

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### **Usage guidelines**

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### **About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE  
NEW ENCYCLOPÆDIA;  
OR,  
UNIVERSAL DICTIONARY  
OF  
ARTS AND SCIENCES.

IN WHICH

*The different Sciences and Arts are digested into the Form of distinct Treatises or Systems :*

Including the

LATEST DISCOVERIES AND IMPROVEMENTS;

WITH THE NATURAL, CIVIL, MILITARY, AND COMMERCIAL HISTORY, AND BIOGRAPHY OF EMINENT MEN,

OF ALL NATIONS;

A DESCRIPTION OF

ALL THE COUNTRIES, CITIES, SEAS, RIVERS, &c. OF THE KNOWN WORLD.

Including also

THE WHOLE OF DR. JOHNSON'S

DICTIONARY OF THE ENGLISH LANGUAGE.

COMPILED FROM EVERY SOURCE OF DOMESTIC AND FOREIGN LITERATURE; AND ILLUSTRATED WITH  
UPWARDS OF THREE HUNDRED AND FORTY PLATES,

## FOUNDERY.

At the conclusion of our last Volume, (see page 714), we inserted this word in its proper order, with its different definitions, but had not sufficient room remaining in that volume to insert the various branches of this art, in the complete manner, which an article of such importance required.

1. **FOUNDERY OF BELLS.** The metal, it is to be observed, is different for bells from what is for statues; there being no tin in the latter; but there is a 5th, and sometimes more, in the bell-metal. The dimensions of the core and the wax for bells, if a ring of bells especially, are not left to chance, but must be measured on a scale, or diapason, which gives the height, aperture, and thickness, necessary for the several tones required. It is on the wax that the several mouldings and other ornaments and inscriptions, to be represented in relief on the outside of the bell, are formed. The clapper or tongue is not properly a part of the bell, but is furnished from other hands. In Europe, it is usually of iron, with a large knob at the extremity; and is suspended in the middle of the bell. In China, it is only a huge wooden mallet, struck by force of arm against the bell; whence they can have but little of that consonance so much admired in some of our rings of bells. The Chinese have an extraordinary way of increasing the sound of their bells, viz. by leaving a hole in the cannon; which our bell founders would reckon a defect. The proportions of our bells differ very much from those of the Chinese, as well as their sizes. See BELL, N° 1, § 5. In ours, the modern proportions are, to make the diameter 17 times the thickness of the brim, and the height 12 times. The parts of a bell are, 1. The sounding bow, terminated by an inferior circle, which grows thinner and thinner. 2. The brim or that part of a bell whereon the clapper strikes, and which is thicker than the rest. 3. The outward sinking of the middle of the bell, or the point under which it grows wider to the brim. 4. The waist or furniture, and the part that grows wider and thicker quite to the brim. 5. The upper vase, or that part which is above the waist. 6. The pallet which supports the staple of the clapper within. 7. The bent and hollow branches

Vol. X. PART I.

F O U

of metal uniting with the cannons, to receive the iron keys, whereby the bell is hung up to the beam which is its support and counterpoise, when rung out. The business of bell-foundery is reducible to three particulars. 1. The proportion of a bell. 2. The forming of the mould. And, 3. The melting of the metal. There are two kinds of proportions, viz. the simple and the relative; the former are those proportions only that are between the several parts of a bell to render it sonorous; the relative proportions establish a requisite harmony between several bells. The method of forming the profile of a bell, previous to its being cast, in which the proportion of the several parts may be seen, is as follows: the thickness of the brim, C1, *Plate CLV. fig. 12.* is the foundation of every other measure, and is divided into three equal parts. First, draw the line HF which represents the diameter of the bell; bisect it in F, and erect the perpendicular Ff; let DF and HF be also bisected in E and G, and two other perpendiculars Ee, Gg, be erected at E and G. GE will be the diameter of the top or upper vase, i. e. the diameter of the top will be half that of the bell; and it will, therefore, be the diameter of a bell which will found an octave to the other. Divide the diameter of the bell, or the line HD, into 15 equal parts, and one of these will give C the thickness of the brim; divide again each of these 15 equal parts into three other equal parts and then form a scale. From this scale take 12 of the larger divisions or two 15ths of the whole scale in the compass, and setting one leg in D describe an arc to cut the line Ee in N; draw ND, and divide this line into 12 equal parts; at the point 1 erect the perpendicular 1C = 10, and C1 will be the thickness of the brim = one 15th of the diameter: draw the line CD: bisect DN; and at the point of the bisection 6 erect the perpendicular 6K = 1½ of the larger divisions on the scale. With an opening of the compass equal to twice the length of the scale or 30 brims, setting one leg in N, describe an arc of a circle, and with the same leg in K and the same opening, describe another arc to intersect the former: on this point of intersection as a centre, and with a radius equal to 30 brims, describe the arc NK; in 6K produce take KB = ½ of the larger measure of the scale ½ of the brim, and on the same centre with

A

11

radius  $30\frac{1}{2}$  brims describe an arc AB parallel to NK. For the arc BC, take 12 divisions of the scale or 12 brims in the compass; find a centre, and from that centre, with this opening, describe the arc BC, in the same manner as NK or AB were described. There are various ways of describing the arc Kp; some describe it on a centre at the distance of nine brims from the points p and K; others, as it is done in the figure, on a centre at the distance only of seven brims from those points. But it is necessary first to find the point p, and to determine the rounding of the bell p. For this purpose, on the point C as a centre, and with the radius C 1, describe the arc 1 p n; bisect the part 1, 2, of the line D n, and erecting the perpendicular p m, this perpendicular will cut the arc 1 p n in m, which terminates the rounding 1 p. Some founders make the bendings K a third of a brim lower than the middle of the line DN; others make the part C 1 D more acute, and instead of making C 1 perpendicular to DN at 1, draw it one 6th of a brim higher; making it still equal to one brim; so that the line 1 D is longer than the brim C 1. In order to trace out the top part Nn, take in the compass eight divisions of the scale or 8 brims, and on the points N and D as centres, describe arcs to intersect each other in 8: on this point 8, with a radius of eight brims, describe the arc Nb; this arc will be the exterior curve of the top or crown: on the same point 8 as a centre, and with a radius equal to  $7\frac{1}{2}$  brims, describe the arc A c; and this will be the interior curve of the crown; and its whole thickness will be one third of the brim. As the point 8 does not fall in the axis of the bell, a centre M may be found in the axis by describing, with the interval of 8 brims on the centres D and H, arcs which will intersect in M; and this point may be made the centre of the inner and outer curves of the crown as before. The thickness of the cap, which strengthens the crown at Q, is about one third of the thickness of the brim; and the hollow branches or ears about one sixth of the diameter of the bell. The height of the bell is in proportion to its diameter as 12 to 15, or in the proportion of the fundamental sound to its third major: whence it follows that the sound of a bell is principally composed of the sound of its extremity or brim, as a fundamental of the sound of the crown which is an octave to it, and of that of the height which is a third. The particulars necessary for making the mould of a bell are, 1. The earth: the most cohesive is the best; it must be well ground and sifted, to prevent any chinks. 2. Brick stone; which must be used for the mine, mould, or core, and for the furnace. 3. Horse-dung, hair, and hemp, mixed with the earth, to render the cement more binding. 4. The wax for inscriptions, coats of arms, &c. 5. The tallow equally mixed with the wax, in order to put a slight lay of it upon the outer mould, before any letters are applied to it. 6. The coals to dry the mould. For making the mould, they have a scaffold consisting of four boards, ranged upon tr. ssels. Upon this they carry the earth, grossly diluted, to mix it with horse-dung, beating the whole with a large spatula. The compasses of construction are the chief instrument for making the mould: They

consist of two different legs joined by piece. And last of all, the founders are which are the engravings of the letters, coats of arms, &c. They first dig a sufficient depth to contain the mould of together with the case or cannon, under and about six inches lower than the level where the work is performed. The hole wide enough for a free passage between the end walls of the hole, or between one and another, when several bells are to be cast. At the centre of the hole is a stake erected strongly fastened in the ground. This is an iron peg, on which the pivot of the branch of the compasses turns. The stake is compassed with a solid brick work, perfectly about half a foot high, and of the proposed diameter. This they call a *millstone*. The top of the mould are, the core, the model of and the shell. When the outer surface of the mould is formed, they begin to raise the core, made of bricks that are laid in courses height upon a lay of plain earth. At the top of each brick, they bring near it the branch of the compasses, on which the curve of the shell is shaped, so as that there may remain between the curve the distance of a line, towards filled up with layers of cement. This is continued to the top, only leaving an opening for the coals to bake the core. This is covered with a layer of cement, made of horse-dung; on which they move the core of construction, to make it of an even firmness every where. The first layer being finished, they put the fire to the core, by filling it half way through an opening that is kept shut during the baking, with a cake of earth that has been rarely baked. The first fire consumes the earth, and the fire is left in the core half or some whole day: the first layer being thorough they cover it with a second, third, and fourth, each being smoothed by the board of the shell, and thoroughly dried before they put another. The core being completed, they divide the compasses to pieces, with intent to cut the thickness of the model, and the compasses immediately put in their place to begin the shell piece of the mould. It consists of a mixture of earth and hair, applied with the hand to the core, in several cakes that close together. The work is finished by several layers of a thinment of the same matter, smoothed by the compasses, and thoroughly dried before they lay on another. The first layer of the model is a mixture of wax and grease spread over the whole which are applied the inscriptions, coats of arms, &c. besmeared with a pencil dipped in a wax in a chafing dish: this is done for every part. Before the shell is begun, the compasses are divided to pieces, to cut off all the thickness of the place of the thickness to be given to the model. The first layer is the same earth with which it is fitted very fine; whilst it is tempering it is mixed with cow's hair to make it firm. The whole being a thin cullis, is gently rubbed on the model, that fills exactly all the shell of the figures, &c. and this is repeated till the whole is two lines thick over the model.

is thoroughly dried, they cover it with a  
the same matter, but somewhat thicker ;  
the second layer becomes of some consist-  
they apply the compasses again, and light  
the core, so as to melt off the wax of the  
ns. &c. After this, they go on with the  
ers of the shell, by means of the com-  
here they add to the cow's hair a quan-  
mp. spread upon the layers, and after-  
noted by the board of the compasses.  
ness of the shell comes to 4 or 5 inches  
n the mill-stone before observed, and sur-  
quite close, which prevents the extra-  
of the metal. The wax should be taken  
the melting of the metal. The ear of  
requires a separate work, which is done  
e drying of the several incrustations of

It has 7 rings: the 7th is called the  
rd unites the others, being a perpendi-  
port to strengthen the curves. It has an  
at the top, to admit a large iron peg,  
ie bottom; and this is introduced into  
in the beam, fastened with two strong

There are models made of the rings,  
ies of beaten earth, that are dried in the  
rier to have the hollow of them. These  
gently pressed upon a layer of earth and  
in, one half of its depth: and then taken  
out breaking the mould. This opera-  
peated 12 times for 12 half moulds, that  
two united may make the hollows of the  
; the same they do for the hollow of the  
nd bake them all, to unite them together.

The open place left for the coals to be put  
placed the rings that constitute the ear.  
put into this open place the iron ring  
on the clapper of the bell; then they make  
cake of clay, to fill up the diameter of  
keels of the core. This cake, after ba-  
clapped upon the opening, and soldered  
hin mortar spread over it, which binds  
nd close to the core. The hollow of the  
filled with an earth, sufficiently moist to  
re place, which is strewed at several times  
e cover of the core; and they beat it gen-  
a pebble, to a proper height; and a work-  
with the earth at top with a wooden  
ipped in water. Upon this cover, to be  
afterwards, they assemble the hollows  
ings. When every thing is in its proper  
they strengthen the outside of the hollows  
ortar, in order to bind them with the  
and keep them steady at the bottom, by  
a cake of the same mortar, which fills  
whole aperture of the shell. This they let  
at it may be removed without breaking.  
re room for the metal, they pull off the  
of the rings, through which the metal is

before it enters into the vacuity of the  
The shell being unloaded of its ear, they  
nder the mill-stone five or six pieces of  
about two feet long, and thick enough to  
almost the lower part of the shell; between  
nd the mould, they drive in wooden wedges  
mallet, to shake the shell of the model  
and it rests, so as to be pulled up and got  
the pit. When this and the wax are re-  
they break the model and the layer of

earth, through which the metal must run, from  
the hollow of the rings, between the shell and the  
core. They smoke the inside of the shell, by  
burning straw under it, that helps to smooth the  
surface of the bell. Then they put the shell in the  
place, so as to leave the same interval between  
that and the core; and before the hollows of the  
rings or the cap are put on again, they add two  
vents, that are united to the rings, and to each  
other, by a mass of baked cement. After which  
they put on this mass of the cap, the rings, and  
the vent, over the shell, and solder it with thin  
cement, which is dried gradually by covering it  
with burning coals. Then they fill up the pit  
with earth, beating it strongly all the time round  
the mould. The surface has a place for the fire,  
and another for the metal. The fire place has a  
large chimney with a spacious ash-hole. The fur-  
nace which contains the metal is vaulted, whose  
bottom is made of earth, rammed down; the rest  
is built with brick. It has four apertures; the  
first, through which the flame revibrates; the se-  
cond is closed with a stopple that is opened for  
the metal to run; the others are to separate the  
dross or scorizæ of the metal by wooden rakes:  
through these last apertures passes the thick smoke.  
The ground of the surface is built sloping, for  
the metal to run down.

2. **FOUNDRY OF GREAT GUNS AND MORTAR  
PIECES.** The method of casting these pieces is  
different from that of bells: they are run massy,  
without any core, being determined by the hol-  
low of the shell; and they are afterwards bored  
with a steel trepan, that is worked either by horses  
or a water mill. For the metal, parts, propor-  
tions, &c. of these pieces, see GUNNERY.

3. **FOUNDRY OF LETTERS, OR CASTING OF  
TYPES FOR PRINTING.** In the business of cut-  
ting, casting, &c. letters for printing, the letter-cut-  
ter must be provided with a vice, hand vice, ham-  
mers, and files of all sorts such as watch makers  
use; also gravers and sculptors of all sorts, and  
an oil-stone, &c. suitable and sizeable to the sever-  
al letters to be cut: a flat gauge made of box to  
hold a rod of steel, or the body of a mould, &c.  
exactly perpendicular to the flat of the using file:  
a sliding gauge whose use is to measure and set off  
distances between the shoulder and the tooth, and  
to mark off from the end, or from the edge of  
the work: a face gauge, which is a square notch  
cut with a file into the edge of a thin plate of  
steel, iron or brass, of the thickness of a piece of  
common tin, whose use is to proportion the face of  
each sort of letter, viz. long letters, ascending  
letters, and short letters. So there must be 3 gauges,  
and the gauge for the long letters is the length  
of the whole body supposed to be divided into  
42 equal parts. The gauge for the ascending let-  
ters Roman and Italic are five 7ths, or 30 parts of  
42, and 33 parts for the English face. The gauge  
for the short letters is three 7ths, or 18 parts of  
42 of the whole body for the Roman and Italic,  
and 22 parts for the English face. The Italic and  
other standing gauges are to measure the scope of  
the Italic stems, by applying the top and bottom  
of the gauge to the top and bottom lines of the let-  
ters, and the other side of the gauge to the stem;  
for when the letter complies with these three sides

**F O U ( 4 ) F O U**

of the parts, and either cast in one shape. The next part of the entrepreneur is to prepare good dies, patterns, wax, temper, and a free form above and below the face of which he draws or prints the exact shape of the letter with pen and ink. These letters be large, or with a smooth bottom, or with a neck, will be first cast then cast in wax, and properly shaped and polished patterns are made, which are kept for the first before the strokes or marks be made on the face of the pattern, and these the marks are drawn on the wax, having well shaped the entire number of figures, and exposing the wax to the same heat, for if a letter be not deep, dipping it into molten wax, rather used at present, will do, and be used for casting. This wax is generally regular in the depth of the counter punch. The wax makes the slide with proper finish it is to be for the mould. If this be printed to the top and bottom parts of the matrix, we must procure a mould to justify them by. See Plate CIV. *Fig. 21. and 22.* Every mould is composed of an upper and an under part. The under part is delineated in *fig. 21.* The upper part is marked *fig. 22.* and in all respects made like the under part, excepting the foot behind, and the bow of being a little behind; and excepting a final round wire between the body and carriage, near the neck, where the under part has a final round partive made in the body. This wire, or rather half wire, in the upper part makes the side in the side of the letter, when part of it is received into the groove in the under part. These two parts are exactly fitted, and gauged into one another, viz. the male-gauge marked *c* in *fig. 21.* In the female marked *d* in *fig. 21.* so that when the upper part of the mould is properly placed on, and in the under part of the mould, both together make the entire mould, and may be fixed backwards or forwards, till the edge of either of the jaws of the female of either carriage comes full to the edge of the female grooves in each carriage, and may be fixed forward or backward, till the edges of each part full in, or stand together, as the side of the female of the upper part of the mould. The parts of the mould are as follows, viz. *a*, The carriage. *b*, The body. *c*, The male of the die. *d*, The female part of it. *e*, The runner. *f*, The female gauge. *g*, The hole. *a a a a*, The bottom plate. *b b b*, The wax. *c c c c*, The bottom plate. *d d d d*, The wax. *e e e e*, The bottom. *f f f f*, The male die. *g g g g*, The female. *h h h h*, The wax. The wax must be as white and fine as the finest of the body, by melting all the profits of samples of letters, which are set upon a supporting block, with a thin wire as to be in the right hand, and then by compressing these with the pattern letters, set in the same manner, he finds the exact figure of the body to be cast. If a few lines of the top of the body are parallel to the bottom, body to be no longer at the head than at the rest, by taking half the number of his profits and turning

them with their heads to the feet of the other and so on, the heads and the feet of the wax being even upon each other, and a better to cut in a groove, the two sides may be more parallel. His former work, whether it be of the thickness of the letter be parallel, setting it a pencil in the composing stick, and sides upwards, and the bottom of the wax being to the feet of the other half, and the head and feet be exactly about each and round, *fig. 23. and 24.* getting the two, the thickness are parallel. The wax is first, the most building to prepare the wax. A matter is a piece of this or another of an iron and a wooden, or of iron, which pattern to the side of the letter, and in the mould, or the wax is cast, the letter is to be cast, by making the letter piece, the depth of the letter, or the side of the letter, or the side of the letter, and so on, every thing thus prepared, it is printed, furnished, which is built of brass, iron, square sides, and a stone on the top, which is a wide round hole for the pattern. A fragment of any extent necessary, the faces in it. As to the mould, in which the wax is to be cast, the wax is a few and a few prepared in large quantities, and the final bars, of about an inch and a half, is delivered out to the workman, or the artist. In the letter foundry, which has a reputation with reputation, under the direction of Alex. Wilson and his at Glasgow, we found, that a flood of metal is made up, different times of the year, sufficient for his colors, at the furnace for his most excellent purpose, a large mould is put to the trade, furnished with a wheel, with more more equally to heat the wax, and the cut iron, which binds when filled with metal. The fire being kindled, the iron or lead are set to flow into the pot, sufficient promoted by throwing in some pot talow, which soon flames. An outer shell which is built to as to project about a foot to the farthest lip of the pot, catches the flame, with the pot, and makes it as powerfully in melting metal, which it serves for a time to convey away all the fines, as the workman, so when this laborious part business is committed. When the lead is roughly melted, a due proportion of the iron or tin and other ingredients are put in, none to be allowed is intended to make the composition flow. The workmen, having all the contents of the pot very thoroughly stirring, with a large iron ladle next to draw the metal into the bush, the rest iron, which are raised to the number upon a level platform faced with iron, by words the right hand. In the course of a few of metal can be easily prepared in this way, and the operation is continued for six days, as is necessary to prepare a stock of all the various degrees of hardness. At the whole is disposed into profits according quality, to be delivered out occasionally.

orkmen. The foundry must now be provided with a ladle, which differs nothing from other ladles but in its size; and he is provided always with ladles of several sizes, which he uses according to the size of the letters he is to cast. As soon as the cafter begins to cast, he must kindle his fire in the furnace to melt the metal in the pan: therefore he takes the pan out of the hole in the floor, and there lays in coals and kindles them; and when they are well kindled, he sets the pan again, and puts in metal into it to melt: if it is a plain-bodied letter he casts, or a thin letter of great bodies, his metal must be very hot; nay sometimes red-hot, to make the letter come. He having chosen a ladle that will hold about as much as the letter and break are, he lays it at a smelting hole, where the flame bursts out, to melt it. Then he ties a thin leather, cut with its lower end against the face to the leather groove of the matrice, by whipping a brown thread twice between the leather groove, and fastening the thread with a knot. Then he puts both halves of the matrice together, and puts the matrice into the smelting hole, and places the foot of the matrice upon the end of the mould, and the broad end of the matrice upon the wood of the upper half of the mould; but not tight up, lest it might hinder the metal from sinking close down upon the matrice, and so ruin a train of work. Then laying a little wood on the upper wood of the mould, and having the casting ladle hot, he with the boiling side of the ladle pours the metal in; and when it is yet melted, he with the broad end of the leather hard down upon the wood, and so fastens it to the wood; all this is the preparation. Now he proceeds to casting; taking the under half of the mould in his left hand, with the hook or hag forward, he cuts the ends of its wood between the lower part of the wood of his thumb and his three hind fingers; he then sets the upper half of the mould upon the side of the stool, so that the male gauges may fall into the female gauges, and at the same time the foot of the matrice places itself upon the stool; and dipping his left hand thumb strong over the upper part of the mould, he nimble catches hold of the lower part with his right hand fingers at the upper part, and his thumb under it, and places the part of the matrice against the middle of the notch in the upper part of the mould, pressing it both forwards and downwards by the shoulder of the matrice, and downwards by the shoulder of the notch close upon the stool; while at the same time with his hinder fingers, he draws the upper half of the mould towards the ball of his hand, and thrusts by the ball of his thumb the lower part towards his fingers, that both the sides of the mould may press against both sides of the matrice, and his thumb and fingers press both halves of the mould close together. Then he takes the handle of his ladle in his right hand, and with the bowl of it gives a stroke, two or three, outwards upon the surface of the melted metal, to burn or clear it from the film or dust that may be upon it; then he takes up the ladle full of metal, and having his mould, as aforesaid, in his left hand, he a little twists the left side of his body towards the furnace, and brings the geat of his ladle to the mouth of the mould, and with the upper part of his right hand towards

him to turn the metal into it, while at the same moment of time he jilts the mould in his left hand forwards, to receive the metal with a strong shake (as it is called; not only into the body of the mould, but while the metal is yet hot, running swift and strongly, into the very face of the matrice, to receive its perfect form there, as well as in the flank. Then he takes the upper half of the mould off the under half, by placing his right hand thumb on the end of the wood next his left hand thumb, and his two middle fingers at the other end of the wood; and finding the letter and break lie in the under half of the mould (as most commonly by reason of its weight it does), he throws or tosses the letter, break and all, upon a sheet of waste paper laid for that purpose on the bench, just a little beyond his left hand, and is then ready to cast another letter as before; and also, the whole number that is to be cast with that matrice. A workman will ordinarily cast about 3000 of these letters in a day. When the casters at the furnace have got a sufficient number of types upon the tables, a set of boys come and nimble break away the jets from them: the jets are thrown into the pots, and the types are carried away in parcels to other boys, who pass them swiftly under their fingers, defended by leather, upon smooth flat stones, in order to polish their broad sides. This a very dexterous operation, and is a remarkable instance of what may be effected by the power of habit and long practice; for these boys, in turning up the other side of the type, do it so quickly by a mere touch of the finger of the left hand, as not to require the least perceptible intermission in the motion of the right hand upon the stone. The types, thus finely smoothed and flattened on the broad sides, are next carried to another set of boys, who sit at a square table, two on each side, and are there ranged up on long rulers or sticks, fitted with a small projection, to hinder them from sliding off backwards. When these sticks are full, they are placed, two and two, upon a set of wooden pins fixed into the wall, near the dresser, sometimes to the amount of an hundred, in order to undergo the finishing operations. This workman, who is always the most expert and skilful in all the different branches carried on at the foundry, begins by taking one of these sticks, and, with a peculiar address, slides the whole column of types off upon the dressing stick: this is made of well seasoned mahogany, and furnished with two end pieces of steel, a little lower than the body of the types, one of which is moveable so as to approach the other by means of a long screw-pin, inserted in the end of the stick. The types are put into this stick with their faces next to the back or projection; and after they are adjusted to one another so as to stand even, they are then bound up, by screwing home the moveable end-piece. It is here where the great and requisite accuracy of the moulds comes to be perceived; for in this case the whole column, so bound up, lies flat and true upon the stick, the two extreme types being quite parallel, and the whole has the appearance of one solid continuous plate of metal. The least inaccuracy in the exact parallelism of the individual type, when multiplied so many times, would render it impos-

able to bind them up in this manner, by disposing them to rise or spring from the stick by the smallest pressure from the screw. Now, when lying so conveniently with the narrow edges uppermost, which cannot possibly be smoothed in the manner before mentioned by the stones, the workman does this more effectually by scraping the surface of the column with a thick edged but sharp razor, which at every stroke brings on a very fine smooth skin, like to polished silver; and thus he proceeds till in about half a minute he comes to the farther end of the stick. The other edges of the types are next turned upwards, and polished in the same manner. It is whilst the types thus lie in the dressing stick that the operation of bearding or barbing is performed, which is effected by running a plane, faced with steel, along the shoulder of the body next to the face, which takes more or less off the corner, as occasion may require. Whilst in the dressing stick they are also grooved, which is a very material operation. To understand this, it must be remembered, that when the types are first broken off from the jets, some superfluous metal always remains, which would make them bear very unequally against the paper whilst under the printing press, and effectually mar the impression. That all these inequalities may, therefore, be taken away, and that the bearings of every type may be regulated by the shoulders imparted to them all alike from the mould, the workman or dresser proceeds in the following manner. The types being screwed up in the stick, as before mentioned, with the jet-end outermost, and projecting beyond the wood about one 8th of an inch, the stick is put into an open press, so as to present the jet end uppermost, and then every thing is made fast by driving a long wedge, which bears upon a slip of wood, which lies close to the types the whole length: then a plane is applied, which is so constructed as to embrace the projecting part of the types betwixt its long sides, which are made of polished iron. When the plane is thus applied, the steel cutter bearing upon that part between the shoulders of the types, where the inequalities lie, the dresser dexterously glides it along, and by this means strips off every irregular part that comes in the way, and so makes an uniform groove the whole length, and leaves the two shoulders standing; by which means every type becomes precisely like to another, as to the height against paper. The types being now finished, the stick is taken out of the press, and the whole column replaced upon the other stick; and after the whole are so dressed, he proceeds to pick out the bad letters, previous to putting them up into pages and papers. In doing this he takes the stick into his left hand, and turning the faces near to the light, he examines them carefully, and whenever an imperfect or damaged letter occurs, he nimbly plucks it out with a sharp bodkin, which he holds in the right hand for that purpose. Those letters which, from their form, project over the body of the type, and which cannot on this account be rubbed on the stones, are scraped on the broad sides with a knife or file, and some of the metal next the face pared away with a pen-knife, in order to allow the type to come close to any other. *This operation is called* **KERNING.**

The excellence of printing types consists not in the due performance of all the operations: described, but also in the hardness of the form, and fine proportion of the character, in the exact bearing and ranging of the letter relation to one another.

4. **FOUNDRY OF SMALL WORKS, OR CASTING IN SAND.** The sand used for casting small work is at first of a pretty soft, yellowish, and clay nature: but it being necessary to strew charcoal dust in the mould, it at length becomes of a black colour. The red-hot metal, by burning of the sand, contributes also to blacken it. The sand is worked over and over, with a roller, board, placed across a chest to receive it, and is by these means sufficiently prepared, and from small stones or hard lumps of sand. When done, they take a smooth wooden board length and breadth proportional to the thinness to be cast, and laying the first half of an open mould or wooden frame upon it, they place within it upon the board, either wooden or metal models of what they intend to cast, and then fill it up with the prepared sand, a little moistened to make it cohere properly, pressing it upon the pattern with the roller, so as to leave their impression. Along the middle of the mould is also placed half a small brass cylinder, to make an impression for the chief canal for the metal to run through when melted, into the models or patterns; from this chief canal are drawn several other canals which extend to each model or pattern place in the frame. Then placing the other half of the mould over the one with the patterns in it, so that the pins enter into the holes that correspond to them in the other, they proceed to work it in the same manner, so as to make the two cavities of the pattern fall exactly on each other. After the frames of the mould are thus finished, and the backs scraped smooth, they take out the patterns first loosening them gently all round, that they may not give way. The moulds are then carried to the melter; who, after strewing mill dust upon them, dries them in a kind of oven for that purpose. Both parts of the mould being dry, they are joined together by means of the pins; and to prevent their giving way, by reason of the red metal passing through the chief cylindrical canal, they are screwed or wedged up in a pair of wooden screws, like a kind of press. When the moulds are thus prepared, the metal is melted in a crucible, of a size proportionate to the quantity of metal intended to be cast, and when brought to a proper heat, is poured into them at the mouth of the chief canal. When the moulds are cooled, the frames are unscrewed, and the cast work taken out of the sand, which is wet and worked over again for other castings.

5. **FOUNDRY OF STATUES.** The casting of statues depends on the due preparation of the sand, the core, the wax, the outer mould, the inner furnace to melt off the wax, and the upper to receive the metal. The pit is a hole dug in a dry ground something deeper than the intended figure, made according to the prominence of certain parts thereof. The inside of the pit is commonly lined with stone, or brick; or, when the figure is large, they sometimes work on the ground,

life a proper sense to resist the impulsion of the melted metal. The inner mould, or core is a rude sketch to which is given the intended attitude and contours. It is raised on an iron grate, strong enough to sustain it, and is strengthened within by several bars of iron. It is generally made either of potter's clay, mixed with hair and horse dung; or of plaster of Paris mixed with brick-dust. The use of the core is to support the wax, the weight, and lessen the weight of the metal. The iron bars and the core are taken out of the brass figure through an aperture left in it for that purpose, which is soldered up afterwards. It is necessary to leave some of the iron bars of the core, to contribute to the steadiness of the projecting part, within the brass figure. The wax is a representation of the intended statue. If it be a piece of sculpture, the wax should be all of the sculptor's own hand, who usually forms it on the spot: Though it may be wrought separately in carves, moulded on a model, and afterwards arranged on the ribs of iron over the grate; filling the vacant space in the middle with liquid plaster and brick-dust, whereby the inner core is proportioned as the sculptor carries on the wax. When the wax, which is the intended thickness of the metal, is finished; they fill small waxen tubes perpendicular to it from top to bottom, to serve both as canals for the conveyance of the metal to all parts of the work; and as vent-holes, to give passage to the air, which would otherwise occasion great disorder when the hot metal came to encompass it. The work being brought thus far, must be covered with its shell, which is a kind of crust laid over the wax, and which being of a soft matter, easily receives the impression of every part, which is afterwards communicated to the metal upon its taking the place of the wax, between the shell and the mould. The matter of this outer mould is varied according as different layers are applied. The first is generally a composition of clay, and old white crucibles well ground and fired, and mixed up with water to the consistence of a colour fit for painting: accordingly they apply it with a pencil, laying it 7 or 8 times over, and letting it dry between whites. For the 2d impression, they add horse-dung and earth to the former composition. The 3d impression is only horse-dung and earth. Lastly, the shell is finished by laying on several more impressions of this last matter, made very thick with the hand. The shell, thus finished, is secured by several iron girths, bound round it, at about half a foot distance from each other, and fastened at the bottom to the grate under the statue, and at top to a circle of iron where they all terminate. If the statue be so big that it would not be easy to move the mould with safety, they must be wrought on the spot where it is to be cast. This is performed two ways: in the first, a square hole is dug under ground, much bigger than the mould to be made therein, and its inside lined with walls of free stone or brick. At the bottom is made a hole of the same materials, with a kind of furnace, having its aperture outwards: in this is a fire made to dry the mould, and afterwards melt the wax. Over the furnace is placed the grate, and upon this the mould, &c. formed as above. Lastly, at one of the

edges of the square pit, is made a large furnace to melt the metal. In the other way, it is sufficient to work the mould above ground, but with the like precaution of a furnace and grate underneath. When finished, 4 walls are to be run around it, and by the side thereof a massive made for a melting furnace. For the rest the method is the same in both. The mould being finished, and inclosed as described, whether under ground or above it, a moderate fire is lighted in the furnace under it, and the whole covered with planks, that the wax may melt gently down, and run out at pipes contrived for that purpose, at the foot of the mould, which are afterwards exactly closed with earth, so soon as the wax is carried off. This done, the hole is filled up with bricks thrown in at random, and the fire in the furnace augmented, till such time as both the bricks and mould become red hot. After this, the fire being extinguished, and every thing cold again, they take out the bricks, and fill up their place with earth moistened, and a little beaten to the top of the mould, in order to make it the more firm and steady. These preparatory measures being duly taken, there remains nothing but to melt the metal, and run it into the mould. This is the office of the furnace above described, which is commonly made in the form of an oven with three apertures, one to put in the wood, another for a vent, and a third to run the metal out at. From this last aperture, which is kept very close, while the metal is in fusion, a small tube is laid, whereby the melted metal is conveyed into a large earthen basin, over the mould, into the bottom of which all the big branches of the jets, or casts, which are to convey the metal into all the parts of the mould, are inserted. These casts or jets are all terminated with a kind of plugs, which are kept close, that, upon opening the furnace, the brass, which gushes out with violence, may not enter any of them, till the basin be full enough of matter to run into them all at once. Upon which occasion they pull out the plugs, which are long iron rods with a head at one end, capable of filling the whole diameter of each tube. The whole of the furnace is opened with a long piece of iron fitted at the end of each pole, and the mould filled in an instant. This completes the work in relation to the casting part: the rest being the sculptor's or carver's business, who, taking the figure out of the mould and earth wherewith it is encompassed, saws off the jets with which it appears covered over, and repairs it with chisels, graters, puncheons, &c.

\* FOUNTAINLESS. *adj.* [from *fontaine*.] Having no fountain; wanting a spring.—

So large

The prospect was, that here and there was room For barren desert *fontaines* and dry. *Milt.*

\* FOUNTAINFUL. *adj.* [*font* and *full*.] Full of spring.—

But when the *fontainful* Ida's top they scald'd With utmost haste,

All fell upon the high hair'd oak. *Chap. II.*

\* To FOUPE. *v. a.* To drive with violence and retentively. A word out of use.—*Vie* pronounce, by the collision of strangers, a word which is moderately as any of the northern languages.

*foepe* their words out of the throat with fat and full spirits. *Camden.*

**FOUQUIERES**, James, an eminent painter, born at Antwerp in 1580. He received his chief instructions from Velvet Brughel; and applied himself to the study of landscapes, and went to Rome and Venice to improve himself in colouring. He succeeded so happily, that his works are said to be nearly equal to those of Titian. He was much caressed at the elector Palatine's court, and afterwards spent several years in France; where his works met with universal approbation, and were proportionably well paid for. Yet by some misconduct he fell into poverty, and died in the house of an inconsiderable painter in 1659.

(1.) \* **FOUR.** *adj.* [*fourer*, Saxon.] Twice two.—

Just as I wish'd, the lots were cast on *four*;  
Myself the fifth. *Pope's Odyssey.*

(2.) **FOUR**, in geography, a rock in the British Channel, near the S. coast of Jersey.

\* **FOURBE.** *n. f.* [French.] A cheat; a tricking fellow. Not in use.—

Jove's envoy, through the air,  
Brings dismal tidings: as if such low care  
Could reach their thoughts, or their repose disturb!

Thou art a false impostor, and a *fourbe.* *Denb.*  
**FOURCES**, a town of France in the dept. of Gers, 6 miles WNW. of Condom.

**FOURCHE**, a chain of mountains in the Helvetic republic, at the E. extremity of the Valais.

**FOURCHEE**, or } in heraldry, a cross forked at  
**FOURCHY**, } the ends. See **HERALDSY.**

**FOUR-FEET ISLAND**, an island on the coast of Kent, near Margate Road.

\* **FOURFOLD.** *adj.* [*four* and *fold*.] Four times told.—He shall restore the lamb *fourfold*, because he had no pity. 2 *Sam.* xii. 6.

\* **FOURFOOTED.** *adj.* [*four* and *foot*.] Quadruped; having twice two feet.—

Augur Aftylos, whose art in vain  
From sight dissuaded the *fourfooted* train,  
Now beat the hoof with Nessus on the plain. }  
*Dryden.*

(1.) **FOUR-MILE WATER**, a river of Ireland in Cork, which runs into Dunmannus Bay, 5 miles SW. of Bantry.

(2.) **FOUR-MILE WATER**, a village of Ireland in Waterford, 4 miles from Clonmell.

(1.) **FOURMONT**, Stephen, professor of the Arabic and Chinese languages, and one of the most learned men of his time, was born at Herbelai, a village 12 miles from Paris, in 1683. He studied in Mazarine college, and afterwards in the Seminary of Thirty-three. He was at length professor of Arabic in the Royal College, and was made a member of the Academy of Inscriptions. In 1738 he was chosen F. R. S. in London, and of that of Berlin in 1741. He was often consulted by the duke of Orleans, who greatly esteemed him, and made him one of his secretaries. He wrote a great number of books. The chief of those which have been printed are, 1. *The Roots of the Latin Tongue*, in verse. 2. *Critical Reflections on the Histories of ancient Nations*, 2 vols 4to. 3. *Meditationes Senecæ*, folio. 4. *A Chinese Grammar, in Latin*, folio. 5. *Several Dissertations printed*

in the Memoirs of the Academy of I &c. He died at Paris in 1745.

(2.) **FOURMONT**, Michael, youngest Stephen, (N<sup>o</sup> 1.) took orders, was of the Syriac language in the Royal Col member of the Academy of Inscription in 1746.

**FOURNEAUX' ISLAND**, a small island in the S. Pacific Ocean. Lon. Lat. 17 11. S.

**FOURNELS**, a town of France, in Lozere, 7 miles W. of St Chely.

(1.) **FOURNESS**, a tract in Loynsd shire, between the Kent, Leven, at Sands, which runs N. parallel with th of Cumberland and Westmoreland, an runs into the sea as a promontory. H Camden expresses it, "the sea, as if it, lashes it more furiously, and in big even devoured the shore, and made 3 *viz.* Kent-land, into which the river K itself; Leven-land and Dudden-land which the land projects in such a man has its name thence; Forencis and Fo nifying the same with us as *promontori* in Latin." Bishop Gibson, however, name of *Fourness*, or *Furness*, from the *furnaces* that were there anciently, the services of which (called *bloomsfinithy* still paid. Here are several cotton mill few years ago; and if fuel for fire plentiful, the trade of this country w increase: but there being no coals r Wigan, or Whitehaven, firing is rat the country people using only turf or the mosses of Fournels much fir is 1 more oak: the trunks in general lie heads to the east, the high winds having the west. Fourness produces all sort: but principally oats, whereof the bread ly made; and there are veins of a ver ore, which is not only melted and wr exported in great quantities. The th bove-mentioned are very dangerous to by the tides and the many quicksands. a guide on horseback appointed to Kei cafter sand at 10l. a-year, to Leven at the public revenue; but to Dudden s. are most dangerous, none; and it is 1 mon thing for persons to pass over it 100 at a time like caravans, under th of the carriers, who pass every day. are less dangerous than formerly, being and better known, and travellers never thout guides.

(2.) **FOURNESS ABBEY**, or "FURNIS in the mountains," was begun at Tu mounderness, in 1124, by Stephen ca logne, afterwards king of England, for of Savigni in France, and 3 years afe to the valley, then called *Bekangejgill* vale of night shade." It was of the Ci der, endowed with above 800l. *per an*: the monks of this abbey, Camden says, 1 of the Isle of Man, which lies over agai to be chosen by ancient custom; it 1 were the mother of many monasteries in Ireland. Some ruins, and part of the f

ed the monastery, are still to be seen at  
The remains at Fournels breathe the  
placidity of the Cistercian abbeys; the  
out was the only piece of elegant Gothic  
it, and its roof has lately fallen in.  
The painted glass from the E. window, representing  
the crucifixion, &c. is preserved at  
this church in Bowdles, Westmoreland.  
Except the N. side of the nave), the  
aisle, refectory, &c. remain, only un-

WYNNES FIELDS, high hills, with vast  
becks, in the above district, (N<sup>o</sup> 1.) which  
the ancient Britons found a secure retreat  
the victorious Saxons: for we find  
led here 228 years after the arrival of the  
when Egfrid king of Northumberland  
with the land called *Carthmell*, with  
itons in it, as is related in his life. In  
mountains are quarries of a fine durable blue  
covering buildings, which are used in  
parts of the kingdom. The inhabitants  
numbers of sheep, which browse upon  
s. The woods afford charcoal for me-  
tals, and oak bark for tanners, in great  
quantity. The forests abound with deer and  
wild fowl, and the *leggs* or *jeoffs*, or large stags,  
which are frequently found underground

NO, a town of Asiatic Turkey, in Caria-  
gia, 10 miles WSW. of Satalia.

ROSEVAUX, a town of France, in the  
Upper Garonne, 10 m. S. of Toulouse.  
*ROSEVAUX*, *adj.* [*four* and *score*.] 1. Four  
score; eighty.—When they were out of  
the straits and crossed the ocean to Spain,  
the *fortune* of their ships, and the greater  
the *fortune*. *Bacon's War with Spain*.—The  
most free people, being a common-  
wealth, maintaining a navy of *four score* ships. *San-*  
*chove's Letters* had, by the practice of near  
years, obtained great veneration from all  
nations. *Cicero*. 2. It is used ellipti-  
cally for years in numbering the age of

fourteen years many their fortunes seek;  
*four score* it is too late a week. *Shak.*  
few might be of use in council upon great  
matters: three score and ten; and the  
numbers in Spain were so 'till *four score*.

WHITE STONES, a village of Oxfordshire,  
Engl.

SQUARE, *adj.* [*four* and *square*.] Qua-  
re; having four sides and angles equal.—  
The spot of Bel was invironed with a wall car-  
ved of great height and beauty; and  
beside certain brazen gates curiously en-  
riched. *Hist.*

FOURTEEN, *adj.* [*four* and *teen*.] Four  
and ten.—I am not *fourteen* pence  
worth for this ale. *Shak.*

FOURTEENTH, *adj.* (from *fourteen*.) The  
fourteen; the fourth after the tenth.—  
The *fourteenth* day that see the ninth day, few  
are left, and the eyes of some do not o-  
pen. *Fourteenth day*. *Brown's Vulg. Err.*  
A. Part. L

(1.) \* FOURTH, *adj.* (from *four*.) The ordi-  
nal of four; the first after the third.—

A third is like the former: filthy hags!  
Why do you shew me this? A *fourth*? start eye!  
What? will the line stretch out to th' crack of  
doom? *Shak.*

(2.) FOURTH REDUNDANT, in music. See IN-  
TERVAL.

\* FOURTHLY, *adv.* (from *fourth*.) In the  
fourth place.—*Fourthly*, plants have their seed and  
feminal parts uppermost, and living creatures have  
them lowermost. *Bacon's Nat. Hist.*

\* FOURWHEELED, *adj.* [*four* and *wheel*.]  
Running upon twice two wheels.—

Scarce twenty *fourwheeled* cars, compact and  
strong,

The massy load could bear, and roll along.

*Pope's Odyssey.*

FOUSSERET, a town of France in the dep. of  
the Upper Garonne; 2 miles W. of Rieux, and  
27 SW. of Toulouse.

(1.) FOU-TCHEOU, a city of China of the 1st  
rank in the province of FO-KIEN. It carries on a  
great trade; and has a good harbour and a most  
magnificent bridge, which has more than 100  
arches, constructed of white stone, and ornamented  
with a double balustrade throughout. It is  
the residence of a viceroy, and has under its jurisdic-  
tion 9 cities of the 3d class. It lies 870 miles  
S. of Pekin. Lon. 126. 50. E. Ferro. Lat. 26. 4. N.

(2.) FOU-TCHEOU, a city of China of the 1st  
rank, in the prov. of Kiang si; formerly one of  
the finest cities in the empire, but almost ruined  
by the Tartar invasion. It lies 735 miles E. of  
Pekin. Lon. 133. 42. E. of Ferro. Lat. 27. 25. N.

\* FOUTRA, *n. f.* (from *four*, French.) A  
fig; a scold; a word of contempt. Not used.—  
A *foutra* for the world, and a willings' hale.  
*Shak. Henry IV.*

FOUYENT LA VILLE, a town of France, in  
the dep. of Upper Saone; 7 m. NE. of Champlitte.

(1.) FOWEY, FAWEY, or FOY, a populous and  
flourishing town of Cornwall, with a commodious  
haven on the British Channel. It extends above 1  
mile on the E. side of the river, (N. 2.) and has  
a great share in the fishing trade, especially of  
pilchards. It rose so much formerly by naval wars  
and piracies, that in the reign of Edward III. its  
ships refusing to strike when required, as they  
failed by Rye and Winchelsea, were attacked by  
the ships of those ports, but defeated them: where-  
upon they bore their arms mixed with the arms of  
those two cinque ports, which gave rise to the  
name of the "Gallants of Fowey." And Camden,  
informs us that this town quartered a part of the  
arms of all the other Cinque Ports with their own;  
intimating, that they had at times triumphed o-  
ver them all; and indeed once they were so power-  
ful, that they took several French men of war.

In the reign of Edward III. they rescued certain  
ships of Rye from pirates, for which this town  
was made a member of the Cinque Ports. Ed-  
ward IV. favoured Fowey so much, that when  
the French threatened to come up the river to  
burn it, he caused two towers, the ruins of which  
are yet visible, to be built at the public charge  
for its security: but he was afterwards so provoked  
at the inhabitants for attacking the French,

after a truce proclaimed with Lewis XI. that he took away all their ships and naval stores, together with a chain drawn across the river between the two forts, which was carried to Dartmouth. It is said they were so insolent, that they cut off the ears of the king's pursuivants; for which some lives and estates were forfeited. The corporation consists of a mayor, recorder, 8 aldermen, a town clerk, and 2 assistants; the market is on Saturday; the fairs on May day and Sept. 10. Here are a fine old church, a free school, and an hospital. The toll of the market and fairs, and keyage of the harbour, were vested in the corporation on the payment of a fee-farm rent of about 40s. It has sent 4 members to parliament since the 13 of Q. Elizabeth. Fowey lies 32 miles S. of Launceston; 32 ENE. of Falmouth, 26 of Plymouth, and 240 WSW. of London. Lon. 4. 23. W. Lat. 50. 19. N.

(2.) FOWEY, PAWEY, FOUTH, or FOY, a river of Cornwall, which rises 4 miles SE. of Camel-ford, passes by Lestwithiel, and runs into the British Channel, a little below FOWEY (N. 1.) where it is very broad and deep. It was formerly navigable up to Lestwithiel.

(1.) \* FOWL. *n. f.* [*fugel, fuhl*, Saxon; *voegel*, Dutch] A winged animal; a bird. It is colloquially used of edible birds, but in books of all the feathered tribes. *Fowl* is used collectively: as, we dined upon fish and *fowl*.—

The beasts, the fishes, and the winged *fowl*,  
Are their males subjects, and at their controul.

*Sbat.*

—Lucullus entertained Pompey in a magnificent house: Pompey said, this is a marvellous house for the Summer; but methinks very cold for the Winter. Lucullus answered, do you not think me as wise as divers *fowls*, to change my habitation in the Winter Season? *Bacon's Apoph.*—

This mighty breath

Instructs the *fowls* of heaven. *Thomson.*

(1.) FOWL, among zoologists, denotes the larger sorts of birds, whether domestic or wild: such as geese, pheasants, partridges, turkey, ducks, &c. Tame fowl make a necessary part of the stock of a country farm. See POULTRY. Fowls are again distinguished into two kinds, *viz.* land and water fowls, these last being so called from their living much in and about water: also into those which are accounted *game*, and those which are not. See GAME.

\* To FOWL. *v. n.* [from the noun.] To kill birds for food or game.

\* FOWLER. *n. f.* [from *fowl*.] A sportsman who pursues birds—

The *fowler*, warn'd

By those good omens, with swift early steps  
Treads the crimp earth, ranging through fields  
and glades,

Offensive to the birds. *Philips.*

With slaughter'd guns th' unwear'd *fowler*  
roves,

When frosts have whiten'd all the naked groves.

*Pope.*

(1.) FOWLING, *n. f.* the art of catching birds by means of bird lime, decoys, and other devices; or the killing of them by the gun. See BIRD-CATCHING, BIRD LIME, DECOY, &c. SHOOTING, and the names of the different birds in their order.

(2.) FOWLING is also used for the pursuing taking birds with hawks, more properly called FALCONRY or HAWKING. See these articles.

(1.) \* FOWLINGPIECE. *n. f.* [*fowl* and *piece*] A gun for birds.—'Tis necessary that the country man be provided with a good *fowlingpiece*. *A*

(2.) FOWLINGPIECES are reckoned best, if they have a long barrel, from 5½ to 6 feet, of a moderate bore. But every fowler should have them of different sizes, suitable to the game designs to kill. The barrel should be well bored and smooth within, and the bore of an equal bigness from one end to the other; which may be proved, by putting in a piece of pasteboard, of the exact roundness of the top: for if this will slide down without stops or stopping, you may conclude the bore good. The bridge-pan may be somewhat above the touch hole, and ought to have a notch to let down a little powder: this will prevent the piece from recoiling, which would otherwise be apt to do. As to the hammer, it should be well hardened, and the springs must be neither too strong nor too weak. The hammer ought to be well hardened, and pliable to go down to the pan with a quick motion.

(1.) FOWLNESS, a village in Norfolkshire.

(2.) FOWLNESS ISLAND. See FOULNESS, &c.

(1.) FOX, George, the founder of the sect of Quakers, was a shoemaker in Nottingham. he wrought at his trade, he used to meditate much on the scriptures; which, with his solitary course of life, improving his natural melancholy, he began at length to fancy himself inspired; in consequence thereof set up for a preacher, proposed but few articles of faith; insisting chiefly on moral virtue, mutual charity, the love of God, and a deep attention to the inward motions and secret operations of the spirit: he recommended a plain simple worship, and a religion without ceremonies, making it a principal point to observe in profound silence the directions of the Spirit. Fox met with much rough treatment; his zeal, was often imprisoned, and several times in danger of being killed. But in spite of all discouragements his sect prevailed much, and many great men were drawn over to them; among whom were BARCLAY and PENN. He died 1681. See QUAKERS.

(2.) FOX, John, the martyrologist, was born at Bolton in Lincolnshire, in 1517. At 16 he was entered a student of Brazen-nose college, Oxford; in 1543, he proceeded M. A. and was chosen fellow of Magdalen college. He discovered an early propensity for poetry, and wrote several Latin comedies on Scriptural subjects, which his son assures us were written in an elegant style. He now applied himself with uncommon assiduity to divinity, particularly church history; and, discovering a mature propensity to the doctrine of reformation, he was expelled the college as an heretic. In distress on this occasion was very great; he soon found an asylum in the house of Sir Thomas Lucy of Warwickshire, who employed him as a tutor to his children. Here he married the daughter of a citizen of Coventry. Sir Thomas's children being grown up, after residing a short time with his wife's father, he came to London; finding no immediate means of subsistence, he

d to the utmost degree of want; but as one day sitting in St Paul's church, emaciated with hunger, a stranger accosted him familiarly, bidding him be of good cheer, put a shilling into his hand; telling him at the same time, that in a few days new hopes were before him. He was soon after taken into the family of the dukes of Richmond, as tutor to the earl's children. In this family he lived, at the court of Henry VIII. the entire reign of Edward VI. and the first part of that of Q. Mary I: but at length, persecuted by his implacable enemy Bp. Gardiner, he was obliged to seek refuge abroad. Basil in France was the place of his retreat, where he was employed by correcting the press. On the death of Henry VIII. he returned to England; where he was again received by his former pupil the duke of Norfolk, who retained him in his family as long as he lived, and bequeathed him a pension at his death. Mr. Secretary Cecil also obtained for him a rectory at Shipton near Salisbury; and he had been long had considerable preferment, had he been willing to subscribe to the canons. He died at London, aged 70; and was buried in the chancel of St. Giles's, Cripplegate. He was a man of industry, and considerable learning; a zealous but not a violent reformer; a nonconformist, and an enemy to the church of England. He had two sons; one of whom was bred a divine, and the other a physician. He wrote many pieces: his principal work is, the *Acts and Monuments of the Church*, &c. commonly called *Fox's Book of Martyrs*.

\* **FOX**, *n. f.* [*fox*, Saxon; *vos*, *wosch*, Slavonic.] A wild animal of the canine kind, with long ears, and a bushy tail, remarkable for its cunning, being in holes, and preying upon small animals.—

*He fox hunts not when he would steal the lamb.* *Shak.*

He that trusts to you, will never find you lions, finds you hares; he that trusts to foxes, gets geese. *Shak. Macbeth.*

The fox retreats are more like the dens of robbers, than the fortresses of fair warriors. *Locke. 2.* By way of reproach, applied to a cunning fellow.

**FOX**, in zoology. See **CANIS**, § I, N<sup>o</sup> xvi, 1. The fox is a great nuisance to the husbandman, by taking away and destroying his lambs, poultry, &c. The common way to catch him is, by setting a trap, which being baited, and a train made by string raw flesh across in his usual paths or to the gin, it proves an inducement to him to the place of destruction. The fox is a beast of chase, and is taken with greyhounds, harriers, &c. See **HUNTING**.

**FALL**, a town SE. of Ipswich, Suffolk.

**FOX BROOK**, a village in Staffordshire.

**FOXCASE**, *n. f.* [*fox* and *case*.] A fox's skin.—*It had better be laughed at for taking a foxcase than be destroyed by taking a live fox.* *L'Estrange.*

**FOXCHASE**, *n. f.* [*fox* and *chase*.] The pursuit of fox with hounds.—

*See the same man, in vigour, in the gout; here, in company; in place or out;*

Early at business, and at hazard late;

Mad at a foxchase, wise at a debate. *Boyd.*

**FOXERNA**, a town of Sweden, in W. Gothland; 25 miles N. of Gothenburg.

\* **FOXEVIL**, *n. f.* [*fox* and *evil*.] A kind of disease in which the hair sheds.

\* **FOXFISH**, *n. f.* [*rudpecula piscis*.] A fish.

**FOXFORD**, a town of Ireland, in Mayo county, seated on the May, 8 miles N. of Castlebar, and 112 NW. of Dublin.

(1.) \* **FOX-GLOVE**, *n. f.* [*digitalis*.] A plant.

(2.) **FOX GLOVE**, in botany. See **DIGITALIS**.

**FOXHAM**, a village NW. of Calne, Wilts.

\* **FOXHUNTER**, *n. f.* [*fox* and *bunter*.] A man whose chief ambition is to show his bravery in hunting foxes. A term of reproach used of country gentlemen.—*The foxhunters went their way, and then out steals the fox.* *L'Estrange.*—John Wildfire, foxhunter, broke his neck over a six-bar gate. *Speck.*

(1.) **FOX ISLAND**, an island in Atlantic, on the W. coast of Ireland; 7 miles E. of Slyme-Head.

(2.) **FOX ISLANDS**, or **LYSIE OSTROVA**, a group of 16 islands situated between the E. coast of Kamtschatka, and the West. coast of America. Each Island has a particular name; but the general name, *Fox Islands*, is given to the whole group, on account of the great number of black, grey, and red foxes with which they abound. They are called *Lysie Ostrova*, by the Russians. The dress of the inhabitants consists of a cap and a tur coat, which reaches down to the knee. Some of them wear common caps of a party coloured bird's skin, upon which they leave part of the wings and tail. On the fore part of their hunting and fishing caps, they place a small board like a screen, adorned with the jaw-bones of sea bears, and ornamented with glass beads, which they receive in barter from the Russians. At their festivals and dancing parties, they use a much more showy sort of caps. They feed upon the flesh of all sorts of sea animals, and generally eat it raw. But when they choose to dress their victuals, they use a hollow stone; having placed the fish or flesh therein, they cover it with another, and close the interstices, with lime or clay. They then lay it horizontally upon two stones, and light a fire under it. The provision intended for keeping is dried without salt in the open air. Their weapons consist of bows, arrows, and darts; and for defence they use wooden shields. The most perfect equality reigns among these islanders. They have neither chiefs nor superiors, neither laws nor punishments. They live together in families, and societies of several families united, which form what they call a *race*, who, in case of an attack or defence, mutually help and support each other. The inhabitants of the same island always claim to be of the same race; and every person looks upon his island as a possession, the property of which is common to all the individuals of the same society. Feasts are very common among them, and more particularly when the inhabitants of one island are visited by those of the others. The men meet their guests beating drums, and preceded by the women, who sing and dance. At the conclusion of the dance, the hosts serve up their best provisions, and invite their guests to partake of the feast. They feed their children

when very young with the coarsest flesh, and for the most part raw. If an infant cries, the mother immediately carries it to the sea side, and whether it be summer or winter, holds it naked in the water until it is quiet. This custom is so far from doing the children harm, that it hardens them against the cold, and they accordingly go barefooted through the winter without the least inconvenience. They seldom heat their dwellings; but when they are desirous of warming themselves, they light a bundle of hay, and stand over it; or set fire to train-oil, which they pour into a hollow stone. They have a good share of plain natural sense, but are rather slow of understanding. They seem cold and indifferent in most of their actions; but let an injury, or even a suspicion of one rouse them from this phlegmatic state, and they become furious and inflexible, taking the most violent revenge without any regard to the consequences. The least affliction prompts them to suicide; the apprehension of even an uncertain evil often leads them to despair. Lat. between 51° and 55° N.

FOXLEY, 2 villages: 1 in Norfolk, SW. of Repeham: 2 in Wilts, near Malmesbury.

\* FOXSHIP. *n. f.* [from *fox*.] The character or qualities of a fox; cunning; mischievous art.—

Had'st thou foxship

To banish him that struck mere blows for Rome,  
Than thou hast spoken words. *Shak. Coriol.*

\* FOXTAIL. *n. f.* [*sclerpeconus*.] A plant.

FOXTON, 3 English villages: 1. in Cambridge; 2. in Durham: 3. in Leicestershire.

\* FOXTRAP. *n. f.* [*fox* and *trap*.] A gin or snare to catch foxes.—Answer a question, at what hour of the night to set a foxtrap? *Tull-r.*

(1.) \* FOY. *n. f.* [*foi*, Fr.] Faith; allegiance. An obsolete word.—

He Easterland subdued, and Denmark won,  
And of them both did *foy* and tribute raise.

*Fairy Queen.*

(2, 3.) FOY, in geography. See FOWEY.

(4.) FOY, ST, a town of France in the dep. of Lot and Garonne, 35 miles E. of Bourdeaux. Lon. 6. 5. E. Lat. 44. 49. N.

FOYE, a village in Herefordshire.

(1.) FOYLE, a river of Ireland in Derry; which runs by Londonderry, into LOUGH FOYLE. See N° 2.

(2.) FOYLE, LOUGH, a large bay of Ireland; at the mouth of the Foyle (N° 1.) 4 miles below Londonderry. It is 12 miles long and 7 broad, and is well sheltered by the land on all sides; the entrance not exceeding half a mile wide, having only one deep channel in the middle between sands and shallows.

FOYN'S ISLAND, an island of Ireland, in the Shannon, 21 miles below Limerick.

FOYN TON, a town of Sussex, W. of Devenfy.

FOYSTON, W. of Knaresborough, Yorkshire.

(1.) FOZ, a town of France, in the dep. of the Mouths of the Rhone, 5 miles W. S. W. of Martigues.

(2.) Foz, a town of France, in the dep. of Var, 9 miles NE. of Barjols.

(3.) Foz, a town of Portugal, in the prov. of Aliento; at the conflux of the Zayas and the Tago, 24 miles NE. of Lisbon.

FOZA, a district of Maritime Austria, & the 7 Communes in the Vicentino.

FOZZANO, a town of the French rep. in the island and dept. of Corsica; 4 miles Sarzano.

FRACAS, *n. f.* [French, pronounced *Fr* noise; a hurly-burly.

FRACASTOR, Jerome, a most eminent an poet and physician, born at Verona in Two singularities are related of him: one is his lips adhered so closely to each other he came into the world, that a surgeon was forced to divide them with his knife; the other his mother was killed with lightning, while though, in her arms at the very moment, & unhurt. He was eminently skilled in the letters, and in all arts and sciences. He poet, a philosopher, a physician, an astronomer and a mathematician. Pope Paul III. made of his authority to remove the council of Boulogne, under the pretext of a contumacious temper, which, as Fracastor deposed, was no longer safe to continue at Trent. He was intimately acquainted with cardinal Bembo, Scaliger, and all the great men of his time died of an apoplexy at Cast near Verona 1553; and in 1559, the town of Verona erected a statue in honour of him. He was the author of many performances, both as a poet and as a physician; no man was ever more disintegrated in either of these capacities; for he practised without fees, and as a poet whose usual recompense, no man was ever more dissident about. Owing to this dissidence, little of his poetry is extant, in comparison of what he wrote; a his Odes and Epigrams, which were read with admiration, yet never passing the press. All that remain are his 3 books of "Nights of the French disease;" a book of Miscellaneous Poems; and two books of a poem, intitled, which he began towards the end of his life did not live to finish. And these would have rivalled with the rest, if his friends had not saved and communicated copies of them. He composed also a poem, called *Alcon, sive de canum venaticorum*. His works are all in Latin. His medical pieces are, *De Sympatibus & Antibia*; *De contagione & contagiosis morbis*; *De criticorum dierum*; *De vini temperaturs*. His works have been printed separately at lezevily. The best edition is that of Padua in 2 vols 4to.

FRACHES, in the glass trade, are the stoves into which the glass vessels already made are put when in the lower over the workman's face, and by means of which they are drawn through the leers, that they may be taken off from the fire, and cool by degrees.

\* To FRACT. *v. a.* [*fractus*, Lat.] To to violate; to infringe. Found perhaps the following passage.—

His days and times are past,  
And my reliance on his *fract* dates  
Has suit my credit. *Shak.*

(1.) \* FRACTION. *n. f.* [*fractio*, Fr. Latin.] 1. The act of breaking; the state being broken.—The surface of the earth has

be parts of it dissected; several parts retain still the evident marks of *fractura*. *Burnet's Theory*. 2. A broken part al.—

*actions* of her faith, arts of her love, scraps, the bits and greasy re-

er-eaten faith, are bound to Diomedes.

*Sbak.*

the motion of the moon, whereby computed, nor the sun, whereby years are, consisteth of whole numbers, but *fractions* and broken parts. *Broqua's cur.*—Pliny put a round number near rather than a *fraction*, *Arbut. on Coins.* **FRACTION**, in arithmetic and algebra, a fifth of an unit or integer; or a number, in the relation of a part to a whole. The word literally imports a broken. Fractions are usually divided into *axagonal*, and vulgar. See **ALGEBRA ARITHMETIC.**

**FRACTIONAL**. *adi.* [from *fraction*.] Be a broken number; comprising a broken. We make a cypher the medium between increasing and decreasing numbers, connected absolute or whole numbers, and negative numbers. *Coker's Arithmetick.*

**FRACTURE**. *n. f.* [*fractura*, Lat.] 1. Separation of continuous parts.—That without any great *fracture* of the more solid parts of nature, or the infringement of laws thereof. *Hale's Origin of Mankind.* 2. Separation of a continuity of a bone in life.

Man wilt sin and grief destroy,  
The broken bones may joy,  
Be together in a well-tet song,  
Of his praises,  
Dead men raises;  
As well cur'd make us more strong.

*Herber.*

of the skull are dangerous, not in consequence of the injury done to the cranium itself, but because the brain becomes affected. *Sharp's Surg.*

**FRACTURE**. *v. a.* [from the noun.] To break.—The leg was dressed and the *fractures* united together. *Wise's Surgery.*

**FRENUM**, or **FRENUM**, BRIDLE, in anatomy given to divers ligaments, from their restraining and curbing the motions of the parts they are fitted to: as,

**FRENUM LINGUÆ**, or *Bridle of the Tongue*; a ligament, which ties the tongue to the jaws, larynx, fauces, and lower parts of the mouth. In some subjects the *frenum* runs the length of the tongue to the very tip; in others, if it were not cut, it would take away the possibility of speech. See **SURGERY**, *Ind.*

**FRENUM PENIS**, a slender ligament, where the *prepuce* is tied to the lower part of the penis. Nature varies in the make of it; it being so short in some, that unless dissected it would not admit of perfect erection. It is a kind of little *frenum*, fastened to the neck of the clitoris.

**FRAGA**, a strong town of Spain in the kingdom of Arragon. It is situated among the mountains, having the river Cinca before it, whose high banks are difficult of access; and at its back a hill, which cannot easily be approached with large cannon. Alphonso VII, king of Arragon, and I. of Castile, was killed by the Moors in 1134, in besieging this town. It is 53 miles ESE. of Saragossa, and 30 S. of Balbastio. Lon. o. 23. E. Lat. 41. 27. N.

**FRAGARIA**, the **STRAWBERRY**: A genus of the polygynia order, belonging to the icofandria class of plants; and in the natural method ranking under the 35th order, *Scitocofa*. The calyx is oecymid; the petals five; the receptacle of the seeds ovate, in the form of a berry, and deciduous. There is but one species, viz.

**FRAGARIA VESCA**, the cultivated Strawberry. The principal varieties are,

1. **FRAGARIA VESCA ALPINA**, the *Alpine*, or *mountain Strawberry*, having small oval leaves, small flowers, and moderate-sized, oblong, pointed fruit.

2. **FRAGARIA V. CHILCENSIS**, the *Chili Strawberry*, with large, oval, thick, hairy leaves, large flowers, and very large firm fruit.

3. **FRAGARIA V. MOSCHATA**, the *hautboy*, or *musky Strawberry*, having oval, lanceolate, rough leaves, and large pale-red fruit.

4. **FRAGARIA V. SYLVESTRIS**, the *wood Strawberry*, with oval sawed leaves, and small round fruit.

5. **FRAGARIA V. VIRGINIENSIS**, the *Virginian scarlet Strawberry*, with oblong oval sawed leaves, and a roundish scarlet-coloured fruit. All these varieties are hairy, low, perennials, durable in root, but the leaves and fruit stalks are renewed annually in spring. They flower in May and June, and their fruit comes to perfection in June, July, and August; the Alpine kind continuing till the beginning of winter. They all prosper in any common garden soil, producing abundant crops annually without much trouble. They increase exceedingly every summer, both by off-sets or suckers from the sides of the plants, and by runners or strings, all of these rooting and forming plants at every joint, each of which separately planted bears a few fruit the following year, and bears in great perfection the succeeding summer. Those of the Alpine kind (N<sup>o</sup> 1.) will even bear fruit the same year that they are formed. All the sorts are commonly cultivated in kitchen gardens, in beds or borders of common earth, in rows lengthwise 15 or 18 inches distance; the plants the same distance from one another in each row. Patches of the different sorts, disposed here and there in the fronts of the different compartments of the pleasure ground, will appear ornamental both in their flowers and fruit, and make an agreeable variety. Strawberries, eaten either alone, or with sugar and cream, are universally esteemed a most delicious fruit. They are grateful, cooling, subacid, and juicy. Though taken in large quantities, they seldom disagree. They promote perspiration, impart a violet smell to the urine, and dissolve the tartareous incrustations on the teeth. People afflicted with the stone have found relief by using them very largely; and Hoffman says, he has known

F R A ( 14 ) F R A

known consumptive people cured by them. The bark of the root is astringent. Sheep and goats eat the plant: cows are not fond of it; horses and swine refuse it.

\* FRAGILE. *adj.* [*fragile*, Fr. *fragilis*, Lat.]  
 a. Brittle; easily snapped or broken.—

To ease them of their griefs,  
 Their pangs of love, and other incident throes,  
 That nature's *fragile* vessel doth sustain  
 In life's uncertain voyage. *Sbak. Timon.*  
 —The stalk of ivy is tough and not *fragile*. *Bacon's Natural History.*—

When subtle wits have spun their threads too fine,  
 'Tis weak and *fragile*, like Arachne's line.  
*Denham.*

—A dry stick will be easily broken, when a green one will maintain a strong resistance; and yet in the moist substance there is less rest than in what is drier and more *fragile*. *Glanville.* 2. Weak; uncertain; easily destroyed.—

Much ostentation, vain of fleshly arms,  
 And *fragile* arms, much instrument of war,  
 Long in preparing, soon to nothing brought,  
 Before mine eyes thou'st set. *Mik. Par. Reg.*

\* FRAGILITY. *n. f.* [from *fragile*.] 1. Brittleness; easiness to be broken.—To make an induration with toughness, and less *fragility*, decoct bodies in water for two or three days. *Bacon's N. Hist.* 2. Weakness; uncertainty; easiness to be destroyed.—Fear the uncertainty of man's *fragility*, the common chance of war, the violence of fortune. *Knolles's History.* 3. Frailty; liableness to fault.—All could not be right in such a state, in this lower age of *fragility*. *Wotton.*

\* FRAGMENT. *a. f.* [*fragmentum*, Lat.] A part broken from the whole; an imperfect piece. He who late a sceptre did command,  
 Now grasps a floating *fragment* in his hand.  
*Bryden.*

—Cowley, in his unfinished *fragment* of the *Davideis*, has shewn us this way to improvement. *Harris on the Mind.*—If a thin or plated body, which, being of an even thickness, appears all over of one uniform colour, should be slit into threads, or broken into *fragments* of the same thickness with the plate, I see no reason why every thread or *fragment* should not keep its colour. *Newton's Opticks.*—

Some on painted wood  
 Transfix'd the *fragments*, some compar'd the food.  
*Pope's Odyssey.*

\* FRAGMENTARY. *adj.* [from *fragment*.]  
 Composed of fragments. A word not elegant, not in use.—

She, she is gone; she's gone: when thou know'st this,  
 What *fragmentary* rubbish this world is,  
 Thou know'st it, and that it is not worth a thought;  
 He knows it too too much that thinks it nought.  
*Donne.*

 sweet scent.—As the hops begin to chan  
 and smell *fragrantly*, you may conclude:  
*Mortimer's Husbandry.*

FRAGUIER, Claude-Francois, a polite  
 ed French writer, born at Paris, of a no  
 in 1666. He was educated under the J  
 was admitted into their order, but after  
 ted it; and, soon after assist'd the Ab  
 in conducting the *Journal des Sçavans*.  
 tings consist of Latin poems, and man  
 dissertations. He died in 1728.

(1.) \* FRAIL. *adj.* [*fragilis*, Latin.]  
 easily decaying; subject to casualties;  
 stroyed.—

I know my body's of so *frail* a kin  
 As force without, severs within can kil

—When with care we have raised an  
 treasure of happiness, we find, at last, th  
 terials of the structure are *frail* and per  
 the foundation itself is laid in the san  
 a. Weak of resolution; liable to error  
 tion.—The truly virtuous do not easily  
 that is told them of their neighbours; fi  
 may do amiss, then may these also sp  
 man is *frail*, and prone to evil, and the  
 soon fail in words. *Taylor.*

(2.) \* FRAIL. *n. f.* 1. A basket made  
 a. A rush for weaving baskets.

(3.) FRAIL signifies also 75 lb. of raif  
 \* FRAILNESS. *n. f.* [from *frail*]  
 in

—There is nothing among all the frail-uncertainties of this sublunary world so and unstable as the virtue of a coward.

S, in geography, rocks of Ireland, on the Wexford, 12 m. SW. of Carnfore Point. ILTY. *n. f.* [from *frail*.] 1. Weakness of ; infirmity of mind ; infirmity.—Tho' secure foot, and stands so firmly on his *zity*, yet I cannot put off my opinion so *ake*spere.—

should'ft thou have trusted that to wean's *frailty* :  
O thee, thou to thyself wast cruel.

*Milton's Samson Agonistes.*  
shows our *frailty*, pities our weakness, fires of us no more than we are able to c. 2. Faults proceeding from weakness ; firmity : in this sense it has a plural.—

Love did his reason blind,  
we's the noblest *frailty* of the mind.  
*Dryden's Indian Emperor.*  
ind wits will those light faults excuse ;  
are the common *frailties* of the muse.

*Dryden.*  
th. only death, can break the lasting chain ;  
ere, ev'n then, shall my cold dust remain ;  
all its *frailties*, all its flames resign,  
ret, 'till 'tis no sin to mix with thine. *Pope.*  
Christians are now not only like other men  
*frailties* and infirmities, might be in some  
excusable ; but the complaint is, they are  
thers in all the main and chief articles of  
res. *Law.*

FRAISCHHEUR. *n. f.* [Fr.] Freshness ; cool-  
A word foolishly innovated by *Dryden*.—  
ther in Summer-ev'nings you repair,  
ste the *fraischheur* of the purer air. *Dryd.*  
FRAISE. *n. f.* [Fr. the caul of an animal.]  
ake with bacon in it.

FRAISE, in fortification, a kind of defence,  
rg of pointed stakes, six or seven feet long,  
parallel to the horizon into the retrench-  
of a camp, a half-moon, or the like, to pre-  
y approach or scalade. Fraises differ from  
les chiefly in this, that the latter stand per-  
ular to the horizon, and the former jet out  
d to it, or nearly so, being usually made a  
loping, or with the points hanging down.  
are chiefly used in entrenchments and other  
rown up of earth ; sometimes they are  
under the parapet of a rampart, serving in-  
st the cordon of stone used in stone works.

FRAISE, in geography, a town of France,  
:dept. of Volges ; 6 miles S. of South Diez,  
of E. of Bruyeres.

FRAISE A BATTALION, is to line the mus-  
ers round with pikes, that in case they should  
aged with a body of horse, the pikes being  
ted may cover the soldiers from the shock,  
ere as a barricade.

FRAMBANT SUR PISSE, a town of France,  
:dept. of Maine, 9 miles NNW. of Laffay.

\* FRAME. *n. f.* [from the verb.] 1. A fa-  
; any thing constructed of various parts or  
ers.—If the *fram* of the heavenly arch should  
re itself, if celestial spheres should forget their  
d motions, and by irregular volubility turn

themselves any way, as it might happen. *Hooker.*—  
Castles made of trees upon *frames* of timber, with  
turrets and arches, were anciently matters of mag-  
nificence. *Bacon.*—

These are thy glorious works, parent of good !  
Almighty ! thine this universal *frame*. *Milton.*  
Divine Cecilia came,  
Inventress of the vocal *frame*. *Dryden.*  
The gate was adamant ; eternal *frame*,  
Which, hew'd by Mars himself, from Indian  
quarries came,  
The labour of a god ; and all along  
Tough iron plates were clench'd to make it  
strong. *Dryden.*

—We see this vast *frame* of the world, and an in-  
numerable multitude of creatures in it ; all which  
we, who believe a God, attribute to him as the  
author. *Tillotson.* 2. Any thing made so as to in-  
close or admit something else.—Put both the tube  
and the vessel it leaned on into a convenient wood-  
en *frame*, to keep them from mischances. *Boyle.*  
His picture scarcely would deserve a *frame*.  
*Dryden's Juv.*

—A globe of glass, about eight or ten inches in  
diameter, being put into a *frame* where it may be  
swiftly turned round its axis, will, in turning,  
shine, where it rubs against the palm of one's  
hand. *Newton's Opticks.* 3. Order ; regularity ;  
adjusted series or disposition.—

A woman, that is like a German clock,  
Still a-repairing, ever out of *frame*,  
And never going aright. *Shakespeare.*  
Your steady soul preserves her *frame* ;  
In good and evil times the same. *Swift.*

4. Scheme ; order.—Another party did resolve to  
change the whole *frame* of the government in state  
as well as church. *Clarendon.* 5. Contrivance ;  
projection.—

John the Bastard,  
Whose spirits toil in *frame* of villainies. *Shak.*  
6. Mechanical construction. 7. Shape ; form ;  
proportion.—

A bear's a savage beast,  
Whelp'd without form, until the dam  
Has lick'd it into shape and *frame*. *Hudibras.*

(2.) FRAME is also used for a sort of loom,  
whereon artificers stretch their linens, silks, stuffs,  
&c. to be embroidered, quilted, or the like.

(3.) FRAME, among founders, a kind of ledge,  
which, being filled with wetted sand, serves as a  
mould to cast their works in. See FOUNDERY, § 4.

(4.) FRAME, in joinery, a kind of case, wherein  
a thing is set or inclosed, or even supported ; as a  
window frame, a picture frame, &c.

(5.) FRAME, among painters, a kind of square,  
consisting of 4 long slips of wood joined together,  
whose intermediate space is divided by threads in-  
to several little squares like a net ; and hence some-  
times called *reticula*. It serves to reduce figures  
from great to small ; or, on the contrary, to aug-  
ment their size from small to great.

(6.) FRAME, among printers, is the stand which  
supports the cases. See CASE, § 4.

\* To FRAME. *v. a.* 1. To form or fabricate by  
orderly construction and union of various parts.—

The double gates he findeth locked fast ;  
The one fair *fram'd* of burnish'd ivory,  
The other all with liver overcast. *Spenser.*

2. To fit one to another.—They rather cut down their timber to *frame* it, and to do necessaries to their convenient use, than to fight. *Abbot*.—Hew timber, saw it, *frame* it, and set it together. *Mart*.

3. To make; to compose.—  
Then chusing out few words most horrible,  
Thereof did verses *frame*. *Spenser*.

Fight valiantly to-day;  
And yet I do thee wrong to mind thee of it;  
For thou art *fram'd* of the firm truth of valour.

*Shakespeare*.

4. To regulate; to adjust.—Let us not deceive ourselves by pretending to this excellent knowledge of Christ Jesus our Lord, if we do not *frame* our lives according to it. *Tillotson*. 5. To form to any rule or method by study or precept.—  
Thou art their soldier, and, being bred in broils,

Hast not the soft way; but thou wilt *frame*  
Thyself forsooth hereafter theirs. *Shak. Coriol.*

I have been a truant to the law;  
I never yet could *frame* my will to it,  
And therefore *frame* the law unto my will.

*Shakespeare*.

6. To form and digest by thought.—The most abstract ideas are only such as the understanding *frames* to itself, by joining together ideas that it had either from objects of sense or from its own operations about them. *Locke*.—

Full of that flame his tender scenes he warms,  
And *frames* his goddess by your matchless charms. *Granville*.

Urge him with truth to *frame* his sure replies.  
And sure he will; for wisdom never lies. *Odyssey*.

—How many excellent reasonings are *framed* in the mind of a man of wisdom and study in a length of years. *Watts*. 7. To contrive; to plan.—Unpardonable the presumption and insolence in contriving and *framing* this letter was. *Clarendon*.—

8. To settle; to scheme out.—  
Though I cannot make true wars,  
I'll *frame* convenient peace. *Shak. Coriolanus*.

9. To invent; to fabricate, in a bad sense; as, to *frame* a story or lie.—Astronomers, to solve the phenomena, *framed* to their conceit eccentricks and epicycles. *Bacon*.

FRAMECOURT, a town of France in the dep. of the Straits of Catalis; 4½ miles S. of St Pol.

\* FRAMER. *n. s.* [from *frame*; *fremman*, Sax.] Maker; former; contriver; schemer.—The forger of his own fate, the *framer* of his fortune, should be improper, if actions were predetermined. *Hammond*.—There was want of accurateness in experiments in the first original *framer* of those medals. *Arbutnot on Coins*.

FRAMESDEN, a town in Suffolk.

FRAMEFIELD, a village in Suffolk.

FRAMINGHAM, a town SE. of Norwich.

FRAMLINGHAM, a large and ancient town of Suffolk. It has the remains of a castle, built by one of the first kings of the East Angles. Its walls, which are still to be seen, are 21 feet high, and 8 thick; and have 13 towers, 14 feet each above the walls. Two of these are watch-towers. To this castle, Mary Tudor, afterwards Q. Mary I, retired, when the unfortunate Lady Jane Gray was proclaimed queen. See ENGLAND, § 40. Framlingham has a tithe church, built of black

sint, with a steeple 100 feet high, and market place; with a weekly market on and a fair, in May and Sept. It is pleated, upon a clay hill near the source of 18 miles NE. of Ipswich, 30 E. of Bury NNE. of London. Lon. 1. 26. E. Lat.

\* FRAMPOLD. *n. s.* [This word is Dr Hacket, *frampul*. I know not its Peevish; boisterous; rugged; crossgrained husband! Alas, the sweet woman leads with him: she leads a very *frampold* life *Shak*.—The *frampul* man could not be *Halket's Life of Williams*.

(1.) FRAMPON, or PROMETON, England, in Dorsetshire, on the Frome WNW. of Dorchester, 12 NW. of W and 126 NE. of London. Lon. 2. 30. W 45. N.

(2-4.) FRAMPON is also the name of small towns, in Berks, Lincoln, and (shires.

(5, 6.) FRAMPON UPON SEVERN, in Gloucestershire, between Berkley and Berkley on the S. and the Severn on the N. The tide comes up in a straight line for length with great rapidity, till it comes to the ham of Nob, a natural Bulwark, which is a torrent to the E. and by N. of Frampton. FRANC. See FRANK, § IV.

FRANCAISE PORT, a port and bay on the coast of Brasil. Lon. 17. 0. W. of Ferrer 0. S.

FRANCASTEL, a town of France, in the dep. of Oise, 5 miles SW. of Breteuil.

FRANCAVILLA, the name of five towns in the province of Abruzzo: viz. 1. in the province of Chieti: 2. in that of Basilicata: 3. in Calabria Citra: 4. in Calabria Ultra: 5. in Otranto NW. of Oria.

(1.) FRANCE, an extensive country, for many ages a kingdom, but at present a republic: situated between 5° W. and 7° and between 43° and 51° N. Lat. In the present war, it was bounded by the English and the Austrian Netherlands on the N. Germany, the Alps, Switzerland, Savoy, and the E.: by the Mediterranean Sea on the S.; and by the Atlantic Ocean on the W.

(2.) FRANCE, AIR, CLIMATE, SOIL, &c. The air of France is pure, temperate, and healthy. It is so happily situated in the middle of the temperate zone, that some parts are equal to Italy, both with regard to its fertility and the fertility of the soil. The undoubtedly much more salubrious. It produces corn, wine, oil, flax, fruits, &c. in great abundance.

(3.) FRANCE, ANCIENT GOVERNMENT. France was absolute before the revolution: and the subjects were extremely oppressed, even under the greatest monarchs. The parliaments, for a long time past, had little or no share in the

and their business was confined to the passing and registering the arrets or laws which the king issued to them. However, they did not always show obedience to the king, and there have been frequent instances of their making a very spirited opposition. In civil causes they were the last to be decided, provided the court did not interpose. The city of Paris was the most considerable, and the king used often to come in person to give judgment in great affairs recorded. It consisted of the great peers of France, besides the ordinary judges, who purchased their places; and they had cognizance of causes belonging to the crown.

The revenues of the crown arose from the sale of land tax, and the aids which proceeded from customs and duties on all merchandize, and the tax upon which commodity was called *gabelle*. See GABEL. Besides these, there were other taxes, as, the capitation or poll-tax on all estates, offices, and employments, besides the 15th penny, from which neither nobility nor clergy were exempted; the tithes were gifts of the clergy, who were also taxed themselves; and, lastly, crown rents, and forfeitures, which brought in a considerable sum. All these are said to have amounted to 20,000,000 *l.* sterling a-year. But the king had several other sources and ways of raising money, when necessity obliged him.

FRANCE, ANCIENT HISTORY OF, FROM THE CONQUEST OF GAUL, TO THE ACCESSION OF CLOVIS. France was originally possessed by the *Gauls* or *Gauls*; a very warlike people, who checked the progress of the Roman empire, and they yield till Julius Cæsar totally conquered their country, and reduced it to the form of a Roman province. See GAUL. The Romans held in quiet possession of Gaul, as long as the empire retained sufficient strength to repress the incursions of the German nations, whom they were able to subdue. But in the reign of Valerian the ancient Roman valour and discipline had declined, and the same care was not taken to defend the provinces. The barbarous nations, therefore, began to make much more frequent incursions; and among the rest the FRANKS, a German nation, inhabiting the banks of the Rhine, proved particularly troublesome. Their origin is variously accounted for; but the most probable account is, that about the time of the fall of the Roman empire, the people inhabiting the banks of the lower Rhine entered into a confederacy with the *Franks*, or *Freemen*. Their first invasion, according to Valefius, happened A. D. 406, in the second year of Valerian's reign; when they were driven back by Aurelianus, afterwards emperor. They returned two years after in far greater numbers; and were again defeated by Gallienus, Valerian's successor in the empire. Others, however, contend that Gallienus engaged one of their kings to defend the frontiers against his countrymen, and other invaders. But in A. D. 260, the emperor Gallienus, being obliged to retire to Persia, again ravaged Gaul, and drove the *Franks* into Italy. In 275, they were driven back by Probus, by whose victorious and numerous conquests, several of their kings submitted to Rome. X. PART I.

him, and promised an annual tribute.—They continued quiet till A. D. 287; when, along with the Saxon pirates, they plundered the coasts of Gaul. To revenge this insult, the emperor Maximian entered the country of the Franks the following year, and obliged two of their kings to submit to him. The Franks, however, did not remain long in peace. About the year 293, they seized Batavia and part of Flanders; but were entirely defeated by Constantius Chlorus, who transplanted them into Gaul. All these victories, however, were not sufficient to prevent the incursions of this restless and turbulent nation; insomuch that, in 355, they had made themselves masters of 40 cities in Gaul. Soon after, they were totally defeated by Julian, and again by count Theodosius, father to the emperor; but, in 388, they ravaged the province with more fury than ever. As the western empire was at this time in a very low state, they for some time found more interruption from other barbarians than from the Romans, till their progress was checked by Aetius. At this time, the Franks were governed by one *Pharamond*, the first of their kings of whom we have any distinct account. He is supposed to have reigned from A. D. 417 or 418, to 428; and is thought by Abp. Usher to have been killed in the war with Aetius. By some he is said to have compiled the *Salic Laws*, with the assistance of four judges, named *Witegode, Lofgode, Witegode, and Selgode*. Pharamond was succeeded by his son Clodio, who likewise carried on a war against the Romans.

(5.) FRANCE, HISTORY OF, FROM CLOVIS TO CLOVIS THE GREAT. Clodio is said to have received a terrible overthrow from Aetius, near the city of Lens; however, he advanced to Cambrai, where he for some time took up his residence. After this he destroyed the cities of Treves and Cologne, Tournay, and Amiens. He died in 428, and was succeeded by Meroveus. Whether the new king was related to Clodio, is not certain. From him the first race of French kings were called *Merovingian*. He was respected by his people, and died in 428. Meroveus was succeeded by his son Childeric; who made war on the Romans, and proceeded as far as the river Loire. He took the city of Paris after a siege of 5, some say 10 years. The Roman power was now totally destroyed in Italy; and therefore *Chlodomer, Clodius, or Louis*, who succeeded Childeric, attempted the entire conquest of Gaul. Part of the province was still retained by a Roman named *Naucius*, who was defeated and killed, and his dominions reduced, by Clovis. Thus was the French monarchy established by Clovis in the year 427.

(6.) FRANCE, HISTORY OF, FROM CLOVIS'S ESTABLISHMENT OF THE FRENCH MONARCHY, TO HIS DEATH. Clovis now possessed all the country lying between the Rhine and the Loire. He had been educated in paganism; notwithstanding which he allowed his subjects full liberty of conscience. He married Clotilda, daughter of the duke of Burgundy, who was a Christian; and, happening to pass a battle, where, being in great danger, he had invoked the god of Clotilda, and the Christians, he soon declared himself a convert, and was baptized in 496. But his profession of Christianity was not followed by any amendment

of life: he spent the remainder of his life in aggrandizing himself and extending his dominions, by the most abominable treachery and violence. In his attacks on Armorica he proved unsuccessful. The inhabitants of that country, though abandoned by the Romans, united together, and made a powerful defence against the barbarians who assaulted them on all sides. Clovis, finding them too powerful, proposed an union, which they accepted, the more readily as he professed Christianity. Burgundy at this time extended from the forest of Vosges to the sea of Marseilles, under Gondebald, the uncle of Clotilda; who had killed two of his brothers, one of them the father of the French queen. The 3d brother, Godagesil, whom he had spared and allowed to possess Geneva, conspired with Clovis to drive him from his dominions. A war having commenced between the French and Burgundian monarchs, the latter was deserted by Godagesil, and fled to Avignon, leaving his antagonist master of Lyons and Vienna. The victor next besieged Avignon; but it was defended with such vigour, that Clovis accepted of a ransom; and an annual tribute from Gondebald; who was likewise obliged to cede to Godagesil, Vienne and several other places. Gondebald was no sooner at liberty than he assembled a powerful army, and advanced towards Vienne, where Godagesil resided. It was strongly garrisoned by 5000 Franks; but Gondebald being admitted through an aqueduct, massacred most of the Franks, sent the rest prisoners to the king of the Visigoths, and put Godagesil to death. All the other places speedily submitted: and Gondebald, now thinking himself able to resist Clovis, informed him, that he must no longer expect tribute; Clovis, though much mortified with this defection, put up with the injury, and accepted of the alliance of the king of Burgundy. He next attacked the Visigoths, who had possessions on both sides of the Pyrenees, and whom he attacked under pretence of zeal for the true religion: To his nobles, assembled at Paris, he said, "It is with concern that I suffer the ARIANS to possess the most fertile part of Gaul; let us, with the aid of God, march against them; and having conquered them, annex their kingdom to our dominions." The nobility approved, and Clovis attacked a prince for whom he had but lately professed the greatest regard, vowing to erect a church in honour of the holy apostles, if he succeeded. Alaric, king of the Visigoths, was a young man of no military experience, though personally brave. He did not therefore hesitate to engage his antagonist; but his army was utterly defeated on the banks of the Clain, 10 miles S. of Poitiers; A. D. 507. Alaric rushed desperately against Clovis in person, by whom he was killed, and his army pursued with great slaughter. Aquitain now submitted, and Clovis took up his winter quarters at Bourdeaux. Tholouse surrendered next spring; and the royal treasures of the Visigoths were transported to Paris. Angouleme was next reduced, and Arles invaded. But here the victorious career of Clovis was stopped by Theodoric king of the Ostrogoths, who had overthrown Odoacer in Italy. He had married Abollida Clovis's sister, and given his own daughter to the king of the Visi-

goths, and endeavoured to preserve standing between the two sovereigns; this impossible, he sent one of his powerful army against Clovis; who with the loss of 30,000 men. Clovis obliged to raise the siege of Arles: Franks still retained the greatest part of the empire. In 509, Clovis was vested with the title of Roman emperor; he entered the church of St Martin in Tours; after entering the cathedral clothed in a purple mantle, the badges of his consular rank; then proceeded to augment his power over his kinsmen the princes of the race. Among those who perished in the king of Cologne, his son Cloderic; Clotaire, who governed the country of *Cambresis*; and Renomer king of the *Maine*. All these murders, however atoned by his zeal and liberality to the church, he died in 511, after having reformed the Salique laws: a few lines of which women from inheriting any part of the lands, were extended so far as to disinherit the males of the royal family of France of succession to that kingdom. Clovis is buried in the church of St Genevieve, in Paris; his tomb is still to be seen.

(7.) FRANCE, HISTORY OF, FROM THE DEATH, TO THAT OF CLOTAIRE I. Clovis's dominions were divided among his 4 sons; Theodoric, the eldest, had the eastern part of the empire; and, from his making Metz his capital, is commonly called *Metz*. Clodomir, the eldest son by Clotilda; Childobert and Clotaire, both infants, had the kingdoms of Burgundy and Neustria, under the tutelage of their mother; the prudence of Clotilda kept matters quiet in the empire for 8 years; but about 529 a numerous fleet of Danes arrived at the mouth of the Meuse; and their king Coenwald landed his forces, began to destroy the country with fire and sword. Against him his son Theodobert, who defeated them by land, my and navy, and killed their king, retired to retire with precipitation. In 531, Ermanfrid, king of Thuringia, having destroyed his brethren named *Berthaire*, and his dominions, applied to Thierris for assistance; his other brother Balderic, whom he had treated in the same manner. In this juncture Thierris embarked, on condition that he should have one half of Balderic's dominions, after Balderic was overcome and killed; Ermanfrid seized all his dominions. Clovis, perceiving no opportunity of revenging himself on the king of the Ostrogoths, he perceiving the power of the Ostrogoths, he much dreaded, to be considerably weakened by the death of king Theodoric, he engaged Clotaire to assist him. They entered Thuringia with two powerful armies; and their forces after passing the Rhine, were quickly after reinforced by a considerable number of troops under the command of Theodobert; the allies attacked the army of Ermanfrid, who was advantageously posted; and having

was forced to fly from place to place in diffi-  
culty. Soon after this the capital was taken,  
and Hermanfroi himself, being invited to a con-  
ference by Thierry, was treacherously murdered;  
by which his extensive dominions became prey  
to Thierry. In the mean time, Clotilda  
excited her sons to make war on the Burgun-  
dia, to revenge the death of her father Chil-  
peric, whom Gondebald had murdered. Gonde-  
bald was now dead, and had left his dominions  
on his sons Sigismund and Godemar. Sigismund's  
army was quickly defeated; and himself deliv-  
ered up to Clodomir, who threw him into a pit,  
where he perished. Godemar thus became mas-  
ter of Burgundy. Clodomir defeated him, but  
pursuing too eagerly, was surrounded by his ene-  
mies and slain. After the reduction of Thuringia,  
however, Childibert and Clotaire entered Bur-  
gundy with a powerful army, and in 534 com-  
pleted the conquest of it; Godemar was killed;  
others say, he retired into Spain, and thence into  
Africa. In 560 Clotaire became monarch of France.  
He had murdered the sons of Clodomir. Thierry  
and his children were dead, as was also Child-  
ibert; so that Clotaire was sole heir to all the  
dominions of Clovis. He had 5 sons; and Chram-  
nes had some time before rebelled in Auvergne.  
While Childibert lived, he supported the young  
prince; but on his death, Chramnes implored his  
father's clemency. He was at this time pardon-  
ed; but soon after engaged the count of Bretagne  
to assist him in another rebellion. The Bretons,  
however, were defeated, but Chramnes, perceiving  
his wife and children surrounded by his father's  
troops, attempted to rescue them. He was taken  
prisoner, and with his family thrust into a thatched  
cottage near the field of battle; which when the  
king heard of, he commanded the cottage to be  
set on fire, and they all perished in the flames.  
Clotaire did not long survive this cruel execution  
of his son and grand-children, but died in 562.

(2.) FRANCE, HISTORY OF, FROM CLOTAIRE I'S  
DEATH, TO THAT OF CLOTAIRE II. After Clo-  
taire's death, the empire was divided among his 4  
remaining sons, Caribert, Gontran, Sigebert, and  
Chilperic. The old king had made no division of  
his dominions before he died. They therefore  
divided them by lot; Caribert had Paris; Gon-  
tran, Orleans; Sigebert, Metz, or Austrasia; and  
Chilperic, Soissons. Provence and Aquitaine  
were possessed in common. Peace was first dis-  
turbed in 565, by the *Abares*; a barbarous na-  
tion, said to be the remains of the Huns. They  
entered Thuringia, belonging to Sigebert; who  
defeated and obliged them to repass the Elbe.  
Sigebert pursued them close, but quickly conclu-  
ded a peace with them; his brother Chilperic ha-  
ving invaded his dominions, and taken Rheims  
and some other places. Against him, therefore,  
Sigebert marched, made himself master of Soissons  
his capital, and of his eldest son Theodobert. He  
then defeated him in battle; and not only recover-  
ed the place which he had seized, but overran the  
greater part of his dominions: by the mediation  
of the other two brothers, Sigebert abandoned his  
conquests, set Theodobert at liberty, and thus re-  
stored peace. Soon after, Sigebert married Brun-  
ehaut daughter to Athanagild king of the Visigoths

in Spain; and his brother Caribert, king of Paris,  
died, whose dominions were divided. In 567  
Chilperic married Galswintha, Brunehaut's eldest  
sister, whom he obtained with some difficulty.  
Before her arrival, he dismissed his mistress, *Fre-  
degonde*, a woman of great abilities, very ambi-  
tious, and capable of the blackest crimes. The  
new queen, who brought immense treasures from  
Spain, and made it her whole study to please the  
king, was for some time entirely acceptable. How-  
ever, Chilperic gradually suffered Fredegonde to  
appear at court, and was suspected of having re-  
newed his intercourse with her; which so hurt  
the queen, that she desired leave to return to  
Spain, offering to leave all her wealth. The king,  
knowing that this would render him extremely o-  
dious, quieted her suspicions, and soon after cau-  
sed her to be privately strangled; upon which he  
publicly married Fredegonde. This atrocious ac-  
tion excited the greatest indignation. His do-  
minions were quickly invaded and conquered by  
Sigebert and Gontran; after which they made  
peace, Chilperic consenting that Brunehaut should  
enjoy those places which he had bestowed upon  
Galswintha, viz. Bourdeaux, Limoges, Cahors,  
Bigorre, and Bearne, now called *Lascar*. The French  
princes were not long at peace. A war quickly  
commenced; Gontran and Chilperic coalesced a-  
gainst Sigebert. The latter prevailed; and com-  
pelling Gontran to a separate peace, seemed de-  
termined to make Chilperic pay dear for his re-  
peated perfidy; but he was assassinated by order  
of Fredegonde, who thus preserved herself and  
Chilperic. On his death, Brunehaut fell into the  
hands of Chilperic; but Gondebald, one of Sig-  
bert's best generals, escaped into Austrasia with  
Childibert, the only son of Sigebert, about 5  
years of age, who was proclaimed king. In a short  
time, however, Meroveus, eldest son to Chilperic,  
fell in love with Brunehaut, and married her pri-  
vately. Chilperic immediately went to Rouen,  
where Meroveus and his consort were; and ha-  
ving seized them, sent Brunehaut and her two  
daughters to Metz, and carried Meroveus to Sois-  
sons. Soon after, one of his generals being de-  
feated by Gontran, who espoused Brunehaut's  
cause, Chilperic, in a fit of rage, caused Meroveus  
to be shaved and sent to a monastery. From  
hence, however, he escaped, and arrived in Aus-  
trasia; but the jealousy of the nobles forced him  
to leave that country; and being betrayed into  
the hands of his father's forces, he was murdered  
at the instigation of Fredegonde. France was at  
this time divided between Gontran king of Orle-  
ans and Burgundy, Chilperic king of Soissons,  
and Childibert king of Austrasia. Chilperic, in  
579, had a dispute with Vearc count of Bretagne,  
Chilperic dispatched a body of troops against him;  
who were defeated, and he was forced to submit  
to a dishonourable peace. His brother and ne-  
phew lived in strict union, and had no reason to  
be pleased with him. His subjects were oppressed,  
poor, and discontented. His son Clovis, by his for-  
mer marriage, avowedly hated Fredegonde. To  
crown all, the country was threatened with fa-  
mine and pestilence. The king and queen were  
both attacked by an epidemic disease. They re-  
covered, but their 3 sons, Clodobert, Samson,

Aquitain. Pepin now at peace, began to think of assuming the title of *king*. His wishes were agreeable to the nation. The nobility, however, were bound by an oath of allegiance to Childeric, and this oath could not be dispensed with, but by the pope's authority. Ambassadors were therefore dispatched to pope Zachary. His holiness replied, that it was lawful to transfer the regal dignity from hands incapable of maintaining it to those who had so successfully preserved it. On this the unfortunate Childeric was shaved, and confined in a monastery for life; Pepin assumed the title of *king of France*, and the Merovingian line was finally set aside.

(12.) FRANCE, HISTORY OF, FROM CHILDERIC'S DEPOSITION TO THE DEATH OF PEPIN AND ACCESSION OF HIS SONS. This revolution took place in 751. Pepin's attention was first claimed by a revolt of the Saxons; whom he soon reduced. During his expedition against them he got rid of his restless and treacherous brother Grippon; who, weary of Aquitain, fled to Astolphus king of the Lombards, but was killed in attempting to force a pass on the confines of Italy. The submission of the Saxons was followed by the reduction of Brittany, and the recovery of Narbonne from the Infidels. Pepin's next exploit was the protection of pope Stephen III. against Astolphus, king of the Lombards. The pope, unable to contend with such a powerful rival, crossed the Alps and implored the protection of Pepin, who received him with all due respect. He was lodged in the abbey of St Dennis, and attended by the king in person during a dangerous sickness with which he was seized. On his recovery Stephen solemnly placed the diadem on the head of his benefactor, bestowed the regal sanction on his sons Charles and Carloman, and conferred on the three princes the title of *patricians of Rome*. In return for these honours, Pepin accompanied the pontiff into Italy at the head of a powerful army. Astolphus shut himself up in Pavia, where he was closely besieged by the Franks, and obliged to renounce all pretensions to the sovereignty of Rome. No sooner was Pepin gone, however, than Astolphus broke the treaty. The pope was again reduced to distress, and again applied to Pepin; who instantly set out for Italy, and compelled Astolphus a 2d time to submit to his terms, which were now more severe. Not long after Astolphus died, and his throne was usurped by his general Didier; who received the papal sanction, and was recognised as lawful sovereign of the Lombards in 756. Pepin returned to France in triumph; but his peace was soon disturbed by another revolt of the Saxons. But their attempts proved as unsuccessful as formerly, being obliged to submit and purchase their pardon by a renewal of their tribute, and an additional supply of 300 horse. During Pepin's absence, Vaisar duke of Aquitain ravaged Burgundy, and proceeded as far as Chalons. Pepin soon returned, and entering his dominions, committed similar devastations, and would probably have reduced all Aquitain, but for the hostile preparations of his nephew Tassilon, duke of Bavaria. The king, however, contented himself with securing his frontiers by a chain of posts, against any invasion;

after which he resumed his enterprize on the dominions of Vaisar. Victory declared in favour of Pepin, who advanced to the banks of the Rhone; while Vaisar was abandoned by the duke of Bavaria, and even by his own subjects. In distress he retired with a few faithful followers into Saintonge, where he defended himself as long as possible, but was at last deprived of his crown and life by the victor. Thus Aquitain was more annexed to the crown of France. Pepin was soon after seized with a slow fever, which put an end to his life in 768, the 54th of his age and 17th of his reign. He was of a short stature whence he was surnamed *Le Bref*, or *the Short*; he was justly intitled a HERO: though in the preceding reign this seemed to be forgotten, as his tomb was only inscribed, "Here lies the father of Charlemagne." Pepin was succeeded by his two sons, Charles and Carloman.

(13.) FRANCE, HISTORY OF, FROM CHARLES I'S ACCESSION, TO HIS CONQUEST OF LOMBARDY. Pepin's sons continued to reign jointly some time; but the active and enterprising spirit of Charles gave umbrage to the weak and jealous Carloman. The first enterprize of Charles was against Hunald, the old duke of Aquitain; leaving the monastery where he had resided upwards of 20 years, assumed the royal title, and was joyfully received by his subjects, although weary of the French yoke. Charles quickly crossed the field, and with difficulty prevailed upon his brother Carloman, to join him with his forces. But the junction was scarce effected, when Carloman suddenly withdrew his troops. Charles though thus deserted, engaged and overcame his enemy in a great battle, and obliged Hunald to fly to Lupus duke of Gascony. Charles demanded the fugitive prince; and Lupus, not daring to disobey such a powerful monarch, yielded up the unfortunate Hunald, who was instantly cast into prison. The death of Carloman, in 771, Charles sole master of France; but the revolt of the Saxons involved him in a series of wars for many years. They had long been tributaries to the French, and now, when freed from the terror of Pepin's arms, thought to shake off the yoke together. Charles entered their country with a powerful army; and having repeatedly defeated them, advanced towards their chief station, a town near Paderborn. The Saxons made an obstinate defence, but were at last obliged to submit; and Charles spent three days in demolishing the monuments of idolatry in this place; which so much disheartened the whole nation, that they submitted to such terms as he pleased to impose. Charles had concluded a marriage with the daughter of Didier, king of the Lombards, who he seized and frightened to death pope Stephen endeavoured to reduce his successor Adrian I. to a state of entire dependance on himself. Adrian applied to the French monarch. The French monarchy were averse to an Italian war: so that several embassies were sent to Didier, entreating him to restore to the pope those places which he had taken from him, and at last even offering him a large sum of money if he would do so; but this proposal being rejected, Charles obtained the consent of his nobility to make war on the Lombards.

led of his troops so advantageously, that officers were of opinion, that it would be possible to force a passage. This, however, accomplished, either through his superior panic which seized the Lombard soldier which, Didier, with the old duke of , who had escaped from his prison, and sage at his court, shut themselves up in Adalgise, the only son of Didier, with the and children of Carloman, fled to Verona. ty was immediately invested by the con- and soon submitted. This revolt was owing to a chief itiking, who had twice before fled from

Charles, to the court of Denmark. Returning in the king's absence, he roused his countrymen to action, while Charles's generals, disagreeing among themselves, took no proper method for repelling the enemy. In consequence of this, they were entirely defeated on the banks of the Weser in 782. Charles arrived in time to prevent the total destruction of his people, and directly penetrated into the heart of the country. Witiking once more fled into Denmark; but 4,500 of his followers perished at once by the hands of the executioner. An universal insurrection was the consequence of this unheard of cruelty; and though during 3 years Charles was constantly successful in the field, he could not subdue the spirit of the people. At last he was obliged to negotiate. Witiking and several other chiefs were invited to an interview; where Charles represented to them in such strong colours the ruin which must ensue to their country, that they persuaded their countrymen finally to submit, and embrace the Christian religion.

(15.) FRANCE, HISTORY OF FROM CHARLES-MAGNE'S CONQUEST OF THE SAXONS, TO HIS CORONATION AS EMPEROR. Charles having thus brought his affairs in Saxony to a conclusion, turned his arms against Tassilon duke of Bavaria, who had privately supported the Saxons. Entering his country with a powerful army in 787, the total destruction of Tassilon seemed inevitable. Charles had advanced as far as the Lech, where Tassilon, privately entering his camp, threw himself at his feet. The king had compassion on his faithless kinsman, but no sooner was the traitor at liberty, than he stirred up the Huns, the Greek emperor, and the fugitive Adalgise, against the king. He fomented also the discontents of Aquitain and Lombardy; but his own subjects, made a discovery of the whole to Charles. Tassilon, ignorant of this, entered the diet at Ingelheim, but was instantly arrested by order of the French monarch. Being brought to a trial, the proofs of his guilt were so clear, that he was condemned to lose his head: this was afterwards mitigated to perpetual confinement in a monastery, and the duchy of Bavaria was annexed to the dominions of Charles. The Huns, however, and other enemies of the French monarch continued to prosecute their enterprises, though all their attempts only served to enhance the fame of Charles. He defeated the Huns in Bavaria, and the Greek emperor in Italy. The Huns still continuing to infest the French dominions, Charles entered their country at the head of a formidable army and penetrated as far as Raal on the Danube, but was compelled by an epidemic distemper to retire before he had finished his conquest. He had now the mortification to learn that his eldest son Pepin had conspired against him. The plot was discovered by a priest, who had accidentally fallen asleep in a church where the conspirators were met: awakened by their voices, he overheard their consultations; on which he instantly awoke the monarch from his bed, to inform him. Pepin was seized, but had his life spared, though condemned to spend the rest of his days in a monastery. Charles was no sooner freed from this danger than he was again called to arms by a revolt of the Saxons on

the one hand, and a formidable invasion of the Moors on the other; the Hunns at the same time renewing their depredations on his dominions. The king did not at this time make war against the Moors; the victories of Alphonso VI. obliged them to leave France; after which Charles marched in person to attack the Saxons and Hunns. The former consented again to embrace Christianity, and to deliver up a third part of their army; but the Hunns defended themselves with incredible valour. Though often defeated, their love of liberty was altogether invincible; so that it was only the death of the king, and an almost total destruction of the people which terminated the war: only one tribe could be induced to acknowledge the authority of the French monarch. This happened between the years 793 and 798; after which Charles subdued the islands of Majorca and Minorca. His satisfaction from this new conquest, however, was soon damped by the troubles which broke out in Italy. After Adrian I's death his nephew aspired to the dignity; but one Leo being preferred, he determined on revenge. He concealed his designs for 4 years, till on the day of a procession, Leo was assaulted, and left for dead on the ground; but having with difficulty recovered, and escaped to the Vatican, he was protected by the duke of Spoleto, at that time general of the French forces. Leo's cause was espoused by the Sicilians, who invited him to his camp, whence he dispatched him with a numerous guard to Rome, promising soon to follow him and redress all grievances. But the Normans having made inroads into the maritime provinces, he was obliged to defer the promised assistance, till he had constructed forts at the mouths of the navigable rivers, and provided for the defence of his territories, by instituting a militia, and appointing squadrons to cruise against the invaders: after which he set out for the 4th and last time on a journey to Rome, where he was received with the highest possible honours. Leo cleared himself of the crimes laid to his charge by his enemies, while his accusers were exiled. At last, on Christmas, A. D. 800, when Charles appeared in the cathedral of St Peter, and assisted devoutly at mass, the pope suddenly crowned him, and the place instantly resounded with "Long life to Charles the August, crowned by the hand of God! Long life and victory to the great and pacific emperor of the Romans!" He was then consecrated and anointed with royal unction; and conducted to a throne where he was treated with all the respect usually paid to the ancient Cæsars; from this time also being honoured with the title of CHARLEMAGNE, or *Charles the Great*. He afterwards often said, that he was ignorant of the pope's intention at this time; and that had he known it, he would not have been present; but this was not generally believed; and the pope is said to have known the acknowledged emperor, evidently showed

disappointed by the marriage of that prince with Nicephorus; however, the latter acknowledged his new dignity of Augustus, and the union of the two empires were amicably settled. Charles was further gratified by the great HARUN RASCHID, caliph of the Saracens, who presented him the sacred city of Jerusalem, and the pulchre. Mean time his empire was troubled with invasion by the Normans, under Godfrey, a celebrated warrior, who by their adventurous and maritime skill, threatened all the west of Europe with desolation. A temporary truce was settled, and Charles made use of this time to settle the final distribution of his empire. Aquitaine and Gascony, with the Spanish provinces were assigned to his son Lewis. Pepin the greatest part of Bavaria, with the kingdom of the Grifons. Charles the eldest had Aufrasia and Thuringia. This division was sanctioned by the pope; but it had scarce taken effect when the princes were obliged to defend their dominions by force of arms. Lewis and Charles were attacked by the Saracens, and the latter by the Sclavonians. All these enemies were repulsed; but Charles was once more called to exert his martial exertions, by Godfrey, the Norman. Charles sent a message of defiance, which was turned: but the king, by artfully stirring divisions among the northern powers, for a while the threatened danger; these being repulsed, the Normans renewed their depredations and Charles was obliged to face them in person. But Godfrey being assassinated by a private enemy, the Normans retreated, and the dominions of Charles were freed from these invaders. The latter days of Charles were embittered by domestic misfortunes. His favourite daughter died, as did also Pepin king of Italy; and after them, his eldest son Charles. He was finally associated his only surviving son Louis for the government; at Aix la-Chapelle. Charles himself survived this transaction only a few days. He died on the 27th of Jan 814; in the 46th of his age, and 47th of his reign. By the French monarchy was raised to its utmost extent. He had added Aquitaine to the territories of his ancestors; he had confined the independent Britanny to the shores of the ocean, and made them tributaries. He had reduced all the kingdoms of Spain from the Pyrenees to the Ebro; Roussillon, Navarre, Arragon, and Catalonia; he had seized Italy from the Alps to the borders of the Adriatic; but the duchy of Beneventum, or the present kingdom of Naples, escaped the yoke. He also added the whole of Germany, Pannonia; so that the French now had the possession of all the country from E. to W. from the Ebro in Spain to the Vistula; and from the duchy of Beneventum to the Elbe. The boundary between Germany and Denmark these achievements Charles had been attended with horrid misfortunes; for which his only son was the barbarity of the people with whom he had to deal, upon whom no mild measures were likely to have had any effect. His schools showed his inclination to govern and to advance their civilization; yet in his private conduct bordered on cru-

14. FRANCE, HISTORY OF, FROM CHARLEMAGNE'S DEPARTURE TO THE PRESENT. Charles, now Charlemagne, retained the imperial dignity in the western part of the empire, and the whole power of the East was exercised by marrying Louis the 1st, 22

of the fate of the sons of Carloman. His son Lewis, was excellent: exhorting his people as his children; to be good in his administration, but firm in executing; to reward merit; to promote his nobles, and choose his ministers deliberately, to remove them capriciously.

FRANCE, HISTORY OF, FROM CHARLES'S DEATH, TO THAT OF LEWIS I, AND DIVISION OF THE EMPIRE. All Charles's maxims were not sufficient to enable Lewis his dominions so extensive, and people so great as he had to deal with. At the time of his death, he was about 36 years of age, and married Ermengarde, daughter of the King of the diocese of Liege, by whom he had 3 sons, Lothaire, Pepin, and Lewis. Lothaire the eldest, was associated with himself in the empire, and the two youngest were entrusted with the governments of Aquitain and Bavaria. Lothaire proved unfaithful to their father, and enemies to one another. The death of Lewis, and the marriage of the emperor with a princess of Bavaria, artificial but accidental, proved the first source of calamity to the empire. In 823, Charles, the emperor's son, was born; and his pretensions became more fatal to the public tranquillity, than the rest. Various parts of the Imperial empire were likewise assailed by foreign enemies: Brittany and Navarre revolted; the Moravians and Hungarians; while the ambition of Judith the Empress, among the brothers themselves, was not had been appointed sovereign of the East Germany bounded by the Danube, the Neckar, and the Rhine; the Gothons and Burgundians, comprising the West and the Swiss cantons; but this was the golden age. Pepin and Lewis joined with the united forces of Aquitain and Burgundy, the Imperial forces defeated their king and banished the malcontents. The emperor took possession, and the empress retired to Italy. Lothaire, the eldest of the princes, adherent were obliged to submit, receive the emperor in his possession, but his reign terminated with remote. Dreadful revolts, and threatened by the church, he threw himself into the sea, begged pardon, and to distinguish what he had unjustly usurped, Lewis was re-established by the diet of Speyer which had met to depose him. This was to recall his empire; but this man, already now persecuted Lothaire to such a degree, he was obliged to join the brothers and terms against their father. The old emperor sought to check this rebellion by the grant of Aquitain to Pepin, and the youngest son Charles, then only six years of age, but pope Gregory IV, conferred the crown on Lothaire, opposing the grant of Aquitain to Pepin, and the youngest son Charles. The unnatural behaviour of Lewis, however, once more excited the complaints of his subjects. Dreux, Bp. of Metz, was first with Lewis king of Bavaria to depose his father and sovereign. In this the Bavarian monarch was joined by

the French and Saxons; so that the aged emperor was once more restored, the empress released from her nunnery, and Charles from his prison, in 833. But the ambition of Judith soon set matters once more in a flame. She persuaded the emperor to invest her son Charles with Neustria, besides the dominions formerly assigned him. This produced great discontents in Lothaire and Pepin; but their power was now too much broken to accomplish any thing by force. Pepin's death produced a new division of the empire. The claims of young Pepin and Charles his sons were disregarded, and his French dominions divided between the two brothers, Charles and Lothaire, the latter becoming guardian to his infant nephew. This enraged Lewis of Bavaria to such a degree, that he again revolted; but the unexpected appearance of the Saxons obliged him to submit. Still, however, the ambition of the empress kept matters in a ferment. The emperor died, in 841, after a most unfortunate reign of 27 years. Lewis I. was eminent for the mildness of his manners and peaceful virtues, which procured him the title of *Le Debonnaire*, or the gentle: but such was the turbulence and excessive barbarity of the age in which he lived, that all his virtues, instead of procuring him respect and esteem, produced only contempt and rebellion from those, whom duty and justice should have taught submission and obedience. The emperor's death produced a civil war among his sons. The united forces of Lothaire and Pepin were defeated by those of Charles and Lewis on the plains of Fontenoy, where 70,000 Franks perished, in 842. The conquerors having retired, each into their own dominions, Lothaire found means not only to recruit his troops, but to persuade the other two princes to vigorously, that they were glad to consent to a new partition of the empire. By this partition, Lothaire retained Burgundy, with the tract of country between the Rhine and Reine, and between the Moselle and Scheldt. Charles had Aquitain, with the country between the Loire and the Meuse, while Lewis had Bavaria, with the rest of Germany, from whence he was named *Le Roi des Germains*. By this partition, Germany and France were divided, to us never to be reunited. That part of France called to Lothaire, was more properly called *Lotharing*, now corrupted to *Lorraine*. The severity, however, which he had punished at the expense of every kind of duty, and to which he had attached himself, but little respected. Displeas'd with the emperor and his conduct by his situation, he found it not necessary to give up his kingdom, but he did not long stay in it, he sent Lewis the younger to his Kingdom, Lothaire with the eldest son Pepin, and to his youngest son Charles, furnished the *Bell. Bretonne*, Burgundy, and part of France, to his youngest son Charles, and properly the king of France.

THE HISTORY OF CHARLES THE GREAT, EMPEROR OF THE ROMANS, TO HIS DEATH. From 843 to 877 his province had been divided by the annual depredations of the Normans, a man who Charles was said to procure peace at a water engine *that might have ended on a field of war.* Brittany had also revolted; and then he returned by the appearance of Charles himself, and a

powerful army, he was no sooner embarrassed by the Normans, than they threw off the yoke, and under the conduct of their duke Lewis subdued the neighbouring country of Rennes; after which Lewis assumed the title of king, which he transmitted to his son Henspee. He subdued Charles; and his subjects, despising the imbecility of their king, put themselves under the protection of Lewis the German; who, taking the opportunity of Charles's absence repelling the Danes, marched with a formidable army into France, and was solemnly crowned by the Abp. of Sens in 857. Too confident, as it is established on the throne, he was persuaded to dismiss his German forces; when Charles marched against him with an army, and Lewis abandoned his new kingdom as easily as he had obtained it. The kingdom of Charles, however, continued in a very tottering situation. The Normans harassed him in one quarter, and the Bretons in another. He marched against the latter in 856; but was totally defeated after an engagement which had lasted two days. This was chiefly owing to a noted warrior named *Robert le Fort, or the Strong*, who commanded the Bretons; but Charles yielded him over, by giving him the title of Duke of France, including the country between the Seine and the Loire. The abilities of Robert supported Charles for a little; but his difficulties returned on his death; he was killed in repelling the Danes. The death of the king of Lorrain in 859 made some reparation; the cities of Lyons, Vienne, Toul, Belouan, Verdun, Cambrai, Viviers, and Uz. with the territories of Hainault, Zealand, and Holland, came to his share. Cologne, Utrecht, Treves, Mentz, Straßburg, and the rest of Lothaire's territories, were assigned to Lewis the German. Meanwhile the Normans continued their incursions, so that Solomon King of Brittany joined with Charles, to repel the common enemy: an event which ruined their enterprise, and they were glad to relinquish all the spoil they had taken. Charles delivered from a formidable enemy, aspired to the imperial crown, vacant by the death of Lewis. It belonged of right to Lewis the German; but Charles, having quickly assembled a powerful army, marched into Italy before Lewis could be apprised; and being favourably received at Rome, the Imperial crown was put upon his head by Pope Adrian II, in 873. Lewis discharged his duty on the defenceless country of Champagne; and though Charles obliged him to retire, yet he continued his preparations with such vigour, that Charles would probably have found him a very formidable adversary; but he died in 877. Charles no sooner heard of his brother's decease, than he invaded Franconia, Thuringia, and Lower Lorrain, which belonged to his son Lewis. He was unsuccessful; and though superior in numbers, was defeated with great slaughter; and was at same time informed that the Normans had invaded his own territories, and taken possession of Rouen. These disasters affected him so that he fell dangerously ill, from which he was scarce recovered, when he was called into Italy to assist the Pope against the *Baracens*, aided by the duke of Paveventum and the *Greek emperor*. Charles passed into Italy with *but a few followers; but when he came to Pavia,*

where the Pope had appointed to meet was informed that Carloman king of Bavaria son of Lewis the German, had entered I a powerful army, and claimed the imp in his father's right. Charles prepared to meet him; but his generals conspired against I the soldiers refused to pass the Alps. Charles obliged to retire to France, while C dreading him, prepared to return to C This was the last of Charles's enterpri journey brought on a return of his d which was rendered fatal through the tre a Jewish physician named Zedechias, w uttered poison to him. He expired in a cottage upon mount Cenis, in the 34th his age, and 38th of his reign.

(19.) FRANCE, HISTORY OF, FROM C II'S DEATH, TO THE DEPOSITION OF C III. The ambition of Charles had occasioned much distress both to himself and his son Lewis II, surnamed, *the Stammerer*, of a quite different disposition; but his administration was ill calculated to retrieve. He died on the 10th of April 879, a queen Adelaide pregnant; who soon delivered of a son, named *Charles*. His death followed an interregnum; during which a faction was formed in favour of the princes, sons to Lewis the brother of C II. It proved abortive; and the two sons of king, Lewis III. and Carloman, were kings of France. Another kingdom was then erected by an assembly of the states, of Provence, which consisted of the count called *Lyonnais, Savoy, Dauphiny, Franche* and part of Burgundy; and this kingdom given to Duke Boïon, brother-in-law to C II. In 883, they both died; Lewis, by a wound, and Carloman of a wound. This produced an interregnum; which ended with the death of Charles III, surnamed *the Good*, in Germany. His reign was very unfortunate; the Normans whom he had allowed to settle in the land, sailed up the Seine with a fleet of 2000, and laid siege to Paris. Charles, who had force to oppose them, prevailed on them to retire by a large sum of money. But as he could not advance the money at once, they remained all the winter; and in return, plundered the country, amassing vast wealth besides which Charles had promised. Charles fled to Germany, in a very declining state. Here he quarrelled with his empress; and abandoned by all his friends, he was reduced to such distress, that he would have had bread to eat, had not he been supplied by the Abp. of Mentz, out of charity.

(20.) FRANCE, HISTORY OF, FROM C III'S DEPOSITION, TO THE EXCLUSION OF THE CARLOVINGIAN RACE. Eudes count of Flanders chosen king by the nobility during the minority of Charles IV. surnamed *the Simple*, the son of C II, by Adelaide. He defeated the Normans, and repressed the power of the nobility; but a faction was formed in favour of Charles V. was sent for, with his mother, from Germany. Eudes with uncommon moderation, distinguished with great bravery, peaceably re-

greatest part of the kingdom to him, and consented to do homage for the rest. He died soon after this agreement, in 973. During the reign of Charles IV, the French Government declined. By introducing fiefs, those noblemen who had got possession of governments, confined to them and their heirs for ever, became in a manner independent sovereigns: and as they had others under them, and they again others under them, and even these had their vassals a vast number of intemporal little tyrannies were thus erected. The Normans, too, ravaged the country in the most unmerciful manner. At last Charles ceded to Rollo, the captain of these barbarians, the duchy of Normandy; who thereupon became Christian, changed his name to Robert, and that of the duchy to NORMANDY. During the remainder of the reign of Charles the Simple, the usurpations of Robert, grandfather of Hugh Capet, and of Rodolph D. of Burgundy, and the whole reigns of Lewis IV. furnished the *Saxons*, Lothaire, and Lewis V. the poster of the Carolingian race continually declined; till at last they were supplanted by Hugh Capet, who had been created duke of France by Lothaire. This revolution happened in 987, and was brought about much in the same manner as the former one had been by Pepin.

(11) FRANCE, HISTORY OF, FROM HUGH CAPE'S ASSUMPTION OF THE CROWN, TO HENRY I'S DEATH. Hugh Capet did not assume the crown till the death of Lewis V, when he was preferred by the voice of the nation, to his rival Charles D. of Lorraine. He proved an active and prudent monarch, and very fit to keep his tumultuous subjects in awe. He died on the 24th Oct. 996, leaving his dominions in perfect quiet to his son Robert. The new king inherited the good qualities of his father. In his reign the kingdom was enlarged by the death of Henry duke of Burgundy, the king's uncle, whom he succeeded. This new territory, however, occasioned a war of several years continuance, against some pretenders to that duchy; and had it not been for the assistance of the D. of Normandy, it is doubtful whether the king would have succeeded.—As Robert preferred peace and tranquillity to extended dominions with a precarious tenure, he refused Italy and the imperial crown, both which were offered him. He died on the 20th July, 1030, having reigned 33 years, and lived 60. He was succeeded by his son Henry I. who met with great opposition from his mother. She had always hated him; and preferred his younger brother Robert, in whose favour she now raised an insurrection. By the assistance of Robert duke of Normandy, however, Henry overcame all his enemies, and established himself on the throne. In return he supported William, Robert's natural son, afterwards king of England, in the duchy of Normandy: but afterwards, he not only supported the pretenders to the duchy of Normandy secretly, but invaded that country himself. Proving unsuccessful, he was obliged to make peace: but no sincere reconciliation ever followed; the treaty, therefore, was quickly broken; and Henry once more invaded Normandy with two armies. The first was harassed by continual skirmishes, and the last totally defeated; after which Henry was obliged

to agree to the duke's terms; but the rancour between them never ceased, and was the cause of that enmity, which for many years produced perpetual quarrels between France and the Norman kings in England. Henry died in 1065, as was suspected, by poison.

(12) FRANCE, HISTORY OF, FROM HENRY I'S DEATH, TO THAT OF PHILIP I. Henry was succeeded by his eldest son Philip, only 7 years of age. Baldwin earl of Flanders, his guardian, died in 1066, about the time that William of Normandy conquered England. After his death, Philip began to show a very sincere, haughty, and oppressive disposition. He engaged in a war with William the Conqueror, and supported his son Robert in his rebellion against him: (see ENGLAND, § 19.) and after William's death he assisted Robert's brothers against him; by which he was forced to consent to a partition of his dominions. In 1092, Philip procured a divorce from Bertha, and proposed marriage to Emma, daughter to Roger count of Calabria. The treaty was concluded; and the princess sent over, with much treasure in jewels, and ready money: but the king retained her fortune, dismissed the princess, and carried off the princess of Anjou, one of the handsomest women in France, from her husband. He procured a divorce between her and her husband, and a Norman bishop solemnized his own marriage with her. These transactions were so scandalous, that pope Urban II, in a council held at Autun, in 1094, excommunicated Philip, in case he would not part with the countess. He professed repentance and was absolved, a 2d and a 3d time, always returning to the countess when the censure was taken off; by which conduct he became despicable; although too many of the nobility followed his example, but at the same time despised his authority; not only making war upon each other, but robbing his subjects with impunity. In 1110, Philip prevailed on the court of Rome to have his affair revised in an assembly at Poitiers; where, in spite of his utmost efforts, sentence of excommunication was a 4th time pronounced against him. Notwithstanding all these sentences, as Q. Bertha was dead, and the count of Anjou, bribed by a large sum of money, assisted in procuring a dispensation, the countess was proclaimed queen of France. But though their domestic affairs were now quieted, his negligence had thrown the affairs of the nation into great disorder. He therefore associated in the government his eldest son Lewis. This prince was the very reverse of his father; and by his activity and resolution, he reduced the rebellious nobility to submission, and saved the state from being utterly subverted. For these services the queen became so jealous of his popularity, that he found it necessary to retire to England; where he was graciously received by Henry I. He had not been long at court, before Henry received a letter from Philip, requesting him closely to confine his son, or even *dispute him!* Henry, however, instead of complying with this infamous request, showed the letter to Lewis, and sent him home with all imaginable marks of respect. On his return, he demanded justice; but the queen caused poison to be given him. A stranger, however, saved his life; but a palene

remained in his face ever afterwards, though he grew so fat that he was surnamed *the Gross*. He determined to revenge his quarrel by force; but his father having caused the queen to make the most humble submissions to him, he was appeased. Philip died in 1108, and was succeeded by his son Lewis VI.

(23.) FRANCE, HISTORY OF, FROM LEWIS VI'S ACCESSION, TO THE DEATH OF LEWIS VII. The first years of Lewis's reign were disturbed by insurrections of his lords, which were secretly fomented by Henry I. of England, that, by weakening France, Normandy might be the more secure. This quickly brought on a war; in which Henry was defeated, and his son William obliged to do homage to Lewis for Normandy. But Lewis not long after espoused the cause of William the son of Robert duke of Normandy, whom Henry had unjustly deprived of that duchy. This brought on a new war, in which Lewis, being defeated, was obliged to make a short-lived peace upon any terms. Lewis soon renewed his intrigues in favour of William, and formed a confederacy against Henry; which the latter not only dissipated, but prevailed upon the emperor Henry V. to invade France with all his forces on one side, while he was to attack it on the other. But Lewis having collected an army of 200,000 men, both thought proper to desist. He would have marched into Normandy, but his great vassals refused; saying that they had assembled to defend France from a foreign prince, not to enlarge his power. This was followed by a peace with Henry; which, as both monarchs had now seen the extent of each other's power, was made on pretty equal terms, and kept during the life of Lewis, who died in 1137, and was succeeded by his son Lewis VII. The young king was not endowed with any of those qualities which constitute a great monarch. In compliance with the superstition of the age, he undertook an expedition to the Holy Land, from whence he returned without glory. His queen Eleanor accompanied him; but he was so much offended with her gallantries there, as well as afterwards, that he divorced her, and returned the duchy of Guienne, her portion. Six weeks after this she married Henry duke of Normandy, count of Anjou and Maine, and heir apparent to the crown of England. This marriage was a very great mortification to Lewis; and procured him the surname of *the Young*, on account of his jealousy. When Henry II. ascended the throne of England, some wars were carried on between him and Lewis, with little advantage on either side. At last, however, a reconciliation took place; and Lewis took a voyage to England, to visit the shrine of St Thomas of Canterbury. On his return he was struck with an apoplexy; which, though he partially recovered, rendered his right side paralytic; and having languished for about a year, he died on the 17th Sept. 1180, leaving the kingdom to his son Philip II.

(24.) FRANCE, HISTORY OF, FROM LEWIS VII'S DEATH, TO THAT OF PHILIP II. Philip II. formed *The Gift of God*, *The Magnanimous*, and *The Conqueror*, during his life, and *Augustus* after his death, is reckoned one of the greatest princes that ever sat on the throne of France. It is not

clear that these titles were well founded. Early in his reign he was opposed by a strong faction excited by his mother. Them he repressed with a vigour which did him honour; but his taking part with the children of Henry II. of England, their unnatural contests, and his treacherous combination with John to seize his brother's kingdom when he was detained in prison by the emperor Germany, are indelible stains on his character, and for ever exclude him from the title of *Magnanimous*. As to military skill and personal valour, he was evidently inferior to Richard I. of England; and can his recovering of the provinces held by the English in France, from such a dastardly prince John, intitle him to the epithet of *Conqueror*. In politics he was evidently the dupe of the pope. An account of these transactions, which are the principal ones of this reign, is given under ENGLAND, § 23—26. Philip II. died in 1223.

(25.) FRANCE, HISTORY OF, FROM LEWIS VII'S ACCESSION TO THE DEATH OF ST LEWIS. Lewis VIII. succeeded his father Philip II. in 1223; and had been crowned king of England, while Dauphin, in 1216. See ENGLAND, § 25, 26. His reign in France was short, being only 3 years. He besieged Avignon with 50,000 men; lost his brave troops; and dying in 1226, was succeeded by Lewis IX, afterwards surnamed *St Louis*. This prince possessed many good qualities, but was deeply tinctured with superstition. This induced him to engage in two expeditions. The first was against the Saracens in Egypt, in which he was taken prisoner and cruelly treated; but ransomed by paying a million of pieces of gold, and surrendering Damietta. He no sooner regained his liberty, than entered on a new expedition into Syria; but for this he was soon obliged to return, by the death of his mother, whom he had appointed regent and who had managed the national affairs with great prudence. He found many disorders on his return, which he set himself to reform. Having succeeded in this, he yielded to Henry III. of England, the Limousin, Querci, Perigord, and for other places; in consideration of Henry and his son prince Edward renouncing all pretensions to Normandy, and the other provinces of France which the English had formerly possessed. The reputation of Lewis for justice was so great, that the barons of England and king Henry III. made him umpire in their differences. But though he just, his decision had no good effect. At last, having settled every thing in his kingdom, he set out on another expedition for Africa; where he died of the plague, on the 25th Aug. 1270.

(26.) FRANCE, HISTORY OF, FROM LEWIS IX'S DEATH, TO THAT OF PHILIP III. Philip III, surnamed *the Simple*, notwithstanding his father's misfortunes, continued the war against the Infidels with great vigour; and by the assistance of his uncle Charles king of Sicily, he brought the war to a fortunate conclusion. The Saracens were defeated in two engagements, and the king of Tunis was obliged to sue for peace; offering to double the tribute he formerly paid the crown of Sicily; reimburse the expenses of the war; and to permit Christianity to be freely propagated throughout his dominions. The two princes then set sail for Europe; but the seeds of the distemper which he

infected

infected the army in Africa, not being eradicated, broke forth on their arrival in Sicily, and raged with great violence. The king's brother John, his queen Isabella, with the king and queen of Navarre, the count and countess of Poitiers, and many others, perished by this dreadful malady. On his return, Philip took possession of Provence and Toulouse; married his 2d son, then very young, to the only daughter of the king of Navarre; while he himself espoused Mary, daughter of the duke of Brabant. He cultivated the friendship of Edward I. of England, and entered into a war with Spain. But his attention was quickly called off by the death of his eldest son Lewis, in 1275, at the age of 12. The young queen, Mary, was accused by one La Brosse, of having poisoned him. Philip gave some credit to this accusation; but, applying to an inspired nun, her answer proved fatal to La Brosse. Mary, cleared by this pretended prophesy, La Brosse was accused of treason, and condemned. The manner of his trial and execution, however, were such, that the tide of popular favour was turned; La Brosse was thought innocent, and the king and queen strongly suspected. At this time the Sicilians, over whom Charles of Anjou ruled, instigated by John of Procida, a noble exile, resolved to break the French yoke by a general massacre. This was accordingly put in execution; and the French, to the number of 8000, murdered in one night. Charles, sensibly affected by this, laid siege to Messina, and sailed directly to Marseilles, where he obtained a powerful reinforcement. In his absence his son, to whom he had entrusted the siege, having nobly engaged with the Spanish fleet, was defeated and taken prisoner. His father died of grief, and Sicily was attached to the house of Arragon. The misfortunes of Charles were followed by others equally great to Philip himself. Pope Martin IV. in his zeal for the duke of Anjou, had excommunicated Peter king of Arragon, and bestowed his kingdom on Charles of Valois, a younger son of the king of France. In defending himself against this unjust sentence, Peter was mortally wounded; but the defeat of the French fleet so much affected Philip, that he fell sick. His disease, aided by the heat of the climate, fatigue, grief and infirmities, proved fatal. He died at Burgundy in the 41st year of his age, and 16th of his reign.

IN FRANCE, HISTORY OF, FROM PHILIP IV's ACCESSION TO HIS DEATH. By the death of Philip the Hardy the French crown devolved on his 2d son, called also Philip, from the beauty of his person, surnamed *the Fair*; who had espoused the princess of Navarre, and was then in his 17th year. By marrying this princess he had obtained the counties of Champagne and Brie; yet with all this additional power he was unable to support the war in which his predecessor had engaged. For this reason he abandoned the interest of the Infants de la Cerda, and settled the differences with Castile. This was effected by Edward I. of England; by whose mediation also Charles the Lame, son to the duke of Anjou, was released from his captivity; Edward himself paying part of his ransom. On this Charles renounced his claim to Sicily; and Philip promised that his

kinsman, Philip of Valois, should renounce pretensions to the crown of Arragon. In return the latter obtained the eldest daughter of Charles with Anjou and Maine as a dowry. This tranquillity, however, was soon interrupted by differences with Edward the promoter of it, pope Boniface VIII. and Guy de Dampier, count of Flanders. That with England was accidental. A Norman and an English vessel having met off the coast of Bayonne, and both needing water, the crew quarrelled. A Norman was killed by his own weapon, with which he assaulted an Englishman; the Normans complained to Philip; who, instantly allowed them to redress their supposed injury. On this a piratical war commenced, in which the sovereigns for some time took no active part though other nations interfered; the Irish and Dutch seamen siding with the English, and those of Flanders and Genoa with the French. At last the affair became so serious, that in one engagement 15,000 French perished. Philip, alarmed, summoned the king of England as his vassal to attend; and, on his refusal, declared his estates France forfeited. After many negotiations, Philip declared he would be satisfied with the nomination of Guienne, which he conveyed instantly to the king of England, as soon as it should be put into his hands. Edward accepted, but if sooner had Philip obtained possession, than he possessed in the forfeiture; this treachery instantly produced a war. Edward concluded a treaty with the emperor Adolphus, together with the count of Brittany, Holland, Bar, Juliers, Gueldres, and Flanders; while Philip league'd with John Balliol of Scotland. During this war the French made descent on the coast of England, and destroyed Dover; while Edward, in revenge, landed in Guienne with an army of 30,000 men. But being pretty equally matched, a suspension of arms for two years was agreed to; during which a peace was finally concluded, by pope Boniface VII. Guienne was restored; Edward espoused Margaret the sister of Philip; while his daughter Isabel was given to the prince of Wales. Philip and Edward behaved to their allies with equal perfidy. Balliol was abandoned to the resentment of Edward; while Guy, earl of Flanders, was left exposed to the resentment of Philip. This reconciliation was soon followed by a difference with pope Boniface, the mediator between them. They had inserted in their reference, that he was chosen as a private man, and not as Pope. The haughty pontiff soon showed that he was not to be treated so, and a contest with Philip quickly ensued. Boniface forbid the clergy to grant the king any subsidies without the consent of the Holy See. Philip in revenge prohibited them from sending monies out of the kingdom without his leave; and protecting the Colonnas, the implacable enemies of Boniface. This irritated his holiness that he summoned the clergy of France to Rome; while Philip retaliated, by seizing the temporalities those who obeyed the summons, and recalling his brother Charles of Valois, the pope's general. He also dispatched two cardinals, to levy such a body of troops as might execute his hostile purposes. With these he suddenly invested the pope in Avignon; and while the bull was preparing for

excommunication of Philip, the Pope himself was taken prisoner by Philip's troops. Though Boniface had been delivered up by the treachery of the people of Anagnina, yet he was no sooner a prisoner and in distress, than they rescued him and conveyed him to Rome, where he soon after died. His successor Benedict X. revoked the excommunication, and attempted to regain Philip by gentle means: but, before this could be effected, he died, not without suspicion of poison. After his decease Philip offered to procure the papal chair for Bertrand archbishop of Bourdeaux, if he would condemn the memory of Boniface, restore the Colonnes which had been forfeited, allow him, for five years, the tenths of the clergy of France, and comply with a request which at that time it was not proper to divulge. Bertrand, on these terms, ascended the papal throne by the name of *Clement V*, but was nearly killed returning from the cathedral of Lyons, by the falling of a wall; by which accident the duke of Brittany was killed, and the king and count of Valois considerably bruised. The new pope resided at Avignon, where he complied with all the conditions, except as to the conduct of Boniface, which he refused. That which Philip had at first concealed, was discovered by the death of the emperor Albert of Austria; after which event he desired Clement to assist him in placing his brother Charles of Valois on the Imperial throne. But his holiness, apprehensive of danger, urged the diet instantly to elect Henry of Luxemburg. The election was over before Philip arrived at Avignon; and the only consolation he could obtain was the possession of Lyons, which had hitherto maintained an independency under its own archbishop. Mean time Guy, E. of Flanders, abandoned by Edward of England, was obliged to throw himself on the mercy of the French monarch, who had sent his brother, Charles of Valois, with a powerful army to invade his dominions. From the latter indeed he had obtained a promise, that if he could not, within a year, compose the differences between him and Philip, he should be at liberty to retire, and pursue what measures he pleased. But Philip detained him, with two of his sons, in close confinement, while he himself entering Flanders was every where received as sovereign; and at his departure appointed John de Chatillon, a relation of the queen to govern those territories. The new governor repaired the fortifications, but being of a very tyrannical disposition, and the times not allowing his master to keep regular garrisons, an insurrection took place. This would have been effectually quelled by the magistrates, had not Chatillon unluckily entered Bruges, and publicly displayed two hogheads of ropes, which he threatened to employ in the execution of the inhabitants. On this they flew to arms, and massacred 1500 French; Chatillon escaped by swimming over the town ditch. The insurgents, soon amounting to an army of 60,000 men, besieged Courtray. Here they were rashly attacked by count Artois, who was cut off with 20,000 of his troops. Philip determined on revenge; tho' at the expense of debasing the coin of the kingdom. But this enabled him to enter Flanders with such force as would probably have subdued the whole country, had not Edward artfully

communicated to the queen of France, as a feigned correspondence between the French nobility and the court of Rome; by which intelligence Philip was induced to abandon the enterprise. The war continued, but Philip was finally defeated by the Flemings; and the only compensation Philip obtained was Courtray. The next remarkable transaction was the expulsion of the Templars, who enjoyed immense possessions in France. Their estates were confiscated and upwards of 50 of them were put to death. The grand master with three of his principal officers, were killed by a slow fire. All these unfortunate knights were accused of the most gross sensualities. Particulars were said to be revealed, by two criminals who were pardoned for the discovery they made; which were confirmed by their confession. But this confession was afterwardstracted, as being extorted; and those who still maintained their purity to the last: On the whole, it was believed that Philip consulted avarice in this cruel execution. His latter years were embittered by domestic misfortunes. His daughters-in-law, Margaret daughter of the king of Navarre and Jean and Blanch of the count of Burgundy the wives of Lewis, Philip, and Charles, were charged with infidelity. After a severe trial Margaret and Blanch were condemned to perpetual imprisonment; and Margaret was afterwards strangled by order of her husband Lewis. His other paramours, Philip and Walter de Launay, two others, were stayed alive, and hung on a gibbet with an usher, their confidant. The uneasiness which Philip suffered on this account is supposed to have hastened his death, in 1314, in the 50th year of his age, and 30th of his reign.

(28.) FRANCE, HISTORY OF, FROM PHILIP IV'S DEATH, TO THAT OF PHILIP V, AND THE ACCESSION OF CHARLES IV. Lewis X, surnamed *Hautin*, or the *Boysen*, on account of his violent temper, found his treasury so exhausted that he was obliged to delay the ceremony of coronation with his queen Clemente, daughter of the king of Hungary. Finding the kingdom very distracted, he applied himself to appease his subjects, and conciliate their affection. In this he was assisted by his uncle Charles of Valois whom he at length deposed of the government of the kingdom. This regent, however, acted with such cruelty as is said to have proved fatal to himself; for having put to death a noble named *Enguerrand de Poitiers de Marigni*, who enjoyed the late king's confidence, this was so resented, that his friends were thought to administer poison to the king; who expired suddenly after drinking a glass of cold water, in the 26th year of his age, and 2d of his reign. On his death, Charles prepared to dispute the regency with his brothers. Philip count of Flanders, the eldest brother, was then at Rome assisting in the election of a new pope; but on his return the throne was assigned to him by the unanimous voice of the people. His prospects were clouded by the queen-dowager Clémence being delivered of a son, who was introduced among the king's France, under the name of *Jehan I*. His death lasted 3 weeks, or as Marcel says, in 8 days, before the throne to Philip V, who, on account

was surnamed the *Long*. His conduct superior to that of his predecessor, as he the Flemings, and compelled their sovereign to a peace. He summoned Edward king of England to do homage for his lands in France; but that monarch was in difficulties, which rendered the visit out, and sent excuses to Philip, which he refused. He sent an army into Italy to quiet the factions of the Guelphs and Ghibelines, which long filled that country with blood; but the event proved unfortunate, a contagious distemper swept off many thousands of the French. Superstition imputed this to a conspiracy with the Saracens to poison the king. A persecution instantly commenced against them, and great numbers of them were burnt; while the populace insulted their persons and plundered their houses without remorse. The remainder of Philip's reign was spent in regaining internal concerns of the kingdom. He died of a fever and dysentery in 1322, the 28th of April and 6th of his reign, and was succeeded by his son Charles IV. surnamed the *Fair*.

FRANCE, HISTORY OF, FROM PHILIP THE SIXTH TO THAT OF PHILIP VI. Charles settling some disputes with the duke of Burgundy, dissolved his marriage with Blanche, and married in prison, and espoused Mary sister of Henry VIII. emperor of Germany; his marriage had in view the imperial crown, which had been so long separated from France; and in 1325 the imperial crown was disputed between Lewis of Bavaria duke of Austria; the latter of whom had been prisoner in a battle with Lewis. But Lewis, who entertained an implacable hatred against Lewis, excommunicated him. The king then embarked in the same cause, with an alliance of Bavaria; while Frederic contended to acquish his claim to the empire which Lewis successfully maintained. Lewis, however, receiving his prisoner, and dismissing him, alarmed the pope and Leopold preserved their neutrality, while it was determined that a new election should be held, to transfer the crown to Charles. In pursuit of this scheme, the king of France set out for Germany with a splendid army; but soon found that the impossibility of accomplishing his wish, Leopold alone remained his friend; and even in law the king of Bohemia absented himself from the diet; while the death of the king put an end to all connections with that prince. On the decease of Mary, Charles espoused his daughter to the count of Evreux; and to avoid the danger of an infant succession, he contracted an alliance with Robert king of Scotland; that it was provided, that should either die without heir apparent, the states of the kingdom should elect the vacant throne, and the surviving king should assist with his whole power at the nomination. Charles died in the 24th year of his age, leaving his son Edward a regent; and as the succession depended on a regent, a regent was necessary. Two candidates instantly appeared, urging at the same

time their right to the crown as well as the regency. These were, Philip of Valois, cousin-german to the deceased king; and Edward III. king of England the nephew of Charles, who aspired to the throne in right of his mother. His pretensions were easily set aside, and Philip was confirmed regent: from which he soon after stepped into the throne, the queen being delivered of a daughter; from which he acquired the surname of the *Fortunate*. He summoned the English monarch to do homage for his possessions in France; and upon his not answering his summons, forfeited them, and seized his revenues. This induced Edward to cross the sea and pay homage; which Philip consented to receive, upon condition of a proper explanation being given; but as this was studiously delayed, after the return of the king of England, Guienne was again seized by the French monarch. Edward unwilling to lose his continental dominions, or involve himself in a war for the sake of a mere ceremony sent over a formal deed, acknowledging that he owed liege homage to France. Thus the flame was smothered for the time, and would perhaps have been entirely extinguished, but for the intrigues of Robert of Artois, brother-in-law to Philip VI. who had been expelled his country, and had taken refuge in England. By him he was persuaded to renew his pretensions to the crown of France, which of necessity produced a war. For some time, neither party made any open declaration of hostility; but each knew the other's designs. Philip, under pretence of taking the cross, made prodigious armaments, and formed alliances on every side; while Edward, resolving to renew his claim to the crown of France, projected the conquest of Scotland. In this, he failed; and Philip, to favour the Scots, with whom he was in alliance, suffered his subjects to make irruptions into Guienne. In 1337, the war broke out. Philip, having detached part of his fleet against the Infidels, employed the rest, chiefly Genoese vessels, against the English. The Flemings were courted by both. Lewis count of Flanders declared for Philip, but his subjects were more inclined to Edward. James Arteville a brewer, a valiant and artful man, governed them as if he had been their prince; and the English commencing determining him in favour of Edward, that prince, at his request, embarked for Stuyves with a numerous army. He arrived in 1338; and on his first landing, it was resolved that the German princes in alliance with him should attack Arras. But the Flemings, who were vassals of France, pretended scruples at invading their hegemony. To quiet these, Edward assumed the title of *King of France*; and by virtue of this right claimed their assistance to dethrone Philip of Valois as an usurper. This step, which he feared would beset jealousy, he could not take without consulting, and, from that time we may date that national animosity which the English have so long born to the French. A bold and rash attempt was made on the city of Cambrai; but it was soon repulsed upon by Robert of Artois, to raise the king's army to march into Brandy. This country he covered with an army of near 60,000 men, in May 1340. Philip appeared with an army of 100,000 men, and a

pected. But Edward was averse to engage against so great a superiority; and Philip thought it sufficient if he eluded the attacks of his enemy. The two armies faced each other for several days; mutual challenges were sent; and Edward at last retired into Flanders, and dispersed his army. Such was the fruitless conclusion of Edward's first expedition, which plunged him into difficulties. He had contracted near 300,000*l.* of debt; anticipated all his revenue; pawned every thing of value either of his own or his queen's; nay, he was obliged in some measure even to pawn himself to his creditors, by desiring their permission to go over to England to procure supply, and by promising to return in person if he did not remit their money. On his arrival in England, however, he procured a large supply, sufficient to make all the necessary preparations for a new invasion; and so certain were the English that France would now be conquered, that the parliament, before Edward's departure, protested that they owed him no obedience as king of France, but that the two kingdoms must remain for ever distinct and independent. Edward set out on his second expedition with a fleet of 240 vessels. Philip had prepared a fleet of 400 vessels, manned with 40,000 men; which he stationed off Sluys, to intercept him. The two fleets met on the 13th of June 1340; the English, with the wind of the evening, and the sun on their backs, began the action. It was fierce and bloody: The English archers, whose address was now much celebrated, galled the French; and when the ships grappled, the example of the king and nobility with him so animated the seamen and soldiers, that they everywhere maintained the superiority. The Flemings, observing the battle from the shore, sent a reinforcement to the English; which, coming unexpectedly, had a greater effect than in proportion to its power and numbers; 230 ships were taken, and 30,000 Frenchmen killed, with two admirals: the loss of the English was inconsiderable, compared to the importance of the victory. None of Philip's courtiers dared to inform him of the event; till his jester gave him a hint, by which he discovered the loss he had sustained. After this great victory, Edward landed, and laid siege to Tournay. Philip marched to its relief; and acted with so much caution, that Edward found himself in a manner blocked up in his camp; and the countess dowager of Hainault, sister to Philip, mother-in-law to Edward, and sister-in-law to Robert of Artois, coming out of a convent, interposed with so much spirit and address, that she effected a truce for one year, and might perhaps have brought about a peace had she survived. In 1341, however, Edward's ambition was once more excited by the count de Montfort, who had possessed himself of Brittany, an appanage to Edward to reward his services. This request entirely coincided with Edward's desires. Montfort was an active and valiant prince, and inclined to him by interest, and he had had an entrance into the heart of France. The English projects, however, were dashed by the opposition of Montfort; who, some being discovered, he was besieged in Nantz and taken. But *Jane of Flanders, his wife, soon made up for the*

loss of her husband; assembled the inhabitants of Rennes, where she then resided; and carrying infant son in her arms, deplored her misfortune and inspired the citizens with zeal for her cause. The inhabitants of Nantz instantly espoused her interests, and all the other fortresses of Brittain followed their example. Edward was intreated to send succours with all possible expedition to Hennebone, where she resolved to sustain the attacks of the enemy. Charles de Blois, Philip's general, anxious to make himself master of this important fortress, and still more to take the countess a prisoner, sat down before the place with a large army, and conducted the siege with indefatigable industry. The defence was less vigorous: several sallies were made by the garrison, in which the countess herself led on the assault. Observing one day that all the French had quitted the camp to join in a general sally, she sallied out at the head of 306 horse, set fire to the enemies tents, put their sutlers to the sword, and occasioned such an alarm, that the French desisted from the assault, to cut off her communication with the town. Thus intercepted, she retired to Auray, where she continued 5 or 6 days, then returning at the head of 500 horse, she found her way through the French camp, and joined her faithful citizens in triumph. But the besiegers had at length made several breaches in the walls; and it was thought that a general assault would be fatal. A capitulation was proposed, and a conference begun, when the countess, being informed of the approach of the English ships at sea, desisted from the negotiation. She immediately exclaimed that succours were arrived, and forbade any further capitulation. She was not disappointed; the fleet arrived a day or two of English gentlemen, with 6000 archers whom Edward had sent, and who had been detained by contrary winds. They were led to the harbour by Sir Walter Mauny, one of the most valiant commanders of his time. This reinforced the army, and served to keep up the declining spirits of the countess until the late truce was expired; when she was followed by a more considerable reinforcement under Robert of Artois, who made himself master of Vannes: but the Bretons soon recovered the city, and Robert was mortally wounded. Edward, eager to revenge his death, soon landed at Morbihan with an army of 12,000 men. At these he undertook at once the siege of Vannes, Nantz, and Rennes; but by dividing his forces he failed in all, and gave an opportunity to John, duke of Normandy, the king of France's cousin, to invade him in his camp. His provisions soon failed, and Edward, with all his valour, had he not, by artful negotiations, induced Philip to consent to a truce of 10 years. This was effected by the court of Rome, and the French monarch soon saw the partition of that court, and the imprudence of the step he had taken. Edward found a pretence to renege the truce, from the execution of some noble Bretons, who, he said, were partisans of Montfort, and chose to look upon this as an infraction of the treaty. Philip secured himself against the power of his rival by alliances, and by purchasing Montpellier from the king of Majorca: but it meantime, the English, commanded by the

by, had invaded Guienne, twice defeated  
 each army under Count de Lisle, and made  
 riev matters of many towns. Philip, by  
 exhausted state of his treasury, could not  
 any opposition. To recruit his finances,  
 a duty on salt; which nearly excited a re-  
 1. When these discontents were alluaged,  
 led an army of 100,000 men, whose courage  
 uted by the presence of the dukes of Nor-  
 y and Burgundy. The English general was  
 re compelled to stand upon the defensive.  
 fortres yielded after another, till at length  
 appeared but a total extinction of the  
 of England upon the continent. In this  
 00, Edward embarked, in 1345, at South-  
 on, on board a fleet of near 1000 sail. He  
 id with him the chief nobility of England,  
 usel left son the prince of Wales (the *Black*  
 ), a youth of about 15 years old, and alrea-  
 markable both for understanding and valour.  
 army consisted of 4500 men at arms, 10,000  
 ns, 10,000 Welsh infantry, and 6000 Irish;  
 hich he landed safely at La Hogue, a port in  
 ndy, which country he determined to make  
 out of the war. The intelligence of Edward's  
 ing, and the devastations made by his troops,  
 great universal consternation. The rich ci-  
 ties was taken and plundered; the villages  
 town, up to Paris, shared the same fate;  
 the French could only break down their  
 ge, to stop the invader's career. In the mean  
 a Philip had stationed his general, Godemar  
 Bre, with an army on the opposite side of the  
 00, over which Edward must pass; while he  
 left at the head of 120,000 fighting men, ad-  
 ed to give battle. Edward, thus exposed to  
 00, or being inclosed in an enemy's coun-  
 00, promised a reward to any that should inform  
 00, of the passage over the Somme. This was dis-  
 00, of a peasant, named *Cobin Lycaze*; and  
 00, and he got his whole army over the  
 when Philip appeared, in his rear. A bat-  
 00, in which the French were overthrown  
 00, great slaughter. See *CRESSY*. Edward  
 00, advised Calais, which was then defended by  
 de Vienne, an experienced commander, and  
 00, and with every thing necessary for defence.  
 00, at length taken, after a year's siege. See  
 00, 1358. From the beginning of this un-  
 00, Philip had invariably showed him-  
 00, self desirous of peace, and the victory of Cressy  
 00, did not make him more so. Edward also, not-  
 00, withstanding his necessities, was unable to support  
 00, any longer. The mediation of Rome  
 00, was readily accepted, and a truce for 3  
 00, years made. At the same time, Philip met  
 00, with recompense for the losses he had suf-  
 00, fered by the acquisition of Dauphiny. See  
 00, 1355. Soon after this, Philip was married  
 00, to the daughter of Philip count of Ev-  
 00, and Jane queen of Navarre; and his son  
 00, the count of Boulogne. But this do-  
 00, double treaty was soon interrupted by the death  
 00, of Philip, who expired in 1350, the 37th year  
 00, of his reign.

FRANCE, HISTORY OF, FROM PHILIP VI's  
 TO THE DEFEAT AND CAPTURE OF H.  
 THE BLACK PRINCE. On his death, his

eldest son John succeeded; but he very soon disga-  
 ted his nobility by an unseasonable act of severity.  
 Robert de Brienne, count of Eu and Guines, had  
 been taken prisoner at Caen; and under pretence  
 of negotiating his ransom, had passed several times  
 between France and England; but being accused  
 of a treasonable correspondence with Edward, he  
 was suddenly arrested, and beheaded, without any  
 trial. At his death it is said, that he confessed  
 his treason; but this has not been authenticated.  
 Having been countable of France, the badge of his  
 office was delivered to Charles de la Carda; but  
 he was equally unfortunate, being soon after as-  
 sassinated by Charles king of Navarre, surnamed  
*The Wicked*. This prince, celebrated for his per-  
 sonal qualifications, but detested for his crimes,  
 was John's son-in-law. He had demanded the  
 duchy of Angouleme of the king; but as the lat-  
 ter bestowed it upon Carda, he had taken this  
 method of revenging himself. John did not fail  
 to show a proper resentment; but such was the  
 weakness of his government, that the king of Na-  
 varre let him at defiance, and would not even ask  
 pardon, until John had sent him his 2d son as an  
 hostage for his personal security. But the king of  
 Navarre even aspired to the crown of France it-  
 self; pretending a right from his mother, being  
 grandson by the female side of Louis X. But his  
 more immediate demands were Champagne and  
 Brie. John however bestowed Normandy on his  
 eldest son Charles; and commanded him to seize  
 the estates of the king of Navarre. On this the  
 latter soon appeared at Paris; and John was ob-  
 liged to appease his murmurs at the expence of  
 100,000 crowns. All this time the truce with Eng-  
 land had been ill observed on both sides; the  
 French had seized the port of St Jean d'Angeli;  
 and the English the town of Guisars. The rival  
 houses of Montfort and Blois still continued their  
 animosities; while Edward still threatened war.  
 The king of Navarre continued his intrigues; and  
 even the dauphin was drawn into a confederacy  
 against his father. John, however, being inform-  
 ed, found means to defeat them effectually. The  
 dauphin was reclaimed, by shewing him the dis-  
 advantages which must accrue to himself from the  
 connections he had formed. The king of Navarre  
 was invited, with his principal adherents, to an  
 entertainment, where they were arrested; the  
 former sent prisoner to Chateau Gaillard, and feve-  
 ral of the most obnoxious of the latter put to  
 death. The rest of the conspirators, not dismay-  
 ed by this check, immediately appeared in open  
 rebellion; and unable, without assistance to gain  
 their point, they invited over Edward from Eng-  
 land. That enterprising monarch had never lost  
 sight of his original object; and on the expiration  
 of the truce had sent his son, Edward the *Black*  
*Prince*, with a fleet towards the coast of France.  
 With this fleet the prince had entered the Gir-  
 00, 00, and burnt the towns and villages of Languedoc,  
 and retired with the plunder into the country of  
 Guienne. Edward himself, who had likewise  
 passed over to the continent, waited the country  
 at 120 miles St Omer; but the French king, deter-  
 mined to avoid a battle, prohibited his general,  
 the countable of Bourbon, from engaging, though  
 his army was much superior to that of the prince

of Wales. With the flower of his troops, however, he pursued Edward from St Omer to Hesdin, where he desired him to a pitched battle; but the latter disregarding his bravadoes, marched to Calais, and embarked for England. After his departure, John assembled the states of Paris, where he showed to fully the necessity of assisting him in the defence of the kingdom; that they voted him an army of 30,000 men during the war. To supply other exigencies they revived the duty on salt, and added other imposts; but at the same time appointed a committee to take care that the money was solely appropriated to the public service. John's satisfaction from these grants, and the suppression of some disturbances which happened about this time, was soon overcast by the news, that the Black Prince had marched with an army of 12,000 men from Bourdeaux; and, after ravaging the Agenois, Quercy, and the Limousin, had entered Berry. Young Edward had penetrated into the heart of France with this handful of forces, in hopes of joining the duke of Lancaster in Guienne. But he soon found that this was impracticable: the country before him was too well guarded to permit his advancing further; and all the bridges behind were broken down, which prevented a retreat. In this embarrassment his perplexity was increased, on learning that John was actually at the head of 60,000 men to intercept him. He at first thought of retreating: but finding that impossible, he determined calmly to await the approach of the enemy; and notwithstanding the disparity of forces, to hazard a battle. It was at *Maupey*, near Poitiers, that the armies came in sight. John might easily have starved the English into his own terms; but such was the impatient valour of the French nobility, and their certainty of success, that it might have been equally fatal to attempt repressing their ardour. In the meantime, while both armies were drawn out, and expecting the signal to begin, they were stopped by the cardinal of Perigord, who attempted to be a mediator between them. However, John, who thought himself sure of victory, would listen to no other terms than the restitution of Calais; with which the Black Prince refusing to comply, the onset was deferred till the morning, for which both sides waited in anxious suspense. During this interval, the prince strengthened his post; and placed 300 men in ambush, with as many archers, who were commanded to attack in flank during the heat of the engagement. Having taken these precautions, he ranged his army in three divisions; the van was commanded by the earl of Warwick, the rear by the earls of Salisbury and Suffolk, and the main body by himself. In like manner, the king of France arranged his forces in three divisions: the first commanded by the duke of Orleans; the 2<sup>d</sup> by the dauphin, attended by his younger brothers; while he himself led up the main body, seconded by his youngest and favourite son, then only 14 years of age. As the English were to be attacked only by marching up a long narrow lane, the French ordered greatly from their archers, who were posted behind the hedges. Upon emerging from this danger, they were met by the Black Prince himself at the head of his chosen troops, who made a furious

onset upon their forces, already in great disorder. A dreadful overthrow ensued: those yet on the recoiled on their forces; while the English had been placed in ambush, took that opportunity to increase the confusion, and confirm the rout. The dauphin and the duke of Orleans were among the first that fell. The king made the utmost efforts to retrieve by his valour what his rashness had forfeited; but his courage unable to stem that consternation which had prevailed through his army; and his cavalry flying, he found himself exposed to the enemy's fury. At length, spent with fatigue, and desisting of success, he cried out, that he would render to his cousin the prince of Wales, the honour of taking him, however, was reserved to a much more ignoble hand; he was seized by Dennis de Morbec, a knight of Arras who been obliged to fly his country for murder. April following, the prince conducted his prisoner through London, attended by an immense concourse of people of all ranks and states. Edward's modesty on this occasion was remarkable: The king of France was clad in royal purple, and mounted on a beautiful white steed, while the prince himself rode by his side on a little horse, and in very plain attire.

(31.) FRANCE, HISTORY OF, FROM THE DEFEAT OF K. JOHN, TO HIS DEATH. This disastrous defeat, which happened in 1256, almost entirely ruined the French affairs; and the mischief which ensued from this cause were greatly augmented by intestine commotions. The dauphin who had now assumed the government, was together unable to govern a turbulent people in such a crisis. An assembly of the states, which he called, limited the power of the prince, impeached former ministers, and demanded the liberty of the king of Navarre; and the treasurer of the crown was murdered by Marcel's order. The king, whom Marcel employed, was dragged to an altar where he had taken refuge, and instantly put to death. The bishop of Paris resented indignantly done to the church; and Marcel atoned his fate, by murdering both the king and the bishop, that his clothes were stained with their blood. The prince indignantly asked him, if he would be involved in the same destruction? when Marcel affected to provide for his safety by putting him a blue hood, the badge of the adherents of Navarre. The public disorders were augmented by the king of Navarre; and, tho' the dauphin even assured, that he had administered a dose of poison to him, he was obliged to pay him some assistance of regard. A scheme was even formed to change the government, to vest all the power in the commons, and leave the king an empty name; but though this was favourably received by the city of Paris, it was rejected by the rest of the kingdom. The dauphin was likewise rejected as regent by the states general, and the intendants of Picardy and Champagne took up his cause. In this critical situation, the minds of the people were heightened by an unexpected evil. The peasants, who had been long oppressed by the nobles, rose in great numbers to revenge themselves; the castles of the nobility were

of his daughters ravished, and themselves cruel deaths. At last they were obli-

The duke of Orleans cut off 12,000 heads, near the city of Paris; 12,000 sent by the king of Navarre; 9000, beheaded the town of Meaux, where the king three of her ladies of high rank had been taken by an officer in the service.

Amidst these confusions, Marcel perished by the result of his own raising; and the independent people of the nation revolted. His most dangerous enemy, king of Navarre, who had shared the Norman and English adventures, forced Edward into France, and brought back their fortunes; where they assumed the name of *Companions*. By such a competitor the dauphin was reduced to extremity, when his hopes were revived by a peace proposal from his rival, of peaceable terms. On the expiration of the treaty, Edward III. again set sail for England, before Calais with 1200 sail, under the *king of France*, and augmented to 100,000 men. The dauphin was cast on the defensive; shutting Paris, London, and allowing the English to ravage the country, and to penetrate through into Champagne; but Rheims, where he was to have been crowned, baffled their attempts. From Champagne, therefore, he retreated into Burgundy; pillaging Tonnerre, and Avalon. Burgundy was ransomed for 200,000 marks, and a like sum was paid for the dauphin and citizens had rendered it liable to famine, as well as to the assaults of

Thus the war went on till 1369, when Edward inclined to peace, as is said, by a message, to which his army was exposed camped in the fields around Châtillon. Adding all his victories, the French showed the least favour to his claim of succession; of Navarre, was a dangerous rival, and the dauphin deprived him of all admiration his valour and military skill. Conditions of peace were opened at Breigny; and on the following conditions, viz. That Edward should pay for his ransom, at different times three millions of crowns of gold (about half an half of our money); Edward never renounce all claim to the kingdom, and should remain possessed of Poitou, the Agenois, Perigord, the Limousin, Rouergue, Angoumois, and other dis- quarters, together with Calais, Guines, and Pontieu. Other stipulations were the allies of England, as a security for conditions. On John's return, he found himself unable to ratify these terms. He was James, at the head of an exhausted state; without discipline, and his peasants in a state of insubordination. These had risen in great numbers, and one of their chiefs assumed the title of *God and the terror of Man*. A knight of Sens, named *John Gouge*, also got him- self proclaimed king; and he soon caused as

many calamities by his devastations, as the real king had brought on by his misfortunes. Such was the state of that wretched kingdom on the return of its captive monarch: and yet such was his absurdity, that he prepared for a crusade into the Holy Land, before he was well replaced on the throne. Had his exhausted subjects been able to equip him, it is probable he would have gone through with it; but their miseries were such, that they could not pay his ransom. This was a breach of treaty that John could not submit to; and he was heard to express himself in a very noble manner upon the occasion. He therefore actually returned to England, and yielded himself a prisoner, since he could not be honourably free. He was lodged in the Savoy, the palace where he had resided during his captivity; and soon after closed a long and torturous reign, by his death, in 1374, the 56th year of his age.

(32.) FRANCE, HISTORY OF, FROM THE DEATH OF JOHN, TO THOSE OF CHARLES V, AND THE KING OF NAVARRE. Charles V. surnamed *the Wise*, succeeded his father, and, merely by a fine conducted policy, even though he met with some defeats, restored his country once more to tranquillity and power. He quelled the *Companions*, who had long been a terror to the peaceable inhabitants. He invaded them in a body, and led them into Castile against Peter, surnamed *the Cruel*, whom his subjects had dethroned, and who, by an alliance with the English, endeavoured to be re-instated on the throne. In consequence of these alliances, the English and French again came to an engagement; the one side commanded by the Black Prince; the other, by Henry of Trastamarre, and Bertrand du Guesclin, one of the most consummate generals and accomplished characters of the age. However, the usual good fortune of the English prince prevailed; the French lost above 20,000 men, while only 4 knights and 20 private men on the side of the English were slain. But these victories, however glorious, were attended with very few good effects. The English, by their frequent levies, had been quite exhausted. Charles, on the other hand, cautiously forbore coming to any engagement; but allowed his enemies to waste their strength in attempts to plunder a fortified country. When they retired, he stalked forth, and possessed himself of such places as they could not defend. He first seized Ponthieu; Abbeville opened its gates to him; St Valois, Roc, and Crottoy, imitated the example; and the whole country was in a little time reduced. The southern provinces were invaded by his generals with equal success; while the Black Prince, without supplies, and waited by a consumption, returned to England, leaving his affairs in the south of France in a deplorable condition. In this exigence, the resentment of Edward III. was excited to the utmost pitch; and he resolved to take signal vengeance of his enemies on the continent. But the fortunate occasion was elapsed; and all his designs were marked with ill success. The earl of Pembroke and his whole army were intercepted at sea, and taken prisoners by Henry king of Castile. Sir Robert Knoll, one of his generals, at the head of 30,000 men, was defeated by Bertrand du Guesclin; while the

duke of Lancaster, at the head of 25,000 men, saw his troops diminished one half by flying parties, without ever coming to a battle. At last, the English affairs were totally ruined by the death of the Black Prince and king Edward. On this news, the armies of Charles attacked the English on all sides. One, under the duke of Burgundy, entered Artois; another entered Auvergne, under the duke of Berry; a third acted in Guienne under the duke of Anjou; and the forces in Bretagne were under Guefcin: the king himself led a powerful body of troops, to repair any accident that should happen. The constable Guefcin joined the duke of Burgundy, who found it difficult to oppose Sir Thomas Felton and the Senechal of Bourdeaux. Soon after his arrival, the constable attacked and defeated them, making them both prisoners of war. This victory was so well pursued, that, at the close of 1377, Bayonne, Bourdeaux, and Calais, with their dependencies, were all the places left to England on the continent. Thus Charles established once more the house of Valois on the throne of France, but did not long enjoy his good fortune. He died in 1379, aged 44, from the effect of the poison formerly given him by the king of Navarre. The immediate operation of this poison had been suspected by the skill of a physician sent by the emperor Charles IV. Not long before his death, Charles had commenced a process against the king of Navarre for this crime, who was deprived of his possessions in Normandy, as well as his lordship of Montpellier. He did not long survive the monarch he had murdered. His death was singular and terrible; for having been afflicted with the leprosy, he had been obliged to use bandages dipped in sulphur and brandy, which by the carelessness of a page, took fire, and he was burnt to death.

(33.) FRANCE, HISTORY OF, FROM THE DEATH OF K. CHARLES V, TO THOSE OF HENRY V, AND CHARLES VI. Charles V. was succeeded by his son Charles VI. surnamed the *Well beloved*, who at his accession was only 12 years of age. The Duke of Anjou, brother to the late king, had been appointed guardian during his minority; but he being totally unfit for the office, readily resigned it to the dukes of Burgundy and Bourbon, the former, uncle to the king by his father's side, the latter by his mother's. None of these tutors, however proved faithful to their trust. The duke of Anjou seized the plate and treasures of the late king. At that time Q. Joan, infamous for her profligacy, reigned in Naples. She had appointed one Charles Durazzo, her relation, to succeed her in the throne; but the wretch murdered his benefactress, who with her last breath reposed her grant of the kingdom, and bestowed it on the duke of Anjou. His influence at the French court enabled him to waste the treasures of the kingdom in support of his pretensions; though he proved ultimately unsuccessful, his forces being constantly defeated, and his designs frustrated by the superior skill of his adversary. The duke of Burgundy, instead of instructing his pupil in the ways of virtue, indulged him in every kind of vicious pleasure, hoping thereby to gain his favour afterwards. The citizens of Paris, oppressed by taxes, broke out into tumults, and were quelled with difficul-

ty; while the mal-administration of Philip fr involved the nation in hostilities with the Flemish. Philip invaded their country with an army of 80,000 men, with whom was the young king, and the principal nobility of France. The first operations were favourable to the Flemings; but they were at length totally defeated on the banks of the river Lis, where their leader, with 25,000 of his followers, perished. This victory was followed by the submission of the whole country; but the satisfaction of the king was disturbed by new seditions and revolts in Paris, and other great towns. His return, however, at the head of a victorious army, soon reduced them to their duty, and several of the revolted cities were severely punished; while the duke of Anjou's death had freed him from dependence on his tutors, and assumed the reins of government into his own hands in 1384. The genius, which Charles displayed in his early years, raised the hopes of the nation. The young king, whose marriage he had to be a subject of attention to the council, insisted upon seeing the person designed for his consort. An interview was accordingly procured between him and Isabella, daughter to the duke of Bavaria, whom he fell in love with and afterwards married. His administration was for some time prudent and vigorous. He conciliated the affections of his people by restoring their privileges, and relieving them from the taxes which had been imposed in his minority. He reduced the Flemings to the authority of the duke of Burgundy; detached 15,000 archers and 1500 men at arms, to assist the Scots in their incursions into England; and in 1385 fitted out a prodigious armament against England. A vast fleet was assembled in the harbour of Sluys, and a very numerous army in the neighbourhood. According to some, the armament consisted of 1200 ships, 20,000 foot differently armed, 20,000 cavalry, and 20,000 cross-bow men. There was besides a vast wooden edifice or floating tower contrived for the protection of the soldiers when landed; but all these preparations were altogether brought to nothing by the duke of Berry, who being inimical to this measure, carried on his progress so slowly, that he did not arrive at Sluys till 9th September, when no invasion was practicable. A storm drove the greatest part of the fleet on shore, and beat the wooden edifice to pieces; the remains of it was given to the duke of Burgundy with the port of Sluys, which was very considerable, and of the utmost importance. This was only a prelude to more extraordinary calamities. The Sieur de Craon, a profligate nobleman, had been entrusted by the court with a considerable sum of money for the duke of Anjou, which he had dissipated at Venice; but, by the credit of the duke of Orleans, the king's brother, he was pardoned, and returned to court. Here he attempted to assassinate Oliver Clifton the constable, who he suspected of having promoted his disgrace. This veteran hero was attacked by a band of ruffians, against whom he defended himself with wonderful intrepidity, when at last he fell, a receiving more than 50 wounds. Happily, however, he recovered; while the assassin fled for protection to the duke of Brittany. The king demanded he should be given up to him in satisfaction.

duke answered, that he knew nothing of such the king not crediting, marched with forces into his territories. When the army arrived at Mans, the king was seized with a fever; but could not be prevailed upon to take physic. On the 5th of August 1391, he marched all day in the heat of the sun, a pale, ragged, wild-looking fellow, darted behind a tree, and laying hold of the bridle of a horse, cried out, "Stop! where are you going? You are betrayed; and immediately threw again into the wood. The king passed not a little disturbed; and soon after one of his pages, who rode behind and carried his horse, who rode behind and carried his horse, overcome with heat, fell asleep, and let it fall from the helmet which was carried by the king. The king, hearing the noise, looked about; receiving the page lifting the lance, killed immediately: then riding furiously with his lance drawn, he struck on every side of him, and upon every person, till he broke his sword; upon one of his gentlemen leaped up behind him and seized his arm. He fell soon after, and lay as he was carried back in a waggon to Mans, where he lay two days in a lethargy, after which he recovered a little, and expressed great concern for the blood he had shed in his delirium. The king, rejoiced at the news of his recovery; but soon discovered, that he no longer possessed strength of judgment for which he had formerly been remarkable. Hence a regency became necessary; and the competition for it brought out the characters of the queen and duke of Burgundy. The former was a beautiful and accomplished princess; but vindictive, intriguing, without affection, and easily accessible to flattery and every impulse of lawless passion. The duke of Burgundy was equally remarkable for his talents and accomplishments, but notwithstanding his marriage with Valentina daughter of the king of Hungary, he was engaged in many disputes with the king, and among the rest, with his wife Isabella. During the king's illness he aspired at the regency: but the administration was committed to the duke of Burgundy. In a few months the health and understanding of the king seemed to be restored; but in 1393 it was again disturbed by another accident. At an entertainment given at the marriage of one of the king's attendants, six masques entered the apartment dressed like satyrs, in linen clothes covering their bodies, and stuck over with down. These they threw at the king and five lords. The duchess of Burgundy, in her attention to the king though she did not see the masques. Mean time the duke of Orleans, who was then in the city, ran a lighted torch against one of the king's attendants. His whole dress was instantly in a flame, and he was communicated to the rest. The king, notwithstanding the dreadful situation he was in, called out, *Save the king; save the king!* On which the duchess of Burgundy, recollected that it must be him with whom she had been in conversation, wrapped him in her cloak, and carried him out. Only one of the rest escaped being singed into a cistern of water; the other four perished in the flames. The terror which the king's delirium instantly occasioned a relapse; and he continued delirious at intervals as long as he

lived. While in this state he was intractable by every person, except Valentina duchess of Orleans. So great was her ascendancy, that in those superstitious times it was supposed by many to be the effect of magic; others, ascribed it to her charms; and this produced her a number of enemies, particularly the duchess of Burgundy; and the quarrel between the ladies soon extended to their husbands. They did not however neglect the administration of public affairs; they strove to conciliate the parliament by preserving the rights of the commons; and they endeavoured to check gaming, and to substitute manly and martial exercises in its place. During his lucid intervals, Charles resumed the government: and as the war with England still continued, though in a languid manner, the French monarch, had an interview with Richard II. king of England, to put an end to hostilities, of which both were weary. Still, however, their claims were so difficult to be adjusted, that they could only conclude a truce for 25 years; during which space it was hoped that a lasting peace might be established. Richard gave up Cherbourg to Charles, and Breft to the duke of Brittany: a marriage was also concluded betwixt the king of England and Isabella the daughter of Charles, though the latter was then only 7 years of age; but it was never consummated. During this unfortunate reign, France was still farther weakened by the succours sent to the Hungarians against the Turks. On this fatal expedition upwards of 1000 of the bravest knights were sent under John Count of Nevers, eldest son of the duke of Burgundy; the count of Eu constable of France; John de Vienne admiral of France; and the count of Marche, a prince of the blood royal; together with De Courey, one of the most experienced captains in Christendom. The prudent counsels of this veteran, however, were not obeyed by the youthful warriors. Attacking the enemy rashly, they were all either killed or taken prisoners. Notwithstanding this, assistance was sent, in 1400, to Wenceslaus emperor of Germany; and the duke of Orleans acquitted himself so well that he acquired the duchy of Luxemburg for himself, and left his ally satisfied: but while the friendship of France was thus courted by foreign powers, the kingdom itself was in the most miserable situation. The king's distemper daily gained ground; while the interests of the contending parties kept the nation in a ferment. The most violent animosity took place betwixt the dukes of Orleans and Burgundy. The former, by his own interest with the queen, and the ascendancy of his duchess over the king, got the better of his rival, and was made lieutenant general and governor of the kingdom; but having presumed to levy new imposts on the people, and oppressing also the churchmen, whom he ought to have let alone, he was deprived of his authority, and obliged to yield to the duke of Burgundy. For some time, however, these powerful rivals were kept within bounds by the mediation of the duke of Bourbon, who seems to have been the only grandee of a pure and unspotted character; but by his death in 1404, the unhappy nation was left exposed to their fury. In 1405, the queen and duke of Orleans again seized the administration; but were soon deprived of it by the

the voice of the people. During this period Charles and his children were abandoned to distress; but they were relieved by the duke of Burgundy on his obtaining the regency; and Isabella, with the duke of Orleans, was obliged to retire from Milan. A sudden return of the king's reason for a much longer time than usual, now deprived both parties of their power; and the administration was vested in the queen and a council of princes of the blood. The two rival dukes, prohibited from interfering in public affairs, exercised themselves in hostilities against the English, with whom the truce had been lately concluded. They were encouraged to this infraction of the treaty by the unsettled situation of the affairs of Henry IV.: but proving unsuccessful, the truce was renewed, after obtaining restoration of the princess Isabella, who had been married to Richard II. The failure of their enterprises produced a new scene of discord betwixt the dukes, who mutually threw the blame upon each other. By the intreaties of the duke of Burgundy they were apparently reconciled; but the duke of Burgundy pretended friendship only to take the more signal vengeance. To this he was now further inflamed by jealousy. Having hired a band of ruffians, the duke was one evening attacked by 18 of them while attended only by two pages. A Norman, whom the duke had deprived of an employment, headed the assassins, and attacked the duke. At the first blow he cut off his hand, at the second he struck him from his mule, and at the third put an end to his life. His wife Valentina died soon after. The duke of Burgundy escaped to Flanders: and the whole nation was rent into two factions, called the *Burgundians* and *Armagnacs*; the latter being the title of the party of the duke of Orleans, from Armagnac, his father-in-law. A dreadful confusion ensued: the duke of Burgundy returned to France, and extorted a pardon from the unhappy king, who could no longer resist him: and it will give some notion of the state of the kingdom, that 2000 perished in one tumult in the capital. The king was alternately the prisoner of each party, and alternately transferred the power, as he happened to fall into their hands. This was thought by Henry V. of England a favourable opportunity to recover those grants that had been formerly ceded. But previously, to maintain the appearance of justice, he sent ambassadors to Paris, offering perpetual peace and alliance, if put in possession of those provinces which had been taken from the English, and to espouse Catharine, the French king's daughter, with a suitable dowry. Though the French court was at that time averse to war, yet the exorbitance of these demands could not be complied with; and Henry probably made them in these hopes. He therefore assembled a great fleet and army at Southampton; and having allured all the military men in the kingdom to attend him, from the hopes of conquest, he put to sea, and landed at Harfleur, at the head of an army of 6000 men at arms, and 24,000 foot, mostly archers. His first operations were upon Harfleur; which promised to surrender at a certain day, unless relieved before that time. The day arriving, and the garrison still resolving to defend the place, Henry ordered an assault to be made, took the town by storm, and

put all the garrison to the sword. From the victor advanced farther into the country which he now laid waste. But although my made a feeble resistance, yet the climate against the English; a contagious dysentery rying off three 4ths of Henry's army. In situation he had recourse to an expedient enough in that barbarous age. He challenged the dauphin, who commanded the French a single combat. This challenge was rejected the French at last seemed to unite at the prospect of the common danger. A number of 14,000 men at arms, and 40,000 foot bled under count Albert, and was now prepared to intercept Henry's weakened forces on their march. The English monarch, when it was too late to repent of so rashly making an invasion into a country where disease and a powerful enemy everywhere threatened him with death, he therefore thought of retiring into Calais, this retreat, which was both painful and dangerous, Henry took every precaution to surround his troops with patience and perseverance: and he presented them the brightest example of fortitude and resignation. He was continually harassed by small parties of the enemy; and whenever he attempted to pass the Somme, he saw troops on the opposite side ready to oppose his passage. However, he seized, by surprise, a passage near St. Quintin, there he safely carried over his army. His enemy was still resolved to intercept him, and after passing the small river of Te Blangi, he was surprised to observe from the heights the whole French army drawn up on the plains of Agincourt; and so posted, that it was impossible to avoid coming to an engaged battle accordingly took place, in which the English gained a victory, the most remarkable of any recorded in history. See AGINCOURT. This victory, gained on the 25th of October, was however attended with no immediate success. Henry still retreated, after the battle of Agincourt, and carried his prisoners to Calais, and from thence to England. In 1517, he once more landed in Normandy with an army of 25,000 men in Normandy; and intended to strike a decisive blow for the crown of France. That wretched country was now in a deplorable situation. The whole kingdom was divided as one vast theatre of crimes. The duke of Orleans was assassinated by the duke of Burgundy; and the duke of Burgundy, in his turn, fell a victim to the treachery of the dauphin. The duke's revenge for his father's death, entered into a treaty with the English; in which he promised to revenge the murder of the late king Henry, therefore, proceeded without opposition. Several towns and provinces fell into his approach; the city of Rouen was likewise Pontoise and Gisors. He even threatened Paris, and obliged the court to remove to Bourges. At this city the duke of Burgundy, who had offered upon him the protection of the French king, Henry to ratify that treaty formerly broken, by which the crown of France was transferred to a stranger. The imbecility in which Charles had fallen, made him passive in the negotiation of this remarkable treaty; and Henry dictated the principal articles were, That Hen-

ncess Catharine; that king Charles should have the title and dignity of king for life; that Henry should be declared heir to the kingdom; that he should be intrusted with the regency; that France and England should be united under one king, but should still retain their respective laws and privileges; that the dauphin should unite his arms with those of king Charles; that the duke of Burgundy, to depress and ruin the dauphin and his partisans. Not long after, Henry married the princess Catherine, which he carried his father-in-law to take a formal possession of that part of the estates of the kingdom ratified by an act; after which he turned his arms against the dauphin; who, in the mean time, considered about a stranger in his own country, to his enemies successes only opposed. Henry was obliged to return to prevail upon his parliament to favour his cause; and on his arrival in England he found his subjects highly pleased with the prospect of his conquests, yet they were not desirous of the advantage of them. A treaty, proposed to transfer the seat of empire to France, was not much relished by the parliament; and various pretences, they refused him to comply with his exigencies; but he was refusing his schemes; and, joining to the dauphin, he was able once more to raise an army of 28,000 men, and with these he sailed for Calais. In the mean time, the duke of Burgundy, in consequence of the opportunity of repairing his ruined situation, took advantage of Henry's absence, and appointed the regent of Scotland to send him 8000 men; and with these, and a few of his own, he attacked the duke of Burgundy, who commanded the troops in Henry's absence, and gained a complete victory. This was the action which turned the tide against the dauphin.

But it was of short duration: for after appearing with a considerable army in France; while many places which were held for the dauphin, surrendered to the duke of Burgundy. Thus, while Henry was everywhere: he fixed his residence at Paris; and there he had a small court, he was attended by a magnificent one. On Whitsunday, the king and his two queens with their heads dined together in public; and the duke of Burgundy, paying apparent homage, but Henry retained the absolute authority. In the mean time, the dauphin was chased beyond the Rhine, and was even pursued into the south, by the arms of the English and Burgundians. In consequence, he found it necessary to spin out time, and to evade all hazardous actions. Meanwhile, the king of England died, and Charles VI. reigned.

CE, HISTORY OF, FROM THE DEATH OF CHARLES VI, TO THE CORONATION OF HENRY VI. Charles VII. succeeded his father on the throne. Nothing could be more deplorable than his situation on assuming the crown. He was surrounded by the arms of the English; and he was the possessor of almost all France; though but an infant, was invested

with regal power by legates from Paris. The duke of Bedford was at the head of a numerous army, in the heart of the kingdom, while the duke of Burgundy, who had entered into a firm confederacy with him, seconded his claims. Yet, notwithstanding these favourable appearances, Charles VII. means to break the leagues formed against him, and to bring back his subjects to their natural interests and their duty. However, his first attempts were unsuccessful. Wherever he endeavoured to face the enemy he was overthrown; and he could scarcely rely on the friends next his person. His authority was insulted; every advantage was gained against him; and a battle fought near Verneuil, in which he was totally defeated by the duke of Bedford, seemed to render his affairs altogether desperate. But as the English could not keep the field without new supplies, Bedford was obliged to retire to England; and in the mean time his vigilant enemy recovered from his late consternation. Dumois, one of his generals, at the head of 10000 men, compelled the earl of Warwick to raise the siege of Montargis; and this advantage, slight as it was, began to make the French suppose that the English were not invincible. But they soon had still greater reason to triumph, and a new revolution was produced by means the most unlikely. In the village of Domremy, near Vaucouleurs, there lived a country girl, about 17 years of age, called *Joan de Arc*. She had been a servant at a small inn; and had submitted to those hardy employments which fitted the body for the fatigues of war. She was of an irreproachable life, and had hitherto discovered none of those enterprising qualities which appeared soon after. She contentedly fulfilled the duties of her situation, and was remarkable only for her modesty and religion. But the miseries of her country was one of the greatest objects of her compassion. Her mind, inflamed by these objects, began to feel several impulses, which she was willing to consider as the inspirations of heaven. Convinced of this, she had recourse to one Baudricourt, governor of Vaucouleurs, and informed him of her destination by heaven to free her native country. Baudricourt treated her at first with neglect: but her importunities prevailed; and willing to make a trial of her pretensions, he gave her some attendants, who conducted her to the court, which at that time resided at Chinon. The French court were probably sensible of the weakness of her pretensions; but they were willing to make use of every artifice to support their declining fortunes. It was therefore given out, that Joan was inspired; that she had discovered the king among the number of his courtiers, although without any distinction of his authority; that she had told him alone some secrets; and that she had demanded, and minutely described, a sword in the church of St Catharine de Fierbois, which she had never seen. In this manner, the minds of the vulgar being prepared for her appearance, she was armed cap-a-pee, and shown to the people. She was then brought before the university; and they, willing to scowl the imposture, declared that she had actually received her commission from above. When her commission was completely blazoned, the next aim was to send her against the enemy. The English

were then besieging Orleans, the last resource of Charles, and every thing promised a speedy surrender. Joan undertook to raise the siege; and girded herself with the miraculous sword. Thus equipped, she ordered all the soldiers to confess themselves before they set out; she displayed a consecrated banner, and assured the troops of certain success. Such confidence soon raised the spirits of the French army; and even the English, who pretended to despise her, felt secretly the terrors of her mission. A supply of provisions was to be conveyed into the town; Joan, heading some French troops, covered the embarkation, and entered Orleans at the head of the convoy. While leading her troops along, a dead silence and astonishment reigned among the English; and they regarded with religious awe that temerity, which they thought nothing but supernatural assistance could inspire. But they were soon roused from their amazement by a sally from the town; Joan led on the besieged, bearing the sacred standard in her hand, encouraging them with her words and actions, bringing them to the trenches, and overpowering the besiegers in their own redoubts. In attacking one of the forts, she was wounded in the neck with an arrow; but instantly pulling out the weapon with her own hands, and getting the wound quickly dressed, she hastened back to head the troops, and to plant her victorious banner on the ramparts of the enemy. These successes continuing, the English found it impossible to resist troops animated by such superior energy; and Suffolk, who conducted the attack, thinking that it might prove extremely dangerous to remain any longer in the presence of such a victorious enemy, raised the siege, and retreated with all imaginable precaution. From being attacked, the French in turn became the aggressors. Charles formed a body of 6000 men, and sent them to besiege Jargeau, whither the earl of Suffolk had retired, with a detachment of his army. The city was taken; Suffolk yielded a prisoner; and Joan marched into the place in triumph. A battle was soon after fought near Patay, where the English were worsted, as before; and the generals Seales and Talbot were taken prisoners. The raising of the siege of Orleans was one part of the maid's promise to Charles; the crowning him at Rheims was the other. She now declared that it was time to complete that ceremony; and Charles, by her advice, set out for Rheims at the head of 12,000 men. The towns through which he passed opened their gates to receive him; and Rheims sent him a deputation, with its keys, upon his approach. The ceremony was there performed with the utmost solemnity; and the *Maid of Orleans* (for so she was now called) seeing the completion of her mission, desired leave to retire. But the king could not think of parting with her; he pressed her to stay so earnestly, that she at length complied.

(35.) FRANCE, HISTORY OF, FROM THE CORONATION OF CHARLES VII. TO THE EXPULSION OF THE ENGLISH. A tide of success followed this solemnity; Laon, Soissons, Chateau Thierry, Provins, and many other fortresses submitted on the first summons. The English, discomfited and dispirited, fled on every quarter; not knowing whether to ascribe their misfortunes to the power

of sorcery or to a celestial influence; terrified at both. They now found themselves deprived of the conquests they had gained as the French had formerly for their power. Their own divisions entered them for carrying on the war; and the duke of Bedford saw himself divested of his share in the country, without being able to stop the progress of the enemy's progress. In order, therefore, to reverse the declining state of his affairs, he resolved Henry VI. crowned king at Paris, that the natives would be allured to obedience by the splendour of the ceremony. In 1430, accordingly crowned, the vassals swore fealty and homage. But it was now too late to attempt a coronation to give a turn to the generalty of the kingdom had declared against them, and the remainder only waited an opportunity to follow their example. A sally ensued soon after, which, though it promoted the English cause in France, served to render it odious. The duke of Burgundy, at the head of a powerful army, laid siege to Compiègne; and the Maid of Orleans, thrown herself into the place, contrary to the wishes of the governor, who did not think it worth his company of one whose authority would be less than his own. The garrison, however, was terrified at her appearance, and believed themselves more formidable. But their joy was of short duration, Joan having the day after her arrival made a sally, and twice driven the enemy from the trenches, she was at last obliged to place herself in the rear, to protect the rear of her forces. But in the end she drew her troops into the city, the gates and the bridge drawn up by order of the duke of Burgundy, who is said to have long wished an opportunity of delivering her up to the duke of Burgundy. Nothing could exceed the joy of the duke of Burgundy having taken a person who had been so famous for her valor to their arms. *Te Deum* was sung on this occasion; and it was hoped, that the capture of this extraordinary person would give the English their former victories and the duke of Burgundy was no sooner than he purchased her of the count Vendôme had made her his prisoner, and ordered her committed to close confinement. The duke of Burgundy was at that time so great a thing was too absurd to gain credit. A fore, from her successes, was regarded as a sorceress, upon her captivity, confessed herself, forsaken by the demon who had seduced her a temporary and fallacious assistance. Accordingly it was resolved to send her to be tried for witchcraft; and the bishop of Meaux, a man devoted to the English, presented a petition against her for that university of Paris were so mean as to refuse. Several prelates, among which the duke of Winchester was the only one who were appointed her judges. They held their court in Rouen, where Henry resided; and she, clothed in her former military apparel, and surrounded with irons, was produced before them. Her behaviour there no way disgraced her gallantry; she betrayed neither weakness

submission; but appealed to God and the truth of her former revelations. In she was found guilty of heresy and witchcraft and sentenced to be burnt alive. But pre- this sentence, they were resolved to make re her errors; and at length so far pre- upon her, that her spirits were entirely bro- the hardships she was obliged to suffer. sely declared herself willing to recant, and d never more to give way to the vain de- This was what they desired; and willing some appearance of mercy, they changed ce into perpetual imprisonment, and to a bread and water. But their rage was cessated. Suspecting that the female dres he had consented to wear, was disagree- her, they purposely placed in her apart- ment of mens apparel, and watched for the their temptation. Their artifices prevail- ed, struck with the sight of a dress in which gained so much glory, threw off her pe- robes, and put on the forbidden garment. mics caught her equipped in this manner; they considered as a relapse into her for- getfulness. No recantation would suffice, pardon would be granted. She was con- to be burnt alive in the market-place of and this infamous sentence was accord- ed. One of the first misfortunes which tin felt after this, was the defection of the Burgundy; who had for some time seen of his conduct, and wished to break an connection, that only served to involve ty in ruin. A treaty was therefore con- between him and Charles, in which the served to assist him in driving the English France. This was a mortal blow to their and such was its effects upon the populace, that they killed several of the duke of subjects, who happened to be there. It perhaps have hastened the duke of Bur- gundy, who died at Rouen a few days after; and of Cambridge was appointed his suc- to the regency of France. From this pe- English affairs became irretrievable. The Paris returned once more to its duty. Valois, who commanded it, only fit- for the safe retreat of his troops to Nor- . Their ground was continually, though rained by the French; and although their we had waste, and their towns depopu- let they found protection from the weak- divisions of the English. At length both began to grow weary of a war, which, turned on but feebly, was yet a burden which either could support. A truce, there- 22 months, was concluded in 1443. No was this settled, than Charles employed in repairing those numberless ills to which gen had to long been exposed. He dis- cipline among his troops, and justice a- his governors. He revived agriculture, and ed nation. Thus being prepared once for the field, he took the first favourable oc- of breaking the truce; and Normandy was ed by a powerful armies; one commanded uce himself, a 2d by the duke of Brittany, by the count of Alençon, and a 4th by the

count of Dunois. Every place opened its gates almost as soon as the French appeared. Rouen alone promised to hold out; but the inhabitants clamoured so loud, that the duke of Somerset, who commanded, was obliged to capitulate. The skirmish of Fourmings was the last stand which the English made. However, th were put to the rout, and above 1000 were slain. All Nor- mandy and Guienne, that had so long acknow- ledged subjection to England, were lost in one year; and the English saw themselves entirely dis- possessed of a country which for above 3 centuries they had considered as annexed to their native dominions. Calais alone remained; and this was but a small compensation for the blood and trea- sure which had been lavished in that country, and only served to gratify ambition with a transient applause. Thus, in 1450, the power of the Eng- lish in France was entirely destroyed; and Charles deservedly obtained the surname of *the Victorious*.

(36.) FRANCE, HISTORY OF, FROM THE DEATH OF CHARLES VII, TO THAT OF LEWIS XI. The satisfaction of Charles was now greatly diminished by domestic misfortunes. The dauphin, forget- ting the duty he owed his father, had already im- peded his conquests by his seditious intrigues. He had used every endeavour to thwart the designs of his ministers, and it was said that he had poison- ed Agnes Soreille, his father's favourite mistress. He had married Charles's daughter to the duke of Savoy; which Charles resented by a declaration of war against the duke, but had been persuaded to recall it, to prosecute the war against Gui- enne, which made part of the dominions of the English. At last weary of the disobedience of his son, he commanded him to be arrested; but Lewis withdrew to Francie Comte, and after- wards to Brabant; of which the duke of Bur- gundy (then sovereign of the country) was no longer apprised, than he ordered him to be supplied with every necessary, and treated with all imaginable respect. He refused to see him, however, until he should obtain the approbation of his father; on which Lewis having in vain attempted to draw in the duke, employed himself in sowing dissen- sion betwixt his benefactor and his son the count of Charolois, while he himself was receiving a pen- sion of 12,000 crowns annually from the father. Thus he at last destroyed the domestic peace of his benefactor, while his unnatural behaviour cre- ated continual suspicions in the mind of his father. Charles was repeatedly informed that his own do- mestic, along with his undutiful son, were in a conspiracy against his life. The miserable monarch, therefore, in continual fear of being poisoned, and having none in whom he could repose any confi- dence, obstinately refused for some days to take any nourishment; and when at last prevailed upon by the importunities of his attendants to do so, his nourishment had become incapable of reaching food, so that he died for want of sustenance in 1461. His body, neglected by his unnatural son, was interred at the expense of Tannegui de Char- tel, who had been his faithful companion. On Charles's death, his son Lewis XI. succeeded. He did not even attempt to conceal his joy at his father's death. He pretended much friendship for the Count of Charolois, son to the duke of Bur-

gundy, and even conferred upon him a pension of 12,000 crowns annually; but all this show of affection soon degenerated into a mortal aversion on both sides. Some differences which took place between the courts of France and Castile produced an interview betwixt the two monarchs Lewis, and Henry, surnamed the *Impotent*. They met at Maulcon on the confines of Navarre: but their negotiations came to nothing. In his negotiations with the duke of Burgundy, Lewis proved more successful; persuading him to restore some towns on the Somme, which had been ceded by Charles VII. and which rendered the duke master of Picardy. By this transaction he effectually ensured the hatred of Charolois, while he eminent-ly displayed his own duplicity; for though he had agreed to retain in those towns the officers appointed by the duke, he was no sooner in possession of them, than he nominated others in their stead. Brittany was at this time governed by Francis a weak but generous prince, and whose defect of capacity was supplied by the abilities of his ministers. Him Lewis grossly insulted, but as Francis found himself unable to oppose such a powerful adversary alone, he joined in a close alliance with the duke of Burgundy and the court of Charolois. The conspiracy was joined by several of the principal French nobility, and though the secret was confided to upwards of 500 persons, not one of them ever divulged it. Lewis, finding matters become very critical, marched with an army towards the capital, which the count of Charolois already insulted. A battle ensued, in which both princes exerted themselves to the utmost. About 1500 perished on each side, but the count of Charolois remained master of the field. Lewis, however, entered the capital; where he endeavoured, by concession, to conciliate his subjects; in which he succeeded so well, that though the insurgents were above 100,000, they were unable to make themselves masters of the city. At last a treaty was set on foot betwixt Lewis and the count of Charolois; by which the latter obtained the towns formerly ceded, with Boulogne, Guines, Peronne, Mondidier, and Royé, as a perpetual inheritance. By granting favours to the other confederates, the league was broken; and the moment that Lewis found himself freed from danger, he protested against the whole treaty in presence of some confidential members of parliament, and therefore waited the first favourable opportunity, to crush one by one those who had been ready by their united efforts to destroy him. He gained over the duke of Bourbon, one of the most able of the confederates, while, by the discontents betwixt the dukes of Brittany and Normandy, he was enabled to secure the neutrality of the former, and to recover from the latter some territories which he had unwillingly ceded to him. In 1467, Philip duke of Burgundy, from his amiable qualities surnamed *The Good*, died, and left his dominions to his son Charles, count of Charolois. That impetuous prince, an implacable enemy of Lewis, had entered into a secret treaty with Francis; but Lewis had driven the Bretons from the posts they occupied in Normandy, before the duke of Burgundy could pass the Somme. Lewis, however, concluded a peace with Brittany; and, determi-

ned to have a personal interview with the duke of Burgundy. This took place in 1468; and Peronne, a city of Picardy, but belonging to the duke of Burgundy, was appointed as the place rendezvous. To this place Lewis repaired attended only by Cardinal Beaufort, the duke of Bourbon, and the count of St Pol, constable of France seemingly without reflecting that he was entering an hostile city, where he might be treated at the pleasure of the duke, who was his mortal enemy. Indeed he had not been long in the place when he began to see his error; and by the daily course of Burgundian lords and other persons of rank, who were his avowed enemies, he became alarmed for his personal safety. His fears suggested a worse measure than the former; he requested apartments in the castle, when he was in the power of his rival in a moment to make him a close prisoner. This event accordingly took place, and that through the arts and machinations of Lewis himself. His design had been from beginning to keep the duke of Burgundy constantly employed in domestic war. For this purpose he had, before his interview with Charles, excited the inhabitants of Liège, who were subject to the duke of Burgundy, to revolt. It is most probable that he did not imagine the effects of this treaty would so soon begin to appear. At the time, however, that Lewis was in the castle of Peronne, the people of Liège revolted, seized the bishop and governor; and having massacred great numbers retired to the capital. Charles was informed of this massacre, with the additional circumstance, that the ambassadors of Lewis were seen animating the insurgents. He flew in transport of rage; commanded the castle to be shut; denouncing the severest vengeance against the perfidious monarch. Lewis, however, though greatly and justly alarmed, did not neglect to take the proper methods for securing himself. He distributed large sums of money among those officers, to whom he imagined the duke was most inclined to pay any regard, and by splendid promises and presents endeavoured to allay the resentment of his other enemies. At last the resentment of Charles being subsided, he entered into a treaty with the king, and concluded it upon much the same terms as those which had been agreed upon before. It was not long, however, before the new alliance was dissolved. A confederacy against Lewis, whom neither promises nor threats could bind, was formed betwixt his own brother the duke of Normandy, and the duke of Burgundy; but before their measures were ripe for execution, Lewis had already commenced hostilities. The duke of Burgundy, as a peer of France, summoned to parliament; and on his refusal, the constable of St Pol made himself master of Quintin. Several other cities were soon afterwards taken; Baldwin, the natural brother of Charles, corrupted by Lewis, deserted his cause; the proud spirited duke, was at last obliged to solicit a peace. This however, was of no long duration. Charles, encouraged by Edward IV of England, his brother-in-law, began once more league with the dukes of Brittany and Guien the latter being the king's brother. But the prospects were suddenly overcast by the death

duke of Guienne, which was universally supposed to have been occasioned by poison, and is now as universally looked upon as the author. The abbot of St Jean d'Angeli was fixed for the immediate perpetrator of the deed: on the day appointed for his trial he was admitted into his cell; and this also was with a probability, supposed to have been the deed of Lewis, who after the death of his brother invaded the territory of Guienne, and seized the dominions of France. By this and the conduct of the French monarch, Charles was exasperated, that he vowed the most bitter enmity against the French, and threatened to sacrifice to the memory of the duke of Burgundy every one who now fell into his hands. A great number of Nivelle were massacred without distinction of sex or age; Beauvais resisted his attacks; against Charles wreaked his fury on the occasion. Having entered the country of Caux, he seized the cities of Eu and St Valery, burnt the country, and wasted the whole country as far as Reims. Lewis, on the other hand, determined to dissolve the league between the duke of Burgundy and Edward IV. of England. Accordingly he embarked with his army on the frontiers of Brittany, while the duke was obliged to content to a truce for a year; and the duke of Burgundy himself was obliged to follow his example. In a very little time, he again began to conspire with the king of England against Lewis and a general invasion was determined upon. Edward embarked the sea with an army of 10,000 men, while Charles assembled all his forces to join him. Lewis, however, still avoided the storm. Charles, instead of depending on the assistance of Edward, who had entered France at the head of 15,000 archers and 1200 men at arms, laid siege to Nizac on the Rhine; while the constable of St Pol, instead of delivering up the towns as he had promised, deceived his allies, and enabled Lewis to dissolve a confederacy, which, had it been vigorously maintained, might have involved him in the greatest difficulties. To procure the departure of Edward, however, he was obliged to consent to a tribute of 75,000 crowns, as well as to settle on the king himself 50,000 crowns for life; betrothing also the dauphin to the eldest daughter of the king of England. The duke of Burgundy exclaimed loudly against this treaty: but Edward persisted in his resolution; and it was accordingly executed at a place called *Pecquigny*, near Amiens; but in such a manner as showed the little confidence the two sovereigns reposed in each other. A power was reserved by Edward, for the duke of Burgundy to accede to the treaty; but the latter haughtily replied, that he was able to support himself without the assistance of England; and that he would make no peace with Lewis till 3 months after the return of Edward. To this resolution he adhered; but no sooner was the term expired, than he concluded a truce with Lewis for 9 years. The constable of St Pol, having rendered himself obnoxious to all parties by his complicated treachery, fled to Mons in Hainault; but the duke of Burgundy had already agreed to deliver him up, on condition of receiving his estates and moveables as the price of his treachery.

Thus Lewis, without any qualification but cunning, falsehood, and duplicity, got rid of all his enemies except the duke of Burgundy, whose growing power rendered him a constant object of jealousy and terror. The duke's own imprudence however, soon proved his ruin. Having rashly entered into a war with the Swiss, he was defeated in the first engagement with the loss of his military chest and baggage, with his plate and jewels, supposed to be the richest in Europe. His disappointment on this occasion was so great, that he was seized with a severe sickness, from which he had hardly recovered when he returned his mad scheme of conquering the Swiss. Another battle ensued; in which, after an obstinate dispute, Charles was defeated with the loss of 18,000 men, himself escaping with difficulty. This disaster was followed by the defection of most of his allies; the duke of Lorraine recovered Nancy, and great part of his dominions, which Charles had seized; while the latter overwhelmed with shame and disappointment, spent his time in solitude and inactivity. From this he was at last roused by the misfortunes, which fell upon him in such quick succession. He now invested the city of Nancy; and in this, as well as in every other instance, he acted against the advice of his best officers; and the consequences were still more fatal than before. The duke of Lorraine advanced with a strong body of Germans to the relief of the city, while Charles had scarcely 4000 men to oppose him. His troops were therefore easily defeated, and himself, notwithstanding the most heroic efforts of valour, hurried away in the crowd. The count de Campobasso, an Italian nobleman in whom he put a great deal of confidence, but who was in reality a traitor, had deserted with about 80 men in the beginning of the engagement. He left 12 or 15 men about the duke's person, with strict orders to assassinate him in the tumult; and this order they punctually complied with; the body of Charles being found two days after the battle pierced with three wounds. The news of Charles's death was received with the utmost joy by Lewis, whose sole object now was to unite the territories of the duke of Burgundy to his own. This might be done in two ways; one by a match betwixt the dauphin and Mary the heiress of Burgundy; the other, by marrying her to the duke of Angouleme, a prince of the royal blood of France, and on whom Mary had shown some inclination to bestow herself. The king, however, to whom duplicity and falsehood seem to have been absolutely necessary, chose a third method, more agreeable to his character. The match with the dauphin was attended with such circumstances as rendered it evidently impracticable. The disparity of age was very great, the dauphin being only 3 years old, and the princess 20; the Flemings were besides averse; but, Lewis insisted upon the match, at the same time that he endeavoured to make himself master of her dominions by force of arms. He addressed circular letters to the principal cities of Burgundy; representing, that the duchy had been given up by king John to the male heirs of his son Philip; and that now, when they were extinct by the death of Charles, the territory reverted of course to the crown. He corrupted the

governors of some towns, and seduced the inhabitants of others to rise against their governors; whilst he himself, at the head of an army, prepared to enforce obedience from those who could not be worked upon by other methods. Thus Burgundy was entirely reduced; but Flanders could not be brought under subjection either by fair means, force, or fraud. In his conduct for this purpose, indeed, Lewis displayed the most detestable treachery and falsehood. To render Mary odious to her subjects, he negotiated with her ministers, and prevailed upon them to disclose to him some of the most important state secrets; after which he communicated their letters to the states of Flanders. This double treachery, however, did not answer his purpose. Mary was thus induced to bestow herself upon the emperor Maximilian; and Lewis had the mortification to find, that all his arts had contributed only to aggrandize a rival power, whom he had already sufficient cause to dread. To remedy this oversight, he entered into an alliance with Edward IV. of England, whom he had inspired with a jealousy of his brother Clarence, in order to prevent a match betwixt that nobleman and the princess Mary, which had also been in agitation. Thus a peace was concluded between the two monarchs, to continue during the life of each, and for a year after. The marriage of Mary with Maximilian effectually secured the independence of Flanders; while the return of the prince of Orange to the party of that princess extended the flames of war once more to the cities of Burgundy. The French were on the point of being totally expelled from that country, when Maximilian unexpectedly made proposals of peace. A truce was concluded; but without any term limited for its duration, or without any conditions stipulated in favour of the Burgundians; so that the whole country was quickly after reduced by Lewis. The king now, freed from the apprehension of foreign enemies, turned his vindictive disposition against his own subjects; over whom, under pretence of former rebellions he exercised the most insupportable tyranny. The principal victim to his sanguinary disposition on this occasion was James d'Armagnac duke of Nemours, one of the first noblemen in the kingdom but who had formerly appeared a zealous confederate against him in the league in which Edward and Charles were concerned. The unfortunate nobleman, fled to a fortress named *Carlat*, situated among the mountains of Auvergne. Here he was besieged by the Seigneur de Beaujeu, who had married Anne the daughter of Lewis. The place, however, was almost impregnable to any force; so that his enemies were obliged to make the most solemn promises of safety to induce him to surrender. By these he was at last persuaded to trust himself in the hands of the faithless tyrant; who no sooner had him in his power than he shut him up in the Bastille in an iron cage, and reprimanded the judges because they had released him from this close confinement during the time of his examination. The judges reluctantly condemned him to be beheaded: but the king's cruelty extended beyond the sentence; and he ordered the two sons of the duke, though yet in childhood, to be placed directly under the scaffold,

that they might be covered with the blood of their father: 4000 persons are said to have upon this occasion without any form or ceremony were it not for the concurrent testimony of historians of that age, the inhuman barbarities of this monarch would scarce be credible. By these he broke the spirit of the Franks, and gradually extended the power of France beyond all bounds; so that at last it was only by the king's pleasure. In 1479, the emperor Maximilian, who had lightly abandoned the duchy of Burgundy when he might have retained it, now renewed his claims when it was in his power to enforce them. After negotiations, and destruction of cities, on a bloody battle was fought at Guinegate. The Flemings were routed; but as the French fought with too great ardour, the infantry of France rallied, and the battle was renewed with slaughter on both sides. A more decisive victory was afterwards gained by the capture of several Flemish vessels, which induced that people to think of peace. In the year 1480, however, Lewis, received warning of his approaching end, by a fit of apoplexy with which he was seized in 1480. He lay speechless for several days after which he recovered in some degree, but his illness neither prevented him from pursuing his schemes, nor from using the same method to attain them. He seized the duke of Bourbon, the only nobleman in France whose power could give him any occasion of suspicion; yet, notwithstanding his being a prisoner in the castle of Amboise. He kept his own consort, and endeavoured to marry his own son with aversion towards her. By the death of Charles, king of Naples, he became master of the country of Provence; but his satisfaction was marred by a second stroke of apoplexy; however, he revived, and, again began to pursue his ambitious intrigues. The death of Edward IV. of Burgundy, who perished by a fall from his horse, inspired him with new views; he betrothed his son to the infant daughter of Edward IV. Thus he offended Edward IV. of France, whose eldest daughter Elizabeth he had previously contracted to the dauphin; which would have undoubtedly ensued, had it not been for the death of Edward. This was followed after by that of Lewis himself, who exhausted the skill of the physician, and the clerical order with prayers and processions to avert the impending stroke. He expired after a reign of 23 years; during which he was detested by his subjects, and equally despised by his neighbours; notwithstanding he obtained the title of *Pope*, which his successors have ever since retained. Notwithstanding the dark character of his reign, it must be allowed, that he laid the foundation of the grandeur of the French monarchy; he deprived the people of their liberties, oppressed the nobility, established a standing army, and even induced the states to render it perpetual, which formerly were only convened to support the army which was to keep the provinces in slavery.

(37) FRANCE, HISTORY OF, FROM THE DEATH OF LEWIS XI, TO THAT OF CHARLES VIII. Charles VIII was only 14 years old, when he succeeded his father Lewis XI, in 1483. But though might, even at that age, have ascended the throne without any violation of the laws, yet it was judged necessary to have a regent, on account of his delicacy of constitution and want of education. Three competitors appeared, for this important trust, viz. 1. John duke of Bourbon, a prince of the blood, and who had, till the age of 40, maintained the most unblemished character; 2. Lewis duke of Orleans, presumptive heir to the crown, but who, from his being only 20 years old himself, seemed incapacitated on that account from undertaking such an important office; and 3. Anne, the eldest daughter of Lewis, to whom the latter had, in his last moments, committed the charge of the kingdom, with the title of governess. The claim of this lady was supported by the assembly of the states-general at Tours; and though she was only in the 22d year of her age, the office could not have been more properly bestowed. Being married to Peter of Bourbon, sire of Beaujeu, her title was *the Lady of Beaujeu*; but she acted entirely independent of her husband, who was but of a moderate capacity, and indeed had been recommended to her by Lewis on account of his slender abilities. Left by any other match the House of Bourbon should be too much aggrandized. Her first step was to ingratiate herself with the people by some popular acts; among which one was to punish the instruments of her father's cruelties. One of these, named Oliver le Dain, who, from the station of a barber, had raised himself to the confidence of the king, and had distinguished himself by the invention of new modes of torture, was publicly hanged. Another, named John Doyac, who by continual acts of rapacity had oppressed the people, was condemned to be whipped, to have one of his ears cut off, and his tongue pierced with a hot iron; then taken to his native city of Montferand, again whipped, and his other ear cut off; after which his estates, as well as those of Oliver, were confiscated. James Cailler, the physician of Lewis, who had availed himself of the terror of death with which the king was influenced, to extort great sums of money from him, was ordered to answer for the immense wealth he had acquired; but he averted the danger by paying a fine of 50,000 crowns. Thus the prince gained the affections of the people; and many of those who were averse to her government. The duke of Bourbon was made constable, an office which he had long desired; but the duke of Orleans behaved so as to exclude all hopes of power. Incensed at the determination of a trifling dispute at tennis against him, by the governess, he exclaimed, that whoever had decided it in that manner "was a liar if a man, or a strumpet if a woman." After this furious declaration he fled to the castle of Beaujeu, where, however, he was forced to surrender. He then applied to Henry VII, but that prince, paying little attention to his proposal, he next made his application to the court of Brittany. Here he was received with great marks of esteem, and began to entertain hopes of marrying the daughter of the duke;

but being looked upon with a jealous eye by the nobility, they entered into secret negotiations with Anne, and even solicited her to invade the country. In these however, they stipulated that only a certain number of troops should enter the province, and that no fortified place should remain in the hands of the French. Brittany however was invaded at once by 4 armies, each of them superior to the stipulated number, who quickly made themselves masters of the most important places; while the troops of the duke retired in disgust. Finding at last, however that the entire subjection of their country was determined upon, the nobility began to exert themselves in defence of it; and, inflamed by the enthusiasm of liberty, they raised an army of 60,000 men, and compelled the French to abandon the siege of Nantz. But this proved only a transient success; Anne persevered in her design, and the state of Europe at that time favoured it. England alone was then capable of affording any effectual assistance; and the avarice of Henry prevented him from giving it, which for his own interest he ought to have done. Thus the Bretons were left to defend themselves the best way they could; and having ventured a battle, they were entirely defeated, and most of their leaders taken prisoners. A small body of English, under lord Woodville, who assisted them, were entirely cut in pieces. The duke soon after died by a fall from his horse, leaving his dominions to his daughter Anne, at that time only 13 years of age. The lady Beaujeu, then, finding that the conquest of Brittany would still be difficult, determined to conclude a marriage betwixt the young king of France and the duchess, though the former had already been married to Margaret of Austria, the daughter of Maximilian. This marriage indeed had not been consummated by reason of the tender age of the princess; but she had been sent to Paris for her education, and had for several years been treated as queen of France. In 1491, however, Margaret was sent back to her father: Anne of Brittany for a long time refused to violate the engagements into which she had entered; but at last, finding herself distressed on all sides, and incapable of resisting the numerous forces of France with which she was pressed, she reluctantly consented to the match, and the nuptials were celebrated at Langeais in Touraine. Maximilian, enraged at the double disgrace he had suffered, began, when too late, to think of revenge. France was now threatened by the united forces of Austria, Spain, and England. But this formidable confederacy was soon dissipated. Henry was bought off with money; the immediate payment of 745,000 crowns, and the promise of 25,000 annually ever after, persuaded him to retire into his own country. Ferdinand king of Spain had the counties of Roussillon and Cerdagne restored to him; while Maximilian was gratified by the cession of part of Astois, which had been acquired by Lewis XI. The young king of France agreed to these terms the more readily, that he was bent upon an expedition into Italy, to conquer the kingdom of Naples, to which he claimed a right. Most of his counsellors were against it, but he was inflexible, though Ferdinand king of Naples offered

ed to do homage for his kingdom, and pay him a tribute of 50,000 crowns a-year. He appointed Peter duke of Bourbon regent in his absence; after which he set out with very few troops and very little money. By the way he fell ill of the smallpox, but soon recovering he entered Italy with only 6000 horse and 12,000 foot; he was attended with the most surprising success, traversing the whole country in six weeks, and becoming master of Naples in less than a fortnight. Had Charles acted up to the character generally given him, he might have raised his name as high as any hero of antiquity. His behaviour, however, was very different. He amused himself with feasts and shows; and leaving his power in the hands of favourites, they shared it with any who would purchase titles, places, or authority, at the rates they imposed. But while Charles was thus losing his time, a league was concluded against him at Venice; into which entered the pope, the emperor Maximilian, the archduke Philip, Lewis Sforza, and the Venetians. The confederates assembled an army of 40,000 men, commanded by Francis marquis of Mantua; and they waited for the king in the valley of Fornovo, in Parma, into which he descended with 9000 men. On the 6th July 1495 he attacked the allies; and, notwithstanding their great superiority, defeated them, with the loss of only 80 of his own men. Thus he got safe to France; but his Italian dominions were lost almost as soon as he departed. Some schemes were proposed for recovering these conquests; but they were never put in execution, and the king died of an apoplexy in 1498. The premature death of this monarch, in the 28th year of his age, was supposed to have been owing to his irregular life. He was greatly celebrated for his sweet temper and agreeable disposition, which procured him the titles of the *Affable* and *Courteous*. Two of his domestics are said to have died of grief after his death, and his widow abandoned herself to the most pungent sorrow for *two days*.

(38.) FRANCE, HISTORY OF, FROM LEWIS XII'S ACCESSION TO THAT OF FRANCIS I. By the death of Charles VIII. the crown passed from the direct line of the house of Valois, and Lewis duke of Orleans succeeded. At his accession he was in his 36th year, and had long been taught in the school of adversity. During the administration of the Lady Beaujeu, he had been constantly in disgrace; after his connections with the Duke of Brittany, he had spent a considerable time in prison; and though afterwards set at liberty by Charles, he had never possessed any share of his favour. Towards the conclusion of that reign, he fell under the displeasure of the queen; and had continued at his castle of Blois till he was called to the crown. He had been married in early life, and against his will, to Jane the youngest daughter of Lewis XI. a princess of an amiable disposition, but deformed, and supposed to be incapable of bearing children. Afterwards he entertained thoughts of having this marriage dissolved, and was supposed to possess the affection of the duchess of Brittany before she became queen of France. After the death of her husband, that princess retired to Brittany, where she pre-

tended to assume an independent form; but Lewis having got his marriage with her dissolved by pope Alexander VI. quickly proposed to the queen dowager, which she accepted; but it was stipulated, that if she have two sons, the younger should inherit the crown. As Lewis, while duke of Orleans, had some pretensions to Naples, he instantly set about realizing them. On his accession, he found that the people of that country much more favoured his designs than formerly. The pope was interested, he had conciliated the friendship of the Venetians; he concluded a truce with the duke Philip; and renewed his alliance with the kings of England, Scotland, and France. He then entered Italy with an army of 20,000 men, and, assisted by the Venetians, quickly recovered one part of the duchy, while they conquered the other, the duke himself being obliged to retire to his family to Inspruck. He then attacked the king of Spain with three armies at once: one by land, and one by sea; but not performing any thing remarkable, he returned to Naples in 1504. In 1506 the Genoese drove out the nobility; chose 8 tribunes, and declared Paul Nuova, a silk-dyer, their chief; after which, they expelled the French, and reduced a great part of the Riviera to their obedience. Lewis's return into Italy in 1507, he obliged the Genoese to surrender; and, in 1508, entered into the treaty of Cambrai, with the other princes of the league, to reduce the overgrown power of the Venetians. Pope Julius II. who had been the first contriver of this league, very soon broke it; and declared, that if the Venetians refused to restore the cities of Faenza and Rimini, which had been unjustly taken from him, he would attack them. This was refused; and in 1512 the forces of the republic received such a defeat from Lewis, that they agreed to restore only the two cities, but whatever else was required. The pope now, instead of making peace, made war on the king, without the least provocation. Lewis called an assembly of his clergy; where it was determined, that in some cases it was lawful to make war on the pope; upon which the king declared against him, and committed the care of the kingdom to Marshall de Trivulce. He soon obliged the pope to retire into Ravenna; and in 1512 the duke of Nemours, gained a great victory at Ravenna, but was killed in the engagement. His death the army disbanded for war, and the French affairs in Italy, and elsewhere, fell into confusion. They recovered the duchy of Milan, and lost it again in 1515, when Henry VIII. of England invaded France, and took Terracena and Tournay; and the same year he reduced Burgundy with an army of 25,000 men. This desperate state of affairs the queen Lewis put an end to the opposition of her dangerous enemies by negotiating a marriage with Ferdinand of Spain he offered his second son for either of his grandsons, Charles or Lewis; and to renounce, in favour of that marriage, his claims on Milan and Genoa. This proposal was accepted; and Lewis himself married t

Francis found it impossible to succeed; and at the same time an irreconcilable hatred took root between the two monarchs. In 1521, this hatred produced a war; which, however, might have been terminated, if Francis had retreated into Calabria, but this being refused, hostilities were renewed with greater vigour than ever; they continued till France was brought to the very brink of ruin, Francis himself being taken prisoner, on the 24th Feb. 1524. This disaster threw the whole kingdom into the utmost confusion. The Flemish troops made continual ravages; many thousand boers assembled in Alsace, and an invasion from that quarter; Henry VIII. assembled a great army, and threatening the kingdom on that side also; and a party of English troops disposed of the remainder of the money: the duke of Vendôme, however, who, after the constable, was the head of the House of Bourbon, went on to Lyons, where he assured the regent that he had no view but for her service, and that he would be ready to die for her; upon which she formed a council of the best men of the kingdom, and of this she appointed a president. The famous Andrew Doria, with the French galleys to take on board the remains of the French troops under the duke of Vendôme, whom he landed safely in France. Those who were expelled out of the Milanese also made their way to France. Henry VIII. under the influence of the regent, resolved not to oppress the oppressed; and the emperor agreed to a truce with the regent for ten years. In Picardy the Flemings were repulsed; and count Guise, with the duke of Lorraine, with a handful of troops, defeated and cut off the German peasants. In the mean time Francis was detained in captivity in Italy: weary of his confinement in that country, the princes of Italy beginning to cabal for his liberation, he was carried to Madrid; where,

he was presented to an assembly of the notables; to whom he proposed the question, Whether he was bound to perform the treaty of Madrid? or, Whether if he did not perform it, he was obliged in honour to return to Spain? To both these questions, the assembly answered in the negative. When the ambassadors delivered their propositions, Charles treated the English herald with respect, and the French one with contempt; which produced a challenge from Francis to the emperor. See *DUEL*, § 3. All differences, however, were at last adjusted; and a treaty was concluded at Cambray, on the 24th Aug. 1528. By this treaty, the emperor contented himself with reserving his right to the duchy of Burgundy, and to receive two millions of crowns, as the ransom of the king of France's two sons. Of these he was to receive 1,000,000 in ready money: the prince's lands in Flanders belonging to the house of Bourbon were to be delivered up; these were valued at 400,000 more: and the remaining 400,000 were to be paid by France in discharge of the emperor's debt to England. Francis was likewise to discharge the penalty of 500,000 crowns, which the emperor had incurred, by not marrying his niece the princess Mary of England; and to release a rich *jeur-de-lis* which had been many years before pawned by the house of Burgundy for 50,000 crowns. The town and castle of Hesden were also yielded; together with the sovereignty of Flanders and Artois, and all the king's pretensions in Italy. As for the allies of France, they were abandoned to the emperor's mercy, without the least stipulation in their favour; and Francis himself protested against the validity of the treaty before he ratified it, as did also his attorney general before he registered it in parliament; but both of them with the greatest secrecy imaginable. Not long after, the war was renewed with Charles V, who made an invasion into France, but with very bad success; nor was peace

the people to their duty without making many examples: the other behaved with the utmost haughtiness and cruelty; and though the king afterwards remitted many of his punishments, yet from that time the constable became odious to the people, while the family of Guise were highly respected. In 1548, the king began to execute the edicts which had been made against the Protestants with the utmost severity; and, thinking even the clergy too mild in the prosecution of heresy, erected for that purpose a chamber composed of members of the parliament of Paris. At the queen's coronation, which happened this year, he caused a number of Protestants to be burned, and was himself present at the spectacle. He was, however, so much shocked, that he could never forget it; but complained, as long as he lived, that, at certain times, it appeared before his eyes, and troubled his understanding. In 1549, a peace being concluded with England, the king purchased Boulogne from the latter, for the sum of 400,000 crowns; one half to be paid on the day of restitution, and the other a few months after. Scotland was included in the treaty, and the English restored some places they had taken there. This was the most advantageous peace that France had hitherto made with England; the vast arrears which were due to that crown being in effect remitted; and the pension which looked so like tribute, not being mentioned, was in fact extinguished. The earl of Warwick himself, who had concluded the peace, was so sensible of the disgrace suffered by his nation on this occasion, that he pretended to be sick, in order to avoid setting his hand to such a scandalous bargain. This year, an edict was made to restrain the extravagant remittances which the clergy had been in use of making to the court of Rome. With this edict pope Julius III. was highly displeased; and in 1550, war was declared by the king of France against the pope and the emperor. The emperor soon found himself in such danger, that he could not support the pope as he intended, who on that account was obliged to sue for peace. After this, the king continued the war against the emperor with success; reducing Toul, Verdun, and Metz. He then entered the country of Alsace, and reduced all the fortresses between Haguenau and Wissemburg. He failed, however, in his attempt on Strafsburgh: and was soon after obliged by the German princes and the Swiss to desist from farther conquests on that side. This war continued with very little interruption, and as little success on the part of the French, till 1557, when a peace was concluded; and in 1559, the king was killed at a tournament by the count de Montgomery, one of the strongest knights in France, who had done all he could to avoid this encounter with the king. The reign of his son and successor Francis II. was remarkable only for the persecution of the Protestants, of whom he made a dreadful slaughter; 1200 died by the hands of the executioner; the waters of the Loire were tinged with their blood, and their bodies, being denied burial, tainted the air. He died in his 18th year, and end of his reign, A. D. 1560.

(41.) FRANCE, HISTORY OF, FROM THE DEATH OF FRANCIS II. TO THE MASSACRE OF THE PRO-

TESTANTS UNDER CHARLES IX. succeeded his brother in 1560. He at last took up arms in their own defence, which occasioned several civil wars, the first continued till 1562, when a peace was concluded by which the Protestants were to have freedom, and liberty of conscience. In 1562, a civil war broke out anew, and was continued with little interruption till 1569, when peace was concluded upon very advantageous terms for the Protestants. After this, king Charles IX. took the government into his hands, and persecuted the Protestants in an extraordinary manner. He ordered to court the admiral Coligni, who was of the Protestant party; and cajoled him, till he was lulled into a perfect security, receiving the many warnings given him by the duke of Guise, the head of the Catholics. On the 22d Aug. 1571, as he was walking in the court to his lodgings, he received a blow in the window, which carried away the admiral's right hand, and wounded him grievously in the left arm. This he ascribed to the duke of Guise, the head of the Catholics. After dinner, the king went to parliament, and amongst others made him this speech: "You have received the wound, but do not suffer." This satisfied the admiral of the king's sincerity, and hindered him from complying with the desire of his friends, who would have forced him away, and who were strong enough to have forced a passage out of Paris, if they had intended it. In the evening, the queen mother, Catherine de Medicis, held a cabinet council, in which she determined on the execution of the massacre of St. Bartholomew, which had been long meditated. The council, which was composed of the duke of Anjou, the king's brother, the duke of Nevers; Henry of Angoulême, the prior of France, and bastard brother of the king; the marshal de Tavannes; and Albert count de Retz. The direction of the massacre was given to the duke of Guise. The guard was pointed to be in arms, and the city was ordered to dispose the militia to execute the king's command, of which the signal was the ringing of the bells of the Louvre. Some say, that when the king approached, which was that of midnight, the uproar grew undetermined: that he expected to find the people whom he would destroy were his subjects, who had no other capital at his command, and in confusion; and particularly the admiral who was detained so lately by his caresses. The queen mother, however, reproached him with the massacre, and represented to him the great number of Protestants; which obliged him to consent. According to the custom of the times, ever, the king himself urged on the massacre, and when it was proposed to him to take a few of the heads, he cried out, "I will not die, let there not be one left to reproach me with breach of faith." As soon as the signal was given, a body of Swiss Catholic troops, led by the duke of Guise, the chevalier of Angoulême, and accompanied by many persons of quality, entered the admiral's house. Having forced the doors, the foremost of the assassins

ment; and one of them asked if he was to this he answered that he was; and Young man respect these gray hairs:" the assassin replied by running him thro' with his sword. The duke of Guise chevalier, growing impatient below stairs, to know if the business was done; and that it was, commanded that the body be thrown out at the window. As soon on the ground, the chevalier, or (as some Duke of Guise, wiping the blood off the sword to the fury of the populace; who, cries of indignities, dragged it to the cellars, to which they chained it by the feet, and being cut off and carried to the queen; who caused it to be embalmed and sent to the king himself went to see the body upon the gibbet; where a fire being kindled it, part was burnt. In the Louvre, the men belonging to the king of Navarre and the prince of Conde were murdered under the great. Two of them wounded, and pursued assassins, fled into the bed-chamber of the queen of Navarre, and jumped upon her bed, begging her to save their lives; and as she went this favour of the queen mother, two more, by these circumstances, rushed into the room, and threw themselves at her feet. The queen came to the window to enjoy their dreadfulness; and the king, seeing the Protestants fled on the other side of the river flying cries, called for his long gun, and fired them. In 3 or 4 days many thousands were killed in Paris, by the most cruel deaths which could be invented. Peter Ramus, professor of philosophy and mathematics, after voided of all he had, his belly being first open, was thrown out of a window. This was affected Denis Lambin, the king's professor though a zealous Catholic, he died of

The first two days the king denied it was his orders, and threw the whole blame upon the Duke of Guise; but, on the 28th of August to the parliament, avowed it, was committed upon it, and directed a process against him, by which he was stigmatized as a traitor. Two innocent gentlemen suffered as his accomplices in a pretended plot against the life of the prince of Conde. They were executed by the king; and the king and the queen mother were spectators of this horrid deed; and at the jubilee to thank God for the execution of it.

FRANCE, HISTORY OF, FROM THE DIABOLICAL MASSACRE OF THE PROTESTANTS, TO THE DEATH OF CHARLES IX. This massacre confined to the city of Paris alone. On the 24th of St. Bartholomew, orders had been first given to the governors of provinces to fall upon the Protestants themselves, and to let loose the people upon them; and though an edict was published the end of the week, assuring them of the protection, and that he by no means designed to exterminate them because of their yet private orders were sent, of a nature

directly contrary; in consequence of which, the massacre, or, as, in allusion to the Sicilian vespers; (see ITALY) it was now styled, the *Matins of Paris*, were repeated in Meaux, Orleans, Troyes, Angers, Thoulouze, Rouen, and Lyons: so that in the space of two months 30,000 Protestants were butchered. The next year Rochelle, the only strong fortress which the Protestants held in France, was besieged, but was not taken without the loss of 24,000 Catholics, who besieged it. After this a pacification ensued on terms favourable to the Protestants, but to which they never assented. This year the duke of Alençon was elected king of Poland, and soon after set out to take possession of his new kingdom. The king accompanied him to the frontiers of the kingdom; but during the journey was seized with a slow fever, which had a very dangerous appearance. He lingered for some time under the most terrible agonies both of body and mind; full of remorse, and blood oozing from all the pores of his body. He died on the 30th of May 1572, having lived 33 years, and reigned 13. It is said, that after the dreadful massacre, the prince had a fierceness in his looks, and a colour in his cheeks which he never had before. He slept little, and never sound. He waked frequently in agonies, and was obliged to have some music to compose him again to rest.

(43.) FRANCE, HISTORY OF, TO THE DEATH OF HENRY III. During the first years of the reign of Henry III. who succeeded his brother Charles, the war with the Protestants was carried on with indifferent success on the part of the Catholics. In 1573, a peace was concluded, called by way of eminence the *Edict of Pacification*. This edict gave occasion to the Guises to form an association in defence, as was pretended, of the Catholic religion, afterwards known by the name of the *Catholic League*. In this league, though the king was mentioned with respect, he could not help feeling that it struck at the very root of his authority: for, as the Protestants had already their chiefs, so the Catholics were, for the future, to depend entirely upon the chief of the league; and well, by the very words of it, to execute whatever he commanded, for the good of the cause, against any, without exception of persons. The king to avoid the bad effects of this, by the advice of his council, declared himself head of the league; and of consequence recommenced the war against the Protestants, which was not extinguished so long as he lived. The faction of the Duke of Guise, in the mean time took a resolution of supporting Charles cardinal of Bourbon, a weak old man, as presumptive heir of the crown. In 1584, they entered into a league with Spain, and took up arms against the king; and though peace was concluded the same year, yet in 1587, they again proceeded to such extremities, that the king was forced to fly from Paris. Another reconciliation was soon after effected: but it is generally believed that the king from this time resolved on the destruction of Guise. Accordingly, finding that this nobleman still behaved towards him with his usual insolence, the king caused him to be murdered, as he was coming into his presence, by his order, on the 23d Dec. 1587. The king himself did not

long survive him; being stabbed by one James Clement, a Jacobine monk, on the first of August 1589. His wound at first was not thought mortal; but his frequent swooning quickly discovered his danger; and he died next morning, in the 39th year of his age, and 16th of his reign.

(44.) FRANCE, HISTORY OF, TO THE DEATH OF HENRY IV. Before the king's death, he nominated Henry Bourbon, king of Navarre, to be his successor, but as he was a Protestant, or at least greatly favoured their cause, he was at first owned by very few except those of the Protestant party. He met with the most violent opposition from the members of the Catholic league; and was often reduced to such straits, that he went to people's houses under colour of visits, when in reality he had not a dinner in his own. By his activity and perseverance, however, he was at last acknowledged throughout the kingdom, to which his abjuration of the Protestant religion, no doubt, contributed. As the king of Spain had laid claim to the crown of France, Henry, no sooner found himself in a fair way of being firmly seated on the throne, than he formally declared war against that kingdom; in which he at last proved successful, and in 1597 entered upon the quiet possession of his kingdom. The king's first care was to put an end to the religious disputes which had so long distracted the kingdom. For this purpose, he granted the famous edict, dated at Nantes, April 13, 1598. Soon after, he concluded peace with Spain upon very advantageous terms. This gave him an opportunity of restoring order and justice throughout his dominions; of repairing all the ravages occasioned by the civil war; and abolishing all those innovations which had been made, either to the prejudice of the prerogatives of the crown or the welfare of the people. His plans of reformation, indeed, he intended to carry beyond the boundaries of France. If we may believe the duke of Sully, he had in view no less a design than the new-modelling of all Europe. He imagined that the European powers might be formed into a kind of Christian republic, by rendering them as nearly as possible of equal strength; and that this republic might be maintained in perpetual peace, by bringing all their differences to be decided before a senate of wise, disinterested, and able judges; and then he thought it would be no difficult matter to overturn the Ottoman empire. With a view, it is now thought, of executing this grand project, but under pretence of reducing the exorbitant power of the house of Austria, Henry made immense preparations both by sea and land; but if he really had such a design, he was prevented by death from attempting to execute it. He was stabbed in his coach by one Ravillac, a friar, on the 12th of May, 1610.

(45.) FRANCE, HISTORY OF, TO THE DEATH OF LEWIS XIII. Of the murder of Henry IV. the queen mother assumed the regency. Ravillac was executed after half an hour's severe torments. It is said that he made a confession, which was so written by the party who took him down, that not one word of it can ever be read, and thus his instigator and accomplices could never be discovered. The regency during the minority of Lewis XIII. was distinguished for cabals and

intrigues of the courtiers. In 1617, the king assumed the government himself, banished the queen mother to Blois, castrated her favourite mignon d'Aure to be killed, and chose for his minister the famous cardinal Richelieu. In 1620, a war broke out between the Catholics and Protestants, which was carried on with the greatest fury on both sides. Both parties soon became weary of such a destructive war; and a peace was concluded in 1621, by which the edict of Nantes was confirmed. This treaty, however, was of no long duration. A new war broke out, which lasted till the year 1628, when the edict of Nantes was again confirmed; only the Protestants deprived of all their cautionary towns, and frequently of the power of defending the cities in time to come. This put an end to the wars on account of religion in France. Historians say, that in these wars above a million of men lost their lives; that 150,000,000 livres were expended in carrying them on; and that 9 cities, 40 villages, 2000 churches, 2000 monasteries, and 1000 houses were burnt or otherwise destroyed during their continuance. The next year, the king attacked with a slow fever which nothing could allay, an extreme depression of spirits, and a disgusting swelling in his stomach and belly. A year after, however, he recovered, to the great disappointment of his mother, who had been desirous of regaining her power. She was arrested but escaped into Flanders, where she remained during the rest of this reign. Richelieu, a masterly train of politics, though himself was to an enthusiast for popery, supported the pretensions of Germany and Gustavus Adolphus against the house of Austria; and, after quelling all rebellions and conspiracies which had been formed against him in France, died some months before Lewis XIII. in 1642.

(46.) FRANCE, HISTORY OF, TO THE DEATH OF LEWIS XIV. Lewis XIV. surnamed *the Great*, succeeded to the throne when only five years of age. During his minority, the kingdom was torn into pieces under his mother Anne of Austria, by the factions of the great, and the divisions between the court and parliament. The prince of Condé flamed like a blazing star; sometimes a patriot, sometimes a courtier, and sometimes a rebel. He was opposed by the celebrated Turenne, who from a Protestant had turned Papist. The misfortune of France was involved at once in civil and foreign wars; but the queen mother having the choice of Cardinal Mazarine for her first minister, found means to turn the arms even of Cromwell against the Spaniards, and so divided the domestic enemies of the court, that when Lewis assumed the government into his own hands, he found himself the most absolute monarch that had ever sat upon the throne of France. He had the good fortune, on the death of Mazarine, to put the despotic administration of his affairs into the hands of Colbert, who formed new systems for the navy, commerce, and manufactures of France which he carried to a surprising height. The king himself, ignorant and vain, was blind to the patriotic duty of a king, promoting the interests of his subjects only to answer the purposes of greatness; and by his ambition he embroiled

th all his neighbours, and wantonly rundermany a dismal scene of devastation. By politic and unjust revocation of the edict of sin 1685, with the dragging the Protest that followed it, (see DRAGOONING,) he many to take shelter in England, Holland, fterent parts of Germany, where they cita his manufactories, to the great prejudice ce. He was so blinded by flattery, that egated to himself the divine honours paid eads for his conveniency: and in the rained himself a confederacy of almost all rprinces of Europe; at the head of which r King William III. He was so well ferat he made head for some years against this r; and France seemed to have attained the rch of military glory, under the conduct rrenowned generals Conde and Turenne. rited PROVINCES.) At length, having r the English by his repeated infidelities, rns under the duke of Marlborough, and r the Austrians under prince Eugene, render- rter part of Lewis's life as mis-rable as rning of it was splendid. His reign r to 1711, was one continued series of r and calamities; and he had the mortifica- r these places taken from him, which, r former part of his reign, were acquired at r of many thousand lives. (See ENG- r 75—76.) Just as he was reduced, old r, to the desperate resolution of collec- r people and dying at their head, he was r the English Tory ministry deserting the r, withdrawing from their allies, and conclu- r peace of Utrecht in 1713. The last years r XIV. were all embittered by domestic r; which, added to those he had already r of a public nature, impressed him with a r melancholy. He had been for some time r with a fistula; which, though successful- r ever afterwards affected his health. The r fore the peace, his only son, the duke of r, died, together with the duchess and r eldest son; and the only remaining child was r the point of death. The king himself sur- r the month of Sept. 1715; but on the r that month expired, leaving the kingdom r great-grandson Lewis, then a minor.

FRANCE, HISTORY OF, TO THE MAR- r LEWIS XV. By the last will of Lewis r devolved the regency during the minority r young king, upon a council, at the head of r was the duke of Orleans. That nobleman, r, disgusted with a disposition which gave r by a casting vote, appealed to the parlia- r Paris, who set aside the will of the late r and declared him sole regent. His first acts r extremely popular. He restored to parlia- r the right of remonstrating against the edicts r crown, and forced those who had enriched r lives during the former reign to restore their r. He also took every method to efface the r occasioned by the unsuccessful wars r his predecessor had engaged; promoted r rce and agriculture; and, by a close alli- r with Great Britain and the United Provinces, r to lay the foundation of a lasting tranquil-

lity. This happy prospect, however, was soon overcast by the intrigues of Alberoni the Spanish minister, who had formed a design of recovering Sardinia from the emperor, Sicily from the duke of Savoy, and of establishing the house of Stuart on the throne of Britain. To accomplish these purposes, he negotiated with the Ottoman Porte, Peter the Great of Russia, and Charles XII. of Sweden; the Turks intended to resume the war against the emperor; the two latter to invade Great Britain. But as long as the duke of Orleans retained the administration of France, he found it impossible to bring his schemes to bear. To remove him, therefore, he fomented divisions in the kingdom. An insurrection took place in Brittany; and Alberoni sent small parties in disguise into the country, to support the insurgents, and even laid plots to seize the regent himself. All of a sudden, however, the Spanish minister found himself disappointed in every one of his schemes. His partisans in France were put to death; the king of Sweden was killed at Frederickshall, in Norway; the Czar, intent on making new regulations, could not be persuaded to make war upon Britain; and the Turks refused to engage in a war with the emperor, from whom they had lately suffered so much. The cardinal, nevertheless, continued his intrigues: which quickly produced a war betwixt Spain on the one part, and France and Britain on the other. The Spaniards, unable to resist the union of two such formidable powers, were soon reduced to the necessity of suing for peace; and the terms were dictated by the regent of France; and of these the dismissal of Alberoni the Spanish minister was one. A double marriage was now set on foot: the duke of Orleans gave his own daughter Mad. Montpensier, to Don Lewis prince of Asturias, while the infant of Spain was betrothed to her cousin the king of France. From this time the house of Bourbon continued united; both princes being convinced, that it was their interest not to waste their strength in wars against each other. The spirit of conquest having now greatly subsided, and that of commerce taken place throughout the world in general, France became the scene of as remarkable a project in the commercial way as ever was known in any country. John Law, a Scots projector, of uncommon genius, (see LAW,) proposed the plan of a company which might by notes pay off the debt of the nation, and reimburse itself by the profits. The nation being at this time involved in a debt of 200 millions, the regent as well as the people in general were very fond of embarking in his new scheme. The bank was established in 1716, and proceeded at first with some caution; but having by degrees extended their credit to more than 80 times their real stock, they soon became unable to answer their demands: so that the company was dissolved in 1720, the 4th year after it had been instituted. The confusion into which the kingdom was thrown by this fatal scheme, required the utmost exertions of the regent to put a stop to it; and the king, in 1723, took the government into his own hands. The duke then became minister; but he did not long enjoy this post. His irregularities had broken his constitu-

was, and brought on a number of maladies, under which he soon sunk, and was succeeded in his administration by the duke of Bourbon Conde. The king had been married, when very young, to the infanta of Spain, but the marriage had never been consummated. The princess, however, had been brought to Paris, and for some time treated as queen of France; but as Lewis grew up, he contracted an inveterate hatred against the intended partner of his bed. The minister therefore, at last consented that the princess should be sent back; an affront so much resented by the queen her mother, that it had almost produced a war betwixt the two nations. The dissolution of the marriage of Lewis was the last act of Conde's administration; and the procuring of a new match was the first act of his successor, Cardinal Fleury. The princess pitched upon was the daughter of Stanislaus Leszinski, king of Poland, who had been deposed by Charles XII. of Sweden. This princess was destitute of personal charms, but of an amiable disposition; and though, perhaps, she never possessed the love of her husband, her excellent qualities commanded his esteem; and the birth of a prince, soon after their marriage, removed all fears concerning the succession.

(48.) FRANCE, HISTORY OF, UNDER LEWIS XV. TILL THE FAMILY COMPACT. Cardinal Fleury continued the pacific schemes pursued by his predecessors; though they were somewhat interrupted by the war which took place in 1733. Notwithstanding the connection betwixt that monarch and the French nation, however, Fleury was so parsimonious in his assistance, that only 2500 soldiers were sent to relieve Dantzic, where Stanislaus himself resided, and who at that time was besieged by the Russians. This pitiful reinforcement was soon overwhelmed by a multitude of Russians; and Stanislaus was at last obliged to renounce the crown of Poland, though he was permitted to retain the title of king: and that this title might not be merely nominal, the king of France bestowed upon him the duchies of Bar and Lorraine; so that, after his death, these territories were again united to the dominions of France. Fleury steadily pursued his pacific plans; the disputes between Spain and England, in 1737, very little affected the peace of that kingdom; and it must be remembered to his praise, that instead of fomenting quarrels betwixt the neighbouring states, he laboured to keep them at peace. He reconciled the Genoese and Corsicans: and his mediation was accepted by the Ottoman Porte, who carried on a successful war with the emperor of Germany, but made peace with him at the cardinal's intercession. All his endeavours to procure the general peace, however, proved at last ineffectual. The death of the emperor Charles VI. in 1740, set all Europe in a flame. The emperor's eldest daughter, Maria Theresa, claimed the Austrian succession. Among the many competitors who pretended a right to these extensive dominions, the king of France was one. But as he wished not to awaken the jealousy of the European princes by preferring directly his own pretensions, he chose rather to support those of Frederick II. who laid claim to Silesia. This brought on the war of 1740, of which an account

will be found under ENGLAND, § 80, & PRUSSIA. It was terminated in 1748 by the treaty of Aix-la-Chapelle; but to this Lewis secretly meditated a severe vengeance against, only consented, that he might have recruit his fleet and put himself somewhat upon an equality with that formidable monarch. But while he meditated great exploits to stir up the internal tranquillity of his kingdom, he was troubled by violent disputes betwixt the parliaments of France. In the reign of Lewis there had been violent contests betwixt the parliaments and Jesuits, and the opinions of the Jesuits had been declared heretical by the celebrated bull named *Unigenitus*; the reception of which was enforced by the king, in opposition to the parliaments, the archbishop of Paris, and the people. The archbishop with the prelates protested against it. The duke of Orleans favoured the bull by inducing the parliaments to submit to it; but at the same time stopped the execution which was going on against its authors. This matters passed over till the conclusion of peace; soon after which the jealousy of the parliaments was awakened by the minister attempting to divide the wealth of individuals of the kingdom. To prevent this, they revived the contest against the bull *Unigenitus*; and it was resolved, that professional notes should be obtained of every clergyman, that these notes should be signed by him, and maintained the authority of the bull; and without such notes, no person could obtain the sacrament, or extreme unction. On this occasion the new archbishop and the parliament took opposite sides: the latter imprisoned the clergy as refused to administer the sacraments. Other parliaments followed the example of Paris; and a war was instantly kindled between the civil and ecclesiastical departments of France. In this dispute the king interfered, for the parliaments to take cognizance of the ecclesiastical proceedings, and commanded them to discontinue all prosecutions relative to the refusal of the sacraments; but instead of acquiescing, they presented new remonstrances, refused to attend to any other business, and resolved they would not obey this injunction without their duty as well as their oath. They presented a petition to the king before their tribunal, in which they demanded all writings, in which its jurisdiction was disputed, to be burnt by the executioner. In the assistance of the military, they enforced the administration of the sacraments to the sick, and to distribute that justice to the subject which they had been originally instituted. Enraged at their obstinacy, arrested and imprisoned four members who had been most obstinately banished the rest to Bourges, Poitiers, and other parts of the kingdom; while, to prevent any impediment to the administration of justice by their absence, letters patent, by which a royal chamber was constituted for the prosecution of civil and criminal suits was granted. The counsellors refused to plead before the new courts; and the king, finding that the nation was about to fall into a state of anarchy, recalled the parliament. The banished members entered Paris amidst the acclamations of the people; and the archbishop, who still

rage the priests in refusing the sacraments, banished to his seat at Conflans; the bishops of Sens and Troyes were also banished, and their see established; but it was of no long duration. In 1756, the parliament again fell under the censure of the king, by their imprudent perseverance of those who adhered to the bull *Unigenitus*. They even refused to register the taxes for carrying on the war. By this Lewis revoked, that he suppressed the 4th and 5th articles of inquest, the members of which punished themselves by their opposition. He ordered the bull *Unigenitus* to be respected, and prohibited the secular judges from ordering the administration of the sacraments. On this, 15 members of the great chamber resigned their offices. 124 members of the different parliaments followed their example: and the most grievous disorders took place throughout the kingdom. An attempt was made by a fanatic, named *Damien*, to assassinate the king; and he was actually killed, though slightly, between the ribs, in the presence of his son, and in the midst of his

The assassin was put to the most exquisite torments; in the midst of which he persisted, in the most obstinate manner, to declare that he had no intention to kill the king; but that his design was only to wound him, that God might purify his heart, and incline him to restore peace to his dominions, &c. These expressions, which were daily indicated insanity, had no effect on the secular judges, who consigned him to one of the most horrid deaths the ingenuity and cruelty of man could invent. This attempt, however, had some effect upon the king, as he afterwards banished the archbishop of Paris, who had been recalled, and accommodated matters with his parliament once more. The unfortunate issue of the war of 1755, had brought the nation to the brink of ruin, when Lewis implored the assistance of Spain; and on this occasion, the *Family Compact* was signed; by which, the single exception of the American trade, between France and Spain were naturalized in both kingdoms, and the enemy of the one soon was invariably to be looked upon as the enemy of the other. At that time, however, the power of Spain availed very little; both powers were reduced to the lowest ebb, and the arms of France were triumphant in every quarter of the globe.

See ENGLAND, § 82, 83.

FRANCE, HISTORY OF, UNDER LEWIS XV. HIS DEATH. The peace concluded at Utrecht in 1763, though it freed the nation from a destructive and bloody war, did not restore internal tranquillity. The parliament, eager to see the victory they had formerly gained over their religious enemies, now directed their efforts against the Jesuits, who had obtained and enforced the bull, *Unigenitus*. That once powerless, however, was now on the brink of destruction. A general detestation of its members had taken place throughout the whole world. A rivalry formed by them against the king of England, and from which he narrowly escaped, kindled the indignation of Europe, and this was further inflamed by some fraudulent practices which they had been guilty in France.

Le Valette, the chief of their missionaries at Martinico, had, ever since the peace of Aix-la-Chapelle, carried on a very extensive commerce, in such a manner that he even aspired at monopolizing the whole West India trade, when the war with Britain commenced in 1755. Leonay and Gouffre, merchants at Marseilles, in expectation of receiving merchandizes to the value of two millions from him, had accepted of bills drawn by the Jesuits to the amount of a million and an half. Unhappily they were disappointed by the vast number of captures made by the British; in consequence of which they were obliged to apply to the Society of Jesuits at large: but they, either ignorant of their true interest, or too slow in giving assistance, suffered the merchants to stop payment. Their creditors demanded indemnification from the Society at large; and on their refusal to satisfy them, brought their cause before the parliament of Paris. That body, eager to revenge themselves on such powerful adversaries, carried on the most violent prosecutions against them. In the course of these, the volume containing the constitution and government of the order itself was appealed to, and produced in open court. It then appeared, that the order of Jesuits formed a direct body in the state, submitting implicitly to their chief, who alone was absolute over their lives and fortunes. It was likewise discovered that they had, after a former expulsion, been admitted into the kingdom upon conditions which they had never fulfilled; and to which their chief had obstinately refused to subscribe; consequently that their existence at that time in the nation was merely the effect of toleration. The event was, that the writings of the Jesuits were pronounced to contain doctrines subversive of all civil government, and injurious to the security of the sacred persons of sovereigns; the attempt of *Damien* against the king was attributed to them, and every thing seemed to prognosticate their speedy dissolution. In this critical moment, however, the king interfered, and by his royal mandate suspended all proceedings against them for a year; a plan of accommodation was drawn up, and submitted to the pope and general of the order: but the latter, by his ill-timed haughtiness, entirely overthrew the hope of reconciliation. The king withdrew his protection, and the parliament redoubled their efforts against them. The bulls, briefs, constitutions, and other regulations of the Society, were determined to be encroachments on authority, and abuses of government; the Society itself was finally dissolved, and its members declared incapable of holding any clerical or municipal offices; their colleges were seized; their effects confiscated; and the order annihilated. The parliament having gained this victory, next made an attempt to set bounds to the power of the king himself. They now refused to register an edict which Lewis had issued for the continuance of some taxes which should have ended with the war, and likewise to conform to another, by which the king was enabled to redeem his debts at an inadequate price. The court attempted to get the edicts registered by force, but the parliament everywhere seemed inclined to resist to the last. In 1766, the parliament of Brittany refused the crown a gift of

900,000 livres; in consequence of which, they were singled out to bear the weight of royal vengeance; but while matters were just coming to extremities, the king dropt the process altogether, and published a general amnesty. The parliaments, however, affected to despise the royal clemency; which exasperated the king to such a degree, that he ordered the counsellors of the parliament of Brittany (who had refused to resume the functions of which he deprived them) to be included in the list of those who were to be drafted for militia; and those upon whom the lot fell were immediately obliged to join their respective regiments; the rest being employed in forming the city guard. The parliament of Paris remonstrated so freely upon this conduct of the king, that they also fell under his censure; and Lewis in the most explicit manner declared, that he would suffer no earthly power to interfere with his will; and the parliaments were thus intimidated into submission. The interval of domestic tranquillity was employed by the king in humbling the pride of the pope, who refused to recall a brief he had published against the duke of Parma. On this the French monarch reclaimed the territories of Avignon and Venaissin; and while the pontiff denounced his unavailing censures against him, the marquis de Rochecouart, with a single regiment of soldiers, drove out the troops of the pope, and took possession of these territories. A more formidable opposition was made by the natives of the small island of Corsica; the sovereignty of which had been transferred to France by the Genoese, its former masters, on the condition that Lewis should reinstate them in the possession of the island of Capraria, which the Corsicans had lately reduced. These islands defended themselves with the most desperate intrepidity; and it was not till after two campaigns, in which several thousands of the bravest troops of France were lost, that they could be brought under subjection. The satisfaction which this unimportant conquest might afford to Lewis, was clouded by the distress of the nation at large. The East India Company had totally failed, and most of the capital commercial houses in the kingdom were involved in the same calamity. The minister, the duke of Choiseul, by one desperate stroke, reduced the interest of the funds to one half, and at the same time took away the benefit of the survivorship, in the tontines, by which the national credit was greatly affected; the altercation betwixt the king and his parliaments revived, and the dissensions became worse than ever. Choiseul attempted in vain to conciliate the differences; his efforts tended only to bring misfortunes upon himself, and, in 1771, he was banished by the king, who suspected him of favouring the popular party too much. This was soon followed by the banishment of the whole parliament of Paris, and that by the banishment of others; new parliaments being every where chosen in place of those who had been expelled. The people were by no means disposed to pay the same regard to these new parliaments that they had done to the old ones; but every appearance of opposition was at last silenced by the absolute authority of the king. In the midst of this plenitude of power, however, which he had so ar-

dently desired, his health daily declined, a period of his days was evidently at no great distance. As he had indulged himself in sensuality to the greatest excess, they now provided immediate means of his destruction. His favourite, Madame de Pompadour, who had long governed him with absolute sway, had long been dead, and the king had for some time been equally enslaved by the charms of Madame Barre. At last even her beauty proved insufficient to excite desire; and a succession of mistresses became necessary to rouse the languid appetite of the king. One of these, who was infected with the small-pox, communicated the disease to the king; who died of it, notwithstanding all the assistance given him by the physicians.

(50.) FRANCE, HISTORY OF, UNDER I. XVI. TILL THE AMERICAN TREATY. I. XVI. succeeded his grandfather, in 1774, in the 20th year of his age; and to secure himself against the disease which had proved fatal to his predecessor, submitted to inoculation, with several others of the royal family. Their quick and recovery contributed much to extend that practice throughout the kingdom, and to remove prejudices against it. The king had no sooner regained his health, than he applied himself gently to extinguish the differences which had taken place between his predecessor and the parliaments. He removed those from their employments who had given cause of complaint by their arbitrary and oppressive conduct; and he conciliated the minds of his subjects, by removing the new parliaments and recalling the old ones. But though the prudence of Lewis had suggested to him these measures, he endeavoured still to preserve pure and entire the royal authority. He explained his intentions by a speech in the great chamber of the parliament, which he concluded thus: "That in his desire to bury in oblivion all grievances; he should ever behold with extreme disapprobation whatever might tend to create divisions and disturb the general tranquillity; and that his successor would read his ordinance to the assembly from which they might be affirmed he would suffer the smallest deviation to be made." This ordinance was conceived in the most explicit terms, and was immediately registered by the king's command. The articles of it limited within very narrow bounds the pretensions of the parliament of Paris: The members were forbidden to look upon themselves as one body with the other parliaments of the kingdom, or to take any step, or assume any title, that might tend towards or imply an union: They were enjoined never to interrupt the administration of public justice, except in the cases of absolute necessity, for which the first president was to be responsible to the king; and it was added, that on their disobedience the Grand Council might displace the parliament without any new edict. They were still never permitted to enjoy the right of remonstrating, before the registering of any edicts or letters patent, which they might conceive injurious to the welfare of the people, provided they served in their representations the respect due to the throne. But these remonstrances were never to be repeated; and the parliament, if they pre-

, were to register the edict objected to soon as farthest from the first day of its issued. They were forbidden to issue which might excite trouble, or in any tard the execution of the king's ordinance they were assured by the king himself conclusion of this code for their future, that as long as they adhered to is prescribed, they might depend upon grace and protection. In short, the which Lewis consented to re-establishments were such, that they were reduced cyphers, and the word of the king used to be the only law in the kingdom. bishop of Paris, who had likewise praised some commotions about the bulls, was obliged to submit; and severely if he should afterwards interfere in such The final conquest of the Corsicans, vexed by the oppression of their government more attempted to regain their liberty the first event of importance which took this restoration of tranquillity; but the was yet filled with disorder from other scarcity of corn happening to take place a time that some regulations had been M. Turgot, the new financier, the posted in great bodies, and committed such that a military force became absolutely to quell them; and it was not till upwards of them were destroyed, that they reduced. The king, however, by his vigorous conduct on this occasion, a stop to all riots, and eminently displayed clemency as well as prudence in the method for the restoration of the publicty. The humanity of Lewis was next an edict which he caused to be registered sent, sentencing the deserters of his army to work as slaves on the public roads, punishing them as formerly with death; equal attention to the welfare of his subjects the moment of peace to fulfil those of economy, which on his accession he owed to his people. Various regulations took consequence; particularly the suppression of the *Mulquetaires* and some other corps, being more adapted to the parade of guard than of a real military service, supported at a great expence, without any return of benefit to the state. Particular attention was also paid to the marine; and the appointment of M. de Sartine in 1776, to that post, did honour to the penetration of the king. That minister, fruitful in resources, varied in his application, was incessantly in augmenting the naval strength of his kingdom; and the various preparations that filled the harbours and docks, created no small uneasiness in the public mind. The next appointment made in the navy was equally happy, and in one regular and unprecedented. M. Turgot, possessed of integrity and industry, had been able to command the public confidence. His successor, M. Clugny, intendant general of the navy, had been elevated to the vacant post; and soon after, M. Taboureaux des Reaux

was appointed his successor; and the king associated with him in the management of the finances M. Neckar, by birth a Swiss, and by religion a Protestant. That gentleman, in the preceding reign, had been chosen to adjust some differences between the East India company and the crown; and had discharged his trust in a manner which gained the approbation of both parties. Possessed of distinguished abilities, his appointment would have excited no surprise, had it not been contrary to the constant policy of France, which had carefully excluded the aliens of her country and faith, from the controul of her revenue. It was a new instance of enlargement of mind and liberality of sentiment; and will to posterity mark the prominent features of the reign of Lewis XVI. Although the king was of a pacific disposition, and not destitute of generosity of sentiment, yet his own and the public exultation had been openly and constantly proportioned to the success of the Americans in their contest with Britain: the princes of the blood and chief nobility were eager to embark in support of the cause of freedom; and the prudence of the king and his most confidential ministers alone restrained their ardour. The fatal events of the former war were still impressed on the mind of Lewis; and he could not readily consent to expose his infant marine in a contest with a nation who had so long asserted the dominion of the seas, and so lately broken the united strength of the house of Bourbon. At the same time, he was sensible, that the opportunity of humbling the British court should not be entirely neglected, and that some advantages should be taken of the commotions in America. Two agents from the United States, Silas Deane and Dr Franklin, had successively arrived at Paris; and though all audience was denied them in a public capacity, still they were privately encouraged to hope, that France only waited the proper opportunity to vindicate by arms the independence of America. In the mean time, the American cruizers were hospitably received into the French ports: artillery and all kinds of warlike stores were freely sold or liberally granted to the colonists; and officers and engineers, with the connivance of government, entered into their service. Some changes were about this time introduced into the different departments of state. The conduct of M. Neckar in the finances had been attended with universal approbation; and M. Taboureaux des Reaux, his colleague, had resigned, but still retained the dignity of counsellor of state. To afford full scope to the genius of M. Neckar, Lewis determined no longer to clog him with an associate; but, with the title of Director General of the Finances, submitted to him the entire management of the funds and revenue of France. In the following year, count St Germain, secretary at war, died; and the prince of Montbarey, who had already filled an inferior situation in that department, was appointed to succeed him. In the mean time, Lewis's negotiations with foreign courts were not neglected. He concluded a new treaty of alliance with Switzerland; vigilantly observed the motions of the different princes of Germany on the death of the elector of Bavaria; and when questioned by the

English ambassador, Lord Stormont, respecting the various warlike preparations which were diligently continued through the kingdom, he replied, That at a time when the seas were covered with English fleets and American cruizers, and when such armies were sent to the New World as had never before appeared there, it became prudent for him also to arm for the security of the colonies, and the protection of the commerce, of France. The king was sensible at the same time, that the remonstrances of Great Britain, and the importunities of the United States, would soon compel him to adopt some decisive line of conduct. This was hastened by the capture of Gen. Burgoyne's army. See AMERICA, § 28, 29. The news of that event were received at Paris with unbounded exultation. M. Sartine, the marine superintendent, was eager to measure the naval strength of France with that of Great Britain; the queen, who had long seconded the applications of the American agents, espoused their cause with fresh ardour; and the pacific inclinations of Lewis being overborn, by the suggestions of his ministers and his queen, he at length determined openly to acknowledge the independence of the United States. Dr Franklin and Silas Deane were now acknowledged as public ambassadors from those states to the court of Versailles; and a treaty of amity and commerce was signed between the two powers, in February 1778.

(51.) FRANCE, HISTORY OF, UNDER LEWIS XVI, TILL THE GENERAL PEACE, IN 1783. The duke of Naoilles, ambassador to the court of London, was in March instructed to acquaint that court with the above treaty. At the same time he declared, that the contracting parties had not stipulated any exclusive advantages in favour of France, and that the United States had reserved the liberty of treating with every nation whatever on the same footing of equality and reciprocity. But this stipulation was treated by the British court with contempt; and the recall of Lord Stormont, their ambassador at Versailles, was the signal for the commencement of hostilities.—The events produced by this war will be found under the articles AMERICA, § 29—33; ENGLAND, § 98, 99, 102—104, 106; and INDOSTAN. Here we have chiefly to notice domestic transactions, the measures of the cabinet, and the internal economy of the state. In 1780, new changes in the French ministry took place. M. Bertin had resigned the office of secretary of state; the prince de Montbarey had retired from the post of secretary at war, and was succeeded by the marquis de Segur. But the most important removal was that of M. Sartine, who had for several years presided over the marine department, and whose unwearied application and ability had raised the naval power of France to a height that astonished Europe: but his colleagues in the cabinet loudly accused a profusion, which would have diverted into one channel the whole resources of the kingdom; and his retreat opened a road to the ambition of the marquis de Caltries, who was appointed to supply his place. This year the king fixed on the anniversary of his birth-day to render it memorable by a new instance of humanity, in abolishing for ever the inhuman custom of putting the

question, as it was called, by torture; which had been so established by the pages, that it seemed to be an inseparable constitution of the courts of justice. At the same time, to defray the charge he continued to diminish his own exp and sacrificing his magnificence to his subjects, dismissed at once above 40 belonging to his court. Unhappily, the public discontents were excited next the dismissal of their favourite minister. He had conceived the arduous but popular of supporting a war by loans without the rigid economy which he had introduced all the departments of the royal household; the various resources that presented themselves, his fertile genius, had supported him a difficulties that attended this system. Bitterness of temper had not rendered him acceptable to the sovereign and his subjects; repeated reforms he had recommended presented as inconsistent with the dignity of the crown: he was therefore in 1781 dismissed his office of comptroller-general; and L. Fleuri, counsellor of state, was appointed to that important department. The defeat of de Grasse happened next year, and impeded the kingdom with general grief and consternation. Immense preparations were, however, made for the operations of 1783, and in conjunction with the courts of Madrid and the Hague, I determined this year to make the most of the efforts to bring the war to a conclusion. In the midst of these preparations, the voice of peace was again heard; and Lewis was induced to the proffered mediation of the two emperors in Europe, the emperor of Germany and the empress of Russia. The count de Vergennes, who still occupied the post of secretary of state, was appointed to treat with M. Bertin, the British minister at Brussels, and lately proceeded to Paris to conduct the negotiation. The way was already opened for the restoration of the public tranquillity by the provisional articles signed at the conclusion of the war between the States of America and Great Britain, and which were to constitute a treaty of peace, and which were to be concluded when that between France and Great Britain took place. Preliminary articles were accordingly agreed upon and signed at Versailles; which were soon after succeeded by the definitive treaty of peace in 1783.

(52.) FRANCE, HISTORY OF, UNDER LEWIS XVI, TO THE ASSEMBLY OF THE NATIONAL CONVENTION. Though the late war had been attended with most brilliant success, and the independence of America seemed to strike deep at the foundation of her rival's power, yet France herself had not been entirely free from inconvenience. The M. Neckar had diminished the public credit by 3 different persons, who had since occupied the post, increased the jealousies of the people, and the failure of the celebrated CAISSE D'ESCOMPTE completed the universal consternation. A bank had been established in 1776. The plan was formed by a company of private adventurers, whose capital was fixed at 500,000*l.* sterling. The professed design of the Company was to

best dates, at the rate of 4 per cent per annum; but as this interest could never be a return for the capital sunk by the proprietors, it was entrusted with the additional power of notes to the amount of their capital, which were capable of being converted into specie at the option of the proprietors, and which were often voluntarily taken by their customers for more convenience. The reputation of the bank caused its stock to sell above par; and it was still at the highest, when, to the ruin of the nation, it suddenly stopped on the 24th Oct. 1783. The cause assigned was a sudden scarcity of specie: But the effect was that the failure arose from a loan made to government; and what confirmation of this was, that government about the same time stopped the payment of the bills drawn upon by their army in America. Whatever the cause of this event, the king was prevailed upon to extend his protection to the company, and to issue edicts the banks in Paris were ordered to receive the notes of the *Caisse d'Escompte*; and a lottery with a stock of one million, redeemable in 3 years, raised 100 millions.

The tickets were made purchasable in five parts d'Escompte. By these expedients public confidence in the bank was restored, and its stock rose to double the original subscription; the bills drawn were at the same time put in a circulation, and public credit was restored to the Kingdom. Some compensation was made for the losses that had been incurred during the war, was drawn from a treaty with the States of America. These engaged to furnish in the sum of 18 millions of dollars, which had been advanced in the hour of distress; and Lewis consented to receive the American conversion to the States, in the 12 years, by 12 equal and annual payments. The general peace was first after the establishment of a treaty between France and Holland, which was effected with great secrecy by the King's ministers. It included all the principal conditions to cement in the closest union the nations under distinct governments; which they may mutually participate, in the war, of good or of evil; and in all matters the most perfect aid, counsel, and support to each other. It also prohibited, if their post offices for the preservation of peace were interrupted, the assistance they were to furnish each other by sea and land. France was to furnish Holland with 10,000 effective infantry, 1200, twelve ships of the line and 6 frigates. Their High Mightinesses, on the other hand, agreed that France should furnish by sea, were to contribute to the defence of the line and 3 frigates; and in the event of an attack on the territory of France, the neutral were to have the option of furnishing a contingent either in money or troops, to the amount of 5000 infantry and 1200 cavalry.

If the stipulated succours should be interrupted, the defence of the party attacked, during a proper peace, they engaged to assist each other with all their forces, if necessary; however agreed that the contingent of

troops to be furnished by the States general should not exceed 20,000 infantry and 4000 cavalry. It was further added, that neither of the contracting powers should disarm, or make or receive proposals of peace or truce, without the consent of the other: they promised also not to contract any alliance or engagement whatever, directly, or indirectly, contrary to the present treaty; and on any treaties or negotiations being proposed which might prove detrimental to their joint interest, they pledged their faith to give notice to each other of such proposals as soon as made. Thus Holland became the firm ally of that power against which she had formerly aimed the most powerful kingdoms of Europe; while France supporting America against Great Britain, and converting a formidable foe into a useful friend, seemed to have attained a political influence she had never before been possessed of. Notwithstanding these appearances, the seeds of future contention were already sown. The parliament of Paris had taught the people to look with a less envious eye on the lustre of the throne; the war in America had enlarged their political ideas; they had stood forth as the champions of liberty, in opposition to regal power. From this time, instead of blindly acquiescing under the edict of their sovereign, they canvassed each act with address and impartiality. The dissolution of M. Necker had given very great dissatisfaction to the public; his successor in office, M. de Fleury, had retired in 1773, and the transient administration of M. de Calonne had expired in the same year that gave it birth. On his retreat, M. de Calonne was nominated comptroller general. Though unacceptable to the sovereign, he did not enter upon his arduous station favoured by the breath of popularity. The bold and judicious measures of Calonne, however, restored credit to the *Caisse d'Escompte* which had stopped payment a few weeks before his accession. His next measure, in 1784, the establishment of the *Caisse d'Amortissement*, or sinking fund, was intended to yield higher degrees of utility. The principal measure of 1785, was the establishment of a New India Company; a measure not equally commendable with the preceding, and which therefore excited violent complaints. Although peace had been re-established throughout Europe for 3 years, yet the finances of France seemed scarcely affected by this interval of tranquillity, and it was found requisite to close every year with a loan. The treaty of commerce, which was concluded in 1770 with Great Britain, proved a new source of discontent. It was represented as likely to extinguish those instant establishments, which were yet unable to vie with the manufactures of England that had attained to maturity; and the market that it held out for the wines and oils of France was passing over to France, while the duties of the tariff was piled on the most striking objects. But when the edict for regulating the law of the circulation of the 1st year, and which amounted to the sum of 50,000,000, was presented to the parliament of Paris, the murmurs of the people, through the remonstrances of that assembly, assumed a more legal and formidable aspect. The king however signified, that he expected to be obeyed without

farther delay. The ceremony of the registering accordingly took place on the next day; but it was accompanied with a resolution, importing, "that public economy was the only genuine source of abundant revenue, the only means of providing for the necessities of the state, and restoring that credit which borrowing had reduced to the brink of ruin." The king was no sooner informed of this step, than he commanded the attendance of the grand deputation of parliament; when he erased from their records the resolution that had been adopted; and observed, that though it was his pleasure that the parliament should communicate, by respectful representations, whatever might concern the good of the public, yet he never would allow them so far to abuse his clemency, as to erect themselves into the censors of his government. Calonne, however gratified by the approbation of his sovereign, felt deeply mortified by the opposition of the parliament. His attempts to conciliate that assembly had proved ineffectual; and he experienced their inflexible aversion at the critical juncture when their acquiescence might have been of the most essential service. An anxious enquiry into the state of the public finances had convinced him that the expenditure by far exceeded the revenue. In this situation, to impose new taxes was impracticable; to continue the method of borrowing was ruinous; to have recourse only to economical reforms would be found wholly inadequate; and he hesitated not to declare, that it would be impossible to place the finances on a solid basis, but by the reformation of whatever was vicious in the constitution of the state. To give weight to this reform, M. de Calonne was sensible that something more was necessary than the royal authority; he perceived that the parliament was neither a fit instrument for introducing a new order into public affairs, nor would they submit to be a passive machine for sanctioning the plans of a minister, even if those plans were the emanations of perfect wisdom. Though originally a body of lawyers, indebted for their appointments to the king, there was not an attribute of genuine legislative assembly but what they seemed desirous to engross to themselves; and they had been supported in their pretensions by the plaudits of the people, who were sensible that there was no other body in the nation that could plead their cause against royal or ministerial oppression. To suppress, therefore, the only power of controul that remained, and to render the government more arbitrary, was deemed too perilous a measure: yet to leave the parliament in the full possession of their influence, an influence that the minister was convinced would be exerted against him, was at once to render his whole system abortive. In this dilemma, the only expedient was to have recourse to some other assembly, more dignified and solemn in its character, and which should in a greater degree consist of members from the various orders of the state and the different provinces of the kingdom. This promised to be a popular measure; it implied a deference to the people at large, and might be expected to prove highly acceptable. But the true and legitimate assembly of the nation, the States General, had not met since the year 1614; nor

could the minister flatter himself with the obtaining the royal assent to a meeting: despotic sovereign could not but regard with secret jealousy. Another assembly had been substituted in the room of the States: this was distinguished by the title of the A and consisted of a number of persons from every order of the kingdom, chiefly selected from the orders of the state, and nominated by himself. This assembly had been convened by Henry IV, again by Lewis XIII, and was once more summoned by the authority of Louis XVI. The writs for calling them together were dated the 29th Dec. 1786; and were addressed to 7 princes of the blood, 9 dukes and 11 counts of France, 8 field marshals, 22 nobles, 8 lords of state, 4 masters of requests, 11 archbishops and bishops, 37 heads of the law, 12 deputed by the *proys d'etats*, the lieutenant civil, and the magistrates of the different towns of the kingdom. The number of members was 144; and on the 1st of Jan. 1787, was appointed for the next day, the arrival of the Notables at Paris, however the minister found himself yet unprepared to submit his system to their inspection, and postponed the opening of the council to the 5th of Feb. 1787. On the 14th, was occasioned by the death of M. de Calonne himself, and the count de Vergennes, president of the council, and first secretary of state; a vacancy which was the necessary result of the death of the minister on the day previous to that fixed for the opening of the meeting. He was succeeded in the management of foreign affairs by the count de Mirabeau, a nobleman of unblemished character, whose loss at this critical juncture was severely felt by M. de Calonne; the count alone, of the ministers, having entered with warmth and activity into his plans. The chevalier de Mirabeau, keeper of the seals, was avowedly his rival; the marshal de Castries, secretary of the marine department, was personally attached to M. Neckar; and the baron de Breteuil, secretary for the household, was the creature of the queen, and deeply engaged in what was called the Austrian system. Under these difficulties M. de Calonne, on the 22d Feb. first met the assembly of the Notables, and opened his long exposition.

(53.) FRANCE, HISTORY OF, UNDER Louis XVI, TO THE DISMISSION OF THE NOTABLES. M. de Calonne, began by stating, that the expenditure had for centuries past exceeded the revenue, and that a very considerable deficit had of course existed; that the Missions of 1720 had by no means restored the balance, and that under the economical administration of cardinal Fleury the deficit still existed; that the progress of this derangement under the administration of M. de Calonne had been extreme; the deficiency amounted to three millions Sterling at the appointment of M. de Calonne; who, however, by the administration of M. de Terray; who, however, by the administration of M. de Neckar; who, however, by the administration of M. de Calonne recommended a territorial tax like the English land-tax, from which no

men were to be exempted; and an int-  
to the poss. of the clergy, which  
had been de. from contributing  
public burd- of these branches of  
taxation were to be a strict ex-  
; and a cont- of the force was pre-  
mortgaging the lands of the

The very necessity of this was  
ed with boldness and a person-  
instead of meeting with a acqui-  
the comptroller general of the  
the boundless ocean of public contro-  
M. Neckar, previous to his retirement,  
riched his *Compte rendu au Roy*, which  
was represented as possessing a clear far-  
prospect of steering. This performance had  
ed with avidity, and probably contributed  
to the author the royal favour; but  
it was ably vindicated by M. de Bri-  
ghe, of Toulouse. M. de Calonne met  
his more formidable adversary in the count  
Necker. This extraordinary man, reflect-  
disposition, licentious in his morals, but  
penetrating, and enterprising, had visited  
part in Europe. He had been admitted  
into the confidence of the minister; and  
of the great Frederick: in this capacity  
his reports were often left neglected; and  
his letters were often left unanswered;  
he ascended to admiration; and he, who had  
been the intimate friend, relative  
Paris the avowed enemy, of M. de  
Necker. While the archbishop therefore arraign-  
the understanding, the count impeached his  
eloquence of M. de Calonne,  
might have successfully vindicated his  
reputation against the calculations of  
and the invectives of Mirabeau; but he  
to support himself against the influence of  
great bodies of the nation. The ancient  
clergy had ever been free from all  
assessments; and through the shameful  
of buying patents of nobility, such crowds  
of nobles started up, that every province  
was deluged with them. The magistracies likewise  
of the kingdom enjoyed their share of these  
; so that the whole weight of the  
taxation fell on those who were least able to bear

The minister's design, then, of equalizing  
the burd- and, by rendering the taxes  
equally, diminishing the load born by the lower  
classes of people, though undoubt-  
ed and patriotic, at once united against  
the nobility, the clergy, and the magistracy.  
The intrigues of these 3 bodies raised against him  
a clamour, that finding it impossible to  
stop the torrent, he not only resigned his place  
on the 12th of April, but soon after retired to  
avoid the storm of persecution. During  
his absences at home, Lewis's attention was  
led to the state of affairs in Holland. The  
of Orange had been stripped of all autho-  
the aristocratic party; and, retiring from  
the scene, maintained the shadow of a court at  
Brussels. His brother-in-law, however, the  
king of Prussia, endeavoured to promote his

interest; and having offered, in concert with  
France, to undertake the arduous task of com-  
piling the differences which distracted the re-  
public. the proposal was received with apparent  
cordiality by the court of Versailles. But it  
could scarce be expected that France would wish  
to restore the prince of Orange to that degree of  
power which he had before occupied, and thus  
abandon one of the most favourite objects of her  
policy, the establishing a supreme and permanent  
control in the affairs of Holland. In fact, the  
conditions framed by the Louvestein faction, as  
the basis of reconciliation, were such as plainly  
indicated their design to reduce the influence and  
authority of the stadtholder within very narrow  
limits. But the Prince of Orange was admirably  
supported and assisted by the genius, spirit, and  
abilities of his consort; who firmly rejected every  
measure tending to abridge any rights that had  
been attached to the office of stadtholder; and  
M. de Rayneval, the French negotiator, having  
in vain endeavoured to overcome her resolution,  
broke off the correspondence between the Hague  
and Nimuegue, and returned to Paris in January  
1787. The events that ensued will be found un-  
der the article UNITED PROVINCES. It is only  
necessary to observe here, that the republican  
party were totally disappointed in their hopes  
from France. The court of Versailles had indeed  
long trusted to the natural strength of the republi-  
can party, and had been assiduous during the  
whole summer in endeavouring to second them  
by every species of succours that could be pri-  
vately afforded. These aids, which might have  
proved effectual had the contest been confined to  
the state of Holland and the stadtholder, were  
overwhelmed in the rapid invasion of the Prussians;  
for the court of Berlin had taken its measures  
with so much celerity, and the situation of the  
republicans was already become so desperate,  
that it was doubtful whether their affairs could be  
restored by any assistance that France was capable  
of giving. Yet on great Britain sitting out a  
strong squadron of men of war at Portsmouth to  
give confidence to the operations of the king of  
Prussia, the court of Versailles also sent orders to  
equip 16 sail of the line at Brest, and recalled a  
small squadron which had been commissioned on  
a summer's cruise on the coast of Portugal. But  
in these preparations Lewis seemed rather to re-  
gard his own dignity, than to be actuated by any  
hopes of effectually relieving his allies. All op-  
position in Holland might be already considered  
as extinguished. The states assembled at the  
Hague had officially notified to the court of Ver-  
sailles, that the disputes between them and the  
stadtholder were now happily terminated; and  
as the circumstances which gave occasion for their  
application to that court no longer existed, so the  
succours which they had then requested would  
now be unnecessary. The French court there-  
fore readily listened to a memorial from the  
British minister at Paris; who proposed, to pre-  
serve the good understanding between the two  
crowns, that all warlike preparations should be  
discontinued, and that the navies of both king-  
doms should be again reduced to the footing of a  
peace establishment. This was gladly acceded to

by the court of Versailles; and harmony between the two nations was restored. Though Lewis could not but sensibly feel the mortification of thus relinquishing the ascendancy he had attained in the councils of Holland, the state of his own domestic concerns and the internal situation of his kingdom furnished matter for more serious reflection. The dismissal of M. de Calonne had left France without a minister, and almost without a system; and though the king bore the opposition of the Notables with admirable temper, yet the disappointment he had experienced sunk deep into his mind. Without obtaining any relief for his most urgent necessities, he perceived too late that he had opened a path to the restoration of the ancient constitution of France, which had been undermined by the crafty Lewis XI. and had been nearly extinguished by the daring and sanguinary counsels of Richlieu under Lewis XIII. The Notables had indeed demeaned themselves with respect and moderation, but at the same time they had acted with firmness. The appointment of the archbishop of Thoulouze, the vigorous adversary of M. de Calonne, to the office of comptroller general, probably contributed to preserve the appearance of good humour in that assembly; yet the proposed territorial impost, or general land-tax, which was an object so ardently coveted by the court, was rejected. Lewis, therefore, deprived of any further hope of rendering the convention subservient to his embarrassments, determined to dissolve the assembly; which he accordingly did, with a very moderate and conciliatory speech to the members on their dismissal.

(54.) FRANCE, HISTORY OF, UNDER LEWIS XVI, TO THE RECALL OF THE EXILED PARLIAMENT. Thus, disappointed of the advantage which he expected to have drawn from the acquiescence of the Notables, the king was obliged to recur to the usual mode of raising money by royal edicts. Among the measures proposed for this purpose were, the doubling of the poll-tax, the re-establishment of the third twentieth, and a stamp duty. But the whole was strongly disapproved of by the parliament of Paris; and that assembly, in the most positive terms, refused to register the edict. Lewis was obliged to apply, as the last resort, to his absolute authority; and, by holding what was called a *bed of justice*, compelled them to enroll the impost. The parliament, though defeated, were far from being subdued; and on the day after the king had held his bed of justice, they entered a formal protest against the edict; declaring, "that it had been registered against their approbation and consent, by the king's express command; that it neither ought nor should have any force; and that the first person who should presume to attempt to carry it into execution, should be adjudged a traitor, and condemned to the galleys."—This spirited declaration left the king no other alternative, but either to proceed to extremities in support of his authority, or to relinquish for ever the power of raising money without the consent of the parliament. Painful as every appearance of violence must have proved to the mild disposition of Lewis, he could not expect to surrender, without a struggle, that

authority which had been so long exercised by his predecessors. Since the commencement of present discontents, the capital had been generally filled with considerable bodies of troops about a week after the parliament had eute protest, an officer of the French guards, party of soldiers, went at break of day to the house of each member, to signify the king's command, that he should immediately get in his carriage, and proceed to Troyes, a city of Champagne, about 70 miles from Paris, without speaking to any person out of his house before his departure.—These orders were served at the same instant; and before the citizens of Paris were acquainted with the true nature of their magistrates were already on the road to their place of banishment. Previous to their removal, however, they had presented a remonstrance to the late measures of government, and the present state of public affairs: wherein they declared, that neither the parliaments, nor any other authority, excepting that of the king, of the kingdom collectively assembled, warranted the laying of any permanent tax on the people; and they strongly expressed their desire of the renewal of these national assemblies, which had rendered the reign of Charles IX. to great advantages. This requisition of the parliament to establish the national council, or states-general, was the more honourable, as the former assembly must have sunk under the influence of the court, and returned to their original condition of registers and courts of law. The considerate attachment of the people therefore rose in support to this instance of disinterestedness; and numbers were openly expressed in the streets of the capital, and the general disaffection augmented by the stop put to public business, the exile of the parliament. Lewis, by his rigorous counsels, wished to allay the general discontent by every expectation that was consistent with his dignity; but the queen strongly dissuaded him from any step that might diminish his authority. The influence of that princely cabinet was undoubtedly great: but the party which once had accompanied her was no longer the court of Artois, the king's uncle, who had espoused himself in the most ungenerous terms against the conduct of the parliament; and the utmost popular hatred, not only in the capital that the same once manifested; it blazed with equal strength in the provincial parliaments.—Among various instances of this, the parliament of Grenoble passed a decree against LETTRES DE CACHET, one of the most odious engines of arbitrary power. The king had endeavoured to soothe the Parisians by regulations of economy, and by continual presents in his household; but these instances attracted attention, which once would have been regarded with the loudest acclamations, were now regarded under their affliction for the sake of their parliament. Lewis therefore, to regain the affections, consented to restore to the assembly the stamp-duty and the territorial

(55.) FRANCE, HISTORY OF, UNDER LEWIS XVI, TO THE RE-ESTABLISHMENT OF THE PARLIAMENT OF NOTABLES. These measures were, first

gent to establish harmony between the court and parliament. The necessities of the state continued; nor could the deficiency of the revenue be supplied but by extraordinary resources. In the middle of November 1787, in a full session of the parliament, attended by all the princes of the blood and the peers of France, the king entered the assembly, and proposed two edicts for the approval: one was for a new loan of 20 millions, near 19 millions Sterling: the other for the re-establishment of the Protestants in all their ancient civil rights; a measure which had been warmly recommended by the parliament. On this occasion, the king delivered a speech of great length, filled with professions of respect for the people, but strongly expressive of the ease he expected to his edicts. An animated debate took place, and was continued for 9 days; when the king, chagrined at some freedom in their debates, suddenly rose and interrupted the edict to be registered without delay. This measure was most unexpectedly opposed by the duke of Orleans, who, considering it as an infringement of the rights of parliament, protested against the whole proceedings as being thereby null and void. Though the king could not conceal his astonishment and anger at this decisive step, he contented himself with repeating his orders; and immediately quitting the assembly, retired to Versailles. On the duke's departure, the parliament confirmed the edicts of the duke of Orleans. It was not to be expected that Lewis would suffer to hold an article of his laws with impunity. A letter was next addressed to the duke of Orleans, commanding him to retire to Villars Cotterel, one of his great estates near Paris, and to receive company there except his own family; at the same time the Abbé Sabatier and M. Freteau, members of the parliament, who had distinguished themselves in the debate, were seized and carried, the first to the castle of Mont St Michel in Brittany, the last to a prison in Picardy. The acts of despotism roused the feelings of the people. On the following day they waited on the king, and expressed their astonishment that the use of the blood had been called, and two members imprisoned, for declaring what their duty and consciences dictated. The answer being reserved, forbidding, and unbecoming; and tended to increase the resentment of the parliament. At the same time, it did not prevent them from attending to the exigencies of the state; and convinced of the emergency, they consented to register the loan for 20 millions of livres, which had been the source of his unfortunate difference. This concession pleased the king, and the sentence of the two ministers was in consequence changed from imprisonment to exile; M. Freteau being sent to his country seat, and the Abbé Sabatier to a convent of Benedictines. The parliament, however, would not give up the points against which they had originally remonstrated. In a second session, held in the most animated language, they boldly reprobated the late acts of arbitrary power. Lewis naturally mild, and willing to see measures of reconciliation, in the beginning

of 1788, recalled the duke of Orleans to court, who soon after obtained leave to retire to England; and he permitted the return of the Abbé Sabatier and M. Freteau to the capital. The parliament also seconded the parliament of Grenoble, by loudly inveighing against LETTRES DE CACHET. These repeated remonstrances, mingled with personal reflections, seconded most probably the suggestions of the queen, and Lewis was once more instigated to measures of severity. Mess. d'Espremevil and Monsabert, whose bold and pointed harangues had pressed most closely on the royal dignity, were doomed to experience its immediate repentment. While a body of armed troops surrounded the hotel in which the parliament were convened, Colonel Degout entered the assembly, and secured the persons of the obnoxious members, who were instantly conducted to different prisons. This new instance of arbitrary violence occasioned a fresh remonstrance from parliament, which in boldness far exceeded all the former representations of that assembly. They declared they were now more strongly confirmed, by every proceeding, of the insupportable innovation which was aimed at in the constitution. "But, sire," added they, "the French nation will never adopt the despotic measures to which you are addicted, and which offend alarm the most faithful of your magistrates: we shall not consent that all the unfortunate circumstances which afflict us; we shall only represent to you with respectful firmness, that the fundamental laws of the kingdom must not be trampled upon, and that your authority cannot be exercised so long as it is tempered with justice." Language so pointed and decisive, and which asserted the controlling power of the laws above the royal authority, could not fail forcibly to alarm the king; and with a view to diminish the influence of parliament, it was determined again to convene the Notables.

(36.) FRANCE, HISTORY OF, UNDER LEWIS XVI. TO THE RESTORATION OF THE STATES GENERAL. Lewis appeared in the assembly of the Notables, about the beginning of May, 1788, and after complaining of the excesses of the parliament of Paris which had drawn down his reluctant indignation on a few of the members, he declared his resolution, to recall them to their duty and obedience by a salutary reform. M. de la Motte, as keeper of the seals, then explained his majesty's pleasure to establish a *cour plénière* or supreme assembly, to be composed of princes of the blood, peers of the realm, great officers of the crown, the clergy, marshals of France, governors of provinces, knights of different orders, a deputation of one member from every parliament, and two members from the chambers of council, and to be summoned as often as the public emergency, in the royal opinion, should render it requisite. If the assembly of the Notables listened in silent deference to the project of their sovereign, the parliament of Paris received it with aversion. That body protested against the establishment of any other tribunal; and declared their final resolution not to assist at any deliberations in the supreme assembly which his majesty proposed to institute. A more unexpected mortification occurred to the king in the opposition of several

Several peers of the realm: these expressed their regret at beholding the fundamental principles of the constitution violated; and while they were lavish in their professions of attachment to the person of their sovereign, concluded with apologizing for not entering on those functions assigned them in the plenary court, as being inconsistent with the true interests of his majesty, which were inseparable from those of the nation. The flame quickly spread throughout the more distant provinces; at Rennes in Brittany, and Grenoble in Dauphine, the people broke out into acts of the most daring outrage; several hundreds of the inhabitants perished in a conflict with the military; yet they maintained their ground against the regulars; and the commanding officer, at the intreaties of the first president, readily withdrew his troops from a contest into which he had entered with reluctance. The different parliaments of the kingdom at the same time expressed their feelings in the most glowing language: and strongly urged the necessity of calling together the states general, the lawful council of the kingdom, as the only means of restoring the public tranquillity. Lewis now plainly saw, that the re-establishment of the *states general* was absolutely necessary, in order to avoid the calamities of a civil war. It was not, however, till after many a painful struggle that he could resolve to restore an assembly, whose influence must naturally diminish that of the crown, and whose jurisdiction would confine within narrow limits the boundless power he had inherited from his predecessors. It is probable that Lewis XVI, still flattered himself with the hope of being able to allure the members of that assembly to the side of the court; and having employed them to establish some degree of regularity in the finances, and to curb the spirit of the parliaments, that he could again have dismissed them to obscurity. Under these impressions an arrest was issued in August, fixing the meeting of the states general to the 1st of May 1789; and every step was taken to secure the favourable opinion of the public during the interval.

(57.) FRANCE, HISTORY OF, UNDER LEWIS XVI, TO THE REVOLUTION, IN 1789. New arrangements now took place in the administration; and M. Necker, whom the confidence of the people had long followed, was again introduced into the management of the finances; the torture, which by a former edict had been restricted in part, was now entirely abolished; every person accused was allowed the assistance of counsel, and permitted to avail himself of any point of law; and it was decreed, that in future, sentence of death should not be passed on any person, unless the party accused should be pronounced guilty by a majority at least of 3 judges. The eyes of all Europe were now turned on the states general: but the moment of that assembly's meeting was far from being auspicious: The minds of the French had long been agitated by various rumours; and the unanimity that had been expected from the different orders of the states was extinguished by the jarring pretensions of each; and their mutual jealousies were attributed by the suspicions of the people to the intrigues of the court, who were supposed already to repent of the hasty assent which had been ex-

torted. A dearth that pervaded the kingdom created the general discontent; and the people pressed by hunger, and inflamed by resentment were ripe for revolt. The sovereign also, impatient of the obstacles he daily encountered, could conceal his chagrin; while the influence of queen in the cabinet was again established, was attended by the immediate removal of Necker. The dismissal of that minister, so the favourite of the public, was the signal to open insurrection; the Parisians assembled in riots; the guards refused to imbrue their hands in the blood of their fellow citizens; the court of Artois and the most obnoxious of the nob thought themselves happy in eluding by flight the fury of the insurgents; the Bastille, so long deemed impregnable, was attacked, demolished, and governor beheaded; and thus on the 14th, 1789, a revolution was accomplished, the most extraordinary of any recorded in history. But rapid succession of new revolutions, that had taken place in France since that period, and various forms of government that have been successively established and abolished within these 21 years, having rendered it extremely problematical, whether even the present *aristo-democratic* or *semi-royal* form of government, of the French republic, will prove ultimately more permanent than its predecessors, whatever marks of stability it may seem to possess, we shall postpone account of the history of France, during its revolutionary state, and of all the astonishing events that have accompanied it, with the great crimes and the great virtues, that have been exhibited in its course to the article REVOLUTION. Long before we arrive at that article, it is to be hoped by every friend of the human race, that a period will be put to the slaughter of Britons, of Frenchmen, of the allies of both, by a solid and lasting peace founded on the principles of reciprocal justice.

(58.) FRANCE, LATE PROVINCES OF. France before the revolution was divided into the following military governments, or provinces: Alsace, Angoumois, Anjou, Armagnac, Artois, Auvergne, Barrois, Basques, Bearne, Berry, Bretagne, Brabant, Burgundy, Brie, Champagne, Caux, Flanders, Forez, Franche Comte, French Flanders, Gascony, Gevaudan, Guienne, French Hainault, Ile of France, Languedoc, Lorraine, Lorraine, Lyonnais, Marche, Maine, Normandy, Navarre, Nivernois, Normandy, Orleans, Perche, Perigord, Picardy, Poitou, Provence, Quercy, Ruoergue, Roussillon, Saintonge, Soissonois, Touraine, Vevey, and Vermandois. They varied much from each other in point of extent and importance, and there were others of still inferior consideration.

(59.) FRANCE, MODERN DIVISION OF. France was divided by the first legislative assembly into 83 departments, and these were subdivided into districts, cantons, and municipalities. The names of the departments are, Ain, Aisne, Allier, Alpes Lower, Alps Upper, Ardeche, Ardennes, Aube, Aude, Aveiron, Calvados, Cantal, Charente Lower, Cher, Correze, Corsica, Creuse, Creuse, Dordogne, Doubs, Drome, Eure and Loire, Finisterre, Gard, Garonne Upper

code, Herault, Indre, Indre and Loire, and Vilaine, Jura, Landes, Loire, Loire Lower, Loire Upper, Loiret, and Garonne, Lozere, Maine, Maine, Manche, Marne, Maine Upper, Meuse, Morbihan, Moselle, Mouths of the Seine, Nièvre, Nord or North, North, Orne, Paris, Puy de Dome, Pyrenees Lower, Pyrenees Upper, Rhine Upper, Rhone and Loire, Saone and Loire, Sarthe, Seine and Marne, Seine and Marne, the Two Sommes, Straits of Calais, Tarn, Var, Vienne, Vienne Upper, Vosges, and About 18 new departments have been set out of the conquered territories of the republic. See FRENCH REPUBLIC.

**FRANCE, MOUNTAINS OF.** The chief mountains of France, are those of the Alps, Pyrenees, and Auvergne: Mount Blanc, &c.

**FRANCE, NEW CONSTITUTIONS AND GOVERNMENT OF.** No country ever had a greater succession of changes in the form of government, than France has had within these years, since the 14th July 1789. The first constitution formed by the National Assembly, an overthrow of the old despotic government, and a beautiful limited monarchy: wherein, and hereditary honours were abolished, and still retained a considerable degree of revenue and enjoyed a large annual income; no more than 1,500,000 l. Sterling being allotted for personal expenses; a sum evidently one third less than is allowed his present Majesty in Britain; and nearly double if we deduct from the civil list. The next constitution which was erected upon the total overthrow of monarchy, in August 1792, was a government upon the principles of liberty and equality which was still further amended in May 1793, and was never carried into execution. (See ACT, § 2.) Instead of this, the most arbitrary measures were carried on under the name of a juncto of the Convention, by their atheistical revolutionary tribunals. These were abolished by the mild government, which succeeded in 1795, under the form of a Directory and Councils. Of this constitution we have already given a pretty full account, under the article COUNCIL, § 8, 9; and DIRECTORY, § 2, the present existing constitution, established in 1799, when Bonaparte overturned the Directory Councils, and fixed the supreme powers in the hands of a triumvirate, under the title of Consuls, a conservatory senate of 24, appointed a tribunate of 100, and a legislative body of 500 members. See FRENCH REPUBLIC.

But we cannot conclude this section, without observing, that, tho' France still retains the name of a republic, and its public acts are in the words LIBERTY and EQUALITY, the present constitution retains very little of the spirit of either; as the successive controul of great classes of voters, arranged by it in relation to their property, over the preceding

voters possessed of less property, reduces any effect of the first suffrages given by the citizens at large, to a mere shadow; and the 41st article of the Constitution gives to the First Consul a degree of power almost despotic, and greatly superior to that enjoyed by the unfortunate Lewis XVI, under the beautiful limited monarchy established by the Constitution of 1789—91.

(62.) **FRANCE, POPULATION OF.** The population of France, before the revolution, was stated by the French at 25 millions; but from the great extent of territory added to the republic since the commencement of the present war, and now incorporated with it, (see FRENCH REPUBLIC,) the total population is supposed to be now increased to at least 33 millions.

(63.) **FRANCE, PRESENT EXTENT OF.** See FRENCH REPUBLIC.

(64.) **FRANCE, PRODUCTIONS OF.** Besides all the necessaries of life, (see § 2.) France produces many of its luxuries; as silk, perfumes, lemons, oranges, olives, prunes, peaches, &c. The forests abound with wood, and the mountains with mines of copper, lead, tin, iron; and some gold and silver. Gold in grains is also found among the sands of some rivers.

(65.) **FRANCE, RELIGION OF.** The established religion of France, from the reign of Clovis I. to the revolution, has been the Roman Catholic; and though it was never accompanied by that dreadful engine of ecclesiastical tyranny, the inquisition, yet no country in Europe has exhibited more barbarous and bloody proofs of the intolerant spirit of that system of superstition than France. (See § 41.) Yet, though universal liberty of conscience was established upon the revolution in 1789, the Roman Catholic system was not attempted to be abolished. So far from this, the kingdom was divided into 10 archbishoprics (formerly 13), and 73 bishoprics (formerly 113), an episcopal hierarchy; an episcopal town being allotted to each department. But Danton and his atheistical associates, in the Convention of 1793, endeavoured to overthrow all religion whatsoever. Upon the fall of Danton, Robertspierre, affecting an abhorrence of the impiety of ATHEISM, did his utmost to recommend DEISM, in its stead. But since his death, CHRISTIANITY has been again openly professed; the churches have been restored to the use of all who incline to attend them; and people of all religious persuasions are allowed to worship God in the way most agreeable to themselves; only as no particular system is established, no salaries are paid to the priests at the public expence, but each party pays its own clergy.

(66.) **FRANCE, RIVERS OF.** France is watered and fertilized by a great number of rivers, many of which afford names to the new departments. (See § 59.) The principal of these are the Seine, Loire, Garonne, and Rhone.

(67.) **FRANCE, SOIL OF.** See § 2.

(68.) **FRANCE, STRENGTH OF.** The present strength of the French republic, we shall not attempt to estimate. It has been sufficiently tried during the course of the present war, and will probably be still more so before it be concluded. Previous to the revolution, the army, in time of peace,

consisted of 200,000 men, and, in time of war, of 400,000; among whom were many Swifs, Germans, Scots, Irish, Swedes, and Danes.

(69.) FRANCE, TAXES AND CI-DEVANT REVENUES OF. See § 3.

(70.) FRANCE, TRADE AND MANUFACTURES OF. The French in time of peace carry on a great trade with Spain, Italy, and the E. Indies. Before the war, a trade very advantageous to Britain was established by the Commercial Treaty. They have very extensive manufactures of linens, woollens, silks, laces, paper, china, soap, &c. and particularly what is called *Cassile* soap.

(71.) FRANCE, TOWNS, CITIES, AND VILLAGES IN. France before the war, was said to contain 400 cities or walled towns, and 43,000 small towns and villages. Paris is the capital.

(II.) FRANCE, ISLE OF, a ci-devant province of France, so called, because it was formerly bounded by the rivers Seine, Marne, Oise, Aisne, and Ourque. It comprehended the Beauvoisis, the Valois, the county of Senlis, the Vexin, the Hurepois, the Gatinois, the Multien, the Goele, and the Mantois. Paris was the capital. It is now divided into 4 departments; viz. Oise, Seine and Oise, Seine and Marne, and Paris.

(III.) FRANCE, ISLE OF, or MAURITIUS, an island in the Indian Ocean. See MAURITIUS.

(IV.) FRANCE, LITTLE, a village of Scotland, 2 miles SE. of Edinburgh, near CRAIGMILLAR Castle; built in the 16th century, for the accommodation of the French retinue, that attended Queen Mary after her return from Paris.

FRANCESCA, Peter, an eminent Florentine painter of night pieces and battles, who was employed to paint the Vatican. He also painted portraits, and wrote on arithmetic and geometry. He died in 1452.

(1.) FRANCFORT ON THE MAINE, an Imperial and Hanseatic town of Germany, in Franconia, where the emperors were formerly elected. It is a handsome, strong, and rich place, and has a great deal of commerce. Here the golden bull is preserved, which is the original of the fundamental laws of the empire. The town is seated in a fine fertile plain; and extremely well fortified. It has 2 great fairs, and has great conveniency for carrying on an extensive trade with the other parts of Germany, by the Maine, which runs through it. The suburbs are called SAXEN-HAUSEN, and are joined to the town by a stone bridge over the Maine. Lutheranism is the established faith, but the Calvinists are richest and most numerous. It is 20 miles E. of Mentz, and 350 W. by N. of Vienna. It was taken by the French in Oct. 1792, by the Prussians in Dec. retaken by the French, in 1793, and afterwards by the Austrians. It is at present, (July 1856,) blockaded by the French, under gen. St. Simeon. Lon. R. 49. E. Lat. 49. 55. N.

(2.) FRANCFORT ON THE ODER, a rich and handsome town of Germany, in the middle Marche of Brandenburg, formerly imperial, but now subject to the king of Prussia. It has 3 great fairs, an academy and 2 colleges: and is 43 miles SE. of Berlin, and 72 S. of Stettin. Lon. 14. 39. E. Lat. 52. 23. N.

FRANCHE COMTE, a ci-devant province of France, bounded on the S. by Breffe; on the W.

by Burgundy; on the N. by Lorraine; an E. by Alsace and Switzerland. It is 1 long from N. to S. and 80 broad. It is p and partly hilly. The flat country is fr grain, wine, hemp, and pasture; and th bound in cattle, copper, lead, iron, silver, waters, stone, marble, and alabaster. It divided into 3 departments; viz. Doubs and Upper Saone.

FRANCHEMONT, or } a town and  
FRANCHIMONT, } a ci-devant  
sate, of Germany, in the late bishopric o  
now included in the French republic, an  
ment of Ourte. The town lies 13 mile  
Liege.

FRANCHIRE, a river of Madagascari  
province of Anossi.

FRANCHIS, a town NW. of Burwash

(1.) \* FRANCHISE. *n. f.* [*franchise*, Fr  
emption from any onerous duty. 2. P  
immunity; right granted.—They grant  
markets, and other *franchises*, and erect  
rate towns among them. *Davies on Irela*

His gracious edict the same *franchise*  
To all the wild increase of woods and

3. District; extent of jurisdiction.—The  
ther privileges granted unto most of the  
tions, that they shall not be travelled forth  
own *franchises*. *Spenser's Ireland*.

(2.) FRANCHISE AND LIBERTY, in law,  
as synonymous terms; for "a royal priv  
branch of the king's prerogative, submitt  
hands of a subject." Being therefore deri  
the crown, they must arise from the king  
or, in some cases, may be held by pres  
which presupposes a grant. The kinds a  
rous and various. We shall briefly ment  
of the principal; premising only, that t  
be vested either in natural persons or bod  
tic; in one man, or in many; but the sa  
tical franchise, that has before been gr  
one, cannot be bestowed on another,  
would prejudice the former grant. A  
PALATINE is a franchise vested in several  
It is likewise a franchise for a number of  
to be incorporated and subsist as a body  
with a power to maintain perpetual it  
and do other corporate acts: and each m  
member of such corporation is also said  
franchise. Other franchises are, to hold  
lect; to have a manor or lordship; or,  
to have a lordship paramount: to ha  
weeks, essays, treasure-trove, royal  
feitures, and deodands: to have a court  
own, or liberty of holding pleas and tryin  
to have cognizance of pleas; which is call  
liberty, being an exclusive right, so that  
court shall try causes arising within that  
tion: to have a bailiwick, or liberty exer  
the sheriff of the county; wherein the gr  
ly, and his officers, are to execute all p  
to have a fair or market; with the right  
toll, either there or at any other public  
at bridges, wharfs, or the like; which  
have a reasonable cause of commencing  
consideration of repairs, or the like, else  
chite is illegal and void: or lastly, to ha

warren, or fishery, endowed with pri-  
royalty. See CHASE, FOREST, &c.  
ANCHISE is also used for an asylum or  
, where people are secure of their per-  
Churches and monasteries in Spain are  
for criminals; so were they anciently in  
till they were abused to such a degree  
was a necessity for abolishing the cus-  
of the most remarkable capitulars made  
magne in his palace of Heristal, in 779,  
relating to the franchises of churches  
of franchise was held so sacred, that  
of religious kings observed it to a degree  
ouster; but to such excess in time was  
, that Charlemagne resolved to reduce it.  
ly he forbid any provision to be carried  
as retired into churches for refuge.

FRANCHISE OF QUARTERS is a certain  
district at Rome, wherein are the houses  
of the princes of Europe; and  
as they cannot be arrested or seized,  
dated at law. The people of Rome look  
an old usurpation and a scandalous pri-  
ambassadors, out of a jealousy of  
er, carried to a great length in the 15th  
by charging infinitely the dependencies  
aces or houses, within which the right  
was anciently confined. Popes Julius  
XV, Gregory XIII, and Sixtus V, pub-  
s and ordinances against this abuse;  
d refused so considerable a part of the  
their authority, and rendered it a re-  
the most abandoned persons. At length  
XI, expressly refused to receive any more  
ers, but such as would make a formal  
of the franchise of quarters.

FRANCHISE. *v. a.* (from the noun.) To  
; to make free; to keep free.—

I lose no honour  
ing to augment it; but still keep  
from *franchis'd*, and allegiance clear.

*Sicak. Macbeth.*  
ANCIA, Francis, a celebrated Bolognese  
in 1490. He was first a jeweller, a  
crafter of coins and medals; and ap-  
plied to painting, obtained great reputa-  
as works, particularly by a piece of St  
, whom he had drawn bound to a tree  
ands tied over his head. He pined him-  
a consumption, by despairing to equal  
and died in 1518.

ANCIA, a town of Naples, in the prov.  
ia Ultra; 8 miles NE. of Nicotera.

ANCIENNE, or ST DENYS. See DENYS, N<sup>o</sup> 5.

ANCIENNE. See FRANKLEDGE.

ANCIENNE I. and II, kings of France.

ANCIENNE. § 39, 40.

ANCIENNE, Philip, D. D. a very ingenious  
of Irish extraction, if not born in Ireland.

ANCIENNE being dean of a cathedral in that king-  
was invited to the church. He was more  
than as a translator than as an original

His versions of Horace and Demosthenes  
are justly valued; the former is accompa-  
nied with learned and useful notes. He was also  
a considerable political writer; and is supposed to  
be employed by the government; for which  
he was appointed *rector of Barrow in Sul-*

*Part I.*

folk, and chaplain of Chelsea hospital. He was  
also the author of two tragedies, *Eugenia*, and *Con-*  
*stantia*. He died at Bath in March 1773; leaving  
a son, then one of the supreme council at Bengal.

(4.) FRANCIS, ST, the founder of the society of  
the FRANCISCANS, was the son of a merchant of  
Assisi, in the province of Umbria. Having led a  
dissolute life, he was reclaimed by a fit of sickness,  
and afterwards fell into an extravagant kind of de-  
votion, that looked less like religion than aliena-  
tion of mind. In 1208, hearing the passage quoted,  
(Matt. x. 9, 10.) "Provide neither gold, nor sil-  
ver," &c. he was led to consider a voluntary  
and absolute poverty as the essence of the gospel,  
and to prescribe it as a sacred rule to himself and  
those who followed him. See FRANCISCANS. He  
died in 1226.

FRANCISCANS, in ecclesiastical history, reli-  
gious of the order of ST FRANCIS, founded by  
him in 1209. This society, which appeared to  
Innocent III. extremely adapted to the state of  
the church, was solemnly approved and confirm-  
ed by Honorius III. in 1223. Francis, through an  
excessive humility, would not suffer the monks of  
his order to be called *fratres*, i. e. brethren or  
friars, but FRATERCULI, i. e. little brethren, or  
*friars minor*, by which denomination they still  
continue to be distinguished. They are also call-  
ed *rossifrons*, on account of the colour of their  
clothing, and CORDELIERS, &c. The Francis-  
cans and DOMINICANS were zealous and active  
friends to the papal hierarchy. In 1287, Matthew  
of Aqua Sparta, being elected general of the or-  
der, discouraged the ancient discipline of the Fran-  
ciscans, and indulged his monks in abandoning  
even the appearance of poverty. This conduct  
raised the indignation of the spiritual or austere  
Franciscans; so that from 1290, schisms arose in  
an order that had been famous for its pretend-  
ed disinterestedness and humility. Such was the  
enthusiastic frenzy of the Franciscans, that they  
impiously maintained, that St Francis was a *second*  
*Christ*, in all respects similar to the first; and that  
their institution and discipline were the true gos-  
pel of Jesus. Accordingly, Albizi, a Franciscan  
of Pisa, published a book in 1383, with the ap-  
plause of his order, intitled, *The Book of the Con-*  
*formities of St Francis with Jesus Christ!* In the  
beginning of the 18th century, the whole Francis-  
can order was divided into two parties; the one  
called *Spirituals*, who embraced the severe disci-  
pline and absolute poverty of St Francis; and the  
other, *Brethren of the Community*, who insisted on  
mitigating the austere injunctions of their founder.  
They wore long, loose, and good habits, with large  
hoods; the former were clad in a strait, coarse, and  
short dress, pretending that this dress was enjoined  
by St Francis, and that no power on earth had a  
right to alter it. Neither the moderation of Cle-  
ment V, nor the violence of John XXII, could ap-  
pease the tumult occasioned by these two parties;  
however their rage subsided from A. D. 1329. In  
1368 these two parties were formed into two large  
bodies, which still subsist, comprehending the  
whole Franciscan order; viz. the *observant bre-*  
*thren*, and the *brethren of the observance of obser-*  
*vation*, from whom sprung the Capuchins and Re-  
collects. The Franciscans are said to have count-

into England in 1224, and to have had their first house at Canterbury, and their second at London; but there is no certain account of their being here till Henry VII. built 2 or 3 houses for them. At the dissolution of the monasteries, the conventual Franciscans had about 55 houses, which were under 7 wardenships; viz. those of London, York, Cambridge, Bristol, Oxford, Newcastle, and Worcester.

FRANCKEMONT. See FRANCHMONT.

FRANCKENBERG, a town of Germany, in the circle of the Upper Rhine, and principality of Hesse; 16 m. N. of Marburg, and 29 SW. of Cassel.

FRANCKENMARK, or FRANKEMARK, a town of Germany, in Aultria; 8 m. SW. of Voglabruck.

FRANCKS, a town of Kent, E. of the Crays.

FRANCOCCI, a town of Italy, in the duchy of Spoleto, 7 miles WNW. of Spoleto.

FRANCOIS, CAPE, a town in the N. part of Hispaniola. It suffered much from the dreadful commotions that took place in that island, in 1794, 95, and 96. Lon. 72. 18. W. Lat. 19. 46. N.

FRANCOISE, a town of France, in the dept. of Lot, 7½ miles NW. of Montauban, and 20½ SSW. of Cahors. Lon. 18. 54. E. of Ferro. Lat. 44. 7. N.

FRANCOLIN. See ATTAGEN.

FRANCONIA, a circle of Germany, bounded on the N. by Meissen and Thuringia, on the S. by Bavaria and Suabia; on the E. by Bohemia and the Upper Palatinate, and on the W. by the Lower, and the electorate of Mentz; being 88 miles from N. to S. and 95 from E. to W. The middle is very fertile in corn, wine, and fruits; but the borders are full of woods and barren mountains. The majority of the people are Lutherans; but there are also many Calvinists, Roman Catholics, and Jews. The FRANKS, who conquered and gave name to France, came from this province. See FRANCE, § 4. Nuremberg is the capital.

FRANCONVILLE, a town of France, 10 miles N. of Paris.

FRANCOSO, a town of Portugal, in the province of Beira, 22 miles E. of Viseu.

FRANCOVILLA, a town of the Ligurian republic, 6 miles S. of Novi.

FRANCREMONT, a town of the French republic, in the dep. of Ourte, and late bishopric of Liege. 4 miles N. of Spa.

(1.) FRANCTON, a town in Warwickshire, on the Foss, near Dunsmore Heath.

(2.) FRANCTON, ENGLISH, } two villages in

(3.) FRANCTON, WELSH, } Shropshire, near Ellesmere.

FRANE, a town of France, in the dep. of the Doubs, 7½ miles SW. of Pontarlier.

FRANEKER, FRANEQUER, or FRANKER, a town of the Batavian republic, in the department of Eems, and ci-devant province of N. Friesland. It has a castle, 2 navigable canals, many magnificent buildings, and an university, rendered famous by its learned professors; particularly Adrian Metius, George Palor, Pierius Winsemus, Sixtus Amama, &c. It lies 9 miles W. of Lewarden, and 5 E. of Haringen. Lon. 5. 33. E. Lat. 53. 11. N.

FRANEKERADEEL, or } a late canton of the  
FRANQUEKADEEL, } ci-devant United

Provinces, in the district of Westerpoovince of North Friesland, now included partment of Eems.

FRANFIELD, a village in Sussex.

\* FRANGIBLE. *adj.* [*frango*, Lat. brittle; easily broken.—Though it seemest wood, if wrought before it be wet it will shew itself very *frangible*. *Boyle*.

4. Not restrained; licentious. Not in

Might not be found a *franker fr*

(II.) FRANK, or FRANC, in the ancient customs, signifies literally *free* from contributions, or exempt from public tax in various senses: sometimes compound sometimes not; though the latter is doubtful proper. Thus,

1. \* FRANKALMOIGNE. *n. f.* The *fr* we in Latin call *libera elemosyna*, or *fr* English; whence that tenure is common among our English lawyers by the nature in *frank aumone*, or *frankalmoig* according to *Briton*, is a tenure by *dis* *Ayliffe's Parergon*.

2. FRANKALMOIGNE is a tenure, religious corporation, aggregate or sole lands of the donor to them and their for ever. The service which they were render for these lands was not defined in general to pray for the souls of the his heirs, dead or alive; and therefore t fealty (which was incident to all other because this *divine service* was of a *fr* nature. This is the tenure by which all ancient monasteries and religious houses lands; and by which the parochial c very many ecclesiastical and elemosynations, still hold them; the nature of being upon the reformation altered, conformable to the purer doctrines of of England. It was an old Saxon te continued under the Norman revolution the great respect that was shown to religious men in ancient times. This reason that tenants in frankalmoigne were freed of all other services except the *trill* *tas*, of repairing the highways, buildi

pellage invasions; just as the druids, among ancient Britons, had *omnium rerum immunita*. And even at present this is a tenure of a different nature from all others; being not in itself feudal, but merely spiritual. For, if the land be neglected, the law gives no remedy by writ or otherwise, to the lord of whom the land is holden; but merely a complaint to the lord or visitor to correct it.

**FRANK CHACE** is a liberty of free chase, by persons that have lands within the county; the same, are prohibited to cut down any wood out of the view of the lord.

**FRANK FEE** signifies the same thing as holden and tenements in fee simple; that is, to the person and his heirs, and not by such service as is required by ancient demesne, but is pleaded as common law. See **FEE**.

**FRANK LAW**, the free and common law of the land, or the benefit a person has by it. He who is guilty of offence loath this frank law incurs many inconveniences, viz. He may not be permitted to serve on juries, nor used as an evidence in any suit; and if he has any thing to do in the court, he must not approach it in person, but by his attorney; his lands, goods, and chattels shall be seized into the king's hands; and if he be effracted, his trees rooted up, and he committed to custody.

**FRANK MARRIAGE**, in law, is where tenements are given by one man to another, together with a daughter who is the daughter or cousin to the donor, and is held in frank marriage. By such gift, both the donor and his heirs but *frank marriage* is expressed, and the donee shall have the tenements to them, and out of their two bodies begotten; that is, the donee and his heirs in special tail. For this expression *frank marriage*, denotes, *ex vi termini*, not by purchase, like *frank almoigne*, but like inheritance; supplying, not only the want of descent, but of procreation also. Such persons in frank marriage are liable to no service to the lord; nor a rent reserved therein is void unless the degree of consanguinity be past between the donor and donee.

**FRANKPLEDGE**. *n. s.* [*franciplegium*, Lat. *n. s. i. e. liber & pleige. i. e. fidi jussor.*] A surety for freemen. For the ancient custom of England, for the preservation of the peace, was that every freeborn man at 14 years of age, religious persons, clerks, knights and their sons excepted, should find security for himself to the king, or else be kept in prison; and it became customary for a certain number of neighbours to be bound for one another, to see that the terms of their pledge forthcoming at all times, unless the transgression of any one absent himself. This was called *frankpledge*, and the terms thereof was called *decenna*, because it consisted of ten households; and every party to the pledge, thus mutually bound, was called *frankpledger*. This custom was so strictly observed, that the sheriffs, in every county, did from time to time take the oaths of young ones as they grew up, of fourteen years, and see that they were bound in one dozen or other: this branch of the king's authority was called *visus franciplegii*, & *frankpledge*. *Cowel*.

**8. FRANK PLEDGE**.—In such cases, as those above-mentioned, (§ 7.) whenever any person offended, the persons bound either produced the offender in 31 days, or made satisfaction for his offence.

**9. FRANK TENEMENT**. See **TENURE**.  
(III. i.) \* **FRANK**. *n. s.* [from the adjective.]  
1. A place to feed hogs in; a sty: so called from liberality of food.—Where sups he? Doth the old boar feed in the old *frank*? *Shakspeare, Henry IV.*  
2. A letter which pays no postage.—You'll have immediately, by several *franks*, my epistle to lord Colbain. *Pope*. 3. A French coin.

(ii.) **FRANK**, § III, i; *def.* 2. See **FRANKED LETTERS**.

(iii.) **The FRANK**, or **FRANC**, (§ III, i; *def.* 3.) anciently current in France, was either of gold or silver:

1. **FRANK, GOLD**, was something more than that of the gold crown.

2. **FRANK, SILVER**, was a third of the value of the gold one. This coin has been long out of use, though the term is still retained as the name of a money of account; in which sense it is equivalent to the livre, or 20 sols.

(IV.) **FRANK**, in geography, a town of the United States, in S. Carolina, 11 m. E. of Kingston.

(V.) **FRANK LANGUAGE**, *Lingua Franca*, a kind of jargon spoken on the Mediterranean, and particularly throughout the coasts and ports of the Levant, composed of Italian, Spanish, French, vulgar Greek, and other languages.

\* **To FRANK**. *v. a.* [from the noun.] 1. To shut up in a frank or sty. *Hammer*.—

In the sty of this most bloody boar,  
My son George Stanly is *frank'd* up in hold.

*Shakspeare*.  
2. To feed high; to fat; to cram. *Junius and Ainsworth*. 3. [From the adjective.] To exempt letters from postage.—My lord Orrery writes to you to-morrow; and you see I send this under his cover, or at least *franked* by him. *Swift*.—

Gazettes sent gratis down, and *frank'd*,  
For which thy patron's weekly thank'd. *Pope*.

**FRANKED LETTERS**. The privilege of letters coming free of postage to and from members of parliament was claimed by the House of Commons in 1660, when the first legal settlement of the present post-office was made; but afterwards dropped, upon a private assurance from the crown, that this privilege should be allowed the members. Accordingly a warrant was constantly issued to the postmaster general, directing the allowance thereof to the extent of two ounces in weight: till at length it was expressly confirmed by 4 Geo. III. c. 24. which added many new regulations, rendered necessary by the great abuses in franking; whereby the annual amount of franked letters had increased from 23,600*l.* in the year 1715, to 170,700*l.* in the year 1763. Other regulations afterwards took place; in particular, franks were required to be dated (the month written at length), and put into the office the same day; notwithstanding which, the revenue still lost by this privilege above 80,000*l.* per annum. The following are the regulations of franking required by 35 Geo. III. and now in force. No letter directed by or to any M. P. shall be exempted from postage if it

exceeds 1 oz. in weight. No letter directed by any member shall be exempted, unless he shall actually be in the post town, or within the limits of its delivery of letters, or within 20 miles of it on the day, or the day before it, on which the letter shall be put into the office. No member shall be entitled to send free from postage more than ten letters in one day, nor to receive more than 15. Whenever the number of letters sent or received by such number in one day shall exceed the number exempted, and the postage upon any of them shall differ, the letters chargeable with a higher postage shall be included in the number exempted, in preference to any chargeable with a lower postage, and the remainder shall be chargeable with the postage to which common letters are now chargeable. Persons who may now in right of their offices send and receive letters free may continue so to do. Printed votes or proceedings in parliament, and printed newspapers may also be sent as usual. No single letter sent by the post from any non-commissioned officer, seaman, or private, in the navy, army, militia, fencible regiments, artillery, or marines, shall be charged with more postage than one penny, but must be paid at the time of putting it into the post office; and such letter must have written thereon, in the hand writing of and signed by the commanding officer, the name of such commanding officer, and of the ship, vessel, corps, regiment, or detachment. Also no single letter directed to any such non-commissioned officer, seaman, or private, shall be charged with more postage than one penny, to be paid on the delivery thereof; but such letter must be directed to such persons, specifying the ship, vessel, regiment, troop, corps, company, or detachment to which they belong: And the postmaster must deliver such letter either to the party to whom it shall be directed, or to some person appointed to receive the same by the commanding officer, and to no other. Every letter containing patterns or samples of goods, not exceeding one ounce, shall be charged only as a single letter, if sent open at the sides, and without any letter or writing therewith, other than the name of the person sending the same, the place of his abode, and the prices of the articles.

(1.) **FRANKEL**, Francis, commonly called *Old Frank*, a famous Flemish painter, supposed to have been born about A. D. 1544. He painted historical subjects from the Old and New Testament; and was remarkable for introducing a great number of figures into his compositions, which he had the address to set up very distinctly. Vandyck greatly commended his works.

(2.) **FRANKEL**, Francis, or *Young Frank*, the son of the former, born in 1620, was distinguished by his father, whose style he imitated so closely, that their works are not easily distinguished. He travelled into Italy for improvement in drawing. His chief performances are a large oval piece in the church of Notre dame at Antwerp; and another, of Solomon's idolatry. He died in 1642.

**FRANKENAU**, a town of Germany, in the circle of the Upper Rhine, and principality of Hesse, 24 miles SW. of Cassel, and 16 S.W. of Waldeck.

(1.) **FRANKENBERG**, a town of Germany, Austria; 6 miles W.N.W. of Voislanowz.

(2.) **FRANKENBERG**, a town of Upper Erzgebirg, 9 miles W. of Freyberg NNE. of Chemnitz.

(3.) **FRANKENBERG**. See **FRANKENFRANKENDAL**, a strong town of lately in the dominions of the Elector now included in the French republic, of Mont Tonnerre. It was taken by the in 1623, by the Swedes in 1632, and the French in 1688. It was taken by the and laid under contribution in 1793, by the Austrians, and finally taken by the Oct. 1794, and annexed to the republic a good trade in porcelain, cloth, silks; a navigable canal to the Rhine. It is NW. of Mannheim, and 8 S. of Worms 29. E. Lat. 49. 25. N.

**FRANKENFELS**, a town of Austria Nieder-Ober, 20 miles WSW. of Mainz

**FRANKENHAUSEN**, two towns Saxony; 1. in Erzgebirg, 8 miles W. of Zwickau; 2. in Schwarzburg-Rudolstadt on the Wipper. It has rich salt-works E. of Sonderhausen, and 26 N. of Erfurt 28. 43. E. of Ferro. Lat. 51. 16. N.

**FRANKENIA**, in botany, a genus of the noxygia order, belonging to the hexandria of plants; and in the natural method to the 17th order, *Calycanthemum*. The quinquefid, and funnel shaped; the petals stigma sexpartite; the capsule unilocular.

(1.) **FRANKENSTEIN**, a town of Germany in the circle of the Upper Rhine; 5 miles Darmstadt.

(2.) **FRANKENSTEIN**, a town of Silesia Bautzen, 9 miles W. of Muefberg.

(3.) **FRANKENSTEIN**, a town of the public, in the department of Sarre and of ci-devant duchy of Deux-Ponts; 20 of Deux Ponts, and 22 NW. of Landau 55. E. Lat. 49. 18. N.

(1.) **FRANKFORD**, a town of Virginia capital of Pendleton county, situated on a branch of the Potomac; 180 miles NW. of Philadelphia, and 350 WSW. of Philadelphia 31. W. of that city. Lat. 38. 42. N.

(2.) **FRANKFORD**, a village of Virginia Shenandoah county, seated on Faterion's Creek NW. of Romney.

(1.) **FRANKFORT**, a town of the United States on the river and in the State of Kentucky 25. 12. W. Lat. 36. 3. N.

(2.) **FRANKFORT**. See **FRANCO**

(1.) **FRANKINCENSE**, a resinous substance so called perhaps from its liberal distribution. *Frankincense* is a dry resinous substance in pieces or drops, of a pale yellowish white colour, but not disagreeable, aromatic, and resinous taste. It is very rare. The earliest histories inform us that it was used among the sacred rites and that it continues to be in many parts. We are uncertain as to the place whence it is brought, and as to the tree which produces it. *Hist.*—Take unto thee sweet spices, *frankincense*. *Exodus*.—I find in Dioscorid.

*Frankincense* gotten in India. *Brerewood* on 1785.—

ack ebon only will in India grow,  
od'rous *frankincense* on the Sabcean bough.

*Dryden's Virgil.*

car and *frankincense*, an od'rous pile,  
'd on the hearth, and wide perfum'd the  
ise. *Pope.*

ANKISTAN, the name given by the Asia-  
Europe.

ANKLAND'S ISLANDS, a cluster of Islands  
South Sea; 6 miles from the NE. coast of  
Island. Lon. 146. 0. E. Lat. 17. 13. S.

FRANKLIN, Benjamin, LL. D. and F. R. S.  
of the most celebrated philosophers and  
of the 18th century, was born at Boston,  
1706. He was the son of Josias Franklin, a  
candler, descended from an ancient Eng-  
lish, who had refused upwards of three cen-  
turies in Northamptonshire, possessing  
a freehold estate of 30 acres, and the eldest  
heret had been uniformly bred up to the  
ten of a blacksmith. This family had early  
ed the opinions of the reformation, and  
in danger of suffering for them, under the  
pre-son of Q. Mary I. Benjamin was the  
eldest son of the youngest branch of this family.  
His father had joined the non-conformists, and  
the prohibition of conventicles under Charles  
migrated with his wife and family, to New  
York in 1682; where, on the death of his first  
wife married Abiah Folger, daughter of Peter  
Folger, author of several tracts on liberty of con-  
science, who bore him 9 children besides our  
author. Benjamin early acquired reading and  
writing, made no progress in Arithmetic, as  
evident in his memoirs written by himself.  
Up to 22 years of age he wrought at his  
father's trade, but his inclination for books  
induced his father to make him a printer,  
where his elder brother James was already of  
prestation. To this brother he was ac-  
quainted as apprentice, and by his rapid  
progress in the business soon became of great  
value, though he often treated him rather  
severely. Mean time he improved himself  
in several other branches of science, as well  
as composition, by writing anonymous essays  
for another's paper, *The New England Courant*,  
which, being much admired, were for some  
time of advantage to it. But one of them, upon  
a political subject, happening to give offence to  
the Assembly, his brother was taken up, imprison-  
ed a month, and prohibited from printing his  
paper. The paper was then continued under  
the name of *Benjamin Franklin*, whose indentures  
discharged, and a new secret contract agreed  
to: but fresh differences afterwards arising  
between the brothers, our author, at the age  
of 17, emigrated to Philadelphia, where he ar-  
rived without knowing a single individual in it,  
escaping the danger of being taken up as a  
way servant, and various other droll ad-  
ventures, which he humourously describes in his  
memoirs. Here he soon got employment from  
Benjamin Franklin and Keimer, the two only printers then  
in the city. After this he was introduced by his  
cousin-law, Captain Holmes, to Sir William

Keith, governor of the Province, who *promised* to  
do much for him, but, except entertaining him  
occasionally, in his own house or a tavern, per-  
formed nothing. By his advice, however, he  
paid a visit to his parents, and in the end of 1724,  
failed for London, where by his own merit, with-  
out Sir William's promised letters of recommen-  
dation and credit, he obtained the best employ-  
ment, first in Palmer's printing office, and after-  
wards in Watt's. At this time our author falling  
in with some Deistical companions, renounced  
the religious principles in which he had been edu-  
cated, commenced Sceptic, and published a  
*Dissertation on Liberty and Necessity, Pleasure and  
Pain*, wherein he endeavoured to prove that there  
is no difference between virtue and vice; which  
he afterwards considered as one of the grand er-  
rors of his life. This work, however, introduced  
him to the acquaintance of Dr Mandeville, Dr  
Pemberton, Sir Hans Sloane, and other celebra-  
ted authors. He had been only 18 months, how-  
ever, in London, during which time, living very  
temperately, or rather abstemiously, he had begun  
to lay up money, when a proposal was made to  
him by his friend, Mr Denham, of returning to  
Philadelphia. This gentleman had been formerly  
a merchant in Bristol, and, having failed, emigra-  
ted to America, where he made a fortune; then  
returned, invited his creditors to a feast, and paid  
their balances with interest. He engaged Franklin  
as his clerk and book-keeper, and to superintend  
the goods he was carrying back to America. They  
accordingly sailed on the 23d July, 1726, and ar-  
rived at Philadelphia, Oct. 11. but Denham dying  
in Feb. 1727, our author engaged once more as  
a printer with Keimer; whom he also served as a  
letter-founder, ink-maker, engraver, and copper-  
plate printer; as well as constructor of a press for  
that purpose. This press which was the first that  
had been seen in the country, was erected by Mr  
Franklin at Burlington, to print some New Jersey  
money bills; and proved the means of his ac-  
quaintance with Judge Allen, and several other  
members of the assembly, who were afterwards  
of great service to him. After this he com-  
missioned types from London, set up a printing  
office, in company with Hugh Meredith, one of  
Keimer's lads; and, at the same time established  
a weekly club, for mutual improvement, which  
not only proved an excellent school of philosophy  
and politics, but turned out also very beneficial  
to his business. This Society, which was called  
the *Junto*, lasted near 40 years. Mean time he  
astonished the public by his personal industry.  
Early and late at work, he composed and distri-  
buted a sheet per day of a work in folio, on picca-  
ny letter loaded with heavy notes in a smaller type,  
besides doing other occasional jobs as they came  
in. This indefatigable industry soon raised his  
credit, and Keimer, being unable to continue his  
News-paper, sold the copy-right to Franklin for  
a mere trifle; who by his improvements in the  
conduct and execution of it, soon raised it to such  
a degree of celebrity, as to make his fortune by  
it. After this his accurate and elegant manner of  
printing recommended him to the employment of  
the Assembly: And his partner Meredith being  
unable to raise his share of the money to pay for  
the

the printing materials, gave up the printing, turned farmer, and thus left Franklin sole proprietor of the business, in 1729. Whereupon his friends Mess. Coleman and Grace offered him money to carry it on extensively, and he accepted of half the offered sum from each. Soon after a new emission of Paper currency being wished for by the public, but opposed by the opulent part of the Assembly, Franklin published a pamphlet on the subject, which, being unanswerable, occasioned the measure to be carried through, and himself to be rewarded by being employed to print the bills. Public and private employment now flowing upon him more and more, he, in 1736, married a lady, for whom he had entertained an affection before he went to London, and whose attachment was mutual. This lady was not his partner's daughter, as the Editors of both the *Encyclopædia Britannica* and the *English Encyclopædia* affirm; but a young widow, whose maiden name was Read, and who, during his absence had been prevailed on by her mother, to marry one Rogers, a potter, who had used her so ill, that she did not so much as bear his name. (See *Franklin's Life*, written by himself, and published by Dr R. Price.) To our author she proved an excellent wife, and contributed much to the success of his Stationary shop. In 1731, Franklin's love of literature led him to set on foot, first a private, and afterwards a public library, which, in 1742, was incorporated by the name of *The Library Company of Philadelphia*; which now consists of many thousand volumes, besides a philosophical apparatus, &c. In 1732, he began to publish *Poor Richard's Almanack*, a work which he rendered remarkable by its numerous valuable and concise moral maxims, recommending industry and œconomy, and which he at last collected into one humorous address to the reader, entitled *The Way to Wealth*, which has since been translated into various languages. In 1736, he entered on his political career, by being appointed Clerk to the General Assembly of Pennsylvania. In 1737, he was appointed Postmaster. In 1738, he formed the first Company for preventing damages by fires, and soon after got an insurance office erected. In 1744, during the war between France and Britain, the French and Indians having made inroads upon the frontiers of the province, he proposed a voluntary association for its defence; which was approved of, and immediately signed by 1200 citizens, who chose Franklin their colonel. But he was then too deeply engaged in philosophical and political pursuits to accept of that honour. In 1745, he published an account of his new invented fire-place. See FIRE-PLACE, § 2. In 1747, he was elected a member of the General Assembly, where he supported the rights of the citizens in opposition to the proprietaries. In 1749, he completed the plan of the Philadelphia Academy, upon the most liberal principles, which was incorporated in 1753. Franklin had now conducted himself so well in his office of postmaster to the province, that in 1753, he was appointed deputy post-master general for the British Colonies; and in his hands this branch of the revenue soon yielded three as much annually as that of Ireland. Yet none of these public avocations pre-

vented his making important discoveries in sci-  
 The Leyden experiment in ELECTRICITY he rendered that science an object of general curiosity, Mr Franklin applied himself to it, and distinguished himself so eminently in that sci-  
 as to attract the attention and applause of not only the Count de Buffon, and other French philosophers, but even of Lewis XV. himself. He the first who thought of securing buildings from lightning; and he was also the first inventor of the electrical kite; having completed his experiment in June 1752, a full year before M. DuRoi's discovery. His theory of positive and negative electricity has likewise received the sanction of public approbation; though many think not fully capable of supporting itself. See ELECTRICITY, *Index*. His theories were at first opposed by the members of the Royal Society in London; but in 1755, when he returned to his native city, they voted him the gold medal, which is annually given to the author of a memoir of most curious and interesting subject. He likewise admitted a member of the Society, and had the degree of LL. D. conferred upon him by the universities of St Andrews, Edinburgh, and Oxford. When the war broke out between Great Britain and France, he returned to America, to take a share in the public affairs of his native country. About 1753, he set on foot, and prevailed upon the assembly to establish the Pennsylvania hospital. In 1754, the American colonies having suffered severely by the depredations of the Indians on their frontiers, he drew up and presented to the commissioners from several colonies, a plan of union (called the *Albany Plan*, from the place where it was met,) which, though unanimously approved by the commissioners, was at last rejected, by the British assemblies, as giving too much influence to the president, who was to be appointed by the king, and disapproved of by the British ministry, as giving too much power to the representatives of the people. This rejection on both sides affords the strongest proof of the excellency and impartiality of his plan, as suited to the situation of Great Britain and America at that period. It appears to have steered exactly between the opposite interests of both countries. In 1757, he restored tranquility to the province, by an amicable and equitable settlement of the differences that had long subsisted between the proprietaries and the people, touching taxation. In 1766, he travelled into Holland and Germany, and in 1767, he visited France, and was every where received with the great marks of attention by men of science. He was introduced in the latter kingdom to Lewis XV. Returning to England in 1767, he was examined before the house of commons concerning the *Stamp Act*. In 1773, having been appointed agent for Pennsylvania, he again came over to England, while the disputes between Great Britain and America were on the point of coming to extremities; when he attracted the public attention by a letter on the duel betwixt Mr Whatley and Temple, concerning the publication of gov. Hutchinson's letters. On the 28th Jan. 1774, he was examined before the privy council on a petition he had presented long before, as agent for Massachusetts Bay against Mr Hutchinson: but this

being disagreeable to ministry, was precipitately rejected, and Dr Franklin was soon removed from his office of postmaster general, which was now looked upon by government as a jealous eye, that it was proposed to him as a foment of rebellion. The Doctor, however, departed for America in the beginning of 1775 with such privacy, that he had left no trace before it was suspected that he entertained such a design. Being elected a delegate to the Continental Congress, he had a principal share in the proceedings about the revolution, and declaration of independence. In 1776 he was deputed by the British to Canada, to persuade the Canadians to throw off the British yoke; but they had been so disgusted with the hot-headed zeal of the British commanders, who had burnt some of their towns, that they refused to listen to the proposition, though enforced by all the arguments Dr Franklin could urge. On his return to Philadelphia, sensible how much he was esteemed, sent him to finish the negotiations with the French, as Sir Thomas Mifflin was then Secretary of the Navy. This important commission was accepted by the Doctor, though then 71st year of his age. The event is well known; a treaty was signed between France and America; and M. le Roi asserts, that the Doctor had advised M. Maurepas not to lose a single day, if he wished to secure the friendship of America, and to detach it from the mother country. In 1777 he was regularly appointed plenipotentiary from Congress to the French court, and he has seen the full accomplishment of his mission by the conclusion of the peace in 1783, which confirmed the independence of America, and which he is to be recalled, and Mr Jefferson was sent to succeed him. Dr Franklin arrived in Philadelphia in Sept. 1785, and was received with the acclamations of a vast multitude, who conducted him in triumph to his own house. For several days he was visited by the members of the Assembly and the principal inhabitants. He was a second time elected president of the Assembly. In 1787, he was appointed a delegate from Pennsylvania, for revising the articles of confederation; and he signed the new constitution in the name of the United States. He was also chosen president of the Pennsylvania Society for alleviating the miseries of the African race, and of the Pennsylvania Society for promoting the abolition of Slavery. His last public act was a memorial on this subject, 12th Feb. 1789. For the greatest part of his life he had been afflicted with the gout. In 1735, indeed, he was attacked with the stone, which ended in a suppuration of the prostate gland, so that he was almost choked by the quantity of matter thrown up. In 1740, as well as another attack, he recovered completely, that his breathing was not affected. As he advanced in years, however, he was again subject to fits of the gout, to which in 1750 nephritic colic was added. From this time he was subject also to the stone, and during the last year of his life these complaints almost confined him to his bed; notwithstanding which, neither his mental abilities nor his health forsok him. His memory was tenacious to the last; a remarkable instance of which was, that he learned to speak French after he was

70. About 16 days before he died, he was seized with a feverish disorder; which, about the 3d or 4th day, was attended with a pain in the left breast, accompanied with a cough and laborious breathing. Thus he continued for 5 days, when the painful symptoms ceased; but a new imposthume had now taken place in the lungs, which suddenly breaking, he was unable to expectorate the matter fully. Hence the difficulty of respiration increased, and he expired on the 17th April 1790. He left one son, governor William Franklin, a zealous loyalist; and a daughter, married to Mr William Bache merchant in Philadelphia, who waited upon him during his last illness. Dr Franklin was sententious but not fluent in society; more inclined to listen than to talk; and an instructive rather than a pleasing companion. With regard to religion, after renouncing his sceptical principles, as neither true nor beneficial to society, he became a firm believer in the Scriptures; and his sentiments on death may be gathered from a letter written about 35 years ago to Miss Hubbard on the death of her father-in-law and his brother, Mr John Franklin. "We are spirits (says he); That bodies should be lent us while they can afford us pleasure, assist us in acquiring knowledge, or doing good to our fellow creatures, is a kind and benevolent act of God. When they become unfit for these purposes, and afford us pain instead of pleasure; instead of an aid they become an incumbrance, and answer none of the intentions for which they were given: it is then equally kind and benevolent, that a way is provided by which we may get rid of them. Death is that way. Our friend and we are invited abroad, on a party of pleasure, that is to last forever. His carriage was first ready, and he is gone before us; we could not all conveniently start together; and why should you and I be grieved at this, since we are soon to follow, and know where to find him?" The Doctor was author of many tracts on electricity, and other branches of natural philosophy, on politics and miscellaneous subjects. The following epitaph on himself was written by Dr Franklin many years before his death:

The BODY of  
 BENJAMIN FRANKLIN, PRINTER,  
 Like the COVER of an OLD BOOK,  
 Its contents torn out,  
 And stript of its lettering and gilding,  
 Lies here food for worms.  
 Yet the WORK itself shall not be lost;  
 For it will (as he believed) appear once more,  
 In a NEW and MORE BEAUTIFUL EDITION,  
 Corrected and amended  
 BY THE AUTHOR.

(II.) FRANKLIN, Thomas, D. D. chaplain to his majesty, was the son of Richard Franklin, printer of a famous anti-ministerial paper called, *The Craftsman*; in the conducting of which he was greatly assisted by Lord Bolingbroke, Mr Pulteney, and other excellent writers, who opposed Sir Robert Walpole's measure's. By Mr Pulteney's advice, young Franklin was devoted to the church, under a promise of being provided for by the patriot; who, however, forgot it, and neglected him. He was educated at Westminster; whence

whence he went to Cambridge, became fellow of Trinity college, and professor of Greek. In Dec. 1758, he was named vicar of Ware and Tunbridge; afterwards lecturer of St Paul's, and at last rector of Brafted in Kent. He was long a favourite in the literary world. His translations of Phalaris, Sophocles, and Lucian, evince his learning and genius, as they are equally distinguished for fidelity, and congeniality with the spirit of the originals. He suffered a translation from the French of Voltaire's works to be printed in his name; but the Orestes and Electra are supposed to be all that were really by him. His own dramatic compositions, particularly the tragedies of *The Earl of Warwick* and *Matilda*, are deservedly esteemed. He died, March 15, 1784.

(III.) \*FRANKLIN. *n. f.* [from *frank*.] A steward; a bailiff of land. It signifies originally a little gentleman, and is not improperly Englished a gentleman servant. Not in use.—

A spacious court they see,  
Both plain and pleasant to be walked in,  
Where them does meet a *franklin* fair and free.  
*Fairy Queen.*

(IV—XIX.) FRANKLIN, in geography, the name of 6 counties, 8 townships, an island, and a fort, in the United States of America, viz.

1. FRANKLIN, a county of Georgia, in the Upper District, seated on the Tugulo, which separates it from S. Carolina, containing 885 citizens, and 156 slaves, in 1790.

2. FRANKLIN, a populous and well cultivated county of Kentucky, bounded by Scott, Shelby, Fayette, and Woodford counties. Frankfort is the capital.

3. FRANKLIN, a county of N. Carolina, in Halifax district, bounded by the Greenville, Warren, Johnston, Wake, and Orange counties; containing 4842 citizens, and 2717 slaves, in 1790. Lewisburg is the chief town.

4. FRANKLIN, a fertile county of Pennsylvania, seated chiefly between the N. and S. Mountains, comprehending 800 square miles, or 512,000 acres. It is divided into 11 townships, and contained 15,325 citizens, and 330 slaves, in 1790. Iron is found in it. Chambersburg is the capital.

5. FRANKLIN, a county of Vermont, bounded on the N. by Lower Canada, and W. by Lake Champlain; containing 23 townships.

6. FRANKLIN, a county of Virginia, bounded by Bedford, Campbell, Patrick, and Montgomery counties; 40 miles long and 15 broad. It comprehends a part of the Alleghany mountains on the NW. and contained 5769 citizens, and 1073 slaves, in 1790.

7. FRANKLIN, an islet of Maine district, in Lincoln county, in the mouth of St George's river, 12 miles S. of Thomaston.

8. FRANKLIN, a township of Connecticut, in New London county, 6 miles NW. of Norwich, containing above 1000 citizens, in 1790, chiefly farmers.

9. FRANKLIN, a township of Massachusetts, in Norfolk county, bounded on the N. by the Charles, containing 1700 acres, and above 1100 citizens, 30 miles S. of Boston.

20—13. FRANKLIN, four townships of Pennsyl-

vania, in Fayette, Washington, W. and York counties.

14, 15. FRANKLIN, two townships of in Delaware and Dutchess counties.

16. FRANKLIN, FORT, a fort of P in Alleghany county, near Venango, bank of the Alleghany, 63 miles N. (Lon. 79. 41. W. Lat. 41. 1. N.

\* FRANKLY. *adv.* [from *frank*.] ly; freely; kindly; readily.—

Oh, were it but my life,  
I'd throw it down for your deliver  
As *frankly* as a pin. *Sbak. Me.*

If ever any malice in your h  
Were hid against me, now forgive  
*Sbak.*

—When they had nothing to pay, he gave them both. *Luke*, vii. 42.—By th of the earth the sap cannot get up to spr ly as it should do. *Bacon's Nat. Hist.*— garden more for being full of blackbirds ries, and very *frankly* gave them fruit to *Speet.* 2. Without constraint.—The ted their servants upon their own horit with the volunteers, who *frankly* listec amounted to a body of two hundre horse. *Clarendon.* 3. Without refer ted very *frankly* into those new del were contrived at court. *Clarendon.*

\* FRANKNESS. *n. f.* [from *frank* nels of speech; openness; ingenuou the Conde duke had some eclairecism duke, in which he made all the protest sincere affection, the other received his; with all contempt; and declared; with cessary *frankness*, that he would have with him. *Clarendon.*—Tom made h man of sense, and always treated h ring the whole time of courtship: his per and good breeding hindered him any thing disagreeable, as his sinceri nels of behaviour made him convert fore marriage in the same manner he do afterwards. *Addis. Guardian.* 2. bounteousness. 3. Freedom from delivered with the *frankness* of a frie word by word, what Kalandier ha touching the strange story. *Sidney.* men that ever were, have had all an c *frankness* of dealing, and a name of c veracity. *Bacon.*

FRANKLEDGE. See FRANK,

(1.) FRANKS, FRANCES, FRANKIQUIS, a name which the Turks, Ar &c. give to all the people of the west Europe. The appellation is commo to have had its rise in Ana, at the crusades; when the French made it sible figure among the crocettes: time the Turks, Saracens, Greeks, &c. used it as a common term for a tians of Europe, and called Europe KISTAN. The Arabs and Malabar:

The term *Franks* not only to the name originally belonging to the Latins and Europeans in his notes on Condinus, cap. 5. origin of the appellation *Franks*, by. The Greeks, he says, at name to the *Franci*, or German settled in Gaul; (see *FRANCE*, ards they gave to the Apulians after they had been conquered by and at length they extended it to all its sense is the name used by several as Comnenus, &c. who to distinguish, called them the *western Franks*. is, that about the time of Charle-distinguished eastern France, west-Latin or Roman France, and Ger-which was the ancient France after-FRANCONIA.

15. See *FRANKSTOWN*.

*FRANKSTADT*, a town of Moravia, in Prerau, 4 miles S. of Freyberg.

*FRANKSTADT*. See *FRAUSTADT*.

*FRANKSTOWN*, or *FRANKS*, a town and Pennsylvania, in Huntingdon county, branch of the Juniata, 20 miles W. lon.

*FRANKFELD*, or *PUSKOWITZ*, a town of les NW. of Fekenberg.

*FRANKFURT*, a town of France, in the dept. 1½ miles W. of Abbeville.

*FRANKMONT*, a town of the Helvetic Baile, on the Doubs, 16 miles N. of and 23 W. of Soleure.

*FRANKVILLE*, a town of France, in the ver Seine, 6 miles SE. of Rouen.

*FRANK*. See *FRANKS*, N° 1.

*FRANTICK*. *adj.* [corrupted from *phrenetick*, Lat. *phreneticus*.] 1. Mad; deprived of 1g by violent madness; outrageously itly mad.—

he wonders what makes him so glad, as' merry fruit they did invent, s *frantick* rites have made them mad.

*Fairy Queen*.

ted by violence of passion; outrage-ent.—Esteeming, in the *frantick* error ds, the greatest madness in the world n, and the highest wisdom foolishness.

h a height their *frantick* passion grows, t both love, both hazard to destroy.

*Dryden*.

rs her hair, and, *frantick* in her griefs, Lucia.

*Addison's Cato*.

*ad.*—

The lover, *frantick*, i's beauty in a brow of Egypt. *Shak*.

*TICKLY*. *adv.* [from *frantick*.] Mad- dly; outrageously.—

; how *frantickly* I square my talk.

*Shak*.

*TICKNESS*. *n. f.* [from *frantick*.] Mad- of passion; distraction.

*ZDORF*, a town of Silesia, in the prin- Neisse, 4 miles N. of Neisse.

*ZIUS*, Wolfgang, professor of divi- temberg, was born in 1564. He wrote,

**PART I.**

1. *Animalium Historia Sacra*: 2. *De Interpretatione Sacrarum Scripturarum*. He died in 1620.

*FRANZBURG*, a town of Up. Saxony, in Swedish Pomerania, founded in 1587, 14 miles S. of Stralsund. Lon. 30. 36. E. of Ferro. Lat. 54. 9. N.

*FRASCATI*, or *FRESCATI*. See *FRESCATI*.

(1.) *FRASERBURGH*, or *FRASERSBURGH*, a small sea-port town in Aberdeenshire, seated on the S. extremity of the Murray Frith, called Kinnaird's Head. It was erected in the 16th century, on Sir *Alex. Fraser's* estate, whence the name. It has a good harbour, made and kept up at a considerable expence by the proprietor and the town, and well adapted for building small vessels. There are from 12 to 15 feet water within the harbour, and 20 feet immediately without at spring tides; without is a tolerable road for shipping, in a bay nearly a league in length and half a league in depth, with good anchorage in a sandy bottom. Vessels of about 200 tons burden enter the harbour. *Fraserburgh* contains about 1600 inhabitants, and is well situated for trade with the east coast of Europe. The town has lately advanced considerably, and requires only encouragement to render it a port of importance. At present it carries on a small trade to the east sea; several manufactories are forming in its neighbourhood. It is 16 miles E. of Banff, and 40 N. of Aberdeen. Lon. 1. 16. E. of Edinburgh. Lat 57. 37. N.

(2.) *FRASERBURGH*, a parish of Scotland, on the coast of Aberdeenshire, so named from the above town, (N° 1.) but anciently called *PHILORTH*. It is 6 miles long from N. to S. 3½ broad, and 4 along the coast; comprehending above 10,000 acres, intersected by the parish of Rathven. The soil is various but mostly fertile, though intermixed with mosses and moors. The climate is dry and healthy, and many of the natives long-lived. Husbandry is much improved, and inclosures are general. Barley, oats, pease, and beans, are the most general produce; potatoes, turnips, cabbages, and clover, are also cultivated, with some wheat and flax. The population in 1792, stated by the rev. Alexander Simpson, in his report to Sir John Sinclair, was 2200, and had increased 518 since 1755. Linen yarn is the chief manufecture. Kelp is also made on the coast. Cod, ling, turbot, haddocks, lobsters, &c. are taken in great quantities. Fish and grain are exported.

*FRASLA*, a town of Germany, in the duchy of Stiria, 10 miles W. of Cilly.

*FRASSINETO*, a town of Naples, in the prov. of Bari, 9 miles SSW. of Conversano.

*FRASTENTZ*, a town of Germany, in the county of Feldkirk, 2 miles E. of Feldkirk.

*FRAT*, the name given by the Asiatics to the *EUPHRATES*.

(1.) *FRATELLI*, two small islands in the Mediterranean, 25 miles W. of Scarpanto.

(2.) *FRATELLI*. See *FRATRICELLI*.

(1.) *FRATELLINI*, Joanna, a celebrated Italian paintress, born at Florence, in 1666. She acquired an excellent stile in painting historical subjects and miniatures, and was patronized by the archduchess Victoria. She died in 1731.

**K**

(2.) *FRAT*

(2.) **FRATELLINI**, Laurence Maria, the son of Joanna, (N<sup>o</sup> 1.) was born in 1690, and studied under Galvani. He painted portraits, animals, landscapes, and historical subjects, admirably. He died in 1729.

(1) \* **FRATERNAL**, *adj.* [*fraternel*, French; *fraternus*, Lat.] Brotherly; pertaining to brothers; becoming brothers.—

One shall rise

Of proud ambitious heart; who, not content

With fair equality, *fraternal* state,

Will arrogate dominion undeserv'd,

Over his brethren. *Milton's Par. Lost.*

—The admonitions, *fraternal* or paternal, of his fellow Christians, or of the governors of the church; then more public reprobations; and upon their unsuccessfulness, the censures of the church, until he reform and return. *Hammond.*—

Plead it to her,

With all the strength and heats of eloquence,  
*Fraternal* love and friendship can inspire.

*Adif. Cats.*

(2.) **FRATERNAL AFFECTION** is the love and attachment subsisting among, or due to one another by, children of the same family. An hearty benevolence, an ardent concern for each other's welfare, and a readiness to serve and promote it, are the peculiar offices of this relation. See *Cicero, De Officiis.*

\* **FRATERNALLY**, *adv.* [from *fraternal*.] In a brotherly manner.

**FRATERNISATION**, *n. f.* [from *fraterniser*, Fr. to fraternise,] one of the many new words to which the French revolution has given birth, literally signifies the act of living together as brethren; but in an enlarged sense, it is used for the act of one nation voluntarily agreeing with another, to be governed by the same laws, or to live in strict alliance, and under the same democratical form of government, with another.

To **FRATERNISE**, *v. n.* [*fraterniser*, Fr.] To live together like brothers. *Bailey.* This verb is also now used in the same enlarged political sense with the noun. See last article.

(1) \* **FRATERNITY**, *n. f.* [*fraternité*, Fr. *fraternitas*, Lat.] 1. The state or quality of a brother. 2. Body of men united; corporation; society; association; brotherhood.—'Tis a necessary rule in alliances, societies, and *fraternities*, and all manner of civil contracts, to have a strict regard to the humour of those we have to do withal. *L'Esperance.* 3. Men of the same class or character.—With what terms of respect knaves and fops will speak of their own *fraternity*. *South.*

(2.) **FRATERNITY**. See **COMPANY** and **GUILD**.

(3.) **FRATERNITY**, in the Roman Catholic system, signifies a society for the improvement of devotion. Of these there are several sorts; as, 1. The fraternity of the rosary, founded by St Dominic. It is divided into two branches, called the *common rosary* and the *perpetual rosary*; the former of whom are obliged to confess and communicate every next Sunday in the month, and the latter to repeat the rosary continually. 2. The fraternity of the Immaculate, whom the blessed Virgin, according to the sabbatine bull of pope John XXII. has promised to deliver out of hell the first Sunday after their death. 3. The fraternity of St

Francis's girdle are clothed with a sack of colour, which they tie with a cord; an cessions walk bare-footed, carrying in th a wooden cross. 4. That of St Austin's girdle comprehends many devotees. Ital and Portugal are the countries where the number of these fraternities, some of whic the name of *arch-fraternities*, are to b Pope Clement VII. instituted the arch of charity, which distributes bread every among the poor, and gives portions to girls on the feast of St Jerome their pa The fraternity of death buries such dead abandoned by their relations, and causes be celebrated for them.

**FRATRIAGE**, *n. f.* the partition an thers, or coheirs, coming to the same int

**FRATRICELLI**, or **FRATELLI**, [Ital. *terculi*, little Brothers,] in ecclesiastical hi enthusiastic sect of Franciscans, which ro ly, particularly in Ancona, about A. J The word was used as a term of derision were most of them apostate monks.

reason the term, as a nick-name, was many other sects, as the Catharists, W &c. however different in their opinion their conduct. But this denomination, a the austere part of the Franciscans, was ed as honourable. See **FRANCISCANS**. T ders were P. Maurato, and P. de Foss who having obtained of pope Celestin mission to live in solitude, after the name mits, and to observe the rule of St Fra its rigour, several idle vagabond monk them, who, living after their own fan making all perfection to consist in pover soon condemned by pope Boniface VIII successor, and the inquisitors ordered to agant them as heretics; which commi executed with their usual barbarity. U retiring into Sicily, Peter John Oliva de had no sooner published his Comment c people, than they adopted his opinion held the Romish church to be Babylon, posed to establish another far more pur They maintained, that the rule of St Fr the evangelical rule observed by Jesus C his apostles. They foretold the reformati church, and the restoration of the true Christ, by the genuine followers of St and declared their assent to almost all the which were published under the name o bet Joachim, in the "Introduction to the ing Gospel," a book published in 1252, phined by one of the spiritual fathers, wh was Gerhard. Among other enormi cated in this book, it is pretended that was the angel mentioned in Rev. xiv. 6. promulgated to the world the true and e gospel of God; that the gospel of Chri be abrogated in 1262, and to give place to gospel; and that the ministers of this g mation were to be bumble and bare-foot destitute of all worldly employments. 2

elect a pope of their church; at least elected in general, with superiors, and built ries, &c. Besides the opinions of Oliva, d, that the sacraments of the church were because those who administered them, were not power or jurisdiction. They admitted archb. by pope John XXII. in case of whose cruelty they regarded him as antichrist; but several of them returned to Germany were sheltered by Lewis, duke of the emperor. There are authentic reasons which it appears that no less than 2000 were burnt by the inquisition, from 1318 to the poverty of St Francis. The persecutions were again revived towards the end of the 15th century, by pope Nicolas V. and his successors. However, all the persecutions, his sect endured, were not sufficient to destroy it; for it subsisted till the time of the reformation in Germany, when its remaining doctrines the doctrine and discipline of Luther. This has led Popish writers to charge it with many enormities, some of which are cited by Bayle, under the article, FRAUD. They had several other denominations were called *Dulcini*, from one of their; *Baschi*, *Requins*, and *Begharai*.  
**FRATRICIDE**. *n. s.* [*fratricida*, French; *frater*, Lat.] The murder of a brother.  
**FRATA**, a market town of Maritime Austria, w. of Rovigo, on the Soortico, containing many palaces.  
**FRUNNEN**, a town of the Helvetic republic; miles N. of Bern, near which a battle was fought by the Bernese over an army of English and Normans, under S. de Courcy.  
**FRAUD**. *n. s.* [*fraus*, Lat. *fraude*, Fr.] Deceit; trick; artifice; subtilty; intrate-

deceitfully; artfully; subtilly; treacherously; by stratagem.  
 \* **FRAUDULENCE**. } *n. s.* [*fraudulentia*, Lat.]  
 \* **FRAUDULENCEY**. } Deceitfulness; trickiness; proneness to artifice — We admire the Providence of God, in the continuance of the Scripture, notwithstanding the endeavours of infidels to abolish, and the *fraudulence* of hereticks always to deprave the same. *Hooker*.  
 \* **FRAUDULENT**. *adj.* [*fraudulens*, Fr. *fraudulentus*, Lat.] 1. Full of artifice; tricky; subtle; deceitful.—

He with serpent tongue  
 His *fraudulent* temptation thus began. *Milton*.  
 She mix'd the potion, *fraudulent* of soul;  
 The potion mantled in the golden bowl. *Odyf*.  
 2. Performed by artifice; deceitful; treacherous.—  
 Now thou hast wrong'd  
 Supplanted Adam,  
 And frustrated the conquest *fraudulent*. *Milton*.

\* **FRAUDULENTLY**. *adv.* [from *fraudulent*.]  
 By fraud; by deceit; by artifice; deceitfully.—  
 He that by fact, word, or sign, either *fraudulently* or violently, does hurt to his neighbour, is bound to make restitution. *Taylor*.

**FRAUENBACH**, a river of Saxony, which runs into the Elbe, 2 miles SW. of Colleda, in Thuringia.

(1.) **FRAUENBERG**, a town of Bohemia, in the circle of Pilsen, 3 miles SW. of Hayd.

(2.) **FRAUENBERG**, a town of Bavaria, in the palatinate of Neuburg, 9 miles NW. of Ratibon.

**FRAUENBOURG**, a town of Prussia Royal, in Poland, on the river Frisch haff, 6 or 7 leagues from Elbing, to the NE. In the cathedral of Frauenbourg is the tomb of the great COPERNICUS, on the subject of which the eminent John BERNOULLI of Berlin wrote to D. S. Earl of Buchan a letter, dated the 22d of Feb. 1704, of which his lordship has favoured us with the following translation:—"In the year 1777, the bishop of Warmia, whom I met in the abbey of Oliva, near Dantzic, told me that he had the pleasure to discover, in his cathedral of Frauenbourg, the long neglected tomb of Copernicus. In the year 1778, on my journey to Russia, passing through that town, and having nothing to do during my short stay there, that could interest me more, I went to the cathedral in search of this precious monument. I knew nobody in Frauenbourg, but on the street I accosted a canon, whose countenance and manner encouraged my address, and I was not disappointed. He told me, that as for the spot where lay interred the ashes of Copernicus, there was no certainty, because it was usual to place the coffins of the deceased canons in a vault, where, in the course of time, from their number, it was impossible to distinguish them from each other; but that with respect to the sepulchral stone, it was a slab of marble, such as was usual for others of the same station, with the short inscription, NIC. COPERNICUS, THOR. That this stone had been hidden, from neglect, many years, and afterwards accidentally observed and placed in the chapter-house of the cathedral, with a view to consider maturely of a proper place for its erection. I regret, however, very much, that I did not make a point with my guide to shew me this stone, as, if

Our better part remains  
 ork in close design, by *fraud* or guile,  
 force effected not. *Milton*.  
 we need the *frauds* of sly Ulysses fear.  
*Dryden's Æn.*

If success a lover's toil attends,  
 asks if force or *fraud* obtains his ends.  
*Pope*.

**FRAUD**, in law, signifies deceit in grants, conveyances of lands, &c. or in bargains and goods, &c. to the damage of another person. Fraudulent conveyance of lands or goods, to creditors, as to creditors is void in law. Fraudulent conveyance, to defraud purchasers, such purchasers void; and the persons giving or putting off such grants as good, shall pay the year's value of the lands, and the full value of the goods and chattels, and likewise shall be fined. See CHEAT, § 3.

**FRAUDFUL**. *adj.* [*fraud* and *ful*.] Treacherous; artful; tricky; deceitful; subtle.—

The welfare of us all  
 is on the cutting short that *fraudful* man.  
*Shak. Hen. VI.*

He, full of *fraudful* arts,  
 well-invented tale for truth imparts.

**FRAUDFULLY**. *adv.* [from *fraudful*.] De-

A part of the inscription be not effaced, it does not tally with that recorded by Gassendi, who says, p. 325, in his life of Copernicus, that bishop *Martin Cromer*, a celebrated Polish historian, caused to be erected to the memory of that great astronomer *unam tabulam marmoream*, with this inscription;

D. O. M.  
 N. D. NICOLAO COPERNICO  
 TORUNENSI. ARTIUM ET  
 MEDICINÆ DOCTORI.  
 CANONICO VARMIIENSI.  
 PRÆSTANTI ASTRÓLOGO ET  
 EJUS DISCIPLINÆ INSTAURATORI.  
 MARTINUS CROMERUS  
 EPISCOPUS VARMIIENSIS  
 HONORIS ET AD POSTERITATEM  
 MEMORIÆ CAUSA POSUIT.  
 M, D, LXXXI.

Gassendi adds, that it was 36 years after the death of Copernicus; but this does not agree with the date of our stone. My Canon had for his apartment the Dormitory of Copernicus, and he kindly asked me to pay it a sentimental visit, an invitation you may believe I accepted with emotion, and enjoyed with pleasure. Above the range of the Dormitories there is another little apartment, which my guide allotted to the memory of his great predecessor, and which he has decorated with his portrait in oil colours, well preserved, and perhaps only a copy from some original painting. It was from this place that Copernicus enjoyed a fine scope of the heavens and a large horizon; here that he made the heavens his study, and rendered himself a luminary of the first magnitude, in the constellation of modern astronomers; and when he found it necessary to make his observations in the open air, there is a little gallery or terrace, that communicates with this apartment, and the adjoining steeple, or belfry, which served to accommodate the great Copernicus in his researches. You, my Lord, are able to conceive the divine satisfaction I enjoyed in this place!—classic and sacred!—where I inhaled as it were the spirit of departed greatness! and it was the shock of these transcendent emotions, that made me to forget the stone I have described in the former part of my letter, my time being elapsed and my carriage ready to depart. Near the cathedral my Canon showed me a large reservoir of water, with a high tower which contains the remains of a hydraulic machine, said to have been invented by Copernicus, for carrying and distributing the water by pipes to the different apartments of the canons, his brethren: a convenience now lost, and which, from the ruin of the machine, they are obliged to fetch from a fountain in the lower part of Frauenbourg. I have read in an old German Journal, that in the ancient town of KÖNIGSBERG there are or were preserved many of the books belonging to Copernicus at the time of his death, with his portrait *fraught* in oil colours, which were purchased at Thorn, probably in his house in that town, possessed by the family so late as the year 1720; and in this house Copernicus was born.—Frauenbourg was built in 1277, and lies 38 miles SW. of Königsberg.

FRAUENBREITUNGEN, a town of Prussia, in the county of Henneberg, on the 4 miles W. of Schmalkalden.

FRAUENBURG, a town in the duchy of Saxe, 20 miles SSE. of Goldingen.

FRAUENFELD, a town of the Helvetic, the capital of the late bailiwick of 7 It was taken from the Austrians by the 1460. Great part of it was burnt in 1771 20 miles NE. of Zurich. Lon. 9. 56. E. 35. N.

 FRA

HEIM, a town of Germany, in Stiria.

HOFEN, a town of Germany, in Lower Silesia, 3 miles S. of Landshut.

NEBERG, a town of Germany, in Stiria, SE. of Oberwoltz.

REUTH, a town of Upper Saxony, in Silesia, 6 miles NE. of Greitz.

LAUSTADT, a town of Silesia, on the frontiers of Poland, 70 miles NW. of Breslau, where a battle gained by the Swedes over the Poles in 1706. Lon. 15. 50. E. Lat. 51. 45. N.

AUSTADT, or WACHOWA, a town of Posen, on the frontiers of Silesia, and in the palatinate of Posen; 48 miles W. of Posen.

WENLOB, Henry, a German author, wrote some books in favour of the fair sex. In 1717, his funeral was attended by a great number of students, who poured so large a quantity of water over his grave as to overflow the church, and run into the Anglesa.

INELLA, in botany. See *DICTAMNUS*. A remarkable of this odorous plant, that, when in blossom, the air which surrounds it is so much inflamed by the approach of a candle. Dr Watson doubts whether inflammability proceeds from an inflammable substance by the plant, or from some of the finer essential oils of the plant being dissolved in the common atmospherical air. The latter, he thinks, is most probable, for were it inflammable air, it would, on account of its specific gravity, leave the plant as soon as it was produced. Common air acquires the property of becoming inflammable, by being transfused with several essential oils.

FRAXINUS, the ASH: A genus of the diœcia belonging to the polygamia class of plants; natural method ranking under the 44th order. There is no hermaphrodite calyx, tripartite; and there is either no corolla, papilionaceous: there are two stamina; one uniloculated seed; and the pistil of the same loculation. There are 6 species; of which the most useful is the common ash. See 1. If a wood of these trees is rightly managed, it will turn out greatly to the advantage of the owner: for, by the underwood, which will cut every 8 or 10 years, there will be a considerable income, more than sufficient to pay the ground and all other charges; and still to leave a stock preserved for timber, which in 20 years will be worth 40s. or 50s. per tree. The ash flourishes best in groves, but grows very rich soil in open fields. It bears transplanting and lopping. In Lancashire they lop the best trees to feed the cattle in autumn; and as the grass is on the decline; the cattle peel the bark as food. The wood has the singularity of being nearly as good when it is very old. It is hard and tough, and is used to make the tools employed in husbandry.

The ashes of the wood afford very good manure. The bark is used in tanning calf skin. When infused in water, it appears of a pale yellowish green when viewed between the eye and the light; but when looked down upon, or placed betwixt the eye and an opaque object, it appears blue. This is destroyed by the addition of an acid,

but recovered by alkalis. The seeds are acrid and bitter. In the church-yard of Lochaber, Dr Walker measured the trunk of a dead ash tree, which, at 5 feet from the surface of the ground, was 58 feet in circumference.—Horses, cows, sheep, and goats eat it: but it spoils the milk of cows.

\* FRAY. *n. f.* [*effrayer*, to fright, Fr.] 1. A battle; a fight.—

Time tells, that on that ever blessed day,  
When Christian swords with Persian blood were dy'd,

The furious prince Tancredi from that *fray*  
His coward foes chased through forests wide.

*Fairfax.*

After the bloody *fray* at Wakefield fought.

*Shak. Henry VI.*

He left them to the fates in bloody *fray*,  
To toil and struggle through the well-fought day.

*Pope.*

2. A duel; a combat.—

Since, if we fall before th' appointed day,  
Nature and death continue long their *fray*.

*Denham.*

The boaster Paris oft desir'd the day  
With Sparta's king to meet in single *fray*.

*Pope.*

3. A broil; a quarrel; a riot of violence.—

I'll speak between the change of man and boy  
With a reed voice, and turn two mincing steps  
Into a manly stride; and speak of *frays*,

*Shak.*

Like a fine bragging youth.  
\* To FRAY. *v. a.* [*effrayer*, Fr.] 1. To fright; to terrify.—

The panther, knowing that his spotted hide  
Doth please all beasts, but that his looks them  
fright,

Within a bush his dreadful head doth hide,  
To let them gaze, whilst he on them may prey.

*Spenser.*

So diversly themselves in vain they *fray*,  
Whilst some more bold to measure him stand  
nigh.

*Spenser.*

—Fishes are thought to be *frayed* with the motion caused by noise upon the water. *Baron's Nat. Hist.*

—These vultures prey only on carcasses, on such stupid minds as have not life and vigour to *fray* them away. *Gov. of the Tongue.* 2. [*frayer*, Fr.] To rub.

FRAYLES, a cluster of islands in the W. Indies, 6 miles NE. of Margarita.

FRAYPONT, a town of the French republic, in the dep. of Ourte, and ci-devant bishopric of Liege; seated on the Weze; 8 miles SE. of Liege.

FRAZE, a town of France, in the dep. of Eure and Loire; 12 miles E. of Nogent le Rotrou.

FRAZERSBURG. See FRASERBURGH.

FREA, or FRIGGA, the wife of Odin, or Woden, was, next to him, the most revered divinity among the Heathen Saxons, Danes, and other northern nations. As Odin was believed to be father, Frea was esteemed the mother of all the other gods. In the earliest times, Frea was the same with the goddess HERTHUS, or EARTH, who was so devoutly worshipped by the Angli and other German nations. But when Odin, the conqueror of the north, usurped the honours due only to the true Odin, his wife Frea usurped those which had been formerly paid to mother Earth. She was worshipped as the goddess of love and pleasure,

pleasure, who bestowed on her votaries a variety of delights, particularly happy marriages and easy births. To Frea the sixth day of the week was consecrated, which still bears her name, *Friday*, or *Frea's day*.

\* **FREAK**. *n. s.* [*frecb*, Germ. fancy, petulant; *fræc*, Sax. fugitive.] 1. A sudden and causeless change of place. 2. A sudden fancy; a humour; a whim; a capricious prank.—

O! but I fear the tickle *freaks*, quoth she,

Of fortune, and the odds of arms in field. *P. Q.*  
—When that *freak* has taken possession of a fantastical head, the distemper is incurable. *L'Espr.*  
—She is restless and peevish, and sometimes in a *freak* will instantly change her habitation. *Spett.*

To vex me more, he took a *freak*

To slit my tongue, and make me speak. *Swift.*

\* To **FREAK**. *v. a.* [A word, I suppose, Scotch, brought into England by *Tbomson*.] To variegate; to chequer.—

There furry nations harbour:

Sables of glossy black, and dark embrown'd,

Or beauteous, *freak'd* with many a mingled hue.

*Tbomson.*

\* **FREAKISH**. *adj.* [from *freak*.] Capricious; humourish.—It may be a question, whether the wife or the woman was the more *freakish* of the two; for she was still the same uneasy top. *L'Espr.*

\* **FREAKISHLY**. *adv.* [from *freakish*.] Capriciously; humourishly.

\* **FREAKISHNESS**. *n. s.* [from *freakish*.] Capriciousness; humourishness; whimsicalness.

**FREAM**, *n. s.* in husbandry, ploughed land worn out of heart, and laid fallow till it recover.

\* To **FREAM**. *v. n.* [*fremer*, Lat. *fremir*, Fr.] To growl or grunt as a boar. *Bailey.*

**FREATS**, or **FREITS**, *n. s. obs.* a term still used in Scotland for *ill omens*, and sometimes denoting accidents supernaturally unlucky. K. James VI. in his *Demonologie*, MS. pen. Edit. B. I. ch. IV. p. 13.

“But I pray you forget not lykeways to tell what are the Devill's rudimentis? E. His rudimentis I call first in general all that quihilk is called vulgairelie the vertu of woode, herbe, and staine; quihilk is used by unlawfull charmis without natural causis. As lykeways all kynd of prattiques, *freitis*, or *utber lyk extraordinair actions, quihilk cannot abyde the tress tawiche of natural raison.*” It occurs again in the same sense in p. 14, *margin. note*; and in p. 41, speaking of *Sorcerers*; “And in generall that naime was gevin thaim for using of sic charmis and *freitis*, as that craft teachis thaim.”

**FRECHILLA**, a town of Spain in the province of Leon; 17 miles NW. of Valencia.

**FRECKELBEN**, a town of Upper Saxony, in Anhalt-Deffau; 30 miles WSW. of Deffau.

**FRECKENHORST**, a town of Westphalia, in the bishopric of Munster, 1m. SW. of Wardendorf.

(1.) \* **FRECKLE**. *n. s.* [*flec*, a spot, German; whence *stecle*, *freckle*.] 1. A spot raised in the skin by the sun.—

Ruddy his lips, and fresh and fair his hue;

Some sprinkled *freckles* on his face were seen,

Whose dusk set off the whiteness of the skin.

*Dryden.*

2. Any small spot or discoloration.—

The cow-slip tall her pensioners be;

In their gold coats spots you see:

Those he rubies fairy favours;

In those *freckles* live their favours. *S.*

—The farewell frosts and easterly wind  
your tulips; therefore cover such with  
prevent *freckles*. *Evelyn.*

(2.) **FRECKLES** (**LENTIGINES**) are 1 yellowish colour, of the bigness of a le scattered over the face, neck, and hands. are either natural, or proceed from the or the action of the sun upon the part. a sudden change of weather will often skin appear of a darker colour than is na thereby produce what is called *tan*, *sun morpheus*; which seem to differ only and usually disappear in winter. Perfor complexion, and those whose hair is red subject to freckles, especially in parts e the sun and air. To remove freckles, p lemons in a glass vial, and, mixing it v and borax finely powdered, let it dige and then use it. Homberg proposes gall mixed with alum, and, after the precipitated, exposed 3 or 4 months to a close vial, as one of the best menstria viag freckles.

\* **FRECKLED**. *adj.* [from *freckle*.] maculated; discoloured with small spot Sometimes we'll angle at the brook

The *freckled* trout to take

With silken worms.

*Drayton*

The even mead that erst brought sw

The *freckled* cowslip,

Wanting the icythe, all uncorrected,

Conceives by idleness. *Shak*

Now thy face charms ev'ry shep

Spotted over like a leopard;

And, thy *freckled* neck display'd,

Envy breeds in ev'ry maid.

57. N.

FREDERICK, the name of 11 Euro-  
pean emperors of Germany, 5  
kings of Denmark, and 2 kings of Prussia; and  
names of other 2 kings of Prussia, and  
1 king of Denmark. See DENMARK, § 6-8; GERMANY,  
and PRUSSIA. Amongst these we shall  
first take notice of the 3 following:

FREDERICK I, King of Prussia, the son of  
William, the Great, elector of Bran-  
denburg, born in 1657; and succeeded his  
father, A. D. 1688. In 1700, he  
made an association with the emperor, Geo-  
rge I, Prussia erected into a kingdom;  
but obtained by a singular accident.  
His advances were rather unpromising, he  
learned from his minister written in  
French, obliging him to use the interest of a cer-  
tain prince, he mistaking the ciphers, ap-  
peared as the emperor's confessor; who, being a  
Protestant deceiver, that he exerted his  
power and that of his order, to procure  
his object. Frederick was according-

ly King of Prussia, Jan. 18, 1701. He  
was distinguished with many virtues. He was magni-  
ficient, constant to his marriage vows,  
and attentive to the true interest of his subjects,  
by his dominions in peace. He was three  
times married; his 2d queen was sister to king

George I. He founded the university of Halle,  
and an academy at Berlin. He died in 1713.

FREDERICK II. surnamed the GREAT, K. of  
Prussia, one of the greatest warriors the present  
age has produced, was the son of Frederick-Wil-

helm, hereditary prince of Brandenburg, and  
Sophia Dorothea, daughter of king George I.

He was born in 1712, the year before his  
father ascended the throne, who was so far from

regarding literature, that he regarded  
it what related to the military art; and  
his generals scarce knew how to sign their

orders, his son was of a disposition the very re-

verse, being put from his birth under the care of  
a French lady of great merit and  
taste, he early acquired a taste for liter-

ature, and a predilection for the French language,  
which never obliterated. At 7 years of age,  
Frederick was put under the military tuition

of Count de Finkestein, and Col. de Kalk-

reid, renowned for courage and experi-

ence. He was taught mathematics and fortifica-

tion by Major Senning; Hau de Jendun, a French-

man, instructed him in other branches of know-

ledge; and a cadet of the name of Keuzel, taught

him his exercise. At 8, he was furnished with a

small arsenal, stored with all sorts of arms pro-

portioned to his age and strength, of which his

father left him absolute master. Soon after he

was named captain and chief of the corps of

cadets; and he performed every day, in mini-

ature, with his little soldiers, all the evolutions

with which his father exercised his giants. At

last he received the command of a company in

his father's famous gigantic regiment composed

of men of whom scarce one was short of 7 French

feet. Endued however, with a taste for the arts,

he devoted to their cultivation every moment he

could escape the vigilance of his guardians. He

was particularly fond of poetry and music, and

when he could find a moment's leisure, read

French authors, or played on the flute; but his

father, as often as he surprized him playing or read-

ing, broke his flute and threw his books into the fire.

The prince, chagrined at this treatment, and

having a great desire to visit Germany, England,

France, and Italy, desired permission to travel.

This, however, his father refused, but permitted

him to accompany himself occasionally into Ger-

many; and, in 1738, took him to Dresden to see

the king of Poland. By these little expeditions the

prince's desire to travel was only the more infla-

med; so that at last he resolved to set out without

his father's knowledge. The design was intrusted

to two of his young friends, named Kat and Keit;

money was borrowed, and the day of departure

fixed, when unluckily the whole project was dis-

covered. The old king, immediately in his retri-

but, and considering his son as a deserter, de-

termined to put him to death. He was shut up

in the fortress of Custrin; and it was with diffi-

culty that the count de Seckendorf, sent purposely

by the emperor Charles VI. was able to alter the

king's resolution. Captain Keit, however,

was determined on his intended escape. Keit

escaped the danger by flying into Holland;

but Kat had not that good fortune. The king

first directed that he should be tried by a court-

martial; but as they only sentenced Kat to per-

petual imprisonment, the revengeful monarch, by

an unheard-of exercise of his prerogative, caused

him to be beheaded. The execution was per-

formed under the windows of the prince, whose

face being held towards the scaffold by 4 gren-

adiers, he fainted away at the shocking sight; and

during the remainder of his life he considered

capital punishments with so great a degree of

horror, that they were rare throughout his domi-

nions while he reigned. When the emperor had

succeeded in preventing the execution of Frederick,

the old king remarked, that "Austria would

one day see what a serpent she had nourished."

The prince remained prisoner a year at Custrin;

during which time his father wished that he should

learn the maxims of government and finance.

For this purpose M. de Münchow, president of

the chamber of domains and finances, was order-

ed to make him assist at all their assemblies, to

consider him as a simple councillor and to treat

him

him as such. But though Frederick assisted at their meetings, he did not trouble himself with reading acts or copying decrees. Instead of this, he amused himself sometimes with reading French pamphlets, and at others with drawing caricatures of the president or members of the assembly. Munchow was also very favourable to the prince at this time, by furnishing him with books and other articles of amusement, notwithstanding the express prohibition of his father; though in this he certainly ran a great risk of his life. Frederick, after this, was recalled to Berlin, on pretence of being present at the celebration of his eldest sister's marriage with the hereditary prince of Bareith; but the true reason was, that the king had now prepared a match for the prince himself. This was the princess Elizabeth Christina of Brunswick, niece to the empress. Frederick, who was not only totally indifferent to the fair sex in general, but particularly prejudiced against this princess, made some objections; his father, however, overcame all obstacles with "his usual arguments (says the author of the life of Frederick), viz. his cane, and a few kicks." But the coldness which Frederick at this time showed for the fair sex was not natural; for as early as 1723, though then only in his 11th year, he fell in love with the princess Anne, daughter of K. George II. Even at this early period he vowed to refuse every other but her for his consort; nor was his vow ever broken, as far as depended on himself. This marriage might have taken place, had it not been for some differences, which arose between the courts of Prussia and Hanover about a few acres of meadow land, and two or three Hanoverians enlisted by the Prussian recruiters. The princess whom he espoused had a large share of beauty, and, what was still better, an excellent heart; but Frederick is said to have suffered so much in his former amours, that certain unformountable impediments remained to the completing of his marriage with any woman. Scarcely therefore was he in bed with his young spouse, when a cry of *Fire!* was raised by his friends. Frederick got up to see where the conflagration was, but finding it a false alarm, he sent messengers to compose the princess; but neither that night, nor any other, did he ever disturb her rest. On this occasion, Frederick received from his father the county of Rupin. He resided in Rupin, the capital, for some time; but afterwards preferred Rheinsberg, which then contained only 1000 inhabitants. Having inscribed over the great gate of the castle, FREDERICO TRANQUILLITATEM COLLENTI, his father was displeas'd with it, and therefore hurried him into the noise and tumult of war. The succession to the crown of Poland had kindled a general war throughout Europe, and the king of Prussia was to send 10,000 auxiliaries to the imperial army, then commanded by prince Eugene. The king conducted his troops in person, and took this opportunity of giving his son an idea of war. At this time, however, he learnt but little, and only saw, as he expressed it, the shadow of the great Eugene. That consummate general, however, predicted that he would one day be a great captain. Frederick having gone to reconnoitre the lines at *Philipburg*, in his return through a very open wood, was exposed to the cannon which thundered incessantly. The number of branches on every side of withstanding which, he never caused move quicker; nor altered the main hand which held the bridle; but conversed calmly with the generals with him. During this campaign the health of the king was so much impaired, that Frederick for some time intrusted with signing all in his name. On his recovery the prince returned to Stetten, under the prince of Dessau fortifications. He was afterwards sent to Rheinsberg to see king Stanislaus, who was remarkable for his philosophy and confidence for his misfortunes. With him Frederick resided for some weeks, and contracted a friendship which was not dissolved but by death. Frederick was allowed to return to his peaceful Rheinsberg, where he remained till the death of his father. In this place his time was alternately by the study of the arts and the pleasures of friendship. Philosophy, politics, the military art, poetry, agreeably succeeded each other, and he spent his period. The prince passed the greatest part of the day in his library; and the evening in the society of a select company of learned men. In these meetings, gaiety generally prevailed, and the generals were wont to speak of war, music, the ear, and excellent painters to decorations. The morning was usually spent in study; agreeable conversation prevailed in the evening; and every evening there was a concert. In this retreat Frederick conceived an ardent passion for military glory, for which he became at last so remarkable; and here he formed the most sublime and daring projects, fired with a desire of imitating the heroes of antiquity, of whom he read the accounts of ancient authors. He never spoke but with a view to the great warriors of Greece and Rome, and when seated on the throne, though not distinguished as an able soldier in a more able manner, than by conferring on him the surname of *Quintus Iulius M. Guichard*, who had written some treatises on the military art of the ancients, he gave him at the same time a free baton in his pursuit of glory. Frederick cultivated the friendship of celebrated poets, philosophers, and men; and commended, complimented, and flattered all the most celebrated literati at that time. "The philosophers (says of his life) answered him as a mad lover his mistress. They wrote to him that he was a great poet, a great philosopher, the greatest of his age, the north. All these hyperboles were and *Solomon* was not sorry for it, though too much understanding to believe in the Rollin, Graveland, Maupertuis, Algarotti, were honoured with his correspondence. The best especially, accustomed to offer to the idol of the day, were it trampled on the dunghill to the altar, did not fail the first man of the universe a prince and the expectancy of the throne, and who at that time he was the greatest philosopher of

poet in the world." That Frederick set up his character with the literati, or on a real predilection for his principles, and the *Apology of Wolf*, (a philosopher who had banished, for writing a work which diffused harmony,) and had his principal translated into French. He even prevailed on his father to relax a little in favour of the philosopher. In 1736, a letter was sent to Frederick, inviting him to return; but he ventured to make his appearance till on his protector was seated on the throne, during his residence at Rheinsberg, which imposed his refutation of the principles of Machiavel, under the title of *Anti-Machiavel*; he sent the MS. to Voltaire to correct, and printed. The old king, now worn with infirmity, saw with regret the predilection retained for men of letters; and, in his private life, often threatened the whole society of the court in the fortress of Spandau. His visits frequently occasioned a violent alarm to the joyous company at Rheinsberg, which all the eloquence of Frederick to quiet their apprehensions, however, were removed, in the old monarch died on the 31st of February, and the throne to his son. The possession of a kingdom did not abate Frederick's predilection for literature, though to this he was now added the qualities and labours of a

His transactions in this character will be seen in the article Prussia; and therefore it remains to be said here, than to relate the motives by which we may be able to trace the character of this great and singular monarch. After his accession, gone into Prussia to receive the homage of the provinces, he formed a resolution of proceeding as far as Paris. Being discovered at Paris, however, he laid aside his design, and went to see his states in Lower Germany. He wrote the celebrated *Voltaire*, that he came *incognito* to visit him at Brussels; but he went with an indisposition in the little *chaise*, two leagues from Cleves, he went to that philosopher, requesting him to give him the first advances. The following curious anecdote given by him of his reception, &c. "A guard I found at the gate was one of the privy counsellors, Rambonet, was dressed in the court: he had large ruffles on his coat; a hat full of holes; and an old peruke, one end of which descended to his pockets, and the other scarcely touched his shoulder. I was conducted into his apartment, where there was nothing remarkable. I perceived in a cabinet, by the side of a taper, a truckle bed, two feet wide, on which lay a little man in a night-gown of coarse blue cloth. The king, in a strong perspiration, and lying under a wretched blanket, in a state of the ague. I bowed to him, and feeling his pulse, as if I had been his physician. The fit over, he dressed himself and went to table. Algarotti, Kayserling, and the king's minister to the states were of the party; where

ART I.

we conversed profoundly on the immortality of the soul, on liberty, and the androgynes of Plato." This rigid economy, and contempt of every luxury, was maintained by Frederick as long as he lived. The following account, likewise from Voltaire, will give an idea of his manner of living. "He rose at 5 A. M. in summer, and 6 in winter. A lacquey came to light his fire, and dress and shave him; though indeed he almost wholly dressed himself. His room was not inelegant. A rich balustrade of silver, ornamented with little cupids, seemed to enclose an alcove bed, the curtains of which were visible; but behind them, instead of a bed, there was a library: the king slept on a truckle bed with a slight mattress concealed behind a screen. Marcus Aurelius and Julian, those apostles of Stoicism, did not sleep in a more homely manner. At 7 his prime minister arrived with a great bundle of papers under his arm. This prime minister was no other than a clerk, who had formerly been a soldier and valet-de-chambre. To him the secretaries sent all their dispatches, and he brought extracts of them, to which the king wrote answers in two words on the margin: and thus the affairs of the whole kingdom were expedited in an hour. At 11 the king put on his boots, reviewed his regiment of guards in the garden, and at the same hour the colonels were following his example in their respective provinces. The princes his brothers, the general officers, and one or two chamberlains, dined at his table; which was as good as it could be in a country where there is neither game, tolerable butcher's meat, nor a pullet, and where the very wheat is brought from Magdebourg. After the repast he retired alone into his cabinet where he made verses till 3 or 6 o'clock. Then came a young man named D'Arget, who read to him. A little concert began at 7, in which the king played on the flute with as much skill as the first performer; and pieces of his composition were frequently executed. Supper was served in a little hall, the most singular and striking ornament of which was a fine picture of Priapus. These repasts were not in general the less philosophic on that account. Never did men converse in any part of the world with so much liberty respecting all the superstitious of mankind, and never were they treated with more pleasantry and contempt. God was respected: but none of those who had deceived men in his name were spared. Neither women nor priests ever entered the palace. In a word, Frederick lived without a court, without counsel, and without religious worship." As Frederick had espoused his princess contrary to his inclination, it was imagined that on his accession, he would set himself free from engagements so disagreeable to himself. The queen impressed with suspicions of this kind, was on the point of fainting away when he made his first visit to her. To the surprise of all parties, however, he made her a very affectionate speech, apologizing for his indifference, and inviting her to participate with him the throne of which she was so worthy. In the 1st year of his reign, he restored the academy of sciences at Berlin; See ACADEMY, § XIII, N° 15. His war with the queen of Hungary, however, which took place almost immediately after his accession.

L

107

for some time prevented him from taking such an active part in literary matters as he was inclined to do. After the peace, he gave full scope to his passion for literature; and in the interval betwixt the conclusion of the first war and beginning of that of 1756, he composed most of his works; particularly his *History of my own Time*. Voltaire was his principal literary correspondent, whom he invited to reside with him. Afraid of losing his liberty, that philosopher hesitated, excused himself, and entered into pecuniary treaties. At last he was determined by seeing a poem from Frederick to M. D'Arnaud, in which the latter was compared to the rising, and Voltaire to the setting, sun. By this Voltaire was so much piqued, that he set out for Berlin without delay, and arrived there in June 1750. He was received in the most magnificent and affectionate manner, and for some time his situation was very agreeable; but the disputes and rivalry which took place betwixt him and Maupertuis soon threw every thing into confusion. In these the king interfered in such a manner as was certainly below his dignity; and he often exercised himself in making a jest of the other men of letters, in a way which induced many of them to leave him. The squabbles with Voltaire were sometimes very diverting; See VOLTAIRE. They ended at last in a final quarrel with that wit, and his departure from the kingdom. The restless disposition of Frederick showed itself after his departure, by his attempts to provoke the literati who remained at his court, to quarrel with him as Voltaire had done. But they were of too passive a disposition to gratify him in this respect, choosing rather to suffer the most mortifying strokes of raillery, or to leave the kingdom, than to contend with him. This proved so uneasy to the king, that he one day exclaimed, "Shall we have no more quarrels then?" The breaking out of the war in 1756, however, put a stop to this diversion, and afforded him as many enemies as he could wish. The exploits he performed, during the 7 years which this unequal contest lasted, are almost incredible; (See PRUSSIA;) and it is amazing how the fortitude and resolution of any man could enable him to sustain the difficulties which during this period he encountered. Once however even the resolution of Frederick was on the point of giving way. After the battle of Colin, when his affairs seemed altogether desperate, he wrote to his sister at Bareith, that he was on the point of putting an end to his own life. And as he wished to have it said that he made verses even on the brink of the grave, he wrote a long poetical epistle to the marquis d'Argens, in which he communicated to him his design, and bade him farewell. His affairs, however, took a better turn, and such desperate thoughts were laid aside. But his constitution was irreparably injured by the excessive fatigues he had sustained. Soon after the peace, his body began to bend, and his head to incline to the right side: by degrees he became very infirm; he was tormented with the gout, and subject to frequent indigestions. All his distempers, however, were born with invincible patience; and, till a very short time before his death, he never ceased to attend his reviews, or visit the provinces. He has

been known to review his troops, and go through all the ranks, as if he felt no pain, or an abscess, which approached to a suppuration touched the saddle. In Aug. 1785, he improved his health still farther by assisting at a review where he was exposed without a cloak to a hard rain for 4 or 5 hours. On his return to Potsdam he was seized with a fever; and, for the first time, became unable to assist at the military exercises. His malady, however, did not prevent him from dictating the disposition of these exercises during the 3 days they lasted. About the end of August the fever left him, but was succeeded by a violent cough; by which he was greatly weakened, prevented from sleeping; but this did not interrupt either the execution of business, or the routine of his literary exertions; wherein he continued to employ himself till the day he died. On the 17th and 18th of May 1788 he was unable to assist at the ordinary reviews. At last his disorder terminated in a dropsy. He was now no longer able to remain in bed, he sat up and night in an arm-chair with springs, and could be moved at pleasure. For near a month before his death the swelling of his feet gave him violent pain, so that he wished an incision to be made; but the surgeon refused to perform the operation, suspecting that it might hasten his death. Nature, however, accomplished his design, his right leg opened, and discharged such a quantity of matter, that he was greatly relieved. On the 16th Aug. 1786, his throat began to swell violently; and he soon after fell into a stupor, though from this he recovered so far as to be able to speak. His respiration and voice became gradually more feeble; and he expired on the morning of the 17th, at 19 minutes after 2, in the 75th year of his age, and 47th of his reign. This great monarch was of the middle size, had large blue eyes and a piercing look. He spoke German incorrectly, and in a very rough manner, but talked French very fluently and agreeably. His constitution was naturally feeble, but he greatly improved it by his laborious life. He was the art of relieving every one from that embarrasment, which is apt to occur in accosting a monarch. His universal knowledge enabled him to converse on all subjects. He talked of war with military men, of verses with the poet, of agriculture with the farmer, of jurisprudence with the lawyer, of commerce with the merchant, and of politics with the Englishman. He had a very retentive memory; was fond of solitude and gardening; took great pleasure in dogs, of which animals he constantly kept a number about him, giving them little balls to play with. In company, he was fond of asking questions and jesting; in which at last proceeded such lengths as undoubtedly were unbecoming in a superior towards his inferiors. In military affairs he was excessively fond of not to say cruel; of which the following anecdote may serve as an instance. In the first war of Frederick, wishing to make some alteration in his camp during the night, he forbade every person, on pain of death, to keep, after a certain hour, any light in his tent. He himself went to his rounds; and in passing the tent of a captain, he perceived a light. Entering the tent

tain sealing a letter to his wife, for a great affection. "What are you (says he;) Do you know the order?" fell on his knees and asked pardon. (says Frederick), and add a few words o dictate to you." Zittern obeyed; dictated, "To morrow I shall die." The unfortunate man wrote them, was executed. His cruel treatment ENCK is well known. In matters of illation, he was more arbitrary than h we have a notable example in the of Arnold the miller. This man had y the rest of his mill, on pretence m which turned it had been diverted nd. But as the water which ran in- also ran out of it into the same chan- the miller evidently suffered no da- judges therefore gave sentence against king not only reversed their sentenc- them. For this he was celebrated be newspapers in Europe; and yet he rong, and afterwards even acknow- lf to have been so: but notwithstand- not only made no reparation to the d, but allowed them to lie in prison ce. He entertained most unaccounta- s against certain places and persons, r conduct nor merit could eradicate. unfortunate places was Westphalia, never conferred any bounty: and one of that country, a man of great me- posed to him for a place, he refused, is a Westphalian; he is good for no- laire justly accuses him of ingrati- Count de Seckendorf; who saved his inst whom he conceived the most im- ed. His neglect of others who af- he most essential service, was shame- a robust butcher prevented him from and all, over a precipice, where both btedly have been killed, the king on- out and saying, *Thank you friend*, rode ver enquiring farther about his pre- th regard to his literary merits, ts of having corrected his works, and wing furnished him with materials y. He has been accused of stealing ichs of poetry from Voltaire, Boileau, d others; nor does the charge seem lation. Such of his verses, as have un- orrection, are very indifferent. But s mention the foibles of Frederick, it record his acts of virtue. Upon his reated his mother with great respect, she should bear the title of *Queen Mo- t* instead of addressing him as *His Ma- ld* call him *son*. As he was passing ween Berlin and Potsdam, a thousand d been marked out for military service . surrounded his coach, and cried out ing deliver us from our slavery." He m their liberty, and next day order- es to be taken off. He granted a ge- on of religion, and among other con- ved the profession of free masonry. this monarch was illustrious, as well

for the variety of characters he sustained, as for the important vicissitudes he experienced. But the pacification of Dresden, in 1745, enabled him to appear in a character far more glorious than that of the conqueror of Silesia. He was now entitled to the noblest eulogy, as the wise legislator of his country. Exclusive of his general attention to agriculture, commerce, and manufactures, he peopled, in particular, the deserts of Pomerania, by encouraging, with royal bounties, a great number of industrious emigrants to settle in that province; the face of which, in a very few years, underwent the most agreeable alteration. Above 60 new villages arose amidst a barren waste; and every part of the country exhibited marks of successful cultivation. Those desolate plains, where not a foot- step had been seen for ages, were now converted into fields of corn; and the happy peasants, under the protection of a patriot king, sowed their grounds in peace, and reaped their harvests in security.

iii. FREDERICK V. king of Denmark, reigned 20 years, and on his death bed, expressed his satisfaction to his son Christian VII, in a circumstance, which few monarchs can boast who have reigned so long. "It is a great consolation to me my son, (said he) in my last moments, that I have not injured any person, and that my hands are not stained with one drop of blood." See DENMARK.

(XI.) FREDERICK, Colonel, the son of THEODORE, king of Corsica, by an Irish lady of the noble family of Lucan, was born in Spain, and had a liberal education, and was also well qualified for the military line. He came to England in 1754, and taught the Italian language for some years. He afterwards went to the continent where he obtained the rank of Colonel, and the cross of merit, from the late duke of Wurtemberg; for whom he acted as agent, upon his return, and disposed of a regiment to the E. India Company. He married a German lady, while abroad, by whom he had a son, who fell in the American war, and a daughter. His finances falling low at last, he shot himself, at Westminster Abbey, on the 1st Feb. 1796. He was a man of general knowledge, and considerable talents. He wrote, 1. *Memoires pour servir l'histoire de Corse*, 8vo, 1768. 2. The description of Corsica; with an account of its union to the crown of Great Britain, 8vo, &c. 1796.

(XIII.) FREDERICK, in geography, the name of two counties, 2 towns, and a fort, in the United States; viz.

1. FREDERICK, a county of Maryland, bounded on the N. by Pennsylvania, E. by Baltimore, SW. by the Potomac, and W. by Washington; extending 30 miles every way. There are 37 mills, an iron and glass manufactory in it. It had 27,150 citizens, and 3,641 slaves in 1795. Fredericktown is the capital.

2. FREDERICK, a county of Virginia, bounded on the N. by Berkley, E. and S. by the Shanandoah, and W. by Hampshire; 30 miles long, and 20 broad. It contained 15,431 citizens, and 4,230 slaves, in 1795. It abounds with lime-stones and iron ore; iron works have been erected which produce from 800 to 1000 tons of iron annually. Winchester is the chief town.

3. **FREDERICK**, a fort of Maryland, in Washington county, on the Potomac, near Pennsylvania.

4. **FREDERICK**, a town of Maryland, in Cecil county, on the Sassafras, 6 miles SW. of Warwick. Lat. 39. 22. 36. N.

5. **FREDERICK**, a township of Pennsylvania, in Montgomery county.

6. **FREDERICK**, a town of New Brunswick, on the N. side of St John's river. Lon. 66. 45. W. Lat. 46. 3. N.

**FREDERICK-AUGUSTUS I**, king of Poland, the son of John George III. elector of Saxony, was born at Dresden in 1670, and succeeded his father in 1694. He made several campaigns against the French and Turks; and having embraced the Roman Catholic religion, he was elected king of Poland, in 1697. But having joined with Peter the Great, and Frederick IV. of Denmark, against Charles XII. of Sweden, tho' at first very successful, he was at last constrained to sign a treaty in 1706, resigning his crown to Stanislaus Leczinski. See SWEDEN. After the battle of Pultowa, however, he was restored to his throne. See POLAND. He died in 1733. He was endued with great personal strength, and undaunted courage.

**FREDERICK-AUGUSTUS II**, king of Poland, the son of the preceding monarch, was born in 1696, and elected in 1734. The latter years of his reign were very unfortunate. In 1736, the king of Prussia invaded Saxony, and retained it till the peace of 1763. Frederick Augustus died Oct. 5th 1762. See POLAND.

**FREDERICKENBURG**, a town of Upper Saxony, in Anhalt Zerbst, 1 mile SW. of Zerbst.

**FREDERICK-LEWIS**, Prince of Wales, the eldest son of K. George II, and father of his present Majesty, was born, Jan. 31st, 1707. He came over to England in Dec. 1728; married Princess Augusta of Saxe-Gotha, May 1736, by whom he had 9 children; and died March 31st, 1751, very much regretted, being a prince of an excellent character and disposition. See ENGLAND, § 81.

**FREDERICK-NAGORE**, a town of Bengal, belonging to Denmark, 18 miles above Calcutta, and 7½ below Chandernagore. See BENGAL, N<sup>o</sup> 1, § 10.

(1.) **FREDERICKSBURG**, a castle and palace of the king of Denmark, in the isle of Zealand, 15 miles NW. of Copenhagen. Lon. 12. 25. E. Lat. 55. 52. N.

(2.) **FREDERICKSBURG**, a fort on the Gold Coast of Guinea, in Africa, near Cape Threepoints, 62 miles from Cape Coast Castle. It is subject to Denmark. Lon. 1. 5. W. Lat. 4. 30. N.

(3.) **FREDERICKSBURG**, a town of Upper Saxony, in Pomerania, formerly called Quarckenburg, 30 miles SSW. of Colberg.

(4.) **FREDERICKSBURG**, a town of Virginia, in Spottsylvania county, on the SW. bank of the Rappahannock, 110 miles from its mouth. It contains about 200 houses; the chief street runs parallel with the river. It had 1413 citizens and 587 slaves in 1790. It is 50 miles SSW. of Alexandria. Lon. 27. 26. W. Lat. 38. 22. N.

**FREDERICKSHALL**, a town of Norway in the province of Aggerhuys, on the frontiers of Sweden, and on the extremity of the Swinefud,

at the mouth of the Tiste. The harbor and commodious; but the saw-dust bro the river from the mills occasions an pence to clear it. It contains 3000 in and lies 31 miles SE. of Christiania, and Uddevalla. Lon. 10. 55. E. Lat. 59. 2  
**FREDERICKSHOLM**, a fort of N miles S. of Christianland.

**FREDERICKSODE**, a town of De Jutland, taken by the Swedes in 1657, subject to Denmark. It is seated near 1 m. N. of Sleswick. Lon. 10. 0. E. Lat.

**FREDERICKS-SUND**, a sea port of in the isle of Zealand, 10 miles NW. hagen. Lon. 12. 13. E. Lat. 55. 50. N

(1.) **FREDERICKSTADT**, a town mark, in S. Jutland; built in 1621. It on the river Eyder, 17 miles WSW. of Lon. 9. 10. E. Lat. 54. 26. N.

(2.) **FREDERICKSTADT**, a town of N the prov. of Aggerhuys, seated on the 26 miles W. of Frederickshall. Lon. Lat. 59. 2. N.

**FREDERICKSTEIN**, a strong forte way, on the summit of a rock, which **FREDERICKSHALL**; famous for the Charles XII. killed while besieging it,

(1.) **FREDERICKSTOWN**, a town of York, in Dutche's county; which contains citizens, and 63 slaves in 1795.

(2.) **FREDERICKSTOWN**, a town of the county of Tyrone, and province of

**FREDERICKSVORN**, a town of N the prov. of Aggerhuys 3 miles S. of L

**FREDERICKSWERK**, a seaport of on the N. coast of Zealand, where foundery for cannons, &c.

**FREDERICK-TON**, a township of N wick, 90 miles up St John's river.

**FREDERICKTOWN**, a flourishing Maryland, capital of Frederick county, Carroll's creek, containing 700 houses for Presbyterians, German Lutherans, and Baptists, a court-house, &c. It is by N. of Baltimore, and 148 SW. of P Lon. 77. 30. W. Lat. 39. 24. N.

(1.) **FREDERICK WILLIAM**, the Gr tor of Brandenburg, was born Feb. 6th. succeeded his father William George, it was declared the first sovereign duke of 1658, and died in 1688. See PRUSSIA.

(2.) **FREDERICK WILLIAM I**, K. the son of Frederick I. and grandson t ceding, was born Aug. 4th, 1688, and su father in 1713. He was a man of nar violent passions, and of an arbitrary His chief pride was to be master of th giment in Europe. See PRUSSIA.

1740, and was succeeded by his son F Great.

(3.) **FREDERICK-WILLIAM II**, late sia, and grandson to the preceding mo born Sept. 25th 1744, and succeeded li derick the Great, in 1786. He was first promoters of the present war w and the first who deserted the coalition peace with the French republic. See

tion. He died in 1797, and was his son Frederick-William III.

EE. *adj.* [*frank*, Sax. *vry*, Dutch.] ; not a vassal; not enslaved; not a dependant.—A free nation is that never been conquered, or thereby enervated by conditions of subjection. *Temple*.—What? and fetter'd with so many chains?

*Dryden*.  
We think any one freer than to have do what he will? *Locke*.—

etch'd body trembles at your power: could fortune; but she can no more: feel: my potent mind remains, the victor's rage, nor feels his chains.

*Prior*.  
Unhappy prisoner free,  
intended harm to thee. *Prior*.

ried; unrestrained.—Their use of it like unto our ceremonies, that be of private action in common life, man was free to order that which himself is a publick constitution for the be church. *Hooker*.—

ful homage, and receive free honours, we pine for now. *Shak. Macbeth*.  
, and in my choice whether or no I in these discourses: yet the publick-ice resolved, the dedication was not — *South*. 3. Not bound by fate; not

hey stood who stood, and fell who fell: that proof could they have giv'n sincere legiance, constant faith, or love, y what they needs must do, appear'd; they would? *Mills. Par. Lost*.  
; allowed.—

ir, I pray, are not the streets as free for you? *Shak. Taming of the Shrew*.  
ig as impure what God declares commands to some, leaves free to all. *Milton*.

my cares my thoughts alone are free. sports with troubled thoughts agree, *Pope*.

s; unrestrained.—  
O conspiracy!  
iou to shew thy dang'rous brow by

s are most free? *Shak. Julius Caesar*.  
are too free upon the subject, in the of their friends. *Temple*.—The cri-ten very free in their censures. *Felton*.  
there are to whose presumptuous;hts

r beauties, ev'n in them seem faults. *Pope*.

ingenuous; frank.—  
, I have doubts within my heart;  
be free and candid to your friend?  
*Otway's Orphan*.

ed; conversing without reserve.—  
Tis not to make me jealous;  
wife is fair, feeds well, loves company,  
p'ecch, sings, plays, and dances well,  
tue is, these make more virtuous.  
*Shak. Othello*.

—Being one day very free at a great feast, he suddenly broke forth into a great laughter. *Hakewill*.

Free and familiar with misfortune grow,  
Be us'd to sorrow, and inur'd to woe. *Prior*.

8. Liberal; not parsimonious: with of.—  
Glo'ster too, a foe to citizens,  
O'ercharging your free purses with large fines,  
That seeks to overthrow religion. *Henry IV*.  
No statute in his favour says,

How free or frugal I shall pass my days;  
I, who at sometimes spend as others spare. *Hor*.

—Alexandrian verses, of twelve syllables, should never be allowed but when some remarkable beauty or propriety in them atones for the liberty: Mr Dryden has been too free of these in his latter works. *Pope*. 9. Frank; not gained by importunity; not purchased.—We wanted words to express our thanks: his noble free offers left us nothing to ask. *Bacon's New Atlantis*. 10. Clear from distress.—

Who alone suffers, suffers most i' th' mind,  
Leaving free things and happy shows behind,  
*Shak. King Lear*.

11. Guiltless; innocent.—  
Make mad the guilty and appal the free,  
Confound the ignorant. *Shak. Hamlet*.

My hands are guilty, but my heart is free. *Dryden*.

12. Exempt; with of anciently; more properly from.

## These

Are such allow'd infirmities, that honesty  
Is never free of. *Shak. Winter's Tale*.

Who fears not to do ill, yet fears the name;  
And free from conscience, is a slave to fame.

Let envy, then, those crimes within you see,  
From which the happy never must be free. *Denham*.

Their steeds around,  
Free from the harness, graze the flow'ry ground. *Dryden*.

—The will, free from the determination of such desires, is let to the pursuit of nearer satisfactions. *Locke*. 13. Invested with franchises; possessing any thing without vassalage; admitted to the privileges of any body: with of.—

He therefore makes all birds of every sect  
Free of his farm, with promise to respect  
Their several kinds alike, and equally protect. *Dryden*.

What do'st thou make a shipboard? To what end  
Art thou of Bethlem's noble college free?  
Stark-staring mad, that thou should'st tempt  
the sea? *Dryden*.

14. Without expence; by charity, as a free-school.

(2.) FREE OR IMPERIAL CITIES in Germany, are those not subject to any particular prince; but governed, like republics, by their own magistrates. There were free cities (*libera civitates*) even under the ancient Roman empire: such were those to whom the emperor, by the advice or consent of the senate, gave the privilege of appointing their own magistrates, and governing themselves by their own laws. See CITY, § 2.

(3.) FREE FISHERY. See FISHERY, § 4.

(4.) FREE

(4.) FREE MASON. See MASON.

(5.) FREE WARREN. See WARREN, § 2.

\* To FREE. *v. a.* [from the adjective.] 1. To set at liberty; to rescue from slavery or captivity; to manumit; to loose.—

The child was prisoner to the womb, and is By law and process of great nature thence Free'd and enfranchis'd; not a party to The anger of the king, nor guilty of, If any be, the trespass of the queen. *Shak.*  
—He recovered the temple, free'd the city, and upheld the laws which were going down. *2 Mac.* ii. 22.—

Can'st thou no other master understand,  
Than him that free'd thee by the pretor's wand?

*Dryden.*  
Should thy coward tongue  
Spread its cold poison through the martial throng,  
My jav'lin shall revenge so base a part,

And free the soul that quivers in thy heart. *Pope.*  
2. To rid from; to clear from any thing ill: with of or from.—It is no marvel, that he could think of no better way to be free'd of these inconveniences the passions of those meetings gave him, than to dissolve them. *Clarendon.*—

Hercules  
Free'd Erymanthus from the foaming boar. *Dryd.*  
Our land is from the rage of tygers free'd.

*Dryden.*  
3. To clear from impediments or obstructions.—  
The chaste Sibylla shall your steps convey,  
And blood of offer'd victims free the way.

*Dryden.*  
Fierce was the fight; but hastening to his prey,  
By force the furious lover free'd his way. *Dryd.*  
This master-key

Frees every lock, and leads us to his person.  
*Dryden.*

4. To banish; to send away; to rid. Not in use.  
We may again  
Give to our tables meat, sleep to our nights,  
Free from our feasts and banquets bloody knives.

*Shak.*  
Never any sabbath of release  
Could free-histravels and afflictions deep. *Daniel.*

5. To exempt.—For he that is dead is free'd from sin. *Rom.* vi. 7.

FREE-BENCH, signifies that estate in copyhold which the wife, being espoused a virgin, has after the decease of her husband for her dower, according to the custom of the manor. In regard to this free-bench, different manors have different customs. In the manor of E. and W. Enbourne in Berkshire, and other parts of England, there is a custom, that when a copyhold tenant dies, the widow shall have her free-bench in all the deceased husband's lands, *dum sola & casta fuerit*, "whilst the lives single and chaste;" but if she shall be guilty of incontinency, she shall forfeit her estate. Nevertheless, upon her coming into the court of the manor riding backwards on a black ram, with his tail in her hand, rehearsing a ridiculous and indelicate form of words in doggerel rhymes, characteristic of the times in which they were composed, the steward is bound by custom to restore her to her free-bench.

(1.) \* FREEBOOTER. *n. f.* [free and booty.] A robber; a plunderer; a pillager.—Perkin was

not followed by any English of name, he consisted mostly of hafe people and free fitter to spoil a coast than to recover a k Bacon.—The earl of Warwick had, as oft met with any Irish frigates, or such freebooters failed under their commission, taken all open. *Clarendon.*

(2.) FREEBOOTER, or FLIBUSTER, usually a name given to the pirates who scoo American Seas, and made war against t niards. See BUCCANIER.

\* FREEBOOTING. *n. f.* Robbery; plunder; act of pillaging.—Under it he may cleanly any fit pillage, that cometh handsomely in and when he goeth abroad in the night booting, it is his best and surest friend. *Sp.*

\* FREEBORN. *n. f.* [free and born.] Not inheriting liberty.—

O baseness, to support a tyrant's throne  
And crush your freeborn brethren of the

—I shall speak my thoughts like a free subject, such things perhaps as no Dutch collector could, and I am sure no Frenchman *Dryden's Æn. Ded.*—

Shall freeborn men, in humble awe,  
Submit to servile shame,  
Who from consent and custom draw  
The same right to be rul'd by law,  
Which kings pretend to reign?

FREEBURG, a town in Yorkshire.

\* FREECHAPEL. *n. f.* [free and chape] chapels as are of the king's foundation, him exempted from the jurisdiction of the ry. The king may also license a subject such a chapel, and by his charter exempt the ordinary's visitation. *Cozuel.*

\* FREECOST. *n. f.* [free and cost.] expence; free from charges.—We must not any man for an exact master in the rule modern policy, but such a one as has himself so far to hate and despise the ab being kind upon freecost, as not so much a friend what it is o'clock for nothing. *S.*

(1.) \* FREEDMAN. *n. f.* [free and man] slave manumitted. *Libertus.*—

The freedman jostles, and will be p  
First come, first serv'd, he cries. *D.*

(2.) FREED MAN. See LIBERTUS.

(1.) \* FREEDOM. *n. f.* [from free.] ty; exemption from servitude; independence; The laws themselves they do specially as most repugnant to their liberty and freedom. *Spenser on Ireland.*—

O freedom! first delight of human kind  
Not that which bondmen from their ma  
The privilege of doles; nor yet t' inf  
Their names in this or t'other Roman  
That false enfranchisement with ease i  
Slaves are made citizens by turning re

*Dryd.*  
2. Privileges; franchises; immunities.—  
By our holy sabbath have I sworn  
To have the due and forfeit of my bo  
If you deny it, let the danger light  
Upon your charter, and your city's f.

3. Power of enjoying franchises.—This;

men to servants, so as to become citizens  
privileges with the rest, which very much  
the power of the people. *Swift*. 4. Ex-  
rom fate, necessity or predetermination.

I else must change  
ature, and revoke the high decree  
geable, and eternal, which ordain'd  
eedom; they themselves ordain'd their

*Milton*.  
fin, by how much the more free will  
ice, by so much is the act the more  
d where there is nothing to importune,  
rove the will to any act, there is so  
ighter and perfecter degree of freedom  
act. *South*. 5. Unrestraint.—I will that  
fts and sabbaths shall be all days of free-  
e Jews in my realm. *1 Mac*. 2. 6. The  
ring without any particular evil or ince-  
ce.—The freedom of their state lays them  
reater necessity of always chusing and  
best things. *Law*. 7. Ease or facility  
it showing any thing.

EDOM, (§ 1. *def*. 1.) See LIBERTY.  
EDOM OF A CORPORATION, (§ 1. *def*.  
CORPORATION, § III, VII. The free-  
ties, and other corporations, is regularly  
by serving an apprenticeship; but it is  
hased with money, and sometimes con-  
way of compliment.

EDOM OF CONSCIENCE. See TOLER-

EDOM OF THE WILL, (§ 1. *def*. 4.)  
er or faculty of the mind, whereby it is  
f acting or not acting, choosing or reject-  
er it judges proper. Of this every man  
sensible, who finds in himself a power to  
sustain, continue or end several actions,  
a thought or preference of the mind.  
PHYSICS.

EFooted. *adj*. [*free* and *foot*.] Not  
in the march.—

We will fetters put upon this fear,  
now goes too freefooted. *Shak*. *Hamlet*.

HEARTED. *adj*. [*free* and *heart*.] Li-  
restrained.—

: must freehearted be, and voluntary;  
x enchanted, or by fate constrain'd.

*Davies*.  
FREEHOLD. *n. f*. [*free* and *bold*.] That  
ement which a man holdeth in fee,  
r for term of life. *Freehold* indeed is the  
sion of lands or tenements in fee, fee-  
r life. *Freehold* in law is the right that  
is to such land or tenements before his  
seizure. *Freehold* is sometimes taken in  
n to villenage. Land, in the time of the  
was called either blockland, that is, holden  
or writing, or foreland, that is, holden  
writing. The former was held by far-  
pditions, and by the better sort of ten-  
oblemen and gentlemen, being such as  
call *freehold*. The latter was commonly  
sfeffion of clowns, being that which we  
at the will of the lord. *Cowel*.—No alie-  
lands holden in chief should be available,  
the *freehold* or inheritance thereof, but  
re it were made by matter of record.  
*See of Alienation*.—There is an unspeak-

able pleasure in calling any thing one's own: a  
*freehold*, though it be but in ice and snow, will  
make the owner pleased in the possession, and  
stout in the defence of it. *Addison*.—My friends  
here are very few, and fixed to the *freehold*, from  
whence nothing but death will remove them. *Swift*.  
—I should be glad to possess a *freehold* that could  
not be taken from me by any law to which I did  
not give consent. *Swift*.

(2.) FREEHOLD, or FRANK TENEMENT; *liberum  
tenementum*. See FEE and TAIL.

(3.) A FREEHOLD, by the common law, cannot  
commence *in futuro*; but it must take effect pre-  
sently, either in possession, reversion, or remain-  
der. Whatever is part of the freehold goes to the  
heir; and things fixed thereto may not be taken  
in distress for rent, or in execution, &c. No man  
shall be disseised of his freehold by stat. *Magna  
Charta*, cap. 29. but by judgment of his peers, or  
according to the laws of the land: nor shall any  
distrain freeholders to answer for their freehold, in  
any thing concerning the same, without the king's  
writ. Freehold estates, of certain value, are re-  
quired by statutes to qualify jurors, electors of the  
knights of the shire in parliament, &c.

(4.) FREEHOLD, in geography, a town of New  
Jersey, in Monmouth county, 15 miles W. of  
Shrewsbury, 20 SE. by S. of New Brunswick,  
and 44 NE. of Philadelphia. It has an academy,  
and contained 3,258 citizens, and 627 slaves in  
1795. A bloody battle was fought here between  
the British under Sir H. Clinton, and the Ameri-  
cans under Gen. Washington on the 28th June,  
1778. See AMERICA, § 30.

(5.) FREEHOLD, a township of New York, in  
Albany county, containing 1817 citizens, of whom  
562 were electors; and 5 slaves, in 1795.

(1.) \* FREEHOLDER. *n. f*. [from *freehold*.]  
One who has a freehold.—As extortion did banish  
the old English *freeholder*, who could not live but  
under the law; so the law did banish the Irish  
lord, who could not live but by extortion. *Davies*.

(2.) FREEHOLDERS, in the ancient laws of Scot-  
land, are called *milites*, knights. In *Reg. Judicial*.  
it is expressed, that he who holds land upon an  
execution of a statute merchant, until he hath sa-  
tisfied the debt, *tenet ut liberum tenementum sibi et  
assignatis suis*; and the same of a tenant *per elegit*:  
the meaning of which seems to be, not that such  
tenants are freeholders, but as freeholders for the  
time, till they have received profits to the value  
of their debt.

\* FREELY. *adv*. [from *free*.] 1. At liberty;  
without vassalage; without slavery; without depen-  
dence. 2. Without restraint; heartily; with  
full gust.—If my son were my husband, I would  
*freelier* rejoice in that absence wherein he wou  
honour, than in the embraces of his bed,  
where he would shew most love. *Shakesp*. *Coriol*.

3. Plentifully; lavishly.—  
I pledge your grace; and if you knew what  
pains

I have bestow'd to breed this present peace,  
You would drink *freely*. *Shak*. *Henry IV*.

4. Without scruple; without reserve.—

Let such teach others who themselves excel,  
And censure *freely* who have written well. *Pope*.

5. Without impediment.—To follow rather the  
Goutis

Goths in rhyming, than the Greeks in true verifying, were even to eat acorns with swine, when we may freely eat wheat-bread among men. *Afcham.*

The path to peace is virtue: what I show,  
Thyself may freely on thyself bestow:  
Fortune was never worshipp'd by the wife;  
But set aloft by fools, usurps the skies. *Juv.*  
6. Without necessity; without predetermination.  
*Freely they stood who stood, and fell who fell.*  
*Milton.*

—He leaves us to chuse with the liberty of reasonable beings; they who comply with his grace, comply with it *freely*; and they who reject it, do also *freely* reject it. *Rogers.* 7. Frankly; liberally; without cost.—By nature all things have an equally common use: nature *freely* and indifferently opens the bosoms of the universe to all mankind. *Soutb.* 8. Spontaneously; of its own accord.

(1.) \* FREEMAN. *n. f.* [*free* and *man.*] 1. One not a slave; not a vassal.—Had you rather Cæsar were living, and die all slaves, than that Cæsar were dead, to live all *freemen*? *Shakefp.*—If to break loose from the conduct of reason, and to want that restraint of examination and judgment which keeps us from chusing or doing the worst, be liberty, true liberty, madmen and fools are only the *freemen*. *Locke.* 2. One partaking of rights, privileges, or immunities.—

He made us *freemen* of the continent,  
What nature did like captives treat before.

—What this union was is expressed in the preceding verse, by their both having been made *freemen* on the same day. *Addison on Italy.*

(2.) FREEMAN, Susannah, afterwards Mrs CARROL and Mrs CENTLIVRE, a celebrated comic writer, daughter of Mr Freeman of Holbeach, in Lincolnshire. She had such an early turn for poetry, that it is said she wrote a song before she was 7 years old. Before she was 12, she could not only read Moliere in French, but enter into the spirit of all the characters. Her father dying, left her to the care of a step-mother, whose treatment being harsh, she determined, though almost destitute of every necessary, to go up to London to seek a better fortune. As she was proceeding on foot, she was met by the noted libertine, Anthony Hammond, Esq. who was so struck with her beauty, that he instantly fell in love with her; and inquiring into her story, soon prevailed upon her unexperienced innocence to go with him to Cambridge. After some months cohabitation, he persuaded her to come to London; where, in a short time, she was married to a nephew of Sir Stephen Fox. But he dying about a year after, her wit and beauty soon procured her a 2d husband, one Carrol, an officer in the army; but he being killed in a duel about 18 months after, she became a votary of the Muses, and under this name of Carrol, some of her earlier pieces were published. Her first attempt was a tragedy, the *Perjured Husband*; but her natural vivacity leading her to comedy, we find but one more attempt in the buskin, among 18 dramatic pieces which she afterwards wrote. In 1706, Mr Joseph Centlivre, principal cook to Q. Anne, married her; and, after passing several years happily together, she died at his house in Spring Garden, in Dec. 1723. She for

many years enjoyed the intimacy and the most eminent wits of the times, viz. and Steele, Rowe, Budgell, Farquhar, &c. and few authors received more esteem and patronage from the great. do not abound with wit, and the language times poor; but her plots are well conceived characters natural.

FREE-MARTIN. See HERMAPHRODITE.  
\* FREEMINDED. *adj.* [*free* and *mind.*] perplexed; without load of care.—] *mind*, and cheerfully disposed at hours sleep, and exercise, is one of the best long lasting. *Bacon.*

\* FREENESS. *n. f.* [*from free.*] 1. or quality of being free.— 2. Openness of vedness; ingenuoufness; candour.—] may pardon it, if he please, for the *free* confession. *Dryden.* 3. Generosity; I hope it will never be said that the laity the clergy are taught to be charitable, if corporations exceed the clergy itself, sons, in *freeness* of giving. *Spratt.*

FREEPORT, a township of the Un in Maine district, and Cumberland co ed at the head of Casco Bay, 10 mi Portland, and 140 of Boston. It contains citizens in 1795.

\* FREESCHOOL. *n. f.* [*free* and *school.*] school in which learning is given with To give a civil education to the youth in the time to come, provision was made by law, that there should be one school at least erected in every diocese. *Davies.*—] gymen stood candidates for a small gentleman who happened to have a better standing than his neighbours, procure for him who was the better scholar. *Spratt.*

\* FREESPOKEN. *adj.* [*free* and *spoken.*] accustomed to speak without reserve;—] night supped privately with some six or seven amongst whom there was one that was a very rough man, and began to take the liberty of Marcellus and Regulus had done:—] fell into discourse of the injustice of the former time, and, by name, of the others; and said, what should we do with them if we had them now? One of them, who was a *freespoken* senator, answered, they should sup with us. *Bacon.*

(1.) \* FREESTONE. *n. f.* [*free* and *stone.*] commonly used in building.—] *Freestone* from its being of such a constitution wrought and cut freely in any direction —I saw her hand; she has a leathern hand stone coloured hand. *Shakefp.* As you lie streets are generally paved with brick and always kept very neat. *Addison on*

(2.) FREE-STONE is a whitish stone many parts of Britain, that works ill but is more hard and durable; being used in building, &c. It is a species of limestone, but finer grained and smoother. The different parts of Europe vary much in this general property indeed are softer while in the quarry, than have been some time exposed to the air

nal property differs greatly in degree. It is a sort of grey free-stone in use at Paris, which we have not yet met with any in this country which has the above-mentioned quality to a degree, that the expence of working great measure saved. This stone lies on the southside of the river Seine, and is of a soft and large grit. It is so soft when cut out of the strata, that they fashion it conveniently with a sort of broad axe, and many stones for building in this manner, as an equal number of our people do or two. Though this stone is as soft as when first taken up, it is found to harden considerably in the air, that it becomes more than our ordinary free-stone. The Portland is the finest kind, which is white, and of a fine grain, is very fit for hewing and carving; neither resist water nor fire, which is a rare instance in so dense a stone; while one of Kent, which is less beautiful to the eye, is of a greyish colour, and consists of a rougher grain, resists the air every well. The free-stone of Derbyshire, on the other hand, is so brittle as to be unfit for working; and so coarse and open, that it lets water through: yet it is cut extremely well, and is fit for ovens, &c.

**FREE THINKER.** *n. f.* [*free* and *think*.] One who is a contemner of religion.—Atheist is a stronger word: I'm a *freethinker*, child. —Of what use is freedom of thought, if it does not produce freedom of action, which is not how remote soever in appearance, of the true and Christian? And therefore we should consider it as an edifice, wherein we have such a mutual dependance on each other, that if you pull out one single nail, the whole must fall to the ground. See *Free*.

**FREEBORN.** See *Free*, and *Birth*.

**FREEBORN,** a village SW. of Yarmouth.

**FREEBORN,** a town of Massachusetts, in the county, 50 miles S. of Boston, containing 1000, in 1795.

**FREEBORN.** *n. f.* [*free* and *will*.] 1. The directing our own actions without necessity or fate.—We have a power to be the prosecution of this or that desire; and to be the source of all liberty; in this world, that which is improperly called *Liberty*. 2. Voluntariness; spontaneity. —I desire, that all they of the people of my nation, which are minded of their duty to go up to Jerusalem, go with thee.

**FREEBORN,** an island in the East Indies. Lon. 137. 52. E. Lat. 0. 50. N.

**FREEBORN.** *n. f.* [*free* and *woman*.] A woman who is freed.—All her ornaments are taken from her; she is become a bondswoman. See *Free*.

**FREEZE.** *n. f.* in architecture, that part which are of columns, between the architrave and the frieze. It is properly a large flat member, separating the architrave from the frieze. See *ARCHITECTURE*, *Index*.

1. PART I.

(2.) FREEZE, FRIEZE, or *Frize*, in commerce. See *FRIEZE*, N<sup>o</sup> 1.

(1.) \* *To FREEZE.* *v. a.* pret. *froze*; part. *frozen* or *froze*. [*wiezen*, Dutch.] 1. To congeal with cold. 2. To kill by cold.—

When we both lay in the field,  
Frozen almost to death, how did he lap me,  
Ev'n in his garments! *Shak. Rich. III.*  
—My master and mistress are almost *frozen* to death.  
*Shak.* 3. To chill by the loss of power or motion.  
I have a faint cold fear thrills through my veins,  
That almost *freezes* up the beat of life. *Shak.*  
Death came on again,  
And exercis'd below his iron reign;  
Then upward to the seat of life he goes:  
Sense fled before him, what he touch'd he *froze*.

(2.) \* *To FREEZE.* *v. a.* pret. *froze*. 1. To be congealed with cold.—The aqueous humour of the eye will not *freeze*, which is very admirable, being it hath the perspicuity and fluidity of common water. *Ray on the Creation*.—The *freezing* of water, or the blowing of a plant, returning at equidistant periods in all parts of the earth, would as well serve men to reckon their years by as the motions of the sun. *Locke*. 2. To be of that degree of cold by which water is congealed.—

Opulous with his lute made trees  
And mountain tops, that *freeze*,  
Bow themselves when he did sing.  
*Shak. Henry VIII.*  
Thou art all ice, thy kindness *freezes* me.  
Heav'n *freezes* above severe, the clouds congeal,  
And thro' the chrystal vault appear'd the standing hail.

(1.) FREEZING, *n. f.* in philosophy, the same with congealation. See *COLD*, *CONGELATION*, *FROST*, and *ICE*. Freezing may be defined the fixing of a fluid body into a solid mass, by the addition of cold. Water and some other fluids suddenly dilate and expand in the act of freezing, so as to occupy a greater space in the solid than in the liquid state; in consequence of which ice is specifically lighter than water and floats upon it. Water also loses of its weight by freezing, being found lighter after it is thawed, than before it was frozen. And it even evaporates nearly as fast while frozen, as while it is fluid. Water which has been boiled freezes more readily than that which has not been boiled; and a slight disturbance of the fluid disposes it to freeze more speedily; having sometimes been cooled several degrees below the freezing point, without coming to a congelation when kept quite still, but suddenly freezing on the least motion or disturbance. Water covered over with a surface of oil of olives, does not freeze so readily as without it; and melted absolutely preserves it under a strong frost, where olive oil would not. Rectified spirit of wine, nut oil, and oil of turpentine, seldom freeze. The surface of water, in freezing, appears all wrinkled; the wrinkles being sometimes in parallel lines, and sometimes like rays, proceeding from a centre to the circumference. Fizz's standing in a current of air grew much colder than before. Fahrenheit had long ago observed, that a pond, which stands quite calm, often appears to be covered

of cold much beyond what is sufficient for freezing, and yet no congelation ensued: but if a slight breath of air happens in such a case to brush over the surface of the water, it freezes the whole in an instant. It has also been discovered, that all substances grow colder by the evaporation of the fluids which they contain, or with which they are mixed. If both these methods, therefore, be practised upon the same body at the same time, they will increase the cold to almost any degree of intenseness we please.

(2.) **FREEZING, ASTONISHING EXPANSIVE FORCE OF.** Although cold, in general, contracts most bodies, and heat expands them, yet there are some instances to the contrary, especially in the extreme cases or states of these qualities of bodies. Thus, though iron, in common with other bodies, expands with heat, yet, when melted, it is always found to expand in cooling again. Thus also, though water expands gradually as it is heated, and contracts as it cools, yet in the act of freezing it suddenly expands again, and that with an enormous force, capable of rending rocks, or bursting the very thick shells of metal, &c. A computation of the force of freezing water has been made by the Florentine Academicians, from the bursting of a very strong brass globe or shell, by freezing water in it; when, from the known thickness and tenacity of the metal, it was found that the expansive power of a spherule of water only one inch in diameter was sufficient to overcome a resistance of more than 27,000 pounds, or 13 tons and a half. See the experiments on bursting thick bomb-shells, by freezing water in them, by Major Edward Williams of the Royal Artillery, in the *Edin. Philos. Transf.* vol. 2. Such a prodigious power of expansion, almost double that of the most powerful steam-engines, and exerted in so small a mass, seemingly by the force of cold, was thought a very material argument in favour of those who supposed that cold, like heat, is a positive substance. Dr Black's discovery of latent heat, however, has afforded a very easy and natural explanation of this phenomenon. He has shewn, that, in the act of congelation, water is not cooled more than it was before, but rather grows warmer: that as much heat is discharged, and passes from a latent to a sensible state, as had it been applied to water in its fluid state, would have heated it to 135°. In this process, the expansion is occasioned by a great number of minute bubbles suddenly produced. Formerly these were supposed to be cold in the abstract; and to be so subtle, that, insinuating themselves into the substances of the fluid, they augmented its bulk, at the same time that, by impeding the motion of its particles upon each other, they changed it from a fluid to a solid. But Dr Black shews, that these are only air extricated during the congelation; and to the extrication of this air he ascribes the prodigious expansive force exerted by freezing water. The only question, therefore, is, By what means this air comes to be extricated, and to take up more room than it naturally does in the fluid? To this it may be answered, that perhaps part of the heat, which is discharged from the freezing water, combines with the air in its latent state, and, by restoring its elasticity, gives

it that extraordinary force; as is seen in the case of air suddenly extricated in the explosion of gun-powder.—The degree of expansion in the state of ice, is by some authors at about  $\frac{1}{10}$  of its volume. Oil and metals shrink and contract after freezing. Malton relates several experiments of vessels made very thick and strong; in which, when water, close stopped, and exposed to the water being expanded in freezing, finding either room or vent, burst the strong barrel of a gun, with water in it, ped and frozen, was rent the whole length, to try the force with which it expanded a cannon with it, whose sides were annealed and then closed up the mouth and vent, so none could escape; the whole being exposed to strong freezing air, the water froze in a few hours, and burst the piece in two places. Mathematicians have computed the force of this expansion; and they say, that such a force will raise a weight of 27720 pounds. Mr Williams, of the Royal Artillery, made several experiments on the force of it, at Quebec, in 1785. He filled all sizes of iron bomb-shells with water, then plugged the fuze hole close, and exposed them to the strong freezing air of winter in that climate; sometimes driving the plugs as hard as possible with a sledge, and yet they were always thrown out by the sudden expansion of the water in the act of freezing, like a ball shot by gunpowder, sometimes at a distance of between 400 and 500 feet, and they weighed near 3 pounds; and when they were screwed in, or furnished with hooks to lay hold of the inside of the shell, they could not possibly be forced out, unless the shell was always split in two, and the thickness of the metal of the shell was less than an inch. Through the circular crack, in the shells, where they burst, there is a thin film or sheet of ice, like a fan; in cases where the plugs were projected into the water, there suddenly issued out from the hole a bolt of ice of the same diameter, over it to the height sometimes of 8½ inches.

(3.) **FREEZING MIXTURES,** prepared to produce the artificial congelation of water, and other fluids. See **COLD**, § 8, 9; and **ICE**.

(4.) **FREEZING, MR CAVENDISH'S EXPERIMENT ON.** "If a vessel of water, (says Mr Cavendish) with a thermometer in it, be exposed to the air, the thermometer will sink several degrees below the freezing point, especially if the water is covered up so as to be defended from the wind, and care taken not to agitate it; and then, when a thin layer of ice is formed upon the surface, or a bit of ice, or on mere agitation of ice shoot suddenly through the water, the thermometer rises quickly to the point, where it remains stationary." Mr Cavendish adds, that though, in conformity to common opinion, he has allowed that "mercury may set the water a freezing, yet for experiments lately made by Dr Blagden, he is of opinion that it has not much, if any, effect of otherwise than by bringing the water to a temperature with some substance colder than itself. In general also the ice shoots rapidly, and

thermometer rises very quick; yet he once did it to rise very slowly, taking up not less than a minute, before it ascended to the freezing point; but in this experiment the water cooled not more than one or two degrees below the freezing point, and it should seem, that the more the water is cooled below the freezing point, the more rapidly the ice shoots and the more the thermometer rises." Mr Cavendish then observes, from the foregoing experiments we learn that water is capable of being cooled considerably below the freezing point, without any congealing piece; and that, as soon as by any small part of it is made to freeze, the ice spreads rapidly through the whole of the water. The cause of this rise of the thermometer is, that almost all bodies, by changing from a fluid state, or from the state of an elastic fluid, generate heat; and the heat is produced by the contrary process. In all the circumstances of the phenomenon are perfectly well explained; for, as soon as part of the water freezes, heat will be generated; and in consequence of the above-mentioned law, so that the new formed ice and the water will be warmed, and must continue to receive heat by the freezing of fresh portions of water, till it is heated exactly to the freezing point, unless the water could become solid before a sufficient quantity of heat was added to raise it to that point, which is not the case; and it is evident, that it cannot be heated above the freezing point; for as soon as it is at that point, no more water will freeze, and consequently no more heat will be generated.—Reason why the ice spreads all over the water instead of forming a solid lump in one part, is, as soon as any small portion of ice is formed, the water in contact with it will be so warmed as to be prevented from freezing, and the water at a little distance from it will still be below the freezing point, and will consequently continue to freeze. Were it not for this generation of heat, the whole of any quantity of water would freeze as soon as the process of congelation began; and in like manner the cold is generated by the melting of ice; which is the cause of the time required to thaw ice and snow. It was first found that, by adding snow to warm water, and stirring it about until all was melted, the water was as much cooled as it would have been by the addition of the same quantity of water which was more than 150° degrees colder than the water; or, in other words, somewhat more than 150° of cold are generated by the thawing of snow; and there is great reason to believe that as much heat is produced by the freezing of water. The cold generated in the experiment mentioned was the same whether ice or snow was used."

**FREEZING OF QUICKSILVER.** The congealing of quicksilver was first ascertained by Mr Adam Braun professor of philosophy at Göttingen. He had been employed in making geometrical experiments, not with a view to the discovery he actually did, but to see how degrees of cold he could produce. An ex-

cellent opportunity for this occurred on the 14th of December 1759, when the mercury stood naturally at 34°, which is now known to be only 3° or 6° above its point of freezing. Mr Braun, to increase this great degree of natural cold, prepared a freezing mixture of aquafortis and powdered ice, by which his thermometer was sunk to 69°. Part of the quicksilver had now really congealed; yet so far was Mr Braun from entertaining any suspicion of the fact, that he had almost desisted from further attempts, being satisfied with having so far exceeded all former philosophers. But in the hopes of producing a still greater degree of cold, he renewed the experiment; but having expended all his powdered ice, he was obliged to substitute snow in its place. With this fresh mixture the mercury sunk to -100, 240, and 352°. He then supposed that the thermometer was broken; but on taking it out, he found the quicksilver fixed, and continuing so for 12 minutes. On repeating the experiment with another thermometer which had been graduated no lower than 220°, all the mercury sunk into the ball, and became solid as before, not beginning to re-ascend till after a still longer interval of time. He now concluded that the quicksilver was really frozen, and prepared for making a decisive experiment. This was accomplished on the 25th, and the bulb of the thermometer broken as soon as the metal was congealed. The mercury was now converted into a solid and shining metallic mass, which flattened and extended under the strokes of a pestle, in hardness rather inferior to lead, and yielding a dull sound like that metal. Professor Zepinus made similar experiments at the same time, employing both thermometers and tubes of a large bore; in which last he remarked, that the quicksilver fell sensibly on being frozen, assuming a concave surface, and likewise that the congealed pieces sunk in fluid mercury. The fact being thus established, and fluidity no longer to be considered as an essential property of quicksilver, Mr Braun communicated an account of his experiments to the Petersburg Academy, on the 6th of September 1760; of which a large extract was inserted in the *Philos. Trans.* vol. lxx. p. 156. After this he never suffered a winter to elapse, without repeating the experiment of freezing quicksilver, and never failed of success when the natural cold was of a sufficient strength for the purpose. This degree of natural cold he supposes to be 10° of Fahrenheit, though some commencement of the congelation might be perceived when the temperature of the air was as high as +2. The results of all his experiments were, that with the abovementioned frigorific mixtures, and once with rectified spirits and snow, when the natural cold was at 28°, he congealed the quicksilver, and discovered that it is a real metal which melts with a very small degree of heat. Not perceiving, however, the necessary consequence of its great contraction in freezing, he confounded its point of congelation with that of its greatest contraction in freezing, and thus marked the former a great deal too low. The experiments of Mr Braun were successfully repeated at Göttingen, in 1774, by Mr John Frederick Blumeubach;

who was encouraged to this attempt by the excessive cold of the winter that year, especially the night of Jan. 12th. when he made the experiment, the thermometer standing at 16° in the open air. Mr. Böhmenbach, at 5 P. M. put 3 drams of quicksilver into a small sugar glass, and covered it with a mixture of snow and Egyptian sal ammoniac, setting the glass out in the air upon a mixture also of sal ammoniac. At one the next morning, the mercury was found frozen quite solid, and hard to the glass; and did not melt till 7 or 8 A. M. The colour of the frozen mercury was a dull pale white with a bluish cast, like zinc, very different from the natural appearance of quicksilver. In Jan. and Feb. 1755, by similar means, quicksilver was twice frozen by Mr Hutchins, governor of Albany fort, in Hudson's bay. And the same was done on the 28th of Jan. 1776, by Dr Lambert Becker, secretary of Rotterdam. The temperature of the atmosphere was then at +12°; and the lowest it could reduce the thermometer by artificial cold was 94°; when, on breaking the glass, the mercury was found frozen. In the beginning of 1780, M. Ven Elterlein of Vytegra, a town of Russia, in lat. 61° north, and long. 36° east, froze quicksilver by natural cold. On the 4th January 1789, the cold being increased to 34° that evening at Vytegra, he exposed to the open air 3 oz. of very pure quicksilver in a china tea cup, covered with paper pierced full of holes. Next day, at 8 A. M. he found it solid, and looking like a piece of cast lead, with a considerable depression in the middle. On attempting to loosen it in the cup, his knife raised shavings from it as if it had been lead, which remained sticking up; and at length the metal separated from the bottom of the cup in one mass. He then took it in his hand to try if it would bend: it was stiff like glass, and broke in two pieces; but his fingers immediately lost all feeling, and could scarcely be restored in an hour and a half by rubbing with snow. At 2 o'clock the thermometer stood at 27°; but by half past 5 it was risen to 40°; and then the two pieces of mercury which lay in the cup had lost so much of their hardness, that they could no longer be broken, or cut into shavings, but resembled a thick amalgam, which though it became fluid when pressed by the fingers, immediately afterwards resumed the consistence of paper. With the thermometer at 39° the quicksilver became fluid. The cold was never less on the 24th than 27°, and at 9 P. M. it had increased again to 35°. This experiment seems to fix the freezing point of mercury at 40° of Fahrenheit's thermometer, or 20 below 0; which is 72° below the freezing point of water. In the winter of 1791 and 1792, Mr. Hutchins, repeated the method of freezing quicksilver by artificial cold, with such success, that from his experiments and those of M. Ven Elterlein, the freezing point of mercury may be well as well settled, to be 20 below 0, or 72° below the freezing point of water. Other points of mercury, that not been altogether new to the subject. Prof. Dr. Esauus has lately published an interesting site it; but he was not able to determine the difference between the expansion of the fluid mercury, by cold, and that of the corresponding metal by heat; he could not determine any thing

certain concerning it. On this subject of other curious facts may be found in *Transf.* vol. 51, p. 672; vol. 52, p. 156; 174; vol. 73, p. 303 and 325; vol. 76 vol. 77, p. 285; vol. 78, p. 43; vol. 7 &c.; being experiments on the congelation of quicksilver in England, by Mr Richard where he proves that mercury may be only in England in summer, but even in the best climate, at any season of the year, out the use of ice or snow.

(6.) FREEZING OF QUICKSILVER BY COLD. The most remarkable congelation of mercury, by natural cold, that has ever been observed, was that related by Dr Peter Simon who had been sent by the empress of Russia some other gentlemen, on an expedition to that of Dr Gmelin. Being at Krat: 1772, in N. lat 56° 35', and E. lon. 93° an opportunity of observing this phenomenon. On the 6th and 7th of Dec. (1772) he perceived the greatest cold I have ever known in Siberia: the air was calm at the time, and singularly thickened; so that, though the sky in some respects clear, the sun appeared only as a fog. I had only one thermometer left the scale went no lower than 7°; and on the 7th in the morning, I remarked, that the mercury in it sunk into the ball, except some that which stuck fast in the tube. When I touched the thermometer, as it hung in the open air, the mercury touched with the finger, the quicksilver it could plainly be seen, that the solid mercury stuck and resisted a good while, and was pushed upward with a sort of violence. At the time I placed upon the gallery, on the roof of my house, some quicksilver in an open vessel. Within an hour I found the edges and the middle frozen solid; and some minutes after it was condensed by the natural cold into a very much like tin. While the metal was still fluid, the frozen surface exhibited a variety of branched wrinkles; but in general appeared pretty smooth in freezing. The solid mercury was more flexible than lead being bent short, it was found more brittle; and when hammered out thin, somewhat granulated. If the mercury had been perfectly closed, the quicksilver would have run under it in drops; and the same would have happened when the metal was touched with the finger, by which also the water was immediately condensed. When the frozen mass was broken in the cold, the fragments adhered to each other, and to the bowl in which they lay. In the morning it thawed on us further gradually, like wax on the fire, and did not melt at all. Although the most frozen mercury was not melted, yet the condensed quicksilver immediately adhered to the open vessel with which it could still be separated. On the 10th of Dec. an opportunity of making the same experiment all day; but, some hours after sunset would resume its usual fluidity, which could be done at 45°, when the rest of quicksilver began to melt. An instance of the natural congelation of quicksilver also occurred in Jan. 1781, at Upsala, Sweden, on the 11th Jan. 1781; and on

is observed the same effect of the cold; Bay; when he found that at the point of a mercurial thermometer stood at spirit thermometer at 30°.

**FREEZING OF QUICKSILVER, DR BLACK'S METHOD FOR.** Mr Cavendish and Dr Black ed the proper method of obviating the in this subject, which had not been clear- of. Braun. (See § 5.) Dr Black, in a r Hutchins, dated Oct. 5, 1779, gave ng directions for making the experi- accuracy: Provide a few wide and of thin glass, sealed at one end and : other; the wideness of these tubes m one half to 3 quarters of an inch, gth of them about three inches. Put an inch and a half depth of mercury these tubes, and plunging the bulb of meter into the mercury, set the tube ercury and the thermometer in it into mixture, which should be made for e in a common tumbler or water glass:

in making a freezing mixture with spirit of nitre, the quantity of the acid r be so great as to dissolve the whole s, but only enough to reduce it to the of panada. When the mercury in the s thus set in the freezing mixture, it irred gently and frequently with the thermometer; and if the cold be suf- ong, it will congeal by becoming thick like an amalgam. As soon as this is the thermometer should be examined ting it out of the congealing mercury ; no doubt that in every experiment ; with the same mercury, the instru- always point to the same degree, provi- den made and graduated with accuracy."

**FREEZING OF QUICKSILVER, MR AEPHON'S METHOD FOR.** Mr Aephus gives the direction for using the tuming spirit of like some of this spirit, cooled as much and put it into a wine glass till it be full, filling it up with snow, and stir- til the mixture become of the consist- p; by which means you obtain, almost nt, the necessary degree of cold for g of quicksilver."

**FREEZING OF QUICKSILVER, MR BRAUN'S METHOD FOR.** In the course of his obser- r Braun found, that double aquafortis effectual than spirit of nitre; but with spirit, which seldom brings the mer- than 148°, this metal may be frozen wing manner: Six glasses being filled as usual, and the thermometer put in m, the spirit of nitre was poured upon he mercury would fall no lower in this, meter was removed to the second, and ie third and fourth, in which fourth im- he mercury was usually congealed. Mr arks, that by the mixture of snow and ich froze the mercury, he never was ng thermometers, filled with the most i- d spirit of wine, lower than 148° : cold which will freeze mercury, will spirit of wine; and therefore spirit ther- are the most fit to determine the de-

gree of coldness in the frigorific mixtures, till we can construct solid metallic thermometers with sufficient accuracy. Mr Braun tried the effects of different fluids in his frigorific mixtures: he always found that Glauber's spirit of nitre and double aquafortis were the most powerful; and from a number of experiments made when the temperature of the air was between 21° and 28° of Fahrenheit, he concludes, that spirit of salt pounded upon snow increased the natural cold 36°; spirit of sal ammoniac, 12; oil of vitriol, 42; Glauber's spirit of nitre, 70; aquafortis, 48; simple spirit of nitre, 35; dulcified spirit of vitriol, 24; Hoffman's anodyne liquor, 38; spirit of hartshorn, 12; spirit of sulphur 12; spirit of wine rectified, 24; camphorated spirit, 18; French brandy, 14; and that several kinds of wine increased the natural cold to 7, 8, or 9 degrees.

(10.) **FREEZING OF QUICKSILVER, MR CAVENDISH'S APPARATUS FOR, AND MR HUTCHINS'S EXPERIMENTS ON.** The apparatus recommended by Mr Cavendish, and which Mr Hutchins made use of (§ 11.) consisted of a small mercurial thermometer, the bulb of which reached about 2½ inches below the scale, and was inclosed in a glass cylinder swelled at the bottom into a ball, which, when used was filled with quicksilver, so that the bulb of the thermometer was entirely covered with it. If this cylinder be immersed in a freezing mixture till great part of the quicksilver in it is frozen, it is evident that the degree shown at that time by the inclosed thermometer is the precise point at which mercury freezes; for as in this case the ball of the thermometer must be surrounded for some time with quicksilver, part of which is actually frozen, it seems impossible that the thermometer should be sensibly above that point; and while any of the quicksilver in the cylinder remains fluid, it is impossible that it should sink sensibly below it. The diameter of the bulb of the thermometer was rather less than a quarter of an inch; that of the swelled part of the cylinder two thirds; and as it was easy to keep the thermometer constantly in the middle of the cylinder, the thickness of quicksilver betwixt it and the glass could never be much less than the other sixth part of an inch. The bulb of the thermometer was purposely made as small as it conveniently could, to leave a sufficient space between it and the cylinder, without making the swelled part larger than necessary, which would have caused more difficulty in freezing the mercury in it. The first experiment with this apparatus was made on the 15th Dec. 1781; the thermometer had stood the evening before at 18°. A bottle of spiritus nitri fortis was put on the house-top, to cool it to the same temperature. The thermometers made use of had been hung up in the open air for three weeks, to compare their scales. On the morning of the experiment they were about 23° below 0.—In making it, the thermometer of the apparatus was suspended in the bulb of the cylinder by some red worsted wound about the upper part of its stem, to a sufficient thickness, to fill the upper part of its orifice; and a space of near half an inch was left empty between the quicksilver and the worsted. The apparatus was placed in the open air, on the top

of the sort, with only a few deer skins sewed together for a shelter; the snow lay 18 inches deep on the works, and the apparatus was stuck into the snow, to bring it to the temperature of the air. The instruments were afterward placed in three fresh freezing mixtures, in hopes of being able by their means to produce a greater degree of cold, but without effect; nor was any greater cold produced by adding more spirit of nitre. The mercury, however, was very completely frozen, that in the thermometer descending to 448°. On plunging the mercury into the freezing mixture, it descended in less than one minute to 40° below 0. Mr Hutchins made other 7 experiments with various proportions of the mixture, of which we shall only describe the last. His 8th experiment was made with a view to try whether quicksilver would congeal when in contact with the freezing mixture. For this purpose, he did not use the apparatus provided for other experiments, but filled a gallipot made of flint stone (as being thinner than the common sort), containing about an ounce, half full of quicksilver, into which he inserted a mercurial thermometer, employing another as an index. Thus he hoped to determine exactly when the quicksilver was congealed, as he had free access to it at all times, which was not the case when it was inclosed in the cylindrical glass, the worsted wound round the tube of the thermometer to exclude the air being equally effectual in excluding any instrument from being introduced to touch the quicksilver. He then made a kind of skewer, with a flat blunt point, of dried cedar wood, on account of its lightness, which he found would remain in the gelatinous freezing mixture at any depth he chose; but, when inserted into the quicksilver, the great difference betwixt the specific gravity of it and that ponderous fluid, made it always rebound upwards; and by the degree of resistance, he could always know whether it proceeded from fluid or solid metal. At this time, however, the experiment did not succeed; but, at another trial, having employed about  $\frac{1}{2}$ ths of a pound of metal, and let it remain a considerable time immersed in the same mixture which had just now been supposed to fail, he found that part of it was congealed; and on pouring off the fluid part, no less than two thirds remained fixed at the bottom.

(II.) FREEZING OF QUICKSILVER, Mr CAVENDISH'S EXPERIMENT ON. An experiment was at last made by Mr Cavendish himself, of which he gives the following account in the *Phil. Trans.* vol. lxxiii. p. 325. Here, speaking of the cold of freezing mixtures, he says, "There is the utmost reason to think that Mr Hutchins would have obtained a greater degree of cold by using a weaker nitrous acid than he did. I found (says he) by adding snow gradually to some of this acid, that the addition of a small quantity produced heat instead of cold; and it was not until so much was added as to increase the heat from 28 to 51°, that the addition of more snow began to produce cold; the quantity of snow required

for this purpose being pretty exactly one quarter of the weight of the spirit of nitre, and the weight of the snow, and air of the room, as well as the acid, being 28°. The reason of this is, a great deal of heat is produced by mixing it with spirit of nitre; and the stronger the acid the greater is the heat produced. Now it appears from this experiment, that before the acid was diluted, the heat produced by its union with the water formed from the melting snow, was greater than the cold produced by the same; it was not until it was diluted by the addition of one quarter of its weight of that substance, that the cold, generated by the latter cause, began to exceed the heat generated by the former. From what has been said, it is evident, that a freezing mixture made with undiluted acid will not generate cold until so much snow is dissolved as to increase its heat from 28 to 51°; so that the greater cold will be produced than would be obtained by mixing the diluted acid heated with snow of the heat of 28°. This method of adding snow gradually is much the best I know, of finding what strength it ought to be in order to produce the greatest effect possible. By means of this acid diluted in the above mentioned proportion, I froze quicksilver in the thermometer called G † by Mr Hutchins, on the Feb. 1781. I did not indeed break the thermometer to examine the state of the quicksilver in; for as it sunk to 110°, it certainly must have been in part frozen; but immediately took it out and put the spirit thermometer in its room, in order to find the cold of the mixture. It sunk to 30°; but by making allowance of the space the tube being not so cold as that in the balance appears, that if it had not been for this cause, it would have sunk to 35° ‡; which is 6° below the point of freezing, and is within one degree of the great a cold as that produced by Mr Hutchins in this experiment the thermometer G sunk to rapidly; and, as far as I could perceive, was stopping at any intermediate point till it came to the above mentioned degree of 110°, where it stuck. The materials used in making the mixture were previously cooled, by means of salt and lime to near 0; the temperature of the air was between 20° and 25°; the quantity of acid was  $4\frac{1}{2}$  oz.; and the glass in which the mixture was made, was surrounded with wool, and placed in a wooden box, to prevent its losing its cold as it would otherwise have done. Some time before this, I made a freezing mixture with spirit of nitre, much stronger than that used in the foregoing experiment, though not quite so strong as the undiluted acid, in which the cold was less intense by  $4\frac{1}{2}$ °. It is true, the temperature of the air was much less cold, namely 35°, but the spirit of nitre was at least as cold, and the snow was much less so. The cold produced by mixing of vitriol, properly diluted with snow, is not so great as that produced by spirit of nitre, though it does not differ from it by so much as 8°. A freezing mixture, prepared with diluted o

† This was a small mercurial thermometer, made by Nairne and Blount, on an ivory scale, and marked every five degrees, and reaching from 215° above, to 250° below the cypher.

‡ This is to be understood of a spirit thermometer, whose 29° = 40° of Fahrenheit's mercurial.

whose specific gravity, at 60° of heat, 642, sunk in the thermometer C to 37°, experiment being tried at the same time, and the same precautions, as the foregoing. It was also found, by adding snow gradually to this acid, as was done by the nitrous acid it was a little, but not much stronger, ought to be, in order to produce the greatest.

**FREEZING OF QUICKSILVER, Mr WALLER'S EXPERIMENTS ON.** See COLD, § 9.

**FREEZING OF VITRIOLIC ACID.** Acids, of those of the mineral kind, powerfully congelate. There is, however, a peculiarity in regard to that of vitriol. M. Chaptal found, that it condensed by the cold of the ice, and the crystals began to melt only 2° of his thermometer; which, if Reaumur's scale, amounts to about 47° of Fahrenheit. The crystals are unctuous from the melting acid, and are warmer than the neighbouring bodies; the prism was that of a prism of six sides, flattened terminated by a pyramid of six sides; but the flat appeared on one end only; on the other, the flat was lost in the general mass. The crystals resulted from an assemblage of six isosceles triangles: the oil when the crystal was melted was brownish black; on redistilling it in a proper apparatus, no peculiar gas came over. M. Chaptal repeated his experiments with the highly condensed acid, but found that it did not freeze; the density of the acid which he thought froze was to the oil, of the usual strength, as from 63 and 65 to 66; and the necessary degree of cold about 19° of Fahrenheit. Nitrolic acid melted will not crystallize again at the same degree of cold. M. Moric, a chemist and manufacturer of oil of vitriol at Hadimont Vervier, in Limbourg, attributes this peculiarity to the addition of nitrous air. The oil of vitriol is usually separated from sulphur by distilling it in close vessels; and the air is supplied by adding to the sulphur a little nitre. He found that by mixing the acid, capable of being condensed, with water, or employing it for other purposes, orange-coloured fumes, and the smell of true nitrous acid, were very evident. This gas was destroyed, no degree of cold could congelate the acid, whatever was its degree of concentration; and the congelation was generally observed immediately after the process by which the acid was obtained. Mr Macquer repeats in the 2d edition of his *Chemical Dictionary*, under **VITRIOLIC ACID**, that the duke d'Ayen observed the congelation of concentrated vitriolic acid, which had been exposed to a cold expressed by 13° or 14° below 0 on Reaumur's thermometer; but that mixtures, consisting of one part of the above mentioned concentrated acid, to 10 or more parts of water, could not be congelated by the cold to which he exposed them, till he diluted the acid so much that its density was that of water as 104½ to 96; in which latter case it is probable that the water was only frozen, and the acid in diluted solutions of salts. Similar experiments were made by M. de Morveau, with equal success. Having produced an indurated mass by pouring spirit of nitre on pounded

ice, he congelated a part of some vitriolic acid which had been previously concentrated; but he observed, that though a very intense cold had been made use of to congelate the acid at first, it nevertheless remained congelated in much smaller degrees of cold, and that it thawed very slowly. This coincides with the observations of M. Chaptal; though the latter observes, that there is some difference between strong oil of vitriol lowered with water, and that produced by a given strength by rectification. The latter always has some colour; and it will not dissolve indigo in such a manner as to carry the colour into stuff, though the stronger oil, diluted to the same degree, succeeds very well. Some observations were also made by Mr M'Nab at Hudson's Bay, an account of which is given in the *Phil. Trans.* for 1786, by Mr Cavendish. From them it appears, that a vitriolic acid, whose specific gravity was to that of water as 184½ to 1000, froze when exposed to a cold of 15° of Fahrenheit's scale; that another more diluted vitriolic acid, consisting of 629 parts of the former concentrated acid, and 351 parts of water, congelated in a temperature of 36°; and that, when farther diluted, it was capable of sustaining a much greater degree of cold without freezing at all. In these experiments, as well as in those of Mr Morveau, it appeared that the whole of the acid did not congelate, but that part of it retained its fluidity; and on examining the strength of that which remained fluid, Mr Cavendish found that there was very little difference between it and the other; whence he was led to suppose, that the reason of this congelation does not arise from any difference in strength, but on some less obvious quality, and such as constitutes the difference between common and icy oil of vitriol. In all the experiments hitherto made, however, Mr Cavendish had found some uncertainty in determining the point of easiest freezing; neither could he determine whether the cold necessary for congelation does not increase without any limitation in proportion to the strength of the acid. A new set of experiments were therefore made by Mr Keir to determine this point, which our room permits us not to quote; but from which Mr Keir draws the following inferences: "1. That the vitriolic acid has a point of easiest freezing, and that this is when its specific gravity is to that of water as 178½ to 1000. 2. That the greater or less disposition to congelation does not depend on any other circumstance than the strength of the acid. 3. That the freezing and thawing degree of the most congelable acid is about 45° of Fahrenheit's scale. It is, however, to be observed, that this degree is inferred from the temperature indicated by the thermometers immersed in the freezing and thawing acids; but the congelation of the fluid acid could never be accomplished without exposing it to a greater degree of cold, either by exposing it to the air in frosty weather, or to the cold of melting snow. 4. Like water, this acid possesses the property of retaining its fluidity when cooled several degrees below the freezing point; and of rising suddenly to it when its congelation is promoted by agitation, or by contact even with a warmer thermometer. 5. That, like water and other congelable fluids, the vitriolic

US, John Thomas, a learned German,  
Leyden, in the 16th century. He studied  
Latin and Remus, and was made rector of  
the school at Altorf in 1575. He died at Basil in  
1600. He wrote, 1. *Questiones Geometricæ et  
Arithmeticæ*: 2. *Logica Consultorum*: 3. A Latin  
translation of Frobenius's voyages: 4. Notes, his-  
torical, political, &c. on Cicero's Orations.

NE, a town of France, in the dep. of  
the Mayenne: 20 miles W. of Angers.

ERSHEIM, a town of Germany, in the  
electorate of the Rhine, taken by the French in  
1794, and now included in the French republic,  
of the Mont Tonnerre. It is 4 miles NNE.

D, John, a learned English physician,  
born at Croton, in Northamptonshire,  
in 1696, he published, in conjunction  
with Foulkes, an edition of two Greek o-  
rations of Æschines against Ctesiphon, and  
one of *de Corona*, with a new Latin ver-  
sion, in 1699, he wrote a letter to Dr Sloane  
concerning an *Hydrocephalus*, published in the  
*Transactions*, and another letter in Latin to  
a gentleman, *De spasmi variolæ historia*,  
and the same Transactions. In 1703, a  
dissertation appeared; which gained him  
a fellowship in the university of Oxford. In  
1704, he was chosen professor of anatomy  
in the university of Oxford. In 1705,  
attended the earl of Peterborough to  
physician to the army there; and upon  
his return in 1707, published an account of the  
disease. In 1709, he published his *Cle-  
renia*. In 1712, he attended the duke of  
Burgundy as his physician. In 1716,  
elected a fellow of the college of physi-  
cians in London. This year he published the 1st  
edition of his *Commentary on Fevers*, written by him-  
self M. P. for Launceston in Cornwall in  
1717, he distinguished himself by his opposi-  
tion to the ministry. In March 1722, he was com-  
mitted to the tower on a charge of high treason;  
he was under confinement, he wrote a  
letter to Dr Mead, *De quibusdam variolarum  
speciebus*, and began his *History of Physic*, the first  
edition of which was published in 1725, and the 2d  
in 1728. Upon the accession of George II, he  
was appointed physician to the queen, who showed  
the highest esteem for him. He died at Lon-  
don in 1733. His works were published together  
at London, in folio, in 1733, and dedica-  
ted to the queen.

DORFF, a town of Germany in Auf-  
spitz: 10 miles SE. of Tulln.

ERSHEIM, a town of Germany, lately in  
the electorate of the Rhine, now included in the  
French republic, of Mount Tonnerre: 10  
miles W. of Manheim.

(1.) FRENCH. *adj.* belonging to France.

(2.) FRENCH, *n. f.* the citizens of France.

(3.) FRENCH, in geography, a river of the Uni-  
ted States, in Massachusetts, which rises from a  
pond in Worcester county, and runs into the  
Quinebaug in Connecticut; so named from the  
French Protestants, who settled on its banks, af-  
ter the revocation of the Edict of Nantz, in 1685.

(4.) FRENCH BEAN, in botany. See PHASEO-  
LUS.

(5.) FRENCH BROAD, a navigable river of Ten-  
nessee, from 400 to 500 yards broad, formed by  
several head waters that rise in N Carolina, on  
the SE. of the Great Iron and Bald Mountains.  
After running 56 miles NW. between these moun-  
tains, and 25 miles N. it joins the Holston 11  
miles above Knoxville.

(6.) \* FRENCH CHALK. *n. f.* French chalk is an  
indurated

Indurated clay, extremely dense, of a smooth glossy surface, and soft and unctuous to the touch; of a greyish white colour, variegated with a dusky green. *Hill.*—*French chalk* is unctuous to the touch, as steatites is, but harder, and nearer approaching the consistence of stone. *Woodward.*

(7.) FRENCH CREEK, a river of N. America, the N. head water of the ALLEGANY, into which it falls on the N. side of Fort Franklin, 80 miles N.E. of Pittsburg.

(8.) FRENCH HONEY-SUCKLE. See HEDYSARUM.

(9.) FRENCH LANGUAGE, the language now spoken in France, which, like the English, is not an original language, but a medley of several. Those that prevail most, and are the basis of it, are, 1. The Celtic; whether that were a particular language itself, or whether it were only a dialect of the Gothic, as spoke in the West and North: 2. The Latin, which the Romans carried with them into Gaul, when they conquered it: And, 3. The Teutonic, or that dialect of the Teutonic spoken by the FRANKS, when they passed the Rhine, and established themselves in Gaul. Of these three languages, in the space of about 1300 years, was the modern French gradually formed. Its progress was very slow. Both the Italian and Spanish were regular languages long before the French. Pasquier observes, it was under Philip of Valois that the French tongue first began to be polished; and that, in the register of the chamber of accounts of that time, there is a purity almost equal to that of the present age. However, the French was still very imperfect till the reign of Francis I. The custom of speaking Latin at the bar, and of writing the public acts and instruments of the courts of justice in that language, had made the French overlook their own language. The preceding ages had been remarkable for their ignorance, owing, in a great measure, to the long and calamitous wars which France had been engaged in: whence the French nobility deemed ignorance a kind of merit; and the generals did not regard whether they wrote and talked politely or not, provided they could fight well. But Francis I. restored learning, and changed the face of affairs; and after his time, Henry Stevens printed his book, *De la Precellence du Langage François*. The change was become very conspicuous at the end of the 16th century; and under Henry IV, Amyot, Coeffeteau, and Malherbe, contributed towards bringing it to perfection; which Cardinal Richelieu completed, by the establishment of the French academy; a society of which the most distinguished persons in church and state have been members. Nor did the long reign of Lewis XIV. contribute little to the improvement of the language; his taste for the fine arts rendered his court the politest in Europe. Wit and magnificence lent to vice; and his generals might have disputed with the Greeks, Romans, &c. the glory of writing well, if they could not that of fighting. From the court, the elegance and purity of the language soon spread itself into the provinces; where there are now very few who do not write and speak good French. One character of the French language is, that it is natural and easy. The words are ranged in it

much in the same order as the ideas in which it differs exceedingly from the Latin, where the inversion of the natural words is reputed a beauty. The Helles even the French in this point, but of it in copiousness and variety. But analogy of grammar, and the simplicity with the moods of verbs are formed, has the advantage not only over the over all the known languages in the the peculiar expressions and idioms of are sometimes so quaint and extraor it loses a good deal of the advantage grammatical simplicity gives it over the French has few compound words, which differs widely from the Greek, High English. This the French authors are to be a great disadvantage; the Greek deriving a great part of their force from the composition of words, and expressing that in one founding word, French cannot express but by a periphrastic diminutives in the French are as few as pounds, the greatest part of those in lost their diminutive signification. It is chiefly admired for its justness, purity and flexibility. It is the most universal language in Europe. The policy of courts has rendered it necessary for the of princes, &c. and the discoveries and ment-made by the French in arts have had the same effect among the in Germany, and elsewhere, the princesses of distinction value themselves on speaking French; and in several courts the French is almost as much used as the in the country.

(10.) FRENCH REPUBLIC. See FRANCE 59, 61, 65; and REPUBLIC. Under we mean here only to give a sketch of extent of the territory of the republic, been greatly increased since the commencement of the present war, in consequence of its conquests and annexations. The cede of Savoy, the county of Nice, and ty of Monaco; the whole Belgic comprehending the countries of Liege, Stav Malméd, Hainault, Tournetais, Flabant, Namur, Aultrian Gueldres, Macloo, Limburg, and Luxemburg; and territories on the left, or W. bank of comprehending those of Mœurs, Cleveduchies of Juliers, Arreberg, and D part of the electorates of Cologne, Tre and the Palatinate of the Rhine; the Saarbruck, the bishopric of Worms, together with the ci-devant republic are now annexed to the French rep divided into the following 18 de viz. Mount Blanc, Maritime Alps, the Scheldt, the Lys, Jemappes, F bre and Meuse, the Ourte, the Lov the two Nethes, the Roer, the Eiffel, and Moselle, the Rhine and Nahe, the Moselle, Mount Tonnerre, and Lake I that the republic now consists of 101 d in all. Besides these extensive terri county of Venaisin, and the principa

and Mountbelaïrd, (which, though insular France, were considered as no part of the monarchy.) are also now included public. Whether the French government may be able to retain all these important acquisitions, the future events will, and the definitive treaty of peace will show. At present (July 1800) the total territory of the republic, exclusive of Corsica, is from 5° 5' Lon. W. to 7° 47' E. 42° 30' to 51° 0' Lat. N.

**RANCH TOWN**, a town of Maryland, in 1770 on the Elk, 1 mile S. of Elktown.

**RAY**, a village in Gloucestershire.

**REHURZE**, a town of Ireland in Kil-

**RENCHIFY**, *v. a.* [from *French*.] To imitate the manners of France; to make a country disliked nothing more in king Edward's time than that he was *Frenchified*; noted the desire of foreign language then broken of bringing in foreign powers, and happened. *Comden*.—

Has he familiarly disliked  
How scarce, or said your doublet  
Exactly *Frenchified*? *As you like it*.

**RENCHMAN'S BAY**, a bay on the S. maica, between Great Pedro and Starve-

**RENCHMAN'S BAY**, a bay of the United States on the coast of Lincoln county, in the distance, between Mount Desert Island and Point. Lon. 68. 1. W. Lat. 44. 20. N. **REH**, a river of Germany in the circle of the Rhine, which runs into the Ergeltz, &c.

**REH**, a town of France, in the department of Maine, 4 miles ESE. of Bouillon.

**REH**, *adj.* [*freneticque*, French; generally therefore written *phrenetic*.] Frenzied.—

He himself impotent,  
Of his *frenetic* malady. *Daniel*.

**REH**, a lake of N. America in New York, St John's River runs through it.

**REH**, a town of France, in the department of Oise, 7 miles SW. of Compiègne.

**REH**, a town of Westphalia, in the department of Bentheim, 3 miles NNW. of Nor-

**RENZY**, *n. f.* [*epireus*; *phrenitis*, Lat. *enatis*; *phrenetis*, *phrenzy*, or *frenzy*.] Distraction of mind; alienation of mind; any violent passion approaching to that knave, Ford, hath the finest mad o'isy in him that ever governed *frenzy*.

*Wives*.—  
Fortitude is seen in great exploits,  
Ice warrants, and that wildon guides:  
Tow'ring *frenzy* and distraction. *Cato*.  
It is a disposition of the body induceth  
Which disturbs all the operations of the  
Senses, a lethargy or *frenzy*: this  
Exceeds our narrow faculties. *Bentley*.  
**REH**. See MEDICINE & PHRENITIS.

\* **FREQUENCY**, *n. f.* [*frequentia*, Fr. *frequentia*, Latin.] Crowd; concourse; assembly.—

The *frequency* of degree  
From high to low throughout. *Shak. Timon*.  
He, in full *frequency* bright

Of angels, thus to Gabriel smiling spake. *Milt.*

\* **FREQUENCY**, *n. f.* [*frequentia*, Latin.] 1. Common occurrence; the condition of being often seen or done.—Should a miracle be indulged to one, others would think themselves equally intitled to it; and if indulged to many, it would no longer have the effect of a miracle; its force and influence would be lost by the *frequency* of it. *Afterbury*. 2. Concourse; full assembly.—

Thou can'st erewhile into this senate: who  
Of such a *frequency*, to many friends

And kindred thou hast here, seduced thee? *Jonf.*

\* **FREQUENT**, *adj.* [*frequent*, Fr. *frequent*, Latin.] 2. Often done; often seen; often occurring.—The *frequent* these times are, the better.

*Duty of Man*.—  
An ancient and imperial city falls;  
The streets are fill'd with *frequent* funerals.

*Dryden's Æneid*.  
Frequent fereses shall besiege your gates. *Pope*.

2. Used often to practise any thing.—The Christians of the first times were generally *frequent* in the practice of it. *Duty of Man*—Every man thinks he may pretend to any employment, provided he has been loud and *frequent* in declaring himself hearty for the government. *Swift*. 3. Full of concourse.—

*Frequent* and full. *Milton*.  
\* **To FREQUENT**, *v. a.* [*frequentio*, Latin; *frequentier*, French.] To visit often; to be much in any place; to resort often to.—

They in latter day,  
Finding in it fit ports for silbers trade,  
'Gan more the time *frequent*, and further to invade.

—There were synagogues for men to resort unto;  
Our Saviour himself and his apostles *frequent*  
Them. *Hooker*.—

This fellow here, this thy creature,  
By night *frequent* my house. *Shak. Timon*.

—At that time this land was known and *frequent*  
ed by the ships and vessels. *Bacon*.—

With tears  
Wat'ring the ground, and with our sighs the air  
*Frequenting*, sent from hearts contrite, in sign  
Of sorrow unteign'd, and humiliation meek.

*Milton*.  
To serve my friends, the senate I *frequent*;  
And there what I before digested, vent. *Dennis*.

—That he *frequent*ed the court of Augustus, and was well received in it, is most undoubted. *Dryd.*

\* **FREQUENTABLE**, *adj.* [from *frequent*.] Conversable; accessible. A word not new itself, but not inelegant.—While youth lasted in him, the exercises of that age and his humour, not yet fully discovered, made him somewhat the more *frequentable* and less dangerous. *Sidney*.

\* **FREQUENTATIVE**, *adj.* [*frequentativus*, Fr. *frequentativus*, Lat.] A grammatical term applied to verbs signifying the frequent repetition of an action.

\* **FREQUENTER**, *n. f.* [from *frequent*.] One who often resorts to any place.—Petitions under

seen but some light skirmishes, in their vain bravery made light account of the Turks. *Knolles's Hist. of the Turks.*

(2.) FRESHWATER, in geography a river of Wales in Pembrokehire, which runs into the Sea, and forms a bay, 6 miles SE. of Pembroke Haven.

(3.) FRESHWATER-BAY, a bay in the Straits of Magellan. Lon. 72. 13. W. Lat. 53. 27. N.

(4.) FRESHWATER BAY, a bay on the E. coast of Newfoundland. Lon. 53. 30. W. Lat. 49. 10. N.

(5.) FRESHWATER BAY, a bay on the W. coast of the isle of Wight. Lon. 1. 31. W. Lat. 50. 37. N.

(1.) FRESNE, Charles DE, Sieur DU CANGE, one of the most learned writers of his time, was born at Amiens in 1610, and studied at the Jesuits college in that city. Afterwards he studied the law at Orleans, and gained great reputation by his works; among which are, 1. The history of Constantinople under the French emperors. 2. John Cinnamus's History of the affairs of John and Manuel Comnenus, in Greek and Latin, with historical and philological notes. 3. *Glossarium ad Scriptores medie & infime Latinitatis*: 6 vols folio. 4. A Greek Glossary, consisting of curious passages from rare MSS. 2 vols folio. He died in 1688, aged 78. Lewis XIV settled pensions on his 4 children.

(2.) FRESNE, a town of France, in the dept. of the Meuse; 10½ miles SE. of Verdun, and 12 NNE. of St Mihiel.

(3.) FRESNE ST MEMETZ, a town of France, in the dept. of Upper Saone; 12 miles SE. of Gray, and 12 SW. of Vesoul.

FRESNEAU, a town of France, in the dept. of Oise; 10 miles S. of Beauvais.

(1.) FRESNES, a town of France, in the dept. of Calvados, 12 miles S. of Vire.

(2.) FRESNES, a town of France, in the dept. of the Straits of Calais; 7½ miles NE. of Arras.

FRESNILLO, a town of Mexico, in the prov. of Zacatecas, 40 miles N. of Zacatecas.

FRESNO, 2 towns of Spain: 1. in Old Castile, 5 miles S. of Borgo d'Oima: 2. in Andalusia, 20 miles N. of Cordova.

(1.) FRESNOY, Charles Alphonso DU, an excellent poet and painter, born at Paris in 1611. He was instructed by Perrier and Simon Vouet in painting, but as soon as he fix'd himself at Rome, he made the works of Titian his models. He was, however, more celebrated as a poet than as a painter; and is better known by his incomparable poem *De arte graphica*, than by his performances on the canvass. He bestowed so much pains on it, that he died in 1665, before it was published. It was printed afterward with a French prose translation and notes, by M. de Piles; and was translated into English by Mr Dryden, who prefixed an original preface with a parallel between painting and poetry.

(2.) FRESNOY, a town of France, in the dept. of Aisne; 7 miles SW. of Compiègne.

FRESQUEL, a river of France, which runs into the Aude, near Carcassone.

FRESSELINES, a town of France, in the dept. of Craue, on the Craue, 15 m. NNW. of Gueret.

FRESSEVILLE, a town of France, in the dept. of Somme; 10 miles W. of Abbe

FRESSIN, a town of France, in the Straits of Calais, 4½ miles N. of H

FRESTA, a town of Sweden, in the dept. of Upland, 21 miles SE. of Upsal.

(1.) FRESWICK, a river of Scotland, which runs into the Sea near W

(3.) FRESWICK, a town of England, in the county of York.

(1.) \* FRET. *n. f.* [Of this word the etymology is very doubtful: some derive it from the verb *to eat*; others from *fretan*, to devour; *Skinner* more probably from the French *freticler*: perhaps it comes from the Latin *fretum*.] 1. A narrow strait of the sea, where the water by its passage is always rough.—Euripus generally signifies a strait, *fret*, or channel of the sea, between two shores. *Brown*. 2. Any astringent liquours by fermentation, confinement, &c.—Of this river the surface is covered with froth and bubbles; for it runs long up and is still breaking against the stones through its passage. *Addison on Italy*.—The fretting fever, if well governed, like wine upon the stone, discharges itself of heterogeneous matter. 3. That stop of the musical instrument which causes or regulates the vibrations of the string. It requireth good winding of a string will make any note; and, in the top of the higher they go, the less distance between the frets. *Bacon's Nat. Hist.*—

The harp

Had work, and rested not: the soft  
And dulcimer, all organs of sweet it  
All founds on fret by string or gold  
Temper'd soft tunings, intermix'd  
Choral or unison. *Milton's Pa*

—They are fitted to answer the modulation of harmony: two or three pipes to adorn the church organ, or to all the strings and lute. *Grew's Conf. Sac.* 4. Work rising, or herances.—The frets of houses, and figures, please; whereas unequal figures deformities. *Bacon's Natural History*.—delight in a prospect well laid out, and with fields and meadows, woods and the curious fret works of rocks and groves. 5. Agitation of the mind; commotion; temper; passion.—

Calmness is great advantage: he that  
Another chase, may warm him at his  
Mark all his wand'rings, and enjoy  
As cunning tencers suffer heat to  
The incredulous Phœac, having y  
Drank but one round, reply'd in toil

You, too weak, the slightest loss  
Are on the fret of passion, boil and

Yet then did Dennis rave in fury  
I never answer'd; I was not in debt

(2.) FRET, or FRETTE, in architecture, a kind of knot or ornament, consisting of two lists or small fillets variously interwoven, and running at parallel distance to their breadth.

in heraldry, a bearing composed of fess and variously interlaced. Some see *lover's knot*. See HERALDRY.

in music, (§ 1, def. 3.) a kind of instruments, particularly bass viols. Frets consist of strings tied round the instrument, at certain distances, within and such notes are to be found.

FRET. v. a. [from the noun.] 1. To fret by external impulse or action.— as well forbid the mountain pines their high tops, and to make a noise they are fretted with the gulls of heav'n.

*Shakespeare.*

away by rubbing.—

up them still upon one place,

have fretted us a pair of graves

in earth. *Shakespeare's Rich. II.*

banks of rivers, with the washing of the

we were divers times fretted out big

id. *Abbot*.—Before I ground the object

the pitch, I always ground the potty on

concave copper, 'till it had done

off; because, if the particles of the

not made to stick fast in the pitch, they

rolling up and down, grate and fret

metal, and fill it full of little holes.

*pitch*. 3. To hurt by attrition.—

*Antony*

and dejected; and, by starts,

if fortunes give him hope and fear

he has and has not.

*Shak. Ant. and Cleop.*

to; to eat away.—It is fret inward,

and bare within or without. *Lev. xiii. 55.*

useful husband, plowing up his ground,

all fret with rust, both pikes and

his,

thy helms under his harrow found.

*Hakeswill.*

into raised work.—

Nor did there want

or freeze, with bossy sculptures grav'n;

was fretted gold. *Milton's Par. Lost.*

gate; to diversify.—

Yon grey lines,

the clouds, are messengers of day.

*Shak. Julius Cesar.*

to angry; to vex.—

rather part with Mary and with Ruth

you hast; and they that over-ween,

by growing virtues fret their spleen,

never find in thee, but pity and truth.

*Milton.*

how hast fretted me in all these things,

will recompence thy way upon thine

xvi. 43.—Such an expectation, cries

never come to pass: therefore I'll even

and go and fret myself. *Collier*.—In-

friends fret and gall more, and the

them is not so easily obliterated. *Arb.*

*Bull.*

FRET. v. n. 1. To be in commotion;

sed.—No benefits whatsoever shall ever

say that diabolical rancour, that frets

its in some hellish breaths, but that it

is in slander and invective. *South*.—

Th' adjoining brook, that purls along  
The vocal grave, now fretting o'er a rock,  
Now scarcely moving through a reedy pool.

*Thomf. Summ.*

2. To be worn away; to be corroded.—Take a piece of glove's leather that is very thin, and put your gold therein, with sal armoniack, binding it close, and then hang it up: the sal armoniack will fret away, and the gold remain behind. *Peacock on Drawing*.—3. To make way by attrition or corrosion.—These do but indeed scrape off the exuberances, or fret into the wood, and therefore they are very seldom used to soft wood. *Moxon's Mech. Exer.*—It inflamed and swelled very much; many wheals arose, and fretted one into another with great excoriation. *Witman*. 4. To be angry; to be peevish; to vex himself.—They trouble themselves with fretting at the ignorance of such as withstand them in their opinion. *Hooker*.—We are in a fretting mind at the church of Rome, and with angry disposition enter into cogitation.

*Hooker*.—  
Helpless, what may it boot  
To fret for anger, or for grief to moan? *P. Q.*  
Their wounded steeds  
Fret fetlock deep in gore, and with wild rage  
Yerk out their armed heels at their dead masters.

*Shak. Henry V.*

Be lion-mettled, proud, and take no care

Who chafes, who frets, or where conspirers

are. *Shak. Macb.*

—His heart fretteth against the Lord. *Prov. xix. 3.*  
*Rudibras fretting*

Conquest should be so long a-getting,

Drew up his force. *Rudibras.*

He swells with wrath, he makes outrageous

moan,

He frets, he fumes, he stares, he stamps the

ground. *Dryden.*

How should I fret to mangle ev'ry line,

In reverence to the sins of thirty-nine. *Pope.*

FRETEVAL, a town of France, in the dep. of Loire and Cher, 6 miles NE of Vendome, and 6 N. of Blois.

\* FRETFUL, *adj.* [from fret.] Angry; peevish; in a state of vexation.—

Thy knotty and combined locks to part,

And each particular hair to stand on end,

Like quills upon the fretful porcupine.

*Shak. Hamlet.*

Where's the king?

—Contending with the fretful elements;

Bids the wind blow the earth into the sea.

*Shak. K. Lear.*

—They are extremely fretful and peevish, never well at rest; but always calling for this or that, or changing their posture of lying or sitting. *Har.*

Are you positive and fretful;

Heedless, inconstant, forgetful? *Swift.*

\* FRETFULLY, *adv.* [from fretful.] Peevishly.

\* FRETFULNESS, *n. s.* [from fretful.] Passion; peevishness.

FRETIFLUX, a town of France, in the dep. of the Straits of Calais, 3 miles S. of Calais.

FRETTON, a town of England, in Norfolk.

FRETOY, a town of France, in the department of the Oise, 5 miles NW. of Nogon.

(1.) FRETTS,

(1.) **FRETTS**, *n. f.* in mineralogy, a term used by miners to express the worn side of the banks of the rivers in mine countries, where they search for the thoad stones or grewts waiked down from the hills, in order from thence to trace out the running of the thoad up to the mine.

(2.) **FRETTS**, **FREATS**, or **FREITS**. See **FREATS**.  
\* **FRETTY**. *adj.* [from *fret*.] Adorned with raised work.

**FRET-WORK**, work adorned with frets. It is sometimes used to fill up and enrich flat empty spaces; but it is mostly practised in roofs, which are fretted over with plaster work.

**FREUDENBERG**, the name of 3 towns of Germany: viz. 1. in the circle of Bavaria, and Up. Palatinate, 4 miles E. of Amberg; 2. in that of Franconia, and county of Wertheim, on the Main, 8 miles N. of Wertheim, and 28 NE. of Heidelberg; 3. in Westphalia, in Nassau-Siegen, 5 miles WNW. of Siegen.

**FREUDENSTADT**, a fortified town of Suabia, with a citadel, in the duchy of Wirtemberg; founded in 1600, as an asylum for the persecuted German Protestants. It is seated in the Black Forest, 24 miles SE. of Straßburg, and 36 SW. of Stuttgart. A part of the French army, under Gen. Jourdan, were posted here, on the 7th April 1799, when they attacked the Austrians under the Archduke Charles, but were forced to retreat. Lon. 26. 0. E. of Ferro. Lat. 48. 23. N.

(1.) **FREUDENTHAL**, a town of Silesia, in Troppau, famous for fine linen and good horses; 11 m. SW. of Jagendorf, and 19 W. of Troppau.

(2.) **FREUDENTHAL**, or **BISTRA**, a village of Carniola, seated near the Falsritz, 5 miles N. of Circuitz.

**FREVENSTEIN**, a town of Germany, in Stiria, 3 miles NE. of Windisch Weitritz.

**FREVENT**, a town of France, in the dep. of the Straits of Calais; 7½ miles S. of St Pol, and 6 W. of Arras.

**FREVILLE**, a town of France, in the dep. of the Lower Seine, 4½ miles NE. of Candebeec.

**FREUNDSBERG**, a town of Germany in the Tyrolse, 2 miles E. of Schwatz.

**FREUNDSDIEM**, a town of Germany, in the Tyrolse, 24 miles W. of Innsbruck.

**FREYA**, **FRIA**, or **FREGGA**, the Venus of the Saxons. See **FREA**. The following German towns appear to have been named from here:

**FREYBERG** or **FRIEBERG**, a town of Up. Saxony in the margraviate of Meissen, on the Muldaw; containing 6 churches and about 2000 houses. The environs abound with mines of silver, copper, lead, and tin, which produce about 10,000 rix-dollars annually. It is 18 miles SSW. of Meissen, and 19 WSW. of Dresden. Lon. 31. 1. E. of Ferro. Lat. 50. 59. N.

**FREYBERG** or **PEINER**, a town of Moravia, 28 miles ENE. of Párau, and 36 E. of Olmutz.

(1.) **FREYBERG**, a town of Silesia, in Schweidnitz, near the Pommitz, 7 miles W. of Schweidnitz.

(2.) **FREYBERG**, or **FRIEBURG**, a town of Up. Saxony, 15 miles S. of Hildr, and 4 NNW. of Naumburg.

(3.) **FREYBERG**. See **FRIEBURG**. N. 1, 2.

**FREYENBERG**, a territory of the Helvetic

republic, surrounded by the late cantons rich, Bern, Lucerne and Zug; ancient *Rori* and *Wuggenthal*. The Swiss to Count Hapsburg in 1415. It is 24 and 12 broad; and contains about 20,

**FREYENSTADT**, a town of Bavar Schwarzach; 20 miles SE of Nuremb NW. of Ratibon. Lon. 29. 8. E. of Ferro. 49. 9. N.

**FREYENSTEIN**, a town of Upper miles SE. of Meyenburg.

**FREYENTHURN**, a town of Carnic Kulp, 7 miles S. of Rudolfswoth.

**FREYENWALD**, a town of Brandenb Oder. The natives export corn, b fish, alum, &c. It lies 24 miles NW. and 32 NE. of Berlin.

**FREYHAN**, a town of Silesia, in Oel

**FREYHEIL**, a town of Bohemia, in of Koniggratz, 6 miles NW. of Frat

**FREYHOFF**, a town of Carniola, on 7 miles SW. of Landstrafs.

**FREYHUNG**, a town of Bavaria, in 10 miles NE. of Sulzbach, and 11 N. of

**FREYLA**, a town of Spain, in Gra

**FREYLING**, a town of Austria, 4 1 of Esserling.

(1.) **FREYINGEN**, or **FRIESINGEN**, a small principality of Germany in B between Munich and Landshut. It co the counties of Ismaning and Werd the lordship of Burgkrain.

(2.) **FREYSINGEN**, the capital of bishopric. See **FRIESINGEN**, N. 2.

(1.) **FREYSTADT**, or **FREUSTADT**, Austria, 82 miles W. of Vienna.

(2.) **FREYSTADT**, a town of Prussia land, 80 miles SW. of Konigsberg.

(3, 4.) **FREYSTADT**; 2 towns of Si the principality of Glogau, 14 miles N 2. in that of Teschen, 7 miles, NNW. of

**FREYSTATTL**, a town and castle of on the Waag, 2 miles NE. of Leopold

**FREYSTETT**, or **FREYSTAETT**, a to many in the circle of the Upper Rhin NW. of Darmstadt.

**FREYUNG**, a town of Bavaria, in th of Passau, 14 miles N. of Passau.

**FREYVALDE**, 2 towns of Silesia: 1. cipality of Grotkau, 15 miles S. of in that of Sagan, 12 miles SW. of Sag

**FRIA**, or **FREGGA**. See **FREA**.

\* **FRIABILITY**, *n. f.* [from *friabile*.] being easily reduced to powder.—Har ability, and power to draw iron, are be found in a loadstone. *Locke*.

\* **FRIABLE**, *adj.* [from *friabile*, French Latin.] Easily crumbled; easily reduced.—A spongy excrescence grows roots of the bee tree, and sometimes very white, light, and friable, which anach. *Plasch's Nat. Hist.*—The 1 the subject is the most friable, and 1 like or dissolved. *Johnson's Diet.*

(1.) \* **FRIAR**, *n. f.* [A corrupted French.] A religious; a brother of f order.—

Holy Franciscan *friar* brother!

he priests and *friars* in my realm, procession sing her endless praise. *Shak.* out a *frator*, but he's big enough to be a *frator*.—Many jesuits and *friars* wear the disguise of Presbyterian and Independentists, to preach up rebellion. *Swift.* would needs show his talent in Latin.

**FRIAR, or FRIER.** [Lat. *frater*. Ital. *fra*, *fratello*, i. e. *brother* &c.] A term common to all orders; founded on this, that kind of brotherhood presumed between the superior of the same monastery. Friars are distinguished into these 4 principal orders: 1. FRANCISCANS, Minor, or grey; 2. AUGUSTINES; 3. DOMINICANS, or black; 4. CARMELITES, or white nuns. See the rest of the orders descend. See *Black*.

**FRISK,** in a more peculiar sense, is reserved for monks as are not priests; for *frisks* are usually dignified with the appellation of *fraters*.

**FRATRES OBSERVANT,** [*fratres observantes*] a kind of the Franciscans; thus called, because they live together in any number, or congregation, as the convents are; several among themselves to observe the rules of the order, and that more strictly than others do, from whom they are distinguished by a singularity of zeal, living in order of their own choosing.

**FRATRY, adj.** [*frater* and *fratres*] Monastic; in the world.—Their *fratry* general signifies it is one holy day in the Church, in remembrance of thirty thousand years, which the Jews *Kezab*.

**FRIAR, n. s.** from *frater*.—A man, who is not in the line.—Stick not proud riches, for thou may'st be justly, suddenly, & eternally, and leave others to say, yet *frisks* not *friskily* contempt of them. *Shak.*

**FRIAR, n. s.** [*frater* and *fratres*] A plant, which grows from which it derives only in flower resembling a cowslip.

**FRIAR, n. s.** an island on the W. coast of Spain, S. of Iber's Bay.

**FRIAR, n. s.** a celebrated architect of antiquity. He translated Palladio's works, &c. Parallel between ancient and modern use.

**FRIARY, adj.** Like a friar.—Francis had scratch his elbow when he had sweetened his hand's name. St. Francis with a name a corner. *Chival's Revivings.*

**FRIARY, n. s.** [from *frater*] A monastery of friars.

**FRIARY, n. s.** a town of Spain, in Old Castile, on an island in the Bay; 13<sup>th</sup> m. N. of Madrid. **FRIAY,** a town of France, in the dep. of Vendée, 7 miles S. of Broy.

**FRIAY, n. s.** To trifle.—*Shak.* I would have been more industrious than that with the *frisks* of *frisks*. *Mad.* *frisks* of *frisks*. [from the verb] A trifle. *Shak.* one who professes rupture but the *frisks* her content. *Spektator.*

(1.) **FRIBURG, or FREYBURG,** a large town of Germany, in Suabia capital of Amuln Braggaw; founded in 1118, by R. hold III. D. of Zahringen. The streets are broad and well paved, and the steeple of the great church, next to that of Strasburg, is reckoned the finest in Germany. Its university was founded in 1457, by Albert, D. of Austria. The inhabitants are famous for publishing crystal and precious stones. It has been several times taken and retaken; particularly by the French in 1744, who demolished the fortifications. It is seated on the Triser, 20 miles E. of A. rich, and 24 SSE. of Strasburg. Lon. 7. 57. E. Lat. 46. 4. N.

(2.) **FRIBURG,** a town of Germany, in Upper Rhenia, 13 miles SSE. of Bismar, and 18 of Buxhausen.

(3.) **FRIBURG, or FREYBURG,** a town of the Helvetic republic, capital of the canton (N. 2.) seated on the Saue, in a most singular and picturesque situation. M. Cox, in a *Travels in Switzerland*, thus describes it: "It stands partly on a level plain, partly on bold precipitous rocks, half enclosed by the river Saue; and is a most curious one, &c. by its situation, and hills, that the traveler is reminded of the same, which he could be burnt upon, was at the whole, which in the overlooking and nature, the hills, which are of a height of 1000 feet, and in the midst of a chert mountain, at a distance within which tower the eyes of merchants a large mountain of rocks, rocks, &c. &c. and meadows, rising into hills from wild to green, from the base of a town to the solitude of the desert retirement. The Saue winds in the most extensive manner as to form in the middle, where the distance of two miles, in the middle, between which the intervening parts of the current are parallel to each other. On the left, the distance to the town is extremely deep, in the middle, the rocks even pass over the roofs of the houses. Many of the edifices, erected in regular proportion to the scale of an immense street, and many overlook the edge of a precipice in such a manner, that in looking down, a man's head would be apt to turn giddy. But the most extraordinary point of view is from the Parliament. On the NW. a part of the town stands boldly on the sides and the peak back of an abrupt ridge, and from E. to W. a semicircle of high perpendicular rocks, is seen, whose base is washed and undermined by the winding Saue, and whose tops and sides are thickly clad with thrub and underwood. On the highest point of the rocks, and on the very edge of the precipice, appears, half rising in the air, the gate called *Burggatter*, a strange structure on the bridge would compare to the prospect of the Living Island in Guibner's Travels; and would not conceivably be accessible, but by means of a road and ladder. The houses are fringed with a grey iron stone, the roof and walls black, and the public edifices, particularly the church, are extremely beautiful. The town is 12 miles SW. of Bern, and 75 of Zurich. Lon. 6. 57. E. Lat. 46. 4. N.

(4.) **FRIBURG,** one of the 23 independent cantons of Swiss land. It is surrounded on all sides by the canton of Bern. The town is seated on the

fruits, and pastures: and the canton can send 28,000 men into the field. The total population is above 72,800. The people are Roman Catholics. The bishop of Lausanne's diocese extends over this canton, and part of that of Soleure.

(5.) FRIBURG, a celebrated hermitage, in the above canton, (N. 4.) 3 miles from the capital (N. 3.) containing a church and steeple, a vestry, a kitchen, a large hall, two rooms on each side, two pair of stairs, and a cellar, all cut out of the solid rock. The church is 63 feet long, 36 broad, and 22 high. But the most wonderful thing is the steeple, which is 70 feet high above the rock. The chimney of the kitchen is also very surprising, for the passage up is 90 feet in height. It is almost inconceivable how one man, with his servant, could perform so difficult a work, though they were 24 years in executing it.

(6.) FRIBURG. See FREYBURG. N. 2.

(7.) FRIBURG L'ÉVÊQUE, a town of France, in the dept. of Meurthe, 6 miles E. of Dieuze and 7½ W. of Strasburg.

FRIBUS, a town of Bohemia, in the circle of Elbogen, 9 miles W. of Joachimsthal.

\* FRICASSEE. *n. f.* [French.] A dish made by cutting chickens or other small things in pieces, and dressing them with strong sauce.—

Oh, how would Homer praise their dancing dogs,  
Their stinking cheese, and *fricassée* of frogs!

He'd raise no fables, sing no flagrant lye,  
Of boys with custard choak'd at Newberry.

*King.*  
\* FRICATION. *n. f.* [*fricatio*, Latin.] The act of rubbing one thing against another.—Gentle *frication* draweth forth the nourishment, by making the parts a little hungry, and heating them: this *frication* I wish to be done in the morning. *Bacon's Nat. Hist.*—Resinous or unctuous bodies, and such as will flame, attract vigorously, and melt thereof without *frication*, as good hard wax, which will convert the needle almost as actively as the loadstone. *Brown's Vulg. Err.*

FRICENTI, or } an episcopal town of Naples,  
FRICENTY, } in Principato Ultra, near the  
Tirpato; 12 miles NW. of Conza, and 20 SE.  
of Benevento. Lon. 15. 9. E. Lat. 40. 59. N.

(1.) \* FRICTION. *n. f.* [*friction*, Fr. *frictio*, from *frico*, Latin.] 1. The act of rubbing two bodies together.—Do not all bodies which abound with terrestrial parts, and especially with sulphureous ones, emit light as often as those parts are sufficiently agitated, whether the agitation be made by heat, *friction*, percussion, putrefaction, or by any vital motion? *Newton's Optics.* 2. The resistance in machines caused by the motion of one body upon another. 3. Medical rubbing with the flesh-brush or cloths.—*Frictions* make the parts more fleshy and full, as we see both in men and in the currying of horses; for that they draw a greater quantity of spirits to the parts. *Bacon.*

(2.) FRICTION, (§ 1. *def.* 1) is called also ATTRITION. The phenomena arising upon the friction of divers bodies, under different circumstances, are very numerous and considerable. Mr Hawkihee gives a number of experiments of this kind; particularly of the attrition or friction of glass, under various circumstances, the result of which

was, that it yielded light and became  
All bodies by friction are brought  
heat; many of them to emit light;  
● cat's back, sugar, beaten sulphur,  
sea water, gold, copper, &c. but  
diamonds, which when briskly rub  
glass, gold, or the like, yield a light  
of a live coal when blown by the bl  
ELECTRICITY, *Index.*

(3.) FRICTION, in mechanics, (§ 1. from the roughness or asperity of the body moved on, and that of the body for such surfaces consisting alternately of eminences and cavities, either the eminences must be raised over those of the other, or must be both broke and worn off; can happen without motion, nor can be produced without a force impressed. force applied to move the body is either wholly spent on this effect; and consequently there arises a resistance or friction, which is greater, *ceteris paribus*, as the eminences are greater and the substance the harder: a body, by continual friction, becomes more polished, the friction diminishes. Amontons, De La Hire, Camus, Muschenbroek, Ferguson, Euler, and other chancians, have made a number of experiments to settle a principle for the determination of the quantity of friction. A successful set of experiments, made on iron, are those of the rev. Samuel Vince of Cambridge; published in the 75th volume of *Philos. Trans.* p. 165. Mr Emerson, in his *Elements of Mechanics* has also made several remarks on the friction of wood and iron. MECHANICS.

(4.) FRICTION, in medicine and surgery (§ 3.) is performed with oils, unguents, matters, to relieve, or cure a diseased joint. Frictions with mercurial ointment are most useful in venereal cases. The application of friction externally, is preferred to give a salivation. Friction of the flesh-brush, a linen cloth, or even the hand, contribute greatly to health, in all diseases which impede the circulation of the blood and humors, or the power of the nerves. Persons therefore, of weak nerves and low spirits, should supply the want of other pleasures, by spending half an hour, morning and evening, in rubbing their whole body, especially their arms, with a flesh-brush. This is most advantageous, when the *prima vie* are most debilitated.

FRIDATHORP, a village E. of Kingston.

FRIDAW, a town of Germany, 10 miles ESE. of Pettaw, and 104 S. of V. 33. 57. F. of Ferro. Lat. 46. 30. N.

(1.) \* FRIDAY. *n. f.* [*Frige Ides*, Saxon deity, the sixth day of the week, so named after the Saxon deity.—As the were not kin to the goddess, she would be as fair on Friday as Helen is on Saturday.] *Sbak. Troil. and Cress.*

For Venus, like her day, will change  
And seldom shall we see a Friday cl

(2.) FRIDAY, by the Romans was called *Veneris*. See VERA, and GOOD-FRIDAY.

(1.) FRIDBERG, a town of Ger

, with a castle. It was plundered by the  
in 1032; and taken by the Austrians in  
It lies 4 miles SE. of Augsburg, and 28  
of Munich. Lon. 11. 10. E. Lat. 48. 20. N.  
FRIDBERG, an imperial town of Germany,  
crania, and in the landgravate of Hesse;  
on a mountain, 12 miles NE. of Frankfurt,  
ENE. of Mentz. Lon. 8. 46. E. Lat. 50.

FRIDBERG, a town of Germany in Stiria,  
5 E. of Pruck, and 42 S. of Vienna. Lon.  
E. of Ferro, Lat. 47. 32. N.

FRIDBERG, in Silesia. See FRIEDBERG.  
FRIDBURG, a town of Germany, in the circle  
of Saxony, and province of Thuringia,  
on the Unstrut, 30 miles W. of Leiptick.  
Lon. 21. E. Lat. 51. 19. N.

FRIDECK, a town of Silesia, 15 miles  
of Teichen, and 12 S. of Odelberg.

FRIDECK, a town of Prussia, 12 miles E. of

FRICHSBERG, a fort on the coast of  
, 7 miles from Cape Coast Castle.

FRICHSODE. See FREDERICKSODE.

FRIDEWALDE, a town of Germany in  
Saxony, 18 m. W. of Eisenach and 35 SSE.  
of Jena.

FRIDEWALDE, a town of Westphalia, in  
the county of Sayn, 9 miles S. of Siegen.

FRIED. a town of Germany, in Austria,  
on the Danube; 20 miles SE. of Tubing-  
en and 12 NE. of Constance. Lon. 9. 31. E.  
Lat. 48. N.

FRIEDLAND, a town of Bohemia, 55 m.  
Dresden. Lon. 15. 15. E. Lat. 52. 4. N.

FRIEDLAND, a town of Prussia, in the prov.  
of Pomerania, 20 m. NE. of Konigsberg.

FRIEDMAN, a town of Hungary, 17 m. NNW.  
of Pest.

FRIEDMAN, a town of Naples, in the province of  
Naples, 7 miles ESE. of Potenza.

FRIEDSTEIN, a town of Germany, in  
the county of Nassau, 1 mile NW. of Gottschee.

FRIEDSTOL, one of the ancient immunities  
granted to churches. The word signifies a seat,  
or place of peace and security, where cri-  
minals find safety and protection. Of these  
there were many in England; but the most fa-  
mous were those at Beverly, and in St Peter's  
parish, York, granted by charter of king Henry I.

FRIEDBERG, or FRIDBERG, a town of  
Germany, in the county of Nassau, 6 miles SW. of Ziegenhals.

FRIEDBERG, or FRIEDENBURG, a town of  
Germany, in the county of Jauer, on the Queiss; 11 m.  
of Lowerberg, and 14 WNW. of Hirschberg.

FRIEDBERG HOHEN, a town of Silesia, in  
the county of Schweidnitz; where Frederick the  
Great defeated the Austrians, June 4th, 1745. It  
lies SW. of Striegau, and 10 NW. of  
Schweidnitz.

FRIDEBURG, a Moravian settlement of N.  
Carolina in Surry county.

FRIDEBERG, a town of Brandenburg, 46  
m. of Frankfort on the Oder, and 82 ENE.  
of Berlin.

FRIEDEBURG, a town of Saxony, in the  
county of Mansfeld, 4 m. E. of Gerbstadt.

FRIEDEBURG, a town of Westphalia, in E.

Friedland, 22 miles ENE. of Embden. Lon. 25. 8.  
E. of Ferro. Lat. 53. 30. N.

FRIEDELAND, a town of Silesia, in the duchy  
of Schweidnitz, 16 miles SW. of Schweidnitz.

FRIEDENSBERG, [D. n. i. e. the *Mountain of  
Peace*] a palace of Denmark, near lake Elleron,  
4 miles from Fredericksburg, built by Frederick  
IV, K. of Denmark, in 1720, when peace was  
concluded with Sweden.

FRIEDENSBUCHTEN, [i. e. *Tents of Peace*]  
a Moravian town and settlement in Pennsylvania,  
on the Susquehanna, 24 miles below Tioga Point.  
Besides a neat chapel and elegant houses, it con-  
tains 15 Indian huts, and 250 acres.

FRIEDERICKSTÆD, a town on the W. coast  
of Santa Cruz. Lon. 93. 25. W. Lat. 17. 48. N.

FRIEDEWALDE, a town of Silesia, in the  
duchy of Niesse, 6 miles S. of Grottkaw.

(1.) FRIEDLAND, a town of Bohemia, in the  
circle of Boleslau, 9 miles NE. of Krottaw.

(2.) FRIEDLAND, a town of Lusatia, on a canal  
of the Spree, 8 miles N. of Lieberose.

(3.) FRIEDLAND, a town of Moravia, in the  
circle of Olmutz; 18 miles NNE. of Olmutz.

(4.) FRIEDLAND, a town of Up. Saxony, in  
Mecklenburg, 14 miles NE. of New Branden-  
burg.

FRIEDLINGEN, or FRIDLINGEN, a town and  
fort of Suabia, 3 miles E. of the Rhine, and 4 N.  
of Balle. Lon. 7. 36. E. Lat. 47. 40. N.

FRIELED, a town of Sweden, in the province  
of Smoland, 33 miles NW. of Wexio.

\* FRIEND. *n. f.* [friend, Dutch; *freund*, Sax.]  
This word, with its derivatives, is pronounced  
*friend*, *friendly*; the *i* is usually neglected. 1. One joined  
to another in mutual benevolence and intima-  
cy; opposed to foe or enemy.—

*Friends of my soul, you twain*  
Rule in this realm, and the gor'd state sustain.

*Shakespeare.*  
—Some man is a friend for his own occasion, and  
will not abide in the day of thy trouble. *Ecclus.*  
vi. 8.—

God's benison go with you, and with those  
That would make good of bad, and *friends* of  
foes.

*Shakespeare.*  
Wonder not to see this foul extend  
The bounds, and seek some other self, a *friend*.

*Dryden.*  
2. One without hostile intentions.—  
Who comes so fast in silence of the night?  
—A *friend*.

—What *friend*? your name? *Sh. Merch. of Ven.*

3. One reconciled to another; this is put by the  
custom of the language somewhat irregularly in  
the plural number.—

He's *friends* with Cæsar,  
In state of health thou say'st, and thou say'st free.

*Shakespeare.*  
My son came then into my mind; and yet my  
mind

Was then scarce *friends* with him. *Sh. Lear.*  
If she repent, and would make me a *friend*,  
Bid her but send me her's, and we are *friends*.

*Lucius.*

4. An attendant, or companion.—  
The king ordains their entrance, and ascends  
His regal seat, surrounded by his *friends*. *Æn.*

5. Favourer, one propitious.—Aurora rising up

on Pegasus, sheweth her swiftness, and how she is a *friend* to poetry and all ingenious inventions. *Peacock*. 6. A familiar compellation—*Friend*, how camest thou in hither? *Mat.* xxii. 12.

What support me, do'st thou ask?

The conscience, *friend*, t'have lost mine eyes o'erply'd

In liberty's defence. *Milton.*

\* To FRIEND. v. a. [from the noun] To favour; to befriend; to countenance; to support.—

I know that we shall have him well to *friend*.

*Shakespeare.*

When vice makes mercy, mercy's so extended, That, for the fault's love, is th' offender *friend*-

ed. *Shakespeare.*

\* FRIENDED. *adj.* Well disposed; inclined to love.—

Not *friended* by his wish to your high person,

His will is most malignant, and it stretches

Beyond you to your friends. *Shakespeare.*

\* FRIENDLESS, *adj.* [from *friend*.] 1. Wanting friends; wanting support; without countenance; destitute; forlorn.—

Alas! I am a woman, *friendless*, hopeless.

*Shakespeare's H. VIII.*

—Woe to him that is alone, is verified upon none so much as upon the *friendless* person. *South.*—

To some new clime, or to thy native sky,

Oh *friendless* and forsaken virtue fly. *Dryd.*

To what new clime, what distant sky,

Forsaken, *friendless*, will ye fly? *Pope.*

\* 2. FRIENDLESS MAN. The Saxon word for him whom we call an-outlaw, because he was, upon his exclusion from the king's peace and protection, denied all help of friends.

\* FRIENDLINESS. *n. s.* [from *friendly*.] 1. A disposition to friendship.—Such a liking and *friendliness* as hath brought forth the effects. *Sidney.* 2. Exertion of benevolence.—Let all the intervals be employed in prayers, charity, *friendliness* and neighbourhood, and means of spiritual and corporal health. *Taylor's Rule of holy living.*

(1.) \* FRIENDLY. *adj.* [from *friend*.] 1. Having the temper and disposition of a friend; kind; favourable; benevolent.—They gave them thanks, desiring them to be *friendly* still unto them. 2 *Blac.* xii. 31.—

Thou to mankind

Be good, and *friendly* still, and oft return! *Milt.*

How art thou

To me so *friendly* grown above the rest

Of brutal kind? *Milton's Paradise Lost.*

Let the Nassau star in rising majesty appear,

And guide the prosperous mariner

With everlasting beams of *friendly* light. *Prior.*

2. Disposed to union; amicable.—

Like *friendly* colours found our hearts unite,

And each from each contract new strength and

light. *Pope.*

3. Salutory; homogeneal.—

Not that Nepenthe, which the wife of Thone

In Egypt gave to Jove born Heiæna,

Is of such power to stir up joy as this,

To be so *friendly*, or so cool to thirst. *Milton.*

(2.) \* FRIENDLY. *adv.* In the manner of friends; with appearance of kindness; amicably.—

Here between the armies,

Let's drink together *friendly*, and embrace;

That all their eyes may bear those tokens h

Of our restored love and amity. *Shak. H*

(3.) FRIENDLY ISLANDS, a cluster of island the Pacific Ocean, so named by Capt. Cook in 1 on account of the friendship which appears subsist among the inhabitants, and from 1 courteous behaviour to strangers. Abel J Tasman, an eminent Dutch navigator, first tu ed here in 1643, and gave names to the prin islands. Captain Cook laboriously explored whole cluster, which he found to consist of more 60, and left some European plants and anima pon them. (See COOK, N<sup>o</sup> III, § 10.) three islands which Tasman saw he named 1 *Amsterdam*, *Rotterdam*, and *Middleburg*. first is the largest, See AMSTERDAM, N<sup>o</sup> II. chief of these islands are ANNAMOOKA, TAI TAHOO, LEFOOGA, and EAGOA, or MIDDLEB See these articles. The natives of these is seldom exceed the common stature, but are strong and well made. They are generally h about the shoulders; and though the muscula pearance of the men rather conveys the ide strength than of beauty, several of them are handsome. Most of the women are well pro tioned, and some are absolutely perfect mode beauty both in features and figure. But the remarkable distinction, is the uncommon smal and delicacy of their fingers. The general co is a cast deeper than the copper brown; but ral have a true olive complexion; and some of women are even a great deal fairer. Their c tenances express their natural mildness, being tely free from that savage keenness which m most nations in a barbarous state. They are cheerful, and good-natured. There are few tural deformities to be found amongst them. most common is the tetter or ring-worm, seems to affect almost one half of them, and k whitish serpentine marks everywhere behind Captain Cook had the mortification to learn all the care he took when he first visited 1 islands, to prevent the venereal disease from b communicated to the inhabitants, had pr intellectual. But they do not seem to regai much. As there appeared few signs of its effects, probably the climate, and their way ving, abate its virulence. There are two d complaints frequent amongst them; one of w is an indolent form swelling, that affects the and arms, and increase them to an extraordi size in their whole length. The other is a t of the same sort in the testicles, which somet exceeds the size of the two fists. In other resq they seem uncommonly healthy. Their hair general straight, thick, and strong, though a have it bushy or frizzled. The natural color black; but the greatest part of the men, and f of the women, have it stained of a brown, pu or orange colour. Some have it cut off on side of the head only; others have it entirely off except a single lock; the women in get wear it short. The men have their beards short; and both men and women strip the from the arm-pits. The men are stained fro bout the middle of the belly to about half-down the thighs with a deep blue colour. women have only a few small lines or spots t

ed on the inside of their hands. The men circumcised, or rather *supercised*, as the one consists in cutting off only a small piece of skin at the upper part; which is thus incapable of ever after covering the glans. The dress of both men and women is the same: consists of a piece of cloth or matting, about 2½ wide and 2½ long: so as to go once and a half round the waist, to which it is confined by a

It is double before, and hangs down like a coat, as low as the middle of the leg. In the middle, there is cloth sufficient to draw wrap round the shoulders. The interior is wear nothing but a covering made of the maro, which is a narrow piece of sea fish, passed between the thighs, and round the waist. The use of this is chiefly for the men. The ornaments worn by men are necklaces, made of the fruit of the tree, and various sweet-smelling flowers, the name *katulo*. Others are composed of shells, bones of birds, shark's teeth, &c. by being looped upon the breast; rings of shells on the fingers; or joined together into the wrists. The lobes of the ears, and frequently only one, are perforated with holes, in which they wear cylindrical ornaments about 2 inches long. They bathe in the sea, being sensible that salt water hurts the skin when they bathe in the sea, they compare fresh water poured over them to wash. Those of superior rank use cocoa-nut oil, improves the appearance of the skin. The matting their cloth is wholly confined to the women; as is also that of their which are esteemed both for their texture and for many other articles of less note; by which they make vast numbers, and furnish with small beads; all finished with neatness and taste. The labours of the men are laborious and extensive. Agriculture, war, boat-building, fishing, and other that relate to navigation, are the objects of their care. Boats and fruits being their principal business, they pay constant attention to agriculture; they have brought to great perfection, and the planters and gardeners they observe with care, and in the rows every way respectable. The cocoa-nut and bread-fruit are scattered about without any care, and are not treasured after they have attained a height. The houses of the lower people are hut, and very small; those of the nobles are larger and more comfortable. The houses of one of a middling size are about 20 feet long, 10 broad, and 12 high. The house is, by raising, a thatched roof, supported by posts. The floor is raised with earth, and covered with strong thick matting, and very clean. A thick strong mat, about 3 feet wide, is cut into a semicircle, and set upon the floor, in shape resembling a fender, in which the master and mistress sit to sleep in. The rest upon the floor, the unmarried men and women sit apart. If the family be large, there are its adjoining, to which the servants retire at night; so that privacy is much observed. The mats they wear in the day serve for their

covering in the night. Their whole furniture consists of a bowl or two, in which they make kava; a few gourds; cocoa nut shells; and some small wooden stools, which serve them for pillows. They display much ingenuity in building and navigating their canoes. The only tools, that they use to construct them, which are very dexterously made, are hatchets, or rather thick axes, of a smooth black stone that abounds at Tootoa; augers, made of shark's teeth, fixed on small handles, and rasps of a rough skin of a fish, fastened on flat pieces of wood, thinner on one side, with handles. The cordage is made from the fibres of the cocoa-nut husk, which, though above 9 or 10 inches long, they split about the size of a quill, to any length, and roll it up in balls, from which the larger ropes are made by twisting several of these together. The lines that they fish with are as strong and even as the best cores we make. Their other fishing implements are large and small hooks made of pearl shell. Their weapons are clubs of different sorts, spears, and darts. They have also bows and arrows, for shooting birds. The clubs are about two feet long, but only 4 or 5 inches high, and near 4 broad, bending downward by the middle, with 4 strong legs, and circular feet; the whole made of one piece of black or brown wood, neatly polished, and sometimes inlaid with bits of ivory. Yams, plantain, bread-fruit, and coconuts, compose the greater part of their vegetable diet. Of their animal food, the chief articles are, hog, fowls, fish, and shell fish; the lower people eat rats. Their food is generally dressed by boiling, and they have the art of making, from different kinds of fruit, several dishes, which Captain Cook's people esteemed very good. When food is served up to the chiefs, it is commonly laid up in green plantain leaves. The women eat with the men; but there are certain ranks amongst them that can neither eat nor drink together. They seem to have no set time for meals. They go to bed as soon as it is dark, and rise with the dawn. Their diversions are chiefly singing, dancing, and music. The dancing of the men has a thousand different motions with the hands, performed with an ease and grace not to be described but by those who have seen them. Most of the men satisfy themselves with one wife. The chiefs, however, have commonly several, though only to be looked upon as the mistresses of the family. When any person of rank dies, his body is washed and decorated by women, appointed on the occasion; who, by their customs, must not touch any dead with their hands, for many months afterwards; and the length of the time they use this practice, is the greater in proportion to the rank of the chief whom they had washed. The concern of their people for the dead is extraordinary. They beat their teeth with stones, fix a shark's tooth into the head until the blood flows to the eyes, and thrust a spear into the inner part of the thigh, into their sides below the armpits, and through the cheeks into the mouth. But these painful operations are only practised on the death of those most nearly connected. Their long and general mourning proves, that they consider death as a very great evil. And this is confirmed by a very odd custom which they practise to avoid

It. They suppose that the Deity will accept of the little finger, as a sort of sacrifice to procure the recovery of their health. They cut it off with one of their stone hatchets. There was scarcely one among ten of them who was not thus mutilated. The inferior people also cut off a joint of the little finger on account of the sickness of the chiefs to whom they belong. They seem to have no idea of future punishment. They believe, however, that they are justly punished upon earth; and therefore use every method to render their divinities propitious. The Supreme Author of all things they call *Kallafootonga*; who, they say, is a female residing in the sky, and directing all the changes of the weather. They believe that when she is angry with them, the productions of the earth are blasted by lightning, &c. and that they themselves are afflicted with sickness and death, as well as their hogs and other animals. They also admit a plurality of deities, though all inferior to *Kallafootonga*. They call *Isi*, or the living principle, *Otooa*; i. e. a divinity or invisible being. The power of the king is unlimited, and the lives and properties of the subjects are at his disposal. The lower ranks of people have no property, nor safety for their persons, but are at the will of their chiefs. When any one wants to speak with the king, he advances and sits down before him with his legs across; a posture to which they are so much accustomed, that any other mode of sitting is disagreeable to them. To speak to the king standing would be accounted a mark of rudeness. Though some of the chiefs may vie with the king in point of possessions, they fall very short in rank, and in certain marks of respect. It is a particular privilege annexed to his sovereignty, not to be punctured nor circumcised, as all his subjects are. Whenever he walks out, every one he meets must sit down till he has passed. The person who is to pay obedience squats down before the chief, and bows his head to the sole of his foot; which, when he sits, is so placed that it cannot be easily come at; and having tapped or touched it with the under and upper side of the fingers of both hands, he retires. The hands, after this application to the chief's feet, until they be washed, must not touch any kind of food. While in this state, they are called *taboo rama*, q. d. *forbidden hands*. Their great men are fond of having women sit beside them all night, and beat on different parts of their body until they sleep; after which they relax a little of their labour, unless they appear likely to awake; in which case they redouble their drumming until they are again fast asleep. These islands lie between 170° and 180° Lon. W. and between 26° and 23° Lat. S.

(1.) \* FRIENDSHIP. *n. f.* [*friendship*, Dut.]

1. The state of minds united by mutual benevolence; amity.—There is little *friendship* in the world, and least of all between equals, which was wont to be magnified: that that is, is between superior and inferior, whose fortunes may comprehend the one the other. *Bacon*.—He lived rather in a fair intelligence than any *friendship* with the favourites. *Clarendon*. 2. Highest degree of intimacy.—

My sons, let your unseemly discord cease,  
If not in *friendship*, live at least in peace. *Dryd.*

3. Favour; personal kindness.—

His *friendships*, still to few consist  
Were always of the middling kind.  
—Raw captains are usually sent only  
*friendship*, and not chosen by suffices  
on Ireland. 4. Assistance; help.—

Gracious, my lord, hard by here  
Some *friendship* will it lend you 'gai  
pest;

Repose you there. *Shak*

5. Conformity; affinity; correspondence to unite.—We know those colour a *friendship* with each other, and tho incompatible, in mixing together tho which we would make trial. *Dryd. D*

(2.) FRIENDSHIP, (§ 1. *Def.* 1.) may a mutual attachment between two per not merely from the general principle lence, from emotions of gratitude fo ceived, from views of interest, from in fection or animal passion, but from entertained by each of them, that the dued with many amiable and estimab Among the ancients, friendship was highest veneration. Even the charac heroes were not reckoned complete The poets therefore never failed to ori greatest characters with this virtue. CHILLES is represented to have had h ÆNEAS his *Achates*, ORESTES his / Nor was their history deficient in exhib instances to what a pitch of heroic n friendship was sometimes carried in re friendships of DAMON and PYTHIAS, us and ARISTOGITON, &c. are univer (See these articles.) Some modern at ticularly Voltaire, and even the late Soa.ze Jenyns, Esq; have alleged it as among the moral precepts of Christiani no-where expressly enjoin private fri Christian Duty. But in answer to been justly observed, that friendship accident of Society, a consequence of o as moral and social beings, than a re regulated and defined by institutions “ the precepts of Christianity, thou not directly enjoin it, yet have a dire to form those exalted characters, w capable of true friendship, by incul virtues, which give rise to this gen: ment, and are absolutely necessary it.” Besides, the Scriptures afford ample of friendship, carried to the u of perfection of which human nature in the instance of David and Jonath: JONATHAN'S disinterested attachmen litical rival is unparalleled in the ann: kind. Nor is there wanting in the l ven a still higher example. Mr W. in a note on his *Translation of Cicero's* ly observes, that “ the Divine Founder c tian religion, as well by his own exa the spirit of his moral doctrine, has i couraged but consecrated FRIENDSHIP sentiments, (he says) which Christ en Lazarus, were a peculiar species of benevolence, with which he was actual all mankind.”—And that emphatical

“ciple whom Jesus loved,” repeatedly ap-  
the apostle John, affords a decisive evi-  
the justice of Mr Melmoth’s remark on  
“altruism” displayed by our Saviour to  
his peculiar friends; and which Mr Mel-  
s finely illustrated in the note, which  
here only partially quoted.

FA, a town of Portugal, in the province  
of Alentejo, 12 miles SW. of Oporto.

FIESSACH, a town of Brandenburg, in  
the Mark, 28 miles NW. of Berlin.

FIESSACH, a town of Carinthia, in the  
province of Salzburg, with a strong fort;  
taken by the French, in March 1797. It is seated  
on a mountain, 56 miles SE. of Salzburg. Lon-  
g. Lat. 47. 12. N.

FIESSACH, a town of Germany, in Stiria, 9  
miles SE. of Windischgratz.

FIESSINGEN. See FREYSINGEN, N° 1.

FIESSINGEN, FREISINGEN, FREYSINGEN,  
INGEN, a town of Bavaria, capital of the  
county (N° 1.) seated on a mountain, near the  
border of the Isar. It was destroyed in 1116,  
in the reign of Henry II, D. of Bavaria. It has an elegant  
cathedral and episcopal palace; and lies 17 miles  
from Munich, and 18 SW. of Landshut. Lon-  
g. Lat. 48. 20 N.

If all the world

Should in a pet of temperance feed on pulse,  
Drink the clear stream, and nothing wear but

*frieze*,  
Th’ All-giver would be unthank’d. Milton.

‘The captive Germans of gigantick size,  
Are rank’d in order, and are clad in *frieze*.

*Dryd. Pref.*  
—He could no more live without his *frieze* coat  
than without his skin. *Guarlian*.—

See how the double nation lies,  
Like a rich coat with skirts of *frieze*;

As if a man, in making posies,  
Should bundle thistles up with roses. *Swift*.

(2.) \* FRIEZE. FRIZE. *n. f.* [In architecture.]  
A large flat member which separates the architrave  
from the cornice; of which there are as many  
kinds as there are orders of columns. *Harr*.—

No jutting *frieze*,  
Buttrick, nor coigne of vantage, but this bird  
Hath made his pendant bed, and procreant  
cradle. *Shakefp.*

Nor did their want  
Cornice or *frieze* with bossy sculptures grav’n;  
The roof was tressed gold. *Milt. Par. Loll.*

—Polydore designed admirably well, as to the  
practical part, having a particular genius for  
*friezes*. *Dryd. Duple*.

\* FRIEZED. *adj.* [from *frieze*.] Shagged or  
napped with *frieze*.

\* FRIEZELIKE. *adj.* [*frieze* and *like*.] Resem-  
bling a *frieze*.—I have seen the figure of Thalia,  
the comick muse, sometimes with an entire head-  
piece and a little *frieze-like* tower, running round  
the edges of the face, and sometimes with a mask  
for the face only. *Milly on Italy*.

(1.) \* FRIGAT. *n. f.* [*frigata*, French; *frigata*,  
Italian.] 1. A small ship. Ships under 50 guns  
are generally termed *frigates*.—The treasure they  
fought for was, in their view, embezzled in cer-  
tain *frigates*. *Raleigh’s Apology*.—

On high rais’d decks the haughty Belgians  
ride,  
Beneath whose shades our humble *frigates* glide.  
*Dryden*.

2. Any small vessel on the water.—  
Behold the water work and play  
About her little *frigate*, therein making way.  
*Spencer’s Fairy Queen*.

(2.) FRIGATES are usually of two decks, light  
built, designed for swift sailing. When heavier,  
with but one deck, they are called *light frigates*.  
Those mounting from 20 to 44 guns are esteemed  
excellent cruisers. The name was formerly known  
only in the Mediterranean, and applied to a long  
kind of vessel navigated in that sea with sails and  
oars. The English were the first who appeared  
on the ocean with these ships, equipped for war  
as well as for commerce.

FRIGATE-BUILT, *adj.* denotes the disposition  
of the decks of such merchant ships as have a de-  
cent of 4 or 5 steps from the quarter deck and  
fore-castle into the waist; in consequence of which  
those whole decks are on a continued line for the  
whole length of the ship, which are called GAL-  
LEY-BUILT.

FRIGATOON, a Venetian vessel, commonly  
used in the Adriatic, built with a single deck.

and without any fore-mast, having only a main mast, mizen-mast, and bow-sprit.

\* FRIGEFACION. *n. f.* [*frigus* and *facio*, Latin.] The act of making cold.

FRIGGA. See FREA.

(1.) \* FRIGIT. *n. f.* [from the verb.] A sudden terror.—

You, if your goodness does not plead my cause,

May think I broke all hospitable laws,  
To bear you from your palace-yard by might,  
And put your noble person in a fright. *Dryd.*

(2.) FRIGHT, or TERROR. See FEAR. Sudden fear is frequently productive of very remarkable effects upon the human system. Of this many instances occur in medical writings.—In general, the effects of terror are a contraction of the small vessels and a repulsion of the blood in the large and internal ones: Hence proceed general oppression, trembling, and irregularity in the motions of the heart; while the lungs are also overcharged with blood. Frights often occasion incurable diseases, as epilepsy, stupor, madness, &c. In this way they have killed many, by the agitation into which they have thrown the spirits. We have also accounts of persons absolutely killed by terror, when in perfect health at the time of receiving the shock. Persons ordered to be led to execution, but with private orders to be relieved on the scaffold, have expired at the block without a wound.—Out of many instances of the fatal effects of fear, the following is selected as one of the most singular:—"George Grochantzy, a Poland, who had enlisted as a soldier in the service of the king of Prussia, deserted during the last war. A small party was sent in pursuit of him, and, when he least expected it, surprised him singing and dancing among a company of peasants, in an inn. This event so sudden and so dreadful in its consequences, struck him in such a manner, that, giving a great cry, he became altogether stupid and insensible, and was seized without the least resistance. They carried him a way to Glocan, where he was brought before the council of war, and received sentence as a deserter. He suffered himself to be led and disposed of, at the will of those about him, without uttering a word, or giving the least sign that he knew what had happened or would be done to him. He remained immovable as a stone wherever he was placed, and was wholly passive with respect to all that was done to him or about him. During all the time that he was in our custody, he neither eat, nor drank, nor slept, nor had any evacuation. Some were commiserated, and sought to relieve him; after that he was visited by the officers of his corps, and by those soldiers who were attached to the same troop, with offers of food, and of various kinds of relief. But all these offers were rejected; and he remained as before. It was at length determined that he should be executed; and he was accordingly led to the gallows. He was led as if he were insensible to pain, and he was executed without any other signs of life than that it was known to be his. He was buried in the same manner as the other prisoners of war, and his death was reported to the king, who ordered that his body should be buried with military honours, and that his name should be mentioned with respect in the army, as a man who had sacrificed himself for his country, and who had died in the most heroic manner."

whether he would. He received his life the same insensibility that he had shewn on occasions; he remained fixed and immovable, his eyes turned wildly here and there, making cognizance of any object, and the muscles of his face were fallen and fixed like those of a dead body. Being left to himself, he passed in this condition, without eating, drinking, or any evacuation, and died on the 20th day after he had been some times heard to fetch deep breath.

once he rushed with great violence on the wall, who had a mug of liquor in his hand, and threw it from him, and having drunk the liquor, the great eagerness let the mug drop to the ground. When a person is affected with terror, the principal endeavour should be to restore him to his due order, to promote peace, and to allay the agitation of the patient.

For these purposes he may drink a little warm chamomile tea, &c. the feet and legs may be put into warm water, the legs rubbed, and a little chamomile tea repeated every six or eight hours, and when the skin is warm, and there is a profuse perspiration, sleep may be promoted by gentle opiate. Yet frights have been cured, as well as to cause diseases. Mr Eustachius agues, gout, and sciatica, thus cured among the ludicrous effects of fear, the following instance, quoted from a French author, Andrews in his volume of Anecdotes, is what is most remarkable.

On what slight occasions this passion may be excited in a very high degree, in persons the most unlikely to enter into such a state of mind, the following instance is a proof.

"Charles Gustavus (the successor of Charles X. of Sweden) was besieging Prague, when he sent a messenger to demand admittance into the city; and being allowed entrance, he went in a way of amusing the king, to devour a piece of bread of 100 weight in his presence. There was a Count of Koenigsmarc, who stood by the king's side, who, soldier as he was, had not got over the prejudices of his childhood, hinted to the king that the peasant ought to be executed for his crime. 'Sir, said the king, with a smile, if your majesty will but let the gentleman take off his sword and his pistol, I will let him immediately before I begin the siege.' The Count, who had, at the head of a regiment of Swedes, performed wonders at the battle of Lutzen, and who was looked upon as one of the greatest heroes of the age, could not stand this insult, especially as it was accompanied by a great deal of preternatural expansion of the Count's face. With out uttering a word, he suddenly turned round, ran to the Count, and thought not himself safe, till he arrived at his quarters; where he found the Count locked up securely, by order of the king, and that he was not to be seen or heard of any more. The Count was not long after dead, and his death was reported to the king, who ordered that his body should be buried with military honours, and that his name should be mentioned with respect in the army, as a man who had sacrificed himself for his country, and who had died in the most heroic manner."

"Charles Gustavus (the successor of Charles X. of Sweden) was besieging Prague, when he sent a messenger to demand admittance into the city; and being allowed entrance, he went in a way of amusing the king, to devour a piece of bread of 100 weight in his presence. There was a Count of Koenigsmarc, who stood by the king's side, who, soldier as he was, had not got over the prejudices of his childhood, hinted to the king that the peasant ought to be executed for his crime. 'Sir, said the king, with a smile, if your majesty will but let the gentleman take off his sword and his pistol, I will let him immediately before I begin the siege.' The Count, who had, at the head of a regiment of Swedes, performed wonders at the battle of Lutzen, and who was looked upon as one of the greatest heroes of the age, could not stand this insult, especially as it was accompanied by a great deal of preternatural expansion of the Count's face. With out uttering a word, he suddenly turned round, ran to the Count, and thought not himself safe, till he arrived at his quarters; where he found the Count locked up securely, by order of the king, and that he was not to be seen or heard of any more. The Count was not long after dead, and his death was reported to the king, who ordered that his body should be buried with military honours, and that his name should be mentioned with respect in the army, as a man who had sacrificed himself for his country, and who had died in the most heroic manner."

On what slight occasions this passion may be excited in a very high degree, in persons the most unlikely to enter into such a state of mind, the following instance is a proof.

"Charles Gustavus (the successor of Charles X. of Sweden) was besieging Prague, when he sent a messenger to demand admittance into the city; and being allowed entrance, he went in a way of amusing the king, to devour a piece of bread of 100 weight in his presence. ties. Yet there are evils which we ought those that arise from ourselves, or which our power to prevent, it would be madness, and audacity not to guard against. evils, which we cannot prevent, or could without a breach of duty, it is manly and praiseworthy to bear with fortitude. Inferior danger is not fortitude, no more than facility of feeling pain can be called pain to expose ourselves unnecessarily to worse than folly, and very blameable preference. It is commonly called *fool-hardiness*; such a degree of hardness or boldness as fools are capable of. See FORTITUDE. **FRIGHT**. *v. a.* [*frighian*, Sax.] To terrify with fear; to shock with fear; to dismay. This was in the old authors frequently written *affright*, as it is always in the Scripture.—

The herds  
strongly clam'rous in the *frighted* fields.  
*Shakesp. Henry IV.*

Such a numerous host  
sat in silence through the *frighted* deep,  
slain upon ruin, rout on rout,  
their eyes were confounded. *Milton.*  
public watch, and of a sword the flame  
savage, all approach far off to *fright*,  
said all passage to the tree of life. *Milt.*  
peril or danger can *fright* a brave spirit,  
vigilance guarded,  
true reward,  
be in my full springs a merit. *Dryd. Albion.*  
and *frights* itself with any thing reflected  
at, and at a distance: things thus offered  
to mind, carry the show of nothing but  
terror.—

see glaring off with many a broadened'd  
eye, the nations. *Thomson's Autumn.*

**RIGHTEN**. *v. a.* To terrify; to shock  
—  
rugged bear's, or spotted lynx's brood,  
in the valleys and in the wood. *Pope.*  
**THRIFFUL**. *adj.* [from *fright*.] 1. Ter-  
rified; full of terror.—

My and wayward was thy infancy,  
holidays *frightful*, desperate, wild, and  
loud. *Shakesp.*  
Without aid you durst not undertake  
*frightful* passage o'er the Stygian lake.  
*Dryden's En.*

word among women for any thing un-

**THRIFFULLY**. *adv.* [from *frightful*.] 1.  
; horribly.—This will make a prodigi-  
ous of water, and looks *frightfully* to the  
eye; 'tis huge and great. *Burnet.* 2. Dif-  
ferently; not beautifully. A woman's word.—  
to her glass; and Betty, pray,  
to look *frightfully* to-day? *Swift.*

**THRIFFULNESS**. *n. f.* [from *frightful*.]  
; of impressing terror.

**RIGID**. *adj.* [*frigidus*, Lat.] 1. Cold;  
; harsh. In this sense it is seldom used  
;—In the torrid zone the heat would  
be intolerable, and in the *frigid* zones the

cold would have destroyed both animals and ve-  
getables. *Cbeys's Phil. Princ.* 2. Wanting warmth  
of affection. 3. Impotent without warmth of bo-  
dy. 4. Dull; without fire of fancy.—

If justice Phillip's costive head  
Some *frigid* rhymes disbursts,  
They shall like Persian tales be read,  
And glad both babes and nurses. *Swift.*  
(2.) FRIGID ZONE. See ZONE.

(1.) \* FRIGIDITY. *n. f.* [*frigiditas*, Lat.] 1.  
Coldness; want of warmth. 2. Dullness; want  
of intellectual fire.—Driving at these as at the  
highest elegancies, which are but the *frigidities* of  
wit. *Brown's Vulg. Err.*—Of the two extremes,  
one would sooner pardon phrenzy than *frigidity*.  
*Pope.* 3. Want of corporeal warmth.—The boil-  
ing blood of youth hinders that serenity which is  
necessary to serve intemperance; and the *frigidity* of  
decrepit age is as much its enemy, by reason of its  
dulling moisture. *Glanville's Sermons.* 4. Coldness  
of affection.

(2.) FRIGIDITY. See IMPOTENCE.  
\* FRIGIDLY. *adv.* [from *frigidly*.] Coldly;  
dully; without affection.

\* FRIGIDNESS. *n. f.* [from *frigid*.] Coldness;  
dullness; want of affection.

FRIGIDO, a river of Italy, in the now restored  
Cisalpine republic, which runs through the de-  
partment of the Apennines, (see devout duchy of  
Modena,) and falls into the Gulf of Genoa, near  
Massa.

FRIGILIANA, a town of Spain, in Granada,  
13 miles E. of Velez Malaga.

FRIGNANO, a territory of the Cisalpine re-  
public, in the dept. of Parma, and side-vant duchy  
of Modena, comprehending Acquara, Pemanog  
Gara, Ronca, Sestola, and some other small towns.

(1.) \* FRIGORIFICK. *adj.* [*frigorifickus*, *frigo*,  
and *frigo*, Lat.] Causing cold. A word used in  
science.—*Frigorifick* atoms or particles mean those  
nitrous salts which float in the air in cold weather,  
and occasion freezing. *Boyer.*

(2.) FRIGORIFIC PARTICLES, in philosophy,  
small particles of matter, which, according to Gal-  
lenus and others, being actually and essentially  
cold and penetrating other bodies, produce in  
them that quality which we call cold. See COLD.

FRIKEN, a lake of Sweden in the province of  
Warmland, 40 miles long but narrow.

FRILAZIN, a class or rank of people among  
the Anglo-Saxons, consisting of those who had  
been slaves, but had obtained their liberty, either  
by purchase or otherwise. Though these were  
in reality free men, they were not considered as  
of the same rank and dignity with those who had  
been born free, but were still in a more depen-  
dent condition, either on their former masters or  
on some new patrons. This custom the Anglo-  
Saxons seem to have derived from their ancestors  
in Germany, among whom those who had been  
made free did not differ much in point of liberty or  
importance from those who continued in servitude.  
This distinction, between those who have been  
born free and those who enjoy freedom by des-  
cent from a long race of free men, still prevails  
in many parts of Germany; and particularly in  
the original seats of the Anglo-Saxons. Many of

the inhabitants of towns and cities in England, in that period, seem to have been of this class of men, who were in a kind of middle state between slaves and freemen.

\* To FRILL. *v. a.* [*frilleux*, French.] To quake or shiver with cold. Used of a hawk; as the hawk *frills*. *Diſt.*

FRIMAIRE, [Fr. *i. e.* the sleet or frost month, from *frimas*, hoar frost.] The 3d month in the new French calendar. It begins the 21st of Nov. and ends the 20th of Dec.

\* FRINGE. *n. s.* [*friggio*, Italian; *frange*, Fr.] Ornamental appendages added to dress or furniture. It is in conversation used of loose and separate threads.—Those offices and dignities were but the facings or *fringes* of his greatness. *Wotton*.  
The golden *fringe* ev'n set the ground on flame,  
And drew a precious trail. *Dryden*.

—The shadows of all bodies, in this light, were bordered with three parallel *fringes*, or bands of coloured light, whereof that which was contiguous to the shadow was broadest and most luminous; and that which was remotest from it was narrowest, and so faint as not easily to be visible. *Newton's Opt.*

\* To FRINGE. *v. a.* [from the noun.] To adorn with fringes; to decorate with ornamental appendages.—Either side of the bank, *fringed* with most beautiful trees, resisted the sun's darts. *Sidney*.—  
Of silver wings he took a shining pair,  
*Fringed* with gold. *Fairfax*.

Here, by the sacred bramble ting'd,  
My petticoat is doubly *fring'd*. *Swift*.

FRINGILLA, in ornithology, a genus belonging to the order of passerines. The bill is conical, straight, and sharp pointed. See *Plate CLVIII*. There are no less than 108 species comprehended under this genus, distinguished principally by varieties in their colour. The following are the most noted:

1. FRINGILLA AMANDAVA, the AMADUVADE BIRD, is about the size of a wren. The colour of the bill is of a dull red; all the upper parts are brown, with a mixture of red; the under the same, but paler, the middle of the belly darkest; all the feathers of the upper wing coverts, breast, and sides, have a spot of white at the tip; the quills are of a grey brown; the tail is black; and the legs are of a pale yellowish white. It inhabits Bengal, Java, Malacca, and other parts of Asia; and feeds on millet.

2. FRINGILLA CÆLEBS, the CHAFFINCH, has black limbs, and the wings white on both sides; the 3 first feathers of the tail are without spots, but the 2 chief ones are obliquely spotted. It has its name from its delighting in chaff. This species entertains us agreeably with its song very early in the year, but towards the end of summer assumes a chirping note: both sexes continue with us the whole year. In Sweden, the females quit that country in September, migrate in flocks into Holland, leaving their mates behind; and return in spring. In Hampshire Mr White has observed something of this kind; vast flocks of females with scarcely any males among them. Their nest is almost as elegantly constructed as that of the goldfinch, (N. 5.) and of much the same materials, the inside has the addition of some large fea-

thers. They lay 4 or 5 eggs of a dull whitish tinged and spotted with deep purple. caught in plenty in flight time; but the rarely found, though they build in the trees of all sorts. They make their nest of wool, or any thing they can gather have young ones thrice a year. They bred from the nest, being not apt to leave the bird's song, nor to whistle; so that it leave the old ones to bring them up.

finches are generally allowed to be the best for length and variety of song, ending in very pretty notes. They are hardy, and almost upon any seeds. They are seldom diseased, but become very lousy, if not with wine two or three times a month.

3. FRINGILLA CANARIA, the CANARY, hath a whitish body and bill, with the feathers of the wings and tail greenish. See § 3—6. It was originally peculiar to the island to which it owes its name. See CANARY. Though the ancients celebrate the island for its multitude of birds, they have mentioned any in particular. It is probable that our species was not introduced in till after the second discovery of the island 1402. Belon, who wrote in 1555, is the first who speaks to these birds: Gesner is the first who mentions them; and Aldrovand speaks of their rarities, observing that they were very difficult to be obtained, on account of the difficulty attending the bringing them from so distant a country, and that they were chased by people of rank alone. They were first found on the same spot to which we are indebted for the production of these characters; but they are now become so numerous in our own country, that we are under no necessity of crossing the ocean for them. The male will prove fertile with the female of the same species (N. 12. finch (N. 5.); but in this case the male is the most part, proves sterile: the pair best when the hen is the Canary, and the opposite species. She will also prove fertile with the linnet, yellow hammer, chaffin, even the house sparrow; but the male will not assimilate with the female of any other species; the hen must be always of the same species, and the young generally prove Canaries are said by some to live 15 years, 18.

4. FRINGILLA CANNABINA, the GREY FINCH, is rather less than the common finch; has a blood-coloured spot on the forehead; the breast of the male is tinged with red. It is a common fraud in the city of London, when a male bird is distinguished from the female by a red breast, as in this species the feathers, so that the deceit is easily discovered. These birds are frequent in the country; and are often taken in flight in London. They are familiar, and cheerfully answer the call of their captors, a few minutes after they are caught.

5. FRINGILLA CARDUELIS, the GOLDFINCH, with the quill feathers red forwards, and the rest without any spots; the two outer feathers of the tail are white in the middle, as the rest are at the tip. The young bird before it moults is greenish; and hence it is termed by the bird-

FRINGILLA.

FULICA.

Figure 1: Scatter plot of Score vs Frequency

This figure illustrates the distribution of scores and their corresponding frequencies. The x-axis represents the score, and the y-axis represents the frequency. The data points are scattered, showing a general trend where higher scores correspond to higher frequencies, though there is significant variability.

The plot shows a positive correlation between the score and the frequency, with a dense cluster of points in the lower-left quadrant (low score, low frequency) and a more sparse distribution of points extending towards the upper-right quadrant (high score, high frequency).

There are several points at zero frequency for various scores, and a few points at zero score for various frequencies, indicating that some scores or frequencies are not observed or are very rare in the dataset.

The overall distribution appears to be non-uniform, with a higher density of observations at lower scores and frequencies, suggesting a right-skewed distribution of both variables.

The scatter plot provides a visual representation of the relationship between the two variables, highlighting the concentration of data points and the overall trend of the data.

The data points are scattered across the plot, with a notable concentration between scores of 20 and 60 and frequencies of 20 and 60. There are also several points at zero frequency for various scores, and a few points at zero score for various frequencies.

The plot shows a positive correlation between the score and the frequency, with a dense cluster of points in the lower-left quadrant (low score, low frequency) and a more sparse distribution of points extending towards the upper-right quadrant (high score, high frequency).

There are several points at zero frequency for various scores, and a few points at zero score for various frequencies, indicating that some scores or frequencies are not observed or are very rare in the dataset.

7. There is a variety of this species, the London bird-catchers a *cheverel*, manner in which it concludes its jerk. distinguished from the common sort by a streak, or by two, sometimes three, white streaks on the throat. Their note is very sweet, and much esteemed on that account, as well as their great docility. Towards winter, they are in flocks; and feed on various seeds, and those of the thistle. They are fond of building, and often build in apple or pear trees. They are very elegantly formed of fine moss, and bents, on the outside; lined with hair and hair, and then with the goslin or hen fallow. The hen lays 5 white eggs, with deep purple spots on the upper end: they brood in the year. When kept in cages they are commonly fed much on hemp-seed, which they eat freely, but which is said to grow black, and lose both their red and yellow. Goldfinches often attain the age of 2 years. They abound throughout Europe; and are met with in Asia and Africa, but less com-

8. FRINGILLA DOMESTICA, the SPARROW, has the feathers of the wings and tail brown, variegated with grey and black, and a streak on the wings. These birds are very voracious, and have 3 broods in the year. They are every where common about our houses; they build in every place they can find; under the roof, corner of the house, or in holes of the wall. They make a nest of mud; generally a little hay ill put together, lined well with feathers; where they lay 4 or 5 of a reddish white colour spotted with black. They sometimes build in trees, in which they take more pains with the nest; and of the martins from theirs, to save the labour of constructing one of their own. Sparrows frequenting only habitations and parts may be said to be chiefly fed from human industry; for in spite of every precaution, they partake with the pigeons, poultry, &c. of what is thrown out to them, grain of all kinds, &c. and agreeable to their taste, though they are so familiar from the kitchen of most kinds. They are very crafty, and do not so easily fall into a snare as many others. In autumn they collect into flocks, and roost in numerous neighbouring trees, when they may be taken in nets, or caught in great numbers at a bat fowling-net. The flesh is accounted for by many. The sparrow has no song, and its chirp or two frequently repeated. This bird is found every where throughout Europe; and is met with in Egypt, Senegal, Syria, and the parts of Africa and Asia.

9. FRINGILLA LINARIA, the LESSER RED-POLE, is about the size of the greater red-pole; (see N 11.) It has a rich spot of purplish red on the breast; the breast is of the same colour, but the female is less lively in colour; and the spot on the breast; and the spot on the breast is of a saffron hue. This species is common in England; and lays 4 or 5 eggs of a bluish green, sprinkled near the blunt end with blackish spots. Mr Pennant mentions an in-

stance of this bird being so tenacious of her nest, as to suffer herself to be taken off by the hand, and when released she would not forsake it. This species is known about London by the name of the *stone red pole*. Whole flocks of them, mixed with the liskin, (see N 12.) frequent places where alders grow, for the sake of picking the catkins: they generally hang like the titmouse, with the back downwards; and in this state are so intent on their work, that they may be entangled by dozens, by means of a twig smeared with birdlime fastened to the end of a long pole. This species seems to be plentiful throughout Europe, from the extreme parts of Russia to Italy. It is very common in Greenland, and was also met with by our late voyagers at Oonalashka. In America it is likewise well known. Hence it seems to be a bird common to all the northern parts of the globe.

8. FRINGILLA LINOTA, the LINNET, has the bottom of the breast of a fine blood-red, which heightens as the spring advances. These birds are much esteemed for their song. They feed on seeds of different kinds, which they peel before they eat; the seed of the LINUM or flax is their favourite food; from whence the name. They breed among furze and white thorn: the outside of their nests is made with moss and bents, and lined with wool and hair. They lay 5 whitish eggs, spotted like those of the goldfinch.

9. FRINGILLA MONTIFRINGILLA, the BRANBLING, has a yellow bill tipped with black; the head, hind part of the neck, and back, are black; the throat, fore part of the neck, and breast, pale rufous orange; lower part of the breast and belly white; the quill feathers brown, with yellowish edges; the tail a little forked; the legs grey. This species migrates into England at certain seasons, but does not build. It is frequently found among chaffinches, and sometimes comes in vast flocks. They are also seen at certain times in vast clouds in France, insomuch that the ground has been quite covered with their dung, and more than 600 dozen were killed each night. They eat various seeds, but are particularly fond of beech mast. Their flesh is eaten by many, but is apt to prove bitter. They are said to breed about Luxemburg, making their nests on the tall fir trees, composed of long moss without, and lined with wool and feathers within: the hen lays 4 or 5 eggs, yellowish, and spotted; and the young are fledged at the end of May. This species is found more or less throughout Europe; and is common in the pine forests of Russia and Siberia, but those of the last are darker in colour and less in size.

10. FRINGILLA MONTIUM, the TWITE, is about the size of a linnet. It has the feathers of the upper part of the body dusky; those on the head edged with ash-colour, the others with brownish red; the rump is pale crimson; the wings and tail are dusky, the tips of the greater coverts and secondaries whitish; the legs pale brown. The female wants the red mark on the rump. Twites are taken in the flight season near London, along with linnets. The name seems to have been taken from their twittering note. The bird-catchers tell at some distance whether there be any twites among linnets, merely from this. The twite is

supposed to breed in the more northern parts of Britain.

11. FRINGILLA SENEGALA, the SENEGAL FINCH, is a very little bigger than the wren. The bill is reddish, edged all round with brown; on the ridge of the upper, and beneath the under mandible, is a line of brown quite to the tip: the upper parts of the body are of a vinaceous red colour; the lower parts, with the thighs and under tail coverts, of a greenish brown; the hind part of the head and neck, the back, scapulars, and wing coverts, are brown; the tail is black; and the legs are pale grey. It inhabits Bengal, and feeds on millet. The natives catch them by supporting a large hollowed gourd, bottom uppermost, on a stick, with a string leading to some covered place, and stretching under it some millet; the little birds, hastening in numbers to pick it up, are caught beneath the trap, by pulling away the stick. The females sing nearly as well as the males. They are familiar, and when once used to the climate, frequently live 5 or 6 years in a cage. They have been bred in Holland.

12. FRINGILLA SPINUS, the SISKIN, has the prime feathers of the wings yellow in the middle, and the four first chief tail feathers without spots; but they are yellow at the base, and black at the points. Mr Willoughby says, that this is a song bird; and that in Suffex it is called the *barley bird*, because it comes to them in barley seed time. It visits these islands at very uncertain times, like the *grose-beak*, &c. It is to be met with in the bird shops in London; and being rather scarce, sells at a higher price than the merit of its song deserves: it is known there by the name of the *aberdivine*. It is very tame and docile; and is often kept and paired with the canary bird, with which it breeds freely. Dr Kramer informs us, that this bird conceals its nest with great art; and though there are infinite numbers of young birds in the woods on the banks of the Danube, which seem just to have taken flight, yet no one could discover it.

FRINTON, a town in Essex, near Gunfleet.

FRINWALT, a town of Brandenburg, on the Oder, 30 miles NE. of Berlin.

(1.) FRIO, a river of Spain, in Granada.

(2.) FRIO, CAPE, a promontory of Brasil, in the prov. of Rio de Janeiro. Lon. 41. 31. W. Lat. 22. 54. S.

(1.) \* FRIPPERER. *n. s.* [from *frippier*, Fr.] One who deals in old things vamped up.

(2.) FRIPPERERS, or FRIPPIERS, were a regular corporation at Paris, of an ancient standing, and made a considerable figure in that city before the revolution.

\* FRIPPERY. *n. s.* [*fripperie*, Fr. *fripporia*, Italian.] 1. The place where old cloaths are sold. — We know what belongs to a *frippery*. *Shak.* — Lurana is a *frippery* of bankrupts, who fly thither from Druma to play their after game. *Hoswell's Focal Forest.* 2. Old cloaths; cast dresses; tattered rags. —

Poor poet ape, that would be thought our chief,

Whose works are ev'n the *frippery* of wit;

From brocade is become so bold a thief,

As we, the robb'd, leave rage, and pity it.

*Ben Jonson.*

The fighting place now seascots rage

And all the tackling is a *frippery*.

— Ragfair is a place near the Tower of 1 where old cloaths and *frippery* are sold. F

FRISCHACH, a bay of the Baltic, at the mouth of the Vistula.

FRISHBACHALLEN, a mountain of 3 miles E. of Pruck.

(1.) FRISCH-HAFF, a gulf between EN Konigsberg, separated from the Baltic, by 1 NERUNO, 18 leagues long, and 2 broad, communicating with the Baltic by a narrow passage.

(2.) FRISCH-HAFF, a gulf on the coast of Pomerania, 25 miles long, from E. and 8 broad from N. to S. The Oder flows through it, at the E. end.

FRISCHLIN, Nicodemus, a learned C born at Baling in Suabia, in 1547. At the age of 20, he was made a professor in the Univ. of Tubingen. In 1580, he published an original praise of a country life, with a paraphrase of Virgil's Eclogues and Georgics, in which he made such severe remarks on some courtiers that he threatened his life. This led him to retire to a castle in Carniola, and afterwards to discontinue his German; but at last his enemies got him up in Wirtemberg castle, from whence he escaped by falling down from a great height among the rocks, and was killed on the spot. He wrote also a Latin grammar, of geometry, and many poems, comedies and tragedies.

FRISCH-NERUNG, a narrow strait of 1 league long, between the Baltic and Frisch-Haff, and hardly 2 broad.

FRISEI, } or FRISONES, an ancient  
FRISII, } of Germany, so called either  
FRISIONES, } their ardent love of freedom from the fresh and unbroken lands they occupied. Tacitus divides them, from their extent of territory into

1. FRISIONES MAJORES, situated on the banks of the Rhine and the Ems; and

2. FRISIONES MINORES, occupying the banks about the lakes lying between the channel of the Rhine.

\* FRISK. *n. s.* [from the verb.] A frolic of wanton gaiety.

\* To FRISK. *v. n.* [*frizarre*, Ital.] 1. To skip. — Put water into a glass, and with your finger, and draw it round about the lip of the glass, pressing it somewhat hard; and after doing it some few times about, it will make a fine dew. 2. The hills fell a *frisking* in the net. *L'Estrange* Whether every one hath experimented this frolicsome intrusion of some *frisking* ideas, thus importune the understanding, and hindered from being better employed, I know not. 2. To dance in frolic or gaiety. —

We are astwin'd lambs, that did *frisk* i'  
And bleat the one at the other: what we  
Was innocence for innocence; we knew not  
The doctrine of ill doing. *Shak. Wint.*

About them *frisking* play'd

All beasts of th' earth. *Milt. P.*

— A wanton heifer *frisked* up and down in the dews at ease and pleasure. *L'Estrange.* —

h the quick motions of the *frisking* tail,  
rve their fury with the rushing male.

*Dryden's Virgil.*  
ccchus thro' the conquer'd Indies rode,  
its in gambols *frisk'd* before their ho-  
t god. *Dryden.*  
o the mountains airy tops advanc'd,  
*frag* satyrs on the summits danc'd.

Those merry blades,  
/t it under Pindus' shades. *Prior.*  
its at the sound of an organ, and yet  
and *frisk* at the sound of a bagpipe.  
Buli.—

enters thus, in Borneo's isle,  
h a monkey by a wile,  
nick animal amuse;  
ace before him gloves and shoes;  
when the brute puts aukward on,  
tightly is gone:

to *frisk* or climb he tries:  
attention seize the grinning prize. *Swift.*  
KER. *n. f.* [from *frisk*.] A wanton; one  
ot or settled.—

I will wear this, and now I will wear that;  
will wear I cannot tell what:  
fashions be pleasant to me:  
an a *frisker*, all men on me look;  
ould I do but set cock on the hoop?

*Camden.*  
KINESS. *n. f.* [from *frisk*.] Gaiety;  
A low word.

KY *adj.* [*frisque*, Fr. from *frisk*.] Gay;  
low word.

INES. See FRISIL.

RT, a town of Germany, in the bishop-  
ter, 14 miles SW. of Oldenburg, and  
Münster. Lon. 24. 4. E. of Ferro.  
N.

RIT. *n. f.* [among chymists.] Ashes or  
r tried together with sand. *Ditt.*

R, or FRIR, in the glass manufacture, is  
r ingredients whereof glass is to be  
en they have been calcined or baked in a  
A salt drawn from the ashes of the plant  
tern or other plants mixed with sand or  
baked together, makes an opaque mass,  
glassine *frir*; probably from the Italian  
o fry; or because the *frir* when melted,  
amps. like fritters, called by the Italians  
rit, by the ancients, was called *ammoni-*  
*um*, sand, and *nitre*; under which  
thus described by Pliny: Fine sand  
Volturnian sea, mixed with three times  
ity of nitre, and melted, makes a mass  
*monitrum*, which being rebaked makes

. *frir*, Neri observes, is only the calx  
terials which make glass; which though  
it be melted, and glass be made, with-  
calcining them, yet it would take much  
e. This calcining, or making of *frir*, serves  
ad incorporate the materials together,  
vaporate all the superfluous humidity.  
once made, is readily fused and turned  
e. There are 3 kinds of frits: 1. The  
t, or that for crystal metal, made with  
berine and sand: 2. The ordinary frit,  
h bare ashes of pulverine or barilla, with-

out extracting the salt from them. This makes  
the ordinary white or crystal metal. 3. The frit  
for green glasses, made of common ashes, without  
any preparation. This last requires 10 or 12  
hours baking. The materials in each are to be  
finely powdered, washed, and searced; then e-  
qually mixed, and frequently stirred together in  
the melting pot. See CRYSTAL, and GLASS.

(1.) \* FRITH. *n. f.* [*fratum*, Lat.] 1. A strait  
of the sea where the water being confined is  
rough.—

What desp'rate madman then would venture  
o'er  
The *frith*, or haul his cables from the shore?  
*Dryden's Virgil.*

Batavian fleets  
Defraud us of the glittering tinny swarms  
That heave our *friths*, and crowd upon our  
shores. *Tbomson.*

2. A kind of net. I know not whether this sense  
be now retained.—The Wear is a *frith*, reaching  
through the Ose, from the land to low water  
mark, and having in it a bunt or cod with an eye  
hook; where the fish entering, upon their coming  
back with the ebb, are isopt from issuing out a-  
gain. *Carew.*

(2.) FRITH, (§ 1. *def.* 1.) usually signifies the  
opening of a river into the sea; such are the Frith  
of Forth, or of Edinburgh, the Frith of Clyde,  
Moray Frith, &c.

(3, 4.) FRITH, in geography, 2 English villages:  
1. in Kent. 2. in Middlesex, near Hendon.

FRITILLARIA, FRITILLARY; a genus of the  
monogynia order, belonging to the hexa-dria class  
of plants; and in the natural method ranking un-  
der the 10th order, *Crocovite*. The corolla is  
hexapetalous and campanulate, with a nectari-  
ferous cavity above the heel in each petal; the fla-  
mina are as long as the corolla. There are 5 spe-  
cies, all bulbous-rooted showery perennials, pro-  
ducing annual stalks from about one foot to a yard  
or more high, terminated by large, bell-shaped,  
lilaceous flowers, of a great variety of colours.  
They are all propagated by offsets, which they  
furnish abundantly from the sides of their roots,  
and which may be separated every second or third  
year. They are hardy plants, and will thrive in  
ny of the common borders.

\* FRITILLARY. *n. f.* [*fritillaire*, French.] A  
plant. *Miller*

FRITILLUS, a dice-box. See DICE-BOX, § 2.

\* FRITINANCY. *n. f.* [from *fritinnio*, Lat.]  
The scream of an insect, as the cricket or cicada—  
The note or *fritinnancy* thereof is far more shrill  
than that of the locust, and its life short. *Brown's*  
*Vulgar Err.*

FRITINDEN, a village in Kent.

\* FRITTER. *n. f.* [*friture*, Fr.] 1. A small  
piece cut to be fried.—

Maids, *fritters* and pancakes now see ye make,  
Let Slut have one pancake for company sake.

*Tusser.*  
2. A fragment a small piece.—Sense and putter!  
have I lived to stand in the taunt of ore that  
makes *fritters* of English! *Shak. Merry Wives of*  
 *Windsor*—If you strike a solid body that is brittle  
as glass or sugar, it breaketh not only where the im-  
mediate force is, but breaketh all about into shivers  
and

*and fritters*; the motion, upon the pressure, searching all ways, and breaking where it findeth the body weakest. *Bacon's Nat. Hist.*—

The ancient errant knights

Won all their ladies hearts in fights;

And cut whole giants into fritters,

To put them into amorous twitters. *Hudib.*

3. A cheesecake; a wig. *Ainsworth.*

\* To FRITTER. *v. a.* [from the noun.] 1. To cut meat into small pieces to be fried. 2. To break into small particles or fragments.—

Joy to great chaos! let division reign!

My racks and tortures soon shall drive them hence,  
Break all their nerves and fritter all their sense.

*Dunciad.*

How prologues into prefaces decay,

And these to notes are fritter'd quite away.

*Dunciad.*

FRITZLAR, a town of Germany, in Hesse-Cassel, on the Eder, 13 miles SSW. of Cassel. Lon. 26. 41. E. of Retz. Lat. 50. 0. N.

FRIULANI, the people of FRIULI.

(1.) FRIULI, a province of Maritime Austria, in the ci-devant republic of Venice, bounded on the N. by Tirol and Carinthia; E. by Carniola and Gradisca; S. by the Adriatic, and W. by the Trevisan, Feltrin, and Bellunese. According to Dr Oppenheim, it is 55 miles long, 65 broad, and 263 in circumference; containing 4 cities, 20 towns and boroughs, and 600 villages. The country is partly level, partly mountainous. The former is very fertile, producing all kinds of corn, wine, fruits, &c. but the mountains produce only timber and game; and the roads through them are truly terrific, being in many places hardly passable, either on foot or on horseback. The chief rivers are the Tagliamento, Meduna, Cellina and Stella. Cattle are numerous, and the culture of silk is so extensive, that 1000 cwt. are annually produced. The population in 1581, was only 196,510; in 1735 it had arisen to 342,158; and in 1795 to 365,512. The inhabitants called *Furlani* or *Friulani*, are reckoned, says Dr Oppenheim, the *wildest* in Italy, tho' we should suppose they cannot exceed the Calabrians in barbarity. They speak a dialect resembling the ancient French, widely differing from both the modern Italian and German. This country was called by the Romans FORUM JULI. It was taken from the Lombards by Charlemagne, but belonged to the Venetians from 1420 to 1797. It is divided into the dioceses of Udina and Concordia. Udina is the capital.

(2.) FRIULI, CIVIDAD, or CIVIDAD DI. See CIVIDAD, N° 5. This town, anciently called FORUM JULI, is reckoned the 2d capital of the above province, (N° 1.) and contained 400 inhabitants, in 1795.

\* FRIVOLOUS. *adj.* [*frivolus*, Lat. *frivole*, Fr.] Slight; trifling; of no moment.—It is *frivolous* to say we ought not to use bad ceremonies of the church of Rome, and presume all such bad as it pleaseth themselves to dislike. *Hooker.*—These seem very *frivolous* and fruitless; for by the breach of them, little damage can come to the commonwealth. *Spenser.*—

She tam'd the brinded lioness,

And spotted mountain pard; but set at nought  
The *frivolous* bolt of Cupid. *Milton.*

Those things which now seem /  
flight,

Will be of serious consequence to:  
When they have made you once i

—All the impeachments in Greece agreed in a notion of being concerned, honour, to condemn whatever perjured, however *frivolous* the article, ver weak the proofs. *Swift.*—I will any mistake, and do not think myself answer every *frivolous* objection. *Art*

\* FRIVOLOUSLY. *adv.* [from *frivolously*]; without weight.

\* FRIVOLOUSNESS. *n. f.* [from *frivolous*]; Want of importance; triflingness.

(1.) FRIZE, in architecture. See 1. and FRIEZE, § 2.

(2.) FRIZE, in commerce. See F Of frizes, some are crossed, others number are chiefly of English manufacture of Irish.

FRIZER, *n. f.* See next article.

FRIZING OF CLOTH, a term in manufactory, applied to the forming of stuff into a number of little hard bunnences, covering almost the whole of. Some cloths are only frized on the black cloths; others on the right coloured and mixed cloths, rattens, &c. Frizing may be performed two with the hand, by two workmen, with kind of plank that serves for a frizing. The other, by a mill, worked either a horse; and sometimes by men. The teemed the better way; as, the motion uniform and regular, the little knobs more equably and regularly. The this useful machine is as follows: The parts are the FRIZER, or crisper, the and the drawer, or beam. The two equal planks or boards, each about 10 or 15 inches broad; differing only in this: zing table is lined or covered with a woollen stuff, of a rough sturdy nap; a is incrustated with a kind of cement, glue, gum arabic, and a yellow sand, the aquavitæ, or urine. The beam thus called, because it draws the stuff between the frizer and the frizing table on roller, beset all over with little points or ends of wire, like those of carding of wool. The disposition of the machine are thus: The table stands and bears or sustains the cloth to be frized is laid with that side uppermost on which is to be raised; over the table is placed at such a distance from it as to give room for the stuff to be passed between them: the frizer, having a very slow semicircular motion, moving the long hairs or naps of the cloth rolls them into little knobs or burrs; same time, the drawer, which is continually draws away the stuff from under the winds it over its own points. All that has to do while the machine is a-going, the stuff on the table, as fast as the d it off, and from time to time to take

joint of the drawer. The design of ha-  
nizing table lined with stuff of a short  
ny nap, is that it may detain the cloth  
he table and the frizer long enough for  
to be formed, that the drawer may not  
ray too readily, which must otherwise  
; as it is not held by any thing at the  
It is unnecessary to say any thing par-  
the manner of frizing stuffs with the  
ing the aim of the workmen to imitate  
they can with their wooden instrument,  
square, and circular motion of the ma-  
e need only add, that their frizer is but  
feet long, and one broad; and that to  
nap more easily, they moisten the sur-  
y, with water mingled with whites of  
sey.

UZZLE. *v. a.* [*frizer, Fr.*] To curl in  
like nap of frizec.—

Th' humble shrub  
th, with frizled hair implicit. *Milton.*  
isled and curled their hair with hot i-  
rewill.—

'd my shoe, and swear  
I spy'd this yellow frizled hair. *Gay.*  
ZLER. *n. f.* [from *frizle.*] One that  
rt curls.

*adv.* [of *fro*, Saxon.] 1. Backward; re-  
It is only used in opposition to the word  
*fro*, backward and forward, *to* and *from*.  
thaginians having spoiled all Spain, roo-  
that were affected to the Romans; and the  
having recovered that country, did cut  
t favoured the Carthaginians: so betwixt  
k, to and *fro*, there was scarce a native  
left. *Spenser.*—

ben a heap of gather'd thorns is cast,  
y, now *fro*, before th' autumnal black,  
er clung, it rolls around the field. *Pope.*  
contraction of *from*; not now used.—

turn round like grindstones,  
they dig out *fro*' the delves,  
ir bairns bread, wives and selves. *Jonf.*  
ENIUS, John, a famous and learned prin-  
16th century, born at Hamelburg in Fran-  
studied in the university of Basil, where  
d great reputation for learning, and set-  
printing house in that city, was the first  
man printers who brought that admira-  
any degree of perfection. Being a man  
wobity and piety, he would never, for  
f profit, suffer libels or any thing that  
t the reputation of another, to go thro'

The great character of this printer, was  
pal motive which induced Erasmus to re-  
in order to have his own works printed  
A great number of valuable books were  
him with care and accuracy. He died  
Erasmus wrote his epitaph in Greek and  
ohn Frobenius left a son named *Jerome*  
and a daughter married to Nicholas E-  
y who, joining in partnership, continued  
s printing-house with reputation, and  
wreck editions of the Greek Fathers.

ROBISHER, or FOMBISHA, Sir Martin,  
rt navigator and sea officer in the 16th  
born at Doncaster in Yorkshire, and from  
brought up to navigation. He was the

first Englishman who attempted to find a NW.  
passage to China, and in 1576, he sailed with two  
barks and a pinnace for that purpose. In this  
voyage he discovered a cape, to which he gave  
the name of *Queen Elizabeth's Foreland*, and the  
next day discovered a strait to which he gave his  
own name. (See § 2.) This voyage proving unsuc-  
cessful, he attempted the same passage in 1577;  
but discovering some ore in an island, and his  
commission directing him only to search for ore,  
he returned to England with it. He sailed again  
with 25 ships and a great number of adventurers,  
to form a settlement; but being obstructed by the  
ice, and driven out to sea by a violent storm, they,  
after encountering many difficulties, returned  
home, without making any settlement; but with  
a large quantity of ore.—He afterwards command-  
ed the *Aid* in Sir Francis Drake's expedition to the  
West Indies, in which St Domingo, Carthagena,  
and Santa Justina, in Florida, were taken and  
sacked. In 1588, he bravely exerted himself a-  
gainst the Spanish armada, when he commanded  
the *Triumph*, one of the largest ships in that ser-  
vice: and as a reward for his distinguished brave-  
ry, received the honour of knighthood, from the  
lord high-admiral at sea. He afterward com-  
manded a squadron which cruised on the Spanish  
coast; and in 1592, took two valuable ships and a  
rich carrac. In 1594 he was sent to the assistance  
of Henry IV. king of France, against a body of the  
Leaguers and Spaniards, who had strongly en-  
trenched themselves at Croyzon near Brest; but  
in an assault upon that fort, on the 7th Novem-  
ber, he was unfortunately wounded with a ball, of  
which he died soon after he had brought back the  
fleet to Plymouth, and was buried in that town.

(2.) FROBISHER'S STRAITS, a narrow sea, S.  
of Cape Walsingham; W. of Davis's Strait, and  
N. of Cape Farewell in West Greenland. Lon.  
from 65. to 70. W. Lat. between 61. 50. and 63.  
20. N.

\* FROCK. *n. f.* [*froc*, French.] 1. A dress; a  
coat.—

That monster, custom is angel, yet in this,  
That to the use of actions, fair and good,  
He likewise gives a frock or livery,  
That aptly is put on. *Shak. Hamlet.*  
Chalybeat temper'd steel, and frock of mail  
Adamantean proof. *Milton's Agon.*

2. A kind of close coat for men.—  
I strip my body of my shepherd's frock.  
*Dryden.*

3. A kind of gown for children.  
FRODINGHAM, or } a town of Yorkshire, 36  
FRODLINGHAM, } miles E. of York, and  
194 N. of London. Lon. o. 12. W. Lat. 53. 56.  
N.

FRODSHAM, a town of Cheshire, noted for  
its ancient castle. It has a stone bridge over the  
Weaver, near its conflux with the Mersey, and a  
harbour for ships of good burden. By the late in-  
land navigation, it has communication with the ri-  
vers Dee, Ribble, Darwent, Ourse, Trent, Severn,  
Humber, Thames, Avon, &c. which navigation, in-  
cluding its windings, extends above 500 miles, in the  
counties of Lincoln, Nottingham, York, Lancas-  
ter, Westmoreland, Stafford, Warwick, Leicester,  
Oxford, Worcester, &c. Frodsam is 19 miles  
NE.

NE. of Chester, and 18; NNW. of London. Lon. 2. 58. W. Lat. 53. 20. N.

(1.) \* FROG. *n. f.* [*frogga*, Sax.] 1. A small animal with four feet, living both by land and water, and placed by naturalists among mixed animals, as partaking of beast and fish; famous in Homer's Poem. There is likewise a small green frog that perches on trees, said to be venomous. —Poor Tom, that eats the swimming frog, the toad, the tadpole. *Shak. King Lear.*—Auster is drawn with a pot or urn, pouring forth water, with which shall descend frogs. *Peacocks on Drawing.*

2. The hollow part of the horse's hoof.

(2.) FROG, in zoology, § 1, def. 1. See RAWA.

(3.) FROG, in geography, a town of the United States in Georgia; 6 miles W. of Tugleoo.

(1.) \* FROGBIT. *n. f.* [*frog and bit.*] An herb. *Ainsworth.*

(2.) FROGBIT. See HYDROCHARIS.

FROGES, a town of France, in the dept. of Isere, 15 miles WNW. of Grenoble.

(1.) \* FROGFISH. *n. f.* [*frog and fish.*] A kind of fish. *Ainsworth.*

(2.) The FROGFISH is a very singular animal of Surinam, of which a figure is given by Mr Edwards, in his *History of Birds*, Vol. I. There is no specimen in the British museum, nor in any private collection, except that of Dr Fothergill. It was brought from Surinam in South America. Frogs, both in Asia and Africa, according to Merian, change gradually from fishes to frogs, as those in Europe; but after many years revert again into fishes, though the manner of their change has never been investigated. In Surinam these fishes are called JAKJES. They are cartilaginous, of a substance like our mussels, and exquisite food; they are formed with regular vertebræ, and small bones all over the body divided into equal parts; are first darkish, and then grey: their scales make a beautiful appearance. Whether this animal is, in its perfect state, a species of frog with a tail, or a kind of water lizard, Mr Edwards does not pretend to determine; but observes, that when its size is considered, if it should be deemed a tadpole at first produced from spawn, and in its progress towards a frog, such an animal, when full grown, if it bears the same proportion to its tadpole as those in Europe do, must be of enormous size; for our full-grown frogs exceed the tadpoles at least 50 times. See a reduced figure on Plate CLVIII.

\* FROGRASS. *n. f.* [*frog and grass.*] A kind of herb.

FROG-LAKE, a lake of N. America. Lon. 91. 50. W. of Greenwich. Lat. 53. 15. N.

\* FROGLETTUCE. *n. f.* [*frog and lettuce.*] A plant.

FROHBURG, a town of Saxony, on the Wihara, 5 miles SSE. of Perua.

*from* valour are superiour to those which proceed  
*from* any other virtues, have not considered.

*Dryden's Virgil.*—What entertainment can be rais-  
ed *from* so pitiful a machine? We see the success  
of the battle *from* the very beginning. *Dryden.*

'Tis true *from* force the strongest title springs,  
I therefore hold *from* that which first made kings.

*Dryden.*

13. Not near to: noting distance.—  
His regiment lies half a mile at least  
South *from* the mighty power of the king. *Shak.*

14. Noting separation or recession.—  
To die by thee, were but to die in jest;  
*From* thee to die, were torture more than death.

*Shak.*  
Hast thou beheld, when *from* the goal they start,  
The youthful charioteers with heaving heart,  
Rush to the race, and, panting, scarcely bear  
Th' extremes of feverish hope and chilling fear.

*Dryden.*

15. Noting exemption or deliverance.—  
*From* jealousy's tormenting strife,  
For ever be thy bosom freed. *Prior.*

16. Noting absence.—  
Our father he hath writ, so hath our sister,  
Of differences, which I best thought it fit  
To answer *from* our home. *Shak. King Lear.*

17. Noting derivation.—  
I lay the deep foundations of a wall,  
And Enos, nam'd *from* me, the city call. *Æt.*

18. Since. Noting distance from the past.—The  
flood was not the cause of mountains, but there  
were mountains *from* the creation. *Raleigh's Hist.*

—I had, *from* my childhood, a wart upon one of  
my fingers. *Bacon's Natural Hist.*—The other had  
been trained up *from* his youth in the war of Flau-  
ders. *Clarendon.*

The milk of tygers was his infant food,  
Taught *from* his tender years the taste of blood.

*Dryden.*  
—Were there, *from* all eternity, no memorable  
actions done 'till about that time? *Tillotson.* 19.

Contrary to. Not in use.—Any thing so overdone  
is *from* the purpose of playing; whose end, both  
at the first and now, was and is to hold, as 'twere,  
the mirror up to nature. *Hamlet.*

Do not believe,  
That *from* the sense of all civility,  
I thus would play and trifle with your reverence.

*Shak.*  
Did you draw bonds to forfeit? Sign, to break?  
Or must we read you quite *from* what we speak,  
And find the truth out the wrong way? *Donne.*

20. Noting removal.—  
Thrice *from* the ground she leap'd. *Dryd. Æt.*

21. From

21. *From* is very frequently joined by an ellipsis with adverbs: as, *from above*, *from the parts above*; *from below*, *from the places below*; of which some are here exemplified. 22. *FROM above*.—He, which gave them *from above* such power, for miraculous confirmation of that which they taught, endued them also with wisdom *from above*, to teach that which they so did confirm. *Hooker*.—  
No sooner were his eyes in slumber bound,  
Than, *from above*, a more than mortal sound  
Invades his ears. *Dryden's Æn.*
23. *FROM afar*.—  
Light demilances *from afar* they throw. *Æn.*
24. *FROM beneath*.—  
With whirlwinds *from beneath* she tofs'd the ship,  
And bare expos'd the bottom of the deep.  
*Dryden's Virgil.*  
An arm arises out of Stygian flood,  
Which, breaking *from beneath* with bellowing sound,  
Whirls the black waves and rattling stones around. *Dryden.*
25. *FROM behind*.—  
See, to their base restor'd, earth, seas, and air,  
And joyful ages *from behind*, in crowding ranks appear. *Dryden.*
26. *FROM far*.—  
Their train, proceeding on their way,  
*From far* the town and lofty tow'rs survey. *Æn.*
27. *FROM high*.—  
Then heav'n's imperious queen shot down  
*from high*. *Dryden.*
28. *FROM thence*. Here *from* is superfluous.—In the necessary differences which arise *from thence*, they rather break into several divisions than join in any one publick interest; and *from thence* have always risen the most dangerous factions, which have ruined the peace of nations. *Clarendon.* 29. *FROM whence*. *From* is here superfluous.—  
While future realms his wand'ring thoughts delight,  
His daily vision, and his dream by night,  
Forbidden Thebes appears before his eye,  
*From whence* he sees his absent brother fly.  
*Pope's Statius.*
30. *FROM where*.—  
*From where* high Ithaca o'erlooks the floods,  
Brown with o'er-arching shades and pendent woods,  
Us to these shores our filial duty draws. *Pope.*
31. *FROM without*.—When the plantation grows to strength, then it is time to plant it with women as well as with men, that it may spread into generations, and not be pieced *from without*. *Bacon.*  
If native power prevail not, shall I doubt  
To seek for needful succour *from without*. *Æn.*
32. *From* is sometimes followed by another preposition, with its proper case. 33. *FROM amidst*.  
Thou too shalt fall by time or barb'rous foes,  
Whose circling walls the sev'n fam'd hills enclose;  
And thou, whose rival tow'rs invade the skies,  
And, *from amidst* the waves, with equal glory rise.  
*Addison.*
34. *FROM among*.—  
Here had new begun  
*My wand'ring*, had not he, who was my guide  
Up hither, *from among* the trees app  
Presence divine! *Milton's Par*
35. *FROM beneath*.—  
My worthy wife our arms mistai  
And *from beneath* my head my sword  
*Dryden*
36. *FROM beyond*.—There followed him  
titudes of people from Galilee, and fr  
Jordan. *Matt. iv. 25.* 37. *FROM forth*.  
Young Aretus, *from forth* his bride  
Brought the full laver o'er his hands:  
And canisters of consecrated flour.
38. *FROM off*.—The sea being constrain'd  
draw *from off* certain tracts of lands, wh  
then at the bottom of it. *Woodward.*—  
Knights, unhors'd, may rise *from off*  
And fight on foot, their honour to reg
39. *FROM out*.—The king with angry th  
*from out* a window, where he was not  
the world should behold him a behol  
manded his guard and the rest of his l  
hasten their death. *Sidney.*—  
And join thy voice unto the angel-  
*From out* his secret altar touch'd with  
fire,  
Now shake, *from out* thy fruitful l  
seeds  
Of envy, discord, and of cruel deeds.  
Strong god of iron, whose iron see  
The freezing North and hyperborean  
Terror is thine; and wild amazement  
*From out* thy chariot, withers ev'n t
40. *FROM out of*.—Whatsoever such  
there is, it was at the first found out by  
and *from out of* the very bowels of h  
earth. *Hooker.* 41. *FROM under*.—  
He, though blind of sight,  
Despis'd and thought extinguish'd q  
With inward eyes illuminated,  
His fiery virtue rous'd  
*From under* ashes into sudden flame. *J*
42. *FROM within*.—  
*From within*  
The broken bowels, and the bloated  
A buzzing noise of bees his ears alarm  
(1.) *FROME*, a river of England,  
from several springs in the SW. of I  
and running almost due W. passes und  
ton-bridge to Dorchester, and falls int  
the English Channel, called *Poolhaven*, i  
ham.  
(2.) *FROME*, a river of Somersetshire  
ses in Frome-Woodlands, abounds w  
eels, &c. and runs under its stone brid  
Bath: 5 miles SE. of which it falls into  
(3—5.) *FROME*, or *FROOM*, is also t  
other 3 rivers: 1. in Gloucestershire,  
into the Avon at Bristol: 2. in ditto,  
to the Severn near Berkeley: and 3. in  
shire, which runs into the Lug near H  
(6.) *FROME*, or } a town of Som  
*FROME-SELWOOD*, } and the chief t  
part of the country, which was an  
great forest, called *SELWOODSHIRE*. T  
ger than some cities, yet it has only o  
but it has 7 meeting-houses of Protestar  
The number of inhabitants, in 1786,

factory is broad and narrow cloth; of 100 yards are made annually. About 15 more wire cards, for carding wool wools, were made at this place than in any other part of England, which was for the most part with them from hence. There were 1200 matter card-makers, one of whom was a man, women, and children, in that town at once; so that even children of 7 years of age could earn half a crown a-week. This has been long noted for its fine beer, and is to a great age, and is even preferred to the wines of France and Portugal. It is 104 m. E. of Bath, and 104 W. by S. of London. Lat. 51. 10. N.

FRONCES, a town of France, in the department of Somme, 7 miles SW. of Poix.

FRONDLANDS, a forest of Somersetshire, situated at the end of the 17th century, by many coiners and clippers, many of whom were taken and executed, and their covert

FRERE, a town of France, in the department of Pyrenees, 7 m. N. of Mount Lewis.

FRONTA, a town of Spain, in the province of Castellon, 10 miles N. of Valencia.

FRONTWARD, *prep.* [from *frons* and *ward*, Sax.] ; the contrary to the word *towards*. *Use.*—As cheerfully going towards as it is forward *fronward* his death. *Sigs.*—The needle is continually varying towards East and West; and so the dipping or inclining is varying up and down, towards the zenith. *Chym.*

FRONBERG, a town of Westphalia, in the district of Marck, 2 miles W. of Unna.

FRONDESCENTIA, [from *frons*, a leaf.] the unfolding of the leaves of plants. *Use.*—said, by ellipsis, for the time of unfolding.

FRONDESCENTIAE TEMPUS, in botany, the time of the year and month, in which each plant unfolds its first leaves. All plants unfold their leaves every year; but all do not unfold at the same time. Among woody plants, the oak and ash are constantly the latest; the mosses and firs in winter; and most of the honeyuckles; and among annual herbs, the crocus and tulips, are the earliest. The unfolding of the seeds decides with respect to the oak and ash are constantly the latest; the mosses and firs in winter; and most of the honeyuckles; and among annual herbs, the crocus and tulips, are the earliest. The unfolding of the seeds decides with respect to the oak and ash are constantly the latest; the mosses and firs in winter; and most of the honeyuckles; and among annual herbs, the crocus and tulips, are the earliest. The unfolding of the seeds decides with respect to the oak and ash are constantly the latest; the mosses and firs in winter; and most of the honeyuckles; and among annual herbs, the crocus and tulips, are the earliest.

son; that is, according as the sun is sooner or later in dispensing the degree of heat suitable to each species.

\* FRONDIFEROUS. *adj.* [*frondifer*, Latin.] Bearing leaves. *Diſc.*

FRONDOSUS CORDEX. See BOTANY, *Gloss.*

FRONSAC, a town of France, in the department of the Gironde, and ci-devant province of Guienne, on the Ille; 2 miles NW. of Libourne, and 23 NE. of Bourdeaux. Lou. o. 16. W. Lat. 45. 5. N.

(1.) \* FRONT. *n. f.* [*frons*, Latin; *front*, French.] 1. The face.—

His *front* yet threatens, and his frowns command. *Prior.*

They stand not *front* to *front*, but each doth view

The other's tail, pursu'd as they pursue.

The patriot virtues that distend thy thought, Spread on thy *front*, and in thy bosom glow.

*Thomson.*

2. The face, in a sense of censure or dislike: as, a hardened *front*; a fierce *front*. This is the usual sense. 3. The face as opposed to an enemy.—

His forward hand, inur'd to wounds, makes way

Upon the sharpest *fronts* of the most fierce.

*Daniel.*

4. The part or place opposed to the face.—The access of the town was only by a neck of land; our men had shot that thundered upon them from the rampier in *front*, and from the galleys that lay at sea in flank. *Bacon.* 5. The van of an army.—

'Twixt host and host but narrow space was left,

A dreadful interval! and *front* to *front* Presented stood in terrible array. *Milt.*

6. The forepart of any thing, as of a building.—Both these sides are not only returns, but parts of the *front*; and uniform without, though severally partitioned within, and are on both sides of a great and stately tower, in the midst of the *front*. *Baron's Esays.*—Palladius adviseth the *front* of his edifice should so respect the South, that in its first angle it receive the rising rays of the Winter sun, and decline a little from the Winter setting thereof. *Brown's Vulg. Err.*—

The prince approach'd the door, Possess'd the porch, and on the *front* above

He fix'd the fatal bough. *Dryden's Æn.*

—One sees the front of a palace covered with painted pillars of different orders. *Addison on Italy.*

7. The most conspicuous part or particular. (2.) FRONT, in anatomy, (§ 1. def. 1.) the forehead, or that part of the face above the eyebrows. The Latin *frons*, is derived by Martinius from the Greek *φρον*, to think, or perceive; of *φρον*, the mind or thought.

(3.) FRONT, in architecture, (§ 1. def. 6.) denotes the principal face or side of a building, or that presented to their chief aspect or view.

\* (1.) To FRONT. *v. a.* [from the noun.] 1. To oppose directly, or face to face; to encounter.—You four shall *front* them in the narrow lane; we will walk lower: if they scape from your encounter, then they light on us. *Shak. Hen. IV.*—Can you, when you have push'd out of your gates the

very defender of them, think to *front* his revenges with easy groans. *Shak. Coriol.*—Some are either to be won to the state in a fast and true manner, or *fronted* with some other of the same party that may oppose them, and so divide the reputation. *Bacon's Essay.*—

I shall *front* thee, like some staring ghost,  
With all my wrongs about me. *Dryd.*  
2. To stand opposed or over-against any place or thing.—The square will be one of the most beautiful in Italy when this statue is erected, and a townhouse built at one end, to *front* the church that stands at the other. *Addison on Italy.*

(2.) \* *FRONT*. *v. n.* To stand foremost.—  
I *front* but in that file,

Where others tell steps with me. *Shak. H. VIII.*  
(1.) \* *FRONTAL*. *n. f.* [*frontale*, Latin; *frontal*, French.] Any external form of medicine to be applied to the forehead, generally composed amongst the ancients of coolers and hypnoticks. *Quincy.*—We may apply intercipients upon the temples of mastick: *frontales* may also be applied. *Wijeman.*—The torpedo, alive, stupifies at a distance; but after death produceth no such effect; which had they retained, they might have supplied opium; and served as *frontals* in phrenesies. *Brown's Vulg. Err.*

(2.) *FRONTAL*, in architecture, a little fronton, or pediment, sometimes placed over a small door or window.

(3.) *FRONTAL*, *FRONTLET*, or *Brow-band*, in the Jewish ceremonies, consists of 4 several pieces of vellum, on each of which is written some text of scripture. They are all laid on a piece of black calf's leather with thongs to tie it by. The Jews apply the leather with the vellum on their foreheads in the synagogue, and tie it round the head with the thongs.

*FRONTANA*, a town of Spain, in Catalonia, 25 miles SE. of Urgel.

\* *FRONTATED*. *adj.* [from *frons*, Latin.] In botany, the *frontated* leaf of a flower grows broader and broader, and at last perhaps terminates in a right line: used in opposition to *cuspedated*, which is, when the leaves of a flower end in a point. *Quincy.*

\* *FRONTBOX*. *n. f.* [*front* and *box*.] The box in the playhouse from which there is a direct view to the stage.—

How vain are all these glories, all our pains,  
Unless good sense preserve what beauty gains!  
That men may say, when we the *frontbox* grace,  
Behold the first in virtue, as in face. *Pope.*

*FRONTE*, a town of Piedmont, in the marquisate of Ivrea, on the Marlon, 11 miles N. of Turin.

\* *FRONTED*. *adj.* [from *frons*.] Formed with a front.—

Part *fronted* brigades form. *Milton.*

*FRONTEIRA*, a town of Portugal in Alentejo, near which the Portuguese, under the D. of Schomberg, defeated the Spaniards in 1663. It is 10 miles N. of Estremoz.

*FRONTEITEN*, a town of Germany, in the duchy of Stiria, 14 miles NNW. of Graz.

*FRONTENAC*. See *FRONTIGNAC*.

*FRONTENHAUSEN*, a town of Bavaria, 5 miles S. of Dingeltingen, and 14 E. of Landshut,

(1.) \* *FRONTIER*. *adj.* [*frontiere*, Bordering; conterminous.—

A place there lies on Gallia's utmo  
Where rising seas insult the *frontier* g

(2.) \* *FRONTIER*. *n. f.* The marches; the utmost verge of any territory; the properly that which terminates not at the fronts another country.—Draw all the of those borders away, or plant garrison those *frontiers* about him. *Spenser on Ire*  
I upon my *frontiers* here keep rest  
That little which is left to defend.

(3.) *FRONTIERS* are the extremes of a country, which the enemies find in if they would enter it. They were ancient *MARCHES*.

*FRONTIGNAC*, a town of France, in the dep. of Hérault, ci-devant province of Languedoc, famous for its excellent wine, seated on the lake Maguelone, 12 miles from Montpellier. Lon. 3. 48. E. Lat. 43. 46.

*FRONTINAC*, *FORT*, a fortress on the NW. side of Lake Ontario, 3 miles from its mouth, and 300 from Quebec. It was taken from the French, in Aug. 1759, by the British, under Col. Bradstreet; though defended by 1000 men and 60 pieces of cannon, besides 100000 lbs. of powder.

*FRONTINUS*, Sextus Julius, an ancient Roman author, of consular dignity, who flourished under the reigns of Vespasian, Titus, Domitian, Nerva, and Trajan. He commanded the Roman armies in Britain, and made city prætor when Vespasian was emperor; consul; and curator of the aqueducts, which occasioned his writing *De aquæ du* *Rome*. He wrote 4 books upon the Roman art of war; a tract *De re agraria*; another *De limitibus*. These have been rarely printed; but were all collected together in a neat edition at Amsterdam, in 1661, by Robert Keuchen. He died under the reign of Trajan.

(1.) \* *FRONTISPIECE*. *n. f.* [*frontis*, quod in fronte conspicitur; *frontispice*,] That part of any building, or other structure, which directly meets the eye.—

With *frontispiece* of diamond and gold  
Embellish'd, thick with sparkling ore  
The portal shone. *Milton's Paradise Lost.*

—Who is it has informed us that a race can inhabit no tenement, unless it has a sort of *frontispiece*? *Locke.*—The *frontispiece* of a townhouse has pillars of a beautiful black marble streaked with white. *Addison on Italy.*

(2.) *FRONTISPIECE OF A BOOK*, a page with an engraved title on the first page, properly an emblematical engraved device on the title page.

\* *FRONTLESS*. *adj.* [from *frons*.] Wanting shame; void of dissimulation. Thee, *frontless* man, we follow'd  
Thy instruments of death and tools.

*Dryden.*  
For vice, though *frontless* and of hard  
Is daunted at the sight of awful grace  
Strike a blush through *frontless* flaccid

(1.) \* *FRONTLET*. *n. f.* [*frons*, French.] A bandage worn

—How now, daughter, what makes that ? You are too much of late i' th' frown.  
*ear.*—They shall be as *frontlets* between  
*Deut. vi. 8.*—To the forehead *frontlets*  
 ed, to restrain and intercept the influx.  
*Surgery.*

INLET. See *FRONTAL*, § 3.  
 [O, Marcus Cornelius, a Roman Ora-  
 ras preceptor to the emperors Marcus  
 nd Lucius Verus. The former made  
 l, and erected a statue to his honour.  
 him not only eloquence, but the duty  
 ch, and excellent morals.

ANTON, a town of France in the  
 per Garonne, 15 miles N. of Touloute.  
 ANTON. See *FRONTAL*, § 2.

[ONIANI, a sect of Roman Orators,  
 dered M. C. FRONTO, as a model of  
 quence.

NTROOM. *n. f.* [*front* and *room*.] An  
 in the forepart of the house.—If your  
 s in an eminent street, the *frontrooms*  
 only more airy than the backrooms; and  
 nconvenient to make the *frontroom* sha-  
 on.

ZELLA, one of the 17 almost inaccess-  
 s through the mountains of VICENZA,  
 ie Austria, commencing in the valley of  
 it is the narrowest of them, and is so  
 by perpendicular rocks, 300 feet high,  
 of the sun can scarcely penetrate into  
 and the eye cannot perceive the sky."  
 s road," says Dr Oppenheim, "is the  
 most passable" of the 17, "except dur-  
 ing snow, when it is the most perilous."  
*[Stat. Acc. of Marit. Auf. p. 452.*

GARDE, a town of Norway, in the  
 Drontheim, 60 miles SSE. of Drontheim.  
 M, or FROME. See *FROME*, N. 1, 3—5.  
 RE. *adj.* [*bevroren*, Dutch, frozen.]  
 This word is not used since the time of

The parching air  
 core, and cold performs th' effect of fire.

*Milton.*  
 RNE. *adj.* [*bevroren*, Frozen, Dutch.]  
 congealed with cold. Obsolete.—

ly heart-blood is well nigh *frore* I feel,  
 t galage grown fast to my heel. *Spen.*  
 ., a town of Up. Saxony, in the duchy  
 burg, 10 miles S. of Magdeburg.

ASCO, a town of Piedmont, 13 miles  
 urin.

AY, a town of France, in the dep. of  
 ire, 4½ miles SE. of Painbœuf.

FROST. *n. f.* [*frost*, Saxon.] 1. The  
 of cold; the power or act of conglu-

is the state of man: to-day he puts forth  
 ider leaves of hopes; to-morrow blossoms;  
 ears his blushing honours thick upon him;  
 ird day comes a *frost*, a killing *frost*,  
 hen he thinks, good easy man, full surely  
 eatness is a ripening, nips his root,  
 hen he falls. *Sbak. Hen. VIII.*

the *frost* seizes upon wine, only the more  
 parts are coggealed: there is a mighty  
 uch can retreat into itself, and within its

own compass lie secure from the freezing impres-  
 sion. *South.* 2. The appearance of plants and  
 trees sparkling with congelation of dew.—

Behold the groves that shine with silver *frost*,  
 Their beauty wither'd, and their verdure lost.

*Pope's Winter.*

(2.) FROST, or FREEZING, in physiology, is  
 such a state of the atmosphere, as occasions the  
 congelation or freezing of water and other fluids.  
 See *FREEZING*. Under the articles *COLD*, *CONGE-*  
*LATION*, *EVAPORATION*, *FLUIDITY*, and *FREEZ-*  
*ING*, it is shown, that water and other fluids are  
 capable of containing the element of fire or heat in  
 two very different states. In the one, they seem to  
 imbibe fire in such a manner, that it eludes all the  
 methods by which we are accustomed to observe it,  
 either by our sensation of feeling, or the thermom-  
 eter; in the other, it manifests itself obviously  
 to our senses, either by the touch, the thermome-  
 ter, or the emission of light. In the first of these  
 states, we call the body *cold*; and are apt to say  
 that this coldness is occasioned by the *absence* of  
 heat. But this mode of expression is not strictly  
 just, for even those fluids which are coldest to the  
 touch contain a vast deal of heat. Thus vapour,  
 which is colder to the touch than the water from  
 which it was raised, contains an immense quantity  
 of fire. The same may be said of common salt,  
 and snow, or ice. If a quantity of each of these  
 substances is separately reduced to 28° or 30° of  
 Fahrenheit's thermometer, upon mixing them to-  
 gether, the heat which could have raised the ther-  
 mometer to the degree above-mentioned, now  
 enters into the substance of them in such a man-  
 ner that the mercury falls down to 0.—Here an exces-  
 sive degree of cold is produced, and yet we are  
 sure that the substances contain the very same  
 quantity of heat that they formerly did: nay, they  
 will even seem exceedingly cold, when they most  
 certainly contain a great deal more heat than they  
 originally did; for they absorb it from all bodies  
 around them; and if a small vessel full of water  
 is put in the middle of such a mixture, it will in  
 a short time be full of ice. It appears, therefore,  
 that our senses, even when assisted by thermome-  
 ters, can only judge of the state in which the ele-  
 ment of fire is with relation to the bodies around  
 us, without regard to the quantity contained in  
 them. Thus, if heat flows from any part of our  
 body into any substance actually in contact with  
 it, the sensation of cold is excited, and we call  
 that substance *cold*; but if it flows from any sub-  
 stance into our body, the sensation of heat is ex-  
 cited, and we call that substance *hot*, without re-  
 gard to the absolute quantity contained in either  
 case. See *HEAT*.

(3.) FROST, CAUSES OF THE UNCERTAIN DU-  
 RATION OF. Of all known substances, the atmo-  
 sphere either absorbs or throws out heat with the  
 most remarkable facility: and in one or other of  
 these states it always is with respect to the surface  
 of the earth, and such bodies as are placed on or  
 near it; for these, properly speaking, have no  
 temperature of their own, but are entirely regu-  
 lated by that of the atmosphere.—When the air  
 has been for some time absorbing the heat from  
 terrestrial bodies, a frost must be the undoubted  
 consequence, for the same reason that water free-

in a vessel put into a freezing mixture; and were this absorption to continue for a length of time, the whole earth would be converted into a frozen mass. There are, however, certain powers in nature, by which this effect is always prevented; and the most violent frost we can imagine must always, as it were, defeat its own purposes, and end in a thaw. To understand this subject, we must observe, 1. In that state of the atmosphere which we denominate frost, there is a most intimate union between the air and the water it contains; and therefore frosty weather, except in very high latitudes, is generally clear. 2. When such an union takes place, either in winter or summer, we observe the atmosphere also inclined to absorb heat, and consequently to grow frosty. Thus in clear settled weather, even in summer, though the day be excessively hot by the continued sunshine, yet the mornings and evenings are remarkably cold, and sometimes even disagreeably so. 3. The air being therefore always ready in the time of frost or in clear weather, to absorb heat from every substance which comes into contact with it, it follows that it must also absorb part of that which belongs to the vapours contained in it. 4. Though vapour is capable of becoming much colder than water without being frozen, yet by a continued absorption it must at last part with its latent heat, i. e. that which essentially constitutes it vapour; and without which it is no longer vapour, but water or ice. No sooner, therefore, does the frost arrive at a certain pitch, than the vapours, everywhere dispersed through the air, give out their latent heat: the atmosphere then becomes clouded: the frost either goes off, or becomes milder by the great quantity of heat discharged into the air; and the vapours descend in rain, hail, or snow, according to the particular disposition of the atmosphere at the time. 5. Even in the polar regions, where it may be thought that the frost must increase beyond measure, there are natural means for preventing its running to extremes. The principal cause here is, the mixture of a great quantity of vapours from the temperate regions of the globe with the air in those dreary climates. It is well known, that aqueous vapour always flies from a warm to a colder place. For this reason, the vapours raised by the sun in the more temperate regions of the earth, must continually fly northward and southward in great quantities. Thus they furnish materials for those immense quantities of snow and ice which are to be found in the neighbourhood of the poles, and which we cannot imagine the weak influence of the sun in these parts capable of raising. It is impossible that a quantity of vapour can be mixed with frosty air, without communicating a great deal of heat to it; and thus there are often thaws of considerable duration even in those climates where, from the little influence of the sun, we should suppose the frost would be perpetual. 6. We may now account with some probability for the uncertain duration of frosts. In Britain they are seldom of a long continuance; because the vapours raised from the sea with which our island is surrounded, perpetually mix with the air over it, and prevent a long duration of the frost. For the same reason, *frosts are never of such long duration in maritime*

places on the continent as in the inland. There is nothing, however, more under the motion of the vapours with which the sky is constantly filled; and therefore it is impossible to prognosticate the duration of a frost with any degree of certainty. In general, we may be certain, that if a quantity of vapour is condensed in any place, no intense frost can subsist there for any length of time; and by the same causes the vapours are driven from place by place: the frosts are therefore not so general throughout the whole world. See VAPOUR.

(4.) FROST, DEPTH OF. Frost, being driven from the atmosphere, naturally proceeds from the upper parts of bodies downwards, as to the earth: so, the longer a frost is continued, the thicker the ice becomes upon the ponds, and the deeper into the earth the snow is frozen. In about 16 or 17 days frost, it was found it had penetrated 14 inches into the earth. At Moscow, in a hard season, the frost penetrated 2 feet deep in the ground; and Caspar found it penetrated 10 feet deep in Charlot and the water in the same island was frozen to a depth of 6 feet. Scheffer assures us, that in Sweden the frost pierces 2 cubits or 2 Sw into the earth, and turns what moisture there into a whitish substance, like ice; and that in the ice waters to three ells, or more. The author also mentions sudden cracks in the lakes of Sweden, 9 or 10 feet deep, a league long; the rupture being made with noise not less loud than if many guns were fired together. By such means, however, the lakes are furnished with air; so that they are not found dead.

(5.) FROST, EFFECTS OF. The effects of frost in different countries are mentioned in the article FREEZING, § 1, 2, 4, 6. In the parts of the world even solid bodies are rendered by frost. Timber is often apparently rendered exceedingly difficult to saw, and other less solid terrestrial bodies will be shattered by strong and dural Metals are contracted by frost: thus, an iron rod 12 feet long, upon being exposed to the frosty night, lost two lines of its length. Contrary, frost swells or dilates water to the tenth of its bulk. Mr Boyle made several experiments with metalline vessels, exceeding strong; which being filled with water, and stopped, and exposed to the cold, burst by the expansion of the frozen fluid within them, and were often destroyed by frost, as if by the most excessive heat; and in very strong walnut trees, alders, and even oaks, are split and cleft, so as to be seen through with a terrible noise, like the explosion of arms. (See § 7.) In cold countries, the frost proves fatal to mankind; producing gangrene and even death itself. Those who die with their hands and feet first seized, till they pass feeling it; after which the rest of the body is so invaded, that they are taken with convulsions, which if indulged, they awake but die insensibly. But there is another way whereby it proves mortal, *viz.* by freezing the blood.

and viscera, which on dissection are  
be mortified and black.

OST, HOAR. See HOAR-FROST.

OST, HURTFUL EFFECTS OF, ON VEGET-

The great power of frost on vegetables  
is generally known; but the differences between  
those of a severe winter, and those which  
occur in the spring mornings, in their effects  
on trees, were never perfectly explained,  
till Du Hamel and Buffon, in the Me-  
moires de l'Academie de Paris. The frosts of severe  
winters are much more terrible than those of the  
spring; they bring on a privation of all the  
juice of the tenderer parts of the vegetable  
sooner than they are not frequent, such  
as happens perhaps but once in an age;  
frosts of the spring are in reality greater  
to us than these, as they are every year.

In regard to trees, the great difference  
is that the frosts of severe winters affect even  
the trunk and large branches; those of the spring have only power to  
kill the buds. The winter frosts happening at  
the beginning of the year, when most of the trees in our woods and  
have neither leaves, flowers, nor fruits  
yet, and have their buds so hard as to be  
insensible to slight injuries of weather, especially  
if preceding summer has not been too wet;  
and, if there are no unlucky circumstances  
to oppose them, most trees bear moderate winters very  
well, and hard frosts, which happen late in winter,  
do great injuries even to those trees which  
are not utterly destroyed. These are, 1. Long  
frosts blowing the direction of the fibres. 2.  
Frosts of dead wood inclosed round with wood  
in a living state. And, 3. That distemper  
which foresters call the *double blea*, which is  
a circle of blea, or soft white wood, which,  
if the tree is afterwards felled, is found covered  
with a layer of hard and solid wood. The opi-  
nions about the exposition of trees to the  
quarters, have been very different, and  
are not grounded on no rational foundation.  
Some are of opinion that the effects of frost are  
most sensibly felt on those trees which are expo-  
sed to the N. and others think the S. or the W.  
are most strongly affected by them. There is no  
doubt that the N. exposure is subject to the great-

est injury. It does not, however, follow from this,  
that the injury must be always greatest on the trees  
to the N. in frosts: on the contrary, there  
are many instances, and many  
different proofs, that it is on the S. side that  
trees are generally most injured by frost: and it  
is from repeated experiments, that there are  
many accidents, under which a more mo-  
derate frost may do more injury to vegetables,  
than the most severe one which happens to them  
under the most favourable circumstances. It is plain  
from the accounts of the injuries trees received by  
frosts in 1709 that the greatest of all were  
done by repeated false thaws, succeeded by re-  
peated frosts. But the frosts of the spring  
do more abundantly more numerous examples of  
this; and some experiments made by the  
Academie de Buffon, in his own woods, prove in-  
deed, that it is not the severest cold or most  
long frost that does the greatest injury to vege-  
tables. This is an observation directly opposite to

the common opinion, yet it is not the less true,  
nor any way discordant to reason. We find by a  
number of experiments, that it is humidity that  
makes frost fatal to vegetables; and therefore  
every thing that can occasion humidity in them,  
exposes them to these injuries, and every thing  
that can prevent or take off an over proportion of  
humidity in them, every thing that can dry them  
though with ever so increased a cold, must prevent  
or preserve them from those injuries. Numerous  
experiments and observations tend to prove this.  
It is well known that vegetables always feel the  
frost very desperately in low places where there  
are fogs. The plants which stand by a river side  
are frequently found destroyed by the spring and  
autumnal frosts, while those of the same species,  
which stand in a drier place, suffer little or per-  
haps not at all by them; and the low and wet  
parts of forests are well known to produce worse  
wood than the high and drier. The coppice  
wood in wet and low parts of common woods,  
though it push out more vigorously at first than  
that of other places, yet never comes to so good  
a growth; for the frost of the spring killing these  
early top shoots, obliges the lower part of the  
trees to throw out lateral branches: and the same  
thing happens in a greater or lesser degree to the  
coppice wood that grows under cover of larger  
trees in great forests; for here the vapours, not  
being carried off either by the sun or wind, stag-  
nate and freeze, and in the same manner destroy  
the young shoots, as the fogs of marshy places.  
It is a general observation also, that the frost is never  
so hurtful to the late shoots of the vine, or to the  
flower-buds of trees, except when it follows heavy  
dews, or a long rainy season, and then it never  
fails to do great mischief, though it be ever so  
slight. The frost is always observed to be more  
mischievous in its consequences on newly culti-  
vated ground than in other places; and this is  
because the vapours which continually arise from  
the earth, find an easier passage from those places  
than from others. Trees also which have been  
newly cut, suffer more than others by the spring  
frosts, which is owing to their shooting out more  
vigorously. Frosts also do more damage on light  
and sandy grounds, than on the tougher and fir-  
mer soils, supposing both equally dry; and this  
seems partly owing to their being more early in  
their productions, and partly to their lax texture  
suffering a greater quantity of vapours to transpire.  
It has also been frequently observed, that the  
side-shoots of trees are more subject to perish by  
the spring frosts than those from the top; and  
M. Buffon, who examined into this with great  
accuracy, always found the effects of the spring  
frosts much greater near the ground than else-  
where. The shoots within a foot of the ground  
quickly perished by them; those which stood at  
two or three feet high, bore them much better;  
and those at four feet and upwards frequently re-  
mained wholly unhurt, while the lower ones were  
entirely destroyed. A series of observations have  
proved beyond all doubt, that it is not the hard  
frosts which do so much hurt plants, as these frosts,  
though less severe, which happen when they are  
full of moisture; and this clearly explains the ac-  
count of all the great damage done by the severe

frosts being on the south side of the trees which are affected by them, though that side has been plainly all the while less cold than the north. Great damage is also done to the western sides of trees and plantations, when after a rain with a west wind the wind turns about to the north at sunset, as is frequently the case in spring, or when an east wind blows upon a thick fog before sun-rising.

(8.) FROST, MELIORATION OF AROMATIC SPIRITS BY. Mr Baume observes, that aromatic spirituous waters have less scent when newly distilled, than after they have been kept about six months: and he found that the good effects of age was produced in a short time by means of cold; and that, by plunging quart bottles of the liquor into a mixture of pounded ice and sea salt, the spirit, after having suffered for 6 or 8 hours the cold hence resulting, proves as grateful as that which hath been kept many years. Simple waters also, after having been frozen, prove far more agreeable than they were before. Geoffroy takes notice of this melioration by frost; *Hist. Acad.* 1713.

(9.) FROST, MELIORATION OF LAND BY. See HUSBANDRY.

(10.) FROSTS, REMARKABLE. In the year 220, a frost in Britain lasted 5 months. In 250, The Thames was frozen 9 weeks. 291, Most rivers in Britain frozen 6 weeks. 359, Severe frost in Scotland for 14 weeks. 508, The rivers in Britain frozen for 2 months. 558, The Danube quite frozen over. 695, Thames frozen 6 weeks, and booths built on it. 759, Frost from Oct. 1 till Feb. 26, 760. 827, Frost in England for 9 weeks. 859, Carriages used on the Adriatic. 908, Most rivers in England frozen 2 months. 923, The Thames frozen 13 weeks. 987, Frost lasted 120 days: began Dec. 22. 998, Thames frozen 5 weeks. 1035, Severe frost on June 24: the corn and fruits destroyed. 1063, The Thames frozen 14 weeks. 1076, Frost in England from Nov. till April. 1114, Several wooden bridges carried away by ice. 1205, Frost from Jan. 15 till March 22. 1407, Frost that lasted 15 weeks. 1434, From Nov. 24 till Feb. 10. Thames frozen down to Gravesend. 1631, Frost for 13 weeks. In 1708—9, an extraordinary frost throughout most parts of Europe, though scarcely felt in Scotland, or Ireland. In 1715, Severe frost for many weeks. 1739, One for 9 weeks; began Dec. 24. 1742, Severe frost for many weeks. 1747, Severe frost in Russia. 1754, Severe one in England. 1760, The same in Germany. 1776, The same in England. 1788, The Thames frozen below bridge; and booths erected on it. 1795, The Zuyder Zee frozen over, and the rivers of Holland passed by the French.

\* FROSTBITTEN. *adj.* [*frost* and *bitten*.] Nipped or withered by the frost.—The leaves are too much *frostbitten*. *Martiner*.

\* FROSTED. *adj.* [from *frost*.] Laid on in inequalities, like those of the hoar frost upon plants.—The rich brocaded silk unfold,

Where rising flow'rs grow stiff with *frosted* gold. *Guy*.

FROSTENBY, a village near Scarborough.

\* FROSTILY. *adv.* [from *frosty*.] 1. With

frost; with excessive cold. 2. With of affection.—

Courting, I rather thou should'  
Dispraise my work, than praise it.]

\* FROSTINESS. *n. f.* [from *frost*] freezing cold.

\* FROSTNAIL. *n. f.* [*frost* and with a prominent head driven into shoes, that it may pierce the ice.—T strait only to take hold, for better as a horse that is shod with *frostnails*.

\* FROSTWORK. *n. f.* [*frost* and in which the substance is laid on with like the dew congealed upon shrubs.—

By nature shap'd to various figure  
The fruitful rain, and these the ha  
The snowy fleece and curious *frost*  
Produce the dew, and those the ge

\* FROSTY. *adj.* [from *frost*.] 1 power of congelation; excessive cold

For all my blood in Rome's great  
For all the *frosty* nights that I have

Be pitiful to my condemned sons. 3

—The air, if very cold, irritateth the maketh it burn more fiercely; as fit in *frosty* weather. *Bacon*.—A gnat, with cold and hunger, went out one ing to a bee-hive. *L'Esfrange*. 2. Cl

tion; without warmth of kindness or  
What a *frosty*-spirited rogue is th  
3. Hoary; grey-haired; resembling 1

Where is loyalty?

If it be banish'd from the *frosty* hea  
Where shall it find a harbour in the

\* FROTH. *n. f.* [*froe*, Danish at 1. Spume; foam; the bubbles caustic by agitation.—

His hideous tail then hurled he a  
And therewith all enwrapt the nim  
Of his *froth* foamy steed.

—When wind expireth from under th  
causeth some resounding of the water  
eth some light motions of bubble:  
circles of *froth*. *Bacon's Nat. Hist.*—

Surging waves against a solid roc  
Though all to shivers dash'd, th'af  
Vain batt'ry, and in *froth* or bubble

—The useless *froth* swims on the sur  
pearl lies covered with a mass of water

The scatter'd ocean flies;  
Black sands, discolour'd *froth*, and r  
arise.

They were the *froth* my raging f  
When it boil'd up; I knew not th  
Yet then lov'd most. *Dryden's*

—If now the colours of natural bod mingled, let water, a little thickenee be agitated to raise a *froth*; and afte has stood a little, there will appear, shall view it intently, various colours in the surfaces of the bubbles; but small o so far off that he cannot di colours from one another, the who grow white, with a perfect whiteness A painter, having finished the pictare excepting the loose *froth* about his m

nd after many unsuccessful essays, de-  
o do that to his satisfaction, in a great  
a sponge at it, all besmeared with the  
which fortunately hitting upon the right  
one bold stroke of chance most exactly  
the want of skill in the artist. *Bentley*.  
mpty or senseless shew of wit or elo-  
3. Any thing not hard, solid, or sub-  
cateth his veal, pig and lamb being froth,  
vicé in a week go to bed without broth.

*Tusser*.  
ROTH. *v. n.* [from the noun.] To foam;  
out spume; to generate spume.—  
ets within, froths treason at his mouth,  
urns it through his teeth. *Dryd. Don. Seb.*  
muddies the best wit, and only makes it  
d froth high. *Grew*.

THILY. *adv.* [from frothy.] 1. With  
th spume. 2. In an empty trifling man-

HINESS, *n. f.* The state of being frothy;  
want of solidity. *Asb.*

SPIT, or CUCKOW-SPIT, a name given  
ite froth, or spume, very common in  
d the first months of summer, on the  
certain plants, particularly on those of  
non white field lychnis, or catchfly,  
lled by some *spating poppy*. All writers  
bles have taken notice of this froth,  
w have understood the cause or origin of  
ite. It is formed by a little leaping ani-  
d by some the *sea grasshopper*, by ap-  
anus close to the leaf, and discharging  
a small drop of a white viscous fluid,  
staining some air in it, is soon elevated  
in bubble: before this is well formed, it  
such another drop; and so on, till it is  
overwhelmed with a quantity of these  
which form the white froth which we  
in this spume it is seen to acquire  
on its back, wherein the wings are in-  
tefe bursting, from a reptile it becomes  
animal: and thus, rendered perfect, it  
et its mate, and propagate its kind.  
oblong, obtuse body; a large head with  
; 4 external wings, of a dusky brown  
arked with two white spots: the head  
It is a species of CICADA.

THY. *adj.* [from frothy.] 1. Full of  
th, or spume.—The sap of trees is of  
atures; some watery and clear, as vines,  
ears; some thick, as apples; some gum-  
tries; and some frothy, as elms. *Bacon*.  
d a frothy substance rise;

ious, or your bottle flies. *Swift*.  
ot solid; wasting.—Their bodies are so  
ard as you need not fear that bathing  
ike them frothy. *Bacon's Natural Hist.*  
mpy; trifling.—What's a voluptuous  
nd the frothy vanity of discourse that  
attends these pompous entertainments?  
but a mortification to a man of sense  
? *L'Estrange*.—Though the principles  
were never so clear and evident, yet  
be made ridiculous by vain and frothy  
the gravest and wisest person in the  
PART I.

world may be abused by being put in a fool's  
coat. *Tillotson*.

FROUARD, a town of France, in the dep. of  
Meurthe, on the Moselle, 5 m. NNW. of Nancy.

FROULAY-TE SSE, a town of France, in the  
dep. of Orne, 7 miles SE. of Domfront.

\* FROUNCE, *n. f.* A word used by falconers  
for a distemper, in which white spittle gathers a-  
bout the hawk's bill. *Skinner*.

\* To FROUNCE. *v. a.* [from the noun.] To  
frizzle or curl the hair about the face. This word  
was at first probably used in contempt.—

Some frounce their curled hair in courtly guise,  
Some prank their ruffs, and others timely dig:  
Their gay attire. *Spenser's Fairy Queen*.

—Some warlike sign must be used; either a slovenly  
buskin, or an overfaring frounced head. *Ascham*.—

Thus, night oft see me in thy pale career,  
'Till civil suited morn appear;  
Not trick'd and frounc'd as she was wont,  
With the attick boy to hunt. *Milton*.

FROUQUIE, an islet 1 mile W. of Jersey.

\* FROUZY. *adj.* [A cant, word.] 1. Fœtid;  
mufty.—

Petticoats in frouzy heaps. *Swift*.  
2. Dim; cloudy.—

When first Diana leaves her bed,  
Vapours and steams her looks disgrace;  
A frouzy dirty-coloured red  
Sits on her cloudy wrinkled face. *Swift*.

\* FROWARD. *adj.* [from forward, Saxon.] Pee-  
vish; un governable; angry; perverse; the con-  
trary to toward.—The froward pain of mine own  
heart made me delight to punish him, whom I  
esteemed the chieftest let in the way. *Sidney*.—

She's not froward, but modest as the dove;  
She is not hot, but temperate as the dove. *Shak*.

—Whole ways are crooked, and they froward,  
in their paths. *Prov. ii. 15*.—Time moves things  
round, that a froward retention of custom is as  
turbulent a thing as innovation. *Bacon*.—'Tis  
with froward men, and froward factions too, as  
'tis with froward children; they'll be sooner qui-  
eted by fear than by any lenity or civ. *L'Estrange*.  
—Motions occasion sleep, as we find by the com-  
mon use and experience of rocking froward chil-  
dren in cradles. *Temple*.

\* FROWARDLY. *adv.* [from froward.] Pee-  
vishly; perversely.—I hid me and was wroth, and  
he went frowardly in the way of his heart. *Ishab*,  
lvii. 17.

\* FROWARDNESS. *n. f.* [from froward.]  
Peevishness; perverseness.—How many froward-  
nesses of ours does he smother? how many indig-  
nities does he pass by? how many affronts does  
he put up with at our hands? *South*.—

We'll mutually forget  
The warmth of youth, and frowardness of age.  
*Addison's Cato*.

FROWDE, Philip, an English poet, the son  
of a gentleman who had been post-master in the  
reign of Queen Anne. He was sent to the uni-  
versity of Oxford, where he contracted an inti-  
macy with Mr Addison. He wrote several ele-  
gant Latin poems, interred in the *Muze Anglica-  
næ*; and 2 tragedies: *The Fall of Sardanani-  
us*; and *Robert Walpole*; and *Philotas*,  
addressed

addressed to the earl of Chesterfield. He died at London, in 1738, with a very amiable character.

\* FROWER. *n. s.* [I know not the etymology.] A cleaving tool.—

A *frower* of iron for cleaving of lath,  
With roll for a sawpit, good husbandry hath.  
*Tusser.*

\* FROWN. *n. s.* [from the verb.] A wrinkled look; a look of displeasure.—Patiently endure that *frown* of fortune, and by some notable exploit win again her favour. *Knolles's Hist. of the Turks.*—

In his half-clos'd eyes  
Stern vengeance yet and hostile terror stand;  
His front yet threatens, and his *frowns* command.  
*Prior.*

\* To FROWN. *v. a.* [*frogner*, old French, to wrinkle, *Skinner.*] To express displeasure by contracting the face to wrinkles; to look stern.—

Say, that she *frowns*; I'll say she looks as clear  
As morning roses newly wash'd with dew. *Shak.*

They chuse their magistrate;  
And such a one as he, who puts his shall,  
His popular shall, against a graver bench  
Than ever *frown'd*. *Shak. Coriolanus.*

→How now, daughter, what makes that frontlet on? You are too much of late i'th' frown.—  
Thou wast a pretty fellow, when thou hadst no need to care for her *frowning*. *Shak. King Lear.*  
Heroes in animated marble *frown*. *Pope.*

The wood,  
Whose shady horrors on a rising brow  
Wav'd high, and *frown'd* upon the stream below.  
*Pope.*

\* FROWNINGLY. *adv.* [from *frown*.] Sternly; with a look of displeasure.—

What, look'd he *frowningly*?  
A countenance more in sorrow than in anger.  
*Shakespeare's Hamlet.*

\* FROWY. *adj.* Musty; mossy. This word is now not used; but instead of it *frouzy*—  
But if they with thy gotes should yede,  
They soon might be corrupted;  
Or like not of the *frowy* fede,  
Or with the weeds be gluttid. *Spenser's Past.*

FROXFIELD, 2 villages: 1. in Hampsh. N. of Peterfield; 2. in Wilts, 2 miles from Hungerford.

FROYEN, an island near the coast of Norway 35 m. in circuit. Lon. 9. 0. E. Lat. 63. 45. N.

FROYLE, a village in Hampshire.

\* FROZEN. *part. pass.* of *freeze*. 1. Congealed with cold.—

What was the waste of war, what fierce alarms  
Shook Asia's crown with European arms?  
E'en such have heard, if any such there be,  
Whose earth is bounded by the *frozen* sea. *Æn.*

Fierce Boreas, with his offspring issues forth  
To invade the *frozen* waggon of the North. *Ovid.*

A cheerful blaze arore, and by the fire  
They warm'd their *frozen* feet, and dry'd their wet att re. *Dryden's Flower and Leaf.*

2. Chill in affection.—Against whom was the fine *frozen* knight, *frozen* in despair; but his armour naturally representing ice, and all his furniture lively answering thereto. *Sidney.*—

Be not ever *frozen*, coy;  
One bear of love will soon destroy  
And melt that ice to floods of joy. *Carew.*

3. Void of heat or appetite.—

Even here, where *frozen* chastity  
Love finds an altar for forbidden fire  
FROZES, a town of France, in the  
of Vienne, 5 miles W. of Poitiers.

\* F. R. S. *Fellow of the Royal Society*  
Who *virtu* profess,  
Shine in the dignity of F. R. S.

FRUCTESCENCIA, [from *fructus*  
botany, literally signifies the growth of  
but is used elliptically for the process *tin*  
after the fall of the flowers, the fruit  
maturity, and disperse their seeds

plants which flower in spring ripen in the  
summer, as rye; those which flower  
have their fruits ripe in autumn as the  
fruit of autumnal flowers ripens in winter  
following spring, if kept in a stove, or  
defended from excessive frosts. These

M. Adanson, are frequently so pernicious  
olent, as to destroy the greatest part of  
nial plants of Virginia and Mississippi  
cultivated in France, even before they  
bited their fruit. The plants which flower  
our winter, such as those of the Cape  
Hope, ripen their fruit in spring, in our

FRUCTISTÆ, } a sect of botanist  
FRUCTISTS. } TANY, *Index.*

\* FRUCTUOUS. *adj.* [*fructu*  
*fructif.*] Fruitful; fertile; impregnati  
tility.—

Apples of price, and plenteous the  
Oit interlac'd occur; and both im

congenial juice, so rich the soil,  
 ch does *fructuous* moisture o'erabound!

*Philips.*

**FRUGAL.** *a. j.* [*frugalis*, Lat. *frugal*, Fr.]  
 sparing; parsimonious; not prodigal;  
 tie; not lavish.—

Reasoning, I oft admire,  
 pure wife and *frugal* soul! commit  
 proportions, with sup. ruous hand  
 by nobler bodies to create,  
 manifold to this one use. *Milton.*  
 wing'd surveyors his sharp hunger fed  
*frugal* scraps of flesh and mass'n bread.

*Harte.*

rough mists he shoots his fallen beams,  
 of night, in loofe and straggling streams,  
 the evening day. *Dryden's Virgil.*

**GALITY.** *n. j.* [*frugalité*, Fr. *frugalitas*,  
 Lat.] parsimony; good husbandry.—As  
 general sort of men, *frugality* may be the  
 drinking water; for that is no small sa-  
 paying nothing for one's drink. *Bacon.*—

and bounty too,  
 differing virtues, meet in you. *Haller.*  
*frugality*; of your praises, some things I  
 see. *Dryden's Fables; Ded.*—The bound-  
 virtues are indissoluble lines: it is impos-  
 sible to step aside to the frontiers of *frugali-*  
 out entering the territories of parsimony.  
*John Bull.*

**FRUGALITY.** *n. j.* [from *frugal*.] Parimo-  
 niously; thriftily —  
 time young Palamides his marriage press'd,  
*frugally* resolv'd, the charge to thum,  
 his brother's bride with his own. *Dryd.*  
**FRUGES.** [Lat.] fruits, corn, herb, &c.  
**FRUGES,** in geography, a town of France,  
 partment of the Straits of Calais, 9 miles  
 from.

**FRUGIFEROUS.** *adj.* [*frugifer*, Lat.] Bear-  
 ing fruit.

**FRONZI,** Charles Innocent, an Italian poet,  
 to the academy of arts at Parma; where  
 in 1768. His works were printed in 9  
 in 1779.

**FRUTAN,** an island near the W. coast of  
 3 miles W. of Mafu Point.

**FRUIT.** *n. j.* [*fructus*, Lat. *frwyth*, Welsh;  
 ] 1. The product of a tree or plant in  
 seeds are contained.—

strawberry grows underneath the nettle,  
 wholesome berries thrive and ripen best,  
 sour'd by *fruit* of baser quality. *Shak.*  
 part of a plant which is taken for food.—

By taking of that *fruit* forbid,  
 they sought knowledge, they did error  
 bid. *Davies.*

how the rising *fruits* the gardens crown,  
 the sun, and make his light their own.

*Blackmore.*

tion.—The *fruit* of the spirit is in all  
 and righteousness, and truth. *Ephes. v. 9.*  
 offspring of the womb; the young of any

at thou their reck'nings keep? the time  
 compute,  
 their swol'n bellies shall enlarge the *fruit*.

*Sandys.*

5. Advantage gained by any enterprise or conduct.  
 —What is become of all the king of Sweden's  
 victories? Where are the *fruits* of them at this  
 day? Or of what benefit will they be to posterity?  
*Swift.*—Another *fruit*, from considering things in  
 themselves, will be, that each man will pursue his  
 thoughts in that method which will be most agree-  
 able to the nature of the thing, and to his appre-  
 hension of what it suggests to him. *Locke.* 6. The  
 effect or consequence of any action.—She blushed  
 when she considered the effect of granting; she  
 was pale when she remembered the *fruits* of deny-  
 ing. *Sidney.*—They shall eat of the *fruit* of their  
 own way. *Prov.*

(II.) **FRUIT**, in its general sense, includes what-  
 ever the earth produces for the nourishment of ani-  
 mals, expressed by the Latins under the name  
**FRUGES.**

(III.) **FRUIT**, in botany, (§ I. *def.* 1.) called by  
 the Greeks *καρπός*. in the Linnæan system, is one  
 of the parts of fructification, and is distinguished  
 into three parts, viz. the pericarpium, seed, and  
 receptacle, or *receptaculum seminum*. See **BOTANY.**

(IV.) **FRUITS, COLOURS EXTRACTED FROM.**  
 See **COLOUR-MAKING, Index.**

(V.) **FRUITS**, in commerce, (§ I. *def.* 2.) are dis-  
 tinguished into *recent* or *fresh*, and *dry*.

1. **FRUITS, DRY**, are those dried in the sun, or  
 by the fire, with other ingredients sometimes ad-  
 ded to them to make them keep; imported chief-  
 ly from beyond sea, and sold by the grocers. Such  
 are raisins, currants, figs, capers, olives, cloves,  
 nutmegs, pepper, and other spices; which see in  
 their order. Under the denomination of *dry fruits*  
 are also frequently included apples, pears, al-  
 monds, filberds, &c.

2. **FRUITS, FRESH, OR RECENT**, are those sold  
 just as they are gathered from the tree, without  
 any further preparation; as are most of the pro-  
 ductions of our gardens and orchards, sold by the  
 fruiterers.

(VI.) **FRUITS, MISCHIEFS ARISING FROM**  
**SWALLOWING THE STONES OF.** The dangers  
 arising from swallowing the stones of plums and  
 other fruits are very great. The *Philos. Transf.*  
 give an account of a woman who suffered violent  
 pains in her bowels for 30 years, returning once  
 in a month or less. At length, a strong purge be-  
 ing given her, the occasion of all these complaints  
 was driven down from the bowels to the anus;  
 where it gave a sensation of distension and stop-  
 page, producing a continual desire of going to  
 stool, but without voiding any thing. By proper  
 assistance, there was taken out with a forceps a  
 ball of an oval figure, of about 10 drachms in  
 weight, and measuring 5 inches in circumference.  
 This had caused all the violent fits of pain which  
 she had suffered for so many years; and, after  
 voiding it, she became perfectly well. The ball  
 extracted looked like a stone, and felt very hard,  
 but swam in water. On cutting it through with  
 a knife, there was found in the centre, a plum  
 stone, round which several coats of this hard and  
 tough matter had gathered. Another instance is  
 given in the same papers of a man, who, dying of  
 an incurable colic which had tormented him many  
 years, and baffled the effects of medicines, was  
 opened after death; and in his bowels was found

a ball similar to that above-mentioned; but somewhat larger, being 6 inches in circumference, and weighing an ounce and a half. In the centre of this, as of the other, there was found the stone of a common plum, and the coats were of the same nature with those of the former. These and similar instances mentioned in the same work, sufficiently show the folly of that common opinion that the stones of fruits are *wholesome*. Even cherry stones, swallowed in great quantities, have occasioned death.

\* FRUITAGE. *n. s.* [*fruitage*, Fr.] Fruit collectively; various fruits.—

In heav'n the trees  
Of life ambrosial *fruitage* bear, and vines  
Yield nectar. *Milton's Par. Lost.*

Greedily they pluck'd  
The *fruitage*, fair to fight, like that which grew  
Near that bituminous lake where Sodom flam'd.  
*Milton.*

—What is more ordinary with them than the taking in flowers, and *fruitage* for the garnishing of their work? *Morgan.*

\* FRUITBEARER. *n. s.* [*fruit and bearer*]. That which produces fruit.—Trees, especially *fruitbearers*, are often infected with the measles, *Mort. H.*

\* FRUITBEARING. *adj.* [*fruit and bear*] Having the quality of producing fruit.—By this way graft trees of different kinds one on another, as *fruitbearing* trees on those that bear not. *Mortim.*

\* FRUITERER. *n. s.* [*fruitier*, Fr.] One who trades in fruit.—I did fight with one Samsop Stockfish, a *fruiterer*, behind Gray's inn. *Shak.*  
Waldite the *fruit'er's* hand in Autumn stain;  
Blue plums and juicy pears augment his gain.  
*Gay.*

(1.) \* FRUITERY. *n. s.* [*fruiterie*, Fr.] 1. Fruit collectively taken.—

Oft, notwithstanding all thy care  
To help thy plants, on the small *fruitery*  
Exempt from ills, an oriental blast  
Disastrous flies. *Philips.*

2. A fruit-loft; a repository for fruit.

(2.) A FRUITERY, (§ 1. def 2.) should be inaccessible to moisture; and should be as much as possible so, even to frost.

FRUIT-FLIES, a name given by gardeners and others to a sort of small black flies, found in vast numbers among fruit-trees, in the spring season, and supposed to do great injury to them. Mr Leeuwenhoek preserved some of these flies for his microscopical observations. He found that they did not live longer than a day or two, but that the females during this time laid a great number of longish eggs. The gardeners who suppose that these flies wound the leaves of the trees, are mistaken: it is true that they feed on their juices; but they have no instruments wherewith they can extract these for themselves: they feed on such as are naturally extravasated; and when there is not a sufficient quantity of these for their purpose, they haunt the places to which the pucerons resort, and feed on the juices which these little creatures extravasate; by means of the holes they bore in the leaves with their trunks.

\* FRUITFUL. *adj.* [*fruit and full*] 1. Fertile; abundantly productive; liberal of vegetable production.—If the continued cruel, he could do more

sustain his life, than the earth remain *fruitful*'s continual absence. *Sidney.*—

The Earth,  
Though in comparison of Heav'n, so  
Nor glitt'ring, may of solid good con  
More plenty, than the sun that barre  
Whose virtue on itself works no effect  
But in the *fruitful* earth.

2. Actually bearing fruit.—

Adonis' gardens,  
That one day bloom'd, and *fruitful*  
next.

3. Prolifick; childbearing; not barren.—  
Hear, Nature, hear; dear goddess,  
ther!

Suspend thy purpose, if thou did'st in  
To make this creature *fruitful*:

Into her womb convey sterility. *Shak.*  
Male he created thee, but thy conf  
Female for race; then blest'd mankind.  
Be *fruitful*, multiply, and fill the Ear  
Subdue it, and throughout dominion h  
—I have copied Nature, making the you  
rous and the damsels *fruitful*. *Gay.* 4. P  
abounding in any thing.—

While you, my lord, the rural shade  
And from Britannia's public posts reti  
Me into foreign realms my fate conve  
Thro' nations *fruitful* of immortal lay

\* FRUITFULLY. *adv.* [from *fruitful*]  
such a manner as to be prolifick.—

How sacred seeds of sea, and air, a  
And purer fire through universal night  
And empty space did *fruitfully* unite.

2. Plenteously; abundantly.—You have  
portunities to cut him off: if your will  
time and place will be *fruitfully* offered.

\* FRUITFULNESS. *n. s.* [from *fruitful*]  
Fertility; fecundity: plentiful productio  
ther can we ascribe the same *fruitfulness*,  
part of the earth, nor the same virtue to  
thereon growing, that they had before  
*Raleigh's Hist.* 2. The quality of being  
or bearing many children.—

The goddess, present at the match  
So blest'd the bed, such *fruitfulness* ec  
That ere ten moons had sharpen'd eit  
To crown their bliss, a lovely boy wa  
*Dryde.*

3. Exuberant abundance.—The remedy  
*fulness* is easy, but no labour will help  
trary: I will like and praise some things in  
writer, which yet, if he continues in,  
but justly hate him for. *Beh Jonson's Di*

\* FRUITGROVES. *n. s.* [*fruit and grove*]  
Shades; or close plantations of fruit trees:  
The faithful slave,

Whom to my nuptial train Icarus gav  
To tend the *fruitgroves*. *Pope*

\* FRUITION. *n. s.* [*fruo*, Lat.] Enj  
possession; pleasure given by possession  
Man doth not seem to rest satisfied eit  
*fruition* of that wherewith his life is pref  
with performance of such actions as adv  
most deservedly in estimation. *Hooker.*—

I'm driv'n, by breath of her reno  
Either to seek shipwreck, or to arrive  
Where I may have *fruition* of her love.

riches and renown to men imparts,  
 and yet their narrow hearts  
 so great a fluency receive,  
 't' *fruit* to a stranger leave. *Sandys.*  
 once, like beauty, without art or dress,  
 and unadorn'd, could find success;  
 't' *fruit*, novelty destroy'd,  
 mph must find new charms to be enjoy'd.

*Granv.*  
 on generally disables a man from pursuing  
 s in which the guilt of men consists: if  
 ion be on his body, his appetites are  
 , and capacity of *fruit* destroyed.

*sermons.*  
 [TIVE. *adj.* [from the noun.] Enjoying;  
 ; having the power of enjoyment. A  
 legitimate.—To whet our longings for  
 r experimental knowledge, it is reserved  
 e prerogatives of being in heaven, to  
 e happy we shall be, when there. *Boyle.*

ITLESS. *adj.* [from *fruit*.] 1. Barren of  
 : bearing fruit.—The Spaniards of Mexi-  
 ic first forty years, could not make our  
 heat bear seed; but it grew up as high  
 es, and was *fruitless*. *Raleigh's History.*  
 productive of no advantage; idle; un-

—  
 let me not, quoth he, return again  
 to the world, whose joys so *fruitless* are;  
 let me here for ay in peace remain,  
 ightway on that last long voyage fare.

*Spenser's Fairy Queen.*  
 ent! we might have spar'd our coming  
 ther;  
 to me, tho' fruit be here t' excess. *Milt.*  
 ber is for entirely waving all searches in-  
 ity, in relation to this controverly, as  
 her needles or *fruitless*. *Waterland.* 3.  
 o offspring.—

o my head they plac'd a *fruitless* crown,  
 it a barren sceptre in my gripe;  
 o of mine succeeding. *Shakesp. Macbeth.*  
 ITLESSLY. *adv.* [from *fruitless*.] Vain-  
 unprofitably.—After this fruit curiosity  
 nquireth, and confidence blindly deter-  
 Brown's *Vulgar Errors*.—  
 sing they talk'd, and *fruitlessly* divin'd  
 friend the priestess by those words de-  
 n'd. *Dryden.*

IT-TIME. *n. s.* [*fruit* and *time*.] The  
 the time for gathering fruit.

UIT-TREE. *n. s.* [*fruit* and *tree*.] A  
 at kind whose principal value arises from  
 produced by it.—

is, by yonder blessed moon I vow,  
 ips with silver all these *fruit-tree* tops.

*Shakespeare.*  
 possessed houses full of all goods, wells  
 vineyards and oliveyards, and *fruit-trees*  
 mce. *Neb.* ix. 25.—

with a border of rich *fruit-trees* crown'd,  
 loaded branches hide the lotty mound.

*Waller.*  
 UIT-TREES, GENERAL OBSERVATIONS  
 he cutting or pruning them when young,  
 is bearing, though it contributes to the  
 and flavour of the fruit, as well as to the

beauty of the tree. 2. Kernel fruit-trees come  
 later to bear than stone fruit-trees: the time re-  
 quired by the first, before they come to any fit  
 age for bearing, being on an average 5 years; but  
 when they do begin, they bear in greater plenty  
 than stone fruit. 3. Stone fruit, figs, and grapes,  
 commonly bear considerably in 3 or 4 years, and  
 bear full crops the 5th and 6th years; and hold it  
 for many years, if well ordered. 4. Fruit-trees  
 in the same neighbourhood will ripen a fortnight  
 sooner in some grounds than in others of a dif-  
 ferent temperature. 5. In the same country, hot  
 or cold summers set considerably forwards, or put  
 backwards, the same fruit. 6. The fruit on wall  
 trees generally ripen before those on standards,  
 and those on standards before those on dwarfs.  
 9. The fruit of all wall trees planted in the S. and  
 E. quarters, commonly ripen about the same time,  
 only those in the S. rather earlier than those in the  
 E.; those in the W. are later by 8 or 10 days;  
 and those in the N. by 15 or 20.

(III.) FRUIT-TREES, GRAFTING, PLANTING,  
 PRESERVING, &c. OF. See GRAFTING, ORCH-  
 ARD. PLANTING, TREE, &c.

(IV.) FRUIT-TREES, Mr FORSYTH'S MANAGE-  
 MENT OF. The following particulars relating to  
 Mr William Forsyth of Kensington's management  
 of fruit trees, communicated to the E. of Buchan  
 by Dr James Anderson of Mounzie, Nov. 19, 1797,  
 have been very obligingly transmitted to us by his  
 Lordship.—“This subject falls to be considered  
 under two points of view: I. That of recovering  
 decayed trees, and eradicating the diseases to which  
 fruit-trees are subjected: II. Pruning, so as to in-  
 sure a constant succession of fruit-bearing buds.  
 On each of these heads I shall offer such observa-  
 tions as I have been able to pick up.”

I. FRUIT-TREES, Mr FORSYTH'S METHOD OF  
 CURING, WHEN DECAYED, OR INJURED.—“I. The  
 recovering of decayed trees, is an operation pure-  
 ly chirological, for it is in all respects analogous to  
 what takes place in animal bodies, with this sin-  
 gular difference in respect to vegetables, that life  
 can be seemingly renovated, and the vigour of  
 youth restored, after the vital powers are nearly  
 annihilated, in consequence of the gradual decays,  
 which were the natural effects of extreme senility.  
 I mentioned to your lordship, if you recollect, at  
 Dryburgh Abbey, a cherry tree which will afford  
 a full illustration of what I here say. This cherry  
 tree had been brought from abroad by an English  
 admiral, with 3 more of the same sort, about the  
 beginning of this century, and had been planted  
 at Kensington, in the king's garden. The other 3  
 were sent to different places. These 3 trees have  
 been totally dead for many years, and that at Ken-  
 sington was so much decayed, that it had not been  
 known to carry any fruit within the memory of  
 man, and it was so far reduced about 4 years ago,  
 that it made 1.0 shoots at all, though it still conti-  
 nued to send forth a few leaves. The king chanced  
 to take notice of this decayed stump, and observed  
 to Forsyth, that he supposed this tree was past his  
 power to recover. Forsyth thought so himself,  
 but merely to try what could be done, he exami-  
 ned the tree with great care. He found that it  
 was entirely dead in every part, unless upon one  
 side,

side, where a strip of bark, not much above one inch in breadth, was still alive, and on cutting off the top of the tree, within about one foot of the root, he found the wood was totally dead, unless a small slip immediately under the living bark, a section of which you may conceive, from the annexed sketch; (see *Plate CLVIII, fig. 4.*) the whole part at A being all that was alive. His method is to pare off all the dead bark, near the place where it is alive, and to proceed onward till he comes to the *quick*. He cuts into the edges of this all round, till he feels he is every where at the quick; then scooping away the dead wood, leaving only a little at the back of the quick wood for the present to protect it, as in the section, represented on *Plate CLVIII, fig. 5.* He then covers the fresh cut edges of the bark, and the sound part of the wood that is left, with his composition. (See § 3.) The consequence of these operations are, that from the top of the bark, and the sound part of the wood, shoots of considerable vigour sprung out, which vigour was augmented by rubbing off all the buds that appeared, except 2 or 3. The edges of the bark all round begin to swell in the spring and to roll round, in the manner represented in *fig. 6.* Next year more of the dead wood next the edges is cut away, cutting into the *quick* at those places, and cutting off the inner edge of the new roll of bark next to the wood, and then covering the wound with the salve. Next year the roll at each side increases, as represented, *fig. 7.* And so on from year to year, till the decayed wood being scooped out to give room, till in a few years it assumes the form of *fig. 8.* And by continuing the same process the open is entirely closed, and the whole stem left as sound wood as any tree whatsoever. While this process is going on in the body of the tree, the branches advance with increasing vigour, and cover the top of the wound, while new roots spring out in the same manner from below; so that the tree becomes renewed in all its parts, and is for every purpose as vigorous as a young tree, and for the yielding of fruit much more beneficial, as he finds in general that an old decaying tree (not so far gone however as that just described, but past bearing good fruit) will produce commonly as much fruit in the 3d year after being cut over, as could be obtained from a young planted tree of the same kind in the 30th year from the time of planting. The cherry tree above described is now in full bearing, and produced last season some thousands of cherries of the finest sort. — Diseases affecting fruit trees are eradicated on the very same principle explained above. Cherries, plumbs, apricots, peaches, and other stone fruits, if they receive ever so slight a bruise upon the bark, become immediately covered with gum; and wherever that gum appears, it acts as a canker which kills the bark and the wood under it; and this spreads wider and wider, till in a short time the whole is destroyed. In order to guard against this, he watches his trees with care, and wherever he perceives the appearance of gum, at whatever season of the year it be, he takes his knife, cuts off the gum, and all the infected bark and wood under it, till he be at the quick every where, and immediately covers it with his salve. It heals over immediately, and in a very short time it is per-

fectly sound and beautiful. But when a tree, that has been long mis-managed, has its bark gangrened in many places in that case he scrapes off the whole bark entirely, leaving the inner bark if it is found, but in all the places where it is decayed, the whole of that decayed part and wood, is scooped entirely out, leaving nothing but the quick; and when this is thus gone over, it is entirely covered with the salve in every part. After this wounded places soon skin over, and the whole becomes covered with a new bark, and shining like the most healthy tree. This operation is peculiarly useful for old trees, whose bark has become covered and is besides rigid and unhealthy. It is to be headed down, if old and when this process ought never to be omitted.

2. FRUIT-TREES, Mr FORSYTH'S PRUNING. II. "With regard to pruning trees, if standards, Mr Forsyth never shoots. He encourages a good number to push out round the stem, and lets them stand at that state. In his garden, where cattle he heads them down very low, and keeps them rather as bushes than trees; seldom allowing them to grow so high as to be beyond his gathering the fruit. And as he always shoots young, he can easily bend them in any way. From the tendency that young trees which sprung out from old wood, to produce fruit, he seldom fails to have a year after it has been headed down which misses it in the 2d, and in the 3d year a great abundance. He showed me one pear tree, that had been headed down when he gathered 2,500 pears the 3d year after it was cut; and were 3 young trees just beside it, about 10 years old, in high health and vigour, from which he did not gather more than 600. The difference between the fertility of these young trees and the real young ones is indeed almost insupportable. On this account he buys old trees and cuts them, in preference to young ones, and supplies those persons with young trees to change for the old ones, which they are obliged to throw out of their gardens. As trees thus trained are in general very full of fruit, he takes care to cut out some of the stems when they get too large, and lets new ones spring up in their place, thus keeping them constantly in the wild state of a kind of bush rather than trees, which to my taste is the appearance of art about them, but generally irregular, is very beautiful, the fruit intermixed with the branches every where. I scarcely add, that, wherever amputating the wounds are immediately covered with salve. In stone fruit particularly, this must be done, or even delayed. In regard to this mode of pruning differs in some respects according to the diversity of the kind to be managed; for he finds, that to obtain the best fruit over the whole tree, a difference of treatment is required on every individual kind of nectarine, peach, &c. but into the

I consider as of very great importance, I pretend to enter, because I do not know myself. All I can do is to develop what I take to be the general basis of his practice. He shortens a shoot during summer, unless the upright stem, which he sometimes cuts once or even thrice in a season, if it grows too tall; to make it push out shoots for filling up part of the tree, which would be in some ways left bare without this precaution. All shoots he lays in at full length, till September, when he shortens every shoot he means to take away within about 6 inches of the stem from which it springs. In this state he leaves it till winter, when he goes over the whole as convenient; and at that time he cuts it off close to the stem, so as to leave only one or at most two eyes at the root of it, close at the stem of the tree. From these eyes, thus left, there push out only a couple of leaves next spring, which the year thereafter become fruitful, and that with great certainty. After this year the shoot has ripened its fruit, he shortens that shoot in winter, leaving only one eye or two at the root. These eyes also push out only leaves in summer, which the year thereafter become fruitful; and so on he keeps the whole tree continually covered with fruit buds of this season, and preparatory buds which are to come in their next season. Under this management there are no woody branches sticking out from the tree, as of old; but an apple or pear tree is as close dressed as a peach. In shortening shoots of apples and pears in September, he takes certain precautions; but for cherries and other fruits, he never omits to touch the tip of the shoot where cut over, with a brush dipped in lime, made of a due thickness for that purpose, and every wound at the last pruning is done in the same manner, for kernel fruit as well as stone fruit. Mr Forsyth is in general very desirous of keeping all the wood on his trees young; and when the branches begin to get old, he cuts them where a favourable shoot pushes forth, and serves it perhaps for two seasons without touching it; and then cuts out the old branch, and lays this one in its stead. You will observe, that he never shortens any of the shoots along the wall for the purpose of bearing, so that they have fewer branches, and are more ramifications of any sort, than is usual in the case; and these branches, when thus left to themselves, throw out more fruit buds and fewer shoots than they otherwise would have done. He also, that as Kensington gardens are richly manured, though the soil be not naturally favourable, tends greatly to the production of fruit. Mr Forsyth considers it as the inevitable ruin of a garden to be manured; nor does he imagine it possible to give it too much manure, if the production of fruit be the object aimed at. These remarks are the principal hints that I have been able to pick up from Mr Forsyth, in going several times through the garden with him. He is, you will perceive, very communicative; but it takes time for a person, who is not acquainted with the subject, to acquire consistent and correct notions respecting it."

3. FRUIT-TREES, Mr FORSYTH'S RECIPE FOR CURING THE DISEASES OF. Mr Forsyth received a reward from his majesty for publishing the following composition for curing diseases and injuries in all kinds of fruit and forest trees; with his method of preparing the trees, and laying on the composition. "Take one bushel of fresh cow dung, half a bushel of lime rubbish of old buildings, (that from the ceilings of rooms is preferable,) half a bushel of wood ashes, and a 16th part of a bushel of pit or river sand; the 3 last articles are to be sifted fine before they are mixed; then work them well together with a spade, and afterwards with a wooden beater, until the stuff is very smooth like fine plaster used for the ceilings of rooms. The composition being thus made, care must be taken to prepare the tree properly for its application, by cutting away all the dead, decayed, and injured part, till you come to the fresh, sound wood, leaving the surface of the wood very smooth, and rounding off the edges of the bark with a sharp knife, or other instrument, perfectly smooth, which must be particularly attended to: then lay on the plaster about one 8th of an inch thick, all over the part where the wood or bark has been cut away, finishing off the edges as thin as possible; then take a quantity of dry powder of wood ashes, mixed with a 6th part of the same quantity of the ashes of burnt bones; put it into a tin box with holes in the top, and shake the powder on the surface of the plaster, till the whole is covered over with it; letting it remain for half an hour to absorb the moisture. Then apply more powder, rubbing it on gently with the hand, and repeating the application of the powder, until the whole plaster becomes a dry smooth surface. All trees cut down near the ground should have the surface made quite smooth, rounding it off in a small degree, and the dry powder directed to be used afterwards should have an equal quantity of powder of alabaster or stucco, commonly called Paris plaster stone, mixed with it, in order the better to resist the dripping of the trees and heavy rains. If any of the composition be left for a future occasion, it should be kept in a tub or other vessel, and urine, or stale of any kind, poured on it, so as to cover the surface, otherwise the atmosphere will greatly hurt the efficacy of the application. Where lime rubbish of old buildings cannot be easily got, take pounded chalk, or common lime after having been slacked a month or so. As the growth of the tree will gradually affect the plaster, by raising up its edges next the bark, care should be taken, where that happens, to rub it over with the finger when occasion may require, (which is best done when moistened by rain,) that the plaster may be kept whole to prevent the air and wet from penetrating into the wound."

(V.) FRUIT-TREES, Mr F. D. S. BUCKNALL'S COMPOSITION FOR CURING THE CANCER OF. "Take one 4th oz. of the corrosive sublimate, reduced to a fine powder by beating it with a wooden pestle or hammer, and then put it into a 3 pint earthen pipkin, with about a glass-full of gin, or other spirits, stirred well together, and the sublimate thus dissolved: the pipkin is to be filled with vegetable or common water, and constantly stirred, till the mixture is blended together as

complete

completely as possible. This quantity will be sufficient for 200 fruit trees."

(1.) \* FRUMENTACEOUS. *adj.* [from *frumentum*, Lat.] Made of grain. *Diſ.*

(2.) FRUMENTACEOUS is applied by botanists to all such plants as have a conformity with wheat, in their fruits, leaves, ears, or the like.

FRUMENTARII, a kind of soldiers or archers under the western empire. The first mention we find made of these officers is in the reign of the emperor Adrian, who made use of them to inform himself of whatever passed. They did not make any particular corps distinct from the rest of the forces, but there was a certain number of them in each legion. It is supposed, that they were at first a number of young persons, disposed by Augustus throughout the provinces, particularly on all the grand roads, to acquaint the emperor, with all expedition, of every thing that happened. Afterwards they were incorporated into the troops themselves, where they still retained their ancient name. As their principal office was the giving intelligence, they were often joined with the CURIOSI, with whom they agreed in this part of their office. Their name is derived from their being also a sort of purveyors to the armies, cities, &c. collecting the corn from the several provinces.

FRUMENTATION, in Roman antiquity, a largess of corn bestowed on the people. This practice of giving corn to the people was very ancient among the Romans, and frequently used to sooth their turbulent humour. At first the number of those to whom this largess was given was indeterminate, till Augustus fixed it at 200,000.

FRUMENTIUS, ST, the first who preached the gospel in Ethiopia, except the eunuch who was converted by St Philip. (Acts, viii. 27.) Frumentius was ordained bishop of Ethiopia, by St Athanasius, A. D. 331. See ETHIOPIA, § 15.

\* FRUMENTY. *n. f.* [*frumentum*, corn, Lat.] Food made of wheat boiled in milk.

\* To FRUMP. *v. a.* To mock; to browbeat. *Skinner. Ainsw.*

(1.) \* FRUSH. *n. f.* [from the verb.] A sort of tender horn that grows in the middle of the sole, and at some distance from the toe: it divides into two branches, running towards the heel, in the form of a fork. *Farrier's Diſ.*

(2.) FRUSH. See FARRIERY, Part V, Sect. IX.  
\* To FRUSH. *v. a.* [*froisser*, French.] To break, bruise, or crush. *Hanmer.*—

I like thy armour well;  
I'll *frush* it, and unlock the rivets all,  
But I'll be matter of it. *Shakeſp. Troil. & Cress.*

FRUSTRANEA POLYGAMIA. See BOTANY, § 194.

\* FRUSTRANEOUS. *adj.* [*frustra*, Latin.] Vain; useless; unprofitable; without advantage.—Their attempts being so *frustraneous*, and the demonstrations to the contrary so perspicuous, it is a marvel that any man should be zealously affected in a cause that has neither truth nor any honest usefulness in it. *Mare.*—He timely withdraws his *frustraneous* baffled kindles, and sees the folly of endeavouring to stroke a tyger into a lamb, or to court an Ethiopian out of his colour. *Soutb.*

\* FRUSTRATE. *participial adj.* [from the

verb.] 1. Vain; ineffectual; useless able.—

He is drown'd

Whom thus we stray to find, and the  
Our *frustrate* search on land. *S.*

—The ruler of the province of Jude order of Julian buſied in the re-edify temple, flaming balls of fire iſſuing near dation, and oft consuming the workmen enterprize *frustrate*. *Raleigh's Hiſt.*—

All at once employ their thronging  
But out of order thrown, in air they  
And multitude makes *frustrate* the d

*Dry.*

2. Null; void.—Few things are so restrained end or purpose, that, the same be they should forthwith utterly become *Hooker.*

\* To FRUSTRATE. *v. a.* [*frustror*, Lat. Fr.] 1. To defeat; to disappoint; to It is an axiom of nature, that natural not utterly be *frustrate*. *Hooker.*—

I survive,

To mock the expectations of the world  
To *frustrate* prophecies, and to raze  
Rotten opinion. *Shakeſp.*

Stern look'd the fiend, as *frustrate*  
Not half suffic'd, and greedy yet to l  
Not more almighty to resist our mi  
Than wise to *frustrate* all our plots a

2. To make null; to nullify.—The act ment, which gave all his lands to the c cut off and *frustrate* all such conveyances  
Now thou hast aveng'd

Supplanted Adam; and by vanquishing  
Temptation, hast regain'd lost parad  
And *frustrated* the conquest fraudulent  
—The peculiar strength of the motive  
Self perhaps contribute to *frustrate* the  
it, rendering it liable to be suspected  
whom it is addressed. *Atterbury.*

\* FRUSTRATION. *n. f.* [*frustrat* from *frustrate*.] Disappointment; d states notoriously irreligious, a secret an ble power countermands their deepest splits their counsels, and smites their r licies with *frustration*. with a curse. *Sou*  
\* FRUSTRATIVE. *adj.* [from *frustr* lacious; disappointing. *Ainsw.*

\* FRUSTRATORY. *adj.* [from ] That which makes any procedure v which vacates any former process.—B strains this to a *frustratory* appeal. *Ash*

(1.) \* FRUSTUM. *n. f.* [Latin.] A off from a regular figure. A term of se

(II.) FRUSTUM, in mathematics, a pa solid body separated from the rest. Th  
1. The FRUSTUM OF A CONE is the remains when the top is cut off by a parallel to the base; and is otherwise called *cone*.

2. The FRUSTUM OF A GLOBE, or is any part thereof cut off by a plane, contents of which may be found by T To three times the square of the semid the base add the square of its height;

sum by the height, and this product multiplied by 36 gives the solidity of the frustum. **FRUSTUM OF A PYRAMID** is what remains when the top is cut off by a plane parallel

**X**, a **SHRUB**. Shrubs, according to the system of Linnaeus, make a branch of the 7th family in the kingdom, and are distinguished from trees in that they come up without buds. But this distinction is not universal, though it be generally observed with regard to those of Europe. Nature made no absolute distinction between trees and shrubs. *Prunus*, in its general acceptation, is a plant whose trunk is perennial, gemmiferous, dividing and subdividing into a number of branches. In short, it is the epitome of a tree, exemplified in the rose-bush. **FRISINGEN**, a town and ci-devant bailliwick in the Helvetic republic, in the late canton of Fribourg, S. of Spiez, and 30 SE. of Fribourg.

**FRY**, *n. f.* [from *froe*, foam, Danish. *Skin-fry*, the swarm of little fishes just produced from a pawn.—

They come to us, but as love draws;  
They follow us, and never chaws;  
As by chain'd shot, whole ranks do  
Fly to the tyrant pike, and we the fry. *Donne*.  
With the sounds and seas, each creek  
Is bay,  
By innumerable swarm and shoals  
That with their fins and shining scales  
Under the green wave in flocks, that oft  
Come mid sea. *Milton's Par. Lost*.  
The elder had the hap to draw up a very little  
Among the fry. *L'Estrange*.—  
He sits behind some promontory lie  
The Leviathans, t' attend their prey;  
There are no chace, but swallow in the fry,  
Who'er their gaping jaws mistake the way.

*Dryden*.  
Farm of animals; or young people in  
—Out of the fry of those rakish horse-  
stealing up in knavery and villany, are they  
usually supplied and maintained. *Spenser*.—  
I was born before the fry of children young,  
When on sports and childish mirth did play,  
The maidens sounding timbrels sung.

*Fairy Queen*.  
I see no constellations there,  
Nor goat, nor bull, nor bear;  
Nor of that monstrous fry  
That stalk the sky. *Oldham*.  
The fry must be held at a distance, and  
the discipline of contempt. *Collier*.  
*Fry*, *n. f.* A kind of sieve.—He dresseth  
his meat, by running it through a fan  
*Sturmer's Husbandry*.  
*Fry*, *n. f.* [from the verb]. A dish of  
fried fish. *Fry*, *v. a.* [*frigo*, Lat. *frio*, Welsh;  
to dress food by roasting it in a  
fire.

Page 1.

(1.) \* *To Fry*, *v. n.* 1. To be roasted in a pan on the fire. 2. To suffer the action of fire.—

So when with crackling flames a cauldron  
Fries,  
The bubbling waters from the bottom rise;  
Above the brims they force their fiery way,  
Black vapours climb aloft, and cloud the day.  
*Dryden's Æn.*

3. To melt with heat.—  
Spices and gums about them melting fry,  
And, phoenix like, in that rich nest they die.  
*Waller*.

4. To be agitated like liquor in the pan on the fire.  
—Oil of sweet almonds, newly drawn with sugar,  
and a little spice, spread upon bread toasted, is  
an excellent nourisher; but then, to keep the oil  
from frying in the stomach, drink mild beer after  
it. *Bacon's Nat. Hist.*—

Where no ford he finds, no water fries,  
Nor billows with unequal murmurs roar,  
But smoothly slide along, and swell the shore,  
That course he steer'd. *Dryden's Æn.*  
**FRYBERG**, a town of Bohemia, in the circle  
of Prachatz, 9 miles W. of Rosenberg.

\* **FRYINGPAN**, *n. f.* [*fry* and *pan*.] The ves-  
sel in which meat is roasted on the fire.—If I pass  
by the sea, I may chance to fall from the frying-  
pan into the fire. *Houzel's Voc. For.*—We under-  
stand by our of the fryingpan into the fire, that  
things go from bad to worse. *L'Estrange*.—A free-  
man of London has the privilege of disturbing a  
whole street with the twanking of a brass kettle,  
or a fryingpan. *Spettator*.

**FRY'S BAY**, a bay on the SW. coast of Antigua.  
(1.) **FRYTH**, John, a martyr to the Protestant  
religion, under Henry VIII. He was the son of  
an innkeeper at Seven-oaks in Kent; and educa-  
ted in the king's College, Cambridge, where he  
took the degree of B. A. Thence he removed to  
Oxford, and was made a junior canon of Wolfey's  
college. He there became acquainted with Will-  
iam Tyndale, a zealous Lutheran, who converted  
him to Lutheranism. Avowing his opinions pub-  
licly, he was apprehended, examined, and con-  
fined to his college. At length having obtained  
his liberty, in 1528, he went over to Germany,  
where he continued about two years, and then  
returned to England. At last he was taken up at  
Reading as a vagrant, and set in the stocks, where  
he remained till he was nearly expiring for want  
of sustenance. He was at length relieved by the  
humanity of Leonard Cox, a schoolmaster, who  
procured his enlargement, and supplied his wants.  
He then set out for London, where he began to  
make proselytes, but was apprehended by order  
of Sir Thomas More, and sent prisoner to the  
Tower. Refusing to recant, he was burnt in  
Smithfield, on the 4th July 1533. He left several  
works, which were printed in folio, in 1573.

(2.) **FRYTH**, a village in Middlesex, between  
Barnet and Mill hill.  
**FRUAGE**, *n. f.* in old English writers, a tax of  
12d. for every acre, levied in the time of Edw. III.  
\* **FUB**, *n. f.* A plump chubby boy. *Shinley*.  
\* *To FUB*, *v. a.* To put off; to delay by false  
pretences; to cheat. It is generally written *fib*.  
See **FOS**.—A hundred mark is a long loan for a  
\$ poor

poor lone woman to bear? and I have born, and born, and born, and have been *fall'd* off and *fall'd* off from this day to that day, that it is a shame to be thought on. *Shakespeare. Henry IV.*

\* FUCATED. *adj.* [*fucatus*, Latin.] 1. Painted; disguised with paint. 2. Disguised by false show.

FUCECCHIO, a town of Italy, in Tuscany, 18 miles SSW. of Pistoia.

FUCHSWINKE, a town of Silesia, in Neisse.

(1.) FUCINUS, in ancient mythology, the god of the lake is named. His temple stood on its banks.

(2.) FUCINUS LACUS, in ancient geography, a lake of Italy in the country of the Marsi, now called CELANO, from a cognominal citadel, in the S. of Abruzzo Ultra. According to the testimony of ancient authors, it was subject to extraordinary risings and decreasings. The actual circumference is 47 miles: the breadth in the widest part is 10, in the narrowest 4; its depth 12 feet upon an average. But all these have varied prodigiously. Two miles up the plain, behind Avezzano, the fragments of boats, shells, and other marks of its ancient extent, have been casually discovered: and, on the other hand, there are people who remember when it did not flow nearer than within two miles of Avezzano. An immense tract of excellent land is lost at every increase of its level. All round this noble piece of water rises a circle of grand mountains, some of them the highest in Italy, except the Alps, and many of them covered with snow. At the foot of them are numerous villages with rich and well cultivated farms. The environs of the lake, Mr Swinburn describes, as all well inclosed, and the sides of the hills as covered with fine woods; its waters abound with fish of various kinds, and thither repair at stated seasons innumerable flights of wild fowls. As the swelling of the lake was attended with incredible damage, the Marsi had often petitioned the senate to drain it; Julius Cæsar would have attempted it, had he lived longer. His successors were averse to the project, until Claudius, who delighted in expensive difficult enterprises, undertook it. During the space of 11 years he employed 30,000 men in digging a passage through the mountain; and when every thing was ready for letting off the water, exhibited a superb naval spectacle on the lake. A great number of condemned criminals were obliged to act the parts of Rhodians and Sicilians in separate fleets; to engage in earnest, and to destroy one another, for the entertainment of the court and the multitude of spectators that covered the hills. A line of well armed vessels and rafts loaded with soldiers surrounded the scene of action, to prevent any of the wretches from escaping; but it was with great difficulty and many threats that they could be brought to engage. When this savage diversion was ended, the operations for opening the outlet commenced, and the emperor was very near being swept away and drowned, by the sudden rushing of the waters. However, either through the ignorance or negligence of the engineers, the work did not answer as was expected, and Claudius did not live long enough to have the fault amended. Nero abandoned the scheme through envy. *Adrian is said to have let off the*

waters of the Fucinus; but none now except thro' hidden channels formed by nature are probably subject to be obstructed, occasion a superabundance of water in till some unknown cause remove the obstruction and again give free passage. Sir Williamton, who visited the Fucinus in 1785, is the most beautiful lake he ever saw would be complete if the neighbouring rivers were better wooded." It furnishes abundant fish, though not of the best quality. A few large trouts, with many tenches and dace. In the shallow water on the side of the lake, he saw thousands of water frogs feeding and preying upon a little kind of our thornbacks, but much better armed their defensive weapons seemed to avail little against such ravenous foes. Claudius let it be described as still entire, though filled with earth and rubbish in many parts. He filled it with torches as far as he could. It was a covered canal, three miles long, and part through hard rock; and other parts supported by mason work, with wells to give light. It is said to have let off the waters of the lake. Our author is of opinion, that, if the canal were cleared and repaired, it would still answer its purpose, and thereby restore a great deal of land fit for cultivation.

(1.) \* FUCUS. *n. f.* [Latin.] Paint for Not now in use —

Women chat

Of *fucus* this, and *fucus* that. *B.* — Those who paint for debauchery the *fucus* pulled off, and the coarseness is discovered. *Collier.*

(II.) FUCUS, in antiquity, a name given to certain dyes and paints; particularly to a plant used to dye woollens and lincens of blue. The dye, says Theophrastus, was useful, but not lasting; for it soon began to fade and in time went wholly off. The women used something called *fucus*, to stain the red; and many have supposed, from the word expressing both, that the same was used on both occasions. But this inquiry, proves not to be the case. The colored evergreen thing *phlox*, that would stain the flesh. But this peculiar substance, the women to paint their cheeks, was distinguished from the others by the name of *stictis*, the more correct writers, from *stictis*, a root was indeed a root brought from Syria. The Latins, in imitation of the Greeks called this root *radicula*; and Pliny erroneously founds the plant with the *radix tinctoria*, the dyer's reek. The name *fucus* was in this such an universal name for paint, that the ancients and Romans had a *fucus metallicus*, which was cerule used for painting the neck and arms; after which they used the *purpura fucus*, or of the *rizium*, to give the colour to the face. In after-times they also used a *fucus* or the purple, prepared of the *Crocin orange* filer chalk, and some of the rich purple were in use at that time; and that seems to have been very little different from our *rouge*, but is now used on like occasions.

**FUCUS**, in botany, a genus of the order of algae, belonging to the cryptogamous plants. All the species afford a quantity alkaline salt. The most remarkable flowing.

**FUCUS CILIATUS**, the ciliated or ligulated fucus, found on the shores of Iona and other islands is not common. The colour is red, more membranous and pellucid, without veins; the ordinary height of the whole is 4 or 5 inches. It is variable in its appearance according to the different stages of its growth. It is eaten by the Scots and Irish people with dilie. See N<sup>o</sup> 5.

**FUCUS ESCULENTUS**, the edible fucus, or kelp, commonly called tangle in Scotland, is a native of the British shores. It grows about 4 feet long, and 7 or 8 inches thick; sometimes found 3 yards or more in length, and a foot in width. Small specimens are 1 foot long, and two inches broad. The substance is thin, membranaceous, and pellucid; green or olive. The root consists of cartilaginous fibres. The stalk is about 1½ and half an inch wide, nearly square, and in the middle between the root and the leaf, with 10 or 12 pairs of thick, oval, obtuse, foliaceous ligaments, at 2 inches long, and crowded together. It is of an oval lanceolate, or long elliptic shape and undivided, waved on the edges, and ribbed in the middle from bottom to top, running through its whole length, lying out on both sides of the leaf. It is used in N. both by men and cattle. Its growth is in Sept. when it is in perfection. The young part is rejected, and the stalk only is used; it is recommended in the disorder called scurvy, to strengthen the stomach, and restore the

**FUCUS FILUM**, the thread fucus, or sea-dawd, grows on the sea rocks, waving under the long strings, on many parts of the coast. The substance is opaque and cartilaginous, but eaten. The colour, when recent, is a dull olive; when dry, fuscous, or nearly black; and exposed for some time on the shores to wind and air, it becomes yellow, straw colour, &c. It consists only of a simple, naked, cylindrical stalk, 3 or 4 yards long, or less, from the size of a large riddle; that of a thick whip cord; smooth at the summit; smooth on the outside, full of mucous transverse diaphragms, visible when it is held between the eye and the light. The diaphragms have not yet been discovered; but transverse septa in its structure, it is reasonable to suppose this plant to belong rather to the class of conferva than that of fucus. The stalk, when half dry, and twisted, acquires considerable strength and firmness, that it is said, the Highlanders use them for the same intentions as Indian grass.

**FUCUS GIGANTEUS**, the gigantic fucus, is found in the Straits of Le Maire; and grows from sand or ooze by the enormous

length of the sea weeds that grow upon it. The stalks are 4 feet long, and some of the stalks, though not thicker than a man's thumb, are 120. Sir Joseph Banks and Dr Stanger found one of them which were 84 feet long, and as they made a very close attachment with the bottom, they were thought to be at least one half longer.

**FUCUS PUMATIUS**, the painted, or forest fucus, commonly called *dalie* or *dilie*, grows plentifully on our sea coasts, and islands. Its substance is membranaceous, thin, and pellucid; the colour red, sometimes green with a little mixture of red; its length generally about 5 or 6 inches, but varies from 3 to 12; it is ten fingered, or gradually ciliated from the base upwards. Its divisions are extremely various. The inhabitants both of Scotland and England take pleasure in eating this plant; and women of weak habits often recover an appetite by eating it raw. The inhabitants of the Archipelago also are fond of it, as we learn from Steyer. They sometimes eat it raw, but esteem it most when boiled to rigouts, oglios, &c. to which it gives a red colour; and, dissolving, renders them thick and gelatinous. In the Isle of Skye, it is sometimes used in fevers to promote a sweat, being boiled in water with butter. In this manner it also frequently purges. The dried leaves infused in water, exhale the scent of violets.

**FUCUS PINNATIFIDUS**, the jagged fucus, or pepper dilie, is frequent on sea rocks which are covered by the tides, both on the E. and W. coasts. It is of a yellow olive-colour, often tinged with red. The substance is cartilaginous, but tender and transparent; the height about 2 or 3 inches. This species has a hot taste in the mouth, and is therefore called *pepper dilie*, in this country. It is often eaten as a salad, like the preceding.

**FUCUS PLICATUS**, the matted or Indian grass fucus grows on the sea shores in many places of Scotland and England. It is generally about 3 or 4, sometimes 6 inches long. Its colour, after being exposed to the sun and air, is yellowish, or asburo; its substance pellucid, tough, and horny, so as to bear a strong resemblance to what the anglers call *Indian grass*, that is, the tendrils issuing from the ovary of the dory fish.

**FUCUS PROCAMPTUS**, the peckin's fucus, is frequent on the sea rocks, and in basins of water left by the reflux of the tides. Its natural colour is a most beautiful bright red or purple, but is often variegated with white or yellow. Its substance is cartilaginous, but extremely thin, delicate and transparent; its height commonly about 3 or 4 inches. The stalk is compressed, about half a line in diameter, erect, but waved in its growth, and divided almost from the base into many widely expanded branches. These primary branches are very long, alternate, exactly like the stalk, and subdivided into alternate secondary branches, which are again frequently compounded in the same manner, and these divisions decorated with subulated teeth, growing in alternate rows, curiously pectinated or toothed on the upper side like a comb, the smallest of these teeth scarcely visible to the naked eye. The fructifications are minute spherical capsules, or smooth dark-red globules, scattered without order on the sides of the branches;

ches; generally sessile, but some few of them supported on short peduncles. This species, on account of its elegant colours and fine divisions, is the species most admired by those who are fond of pictures and mimic landscapes, composed of marine vegetables.

9. *FUCUS PROLIFER*, the proliferous fucus, is found on the shores of the western coast, adhering to shells and stones. The colour is red; the substance membranaceous, but tough, and somewhat cartilaginous, without rib or nerve, though thicker in the middle, than at the edges. Its whole length is about 4 or 5 inches, the breadth of each leaf about a quarter of an inch. The growth of this fucus, when examined with attention, appears to be extremely singular and wonderful. It takes its origin either from a simple, entire, narrow, elliptic leaf, about an inch and a half long; or from a dilated forked one, of the same length. Near the extremity of the elliptic leaf, or the points of the forked one (but out of the surface, and not the edge), arises one or more elliptic forked leaves, which produce other similar ones, in the same manner, near the summits; and so on continually one or more leaves from the ends of each other, in a proliferous and dichotomous order, to the top of the plant; which in the manner of its growth much resembles the cactus *puntia*, or flat-leaved Indian fig. Sometimes 2 or 3 leaves, or more, grow out of the middle of the disc of another leaf; but this is not the common order of their growth. The fructifications are red, spherical, rough warts, less than the smallest pin's head, scattered without order on the surface of the leaves. These warts, when highly magnified, appear to be the curled rudiments of young leaves; which in due time either drop off and form new plants, or continue on and germinate upon the parent. The plant is very much infested with the *flustra pilosa*, the *mandrepore verucaria*, and other corallines, which make it appear as if covered with white scabs.

10. *FUCUS SACCHARINUS*, the sweet fucus or sea belt, is very common on the sea coast. Its substance is cartilaginous and leathern; and the leaf is quite ribless. By these characters it is distinguished from the *ESCULENTUS*, (See N<sup>o</sup> 2.) to which it is nearly allied. It consists only of one simple, linear, elliptic leaf, of a tawny green colour, about 5 feet long, and 3 inches wide in its full-grown state; but varies to exceedingly as to be found from a foot to 4 yards in length. The ordinary length of the stalk is two inches, but it varies even to a foot. The root is composed of branched fibres, which adhere to the stones like claws. This plant is often infested with the *ferularia ciliata*. The inhabitants of Iceland make a kind of pottage of it; boiling it in milk, and eating it with a spoon. They also boil it in fresh water, dry it in the sun, and then lay it up in wooden vessels, where it is soon covered with a white effluence of sea salt, which has a sweet taste like sugar. This they eat with butter; but if taken in too great a quantity, the salt is apt to irritate the bowels and bring on a purging. Their cattle feed and get fat upon this plant, both in its recent and dry state; but their flesh acquires a

bad flavour. It is sometimes eaten by the people on the coast of England, boiled as a pot-herb.

11. *FUCUS SERRATUS*, the ferrated fucus, sea wrack, is frequent at all seasons upon the rocks at low water mark, but produces its seed in July and August. It consists of a flat, radii and dichotomous leaf, about two feet long; branches half an inch wide, ferrated on the edge with dents of unequal size, and at unequal distances, having a flat stalk or rib divided like the leaf and running in the middle of it through all its ramifications. A small species of coralline, called by Linnæus, *Sertularia pumila*, frequently grows along the leaf. This species affords a much smaller quantity of alkaline salt than most others, the ash of the ashes yielding only 3 of fixed salt. The Dutch cover their crabs and lobsters with this fucus to keep them alive and moist; and prefer to any other, as being destitute of those mucous vesicles with which some of the rest abound, which would sooner ferment and become putrid.

12. *FUCUS VESICULOSUS*, the bladder fucus, common sea wrack, or sea ware, grows in great abundance on the sea rocks about the water mark, producing its fructifications in July and August. It has the same habit, colour, and substance as the foregoing, (N<sup>o</sup> 11); but the edges of the leaves have no serratures, being quite entire; in the surface are immersed hollow, spherical, or oval air-bladders, hairy within, growing generally in pairs, but often single in the angles of the bladders, which are probably destined to buoy up the plant in the water; and on the extreme segments of the leaves, appear tumid vesicles about 1/2 of an inch long, sometimes oval and in pairs, sometimes single and bifid, with a clear viscid mucus interspersed with downy hairs.—This species is an excellent manure for land; for which purpose it is often applied in the maritime parts of Scotland and other countries. In the islands of Jura and Skye it serves as a winter food for cattle, who regularly come down to the shores at the recess of the tides to seek it. And sometimes even the stags, after a storm, descend from the mountains to the sea-side to feed upon it. Linnæus informs us, that the inhabitants of Gothland boil it in water and mixing a little coarse meal or flour, feed their hogs with it; for which reason they call the plant *svintang*. And in Scania, he says, the poor people cover their cottages with it, and sometimes use it for fuel. In Jura, and some other of the Hebrides, the inhabitants dry their cheeses without salt, by covering them with the ashes of this plant; which abounds with such a quantity of salts, that from 5 oz. of the ashes, may be procured 2 1/2 of fixed alkaline salts. But the most beneficial use, to which the fucus vesiculosus is applied, is in making pot-ash, or KELD, a work much practised in our Western Isles. There is a great difference in the goodness and price of this commodity, and much care and skill required in properly making it. That is esteemed the best which is hardest, finest grained, and free from sand or earth. The price of kelp in Jura is 10s. per ton, and about 20 or 30 tons are exported annually from that island. So great a value set upon this plant by the inhabitants, that it

its of rocks and huge stones into the sea to prevent the growth of it. Its medical virtues are much celebrated by Dr Ruffel, in a dissertation concerning the use of Sea water in the treatment of the Glands. He found the saponaceous mucus, in the vesicles of this plant, an excellent resolvent, extremely serviceable in all scorbutic and scrofulous swellings. He recommends the patient to pour with these vesicles bruised in his urine, and the mucus has thoroughly penetrated the pores, and afterwards to wash with sea water. Or, to take 1 lb. of the tumid vesicles, in July, when they are full of mucus, and infuse them in sea-water, in a glass vessel, for 15 days, till the liquor will have acquired nearly the consistence of honey. Then strain it off through a cloth, and rub this liquor 3 or 4 times a day hard scrofulous swellings, washing afterwards with sea water, and nothing so efficacious to disperse them. Even the scrofulous breasts, in women, have been cured by this treatment. By calcining the vesicles in the open air, he made a very black powder, which he called *vegetable etriops*; a powder used as a resolvent and disobstruent, recommended also as an excellent demulcent for the scorbutic laxity of the gums, and for the looseness of the teeth.

**FUDDLE**, *v. a.* [Of unknown etymology.] To make drunk.—  
The table floating round,  
The guests all went faithless to the fuddled feet.

*Thomson.*  
**FUDDLE**, *v. n.* To drink to excess.—  
Whoring and fuddling on still. *L'Es.*  
A small mountainous island of Scotland, N. of BARRAY.

**FUGO**, or **FOGO**, one of the Cape de Verde Islands, in the Atlantic, so named from its being called also St PHILIP, from its having been discovered on St Philip's day. It is 15 miles long and is much higher than any of the other islands, and is much higher than any of the islands at sea, to be one single mountain, and the sides there are deep valleys. There are at the top which burns continually, and is seen a great way off at sea. It vomits fire and smoke, and throws out pieces of rocks to a vast height. Sometimes melted lava run down the sides. The first who inhabited it, brought negroes with them, and a stock of cows, horses, and their descendants are not now distinguishable from the negroes, the chief inhabitants being blacks, and of the Romish religion. *W.* Lat. 15. 10. N.

**FUGO**, or **TERRA DEL FUEGO**, a large island situated from the S. extremity of America, in the Straits of Magellan. (See COOK, N° 1.) It consists of a chain of stupendous mountains, some of which are volcanoes, covered with eternal snow; notwithstanding which the natives go naked, and paint their bodies, naturally fair. Those on the S. side are barbarous and treacherous, but those on the N. perfectly simple and harmless. In 1768, Dr Solander, and others, landed on the island, which, though the summer

time of the stand, was so cold, that two of their company perished by sleeping one night on it. The coast abounds with harbours. *Lon.* from 51. 20. to 58. W. *Lat.* from 52½. to 55. 35. S.

\* **FUEILLEMORTE**, *n. f.* [French.] Corruptly pronounced and written *philomat*.—*Fueillemorte* colour signifies the colour of withered leaves in Autumn.

\* **FUEL**, *n. f.* [from *feu*, fire, French.] The matter or aliment of fire.—This shall be with burning and *fuel* of fire. *Is.* ix. 5.—

This spark will prove a raging fire,  
If wind and *fuel* be brought to feed it with.  
*Shakspeare. Henry VI.*

Mov'd by my charms, with them your love  
may cease;  
And as the *fuel* sinks, the flame decrease. *Prior*  
\* To **FUEL**, *v. a.* [from the noun.] 1. To feed fire with combustible matter.—

And yet she cannot waste by this,  
Nor long endure this torturing wrong;  
For more corruption needful is,

To *fuel* such a fever long *Donne.*  
Never, alas! the dreadful name  
That *fuels* the infernal flame. *Corley.*  
The *fuel*'d chimney blazes wide.

2. To store with firing.—Some are plainly economical, as that the land be well watered, and well *fuelled*. *Watts's Axiom.*

**FUELOE**, one of the FARO islands.  
**FUEN**, a river of China, which runs into the Hoang, in the province of Chanfi.

**FUENCALIANTE**, a town of Spain in Old Castile, near the Xalon, 9 miles N. of Siguencia.  
**FUENHIO**, a river of China in Chanfi.

**FUENHOA**, a city of China, in the province of PEICHELLI, celebrated for its extent and the number of its inhabitants, as well as for the beauty of its streets and triumphal arches. It is situated near the great wall, amidst mountains; and has under its jurisdiction 2 cities of the 2d, and 3 of the 3d class, and a great number of fortresses, which bar the entrance of China against the Tartars.

**FUENSALIDA**, a town of Spain, in New Castile, 18 miles NNW. of Toledo.

**FUEN-TCHEOU**, or **FUEN-TCHEOU-FOU**, a city of China, of the 1st rank, in the province of Chanfi, on the Fuen, famous for its hot baths and springs. It is 280 miles SW. of Pekin. *Lon.* 129. 6. E. of Ferro. *Lat.* 37. 20. N.

(1.) **FUENTE**, a town of Spain in the prov. of Asturia, 20 miles SW. of Santillane.

(2.) **FUENTE DE LA PIEDRA**, a village of Spain, in Granada, 6 miles from Antequera, famous for its medicinal spring.

(3.) **FUENTE DEL SAHUCO**, or **SAHURRO**, a town of Spain, in Leon, 6 miles from Salamanca.

(4.) **FUENTE DUEGNA**, a town of New Castile, on the Tagus, 24 miles SE. of Madrid.

(5.) **FUENTE EL OLMO**, a town of Spain, in Old Castile, between Segovia and Aranda.

(6.) **FUENTE GINALDO**, a town of Spain, in Estremadura, 16 miles NW. of Coria. It was plundered by the Portuguese, in 1734.

(7.) **FUENTE OVEJUNA**, a town of Spain, in Cordova, 32 miles NW. of Cordova.

FUENTELSO, a town of Spain, in Old Castile, 32 miles N. of Avila.

(1, 2.) FUENTES, two towns of Spain; 1. in Arragon, on the Ebro, 20 miles SSE. of Saragossa; 2. in Leon, 13 miles NW. of Palencia.

(3.) FUENTES DE ONORO, a town of Spain, in Leon, 13 miles W. of Ciudad Rodrigo.

FUERSBRUNN, a town of Germany, in Austria, 2 miles NE. of Haderstorf.

FUERTEVENTURA, or FORTAVENTURA, one of the Canary islands, consisting of two peninsulas, joined by an isthmus 12 miles broad. It is 50 miles long according to Mr Cruttwell, but 65 according to Dr Brookes, and from 8 to 24 broad. The soil is fertile, producing wheat, barley, mastic, orchel, dates, olives, and various other fruits; particularly a species of fig tree, that yields a medicinal balsam as white as milk. It abounds in cattle and goats: 10,000 kids being bred annually. Lon. 14. 32 W. Lat. 28. 4. N.

FUERTY, a town of Ireland, in Roscommon.

FUESSEN, or FUSSEN, a town of Suabia, in the bishopric of Augsburg, on the Lech. In 1745, peace was settled here between Austria and Bavaria. It is 47 miles E. of Augsburg, and 65 E. of Constance.

FUFETIUS. See METIUS SUFFETIUS.

\* FUGACIOUS. *adj.* [*fugax, fugacis*, Latin.] Volatile.

\* FUGACIOUSNESS. *n. f.* [*fugax*, Latin.] Volatility; the quality of flying away.

\* FUGACITY. *n. f.* [*fugax*, Latin.] 1. Volatility; quality of flying away.—Spirits and salts, which, by their fugacity, colour, smell, taste, and divers experiments that I purposely made to examine them, were like the salt and spirit of urine and foot. Boyle. 2. Uncertainty; instability.

FUGALIA, in Roman antiquity, a feast supposed by some to be the same with the REGURTIUM, held on the 24th of February, in memory of the expulsion of the kings, and the abolition of monarchy. Others think, that the fugalia was the same with *poplifugia*, or the feast of FUGIA, the goddess of joy, occasioned by the rout of an enemy; which was the reason the people abandoned themselves to riot and debauchery.

FUGAS, a river of Africa, which runs into the Indian ocean, near Juba, on the coast of Zanguebar.

FUGGER, Huldric, a liberal encourager of learning, born at Augsburg, in 1426, and descended of an illustrious family, though originally sprung from a weaver. He was chamberlain to Pope Paul III. but afterwards turned Protestant. He spent large sums in purchasing ancient MSS. and getting them printed by the celebrated Henry Stephens. His relations therefore raised an action against him, and got him declared incapable of managing his own affairs. "Thus (says Dr Watkiss) what we should call wisdom was decreed by a German court a proof of idiotism." He died at Heidelberg, in 1584, and left his extensive library to the elector Palatine, with a fund to support six poor scholars.

\* FUGH. *interj.* [perhaps from *φύω*.] An expression of abhorrence. Commonly *foe*.—A very filthy fellow: how odiously he smells of his coun-

try garlick! *fugb*, how he stinks of Sp. Don Seb.

(1.) \* FUGITIVE. *adj.* [*fugitivus, Fr* *tivus*, Latin.] 1. Not tenable; not to be detained.—Our idea of infinity is a *fugitive* idea, still in a boundless progression can stop no where. Locke.—

Happiness, object of that waking  
Which we call life, mistaking: *fugu*  
Of my pursuing verse, ideal shade,  
Notional good, by fancy only made

2. Unsteady; unstable; not durable. apt to fly away.—The more tender a part, the leaves, of many of the most getables, fall off for want of the support: those only which are more tenacious, stand firm without such reinforcement. *Nat. Hist.* 4. Flying; running; getting.—

Whilst yet with Parthian blood t  
warm,

The *fugitive* Parthians follow.

The Trojan chief

Thrice *fugitive* about Troy wall.

5. Flying from duty; falling off.—Can a daughter enjoy herself, while her parents weep? *Clarissa*. 6. Wandering; roving; vagabond.—The most malicious surmises are tenanted by a libellous pamphlet of a physician. *Wotton*.

(2.) \* FUGITIVE. *n. f.* [from the ad.] One who runs from his station or duty: tried men are best friends, best masters, but not always best subjects; light to run away, and almost all *fugitives* in that condition. *Bacon*.—

Back to thy punishment

False *fugitive*! and to thy speed add  
Lest with a whip of scorpions I pur  
Thy ling'ring.

We understand by some *fugitives*  
commanded

The general's to return with victory.  
A shameful death, *Dent*

7. One who takes shelter under arms from punishment.—Too many, being in inheritance, are led beyond the seas, live under princes which are her majesty's enemies; and convert and are confederate with other traitors and *fugitives* the *Spanker on Ireland*.—Your royal highness great and too just, rather to want or to do homage of rebellious *fugitives*. *Dryden* hard to be caught or detained.—

What mule but his can Nature's  
Or catch that airy *fugitive*, call'd w

(3.) FUGITIVE PIECES, in literature, poems, or other short compositions, newspapers, magazines, or the like publications; or printed on loose sheets or to be called, because easily lost and soon

\* FUGITIVENESS. *n. f.* [from *fugitivus*.] Volatility; fugacity.—That divers salt upon the analysis of many concretes; is plain from the *fugitiveness* of hartshorn attending in distillation. *B* instability; uncertainty.

UGUE. *n. f.* [French; from *fuga*, Lat.]  
 , some point consisting of 4, 5, 6, or  
 number of notes begun by some one  
 , and then seconded by a 3d, 4th, 5th,  
 part, if the composition consists of  
 beating the same, or such like notes, to  
 vernal parts follow, or come in one after  
 the same manner, the leading parts still  
 re those that follow. *Harris*.—The re-  
 figures have an agreement with the figures  
 k of repetition and traduction. *Bucou's*  
 —The skilful organist plies his grave and  
 lcant in lofty fugues. *Milt. on Educ.*—

His volant touch  
 through all proportions, low and high,  
 id puri'd transverse the resonant fugue.  
*Milton.*

has a race of heroes fill'd the stage,  
 nt by note, and through the gamut rage;  
 and airs express their martial fire,  
 in trills, and in a fugue expire. *Add.*

is a piece of music sometimes long-  
 times shorter, in which, agreeable to  
 fharmony and modulation, the composer  
 ffect; or, in other words, what expres-  
 sional thought or sentiment of the piece,  
 it to parts successively and alternately  
 part to another. These are the princi-  
 ple of the fugue; of which some are pecu-  
 lial; and others common to it with what  
 e call *imitation*. 1. The subject pro-  
 ceeds from the tonic to the dominant, or from the  
 to the tonic, in rising or descending.  
 fugue finds its response in the part im-  
 following that which commenced. 3.

one ought to resume the subject in the  
 3 4th or 5th above or below the key,  
 rise it as exactly as the laws of harmony  
 ; proceeding from the dominant to the  
 the subject is introduced from the to-  
 dominant, and moving in a contrary  
 when the subject is introduced from the  
 to the tonic. One part may likewise  
 e same subject in the octave or unison  
 ceding; but in that case, it is a repeti-  
 than a real response. 4. As the octave  
 into two unequal parts, of which the  
 ins 4 gradations descending from the to-  
 dominant, and the other only three in  
 ; the ascent from the dominant to the  
 s renders it necessary to have some re-  
 change in the expression of the sub-  
 to make some alterations in the response,  
 ay not quit the cords that are essential  
 de. It is a different case when the com-  
 ands to alter the modulation; for there  
 efs of the response itself, when taken in a  
 one, produces the alteration proper for  
 e. 5. The fugue should be planned in  
 nner, that the response may commence  
 : close of the best air, so that both the  
 he other may be in part heard at the  
 : that, by this anticipation, the subject  
 it were connected with itself, and that  
 the composer may discover it. In this  
 . It is absolute melody, instead of  
 to impose upon the hearing the false  
 y transposed from one key to another,

without any other restraint than an accompani-  
 ment afterwards formed at pleasure. This de-  
 serves at best no better name than what the French  
 call *imitation*. See IMITATION. Besides these  
 rules, which are fundamental, there are others,  
 which, though prescribed by taste alone, are not  
 less essential. Fugues, in general, render music  
 more noisy than agreeable; for this reason they  
 are most agreeable in the chorus. As their chief  
 merit consists in fixing the ear on the principal  
 air or subject, which, for this reason, is made to  
 pass incessantly from part to part, and from mode  
 to mode, the composer ought to exert his care in  
 preserving that air always distinct; or to prevent  
 it from being absorbed in, or confounded with,  
 the other parts. To produce this effect, there  
 are two different ways; one in the movement,  
 which must be incessantly contrasted with itself;  
 so that, if the procedure of the fugue be accel-  
 erated, the other parts should be more grave and  
 with protracted notes; or, on the contrary, if the  
 motion of the fugue be slow and solemn, the ac-  
 companiments must have more and quicker busi-  
 nesses. The other method is to extend the har-  
 mony by removing the parts at a greater distance  
 from each other; but the others, too nearly ap-  
 proximated to that which contains the subject,  
 should be confounded with it, and prevent it from  
 being distinguished with sufficient clearness; so  
 that what would be an imperfection any where  
 else, becomes here a beauty. The unity of me-  
 lody should be preserved; this is the great and  
 general rule, which must frequently be practised  
 by different means. The chords must be chosen,  
 and the intervals, so that one particular sound  
 may produce the chief effect; this can only result  
 from the unity of the melody. It will sometimes  
 be necessary to employ voices and instruments of  
 different kinds, that the parts which ought to pre-  
 vail may be easily distinguished; this is on the  
 necessity of preserving the unity of the melody.  
 Another object of attention, not less necessary,  
 in the different connections of modulation, which  
 are introduced by the procedure and progress of  
 the fugue, to make all these modulations to corre-  
 spond at the same time in all the parts, to con-  
 nect the whole in its progress by an exact con-  
 formity of motion; lest, if one part be in one  
 mode, and another in another, the general har-  
 mony should be in some degree, and for that rea-  
 son should no longer be able to produce the same  
 effects upon the ear, nor to please in the same  
 mind; which is another reason for preserving the  
 unity of melody. In a word, in every fugue the  
 confusion of a melody and modulation, which  
 composer has most care to avoid, is the great  
 defect, and the chief cause of the failure of  
 many of the best fugues, and the reason why  
 one may say that the fugue is the most im-  
 perfect piece of an excellent composition, and that this  
 tone. There are several other kinds of fugues;  
 such as the

from the tonic to the dominant, or from the dominant to the tonic, the counter fugue ought to be heard in descending from the dominant to the tonic, or from the tonic to the dominant, and *vice versa*. Its other rules are exactly like those of the common fugue.

(5.) FUGUE, PERPETUAL. See CANON, § VIII. FUHME, a river of Saxony, which runs into the Mulda, 2 miles S. of Ragune.

FUHSANAH, a town of Tunis, 110 miles W. of Tunis.

FUHSE, a river of Saxony, which runs into the Allier, near Zell.

FUICHT, or WALDFUCHT, a town of Germany, in Westphalia, 3 miles E. of Sufteren.

FUIDENTALL, a town of Silesia, taken by Frederick the Great, in 1741 and 1744.

FUILLEC, a town of France, in the dept. of the Lower Seine, 9 miles W. of Gourney.

FULA. See FOULA and THULE.

FULBECK, a small town in Lincolnshire.

FULBROOK, the name of 4 English villages: 1. in Bucks, SE. of Claydon: 2. in Lincolnshire, near Normanton: 3. in Oxford, N. of Burford: 4. near Warwick, on the Avon.

\* FULCIMENT. *n. f.* [*fulcimen, fulcimentum, Lat.*] That on which a body rests, which acts or is acted upon at each end, as a balance or a lever. —The power that equiponderates with any weight must have the same proportion unto it, as there is betwixt their several distances from the center or *fulciment*. *Wilkins*.

(1.) FULCRUM, in mechanics, the prop or support by which a lever is sustained.

(2.) FULCRUM, in botany. See BOTANY, *Index*.

(1.) FULDA, or FULDE, an episcopal principality of Germany, in the circle of the Upper Rhine, bounded on the N. by Hesse cassel, E. by Henneberg, S. by Wurzburg, and W. by Iffenburg and Hesse. It is 40 miles long, and from 7 to 25 broad; and is full of woods, mountains, medicinal springs, and rich arable lands. It was only erected into a bishopric, in 1752, by Boniface XIV.

(2.) FULDA, a river in the above bishopric, (N<sup>o</sup> 1.) which passes by the town, (N<sup>o</sup> 3.) and joining the Werra at Minden, they form the WESER.

There are 25 species ; 18 of ong to the gallinule division, distinguish- ing the toes furnished with broad scab- rances ; and 7 comprehend the coots e the toes divided to their origin. The are among the most remarkable :—

CA ATERRIMA, the GREATER COOT, is size than the common coot, (N<sup>o</sup> 2.) image is blacker. This species is found ire and Scotland ; but is more plentiful nent, being found in Russia and the ria very common ; also at Salogne and uring parts, where they call it *judelle*. much esteemed.

ICA ATRA, the COMMON COOT, has a lead, a black body and lobated toes ; ut 15 inches long. They frequent lakes

. PART. I.

and still rivers ; making their nests among the rushes, with grass, reeds, &c. floating on the wa- ter, so as to rise and fall with it. They lay 3 or 6 large eggs, of a dirty whitish hue, sprinkled o- ver with minute deep rust-coloured spots ; and it is said, that they will lay 14 or more. The young when just hatched are very deformed, and the head mixed with a red coarse down. In winter they often repair to the sea, and the channel near South- ampton is sometimes observed almost covered with them. They are often brought to that market, where they are exposed to sale without their fea- thers and scalded like pigs. This species is not nu- merous, for vast numbers fall a prey while young to the buzzards, which frequent the marshes. Their food is small fish and water insects ; but they some- times eat the roots of the bulrush, and with it feed their young ; they are said likewise to eat grain. This species is supposed to extend through- out the old continent, and perhaps the new also. It inhabits Greenland, Sweden, Norway, Russia, Siberia, Persia, China, and many of the interme- diate parts. It is also met with in Jamaica, Ca- rolina, and other parts of N. America. The In- dians about Niagara dress the skins, and use them for pouches. They are called in Carolina, *flycatchers*.

3. FULICA CHLOROPUS, the COMMON GALLI- NULE, is in length about 14 inches, and has a bald forehead and broad flat toes. It gets its food on grassy banks, and borders near fresh waters, and in the very waters if they be weedy. It builds upon low trees and shrubs by the water side ; breeding twice or thrice in a summer ; and, when the young are grown up, drives them away to shift for themselves. The hen lays 7 eggs of a dirty white, thinly spotted with rust colour. The gallinule strikes with its bill, and in spring has a shrill call. In flying, it hangs down its legs ; and in running, it often flirts up its tail, and shows the white feathers. The bottoms of its toes are so very flat and broad (to enable it to swim), that it seems to be the species which connects the cloven-footed aquatic with the fin-toed. It is pretty common on the continent, and inhabits America, from New York to Carolina ; as well as Jamaica and other islands in the W. Indies. It feeds on plants and small fish, and the flesh is pret- ty good.

4. FULICA PORPHYRIO, the PURPLE GALLI- NULE, is about the size of a fowl, or 17 inches in length. The bill is an inch and a half long, and of a deep red colour. The forehead is bare and red ; the head and hind part of the neck are gloss- y violet ; the legs are very stout, and of the co- lour of the bill. This species is more or less com- mon in all the warmer parts of the globe. On the coasts of Barbary they abound, as well as in some of the islands of the Mediterranean. In Si- cily they are bred in plenty, and kept for their beauty. They are often met with in the S. of Russia and W. of Siberia, among reedy places ; and near the Caspian sea ; but in the cultivated rice grounds of Ghilar in Persia, they are in great plenty and high plumage. The female makes the nest among the reeds in the middle of March ; lays 3 or 4 eggs, and sits from 3 to 4 weeks. That they are common in China, the Chinese paper

T hang.

adings testify. They are also met with in the East Indies, the island of Java, Madagascar, &c. Our late navigators saw them at Tongataboo in vast numbers, as well as in the island of Tanna and other parts. They are also common in S. Americz. They are very docile, easily tamed, and feed with the poultry; scratching the ground with their feet, like our cocks and hens. They feed on fruits, roots and grain, but eat fish with avidity, dipping them in the water before swallowing. They often stand on one leg, and lift the food to their mouths with the other. A pair of them, kept in an aviary in France, made a nest of small sticks mixed with a quantity of straw, and laid 6 white eggs, perfectly round; but the hen was careless of them, and they produced nothing. The flesh is said to be exquisite.

\* FULIGINOUS. *adj.* [*fuliginosus* *se*, Fr. *fuliginosus*, Lat.] Sooty; smoky.—Burrage hath an excellent spirit to repress the *fuliginous* vapours of dusky melancholy, and so cure madness. *Bacon*.—Whereas history should be the torch of truth, he makes her in divers places a *fuliginous* link of lies. *Howel*.

FULIGNO. See FOLIGNI.

FULIGO, in natural history, a species of pumice stone. See PUMEX.

(1.) \* FULIMART. *n. s.* [This word, of which *Skinner* observes, that he found it only in this passage, seems to mean the same with *foat*.] A kind of stinking ferret.—The fisher, the *fulimart*, and the ferret, live upon the face, and within the bowels, of the earth. *Walton's Angler*.

(2.) FULIMART, in zoology. See MUSTELA.

FULK, William, D. D. an eminent English divine, born at London, in the 16th century. He was patronised by the E. of Leicester, who, in 1571, presented him to the livings of Warley and Diddington. He attended Leicester, when he went ambassador to France; and on his return was made master of Pembroke hall, and Margaret professor of divinity in Cambridge. His works are very numerous, and chiefly against the Papists; the most noted is his *Comment on the Rbenish New Testament*. He died in 1589.

(1.) \* FULL. *adj.* [*full*, Sax. *vol*, Dut.] 1. Replete; without vacuity; having no space void.—Better is an handful with quietness, than both the hands *full* with travel and vexation of spirit. *Ecc. iv. 6*.—Valley *full* of chariots. *Isaiab*.—The trees of the Lord are *full* of sap. *Psalms*.—

Where all must *full* or not coherent be. *Pope*.

2. Abounding in any quality good or bad.—

With pretence from Strephon her to guard,

He met her full, but *full* of warefulness. *Sidney*.

You should tread a course

Pretty and *full* of view. *Shak. Cymbeline*.

—Followers, who make themselves as trumpets of the commendation of those they follow, are *full* of inconvenience; they taint business through want of secrecy, and export honour from a man, and make him a return in envy. *Bacon*.—

That must be our cure,

To be no more; sad cure; for who would lose,

Though *full* of pain, this intellectual being,

Those thoughts that wander through eternity?

*Milton*

*Gay religion's full of pomp and gold. Milton*.

In that sweet season, as in bed I lay,  
I turn'd my weary side, but still in vain  
Tho' *full* of youthful health and void

—He is *full* of wants which he cannot surmount  
compassed about with infirmities which he  
remove. *Tillotson*.—

From you bright heaven our author  
his fire,

And paints the passions that your eyes  
*Full* of that flame, his tender scenes he  
And frames his goddess by your matchless

3. Stored with any thing; well supplied  
thing.—

*Full* of days was he;

Two ages past, he liv'd the third to see  
4. Plump; faginated; fat.—A gentleman  
body having broken his shin by a fall, it  
inflamed. *Wiseman's Surg.* 5. Saturate

—I am *full* of the burnt offerings of ram;

i. 11.—The alteration of scenes feeds an  
the eye, before it be *full* of the same obj

6. Crowded with regard to the imaginati  
mory.—Every one is *full* of the miracle

old baths on decayed and weak con  
*Locke*.

7. That which fills or makes ful  
great in effect.—Water digesteth a *full* n  
er than any liquor. *Arbushn.* 8. Compl

as that nothing further is desired or wan  
That day had seen the *full* accompl  
Of all his travels. *Daniel's C*

What remains, ye gods,

But up and enter now into *full* bliss?

—Being tried at that time only with a  
he gave *full* credit to that promise, and

evidence of his fidelity as fast as occas  
offered. *Hammond*.—The resurrection

from the dead hath given the world *full*  
of another life. *Tillotson*.

9. Complete  
abatement; at utmost degree.—At th  
two *full* years Pharaoh dreamed. *Geny*

hard riding plunge the horses into water,  
them to drink as they please; but gallop

speed, to warm the water in their bell  
10. Containing the whole matter; express

—Where my expressions are not so *full*  
ther our language or my art were defect

where mine are *fuller* than his, they a  
impressions which the often reading of

left upon my thoughts. *Denham*.—Sho  
go about with never so set study, to del

a natural form of the year before the  
that which is at present established, he co

ly do it in so few words, so fit and pro  
and express. *Woodward*.

11. Strong;  
not attenuated.—I did never know so  
issue from so empty a heart; but the er

makes the greatest sound. *Shakespeare*.—E  
ced under the floor of a chamber, mak

in the same more *full* and resounding

*Nat. Hist.*—

Dryden taught to join

The varying verse, the *full* resounding

12. Mature; perfect.—In the sultanry  
malukes, slaves reigned over families, or  
and much like were the case, if you sur

re the custom were that after full age  
ould expulse their fathers out of their  
Bacon.—

w appears imperfect, and but given  
rpose to resign them in full time  
better covenant. Milton.

These thoughts  
nel must mature. Milton.

ed to the moon.] Complete in its orb.  
s the full moon, as he was coming home  
ng, he felt his legs faulter. Wiseman's

Not continuous, or a full stop.—There-  
ded, making a full point of a hearty  
r. 15. Spread to view in all dimensions.

ut the end of the third century, I do  
ber to have seen the head of a Roman  
awn with a full face: they always ap-  
sile. Addison on Medals.

ULL. adv. 1. Without abatement or  
1.—

He full  
lent all his Father manifest  
d. Milton.

ity of place they are full as scrupulous;  
y of their criticks limit to that very spot  
where the play is supposed to begin.

ram. Poesy.—  
deft blush she wears, not form'd by art;  
m deceit his face, and full as free his  
re. Dryden.

It judicious writer is sometimes mista-  
ll his care; but the hasty critick, who  
views, is full as liable to be deceived.

mg.—  
Since you may  
By courage, if I should not lay,  
m I proffer shall be full as good.

Dryd. Virg.  
e whole effect.—'Tis the pencil, thrown  
upon the horse's mouth, to express the  
ch the painter, with all his skill, could  
n without it. Dryd. Dufr.—

harmony, from heavenly harmony,  
verbal frame began:  
harmony to harmony,  
all the compass of the notes it ran,  
ason closing full in man. Dryd.

—  
the centre of the sacred wood,  
ariseeth of the Stygian flood.

Addison on Italy.  
ineteen sailors did the ship convey;  
of nineteen dolphins round her play.

Addis. Ovid.  
t her full, but full of warefulness. Sid.  
e then confronts the bull,  
his ample forehead aiming full,  
dly stroke descending pierc'd the skull.

Dryden.  
gth resolv'd, he throws with all his force  
e temples of the warrior horse. En.  
ed before adverbs and adjectives, to in-  
ngthen their signification.—

ie why on your shield, so goodly scor'd,  
the picture of that lady's head?  
y is the semblant, tho' the substance

Spens.  
L

I was set at work  
Among my maids; full little, God knows,  
looking

Either for such men or such business. Shakesp.  
—Full well ye reject the commandment. Mar. vii. 9.  
Adam was all in tears, and to his guide

Lamenting turn'd full sad. Milt. Par. Loß.  
—You full little think that you must be the be-  
ginner of the discourse yourself. More's Div. Dial.

—Full little thought of him the gentle knight.  
Dryden.—  
Full well the god his sister's envy knew,  
And what her aims and what her arts pursue.

Dryden.  
—There is a perquisite full as honest, by which  
you have the best part of a bottle of wine for  
yourself. Swift.

(3.) \* FULL. n. f. [from the adjective.] 1.  
Complete measure; freedom from deficiency.—  
When we return,  
We'll see those things affected to the full.

Shakesp. Henry VI.  
—He liked the pomp and absolute authority of a  
general well, and preserved the dignity of it to  
the full. Clarendon.—The picture of Ptolemy  
Philopater is given by authors to the full. Dryd.—

Sicilian tortures, and the brazen bull,  
Are emblems, rather than express the full  
Of what he feels. Dryden's Perf.

If where the rules not far enough extend,  
Some lucky licence answer to the full  
Th' intent propos'd, that licence is a rule.

Pope.  
2. The highest state or degree.—  
The swan's down feather,  
That stands upon the swell at full of tide,  
Neither way inclines. Shakesp. Ant. & Cleop.

3. The whole; the total.—  
The king hath won, and hath set out  
A speedy pow'r to encounter you, my lord:  
This is the news at full. Shakesp. Hen. IV.

But what at full I know, thou knowest not part;  
I knowing all my peril, thou not art. Shakesp.

4. The state of being fatiated.—When I had fed  
them to the full. Jer. v. 7. 5. [Applied to the  
moon.] The time in which the moon makes a  
perfect orb.—Brains in rabbits, woodcocks, and  
calves, are fullest in the full of the moon. Bacon's  
Nat. Hist.

(4.) \* FULL is much used in composition to  
intimate any thing arrived at its highest state, or  
utmost degree.

\* To FULL. v. a. [fullo, Latin.] To cleanse  
cloth from its oil or grease.

\* FULLAGE. n. f. [from full.] The money  
paid for fulling or cleanting cloth.

FULLAN, an inland country of Africa, W. of  
Cahna. The dress of the natives resembles our  
highland tartan plaids.

\* FULL-BLOWN. adj. [full and blown.] 1.  
Spread to the utmost extent, as a perfect blossom.

My glories are past danger; they're full blown:  
Things, that are blasted, are but in the bud.

Denham's Sophy.  
My full-blown youth already fades apace;  
Of our short being 'tis the shortest space.

Dryden's Juvenal.  
2. Stretched by the wind to the utmost extent.—  
He

He who with bold Cratinus is inspir'd,  
With zeal and equal indignation fir'd;  
Who at enormous villany turns pale,  
And steers against it with a full-blown sail. *Dryd.*  
\* FULL-BOTTOMED. *adj.* [*full and bottom.*] Having a large bottom.—I was obliged to sit at home in my morning gown, having pawned a new suit of cloaths and a full-bottomed wig for a sum of money. *Guardian.*

FULL-BROOK, a river of Cheshire, which runs into the Wheelock at Maulbon.

\* FULL-EARED. *adj.* [*full and ear.*] Having the heads full of grain.—

As flames roll'd by the winds conspiring force,  
O'er full-ear'd corn, or torrents raging course.

*Dixban.*

(1.) FULLER, Nicholas, prebendary of Salisbury, a learned English critic; who published in 1617 *Miscellanea Theologica* in 4 books, and afterwards two more of *Miscellanea Sacra*. He died in 1623; and there are some MSS. of his remaining in the Bodleian library, that show his great skill in Hebrew and philology.

(2.) FULLER, Thomas, D. D. a learned English historian and divine, born at Alwinkle, Northamptonshire, in 1608. He studied at Cambridge, and was chosen minister of St Bennet's there. In his 23d year, his merit procured him a fellowship in Sidney college, and a prebend in Salisbury cathedral. He was afterwards appointed rector of Broad Windsor, and lecturer of the Savoy in London: but upon the pressing of the covenant, he retired to Oxford; and soon after accompanied Hopton as his chaplain in the army, which he attended in their marches. Upon the restoration, he recovered his prebend, was appointed chaplain extraordinary to Charles II, and created D. D. His memory was so amazingly tenacious, that he could repeat a sermon, *verbatim*, if once he heard it: He once undertook, in passing to and from Temple-bar to the Poultry, to tell at his return every sign as it stood in order, on both sides of the way, repeating them either backwards or forwards; and this task he actually performed. He wrote, 1. A History of the Holy War. 2. The Church History of Britain, in folio. 3. Andronicus, or the Unfortunate Politician, in 8vo. 4. A Pisgah sight of Palestine. 5. A History of English Worthies; and other works. He died in August 1661. He was fond of punning; but once attempting to play off a joke upon a gentleman named Sparrowhawk, he met with a retort in his own file. "What is the difference, said the Dr, (who was very corpulent) between an owl and a sparrowhawk?" "It is, replied the other, fuller in the head, fuller in the body, and fuller all over."

(3.) \* FULLER. *n. f.* [*fullo*, Latin.] One whose trade is to cleanse cloth.—

The clothiers have put out  
The spinsters, carders, fullers, weavers. *Shak.*  
—His raiment became shining, exceeding white as snow; so as no fuller on earth can whiten them. *Mark*, ix. 3.

(4.) FULLER. See FULLING.

FULLERBY, a village in Lincolnshire, NE. of Horncastle.

(1.) \* FULLER'S EARTH. *n. f.* Fuller's earth is

a marl of a close texture, extremely soft and tuous to the touch: when dry it is of a greenish brown colour, in all degrees, from very pale almost black, and generally has a greenish cast. The finest fuller's earth is dug in our own country. *Hill's Materia Medica.*—The fuller's earth of England very much exceeds any yet discovered in goodness; which is one great reason why English surpasses all other nations in the woollen manufacture. *Woodward on Fossils.*

(2.) FULLER'S EARTH, in natural history, a species of clay, of a greyish ash-coloured in all degrees, from very pale to almost black, and it has generally something of a greenish cast. See CLAY, § I, 4. It is very hard and firm, of a compact texture, of a rough and somewhat uneven surface, that adheres slightly to the tongue, and is very soft to the touch; not staining the hands, and breaking easily between the fingers. It has a sharpness between the teeth, and melts in the mouth. Thrown into water, it makes a great ebullition or hissing; but swells gradually, and falls into a fine soft powder. It makes a white lye, and serves for the same use as the green earth, and is more serviceable with aquafortis. The greatest quantity of it is dug in the pits at Wavedon, near Woburn, in Bedfordshire. The strata in these pits lie from the surface to the depth of six feet, and are several layers of sand, all reddish, but of a lighter colour than others. Under this is a thin stratum of a sand-stone, which they call the fuller's stone, and then they find the fuller's earth. The upper stratum of this is about a foot thick, and the workmen call it *clodge*, and throw it away as useless; being commonly fouled with the scales of iron, which covered it, and which it runs off in a good way into it. After this they come to a fine fuller's earth, which lies 8 feet deep. The matter of this is divided into several layers, being commonly about a foot and a half thick, and one horizontal fissure and another. Of these several layers, the upper half, where they break itself, is tinged red; which seems to be owing to the running of the water upon it, among the sands above; some of which are probably of a ferruginous nature, or have ferruginous matter among them. This reddish fuller's earth the workmen call *crop*; and between this and the lower stratum there is a thin stratum of matter, less than an inch, which in taste, colour, and appearance, resembles the terra Japonica, or snops. The lower half of the strata of fuller's earth they call *swall earth*. This is untinged, and of the red colour of the other, and seems to be proper for tanning. Under the fuller's earth is a stratum of white and coarse stone about a foot thick. They seldom dig through this, if they do, they find more strata of sand. Fuller's earth is of great use in scouring cloths, stuffs, and imbibing oil the grease and oil used in preparing dressings, &c. of the wool; for which reason it has made a contraband commodity, and is not exported under the penalty of 1s. for every weight. See FULLING.

(1.) \* FULLER'S THISTLE, or WEED. [*dipsacus*]; A plant.

(2.) FULLER'S THISTLE, or TEAZLE, is the same as FULLER'S WEED, or by. See DIPSACUS.

**ERTON POINT**, a cape on the W. coast  
of Lon. 61. 35. W. Lat. 17. 13. N.

**FULLERY**, *n. f.* [from *fuller*.] The place  
or trade of a fuller is exercised.

**FULLERY**. See **FULLING**.

**L-EYED**, *adj.* [*full* and *eye*.] Having large  
eyes.

**L-FED**, *adj.* [*full* and *fed*.] Sated; fat;

—  
is a partridge, plump, *full-fed* and fair,  
and this image of well-hooded air. *Pope*.

**FULLING**, *n. f.* the art or act of cleansing,  
and pressing cloths, stuffs, and stockings,  
to them stronger, closer, and firmer: cal-

**FULLING**. *Pliny* (*lib. vii. cap. 36*) assures  
us that Nicias, the son of Hermus, was the  
inventor of the art of fulling: and it appears  
from a description, quoted by Sir G. Wheeler, in  
his travels through Greece, that this Nicias was  
born in Greece in the time of the Romans.  
The fulling of cloths and other stuffs is performed  
in the north of France, where they use a  
mill of water mill, thence called a **FULLING-  
or scouring mill**. These mills, excepting  
the mill-stones and hopper, are  
the same with corn mills: and there are  
several which serve indifferently for either use:  
some are on a high ground, and cloths full'd, by the  
motion of a wheel. Whence, in some places,  
they call the fullers *mill-grinding* corn and  
milling stuffs at the mill.

The principal parts of the fulling-  
mill are, The wheel, with its trundle; which gives  
motion to the tree or spindle, whose teeth com-  
e in contact with the teeth of the pestles, which  
are fixed and made to fall alternately, accord-  
ing to the teeth catch on or quit a kind of latch  
middle of each pestle. The pestles and  
are of wood; each trough having at least  
three or four pestles, at the discretion of the  
operator, or to the force of the stream of  
water in these troughs are laid the cloths, stuffs,  
which are to be full'd: then, letting the cur-  
rent fall on the wheel, the pestles are  
suddenly fall thereon, and by their weight and  
stamp and press the stuffs very strongly,  
and thus become thickened and condensed. In  
the course of the operation, they sometimes make  
use of fulling-stuff, sometimes of fuller's earth, and some-  
times of soap. To prepare the stuff to receive the  
impression of the pestle, they are usually laid  
in a trough of water; then in fuller's earth and water; and  
lastly in soap dissolved in hot water. Soap alone  
does not serve very well; but this is expensive: tho'  
fulling-stuff, in the way of our dressing, is scarce  
thereto; but then it must be well cleared  
from stones and gittinesses, which are apt to  
stick in the stuff. As to urine, it is certain-  
ly not good, and ought to be entirely discarded;  
much on account of its ill smell, as of its  
acidity and saltness, which qualities are apt to  
ruin the stuffs dry and harsh.

**FULLING OF CLOTHS AND WOOLLEN  
STUFFS WITH SOAP**. The best method of fulling  
is, as is delivered by M. Colinet, in an au-  
thentic memoir on that subject, supported by ex-  
periments, made by order of the marquis de Lou-  
isen superintendent of the arts and manu-  
factures of France. 1. The substance of it is as

follows:—A coloured cloth, of about 45 ells, is  
to be laid in the usual manner, in the trough of a  
fulling mill; without first soaking it in water, as  
is commonly practised in many places. To full  
this trough of cloth, 15 lb. of soap are required;  
one half of which is to be melted in two peals of  
river or spring water, made as hot as the hand  
can bear it. This solution is to be poured by lit-  
tle and little upon the cloth, in proportion as it is  
laid in the trough: and thus it is to be full'd for at  
least two hours; after which it is to be taken out  
and stretched. This done, the cloth is immediately  
returned into the same trough, without any new  
soap, and there full'd two hours more. Then tak-  
ing it out, they wring it well, to express all the  
grease and filth. After the second fulling, the re-  
mainder of the soap is dissolved as in the former,  
and cast 4 different times on the cloth; remem-  
bering to take out the cloth every two hours, to  
stretch it, and undo the pouts and wrinkles it has  
acquired in the trough. When they perceive it suf-  
ficiently full'd, and brought to the quality and  
thickness required, they scour it for good in hot  
weather, keeping it in the trough till it be quite  
clean. As to white cloths, as they full more ea-  
sily and in less time than coloured ones, a third  
part of the soap may be spared.

(3.) **FULLING OF STOCKINGS, CAPS, &c.**  
should be performed somewhat differently; viz.  
either with the feet or the hands; or a kind of  
rack or wooden machine, either armed with teeth  
of the same matter, or else horses or bullock's  
teeth. The ingredients made use of herein are,  
urine, green soap, white soap, and fuller's earth.  
But the urine is also reckoned prejudicial here.  
Woven stockings, &c. should be full'd with soap  
alone: for those that are knit, earth may be used  
with the soap. Indeed it is common to full these  
kinds of works with the mill, after the usual man-  
ner of cloth, &c. But that is too coarse and vio-  
lent a method, and apt to damage the work, un-  
less it be very strong.

(1.) **\* FULLINGMILL**, *n. f.* [*full* and *mill*.] A  
mill where the water raises hammers which beat  
the cloth till it be cleaned.—By large hammers,  
like those used for paper and *fullingmills*, they  
beat their best paper. *Martimer*.

(2.) **FULLINGMILL**. See **FULLING**, § 1.

**FULLINGTON**, a village in Hampshire, near  
Bullington.

**\* FULL-LADEN**, *adj.* [*full* and *laden*.] Laden  
till there can be no more added.—It were unfit  
that to excellent a reward as the Gospel promises  
should stoop down, like fruit upon a *full-laden*  
bough, to be plucked by every idle and wanton  
hand. *Tillotson*.

**FULLIO**, Peter, an heretical bishop of Antioch,  
in the 5th century, who embraced the Eutychnian  
heresy, to which he added a singular notion of his  
own, that all the persons in the Trinity suffered  
on the cross; whence his followers were stiled  
**THEOPASCHATITES**. He usurped the see of An-  
tioch from Martyrius in 471, for which he was af-  
terwards deposed, but the emperor Zeno restored  
him. He died in 486.

**\* FULL-SPREAD**, *adj.* [*full* and *spread*.] Spread  
to the utmost extent.—

How easy 'tis, when destiny proves kind,  
With

With full-spread sails to run before the wind;  
But those that 'gainst stiff gales lavecering go,  
Must be at once resolv'd and skilful too. *Dryd.*

\* FULL-SUMMED. *adj.* [full and summed.] Complete in all its parts.—The cedar stretched forth his branches, and the king of birds nested within his leaves, thick feathered, and with full-summed wings fastening his talons East and West; but now the eagle is become half naked. *Hewel's Vocal Forest.*

FULL-SUTTON, a town W. of Wilton, Yorks.

\* FULLY. *adv.* [from full.] 1. Without vacuity. 2. Completely; without lack; without more to be desired.—There are many graces for which we may not cease hourly to sue, graces which are in bestowing always, but never come to be fully had in this present life; and therefore, when all things here have an end, endless thanks must have their beginning, in a state which bringeth the full and final satisfaction of all such perpetual desires. *Hooker.*—He fully possessed the entire revelation he had received from God, and had thoroughly digested it. *Locke.*

The goddess cry'd

It is enough, I'm fully satisfy'd. *Add. Ovid.*

(1.) FULMAR, in ornithology, a species of PROCELLARIA.

(2.) FULMAR, in zoology. See MUSTELA.

\* FULMINANT. *adj.* [fulminant, Fr. fulminans, Latin.] Thundering; making a noise like thunder.

(1.) \* To FULMINATE. *v. a.* To throw out as an object of terror.—As excommunication is not greatly regarded here in England, as now fulminated; so this constitution is out of use among us in a great measure. *Ayliffe's Parergon.*

(2.) \* To FULMINATE. *v. n.* [fulmino, Latin, fulminer, Fr.] 1. To thunder.—

I cannot fulminate nor tonitruate words,  
To puzzle intellects; my ninth lap affords  
No Lycophronian bulkins. *Tbo. Randolph.*

2. To make a loud noise or crack.—Whilst it was in fusion we cast into it a live coal, which presently kindled it, and made it boil and flash for a pretty while; after which we cast in another glowing coal, which made it fulminate atreth. *Boyle.*—In damps one is called the suffocating, and the other the fulminating damp. *Woodward's Natural Hist.*

3. To issue ecclesiastical censures.

(1.) FULMINATING, *part. adj.* thundering, or making a noise resembling thunder.

(2.) FULMINATING GOLD, } See CHEMISTRY, *Index* ; DETONATION, and NITRE.

(3.) FULMINATING SILVER, } *TRY, Index.*

(1.) \* FULMINATION. *n. f.* [fulminatio, Lat. fulmination, French, from fulminate.] 1. The act of thundering. 2. Denunciations of censure.—The fulminations from the Vatican were turned into ridicule. *Ayliffe's Parergon.*

(2.) FULMINATION, in chemistry. See CHEMISTRY, *Index* ; DETONATION, and NITRE.

(3.) FULMINATION, in the Romish canon law, a sentence of a bishop, official, or other ecclesiastical, appointed by the pope, by which it is decreed that some bull sent from the pope shall be executed.

\* FULMINATORY. *adj.* [fulmineus, Latin; from fulminate.] Thundering; striking horror.

FULNEK, a town of Moravia, in the circle of Prerau, 10 miles NW. of Freyburg.

\* FULNESS. *n. f.* [from full.] 1. Of being filled so as to have no part. Your heave-offering shall be reckoned of the wine-press. *Numb. xviii. 27.*—I roar and the fulness thereof. *Deut.*—Thou shalt desire nothing more than safety, freedom. *King Charles.* 2. The state coming in any quality good or bad. 3. Com such as leaves nothing to be desired.—Joyments are so complete, I turn with tulations, and congratulating their full with their continuance. *Soutb.* 4. Comes from the coalition of many parts.—The forwards to London, receiving the acclamations and applauses of the people as he went, indeed were true and unfeigned, as might appear in the very demonstration and full cry. *Bacon's Henry VII.* 5. Completion from deficiency.—In thy presence of joy. *Psalms.*—

He is the half part of a blessed man  
Left to be finished by such as she;

And she a fair divided excellence,

Whose fulness of perfection lies in him  
6. Repletion; satiety.—I need not insist on habitual intemperance of rich tables, on accidents and effects of fulness, pride, wantonness and softness. *Taylor.* 7. Pient

To lapse in fulness

Is forer than to lie for need; and fall

Is worse in kings than beggars. *Sh.*

8. Struggling perturbation; swelling in

—A principal fruit of friendship is the

charge of the fulness of the heart, which

of all kinds do cause and induce. *Bacon.*

9. Largeness; extent.—There wanted

of a plot, and variety of characters to

it ought; and perhaps something might

added to the beauty of the style. *Dr.*

Force of sound, such as fills the ear;

This sort of pastoral derives almost its

wh from a natural ease of thought and

smo verse; whereas that of most other

kind in the strength and fulness of both. *Pope.*

\* FULSOME. *adj.* [from fülle, Sax]

1. Nauseous; offensive.—

He that brings fulsome objects to me

With nauseous images my fancy fills,

And all goes down like oxymel of squi

How half the youth of Europe are

How fulsome must it be to stay behind

And die of rank diseases here at home

2. Rank; gross: to the smell.—White

of a dainty smell, if the plant puts

flowers only, and those not thin or dry

commonly of rank and fulsome smell. *J.*

Lustful.—

He stuck them up before the fulsom

4. Tending to obscenity.—A certain

which is ascribed to the emperor, is

more than any passage I have met with

in *Dryden.*

\* FULSOMELY. *adv.* [from fulsome]

ously; rankly; obscenely.

\* FULSOMENESS. *n. f.* [from fulsome]

Nauseousness. 2. Rank smell. 3. *J.*

—No decency is considered, no fulsomeness

requon is wanting, as far as dulness can  
*Dryden.*

**FUMADO.** *n. f.* [*fumus*, Latin.] A smoked  
h that serve for the hotter countries, they  
h to fume, by hanging them upon long  
e by one, drying them with the smoke  
nd continual fire, from which they pur-  
e name of *fumados*. *Carew.*

**FUMAGE.** *n. f.* [from *fumus*, Latin.]  
*ney. DiB.*

**FUMARIA,** FUMITORY, a genus of the pen-  
der, belonging to the diadelphia class of  
id in the natural method ranking under  
rder, *Corydalis*. The calyx is diphyllous;  
a ringent; and there are two membran-  
ments, each of which has three antheræ.  
many different species, all low, shrubby,  
s and evergreen plants, growing from a  
7 feet high, adorned with small simple  
nd papilionaceous flowers of different

The most remarkable is the  
**FUMARIA OFFICINALIS**, or common fumitory,  
naturally in shady cultivated grounds,  
lucæ spikes of purplish flowers in May  
It is very juicy, of a bitter taste, with-  
remarkable smell. Its medical effects are,  
ben the tone of the bowels, gently loosen  
, and promote the natural secretions. It  
recommended in melancholic, scorbutic,  
scous disorders, for opening obstructions  
viscera, attenuating, and promoting the  
m of viscid juices. Hoffman had a great  
if it as a purifier of the blood; and assures  
in this intention scarce any plant exceeds  
and sheep eat it; goats are not fond of  
and swine refuse it.

**FUMATORY.** *n. f.* [*fumaria*, Lat. *fume-*  
An herb.—

Her fallow leas  
rnel, hemlock, and rank fumatory,  
oot upon. *Shakespeare's Henry V.*  
LY, a town of France, in the dep. of  
1. Its chief trade is in flates.

To FUMBLE. *v. a.* To manage auk-

many farewels as be stars in heav'n,  
liffinct breath and consign'd kiffesto them,  
ables up all in one loose adieu. *Shak.*  
His greasy bald pate choir  
fumbling o'er the beads, in such an agony  
old 'em false for-fear. *Dryd. Sp. Fryar.*

To FUMBLE. *v. n.* [*fommelen*, Dutch.]  
tempt any thing awkwardly or ungainly.  
mechanick thefts will have their atoms  
x to have fumbled in these their motions,  
ive produced any inept system. *Cudworth.*  
uzzle; to strain in perplexity.—Am not  
l to help you out? You would have been  
half an hour for this excuse. *Dryden's*  
*Fryar.* 3. To play childishly.—I saw him  
th the sheets, and play with flowers, and  
on his finger's end. *Shak. Henry V.*

**FUMBLER.** *n. f.* [from *fumble*.] One who  
wardly.

**FUMBLINGLY.** *adv.* [from *fumble*.] In an  
manner.

**FUME.** *n. f.* [*fumée*, French; *fumus*, Latin.]  
c.—

Thus fighting fires a while themselves con-  
sume;

But stright, like Turks, forc'd on to win or die,  
They first lay tender bridges of their fume,  
And o'er the breach in unctuous vapours fly.

*Dryden.*

2. Vapour; any volatile parts flying away.—

Love is a smoke rais'd with the fume of sighs;  
Being purg'd, a fire sparkling in lovers eyes. *Sb.*  
—It were good to try the taking of fumes by pipes,  
as they do in tobacco, of other things, to dry and  
comfort. *Bacon.*—In Winter, when the heat with-  
out is less, breath becomes so far condensed as to  
be visible, flowing out of the mouth in form of a  
fume, or crasser vapour; and may, by proper  
vessels, set in a strong freezing mixture, be collect-  
ed in a considerable quantity. *Woodw. Nat. Hist.*

3. Exhalation from the stomach.—The fumes of  
drink discompose and stupify the brains of a man  
overcharged with it. *South.*—

Plunged in sloth we lie, and snore supine,  
As fill'd with fumes of undigested wine. *Perf.*  
Pow'r, like new wine, does your weak brain  
surprize,

And its mad fumes in your discourses rise;  
But time these yielding vapours will remove:  
Mean while I'll taste the sober joys of love.

*Dryden's Aurengzebe.*

4. Rage; heat of mind; passion.—The fumes of  
his passion do really intoxicate and confound his  
judging and discerning faculty. *South.* 5. Any  
thing unsubstantial.—

When Duncan is asleep, his two chamberlains  
Will I with wine and wassail so convince,  
That memory, the warder of the brain,  
Shall be a fume. *Shakespeare's Macbeth.*

6. Idle conceit; vain imagination.—Plato's great  
year would have some effect, not in renewing the  
state of like individuals; for that is the fume of  
those, that conceive the celestial bodies have more  
accurate influence upon these things below, than  
they have, but in gross. *Bacon.*—To lay aside all  
that may seem to have a show of fumes and fancies,  
and to speak solids, a war with Spain is a mighty  
work. *Bacon.*

(1.) To FUME. *v. a.* 1. To smoke; to dry in  
the smoke.—Those that serve for hot countries  
they used at first to fume, by hanging them upon  
long sticks one by one, and drying them with the  
smoke of a soft fire. 2. To perfume with odours  
in the fire.—

She fum'd the temples with an od'rous flame,  
And oft before the sacred altars came,  
To pray for him who was an empty name. *Dryd.*  
—The fuming of the holes with brimstone, garlick,  
or other unfavoury things, will drive moles out of  
the ground. *Mortim.* 3. To disperse in vapours.  
—The heat will fume away most of the scent. *Mort.*

(2.) To FUME. *v. n.* [*fumer*, French; *fumo*,  
Latin] 1. To smoke.—

Their prayers pass'd  
Dimensionless through heav'nly doors; then clad  
With incense, where the golden altar fum'd  
By their great intercessor; came in sight  
Before the Father's throne. *Milton's Par. Lost.*

From thence the fuming trail began to spread,  
And lambent glories dau'd about her head.

*Dryden's Æn*

Strait hover round the fair her airy band ;  
Some, as the sipp'd, the *fuming* liquor fann'd.

*Pope.*

2. To vapour ; to yield exhalations, as by heat.  
Tie up the libertine in a field of feasts,  
Keep his brain *fuming*. *Sbak. Ant. and Cleop.*  
Silenus lay,  
Whose constant cups lay *fuming* to his brain,  
And always boil in each extended vein. *Rosc.*

3. To pass away in vapours.—

We have

No anger in our eyes, no storm, no lightning ;  
Our hate is spent and *fum'd* away in vapour,  
Before our hands be at work. *B. Jonson's Cat.*  
—Their parts are kept from *fuming* away by their  
fixity, and also by the vast weight and density of  
the atmospheres incumbent upon them. *Cheyne's*  
*Phil. Princ.*—

The first fresh dawn then wak'd the gladden'd  
race

Of uncorrupted man, nor blush'd to see  
The sluggard sleep beneath its sacred beam ;  
For their light slumbers gentle *fum'd* away.

*Tobson's Spring.*

4. To be in a rage ; to be hot with anger.—

When he knew his rival free'd and gone,  
He swells with wrath ; he makes outrageous  
moan :  
He frets, he *fumes*, he stares, he stamps the  
ground,  
The hollow tow'r with clamours rings around.

*Dryden.*

FUMEL, a town of France, in the dep. of Lot  
and Garonne, 9 miles N. of Tournon.

\* FUMET. *n. f.* The dung of the deer.

\* FUMETTE. *n. f.* [French.] A word introduced by cooks, and the pupils of cooks, for the  
sink of meat.—

A haunch of ven'fon made her sweat,

Unless it had the right *fumette*. *Swift.*

\* FUMID. *adj.* [ *fumidus*, Latin.] Smoky ;  
vaporous.—A craft and *fumid* exhalation is caused  
from the combat of the sulphur and iron with the  
acid and nitrous spirits of *aqua fortis*. *Brown's*  
*Vulg. Err.*

\* FUMIDITY. *n. f.* [from *fumid*.] Smokinens ;  
tendency to smoke.

\* To FUMIGATE. *v. n.* [from *fumus*, Latin ;  
*fumiger*, Fr.] 1. To smoke ; to perfume by smoke  
or vapour.—

Wouldst thou preserve thy fam'd family,  
With fragrant thyme the city *fumigate*,  
And break the waxen walls to save the state.

*Dryden's Virgil.*

2. To medicate or heal by vapours.

\* (1.) FUMIGATION. *n. f.* [ *fumigatio*, Latin ;  
*fumigatio*, French ; from *fumigatus* ] 1. Scents  
raised by fire.—*Fumigations*, often repeated, are  
very beneficial. *Arbuthnot*.—

My *fumigation* is to Venus, just

The basis of roses, and red corals dust ;

And, last, to make my *fumigation* good,

'Tis mixt with sparrows beaks and pigeons  
blood. *Dryden.*

2. The application of medicines to the body in  
fumes.

(2.) FUMIGATION, in chemistry, a kind of calcination, when metals or other hard bodies are

corroded or softened by receiving of  
for that purpose.

(3.) FUMIGATION, in medicine.

tile fumes produced by burning certain  
much benefit or prejudice may be pr  
cording to the nature of the case, and  
tution on which the effects are to be  
is evident from the palsies produced at  
gilders, workers in lead-mines, &c. at  
the benefits received in many cases v  
is impregnated with salutary material  
and colds, for instance, are relieved  
ceived with the breath ; by the same  
pectoration is assisted in the asthma ;  
ulcers in the lungs have been relieved  
thod. This is still more strongly ext  
the common practice of curing ven  
and exciting the general action of q  
the system, by inclosing the naked  
patient in a box fitted to receive t  
quicksilver, raised by sprinkling cinn  
red hot iron, or, what is still better  
*gyrus precipitatus cinereus* of the Ph  
Chirurgica, which, not emitting any  
vapours, proves less inconvenient to t

FUNCTION. *n. f.* [*functio*, Lat.] 1. Dis-  
performance.—There is hardly a greater  
between two things than there is be-  
representing commoner in the *function* of  
ck calling, and the same person in common  
A. 2. Employment; office.—The minist-  
now bound to any one tribe: now none  
ed from that *function* of any degree, state,  
; *Whitgift*.—You have paid the heavens  
*Flora*, and the prisoner the very debt of  
ing. *Shak.*—Nor was it any policy, or ob-  
ar partiality of affection either to the men  
*function*, which fixed me. *King Charles.*—  
ible *function* of the goddess gives a con-  
light and beauty to the ode which Horace  
vised to her. *Adajon on Italy*—Let not  
legacies discourage us from asserting the  
ages and pre-eminence of our holy *func-*  
character. *Atterbury*. 3. Single act of any  
Without difference those *functions* cannot,  
ly sort, be executed. *Hooker*.—They have  
fines and prayers against fire, tempests,  
only for the dead, in which *functions* they  
dotal garments. *Stillington*. 4. Trade;  
on.—Follow your *function*; go, and but-  
old bits. *Shak.* 5. Office of any particu-  
of the body.—The bodies of men and o-  
mals, are excellently well fitted for life  
and the several parts of them well  
to their particular *functions*. *Bentley*. 6.  
faculty: either animal or intellectual.—  
us in his eyes, distraction in his aspect,  
ken voice, and his whole *functions* suiting  
forms to his conceit. *Shak. Hamlet.*

Nature seems  
her *functions* weary of herself:  
ce of glory run, and race of thame;  
shall shortly be with them that rest. *Milt.*  
atever warms the heart, or fills the head,  
mind opens, and its *functions* spread,  
nation plies her dang'rous art,  
ours it all upon the peccant part. *Pope.*  
ch every human constitution is morbid,  
their diseases consistent with the common  
of life. *Arbutnot.*

FUNCTION, in the animal œconomy, (§ 1,  
by physicians divided into vital, animal,  
rational.

FUNCTIONS, ANIMAL, include the senses,  
judgment, and voluntary motions; with-  
or all of which an animal may live but  
comfortably. The animal functions per-  
motion of the body by the action of the

X. PART I.

muscles; and this action consists chiefly in the  
shortening the fleshy fibres, which is called *con-*  
*traction*, the principal agents of which are the ar-  
teries and nerves distributed in the fleshy fibres.  
All parts of the body have their own *functio* s, or  
actions, peculiar to themselves. Life consists in  
the *exercise* of these functions, and health in the  
*free and ready exercise* of them.

2. FUNCTIONS, NATURAL, are such as it can-  
not subsist any considerable time without; as the  
digestion of the aliment, and its conversion into  
blood.

3. FUNCTIONS, VITAL, are those necessary to  
life, and without which the individual cannot sub-  
sist; as the motion of the heart, lungs, &c.

(1) \* FUND. *n. f.* [*fund*, Fr. *funda*, a bag, Lat.]  
1. Stock; capital; that by which any expence is  
supported.—He touches the passions more deli-  
cately than Ovid, and performs all this out of his  
own *fund*, without diving into the arts and sci-  
ences for a supply. *Dryden.*—

Part must be left, a *fund* when foes invade,  
And part employ'd to roll the wat'ry tide. *Dryd.*  
—In preaching, no men succeed better than those  
who trust entirely to the stock or *fund* of their  
own reason, advanced indeed, but not overlid by  
commerce with books. *Swift*. 2. Stock or bank  
of money.—As my estate has been hitherto either  
lost upon seas, or fluctuating in *funds*, it is now  
fixed in substantial acres. *Addison*.

(2.) FUND, SINKING, that part of the national  
revenue, which is set aside for the payment of the  
NATIONAL DEBT.

(3.) The FUNDS, those large sums which have  
been lent to government, and constitute the na-  
tional debt; and for which the lenders, or their  
assignees, receive interest from revenues allotted  
for that purpose. The term *sink* is used in the  
same sense, and is also applied to the sums which  
form the capital of the bank of England, the East  
India and South Sea companies; the proprietors  
of which are entitled to a share of the profits of  
the respective companies. The practice of fund-  
ing was introduced by the Venetians and Genoese  
in the 16th century, and has been adopted since  
by most of the nations in Europe. Princes had  
often borrowed money, in former times, to sup-  
ply their exigencies, and sometimes mortgaged  
their territories in security; but these loans were  
generally extorted, and their payment was always  
precarious; for it depended on the good faith and  
success of the borrower, and never became a regu-  
lar burden on posterity. The origin of funds is  
derived from the peculiar manners and circum-  
stances of modern Europe. Since the invention  
of gunpowder, and the progress of commerce, the  
military occupation has become a distinct employ-  
ment in the hands of mercenaries; the apparatus  
of war is attended with more expence; and the  
decision of national quarrels has often been deter-  
mined by command of money rather than by na-  
tional bravery. Ambitious princes have therefore  
borrowed money, to carry on their projects with  
more vigour. Weaker states have been compel-  
led, in self-defence, to apply to the same resource;  
the wealth introduced by commerce has afforded  
the means; the regularity of administration, esta-  
blished in consequence of the progress of civiliza-

tion, has increased the confidence of individuals in the public security; the complicated system of modern policy has extended the scenes of war, and prolonged their duration; and the colonies established by the mercantile nations have rendered them vulnerable in more points, and increased the expence of defending them. When a greater sum has been required for the annual expence, than could easily be supplied by annual taxes, the government have proposed terms, to their own subjects, or foreigners, for obtaining an advance of money, by mortgaging the revenue of future years for their indemnification. This mortgage may either be for a limited period, or perpetual. If the sum allotted annually for the benefit of those who advance the money, be considerably greater than the interests of the sums advanced, they may agree to accept of such allowance, for a limited time, as a full equivalent. Thus, they may either agree for the casual produce of the revenue assigned; or a fixed annuity for a greater or less number of years; or a life annuity to themselves or nominees; or an annuity for two or more lives; or an annuity, with the benefit of survivorship, called a *tontine*, in which scheme, the whole sum to which the original annuitants were intitled continues to be distributed among the survivors. The establishment of the funds was introduced in Britain at the Revolution; and has since been gradually enlarged, and carried to an amazing extent. The various methods above-mentioned have been used in their turns, but perpetual annuities have been granted for the greatest part: and, even when the money was originally advanced on other conditions, the lenders have been sometimes induced, by subsequent offers, to accept of perpetual annuities, instead of the former terms. The debt, for which perpetual annuities are granted, is called the *redeemable debt*, and the other is called the *irredeemable debt*. Although the debts thus contracted by government are seldom paid for a long term of years; yet any creditor of the public may obtain money for what is due him when he pleases, by transferring his property in the funds to another; and regular methods are appointed for transacting these transfers in an easy manner. By these means, the stocks become a kind of circulating capital: they have the same effect, in some respects, as the circulating money in the nation. When a stockholder transfers his share, he may sometimes be able to obtain a greater price than the original value, and at other times be obliged to accept of a less one. The value of the funds depends on the proportion between the interest they bear, and the benefit which may be obtained by applying the money to other purposes. It is influenced by the plenty or scarcity of money, and by the greatness or smallness of the public debt; and it is impaired by any event which threatens the safety, or weakens the credit, of the government. The business of STOCK JOBBING is founded on the variation of the prices of stock. Persons possessed of real property may buy or sell stock, according to their notion that the value is likely to rise or fall, in expectation of making profit by the difference of price. And a practice has taken place among persons who often possess no property in the funds, to contract for the sale of

stock against a future day, at a price on. For instance: A agrees to sell bank stock, to be transferred, in 20 days. A has, in fact, no such stock; but, if bank stock, on the day appointed for should be only 118 per cent, A may much as will enable him to fulfil his 1180l. and thus he gains 20l. by the on the contrary, if the price of bank per cent, he will lose 50l. The business settled without any actual purchase of stock, by A paying to B, or receiving the difference between the current price on the day appointed, and the price of the stock. This practice, which is really nothing concerning the price of stock, is called yet it is carried on to a great extent. In the Exchange-alley, where most kind are transacted, the buyer is called the seller a *bear*. As neither party is compelled by law to implement these business of honour, and the disgrace attendant on a breach of the principles by which the business is conducted. When a person declines to pay his loaned a *lame duck*, and dare never afterwards in the Alley. This opprobrious appellation, is not bestowed on those who are owing to want of ability, providing they do not surrender of their property voluntarily; the law would have exacted if they were entitled to its sanction. The interest on the stock is paid half-yearly; and the lender has the benefit of the interest due on the buys, from the last term to the time. Therefore the prices of the stocks rise or fall, *ceteris paribus*, from term to term, at the term when the interest is paid. In consequence of the different stocks, it is necessary to convert to the term when the last interest is paid, allowance being made for this conversion, the prices of all the government stocks, which bear interest at the same rate, must be the same, as they all depend on the same principle. When a loan is proposed, such terms are offered to the lenders, as may render the transaction beneficial: and this is now regulated by the prices of the old stocks. If the stocks interest at 4 per cent, sell at par, or above par, the government may expect to borrow at that rate; but, if these stocks are undervalued, the government must either grant a higher interest, or some other advantage to the lenders, to compensate for the difference. For this purpose, besides the perpetual annuity, another method has sometimes been granted for a limited number of years. Lotteries have frequently been used to facilitate the loan, by entitling the subscribers to a certain number of tickets, for which a price is charged than the exact value of the prizes. Though their market price is sometimes 2l. or 3l. higher. Sometimes an abatement of a certain proportion of the capital has been granted, and a lender entitled to hold 100l. of stock, in reality he advanced no more perhaps 80l. It belongs to the Chancellor of the Exchequer to propose the terms of the loan in parliament, and he generally makes a previous agree-

althy merchant, who are willing to ad-  
 ze money on the terms proposed. The  
 ers to the loan deposite a certain part of  
 subscribed; and are bound to pay the rest  
 inments, or stated proportions, on appoint-  
 , under pain of forfeiting what they have  
 d. For this they are entitled, perhaps, not  
 hold their share in the capital, but to an  
 for 10 years, and to the right of receiving  
 a number of lottery tickets on advantage-  
 ns. They may sell their capital to one  
 their annuity to a second, and their right  
 ckets to a third. The value of all these in-  
 together is called *annuities*; and, in order to  
 ready subscription, it ought to amount  
 or upwards, on 100l. of capital. This  
 is called the *bonus* to the subscribers.  
 ital advanced to the public, in the form  
 scable stocks, and bearing interest from  
 appropriated for that purpose, is called the  
*loan*. Besides, there is generally a consi-  
 sum due by government, which is not dis-  
 in that manner, and therefore is distin-  
 by the appellation of the *unfunded debt*.  
 y arise from any sort of national expence,  
 ch no provision has been made, or for  
 provision has proved insufficient. The  
 nches are, 1. EXCHEQUER BILLS. These  
 d from the exchequer, generally by ap-  
 of parliament, and sometimes without  
 ointment, when exigencies require. They  
 rest from the time when issued, and are  
 by the bank of England, which promotes  
 culation. See EXCHEQUER, § 4. 2. NAVY

The sums annually granted for the navy  
 ys fallen short of what that service re-  
 To supply that deficiency, the admiralty  
 is in payment of victuals, stores, and the  
 ch bear interest six months after the time  
 The debt of the navy thus contracted is  
 id, from time to time, by parliament. In  
 war, the public expences, since the revo-  
 ave always been much greater than the  
 venue; and large sums have consequent-  
 borrowed. In time of peace, the revenue  
 the expence, and part of the public debts  
 uently been paid off. But, though there  
 u more years of peace than of war since  
 u were established, the debts contracted  
 ach war have much exceeded the pay-  
 rring the subsequent peace. This will  
 y the following abstract of the progress of  
 nal debt.

peace of Ryswich, 1697	L. 21,515,472
at the beginning of war, 1701	16,394,701
contracted during peace, 1697 to	5,121,071
at the peace of Utrecht 1714,	
ing value of annuities af-	
ds subscribed to South Sea	55,282,978
contracted during war 1701 to 1714	38,888,277
at the beginning of war 1740, in-	
cluding L. 1,000,000 charged on	
the bank	47,954,623
at the beginning of peace 1714 to	7,328,355

Debt at the peace of Aix-la-Chapelle,	L. 99,293,323
1748	31,238,690
Contracted during war 1740 to 1748	73,289,673
Debt at beginning of war 1756	5,903,640
Paid off during peace 1748 to 1756	
Debt funded at the peace 1763, in-	
cluding L. 9,839,597 then owing,	
which was funded in the subse-	
quent years	133,957,270
Besides this, about L. 6,000,000 of	
of debt was paid off, without ever	
being funded.	
Funded debt, 1775	125,000,000
Paid off during peace 1763 to 1775,	
besides the above unfunded debt	8,959,270
Funded debt at the peace 1783	211,363,254
The unfortunate and destructive war, now carry-	
ing on against the French Republic, has added	
most enormously to the public debt. Some even	
suppose it has increased it by a sum of above two	
hundred millions.	

(1.) \* FUNDAMENT. *n. f.* [*fundamentum*, Latin.] The back part of the body.

(2.) FUNDAMENT, in anatomy, the lowest part of the intestinum rectum, called by anatomists the ANUS. See ANATOMY, *Index*.

(1.) \* FUNDAMENTAL. *adj.* [*fundamentalis*, Lat. from *fundament*.] Serving for the foundation; that upon which the rest is built; essential; important; not merely accidental.—Until this can be agreed upon, one main and *fundamental* cause of the most grievous war is not like, to be taken from the earth. *Raleigh's Essays*.—

You that will be less fearful than discreet,  
 That love the *fundamental* part of state,  
 More than you doubt the charge of't. *Sb. Cor*  
 —Others, when they were brought to allow the  
 throne vacant, thought the succession should go  
 to the next heir, according to the *fundamental*  
 laws of the kingdom, as if the last king were ac-  
 tually dead. *Swift*.—Gain some general and *fun-*  
*damental* truths, both in philosophy, in religion,  
 and in human life. *Watts*.—

Such we find they are, as can controul  
 The servile actions of our wav'ring soul,  
 Can fright, can alter, or can chain the will;  
 Their ills all built on life, that *fundamental* ill.

*Prior*.

Yet some there were among the founder few,  
 Of those who less presum'd, and better knew,  
 Who durst assert the juster ancient cause,  
 And here restor'd wit's *fundamental* laws. *Pope*.

(2.) \* FUNDAMENTAL. *n. f.* Leading proposi-  
 tion; important and essential part which is the  
 groundwork of the rest.—We propose the ques-  
 tion, whether those who hold the *fundamentals* of  
 faith may deny Christ, and be damnable in respect  
 of superstructures and consequences that arise from  
 them. *Soub.*—It is a very just reproach, that there  
 should be so much violence and hatred in reli-  
 gious matters, among men who agree in all *fun-*  
*damentals*, and only differ in some ceremonies, or  
 mere speculative points. *Swift*.

(3.) FUNDAMENTAL BASS, in music, that which  
 serves for a foundation to the harmony. This  
 part is according to Rousseau, and all authors  
 who have proceeded upon M. Rameau's experi-

ment, in its primary idea, that bass which is formed by the fundamental notes of every perfect chord that constitutes the harmony of the piece; so that under each chord it causes to be heard, or understood, the fundamental sound of that particular chord; that is, the sound from whence it is derived by the rules of harmony. From whence we may see, that the fundamental bass can have no other contexture than that of a regular and fundamental succession, without which the procedure of the upper parts would be illegitimate. To understand this well, it is necessary to be known, that, according to the system of Rameau, which Rousseau has followed in his dictionary, every chord, though composed of several sounds, can only have one which is its fundamental, viz. that which produces this chord, and which is its bass according to the direct and natural order. (See § 4, 5.) Now, the bass which prevails under all the other parts, does not always express the fundamental sounds of the chords: for amongst all the sounds which form a chord, the composer is at liberty to transfer to the bass that which he thinks preferable; regard being had to the procedure of that bass, to the beauty of the melody, and above all to the expression, as afterwards explained. In this case the real fundamental sound, instead of retaining its natural station, which is in the bass, will either be transferred to some of the other parts, or perhaps even entirely suppressed, and such a chord is called an *inverted* chord. In reality, says Rameau, a chord inverted does not differ from the chord in its direct and natural order from which it was produced: but as these sounds form different combinations, these combinations have long been taken for fundamental chords; different names have been given them, which may be seen at the word ACCORD, in *Rousseau's Dictionary*. These names, by the persons who bestowed them, were thought to create and sanctify their distinctions; as if a difference in names could really produce a difference in the species. M. Rameau in his *Treatise of Harmony* has shown, and M. d'Alembert in his *Elements of Music* has still more clearly evinced, that many of these pretendedly different chords were no more than inversions of one single chord. Thus the chord of the 6th is no more than the perfect chord of the 3d transferred to the bass; by adding a 5th, we shall have the chord of the 6th and 4th. Here there are three combinations of a chord, which only consists of 3 sounds; those which contain 4 sounds are susceptible of 4 combinations, since each of these sounds may be transferred to the bass. But in adding beneath this another bass, which, under all the combinations of one and the same chord, always presents the fundamental sound; it is evident, that consonant chords are reduced to the number 2, and the number of dissonant chords to 4. Add to this all the chords by supposition, which may likewise be reduced to the same fundamentals, and you will find harmony brought to a degree of simplicity, in which no person could ever hope to see it, whilst its rules remained in that state of confusion where M. Rameau found them. It is certainly, as that author observes, an astonishing occurrence, that the practice of this art could be carried so

far as it really was, without knowing that all the rules were so exact without having discovered the principles they depended on. After having shewn the fundamental bass beneath the chords, now treat of its procedure, and of the way in which it connects these chords among themselves. Upon this point the precepts of the 1st are reduced to the six following rules. 1. The fundamental bass ought never to sound notes, than those of the series or tone in which the composer finds himself, or at least those of the series or tone to which he chooses to migrate. This of all the rules for the fundamental bass is the first and most indispensable. 2. Its procedure ought to be so managed, as not to be subjected to the laws of modulation, as never the idea of a former mode to be lost, nor of a subsequent one can be legitimately that is to say, that the fundamental bass never to be devious, or suffer us to be misled at a loss in what mode we are. 3. It is subjected to the connection and the preparation of dissonances: a dissonance, which, as we shall afterwards see, is not but a method of producing this connection, which of consequence is only necessary, where a connection cannot subsist without it. 4. By the 4th it is necessary to pursue that career of resolution of the dissonance indifferently. See RESOLUTION. 5. By the 5th it is nothing else but a consequence of the 4th, that the fundamental bass ought only to move by consonant intervals; except alone in the case of a broken cadence, or after a chord of dissonance, where it rises diatonically. 6. The motion of the fundamental bass is illegitimate. By the 6th, in short, the fundamental bass ought not to be syncopated; but by changes of chords properly marked, and in such a manner, for instance, as to prepare their preparation in the imperfect time, so that all the rests may happen in time. This sixth rule admits of an infinite number of exceptions; but the composer ought ever to be attentive to it, if he would be successful in which the movements are proper, and in which the bars may end gracefully. 7. If ever these rules are observed, the harmony will be regular and without fault: this, however, is not to be understood, that the music should be belag detestable. POSITION, § 7. An illustration of the 5th rule may be useful. Whatever turn may be given to the fundamental bass, if it is properly managed, these alternatives must always be found in perfect chords moving by consonant intervals, without which their efforts would have no effect; or, dissonant chords in opera: in every other case, the dissonance neither be properly placed nor proper. Hence it follows, that the fundamental bass not move regularly but in one of these ways. 1. To rise or descend by a 3d or a 4th. 2. To rise or descend by a 4th or a 5th. 3. To rise diatonically, means of the dissonance which forms it.

by a licence upon a perfect chord. With to a diatonic descent, it is a motion abso-robhibited to the fundamental bass; or, at xerely tolerated in cases where two perfect are in succession, divided by a close expres-nderstood. This rule has no other excep-nd it is from not discerning the foundation in transitions, that M. Rameau has caused damental bass to descend diatonically un-rds of the 5th; an operation which is im-ible in legitimate harmony. See CADENCE, § III, and DISCORD, § 2. The funda-bass, which they add for no other reason-erve as a proof of the harmony, must be bed in execution, and often in practice it have a very bad effect; for it is, as M. Ra-very properly observes, intended for the-nt, and not for the ear. It would at-duce a monotony extremely noxious by-returns of the same chord, which they-nd vary more agreeably, by combining it-ent manners upon the continued bass,-t reckoning upon the different inversions-ony, which furnish a thousand means of- new beauties to the music and new energy-pression. See CHORD, § II; and INVER-But it may be objected, If the fundamen- is not useful in composing good music, if- even be retrenched in practice, what good- is, then, can it serve? We answer, that, in- it place, it serves for a rule to scholars, up- which they may learn to form a regular har- and to give to all the parts such a diatonic- mentary procedure as is prescribed them- fundamental bass. 2dly, It proves whe- harmony already formed be just and regular;- harmony which cannot be subjected to the- fundamental bass, must according to all- be said. 3dly, It serves for the investigation- continued bass under a given air; though, in- it, he who cannot directly form a continued- will scarcely be able to form a fundamental- which is better; and much less still will he- le to transform that fundamental bass into a- nate continued bass. These which follow- however, the principal rules which M. Ra- prescribes for finding the fundamental bass- ven air. 1. To ascertain with precision the- us which the composer begins, and those- gh which he passes. There are also rules- regarding the modes; but so long, so vague,- complete, that with respect to this, the ear- returned long before the rules are acquired;- he dance who should try to use them would- to improvement, but the habit of proceed- ways note by note, without even knowing- he is. 2. To try in succession, under each- the principal chords of the mode, beginning- those which are most analogous, and passing- to the most remote, when the composer sees- it under a necessity of doing so. 3. To con- whether the chord chosen can suit the upper- in what precedes and in what follows, by a- additional succession: and when this is im-icable, to return the way he came. 4. Not- ange the note of the fundamental bass till af- having exhausted all the notes which are allow- succession in the upper part, and which can

enter into its chord; or till some syncopated note in the air may be susceptible of two or a greater number of notes in the bass, to prepare the dissonance which may be afterwards resolved according to rule. 5. To study the intertexture of the phrases; the possible succession of cadences, whether full or avoided; and above all, the pauses which for ordinary return at the end of every 4, or of every 2 bars, so that they may always fall upon perfect and regular cadences. 6. To observe all the rules formerly given for the composition of the fundamental bass.—These are the principal observations to be made for finding one under any given air; for there are sometimes several different ones which may be investigated. But, whatever may be said to the contrary, if the air has accent and character, there is only one just fundamental bass which can be adapted to it. After having given a summary explication of the manner in which a fundamental bass should be composed, it should remain to suggest the means of transforming it into a continued bass; and this would be easy, if it were only necessary to regard the diatonic procedure and the agreeable air of this bass. But let us not imagine that the bass, which is the guide and support of the harmony, the soul, and as it were the interpreter of the air, should be limited to rules so simple: there are others which depend upon principles more certain and radical; fruitful, but latent principles, which have been felt by every artist of genius, without having been detected by any one. Rousseau hopes, that, in his letter upon French music, he has insinuated this principle. For those who understand him, he imagines he has said enough concerning it, and can never say enough of it for those who do not. See *Rousseau's Miscellanies*, Vol. II. p. 1. He does not here mention the ingenious system by M. Serre of Geneva, nor his double fundamental bass; because the principles, which, with a sagacity meritorious of praise, he had half detected, have afterwards been unfolded by M. Tartini, in a work of which Rousseau has given an account in his article SYSTEM.

(4.) A FUNDAMENTAL CHORD, is that whose bass is fundamental, and in which the sounds are ranged in the same order as when they are generated, according to the experiment so often repeated by M. d'Alembert, in his Preliminary Discourse and Element of Music. See MUSIC. But as this order removes the parts to an extreme distance one from the other, they must be approximated by combinations or inversions; but if the bass remains the same, the chord does not for this reason cease to bear the name of *fundamental*. Such an example is this chord, *ut mi sol*, included in the interval of a fifth: whereas, in the order of its generation, *ut sol mi*, it includes a tenth, and even a seventeenth; since the fundamental *ut* is not the fifth of *sol*, but the octave of that fifth.

(5.) A FUNDAMENTAL SOUND is that which forms the lowest note of the CHORD, and from whence are deduced the harmonical relations of the rest; or, which serves for a key to the tone. See TONIC.

\* FUNDAMENTALLY. *adv.* [from *fundamental*.] Essentially; originally.—As virtue is feated *fundamentally* in the intellect, so perceptivevly

in the fancy; so that virtue is the force of reason, in the conduct of our actions and passions to a good end. *Grew*.—Religion is not only useful to civil society, but *fundamentally* necessary to its very birth and constitution. *Bentley*.—The unlimited power placed *fundamentally* in the body of a people, the legislators endeavour to deposit in such hands as would preserve the people. *Swift*.

FUNDAON, a town of Portugal, in the prov. of Beira; 23 miles W. of Alfayates.

FUNDI, in ancient geography, a town of Latium, on the Via Appia, near Cajeta; enjoying all the privileges of Roman citizens, except the right of suffrage and of magistracy; now called FONDI.

FUNDO, a town of European Turkey, in Moldavia, 44 miles WNW. of Birlat.

FUNDY, a bay of N. America, between New England and Nova Scotia, remarkable for its tides, which rise to the height of 50 or 60 feet, and flow so rapidly as to overtake animals which feed upon the shore. It has a good fishery.

FUNEN, FIONIA, or FYEN, a considerable island of Denmark, in the Baltic sea, separated from Jutland by a strait called the *Lesser Belt*, and from the island of Zealand by the *Great Belt*. It is 340 miles in circuit; is fertile in wheat and barley, and abounds in grain cattle, horses, game, and fish. Odensee is the capital. Lon. from 9. 40. to 10. 50. E. Lat. 55. 7. to 55. 42. N.

(1.) \* FUNERAL. *adj.* Used at the ceremony of interring the dead.—

Our instruments to melancholy bells,  
Our wedding cheer to a sad funeral feast. *Shak.*  
Let such honours

And funeral rites, as to his birth and virtues  
Are due, be first perform'd. *Denham's Sophy.*  
Thy hand o'er towns the *fun'ral* torch displays,

And forms a thousand ills ten thousand ways.  
*Dryden.*

(2.) \* FUNERAL. *n. s.* [*funus*, Latin; *funerailles*, French.] 1. The solemnization of a burial; the payment of the last honours to the dead; obsequies.—

Here, under leave of Brutus, and the rest,  
Come I to speak in Cæsar's funeral. *Shak.*  
All things that we ordained festival,

Turn from their office to black funeral. *Shak.*  
—He that had cast out many unburied, had none to mourn for him, nor any solemn funerals, nor sepulchre with his fathers. *2 Mac. v. 10.*—

No widow at his funeral shall weep. *Sandys.*  
2. The pomp or procession with which the dead are carried.—

The long funerals blacken all the way. *Pope.*  
—You are sometimes desirous to see a funeral pass by in the street. *Swift.* 3. Burial; interment.—  
May he find his funeral

I th' sands, when he before his day shall fall.  
*Denham.*

(3.) FUNERAL GAMES, a part of the ceremony of the ancient funerals. It was customary for persons of quality, among the ancient Greeks and Romans, to institute games, with all sorts of exercises, to render the death of their friends more remarkable. This practice was general, and is often mentioned by ancient writers. Patroclus's

funeral games take up the greatest part of Homer's Iliads; and Agamemnon's guided by the same poet, telling the goddesses, that he had been a spectator at a number of such solemnities. The celebrated games among the Greeks mostly consisted of races; the prizes were of different sort according to the quality and magnificence of the person that celebrated them. The games of victors on such occasions were usual which was thought to have some relation to the dead. Those games, Romans, consisted chiefly of processions, sometimes of mortal combats of gladiators the funeral pile. They, as well as the Greeks, had also a custom, though very ancient, of cutting the throats of a number of captives to appease the manes of the deceased. Cæsar relates, that the custom of the funeral games were introduced by the emperor Claudius.

(4.) FUNERAL ORATION, a discourse pronounced in praise of a person deceased, at the time of his funeral. This custom is very ancient, the annexed account of the Egyptian funeral, (See § 6.) may be perceived to be the elements of funeral orations, and what was the subject of them, which were afterwards introduced into a more polite and regular form by the Romans, who adopted this custom. I omit remarking, that those funeral orations were attended not only with prayers for the deceased, but with prayers for his one who personated the deceased. An account of one of these is preserved by Porphyry (says he) they (the Egyptians) embalmed the deceased nobles, they privately take out the heart and lay them up in an ark or chest: among other things which they do in the funeral, lifting up the ark or coffin, they invoke him; one of the Libyans has translated out of the Egyptian language is as follows:—O lord, the sun, and the gods who give life to man, receive me, and admit me into the society of the immortal ones; as I lived in this world, I religiously worshipped the gods whom my parents showed me, I always honoured those who begat me, I have killed any man, nor have I defiled of what has been committed to my trust, I have done any thing which is inexpiable whilst I was alive, if I have sinned either by eating or drinking any thing which was not through myself have I sinned, but these, showing the ark and chest which were my trails were. And having thus spoken, he cast them into the river, but the rest of the balms as pure." The Grecians received of superstition and idolatrous worship from the Egyptians, by Cecrops, Cadmus, Demeter, and Erechtheus, coming into Greece; and other customs transplanted from Egyptian solemnities used at the burial of the deceased, an encomium on the deceased added a part. From the Egyptians and especially the latter, the Romans received of their laws and customs, as well as

polytheism and idolatrous worship. It is now, that the custom of making funeral is in praise of the dead obtained among and the manner in which their funeral services performed will be found described in § 9. *xpfc* being brought into their great oratory. the *Roftra*, the next of the kin *laudabat de- s pro roftris*, i. e. made a funeral oration, commendation principally of the party de- , but touching the worthy acts also of those deceafors whose images were there prefent. *anet* fays, that: "In all the funerals of especially in the public or indiftive, the was firft brought with a vaft train of follow- o the Forum; here one of the neareft re- afcended the roftra, and obliged the audi- rith an oration in praise of the deceafed. If of the kindred undertook the office, it was god by fome of the moft eminent perfons city for learning and eloquence, as Appian of the funeral of Sylla. And Pliny the er reckons it as the laft addition to the hap- of a very great man; that he had the honour praifed at his funeral by the moft eloquent is, then conful; which is agreeable to *San's* account of this matter, *Nam et fune- te*. For the funeral orations (fays he) de- very often on fome public office, and by of *fenate* are many times given in charge to *agistrates* to be performed by themselves in l. The invention of this custom is generally ted to *Valerius Poplicola*, foon after the *lea* of the regal family. *Plutarch* tells us, *mourning* his colleague's obfequies with a *foration*, it fo pleafed the Romans, that it a customary for the beft men to celebrate *erals* of great perfons with speeches in their *endations*." Thus *Julius Cæfar*, according *lom*, made an oration in the roftra, in praise *wife Cornelia*, and his aunt *Julia*, when *wherein* he showed, that his aunt's defcent, *mother's fide*, was from kings, and by her 's from the gods. *Plutarch* fays, that "he red of the law of the Romans, which order- table praifes to be given to women as well *men* after death." Though by what he fays *ther place*, it feems that the old Roman law that funeral orations fhould be made only : *elder women*; and therefore he fays, that *was* the firft that made one upon his own it not being then ufual to take notice of *er women* in that way: but by that action *sed much favour* from the populace, who *ards* looked upon him, and loved him as a *ild* and good man. The reason why fuch *was* made in favour of the women, *Livy* is, *was* this, That when there was fuch a *y of money* in the public treasury, that the *greed* upon to give the Gauls to break up *ge of the city* and capitol could not be raifed, *men* collected among themselves and made *who* hereupon had not only thanks given *but* this additional honour, that after death, *ould* be folemnly praifed as well as the *which* looks as if, before this time, only *m* had thofe funeral orations made for them.

FUNERAL RITES, ceremonies accompany-

ing the burial of any person. See BURIAL, § 2. The Latin word, *funus*, is derived from the Greek, *φως, death*. These rites differed among the ancients according to the different genius and religion of each country. See § 6—14.

(6.) FUNERAL RITES, AMONG THE ANCIENT EGYPTIANS. The first people who seem to have paid any particular respect to their dead, were the Egyptians, the posterity of Ham; as they were the first cultivators of idolatrous worship and superstition after the flood, they were also the first who asserted the immortality of the soul, in its migration into all kinds of animals in earth, air, and sea, and its return to the human body; which they supposed to be within the term of 3000 years. Hence proceeded their very great care in embalming their dead bodies, (see CATACOMBS, § 2; and EMBALMING,) and their being at such vast expence in building proper repositories for them; for they were more solicitous about their graves than their houses. This gave birth to those wonders of the world, the pyramids, which were built for the burial of their kings, with such vast charges, and almost incredible magnificence. See PYRAMID. Whenever a person died among the Egyptians, his parents and friends put on mournful habits, and abstained from all banquets and entertainments. This mourning lasted from 40 to 70 days, during which time they embalmed the body. See EMBALMING. The embalmed body was restored to the friends, who placed it in a kind of open chest, which was preserved either in their houses, or in the sepulchres of their ancestors. But before the dead were deposited in the tomb, they underwent a solemn judgment, which extended even to their kings. Of this remarkable custom we have a particular account in the 1st book of Diodorus Siculus. "Those, who prepare to bury a relation, give notice of the day intended for the ceremony to the judges, and to all the friends of the deceafed; informing them, that the body will pass over the lake of that district to which the dead belonged: when, on the judges assembling, to the number of more than 40, and ranging themselves in a semicircle on the farther side of the lake, the vessel is set afloat, which those who superintend the funeral have prepared for this purpose. This vessel is managed by a pilot, called in the Egyptian language CHARON; and hence they say, that Orpheus, travelling in old times into Egypt, and seeing this ceremony, formed his fable of the infernal regions, partly from what he saw, and partly from invention. The vessel being launched on the lake, before the coffin which contains the body is put on board, the law permits all, who are so inclined, to produce an accusation against it. If any one steps forth, and proves that the deceafed has led an evil life, the judges pronounce sentence, and the body is precluded from burial; but if the accuser is convicted of injustice in his charge, he falls himself under a considerable penalty. When no accuser appears, or when the accuser is proved to be an unfair one, the relations, who are assembled, change their expressions of sorrow into encomiums on the dead; yet do not, like the Greeks, speak in honour of his family, because

because they consider all Egyptians as equally well born ; but they set forth the education and manners of his youth, his piety and justice in maturer life, his moderation, and every virtue by which he was distinguished ; and they supplicate the infernal deities to receive him as an associate among the blest. The multitude join their acclamations of applause in this celebration of the dead, whom they consider as going to pass an eternity among the just below." Such is the description which Diodorus gives of this funeral judicature, to which even the kings of Egypt were subject. The same author asserts, that many sovereigns had been thus judicially deprived of the honours of burial by the indignation of their people : and that the terrors of such a fate had the most salutary influence on the virtue of their kings.

(7.) FUNERAL RITES, AMONG THE ANCIENT GREEKS. It was usual sometimes before the interment, to put a piece of money into the mouth of the deceased, which was thought to be Charon's fare for wafting the departed soul over the infernal river. This ceremony was not used in those countries which were supposed to be situated in the neighbourhood of the infernal regions, and to lead thither by a ready and direct road. The corpse was likewise furnished with a cake, composed of flour, honey, &c. which was designed to appease the fury of Cerberus, the door-keeper of hell, and to procure the ghost a safe and quiet entrance. During the time the corpse continued in the house, there stood before the door a vessel of water : the design of which was, that those concerned about the body might purify themselves by washing ; it being the opinion of the Greeks, as well as of the Jews, that pollution was contracted by touching a dead body. The ceremonies by which they expressed their sorrow for the death of their friends were various ; but it seems to have been a constant rule to recede as much as possible in habit and behaviour from their ordinary customs. For this reason they abstained from banquets and entertainments ; they divested themselves of all ornaments ; they tore, cut off, or shaved their hair, which they cast into the funeral pile, to be consumed with the body of their deceased friend. Sometimes they throw themselves on the ground, and rolled in the dust, or covered their head with ashes ; they beat their breasts, and even tore their flesh with their nails, upon the loss of a person they much lamented. When persons of rank, such as public magistrates or great generals, died, the whole city put on a face of mourning ; all public meetings were intermitted ; the schools, baths, shops, temples, and all places of concourse, were shut up. After interment followed the *epulæ* or feasts, at which the company used to appear crowned ; when they spoke in praise of the dead, so far as they could go with truth, it being esteemed a notorious wickedness to lie upon such an occasion. And not only at those feasts, but even before the company departed from the sepulchre, they were sometimes entertained with a panegyric upon the dead person. The Grecian soldiers, who died in battle, had not only their tombs adorned with inscriptions, showing their names, parentage, and

exploits, but were also honoured with in their praise. The custom among them in the interment of their soldiers was namely, " They used to place the bodies of the dead in tents 3 days before the funeral, that persons might have opportunity to finish their relations, and pay their last respects. Upon the 4th day a coffin of cypress was made from every tribe, to convey the bodies to their own relations ; after which went a conveyance in memory of those whose bodies could not be found. All these, accompanied with the body of the people, were carried to the burying place, called *Ceramicus*, and there interred. One oration was spoken in honour of them all, and their monuments adorned with pillars, inscriptions, and all other ornaments about the tombs of the most honourable persons. The oration was pronounced by the nearest relations of those deceased persons, who behaved most valiantly. Thus, after the famous battle of Marathon, the fathers of Callimachus and Cymon were appointed to make the funeral oration. And upon the return of the fleet from the Sicilian expedition, which the solemnity was first held, the oration was constantly repeated every year, either on the day of burying the dead in the ground, or on the day of burning them. This custom have been the most ancient practice among the Greeks ; though burning came afterwards generally used among them. It was usual to throw into the funeral pile those garments which the deceased usually wore. The pile was one of the deceased's nearest relations who made prayers and vows to the gods, that the body might be consumed by the flames, that the body might be reduced to ashes ; and during the time of burning, the dead person's friends poured libations of wine, and called out the name of the deceased. See BURNING, § 5.

(8.) FUNERAL RITES, AMONG THE ANCIENT JEWS, were solemn and magnificent. When a person was dead, his relations and friends gathered round his body, and his clothes ; which custom is but followed by the modern Jews, who only cut off a lock of their garment, in token of affliction. When the dead person's thumb was cut off, and fasten it in that posture with a cord, the thumb then having the first name of God, they thought the devil durst not approach it. When they carried the body to the burying place, they made a speech to the following terms : " Blessed be God, who has formed thee, fed thee, maintained thee, and taken away thy life. O dead ! be thou numbered among the just, and shall one day restore thee. Then they spoke the eulogium, or funeral oration of the deceased ; after which they said, " *Thou art called the righteous of judgment ;* and then they called the face of the deceased towards heaven, and called out, " Go in peace."

(9.) FUNERAL RITES, AMONG THE ANCIENT ROMANS, were very numerous. The funeral lasted 7 days ; and every day was attended with hot water, and sometimes with a cold bath. The deceased were only in a squalid state, but they were thus washed ; and every now and then a friend's meeting, made a horrible noise, with the same view ; which

led CONCLAMATIO. The last conclamation on the 7th day; when, if no signs of life, the defunct was dressed and embalmed POLLINCTORES; placed in a bed near the with his face and heels towards the street; outside of the gate, if the deceased were litigant, was garnished with cypress boughs. course of these 7 days, an altar was raised a bed-side, called ACERRA; on which his every day offered incense; and the libitovided things for the funeral. On the 7th tier was sent about the city, to invite the to the solemnization of the funeral in these: *Exequias L. Tit. L. filii, quibus est commo- jam tempus est. Ollus (i. e. ille) ex adibus*. The people being assembled, and the clamation ended, the bed was covered rple: a trumpet marched forth, follow- women called *præfice*, singing songs in if the deceased: lastly, the bed followed, the next relations; and if the person were ity and office, the waxen images of all his sions were carried before him on poles. d was followed by his children, kindred, *rati*, i. e. in mourning: from which act of ag the corpse, these funeral rites were cal- *præfice*. The body thus brought to the rostra, it of kin *laudabat defunctum pro rostris*, a funeral oration in his praise and that of sions. This done, the body was carried *pyra*, or funeral pile, and there burnt: nds first cutting off a finger, to be buried econd solemnity. The body consumed, n were gathered; and the priest sprinkling npany thrice with clean water, the eldest *præfice* crying aloud, *ilicet*, dis- cessed the y who took their leave of the deceased in *præfice*, *Vale, vale, vale: nos te ordine quo permissit sequemur.*—The ashes, inclosed n, were laid in the sepulchre or tomb.

FUNERAL RITES AMONG THE CHINESE. INA, § 36, and CHINESE, § 12.

FUNERAL RITES AMONG THE NORTH CAN INDIANS. See AMERICANS, § 9.

FUNERAL RITES AMONG THE PRIMITIVE CHRISTIANS. The ancient Christians test- ber abhorrence of the Pagan custom of the dead, and always deposited the nre in the ground: and it was usual to the honour of embalming upon the mar- east, if not upon others. They prepared ly for burial, by washing it with water, ng it in a funeral attire. The carrying the body was performed by near relations, ns of such dignity as the circumstances eceased required. Singing of psalms was t ceremony used in all funeral processions be ancient Christians.

FUNERAL RITES IN THE CHURCH OF

When a Roman catholic is dead, they e body, and put a crucifix in its hand. et stands a vessel full of holy water, and ler, that they who come in may sprinkle nselves and the deceased. In the mean e priest stands by the corpse, and prays eceased till it is laid in the earth. In the ocession, the exorcist walks first, carry- bly water; next the crossbearer; after- X PART I.

wards the rest of the clergy, and last of all the officiating priest. They all sing the *miserere*, and some other psalms; and at the end of each psalm a *requiem*. We learn from Alet's ritual, that the faces of deceased laymen must be turned towards the altar, when they are placed in the church; and those of the clergy towards the people. The corpse is placed in the church surrounded with lighted tapers; after the office for the dead, mass is said; then the officiating priest sprinkles the corpse thrice with holy water, and as often throws incense on it. The body being laid in the grave, the friends and relations of the deceased sprinkle the grave with holy water.

(14.) THE FUNERAL RITES OF THE GREEK CHURCH are much the same with those of the Latin. See § 13. It needs only to be added, that, after the funeral service, they kiss the crucifix, and salute the mouth and forehead of the deceased; after which each of the company eats a bit of bread and drinks a glass of wine in the church, wishing the soul a good repose, and the afflicted family all consolation.

(15.) FUNERAL SERMONS. The custom of the pagan Romans, in pronouncing funeral orations in praise of their deceased heroes, (§ 4,) appears to have been very early adopted by the Christians. Some of their funeral sermons or orations are still extant, as that of Eusebius on Constantine; those of Nazianzen on Basil and Cæsius; and of Ambrose on Valentinian, Theodosius, and others. Gregory, the brother of Basil, made *κατάδειξις λόγων*, a funeral oration, for Melitius bishop of Antioch: in which orations, they not only praised the dead, but addressed themselves to them, which seems to have introduced the custom of praying to departed saints. Now these orations were usually made before the bodies of the deceased were committed to the ground; which custom has been more or less continued ever since, to this day. Though this practice is now considerably improved, and cleared of many things which would smelt too rank of paganism, and is even thrown into a method which, perhaps, may be of some service to Christianity; yet, notwithstanding this new dress, its original may very easily be discerned. The method in which the characters of deceased persons are given in our funeral sermons, is very much the same with that observed in those pagan orations; where first an account is given of the parentage of the deceased, then of his education; after that, we hear of his conduct in riper years: then his many virtues are reckoned up, with his generous, noble, and excellent performances.—Nor let the practice be condemned because of its rise and original; for why may not the custom of heathens, if just and laudable in themselves, and nowise pernicious to Christianity in their consequences, be followed by Christians? Only, since we are come into this practice, there is one thing we should take care to follow them in; and that is, not to make those sermons or orations for every one; but for those only whose character: are distinguished, as eminently useful in the world, and in the church of Christ. The old heathens honoured those alone with this part of the funeral solemnity, who were men of probity and justice, renowned for their

wisdom and knowledge, or famous for warlike exploits: Thus, as Cicero informs us, (*De Legib.* l. 2.) being part of the law for burials; which directs, that the praises only of honourable persons shall be mentioned in the oration: It would be much more agreeable, therefore, if our funeral discourses were not so common, and if the characters given of the deceased were more just; devoid of that fulsome flattery with which they too often abound.

\* FUNERIAL. *adi.* [*funerea*, Latin.] Suits a funeral; dark; dismal.—

But if his soul hath wing'd the destin'd flight,  
Inhabitant of deep disastrous night,  
Homeward with pious speed repass the main,  
To the pale shade *funereal* rites ordain. *Pope.*

FUNSKIRCHEN, or FIVE CHURCHES, a town of Hungary, and bishop's see, between the Drave and the Danube; 110 miles W. of Belgrade.

FUNGANDO, or a kingdom of Africa, between the Zaire and Coanzza, subject to the king of Anoko.

(1.) FUNGI, [from *φύγγος*, *fungus*,] in botany, the 4th order of the 24th class of vegetables, in the Linnæan system; comprehending all those which are of the mushroom kind, and which in Tournefort's constitute the 2d, 3d, 4th, 5th, 6th, 7th, and 8th, genera of the first section in the class xvii. This order contains 10 genera. See AGARICUS, BOLETUS, CLAVARIA, LYCOPERDON, &c. and BOTANY, *Index*.

(2.) FUNGI, an order of plants in the *Fragmenta Methodi Naturalis* of Linnæus. See BOTANY, *Index*. The ancients called fungi *children of the earth*, to indicate the obscurity of their origin. The moderns have likewise been at a loss in what rank to place them; some referring them to the animal, some to the vegetable, and others to the mineral kingdom. Messrs Wilck and Münchhausen have not scrupled to rank these bodies among animal productions; because, when fragments of them or their seeds were macerated in water, these gentlemen perceived a quantity of animalcules discharged, which they supposed capable of being changed into the same substance. It was an ancient opinion, that *bees could produce bees*; but it was referred to Messrs Wilck and Münchhausen to suppose, that *bees could produce beef*. Wilck asserts, that fungi consist of innumerable cavities, each inhabited by a polype; and he does not hesitate to ascribe the formation of them to their inhabitants, in the same way as it has been said that the coral, the lichen, and the mucor, were formed. Hedwig has lately shown how ill founded this opinion is with respect to the lichen; and M. Durande has demonstrated its falsity with regard to the corallines. "Indeed (says M. Bonnet, talking of the animality of fungi) nothing but the rage for paradox could induce any one to publish such a fable; and I regret that posterity will be able to reproach our times with it. Observation and experiment should enable us to overcome the prejudices of modern philosophy; now, that those of the ancients have disappeared and are forgotten." It cannot be denied that the mushroom is one of the most perishable of all plants, and it is therefore the most favourable for the generation of insects. Considering the quickness of its growth, it

must be furnished with the power of absorption; the extremity of its vessels multiplied than in other plants. Its roots in many cases, to be merely intended for support, for some species grow upon stones or sand, from which it is impossible to derive much nourishment. We must therefore think that it is chiefly by the stalk that it is nourished. These stalks grow in a moist and fair soil, and which float multitudes of eggs, so many that every insect they produce are with difficulty to be seen by the microscope. These eggs may be compared to the particles of the Byssus, 100,000 as M. Gleditsch says, are not equal to 1. May we not suppose that a quantity of them are absorbed by the vessels of the fruit, and they remain there, without any change, until the plant begins to decay? Besides, the eggs are only deposited on the surface of the plant, and may exist in the water into which they are taken for examination. Do not we see that insects dispersed through the air, are hatched in paste, &c. and wherever they find a favourable nidus for their development? Considering then, that the corruption of the water should make the water capable of sustaining beings that are really foreign to it, is it not more easy to acquiesce in the opinion of the naturalists who place the fungi in the mineral kingdom, because they are found growing upon stones, thence called *Lapides Fungæi*, however, must be covered with a little water, in order to be watered with tepid water, in order to the growth. Such mushrooms are not produced from the stone, than the lichen on the rock to which it adheres, or the moss on which it is found. We have only to observe the growth of mushrooms, to be convinced that this happens by development, and not by combination of parts as in the opinion of Boeccone, who attributed the viscidulous matter performing the function of cement, and acquiring extension by apposition of parts; and that of Morison, who conceived they grew spontaneously out of the earth, a certain mixture of salt and sulphur, joined from the dung of quadrupeds, have never any adherents. Fungi are produced from the soil, by development; they are subject to those vicissitudes natural to the duration of life which characterize living beings; they perish and die. They extract, by the porosity of their vessels, the juices with which they are nourished; they elaborate and assimilate their own substance. They are, therefore, organized and living beings, and consequently belong to the vegetable kingdom. But whether they are real plants, or only the production of a still a matter in dispute with the ablest philosophers. Some ancient authors have pretended that the seed of mushrooms; but the opinion is never generally received. Petronius, laughing at the ridiculous magnificence of the emperor Trimalcio, relates, that he had written to the Indies for the seed of the morelle. The productions were generally attributed to the fluorous humidity of rotten wood, or to the decomposition of substances. The opinion took its rise from

grew most copiously in rainy weather. The opinion of Tragus, of Bauhin, and Columna, who, talking of the peziza, says, substance was more solid and harder, he did not originate from rotten wood, but from the *pezziza* of the earth. It is not surprising times when the want of experiment or variation made people believe that insects are generated by putrefaction, we should not be opinion general, that fungi owed their origin to the putrefaction of bodies, or to a viscous substance analogous to putridity. Malpighi could not pretend to the existence of seeds which he said he had discovered. He said, that these plants must have them, or they would not perpetuate themselves and shoot by fragments. Micheli, among the moderns, appears to have employed himself most successfully on this subject. He imagined, that he not only saw the seeds in the stamens, as well as the little bodies destined to favour the dissemination and the fecundation of these seeds. Before him, Lister thought he perceived seeds in the *peronospora crassius magna* of John Bauhin: round bodies that are found in the pezizella, at that time, passed for seeds; but did not appear at all probable to Malpighi, saying that the eye, when assisted with the microscope, could perceive nothing so much larger than the seeds. Indeed these bodies are the capsules or covers of the seeds, if not the seeds themselves. However this Malpighi, observing that fungi were often roots or branches, and that they wanted seeds, the means which nature employs for the production of perfect plants, thought it warranted in doubting whether these should be ranked in the number of vegetables. The observations of Malpighi prompted him to observe the production of fungi. Their matrix he called the *matrix* he imagined they grew in places where there was an unctuous matter, composed of wood with nitrous salt, which, by fermented heat and moisture, and insinuated between the fibres of wood; that is, he thought them the production of a viscous and tumour. Lancini, in like manner, considered fungi as owing their existence to the putrefaction of vegetables, and supposed them a disease of plants; but he imagined, "that the fish-tree were necessary to their production, as is the case in the formation of galls; he applied them to the warts and other excrescences of a human body. He added, that such vegetable tumors must necessarily assume various forms and figures, from the fluids which are tubes and vessels relaxed by putrefaction, the ductility of the fibres and their direction, the action of the air. This opinion has been confirmed by the celebrated naturalist M. de Linnæus in the *Memoirs of the Academy of Sciences*.

He maintains, that the fungi have a very soft and spongy texture, which is allowed to be vegetable; that, like the lichen, they are without stalk, branches, and leaves: that, like mosses and are nourished upon the trunks of pieces of rotten wood, and on all sorts of vegetables; that they resemble the lichen

too in the rapidity of their growth, and the facility with which many of them may be dried and restored to their former figure, upon being immersed in water; and, lastly, that there is a great similarity in the manner in which their seeds are produced. He affirms, that only the warts and excrescences which grow on animal bodies, and the knots and other tumors that are to be found on trees, can be compared with one another; for they are composed equally of the solid and liquid substance of the plant or animal on which they grow; whereas, the matter of the fungi is not only quite distinct from that of the plants on which they are found, but often entirely similar to the substance of those that spring immediately from the earth. The organization, says M. de Jussieu, which distinguishes plants and other productions of nature, is visible in the fungi; and the particular organization of each species is constant at all times and in all places; a circumstance which could not happen, if there were not an animal reproduction of species, and consequently a multiplication and propagation by seed. This is not, he says, an imaginary supposition; for the seeds may be felt like meal upon mushrooms with gills, especially when they begin to decay; they may be seen with a magnifying glass, in those that have gills with black margins: and, lastly, says he, botanists can have no doubt that fungi are a distinct class of plants; because, by comparing the observations made in different countries with the figures and descriptions of such as have been engraven, the same genera and the same species are every where found. Notwithstanding this refutation by M. de Jussieu, another naturalist, M. de Necker, has lately maintained, in his *Mycetologia*, That the fungi ought to be excluded from the three kingdoms of nature, and be considered as intermediate beings. He has observed, like Malpighi, the matrix of the fungi: and has substituted the word *carabite* (initium faciens) instead of *stus*; imagining that the rudiment of the fungus cannot exist beyond that point in which the development of the filaments or fibrous roots is perceived. He allows, that fungi are nourished and grow like vegetables; but he thinks that they differ very much from them in respect of their origin, structure, nutrition, and rapidity of growth. He says, that the various vessels which compose the organization of vegetables are not to be found in the fungi, and that they seem entirely composed of cellular substance and bark; so that this simple organization is nothing more than an aggregation of vessels endowed with a common nature, that suck up the moisture in the manner of a sponge; with this difference, that the moisture is assimilated into a part of the fungus. Lastly, That the fructification, the only essential part of a vegetable, and which distinguishes it from all other organized bodies, being wanting, fungi cannot be considered as plants. This he thinks confirmed, by the constant observation of those people who gather the morelle and the mushroom, and who never find them in the same spots where they had formerly grown. As the generation of fungi (says M. Necker) is always performed when the parenchymatous or cellular substance has changed its nature, form, and function, we must conclude that it is the degeneration

of that part which produces these bodies. But if fungi were owing merely to the degeneration of plants, they would be still better entitled to constitute a new kingdom. They would then be a decomposition, not a new formation, or new bodies. Besides, we cannot deny, that in those bodies, which form the limit between the animal and vegetable kingdoms, the organization becomes simple, as the organs destined for nutrition are multiplied: but, as the last in the class of insects belongs to the animal kingdom, fungi ought, notwithstanding the simplicity of their organization, still to belong to the vegetable kingdom. The parenchymatous or cellular substance, which, as M. Bonnet says, is universally extended, embraces the whole fibrous system, and becomes the principal instrument of growth, must naturally be more abundant in these productions; and this accounts for the rapidity of their enlargement. Besides, growth, whether slow or rapid, never was employed to determine the presence or absence of the vegetable or animal character. The *draba verna*, which, in a few weeks shoots, puts forth its leaves, its flowers, and fruit, is not less a plant than the palm. The insect that exists but for a day, is as much an animal as the elephant that lives for centuries. As to the seeds of the fungi, it is probable that nature meant to withdraw from our eyes the dissemination of these plants, by making the seeds almost imperceptible; and it is likewise probable that naturalists have seen nothing but their capsules. Since, however, from the imperfection of our senses, we are unable to perceive these seeds, ought we to infer that they do not exist? Are we authorized to conclude this, because we do not find mushrooms where we have found them a year before? Undoubtedly not; for the greater part of plants require a particular soil, and the same mould that this year will foster a rare plant, will next year allow it to perish. Neither are we at liberty to deny the existence of these seeds, because those bodies which have been called their seeds, and the fragments or cuttings of the plants themselves, have not produced others of the same species. Nature seems to have reserved for herself the care of disseminating certain plants: it is in vain, for instance, that the botanist sows the dust found in the capsules of the orchis, which every one allows to be the seed. But, after all, what are those parts in the fungi casually observed by naturalists, and which they have taken for the parts of fructification? These are quite distinct from the other parts, and whatever may be their use, they cannot have been formed by prolongation of the cellular substance, or of the fibres of the tree on which the fungus grows: they are, therefore, owing, like flower and fruit, to the proper organization of the plant. These plants, therefore, have a particular existence, independent of their putrefying nidus. The gills of certain fungi, which differ essentially from the rest of the plant in their conformation, would be sufficient to authorize this latter opinion. But can putrefaction create an organic substance? Nature undoubtedly disseminates through the air and over the surface of the earth, innumerable seeds of fungi, as well as eggs of insects. The plant and the animal are excluded, when the nidus or the

temperature is favourable for their development. No fortuitous concurrence, either of atoms could produce bodies so exquisitely and early organized. It is sufficient to throw on the beautiful plates which Schæffer has had of them, and compare them by the glass warts and other excrescences of animals, to be convinced that they have not the same origin. The function of the cellular substance in vegetables is greatly superior to that in animals, if they produce any thing but deformities. The part of fungi exhibit a configuration singular, constant, and uniform, to be the chance or putrefaction. As this form is the same in all places where fungi have been it follows, that they contain the principles of their reproduction. They resemble mistletoe, and other parasitic plants, perfectly distinct from the trees on which they grow. The fungi, therefore, are organic living substances, or true plants. If the mode of their production is unknown, that of their seeds is so too.

The white lovely dove n her wings her utmost swiftness prove, ; the gripe of faulcon fierce not *fur*.

*Sidney.* IR, or FURR, (§ 1. def. 1.) in commerce, be skins of wild beasts, dressed in alum

with the hair on; and used as a part of dress, by princes, magistrates and others. The kinds most in use are those of the ermine, sable, castor, hair, coney, &c. See CASTOR, § IV.; CAVIA, LEPUS, MUSTELA, &c. It was not till the later ages that the furs of beasts became an article of luxury. The refined nations of antiquity never made use of them; those alone who were stigmatized as barbarians were clothed in the skins of animals. Strabo describes the Indians covered with the skins of lions, panthers, and bears; and Seneca, the Scythians clothed with the skins of foxes and the lesser quadrupeds. Virgil exhibits a picture of the savage Hyperboreans, (*Georg. lib. 3. l. 382.*) similar to that which our late circumnavigators witnessed in the clothing of the wild Americans. Most part of Europe was then in similar circumstances. Cæsar might be as much amazed with the skindressed heroes of Britain, as our celebrated Cook was at those of his new-discovered regions. What time hath done to us, it may also effect for them; and it is to be hoped with much less bloodshed. Civilization may take place; and those spoils of animals, which are at present essential for their clothing, become merely objects of ornament and luxury. It does not appear that the Greeks or ancient Romans ever made use of furs. It originated in those regions where they most abounded, and where the severity of the climate required that species of clothing. At first it consisted of the skins only, almost in the state in which they were torn from the body of the beast; but as soon as civilization took place, and manufactures were introduced, furs became the lining of the dress, and often the elegant facing of the robes. It is probable that the northern conquerors introduced the fashion into Europe. We find, that about A. D. 522, when Totila king of the Visigoths reigned in Italy, the Suetons (or natives of Sweden) found means, by help of the commerce of numberless intervening people, to transmit, for the use of the Romans, *saphirinas pelles*, the skins of the sables. As luxury advanced, furs of the most valuable species, were used by princes as linings for their tents. Marco Polo, in 1252, found those of the Cham of Tartary lined with ermines and sables. He calls the last *Zibelines* and *Zambolines*. He says that those and other precious furs were brought from countries far north; from the *land of Dark-ness*, and regions almost inaccessible by reason of morasses and ice. The Welsh set a high value on furs, as early as the time of Howel Ddha, who reigned about 940. In the next age, furs became the fashionable magnificence of Europe. When Godfrey of Bologne and his followers appeared before the emperor Alexius Comnenus, on their way to the Holy Land, he was struck with the richness of their dresses, *tam ex ostro quam auisfrigio et nigro opere harmelino et ex nardrino grifoque et vario*. How different was the advance of luxury in France from the time of their great monarch Charlemagne, who contented himself with the plain fur of the otter! King Henry I. wore furs; yet, in his dress was obliged to change them for warm Welsh flannel. But in 1337, the luxury had got to such a head, that Edward III. enacted, that all persons who could not spend 100l. a year should be prohibited the use of this kind of finery.

These,

These, from their great expence, must have been foreign furs, obtained from the Italian commercial states, whose traffic was at this period boundless. How strange is the revolution in the fur trade! The north of Asia at that time supplied us with every valuable kind; at present, we send, by means of the possession of Hudson's Bay, furs to an immense amount, to Turkey, and even to China.

(4.) FURS, VOYAGES LATELY MADE IN SEARCH OF. During Capt. Cook's last voyage to the Pacific Ocean, besides the various scientific advantages derived from it, a new source of wealth was laid open to future navigators, by trading for furs of the most valuable kind on the NW. coast of America. The first vessel which engaged in this new branch of trade, was equipped by some gentlemen in China. She was a brig of 60 tons and 20 men, commanded by James Hanna. She sailed from the Tyra the end of April, 1785: proceeded northward, along the coast of China; passed through Diemen's Straits, the S. end of Japan; and arrived at Nootka in August following. Soon after her arrival, the natives, whom Capt. Cook had left unacquainted with the effects of fire arms, tempted probably by the diminutive size of the vessel (scarce longer than some of their own canoes), and the small number of her people, attempted to board her in open day; but were repulsed with considerable slaughter. This was the introduction to a firm and lasting friendship. Capt. Hanna cured such of the Indians as were only wounded; an unreserved confidence took place; they traded fairly and peaceably; a valuable cargo of furs was procured; and the bad weather setting in, he left the coast in the end of September, touched at the Sandwich Islands, and arrived at Macao, in the end of December. In May 1786, Captain Hanna sailed again from Macao, in the snow Sea Otter of 120 tons and 30 men, and returned to Macao in Feb. 1787. In this 2d voyage he followed his former track, and arrived at Nootka in August; traced the coast from thence as far as 53°, and explored the extensive sound discovered a short time before by Mr. Strange, and called by him Queen Charlotte's Sound, the latitude of which is 51° north, longitude 128 west. The snow Lark, Captain Peters, of 220 tons and 40 men, sailed from Macao in July 1786. Her destination was Kamtschatka (for which she was provided with a suitable cargo of arrack, tea, &c.) Copper Islands, and the NW. coast. Captain Peters was directed to make his passage between Japan and Corea, and examine the islands to the north of Japan, said to be inhabited by hairy people. No account having been received of this vessel since her departure, there is every reason to fear she has perished. In the beginning of 1786, two coppered vessels were fitted out at Bombay, under the direction of J. Strange, Esq. who was himself a principal owner. These vessels were, the snow Captain Cook, of 300 tons, and snow Experiment of 100 tons. They proceeded in company from the Malabar to Batavia; passed through the Straits of Macassar, where the Experiment was run upon a reef, and was obliged to haul ashore upon Bonuco to repair; from thence they steered to the E. of the Palaos Islands; made Sulphur Island;

and arrived at Nootka the end of June following. From Nootka, where they left their surymate (Mackay) to learn the language and exchange skins against their intended return (but which was not brought away in the Imperial Eagle the following year), they proceeded along the coast to Charlotte's Sound, of which they were the discoverers; from thence in a direct course to William's Sound. After some stay there, the experiment proceeded to Macao (their vessels provided with passes by the governor general of Goa): the Captain Cook endeavoured to visit Copper Island, but without success, being prevented by constant west winds. Two coppered vessels were also fitted out by a society of gentlemen in Bengal, viz. the snow Nootka of 200 and snow Sea Otter of 100 tons, commanded by John Meares and William Tipping, lieutenants in the royal navy. The Nootka sailed in July 1786, from Bengal; came through the China Sea, touched at the Batches, where they were very ill treated by the Spaniards, who had taken possession of these islands; arrived at Oonalashki beginning of August; found there a Russian ship and some furriers; discovered accidentally Cape Greville a new strait into Cook's River, 10 leagues wide, and 30 long; saw some Eskimo hunters in a small bay between Cape Elizabeth and Cape Bear; and arrived in Prince William's Sound the end of September. They determined to winter in Snug Corner Cove, lat. 60° 30' N. (which seem placed by providence for the comfort and refreshment of the adventurers in trade,) and were frozen up in this gloomy and frightful spot from the end of November to the end of May. By the severity of the winter they lost their 3d and 4th mates, surgeon, boat carpenter, and cooper, and 12 of the foremen; and the remainder were so enfeebled, that they were under the necessity of applying to the commanders of the K. George and Q. Charlotte, just at this time arrived in the sound, for assistance to assist in carrying the vessel to the Sandwich Islands, where, giving over all further thoughts of trade, they determined, after getting a few barrels of fish off Cape Edgecumbe immediately to proceed. The Nootka arrived at Macao in the end of October, 1787. The Imperial Eagle, Capt. Barkley, fitted out by a society of gentlemen in London, sailed from Oostend the end of November, went into the bay of All Saints; thence to the Sandwich Islands, and arrived at Nootka beginning of June; thence to the S. as far as 50°, in which space he discovered some good spacious harbours. In lat. 47° 46', lost his first mate, purser, and two seamen, who were a trading party with the long-boat, and in the meantime trustingly themselves ashore, unarmed, cut off by the natives. This place seems to be the same that Don Antonio Mourelle calls the *Islas Doloras*, where the Spaniards going ashore for water, were also attacked and cut off. The K. George of 320, and the Queen Charlotte of 200 tons, commanded by Capt. Portlock and Dr. Solander, who served under Captain Cook, in his last voyage, were fitted out by a society of gentlemen in England, who obtained a privilege to trade

of America, from the South Sea and companies. Those vessels failed from the beginning of Sept. 1785; touched at the Sandwich Islands, and arrived at Cook's River in August. From thence, taking a few furs, they steered, in the month of Prince William's Sound, intending there; but were prevented by heavy weather obliged them to bear away, and another part of the coast to winter at. Captain Cook accompanied them till they arrived at Nootka Sound, when they were so near that a canoe came off to them; but as they were near accomplishing their purpose, a storm came on, and obliged them finally to return to the Sandwich Islands, where they spent the winter months; and returning again, arrived in Prince William's Sound of the month of May. The King George remained in Prince William's Sound; and during her stay, discovered a new passage from the Cook's River. The Queen Charlotte along the coast to the south; looked into the bay, where the Russians have now a settlement, examined that part of the coast from which was not seen by Captain Cook, consists of a cluster of islands, called Dixon, *Queen Charlotte's Islands*, at a small distance from the Main, which is far more than it was supposed to be: some part of the coast may, however, be seen from the English islands; and it is probable the distance does not exceed any where 50 leagues. On the coast, Hudson's House, lat. 53° lon. 106° will not be more than 80 miles distant from that part of this coast in the same parallel. It is not improbable, that the enterprising Canadian furriers may penetrate to this communication with which is probably facilitated by lakes and rivers), and add to the comforts and luxuries of Europe this valuable trade in warmth, beauty, and magnificence, the richest furs of Siberia. These ships, laden with their furs in China, were loaded on account of the English company, sailed from Amboyna in the end of February, and arrived at England a short time since, after an absence of years. The year after the departure of the King George and Queen Charlotte, the same month out other two vessels, viz. the Prince of Wales, of 60 tons, and the Prince of Wales, commanded by Captains Colnet and Boscawen, the former of whom had served under Captain Cook. These vessels left England in August, and arrived at New Year's harbour on Staten Land, where they left an officer and 12 men to await the arrival of a vessel which was expected from England: from thence they sailed directly to Nootka, where they arrived in July, sickly and in bad condition; and the *imperial Eagle*, which had left Europe a few days after them. Leaving Nootka, they sailed along the shore to the northward, and soon arrived at the Queen Charlotte. In the beginning of the year 1788, Capt. Mears failed with two other vessels, the *Felice*, which he commanded himself, and the *Iphigenia*, Captain Cook commanded. But the history of

his settlement at Nootka, with the insolent behaviour of Don Martinez, the Spanish commander, (which had nearly occasioned a war between Britain and Spain, but was at last amicably settled,) will be found under the article *NOOTKA*. We have only to add here, that some accounts of the voyages above-mentioned, the fur trade in those parts, had at first been greatly magnified. In that published by Captain Portlock, however, he observes, that "the gains hitherto have certainly not been enviably great; though the merchants have no doubt found the trade lucrative." And later accounts assure us, that it is now become extremely advantageous.

\* *To FUR. v. a.* [from the noun.] 1. To line or cover with skins that have soft hair.—How mad a sight it was to see Dametas, like rich tissue furred with lambskins? *Sidney*.—

Thro' tatter'd cloaths small vices do appear;  
Robes and furr'd gowns hide all.

*Shakesp. K. Lear.*

You are for dreams and slumbers, brother priest;

You fur your gloves with reasons. *Shakesp.*  
2. To cover with soft matter.—To make lamp-black, take a torch and hold it under the bottom of a latten basin; and as it groweth to be furred and black within, strike it with a feather into some shell. *Penckman*.—

Three sisters, mourning for their brother's loss,  
Their bodies hid in bark, and furr'd with moss.

*Dryden.*

Their frying blood compels to irrigate  
Their dry furr'd tongues.

*Philips.*

A dungeon wide and horrible; the walls  
On all sides furr'd with mouldy damps, and  
hung

With clots of rosy gore. *Addison.*

FURA, a small island on the W. coast of Scotland, 4½ miles W. of Udrigill Head.

\* *FURACIOUS. adj.* [*furax*, Lat.] Thievish; inclined to steal. *DiB.*

\* *FURACITY. n. f.* [*furax*, Lat.] Disposition to theft; thievishness.

FURANS, a river of France, which runs into the Mers, near Romans.

FURBECK, a village in Yorkshire, near Blith.

\* *FURBELLOW. n. f.* A piece of stuff plaited and puckered together, either below or above, on the petticoats or gowns of women. This, like a great many other words, is the child of mere caprice. *Trev. DiB.*—

Nay, oft in dreams invention we bestow  
To change a flounce, or add a furbelaw. *Pope.*

*To FURBELLOW. v. a.* [from the noun.] To adorn with ornamental appendages of dress.—

When arguments too fiercely glare,  
You calm them with a milder air;

To break their points, you turn their force,  
And furbelaw the plain discourse. *Prior.*

—She was flounced and furbelawed; every ribbon was crinkled, and every part of her garments in curl. *Addison.*

\* *To FURBISH. v. a.* [*furbir*, French.] To burnish; to polish; to rub to brightness.—

It may enter Mowbray's waxen coat,  
And furbish new the name of John o' Gaunt.

*Shakesp.*

—Fur—

—*Furbish* the spears, and put on the brigandines.  
*Jer.* xlv. 4.—Some others who *furbish* up and reprint his old errors, hold that the sufferings of the damned are not to be, in a strict sense, eternal; but that, after a certain period of time, there shall be a general gaol delivery of the souls in prison, and that not a farther execution, but a final release. *Soub.*—

As after Numa's peaceful reign,  
 The martial Ancus did the sceptre wield;  
*Furbish'd* the rusty sword again,  
 Resum'd the long-forgotten shield,  
 And led the Latins to the dusty field. *Dryden.*  
 Inferior ministers, for Mars repair  
 His broken axle-tree, and blunted war;  
 And send him forth again, with *furbish'd* arms. *Dryden.*

\* **FURBISHER.** *n. f.* [*fourbisseur*, French; from *furbish*.] One who polishes any thing.

**FURCA**, in antiquity, a piece of timber resembling a fork, used by the Romans as an instrument of punishment. The punishment of the furca was of three kinds: the first only ignominious, when a master, for small offences, forced a servant to carry a furca on his shoulders about the city. The 2d was penal, when the party was led about the circus, or other place, with the furca about his neck, and whipped all the way. The third was capital, when the malefactor having his head fastened on the furca, was whipped to death.

\* **FURCATION.** *n. f.* [*furca*, Lat.] Forkiness; the state of shooting two ways like the blades of a fork.—When stags grow old they grow less branched, and first lose their brow-antlers, or lowest *furcations* next the head. *Brown's Vul. Err.*

**FURCHE**, in heraldry, a cross forked at the ends.

**FURETIERE**, Antony, a learned French lawyer, born at Paris in 1620. He was eminent in the civil and canon law, and an advocate in the parliament. Afterwards taking orders, he became abbot of Chalvey, and prior of Chuines. He wrote many works, but is chiefly valued for his *Universal Dictionary of the French Tongue*, in which he explains the terms of art in all sciences; and which was published after his death. He was of the French academy, and the disputes he had with some members of it made much noise. He died in 1688.

\* **FURFUR.** *n. c.* [Latin.] Husk or chaff, or scurf or dandriff, that grows upon the skins, with some lickness to bran. *Quincy.*

\* **FURFURACEOUS.** *adj.* [*furfuraceus*, Lat.] Husky; branny; scaly.

**FURIA**, in zoology, a genus of insects belonging to the order of vermes zoophyta. There is but one species, viz. the

**FURIA INFERNALIS.** It has a linear smooth body ciliated on each side, with reflexed feelers pressed to its body. In Finland, Bothnia, and the northern provinces of Sweden, people were often seized with a pungent pain, confined to a point, in the hand or other exposed part of the body, which presently increased to a most excruciating degree, and sometimes proved suddenly fatal. This disorder was particularly observed in Finland, especially about boggy and marshy places,

and always in autumn. At length it was discovered that this pain instantly succeeded some that dropped out of the air, and in a moment penetrated and buried itself in the flesh. The landers had tried a variety of applications for purpose, until at length a poultice of curd cheese was found the most effectual in easing pain; and the event confirmed that the insect allured by this application to leave the flesh on its removal; this worm, no longer than sixth of an inch, was found in it, and the cause of this painful disease explained. What means this creature is raised into the air as yet unknown.

**FURIES**, } in Pagan mythology, goddesses, } whose offices it was to punish the guilty after death. They sprang from the wound which Coelus received from Saturn. According to others, they were daughters of Earth, and conceived from the Saturn. Some make them daughters of Aë and Night, or Pluto and Proserpine. According to the more received opinions, they were three in number, Tisiphone, Megæra, and Alekto, which some add Nemesis. Plutarch mentions one called *Adrasta*, daughter of Jupiter Necessity. They were supposed to be the ministers of the vengeance of the gods; stern and terrible; always employed in punishing the guilty upon earth, as well as in the infernal regions. They were also called EUMENIDES and ERINNYES. The Athenians killed them *επιφανείας*, very often, and their worship was almost universal, and people dared not to mention their names, nor fix their eyes upon their temples. They were honoured with sacrifices and libations; and at Chaia they had a temple, which, when called by any one guilty of a crime, suddenly rendered him furious and deprived him of the use of reason. In the sacrifices, the votaries used branches of cedar and of alder, hawthorn, saffron, and niper; and the victims were generally turtles and sheep, with libations of wine and honey. They were usually represented with a grim and frightful aspect, with a black and bloody garment, and with serpents wreathing round their heads instead of hair. They held a burning torch in their right hand, to discover the guilty, and iron chains and whips of scorpions in the other to punish the guilty, and were always attended by Terror, Rage, Pain, and Death. In hell they were seated on the throne of Pluto, as the ministers of his vengeance. They were worshipped at Casina, in Arcadia, at Carmia in Pelopponesus. They had a temple at Athens near the Areopagus, and their priests were chosen from amongst the judges of that city. At Telphusæa, a city in Arcadia, a black cow was sacrificed to them.

\* **FURIOUS.** *adj.* [*furieux*, Fr. *furiousus*, L.] 1. Mad; frantick.—No man did ever think himself hurtful actions of furious men and innocents unpunishable. *Hooker.* 2. Raging; violent; transported by passion beyond reason.—

Who can be wile, amaz'd, temperate,  
 furious,  
 Loyal and neutral in a moment? No man.  
*Ainsworth.*

To be *furiosus*,  
: frightened out of fear; and in that mood,  
we will peck the estringe. *Shakeſp.*  
e, other than the sound of dance or song,  
nt, and loud lament, and *furiosus* rage.

*Milton.*

: impetuously agitated.—  
: clamour thence the rapid currents drive,  
is the retreating sea their *furiosus* tide.

*Milton.*

IOUSLY. *adv.* [from *furiosus*.] Madly;  
vehemently.—

h when his brother saw, fraught with  
at grief

th, he to him leapt *furiously*. *Fairy Q.*  
berve countenance to attend the prac-

this carries them on *furiously* to that  
of themselves they are inclined. *South.*—  
eard not half, so *furiously* she flies;  
ve her wings.

*Dryden.*

OUSNESS. *n. f.* [from *furiosus*.] Frenzy;  
transport of passion.

RIUS BIVACULUS, a Latin poet, who  
about A. A. C. 103. He wrote annals  
of which Macrobius recites some frag-  
mentonius also relates some verses of his  
is Cato, in his *Illustrations of Grammaticians*.  
US CAMILLUS. See CAMILLUS, N<sup>o</sup> 1.  
INBERG, a town of Lower Saxony, in  
urg. 36 miles N. of Spandau.

JRL. *v. a.* [*fraser*, Fr.] To draw up;  
t.—

i fortune sends a stormy wind,  
ew a brave and present mind;  
en with too indulgent gales

ke too much, then *furl* thy sails. *Creech.*

.NI. See FRIULI, N. I.

NG, in the sea language, signifies the  
up and binding any sail close to the yard;  
lone by hawling upon the clew lines,  
&c. which wraps the sail close toge-  
being bound fast to the yard the sail is

IRLONG. *n. f.* [*farlang*, Sax.] A mea-  
gth; the eighth part of a mile.—If a  
n the middle of a field and speak aloud,  
heard a *furlong* in round, and that in  
ounds. *Bacon's Natural Hist.*—Coming  
w *furlongs* of the temple, they passed  
ery thick grove. *Addison's Freeholder.*  
LOWG is also used in some law-books  
part of an acre.

OUGH. *n. f.* [*verloef*, Dutch.] A tem-  
ission from military service; a licence  
oldier to be absent.—

and Cato might discharge their souls,  
them *furl's* for another world;  
like sentries, are oblig'd to stand  
: nights, and wait th' appointed hour.

*Dryden.*

ENTY. *n. f.* [More properly *frumenty*,  
of *frumentum*, Latin.] Food made by  
at in milk.—

ber, wife, therefore, tho' I do it not,  
cake, the *passies*, and *furmenty* pot.

*Tusser.*

ON, a town of Maritime Austria, in the  
netian Iliria; 18 m. ESE. of *Unago*.

*PLAT. I.*

(1.) \* FURNACE. *n. f.* [*furnus*, Lat.] An in-  
closed fireplace.—

Heat not a *furnace* for your foe so hot

That it may singe yourself. *Shak. Henry VIII.*

—The fining pot is for silver, and the *furnace* for  
gold. *Prov.*—We have also *furnaces* of great di-  
versities, that keep great diversity of heats. *Bacon.*

—The kings of Spain have erected divers *furnaces*  
and forges, for the trying and fining of their gold.  
*Abbot.*—Whoſo falleth not down and worſhippeth,  
ſhall the ſame hour be caſt into the miſt of a  
burning fiery *furnace*. *Daniel.*—

A dungeon horrible, on all ſides round,

As one great *furnace*, flam'd. *Milt. Par. Loſt.*

(2.) A FURNACE is intended to contain fire, or  
to raise and maintain a vehement fire, whether of  
coals or wood. Of theſe there are great variety,  
according to the different uſes to which they are  
applied.

(3.) A FURNACE, CHIEF OBJECTS TO BE AT-  
TENDED TO, IN ERRECTING. In all furnaces the  
principal things to be attended to are, 1. To con-  
fine the heat as much as poſſible to the matter to  
be operated upon; 2. To prevent its being diſſi-  
pated; 3. To produce as much heat with as little  
fuel as poſſible; and, 4. To have it in our power  
to regulate the degree of heat according to our  
pleaſure. To answer the firſt intention, the fire is

uſually confined in a chamber or cavity built on  
purpose for it, and furnished with a door for put-  
ting in the fuel; a grate for ſupporting it, and al-  
lowing air to paſs through, as well as the aſhes to  
drop down into a cavity provided on purpose, and  
called the *aſh pit*. Thus the heat produced by

the inflamed fuel is confined by the ſides of the  
furnace, and obliged to ſpend great part of its  
force upon the ſubject incloſed. The 2d inten-  
tion, viz. to prevent the diſſipation of the heat, is  
obtained by ſhutting the door of the furnace;  
taking care that the chimney be not too wide, and  
that the matter to be acted upon be placed in ſuch  
a manner, that the fire may have its full effect upon

it as it goes up the chimney. The 3d intention,  
which is the moſt important, is at the ſame time  
the moſt difficult to answer, and depends entirely  
upon the proportion between the ſpaces betwixt  
the furnace bars and the wideſs and height of the  
chimney. This will appear from a conſideration of

the principles on which the degrees of inflamma-  
tion are produced. Theſe depend entirely on the  
current of air which paſſes through the inflamed  
fuel. As ſoon as the fuel is ſet on fire, a certain  
degree of heat is produced; but unleſs a conſtant

influx of air is admitted through the burning fuel,  
the fire is inſtantly extinguished; nor is it poſſible  
by any means to renew the inflammation until we  
admit a ſtream of freſh air among the fuel. When  
this is done, a rarefaction commences in the air of

the fire-place of the furnace; ſo that it is no longer  
a counterpoize to the external air, and is therefore  
driven up the chimney by that which enters at the  
aſh pit. This again paſſing through the fuel, is  
rarefied in its turn; and giving place to freſh

quantities, there is a conſtant flow of air up the  
chimney. In proportion to the rarefaction of the  
air in the fire-place, the greater is the heat. But  
by a certain conſtruction of the furnace, the un-  
der part of the chimney will become almoſt as

Y

Wrongly

strongly heated as the fire-place; by which means, though a very strong current of air is forced thro' the fuel, yet as great part of the heat is spent on the chimney, where it can be of no use, the fuel is wasted in a very considerable degree. To avoid this, we have no other method than to contract the throat of the chimney occasionally by a sliding plate; which when put quite in, shuts up the whole vent; and by being drawn out more or less, leaves a larger or smaller vent at pleasure. This plate ought to be quite drawn out till the fuel is thoroughly kindled, and the furnace well heated, so that a current of air may flow strongly through the fuel. After this the plate is to be put in a certain length, so as just to prevent the smoke from coming out at the door of the furnace. The rarefaction of the air in the fire-place will solicit a very considerable draught of air, which will keep the fuel inflamed to a great degree; at the same time that the heat, being reflected from every part of the furnace excepting that narrow passage where the smoke goes up, becomes very intense. A large quantity of fuel may be put in at once, which will consume slowly, and thus require but little attention in comparison with those furnaces where no such precaution is used. The sliding-plate may be made of cast iron in those furnaces where no great heat is excited; but in others first-*clay* will be more convenient. The contrivance, however, is scarce applicable to those furnaces where great quantities of metal are to be melted; and accordingly the waste of fuel there is immense. It is computed, that the iron works of Carron in Stirlingshire consume annually as many coals as would be sufficient for a city containing 700,000 inhabitants. The 4th intention, viz. that of regulating the heat, is accomplished by allowing only a certain quantity of air to pass through the fuel. For this purpose, says Dr Black, it is necessary to have the command of the furnace below; the parts above being frequently filled with small quantities of soot. The best method of managing this is to shut up the door of the ash-hole perfectly close, and to have a set of round holes bearing a certain proportion to one another; and their areas being as 2, 3, 4, 8, 16, &c. Seven or eight of these ought to be made in the door of the ash-pit, which will give a sufficient command over the fire. When the fire is to be increased to the utmost, all the passages both above and below are to be thrown open, and the height of the vent augmented; which, by increasing the height of the column of rarefied air, increases also the motion of that through the fuel, and of consequence also the heat of the furnace. Macquer recommends another tube applied to the ash-pit, widest at the end farthest from the furnace, and tapering gradually towards it. The intention of this is to augment the current and velocity of the air, by its being made to pass from a wider into a narrower vent; but though this is no doubt true, the air will not ultimately move with greater velocity than if the tube were not there. It can only be useful therefore in cases where the furnace is placed in a small room, and the tube itself has a communication with the external air.

(4.) FURNACE, CUPPELLING, or } is thus described  
 (4.) FURNACE, ESSAYING, } bed in Cra-

*mer's Art of Essaying*: (See *Plate CLII* with iron plates a hollow quadrangular inches broad and 9 inches high, *aa* 6 top in a hollow quadrangular pyramid inches high, terminating in an apert inches square. This prism must be closed with another iron plate, which basis or bottom to it, *aa*. 1. Near make a door, *e*, 3 inches high, and *g* i that leads to the ash-hole. 3. Above and at the height of 6 inches from the another door, *f*, of the figure of a 6 circle, 4 inches broad at its basis, 2 high in the middle. 4. Then fasten on the fore part of this furnace. Let them, *gg*, 11 inches long, and half a be fastened, so that its lower edge shall the bottom of the furnace, with *g* or *4* in such a manner, that there may be upper edge of the said plate and the furnace a groove so wide, as that the lower door, *kk*, may be put into it. move backwards and forwards therein be made of a thicker iron plate. 7 plate, *bb*, 22 inches long, 3 inches high, perfectly parallel to the foregoing plate, tened in the space between the two do manner, that both the upper and the of it may form a hollow groove with the furnace. One of these grooves, welded downwards, serves to receive the of the sliders that shut the lower d The other, that turns upwards, is to inferior edges of the sliders of the small- N° 3. The 3d plate, *ii*, which is li must be rivetted close above the upper such manner that it may form a groove downwards, and contiguous to the upper door, N° 3. 5. To shut the N° 2 & 3, adapt to each of them two of iron plates, that they may move within the above-mentioned grooves, *kk*, *ll*. But the belonging to the upper door, N° 3, each a hole near the top; that is, one one 5th part of an inch broad, and one a half long, *m*; and the other a sem perture, one inch high and two inches. Let, besides, each slider have a handle may be laid hold of when they are to 6. Moreover, let 5 round holes, one be bored in the furnace; two of which made in the fore part of the furnace, others in the back part; all at the height from the bottom, but 3 1/2 inches distant side of the furnace; and, finally, a 5th the height of one inch above the upper the upper door, *f*. 7. In short, let the furnace be armed with iron hooks, half an inch, and about 3 inches distant other, to fasten the lute with which it to be covered over within. 8. Let the moveable, hollow, quadrangular pyramid inches high, be adapted to the upper of the furnace, at the basis 7 inches broad upwards in a hollow tube, *r*, 3 inches ter, 2 inches high, almost cylindrical, the what convergent at top. This prism serves to support a funnel or flue, which

cal, hollow, made of iron plates, and a b; and which, when a very strong fire is b, is put perpendicularly upon the shorter such a manner, that it enters close into it, inches deep, and may again be taken off se, when there is no need of so strong a its pyramidal cover, g, must have a hand-adapted to it, that it may be laid hold thus be taken off or put on again: and being put on the aperture, d, of the furnace, not be easily thrown down, let an iron wretted to the right and left upper edge space, ac, and be turned down towards e, so as to make a furrow open before ed, into which the lateral edges of the y enter and be fastened, and at pleasure l backwards and forwards, whenever it put on or moved. 9. Let a square ledge, a thick iron plate, be fastened at the top per edge of the lower door, s, to support and the lute; but it must be made of ca, that it may be easily introduced into y of the furnace. This assay oven must be covered over on the inside with lute, s:—That the fire may be better confined, the iron may not be destroyed by growth, the whole inside of the furnace must ed over with lute, one finger or one fin a half thick. The lute fit for this is de- under CHAMISTAY. But before using this t put within the furnace small iron bars, length to the diameter of the oven, quar, prismatical, half an inch thick, having remities supported by a square iron ledge, an inch distant from each other; and fast so, that their flat sides may be oblique ard to the transverse section of the furd that the two opposite angles may look ards and the other downwards: the bars be laid flat, but edgewise; by which fi- be ashes of the fuel are prevented from tained too long between the interstices so bars, and from making an obstruction aid oppose the free draught of the air. ace being then covered over with lute, d up by a gentle heat, is at last fit for d- operations, and especially for such as performed in the assay oven. When an a is to be made in this furnace, let through ver holes above described, ee, before and and directly opposite to each other, two s one inch thick, and long enough that remities on every side may jut a little out holes. These serve to support the muffle bottom. Then introduce the muffle the upper aperture of the furnace, d, and upon the above described iron bars, in nanner that the open fore side of it may iguous to the inward border of the upper . The fuel is introduced through the top urnace, d; the cover of which, g, on this t, must be moveable, and not very heavy. ct fuel is charcoal made of the hardest especially of beech, broken into small pieces ignets of an inch, wherewith the muffle e covered over some inches high. Large would not answer, because they could not rough the narrow interstices, between the

sides of the muffle and those of the furnace, and of course could not sufficiently surround the circumference of the muffle; so that there would be on every side places void of fuel, and the fire would be either not strong enough or unequal. But if, on the contrary, coals too small were used, then a great part would fall immediately through the interstices of the grate into the ash hole; the smallest parts of them would turn too soon into ashes, and by increasing the heap of ashes, obstruct the free draught of the air, which is here very requisite. A perfect management of the fire is necessary in performing operations in this furnace; therefore the chemical reader must give attention to what follows. If the door of the ash hole, e, is quite open; and the sliders of the upper door, f, drawn towards each other, so as to touch one another in the middle of the door; and if, besides, the cover, g, and the funnel adapted to its tube, r, are upon the top, d, of the furnace; the fire will be then in the highest degree possible; though, in the mean time, it is hardly ever necessary to put the funnel on, except in a very cold season: but if, after having disposed the furnace in the manner just described, red burning coals are put into the open upper door, f, of it, the fire is still more increased thereby: however, this is very seldom or never necessary. When the upper door is shut with only that slider that has a narrow oblong hole in it, m, then the heat becomes a little less; but it diminishes still more when shut with the other slider, that has in it the semicircular hole, n, which is larger than that of the first slider: nay, the heat again is less when the funnel put at the top of the cover is taken away: Finally, the door of the ash-hole being either in part or totally shut, the heat is still diminished; because the draught of air so necessary to excite the fire is thereby hindered: but if, besides all these, the upper door be opened wide, then the cold air rushing into the muffle, cools the bodies put under it, that are to be changed, to a degree incompatible with any operation, as it will entirely hinder the boiling of the lead. If, during the operation, the fire begins to decay, or to grow unequal, it is a sign that there are places void of coals between the sides of the furnace and those of the muffle: therefore, in this case, the coals must be stirred on every side with an iron rod, introduced through the upper hole, p, of the furnace, that they may fall together, and thus act equally and in a proper manner. However, the effect does not always uniformly answer, even when the apparatus has been made with all the exactness mentioned. The cause of this difference has most commonly its origin in the various dispositions of the air: for as every fire is more excited, in proportion as the air, more condensed, and more quickly agitated, strikes the fuel more violently (which the effect of the bellows plainly shows); it thence appears, that in warm and wet weather, when the atmosphere is light, the fire must be less efficacious in furnaces; that likewise, when several furnaces, situated near each other, are burning at the same time, the fire is in part suffocated, because the circum-ambient air is thereby rendered more rare and lighter. The same effect is produced by the sun, especially in summer, when it shines upon the place where the

furnace is situated. The atmosphere, on the contrary, being heavier in cold dry weather, excites a very great fire. The heat of the fire acts the stronger upon the bodies to be changed, as the muffle put in the furnace is less; as it has more and larger segments cut out of it; as its sides are thinner; in short, as there are more vessels placed in the hinder part of it; or the contrary. In this case, when many of the conditions requisite for the exciting of fire are wanting, the artificer, with all his skill, will hardly be able to excite the fire to a sufficient degree, to perform operations well, in common assay-ovens, even though he uses bellows, and puts coals into the upper door of the furnace. For this reason, the grate ought to be put almost 3 inches below the muffle, lest the air, rushing through the ash-hole, should cool the bottom of the muffle, which happens in common assay-ovens; and again, that the smaller coals, almost already consumed, and the ashes, may more easily fall through the interstices of the grate, and the larger coals still fit to keep up the fire be retained. Lastly, the above-mentioned funnel is added, that the blowing of the fire being, by means of it, increased as much as possible, this may at last be carried to the requisite degree; for the fire may always be diminished at pleasure, but cannot always be increased, without the assistance of a proper apparatus.

(5-9.) FURNACE, EVAPORATING, FORGE, IMPROVED BLAST, LAMP, and MELTING. See CHEMISTRY, *Index*.

(10.) FURNACE, Mr WATT'S STEAM-ENGINE. The steam-engine furnace is described in the specification of the patent obtained for the invention by Mr Watt of Birmingham. His "improved methods of constructing furnaces, or fire-places, consist in causing the smoke or flame of the fresh fuel, in its way to the flues or chimney, to pass, together with a current of fresh air, through, over, or among, fuel which has already ceased to smoke, or which is converted into coaks, charcoal, or cinders, and which is intensely hot; by which means the smoke and grosser parts of the flame, by coming into close contact with, or by being brought near unto, the said intensely hot fuel, and being mixed with the current of fresh or unburnt air, are consumed, or converted into heat, or into pure flame free from smoke." This is done, "first, by stopping up every avenue or passage to the chimney or flues, except such as are left in the interstices of the fuel, by placing the fresh fuel above, or nearer to the external air, than that which is already converted into coaks or charcoal; and by constructing the fire-places in such a manner that the flame, and the air which animates the fire, must pass downwards, or laterally, or horizontally, through the burning fuel, and pass from the lower part, or internal end or side, of the fire-place, to the flues or chimney. In some cases, after the flame has passed thro' the burning fuel, it is made to pass through a very hot funnel, flue, or oven, before it comes to the bottom of the boiler, or to the part of the furnace where it is proposed to melt metal, or perform other office, by which means the smoke is still more effectually consumed. In other cases, the flame is carried immediately from the fire-place into the space un-

der a boiler, or into the bed of a melting furnace. *Fig. 2, Plate CLIX,* shews a fire-engine boiler, and its furnace, which has been chosen for an example of the application of this new method to the heating and evaporation of water. A A is the boiler, which may be of any form suitable to its use. B B is a rounding the boiler as usual. C is the opening for the passage from the space under the boiler to the flues. D D is a funnel or flue for the smoke to come from the fire-place to the boiler. E E is a place to contain the ashes; and F is a door to take them out at, which must be kept closely shut during the time of working. G is the fire-place: the fresh fuel is put in at G, and gradually comes down as the fuel below it is consumed. The part at H is very hot, being filled with coaks or coals which have ceased to smoke, and an opening or openings, to admit fresh air, regulate the fire. K is a door into the space under the boiler; and which being opened, admits fresh air to stop the draught of the chimney when a draught is wanted to cease. *Fig. 3* is a plan of the same fire-place in the other direction, shewing which M M is the back of the fire-place, which is a brick arch on which the fuel lies; and E E is the ash-hole. *Fig. 4* is an outside view of the fire-place, shewing the air-holes I I, and the door E; and *fig. 5* is a plan of the front part of the boiler seated; taken in the line A A in *fig. 2*. The dotted lines represent the flues, and the darts point out the direction of the flues. The fire is first kindled upon the brick arch at E; and when well lighted, more fuel is gradually added until it is filled up to G. Care is to be taken to leave proper interstices for the air to pass either among the fuel, or between the fuel and the front wall N; and as much air is admitted at I I, as can be done without causing the smoke to ascend perpendicularly, which will always do if too much air is admitted. The dimensions of this fire-place are given by the scale, and are properly adjusted for burning about 84 lb. of coals in an hour; whether more or less quantities are required to be burnt, the furnace must be enlarged or diminished accordingly. The more the quantity of fuel is much greater, more furnaces than one may be employed. *Fig. 6* represents this new furnace as applied to a furnace for melting iron and other metals, and constructed without the usual perpendicular flue D in *fig. 2*. The same letters refer to the same parts in all these figures. Mr Watt also constructs these new fire-places in various other ways; the part G H lies sloping, or horizontal, or otherwise varies the figure or form, and the opening E is in various positions; but in all cases the principle is the same, the fresh or raw fuel being placed next to the external air, and so that the smoke or flame may pass downwards, or laterally, or horizontally, over or through the coaked or charred fuel. He also occasionally covers the opening E with a grate, and causes the air to enter only, or principally, through the grate H. In particular cases, he places the grate on a grate as usual, as at A A in *fig. 7*, and that grate, or near at the place where the smoke passes into the flues or chimneys, he places another smaller grate B, on which he makes the fire of charcoal, coaks, or coals, which he burns previously burnt until they have ceased to

giving intense heat and admitting some, consumes the smoke of the first fire. He states his new invention to consist only of consuming the smoke, and in the heat, by causing the smoke and flame with fuel to pass through very hot funnels, or among, through or near, fuel, which is very hot, and which has ceased to smoke; mixing it with fresh air when in these circles; and in the form and nature of the circles above mentioned: the boilers and openings of the furnaces being such as are in use. These new invented fire places are applicable to furnaces for almost every other

**FURNACE, Mr W. THOMPSON'S STEAM-FURNACE.** In vol. iv. of the *Repository* is given the account of a furnace of this sort by Mr Thompson, who describes his invention to be a furnace which will effectually consume the steam arising from it, without requiring more fuel than usual, as has been the case with former furnaces for that purpose. It may be adapted to any boiler or copper already set up, and at small expence. *Fig. 8*, is a section of an oiler and fire-place. *aaaa*, The brick which boilers are usually set. *AA*, The two iron flues run through this boiler, go round it. *BB*, The fire-place; which is about  $\frac{1}{2}$  longer than they are generally. *C*, An arch, which runs across the fire-place, lower than the bottom of the flue under it, and about the middle of the fire-place. *D*, Flues through which the hot air ascends and spends its heat upon the boiler. *E*, A shutter of the fire-place; which must have a hole in it. Thro' this shutter the coals are gently stirred up, by the slice or poker, we are not to injure the arch, nor to raise too great a quantity of coals at once. *F* is a small hole behind the fire for a current of air to pass through, as in the patent lamp. *G*, A plate fixed with its whole length across the fire-place, behind the coals from falling down the flues and choking it. *Fig. 9*, is a front view of the boiler and fire-place, in which the letters represent the same parts. *HH* are a pair of slides shifting backwards, the other forms a door to make the space *F*, for the current of air to pass through, or smaller, as by practice may be found to be most convenient in which this furnace operates. The arch *C* hinders the smoke from going down the chimney, and obliges it to pass through the flues behind it; which has a very strong effect, and burns the smoke as it passes through the flues, which comes up through the space *F* behind it with vigour to the flame, which consumes the smoke that may be left. Too much air will have a very bad effect, as it will cool the flame; the slides *HH* must be regulated in such a manner as the operator may find most advantageous. The shutter in the door *E* must also be of a size; as its being too large or too small is prejudicial.

A channel for the evaporation of the moisture. 4. The grate. 5. The fire-place. 6. The inner part of the furnace. 7. A basin formed of sand. 8. The cavity where the melted metal is. 9. A hole through which the scoria is to be removed. 10. The passage of the flame and smoke, or the lower part of the chimney; which is to be carried up to a height of about 30 feet. 11. A hole in the roof, through which the ore is thrown into the furnace. This furnace is 18 feet long, 12 feet broad, and 9 $\frac{1}{2}$  high.

(16.) FURNACES, MACHINES FOR BLOWING AIR INTO. The most ancient method of animating large fires in the furnaces where ores were melted, seems to have been by exposing them to the wind. Such was the practice of the Peruvians before the arrival of the Spaniards. Alonzo Barba relates, that their furnaces, called *gasinas*, were built on eminences where the air was free; that they were perforated on all sides with holes, thro' which the air was driven in when the wind blew, which was the only time when the work could be carried on; that under each hole was made a projection of the stone-work, on which were laid burning coals, to heat the air before it entered the furnace. Some authors speak of several thousands of these guais burning at once on the sides and tops of the hills of Potosi; and several remains of this practice are to be found in different parts of Great Britain. This method of supplying air being found excessively ineffectual and precarious, the instruments called BELLOWS succeeded. These were at first worked by the strength of men; but as this was found to be very laborious and expensive, the force of running water was employed to give motion to these machines. Thus a much greater quantity of metal could be procured than formerly, and the separation was likewise more complete; inasmuch that in many places the slags or cinders, from which the iron had formerly been extracted, were again used as fresh ore, and yielded plenty of metal. But though this method was found preferable to the others, yet great improvements were still wanted. To melt very large quantities of ore at a time, it was necessary to use bellows of an immense size; and in proportion to their size, they stood in need of the more frequent and expensive repairs. The oil, also, which the bellows required in large quantity, becoming rancid, was found

found to generate a kind of inflammable vapour, which sometimes burst the bellows with explosion, and thus rendered them totally useless. A new method, therefore, of blowing up fires altogether free from the above mentioned inconveniences was fallen upon by means of water. It depends on the following principle, viz. That a stream of water, running through a pipe, if by any means it is mixed with air at its entrance into the pipe, will carry that air along with it, and part with it again as soon as it comes out of the pipe; and if the air is then collected by a proper apparatus, it may with success be used for exciting the most violent degrees of heat. Machines of this kind are called WATER BELLOWS, and are represented on Plate CLX, fig. 3. In the right-hand machine, AB represents a stream of water falling into the funnel, whose throat is contracted at B; after which the stream runs through the perpendicular pipe EF, in the upper part of which there are some small holes represented by *cdef*. Through these holes the air has access to mix itself with the descending water, which, being dashed against the sides of the pipe, is reduced to froth, and thus fills the whole cavity of the pipe EF, which is considerably larger than the throat of the funnel B. When this frothy stream enters the vessel C, the air extracts itself from the water; and as it cannot return through the pipe EF, because it is continually filled with a stream of liquid water, it flies off with considerable force through the smaller pipe D, by which it is conveyed to the furnace. The principal thing, to be kept in view in the construction of these machines, is, to mix the descending stream of water, with as great a quantity of air as possible. For this purpose the contrivance represented in the left-hand machine answers much better than the former. By this the water descending from the reservoir A falls into a kind of cullender B, perforated with a great number of holes in its sides. Thus the water, being forced out in a number of small streams, is very effectually dashed against the sides of the wide descending pipe, when it enters the descending vessel C, and is sent off by the pipe D, as in the former. In some machines of this kind the constructors seem to have been of opinion, that a great height was required in the water-fall; but Dr Lewis who has made a great number of experiments upon the subject, shows, that an excess in height can never make up for a deficiency in the quantity of the water. Four or five feet, he thinks, is a sufficient height for the water-fall; where there is a greater height, however, it may be rendered useful, by joining two or more machines together in the manner represented in the plate; where the water, after having once emitted its air in the condensing vessel C, flows out into a new reservoir E. From thence it descends through another cullender F, and descending from it into a condensing vessel G, the air is extricated, and carried off through the pipe H. The upper figure, I, represents the cullender with the shapes of the holes and their proportional distances according to Dr Lewis. Thus, with very little expence, where there is a sufficient quantity of water, as through a blast of air as can be desired may be readily obtained; for several machines may be con-

structed, and joined together in a manner what similar to that above mentioned, where a quantity of water is employed. But, in this method the air is loaded with moisture, in order to make the condensing vessel as conveniently may be, that the air may arrive at the furnace in as dry a state as possible. In the left hand machines a gage filled with mercury or water, the strength of the blast may be determined. In the large iron founderies another method for blowing up the fires by means of pumps. These consist of cast iron cylinders about 3 feet diameter, exactly fitted within a moved up and down by means of a piston. In the bottom of the cylinder is a large valve that of bellows, which rises as the piston goes up, and thus admits the air into the cylinder from below. Immediately above the bottom is a tube which goes to the furnace as it proceeds from the cylinder is furnished with a valve opening outward. Thus, when the piston is drawn up, the valve in the bottom opens and admits the air that way into the cylinder while the lateral valve shuts, and prevents the air from getting into it through the pipe. When the piston is thrust down, the valve in the bottom shuts, while the air being compressed in the cylinder is violently forced out through the lateral tube into the furnace. In the foundery at Carron, four of these large pumps were a few years ago employed at their furnace, and so contrived that the four pistons, being made alternately, produced a most uninterrupted blast. Some little might indeed be perceived by the ear, but too trifling to produce any sensible effect of heat of the furnace. Even this could be prevented by means of a large reservoir in which all the four cylinders might discharge. This should be furnished with an heavy weight, being supported by the cylinder alone, would force it out through the lateral tube in a manner perfectly equal to any of that puffing or interruption in which is perceptible though but in a small degree in the other.

*Suckling.*  
The billows fall, while Neptune lays his mace  
On the rough sea, and smooths its furrow'd face.  
*Dryden.*

3. To make by cutting.—  
There go the ships that furrow out their way;  
Yea, there of whales enormous fights we see.  
*Wotton.*

\* **FURROW-WEED.** *n. f.* [*furrow* and *weed*.] A  
weed that grows in furrowed land.—  
Crown'd with rank fumiter, and furrow-weeds.  
*Shakespeare.*

(1.) **FURRUCKABAD,** a district of Indostan  
Proper, in the circle of Rohilcund, about 30 miles  
long, on the W. bank of the Ganges; belonging  
to a prince of the Patan Rohilla tribe, and sur-  
rounded by the country of Oude.

(2.) **FURRUCKABAD,** the capital of the above  
district, (N<sup>o</sup> 1.) is seated on the Ganges, 75 miles  
E. of Agra, and 76 NW. of Lucknow. Lon. 79.  
30. W. Lat. 27. 28. N.

(3.) **FURRUCKABAD,** a town of Indostan, in  
Bengal, 42 miles NNW. of Moolshedabad.

\* **FURRY.** *adj.* [from *fur*.] 1. Covered with  
fur; dressed in fur.—  
From Volga's banks th' imperious Czar  
Leads forth his furry troops to war. *Felton.*

2. Consisting of fur.—  
Stretch out thy lazy limbs, awake, awake,  
And Winter from thy furry mantle shake. *Dryd.*  
Not arm'd with horns of arbitrary might,  
Or claws to seize their furry spoils in fight. *Dryd.*  
**FURRY'S-TOWN,** a town of Jamaica, in St James  
county, 20 miles NE. of Savannah La Mar.

(1.) **FURSEY,** an island of England in Pool  
harbour, Dorsetshire, containing about 30 acres.  
(2.) **FURSEY,** a town on the above island.  
**FURST,** Walter, one of the founders of the  
liberal

ties of the Swifs. In 1307, at the head of the  
other patriots he took and razed the Austrian  
forts, and thus founded the Swifs republic.

FURSTENAU, the name of 2 towns in Ger-  
many; 1. in the bishopric of Osnaburg, 15 miles  
NNW. of Osnaburg; 2. in Upper Saxony, 3 miles  
S. of Lauenstein.

(1.) FURSTENBERG, or FURSTENBURG, a  
county of Germany in Suabia, erected in the 13th  
century, bounded by the duchy of Wirtemberg,  
the county of Hohenburg, Brisgaw, the Black Fo-  
rest, and the lake and bishopric of Constance.

(2.) FURSTENBERG, or FURSTENBURG, the ca-  
pital of the above county, (N<sup>o</sup> 1.) with an ancient  
castle, seated on a mountain, near the Danube,  
30 miles NW. of Constance. Lon. 8. 30. E. Lat.  
47. 50. N.

(3.—6.) FURSTENBERG, or } four other towns  
FURSTENBURGH, } of Germany; viz.  
1. in Lusatia, on the Oder, taken by the Prussians  
in 1745, 13 miles S. of Francfort; 2. in the bi-  
shopric of Paderborn, 2 miles NE. of Wunnen-  
burg; 3. in the duchy of Mecklenburg, on the  
Havel, 10 miles SE. of Strelitz; 4. in the county  
of Waldeck, 10 miles W. of Waldeck.

FURSTENECK, a town and castle of Germa-  
ny, in the bishopric of Fulda, 13 m. N. of Fulda.

FURSTENFELD, two towns of Germany; 1.  
in Brandenburg, at the conflux of the Aulnitz  
and the Feistritz, 10 miles N. of Custrins; 2. in  
Stiria, near Hungary, 30 miles E. of Gratz, and  
68 S. of Vienna. Lon. 16. 5. E. Lat. 47. 23. N.

FURSTENWALDE, 2 towns of Upper Sax-  
ony; 1. in the margraviate of Meissen, 2 miles S.  
of Lauenstein; 2. in the middle Mark of Bran-  
denburg, 26 miles E. of Berlin, and 20 W. of  
Francfort on the Oder. It was taken by the  
Swedes in 1631, and is seated on the Spree. Lon.  
14. 8. E. Lat. 52. 23. N.

FURSTENWERDER, a town of Branden-  
burg, 10 miles WNW. of Prenzlow.

FURT, a town of Bavaria, 56 m. NW. of Passau.

FURTH, a large and populous town of Fran-  
conia, in Anspach, on the Rednitz, 4 miles W of  
Nuremberg.

FURTHCOMING, in law, the name of an ac-  
tion competent to any person who has used ar-  
restment in the hands of his debtor's creditor, for  
having the subject arrested declared his property.

(1.) \* FURTHER. *adj.* [from *fortis*, not from  
*far*, as is commonly imagined; *fortis*, *further*,  
*furtherest*, corrupted from *forter*, *fortbest*; *forter*,  
Saxon. *Forter* is used by Sir Thomas More. See  
FORTH and FARTHER, of which the examples  
are to be referred to this word.] 1. At a greater  
distance. 2. Beyond this.—What *further* need have  
we of witnesses? *Matth.* xxvi. 65.—

Satan had journey'd on, penive and slow;  
But *further* way found none, so thick intwin'd,  
As one continued brake, the undergrowth  
Of shrubs and tangling bushes had perplex'd  
All path of man or beast that pass'd that way,  
*Milton.*

Their earnest eyes they fix'd, imagining  
For one forbidden tree a multitude  
was'n, to work them *further* woe or shame.  
*Milton.*

*I may meet*

Some waid'ring spirit, from him to  
What *further* would be learn'd.

3. *Further* has in some fort the force of  
itive in the phrase *no further*, for *nothing*.  
Let this appease

Thy doubt, since human reach no *furt*

(2.) \* FURTHER. *adv.* [from *fortis*.] T  
er distance.—And the angel of Lord we  
and stood in a narrow place. *Numb.* xx

\* To FURTHER. *v. a.* [from the adver  
Saxon.] To put onward; to forward; to  
to countenance; to assist; to help.—

Things thus set in order, in quiet  
Shall *further* thy harvest, and pleasur

—Could their fond superstition have fa  
great attempts, without the mixture of  
lusion concerning the irresistible force  
power. *Hooker.*—Grant not, O Lord,  
of the wicked; *further* not his wicked  
cxl. 8.—

This binds thee then to *further* my  
As I am bound by vow to *further* thi

\* FURTHERANCE. *n. f.* [from *furi*  
motion; advancement; help.—The G  
ed them first, and used them only for th  
ance of their trade and private business.

Our diligence must search out all help  
*therances* of direction, which scripture,  
fathers, histories, the laws and practi  
churches afford. *Hooker.*—For gain and  
success in his affairs, he seeketh *furthera*  
that hath no manner of power. *Hooker.*

Cannot my body, nor blood sacrific  
Intreat you to your wonted *furthera*  
*Sbak.*

—If men were minded to live righteou  
lieve a God would be no hindrance or  
to any such design, but very much fo  
vancement and *furtherance* of it. *Tillot*

\* FURTHERER. *n. f.* [from *further*  
ter; advancer.—That earnest tavourer  
*therer* of God's true religion, that faithf  
to his prince and country. *Afcbam.*

\* FURTHERMORE. *adv.* [*further*  
Moreover; besides.—

This ring I do accept most thankfu  
And so, I pray you, tell him: *further*  
I pray you, shew my youth old Shyloc

\* FURTIVE. *adj.* [*furtive*, Fr. *furti*  
Stolen; gotten by theft.—

Or do they, as your schemes, I th  
shown,

Dart *furtive* beams and glory not the  
All servants to that source of light, the  
FURUM, an island in the Baltic, on  
of Sweden.

(1.) \* FURUNCLE. *n. f.* [*furuncle*,  
*culis*, Lat.] A bile; an angry pustule.—  
is in its beginning round, hard, and infla  
as it increaseth, it riseth up with an ac  
and sometimes a pustule; and then it is  
flamed and painful, when it arrives at  
which is about the eighth or ninth day.

(2.) FURUNCLE, } or BOIL, is other  
FURUNCLE, } ned, a small red skin

inflammation, redness, and great pain, arising from the adipose membrane, under the skin.

SUND, an island of Sweden, in the Baltic. 18. 45. E. Lat. 59. 46. N.

WROUGHT. *adj.* [*fur* and *wrought*.] *ur.*—

along the mazy margin stray,  
th the *fur-wrought* fly delude the prey.

*Gay's Psorals.*

URY. *n. f.* [*furo*, Latin. *fureur*, Fr.] *s.* 2. Rage; passion of anger; tumult approaching to madness.—

oppose my patience to his *fury*; and am  
d

r with a quietness of spirit  
r tyranny and rage of his. *Shak.*

given me to know the natures of living  
and the *furies* of wild beasts. *Wisdom,*

. Enthusiasm; exaltation of fancy.—  
the lute, her wit began to be with a  
inspired; and her voice would, in so

occasion, second her wit. *Sidney.*—  
l, that had number'd in the world  
to course two hundred compasses,

ophetick *fury* few'd the work.

*Shak. Othello.*

r than human kind she seem'd to look,  
an accent more than mortal spoke;

ag eyes with sparkling *fury* roll,  
the god came rushing on her soul.

*Dryden's Æneid.*

*ria*, Lat.] One of the deities of ven-  
thence a stormy, turbulent, violent,  
ian.—

ght of any of the house of York,  
ry to torment my soul. *Shak. H. VI.*

e most proper place for a *fury* to make  
d I believe every reader's imagination

when he sees the angry goddess linking  
l, and plunging herself into hell, amidst

of horror and confusion. *Addison.*

*Y*, § 1. *def.* 4. See *FURIA*.

IRZE. *n. f.* [*firs*, Saxon; *genista spi-*  
Goite's goss.—The whole plant is ve-

the flowers, which are of the pea-  
are disposed in short thick spikes,

succeeded by short compressed pods, in  
ch are contained three or four kidney-

*Müller.*—  
out gravel to fill up a hole,  
ber and *furzin*, the turf and the cole.

*Tusser.*

, there groweth great store of *furze*,  
e shrubby sort is called tame, and the  
n French. *Carew's Survey.*—

We may know,

n to reap the grain, and when to sow,  
e fell the *furzes*. *Dryden's Virgil.*

ZE, in botany. See *ULEX*

*Y*. *adj.* from *furze*.] Overgrown with  
of gorse.—

rough the *furzy* field their rout they  
edling bosoms force the thorny brake.

*Gay.*

US, in botany: A genus of the monœ-  
belonging to the polygamia class of  
e hermaphrodite calyx is *quinquefid*;

*P. s. r. l.*

there is no corolla; there are 4 stamina; the ger-  
men beneath; there are 4 stigmata; the fruit is a  
plum.

FUSAROLE, in architecture, a moulding or  
ornament placed immediately under the echinus,  
in the Doric, Ionic, and Composite capitals.

\* FUSCATION. *n. f.* [*fuscus*, Lat.] The act  
of darkening or obscuring. *DiB.*

FUSE, or FUZE, in artillery. See *FUSEE*, § 1. §.

(1.) \* To FUSE. *v. a.* [*fundo*, *fusum*, Lat.] To  
melt; to put into fusion; to liquify by heat.

(2.) \* To FUSE. *v. n.* To be melted; to be  
capable of being liquefied by heat.

(1.) \* FUSEE. *n. f.* [*fuséau*, French.] 1. The  
cone round which is wound the cord or chain of  
a clock or watch.—The reason of the motion of  
the balance is by the motion of the next wheel,  
and that by the motion of the next, and that by  
the motion of the *fusée*, and that by the motion  
of the spring: the whole frame of the watch car-  
ries a reasonableness in it, the passive impression  
of the intellectual idea that was in the artist.

*Hale's Origin of Mankind.* 2. A firelock [from *fu-*  
*sil*, Fr.]; a small neat mu'quet. This is more  
properly written *fusil*.

(2.) FUSEE, § 1. *def.* 1. See *CLOCK*, § 3, and  
WATCH.

(3.) FUSER, § 1. *def.* 2. See *MUSKET*.

(4.) \* FUSEE. Track of a buck. *Ainsl.*

(5.) \* FUSSE OF A BOMB OR GRENADE SHELL,  
is that which makes the whole powder or compo-  
sition in the shell take fire, to do the designed ex-  
ecution. 'Tis usually a wooden pipe or tap, fill-  
ed with wildfire, or some such matter; and is in-  
tended to burn no longer than is the time of the  
motion of the bomb from the mouth of the mor-  
tar to the place where it is to fall, which time An-  
dersson makes 27 seconds. *Harris.*

(6.) FUSEES OF BOMBS OR GRENADES, are  
chiefly made of very dry beech-wood, and some-  
times of hornbeam, taken near the root. They  
are turned rough, and bored, and then kept for  
several years in a dry place; the diameter of the  
hole is about  $\frac{1}{4}$ th of an inch; the hole does not  
come quite through, leaving about  $\frac{1}{4}$ th of an inch  
at the bottom; and the head is made hollow, in  
the form of a bowl. The composition for fusees  
is saltpetre 3 parts, sulphur 1, and mealed pow-  
der 3, 4, and sometimes 5. This composition is  
driven in with an iron driver (whose ends are  
capped with copper to prevent the composition  
from taking fire), and pressed as hard as possible;  
the last shovel-full being all mealed powder, and  
two stands of quickmatch laid across each other  
being driven in with it, the ends of which are fold-  
ed up into the hollow top, and a cap of parch-  
ment tied over it till it be used. When these fu-  
zes are driven into the loaded shell, the lower end  
is cut off in a slope, so that the composition may  
inflame the powder in the shell. The fuse must  
have such a length as to continue burning all the  
time the shell is in its range, and to set fire to the  
powder as soon as it touches the ground, which  
instantly bursts into many pieces. When the dis-  
tance of the battery from the object is known, the  
time of the shell's flight may be computed to a  
second or two; which being known, the fuse  
may be cut accordingly, by burning two or three

and making use of a watch, or string by way of pendulum, to vibrate seconds.

(1.) \* FUSIBILITY. *n. f.* [from *fusible*.] Capacity of being melted; quality of growing liquid by heat.—The ancients observing in that material a kind of metallical nature, or at least a *fusibility*, seem to have resolved it into a nobler use. *Wotton's Architecture*.—The bodies of most use, that are sought for out of the depths of the earth, are the metals, which are distinguished from other bodies by their weight, *fusibility*, and malleableness. *Locke*.

(2.) The FUSIBILITY of gold is greater than that of iron or copper; but less than that of silver, tin, and lead. Borax is frequently mixed with metals, to render them more fusible.

\* FUSIBLE. *adj.* [from *fuse*.] Capable of being melted; capable of being made liquid by heat.—Colours afforded by metalline bodies, either colliquate with, or otherwise penetrate into other bodies, especially *fusible* ones. *Boyle*.

FUSIGNANO, a market town of the Cisalpine republic, in the department of the Lower Po, and ci-devant duchy of Ferrara.

(1.) \* FUSIL. *adj.* [*fusile*, Fr. *fusilis*, Latin.] 1. Capable of being melted; liquifiable by heat.—Some, less skilful, fancy these scapi that occur in most of the large Gothick buildings of England are artificial; and will have it, that they are a kind of *fusil* marble. *Woodward*. 2. Running by the force of heat.—

The liquid ore he drain'd  
Into fit moulds prepar'd; from which he form'd  
First his own tools: then, what might else be  
wrought

*Fusile* or grav'n in metal. *Milton's Paradise Lost*.  
Perpetual flames,

O'er sand and ashes, and the stubborn flint,  
Prevailing, turn into a *fusil* sea. *Philips*.

(2.) \* FUSIL. *n. f.* [*fusil*, French.] 1. A fire-lock; a small neat musquet. 2. [In heraldry; from *fusus*, Latin.] Something like a spindle.—*Fusils* must be made long, and small in the middle, in the ancient coat of Montague, argent three *fusils* in fesse gules. *Peacock*.

(3.) FUSIL, in heraldry, a bearing of a rhomboid figure, longer than the lozenge, and having its upper and lower angles more acute and sharp than the other two in the middle. It is called in Latin *fusus*, “a spindle,” from its shape.

(1.) \* FUSILIER. *n. f.* [from *fusil*.] A soldier armed with a fusil; a musketeer.

(2.) FUSILIERS, FUSILEERS, or FUZILEERS, are armed as the rest of the infantry, but wear caps like the grenadiers, though somewhat shorter. There are 3 royal regiments of fusiliers in the British service: viz. those of the Scotch fusiliers raised in 1678; of English fusiliers, in 1685; and of Welsh fusiliers, in 1688-9.

FUSINE, a village of Maritime Austria, in the late Dogado of Venice, and district of Chioggia, on the Canal of Brenta.

(1.) \* FUSION. *n. f.* [*fusio*, Lat. *fusio*, Fr.] 1. The act of melting. 2. The state of being melted, or of running with heat.—Metals in fusion do not flame for want of a copious fume, ex-spelter, which fumes copiously, and thereby *ca.* *Newton's Optics*.

(2.) FUSION. See CHEMISTRY, 1 FLUIDITY.

\* FUSS. *n. f.* [A low cant word.]  
a bustle.—

End as it befits your station;  
Come to use and application;  
Nor with senates keep a *fuss*:  
I submit, and answer thus.

(1.) FUST, or FAUSTUS, a goldsmith and one of the 3 earliest printers, to invention of this most useful art has been. Some say, he only assisted Guttenberg, in his attempts to make moveable type. Be that as it may, he had the conceal his art; and to this we are in the tradition of *The Devil and Dr Faust*, led down to the present times. Fust, in alliance with Peter Schoeffer, having, in 1469, printed off a considerable number of copies, to imitate those which were sold in France, undertook the sale of them at Paris, where the art of printing was then unknown. He sold his copies for so high a sum as 5 crowns, the prices usually demanded by scribes. He afterwards lowered his price to 3 crowns, which created universal discontent; but when he produced copies as fast as wanted, and lowered the price to 30 c. Paris was agitated. The uniformity of increased the wonder; informations were sent to the police against him as a magician; he was searched; and a great number of copies found, they were seized: the red ink which they were embellished, was said to be his; and he was seriously adjudged that he was in league with the devil; and if he had not fled, most probably would have shared the fate of those rant and superstitious judges condemn days for witchcraft. See PRINTING.

kins, in his *Biographical and Historical* lately published, says “this story is assigned no authority for discrediting it. to have died of the plague at Paris, about 1469.”

(2.) \* FUST. *n. f.* [*fuste*, Fr.] 1. The body of a column. 2. [From *fus*.] A strong smell, as that of a mouldy body. \* To FUST. *v. n.* [from the noun.] to mouldy; to smell ill.

(1.) \* FUSTIAN. *adj.* [from the noun.] Made of fustian. 2. Swelling; unbecomingly; ridiculously tumid. Used of style.

When men argue, th' greatest  
O' th' contest falls on terms of art,  
Until the *fustian* stuff be spent,  
And then they fall to th' argument.  
—Virgil, if he could have seen the first the Sylva, would have thought Statius his *fustian* description of the statue on horse. *Dryden's Dufresnoy*.

(2.) \* FUSTIAN. *n. f.* [*futaine*, Fr.] *fyste*, a tree, because cotton grows on it. A kind of cloth made of linen and cotton, perhaps now of cotton only.—Is the house trimm'd, the serving men in *fustian* and their white stockings? Such a high swelling kind of writing made up of geneous parts, or of words and ideas; and; bombast.—

will you raise me in combustion,  
 t of high heroick *fustian*. *Hudibras*.  
*fustian* have I heard these gentlemen find  
 Mr Cowley's odes! In general, I will  
 nothing can appear more beautiful to  
 the strength of those images they con-  
 vey'd.—*Fustian* is thoughts and words ill  
 without the least relation to each other.

ice thoughts, when govern'd by the close,  
 e to *fustian*, or descend to prose. *Smith*.  
 'STIAN, in commerce, (§ 1, *def.* 1.) is a  
 cotton stuff, which seems as if it were  
 on one side. *Fustians* should be altogether  
 cotton yarn, both woof and warp; but  
 ces are made, the warp of which is flax,  
 mp. *Fustians* are made of various kinds,  
 row, fine, coarse; with shag or nap,  
 out it.

FUSTIC. *n. f.* A sort of wood brought  
 West Indies, used in dyeing of cloth. *Dist*.  
 'STIC, or FUSTOCK, is a yellow wood,  
 is in all the Caribbee islands. It pays no  
 exportation. It is a species of MORUS.  
 USTIGATE. *v. s.* [*fustigo*, Latin.] To  
 a stick; to cane. *Dist*.

GATIG, in the Roman customs, a pu-  
 nished by beating with a cudgel. This  
 was peculiar to freemen; the slaves  
 rged with whips.

FILARIAN. *n. f.* [from *fussy*.] A low  
 stinkard; a scoundrel. A word used  
*Spenser* only.—Away, you scullion, you  
 : I'll tickle your catastrophe. *Shak*.

TINESS. *n. f.* [from *fussy*.] Mouldiness;

OCK. See FUSTIC, and MORUS.  
 ITY. *adj.* [from *fustil*.] Ill-smelling; mou-  
 stor shall have a great catch, if he knock  
 r of your brains: he were as good crack  
 it with no kernel. *Shak*.

*fussy* plebeians hate thine honours. *Shak*.  
 large Achilles, at this *fussy* stuff,  
 his deep chest laughs out a loud applause.  
*Shak*.

.K, a town of Hungary, on the Danube,  
 Peter-Waradin; 16 miles SSE. of Bacs.  
 FILE. *adj.* [*futile*, Fr. *futiles*, Latin.]  
 tive; loquacious.—One *futile* person, that  
 t his glory to tell, will do more hurt than  
 t know it their duty to conceal. *Bacon*.  
 g; worthless; of no weight.

FILITY. *n. f.* [*futilité*, Fr. from *futik*.]  
 tiveness; loquacity.—This fable does not  
 much at the *futility* of women, as at the  
 nt levity of a prying humour. *L'Esfrange*.  
 igness; want of weight; want of solidity.  
 g *futility* appears in their signs of the zo-  
 d their mutual relations and aspects. *Bent*.

FLOCKS. *n. f.* [corrupted from *foot books*.]

The lower timbers that hold the ship  
 FYPOUR SICRI, a considerable town of  
 Proper, in the province of Agra, seated  
 range of hills; the southern boundary of  
 the plain, in which hardly a shrub is to  
 and the soil is almost as fine as hair-pow-  
 circumstance productive of the most disa-

greeable effects, when the hot winds blow from  
 the W. Its situation too is unhealthy from the  
 badness of its water. Yet the country near it is  
 in tolerable cultivation. It is 42 miles W. of A-  
 gra. Lon. 77. 45. E. Lat. 27. 0. N.

(1.) \* FUTURE. *adj.* [*futurus*, Latin; *future*,  
 Fr.] That which will be hereafter; to come:  
 as, the *future* state.—

Glory they sung to the most High! good will  
 To *future* men, and in their dwellings peace.

*Milton*.  
 He sows the teeth at Pallas's command,  
 And slings the *future* people from his hand.

*Addison's Oriid*.  
 (2.) \* FUTURE. *n. f.* [from the adjective.]  
 Time to come; somewhat to happen hereafter.—

Thy letters have transported me beyond  
 This ign'rant present time; and I feel now  
 The *future* in the instant. *Shak. Macbeth*.

—The mind, once jaded by an attempt above its  
 power, either is disabled for the *future*, or else  
 checks at any vigorous undertaking ever after.  
*Locke*.

(3.) FUTURE, or FUTURE TENSE, in grammar,  
 denotes an inflexion of verbs, whereby they de-  
 note, that a thing will be in some time yet to  
 come. See GRAMMAR.

\* FUTURELY. *adv.* [from *future*.] In time  
 to come.—This prescience of God, as it is presci-  
 ence, is not the cause of any thing *futurely* suc-  
 ceeding; neither doth God's foreknowledge im-  
 pose any necessity, or bind. *Raleigh*.

\* FUTURITION. *n. f.* [from *future*.] The  
 state of being to be; the condition of being to come  
 to pass hereafter.—Is it imaginable, that the great  
 means of the world's redemption should rest only  
 in the number of possibilities, and hang so loose  
 in respect to its *futurition*, as to leave the event in  
 an equal poise, whether ever there should be such  
 a thing or no? *South*.

\* FUTURITY. *n. f.* [from *future*.] 1. Time  
 to come; events to come.—

Not my service past, nor present sorrows,  
 Nor purpos'd merit in *futurity*,  
 Can ransom me. *Shak. Othello*.

—I will contrive some way to make it known to  
*futurity*, that I had your lordship for my patron.  
*Swift*. 2. Event to come.—All *futurities* are na-  
 ked before that All seeing Eye, the sight of which is  
 no more hindered by distance of time, than the sight  
 of an angel can be determined by distance of place.  
*South*.—

This, great Amphiarus, lay hid from thee,  
 Though skill'd in fate and dark *futurity*. *Pope*.  
 3. The state of being to be; futurition.—It may  
 be well reckoned among the bare possibilities, which  
 never commence into a *futurity*, it requiring such  
 a free, sedate and intent mind, as it may be, is  
 no where found but among the platonical ideas.  
*Glanville's Scaphs*.

FUTWALL, a town of Bengal, 9 miles SE. of  
 Patna.

FUZE, FUSE, or FUSEE. See FUSEE.  
 FUZELIER, Lewis, a French dramatic author,  
 and one of the editors of a periodical work, en-  
 titled *The Mercury*. His works are written with  
 spirit. He died in 1752, aged 80.

FUZILEER. See FUSILIER.

**FUZIR**, a town of Hungary, 12 miles SSE. of Caschau.

\* To **FUZZ**. *v. n.* [without etymology.] To fly out in small particles.

\* **FUZZBALL**. *n. f.* [*fuzz* and *ball*.] A kind of fungus, which, when pressed, bursts and scatters dust in the eyes.

\* **FY**. *interj.* [*fy*, French and Flemish; *φύ*, Greek; *vab*, Latin.] A word of blame and disapprobation.

And *fy* on fortune, mine avowed foe,  
Whose wrathful wrecks themselves do now away.

*Spenser.*

—*Fy*, my lord, *fy*! a soldier, and afraid? What need we fear who knows it, when none can call our power to account? *Macbeth*.—A bawd, sir, *fy* upon him. *Shak.*—

But *fy*, my wand'ring muse, how thou do'st stray!

Expectance calls thee now another way. *Milton.*

Nay, *fy*, what mean you in this open place? Unhand me, or, I swear, I'll scratch your face: Let go, for shame! you make me mad for spite: My mouth's my own; and if you kiss, I'll bite.

*Dryden.*

—*Fy*, madam, he cried, we must be past all these gaieties. *Tatler.*

**FYAL**, one of the AZORES. It is well cultivated, and yields corn, garden stuffs, and various fruits. It has several kinds of domesticated European animals: the people are cleanly, diligent, and fairer than those of Madeira. The chief town is Villa de Horta. Lon. 28. 36. W. Lat. 38. 32. N.

**FYAN'S TOWN**, a town of Ireland, in Meath county, 30 miles from Dublin.

**FYEN**. See **FUNEN**.

**FYERS**, or **FYRES**, a river of Invernesshire,

which descending from the S. flows into the Nefs, 10 miles NE. of Fort Augustus. On it is built a stupendous bridge, on two opposite rocks; the top of the arch being above 100 feet from the level of the water. A little below the bridge is the celebrated *Fall of Fyers*, where a great body of water shoots through a narrow cleft between two rocks, and then falls over a vast cleft into the bottom of the chasm, where foam rises and fills the air like a cloud of smoke.

**FYFIELD**, 3 English villages: 1. in Berks; W. of Abingdon: 2. in Essex, near Ongar; Wilts, W. of Marlborough.

**FYNE LOCH**, a great inlet of the sea in Gyleshire, near 40 miles long. It receives a tide on each side of the Isle of Arran, and is directly opposite to its entrance.

**FYNONVAER**, a town in Salop, near Olympton.

**FYIT**, John, a celebrated painter, born at Antwerp, about 1625, one of the best artists of his time. He often painted in conjunction with Rubens and Jordaens; and finished the hair of animals and the plumage of fowls with wonderful spirit and exactness.

**FYVIE**, a parish in Aberdeenshire, 13 miles long and 8 broad, containing about 22,000 acres, of which 8000 are under culture, and 12,000 in wood. The Ythan, and the road from Aberdeen to Banff run thro' it. The air is pure, and the soil kindly, yielding good crops of oats and barley. The population in 1793, stated by the rev. Mr. Mackenzie to Sir J. Sinclair, was 2,194: the decrease in 1755, 334.

**FYZABAD**, a large and populous city in the doostan Proper, in the territory of Oude; on the Gogra, 80 m. E. of Lucknow, and 500 m. by W. of Calcutta. Lon. 82. 30. E. Lat. 26.

## G

(1.) \* **G** Has two sounds, one from the Greek  $\Gamma$ , and the Latin, which is called that of the hard **G**, because it is formed by a pressure somewhat hard of the fore part of the tongue against the upper gum. This sound **G** retains before *a, o, u, l, r*; as, *gate, go, gull*. The other sound, called that of the soft **G**, resembles that of **J**, and is commonly, though not always, found before *e, i*; as, *gem, gibbet*. Before *n*, at the end of a word, *g* is commonly melted away; as in the French, from which these words are commonly derived: thus, for *benign, malign, condign*, we pronounce *benine, maline, condine*. It is often silent in the middle of words before *b*; as, *might*. The Saxon **G**, *g*, seems to have had generally the sound of *y* consonant; whence *gate* is by rusticks still pronounced *gaze*.

(2.) **G** is used, 1. as a letter; 2. as an abbreviation; 3. as a musical character; and 4. as a numeral. I. AS A LETTER, **G** is the 7th of our alphabet, and the 5th consonant. In the alphabets of all the oriental languages, the Phœnician, Chaldee, Syriac, Samaritan, and even the Greek, it is the 3d letter. The Romans call it *gimel* or *gimel*, i. e. camel,

because it resembles the neck of that animal; it bears the same appellation in the Samaritan, Phœnician, Chaldee: in the Syriac it is called *mel*, in Arabic *gim*, and in Greek *gamma*. The Greek  $\gamma$  (r) of the Greeks is evidently the same as the gimel of the Hebrews or Samaritans. The difference between the gamma and gimel consists in this, that the one is turned to the right, the other to the left, according to the different manners of writing and reading which obtained among those nations: though Salmasius and Solinus, vainly attempted to prove that the **G** derived from the Greek kappa. It is clear that the Latins borrowed their form of this letter from the Greeks; the Latin **G** being only a variation of the Greek gamma,  $\gamma$ ; as might easily be shown had our printers all the forms of this letter, which we meet with in the Greek and Latin manuscripts, through which it has passed from  $\gamma$  to **G**. In the *med. lib. ii. cap. De Litera*, calls **G** a *novum* letter. His reason is, that the Romans had not introduced it before the first Punic war; as appears from the rostral column erected by C. Duilius, on which we everywhere find a **C** instead of **G**. It was Carvilius who first distinguished between these

and invented the figure of the G; as we find by Terentius Scaurus. The C served for G; it being the third letter of the alphabet, as the F or γ was of the Greek; found instead of C on several medals: *Num. Imperat.* tom. i. p. 39. M. Beyer has a medal of the *Familia Ogulnia*, where read instead of CAR, which is on those of

But the C is more frequently seen on medals of G; as, AUGUSTALIS CALLAE-FACINEROSIS, &c. for AUGUSTALIS, &c. the pronunciation of those words was not only that the G was ignorantly or neglected by the workmen; as is the case in inscriptions of the eastern empire; where CC, AUCC, are often found for AUG, and northern nations frequently changed C into V or W; as in *Gallus, Wallus; Gallia, Wallia*, &c. For in this instance it cannot be the French changed the W into G; but they wrote *Gallus* long before *Wallus* or *Wall* is known, as appears from all the ancient and Greek writers. And yet it is true, that the French change the W of northern nations, and the V consonant, into *Willielmus*, William, into *Guillaume*; into *Gulphilas; Vaso* into *Gaston*; modern G takes its form from that of C.

It is a mute, and cannot be sounded without the help of a vowel. Its hard sound, not as Dr Johnson says above, (§ 1.) effluve of the fore part of the tongue against the upper gum," but by the reflection of wind at the palate, made by the tongue as it flies out of the throat; which Martianus thus, *G spiritus cum palato*; so that G is a hard letter. G often sounds hard before i, &c. and sometimes before e, as *get*, &c. hard in derivatives from words ending in *ing, stronger*, &c. and generally before the end of words, as *finger*. G is mute before *gn, gnish, sign*. Gb has the sound of hard beginning of a word, as *ghostly*; sometimes it is quite silent, as *though*. But Gb of many other words Gb has the sound *rough, rough, tough*, &c. and in the word the *f*, by ignorance or inadvertency in spelling, has actually usurped the place

As an ABBREVIATION, G, stands for *genius, gens, genius*, &c. G. G. for *genit, gesserunt*, &c. G. C. for *genio ci-Cesaris*. G. L. for *Gaius libertus*, or *genio*. G. V. S. for *genio urbis sacrum*. G. B. *bono*. And G. T. for *genio tutelari*. III.

G is the character or mark of the treachery and from its being placed at the head, being the first found in Guido's scale, the letter took the name GAMUT. IV. As a numeral, G was anciently used to denote 400; a dash over it, thus, Ḡ, for 40,000.

[ג, Hebrew, i. e. an abomination,] Ebed, the leader of the conspiracy of enemies against the usurper ABIMELECH, in *Guidon*. See *Judges*, ix. 26—41.

AL, Barent, an eminent Dutch painter, died in 1650. He was a disciple of Ph. Woude and acquired his manner. His land-  
scape much esteemed.

GAARDE, a town of Norway, in Aggerhuus, 56 miles NW. of Christiania.

GABALA, a town of Arabia Felix, 64 miles NNE. of Aden.

GABALE, in mythology, a deity worshipped at Heliopolis under the figure of a lion, with a radiant head; and it is thus represented on many medals of Caracalla.

GABARA, or GABBARA, in antiquity, the dead bodies which the Egyptians embalmed, and kept in their houses, especially those of such of their friends as died with the reputation of great piety and holiness, or as martyrs. See EMBALMING, and MUMMY.

\* GABARDINE. *n. f.* [*gavardina*, Italian.] A coarse frock; any mean dress.—My best way is to creep under his *gabardine*; there is no other shelter hereabouts. *Shakespeare. Tempest.*—

You call me misbeliever, cut-throat dog,  
And spit upon my Jewish *gabardine*. *Shakespeare.*

The knight did straight submit,  
And laid his weapons at her feet:  
Next he disrob'd his *gabardine*,  
And with it did himself resign. *Hudibras.*

GABARET, a town of France, in the dept. of Landes, on the Gélise, 15 miles W. of Condom, and 24 E. of Mont Marlan. Dr Brookes and J. Walker place it in the dept. of Gers, and also err in the lat. by a whole degree. Lon. o. 6. E. Lat. 43. 39. N.

GABAROUS BAY, a bay on the E. coast of Cape Breton. Lon. 60. o. W. Lat. 45. 50. N.

GABASELSKI, a town of Russia, in the government of Viborg; 36 miles N. of Serdopol.

\* GABBLE. *n. f.* [from the verb.] 1. Inarticulate noise like that of brute animals.—Not to know what we speak one to another, so we seem to know, is to know straight our purpose: though's language, *gabble* enough, and good enough. *Shakespeare.*

2. Loud talk without meaning.—  
Forthwith a hideous *gabble* rises loud  
Among the builders; each to other calls,  
Not understood. *Milt. Par. Lost.*

\* To GABBLE. *v. n.* [*gabbare*, Ital. *gabberen*, Dut.] 1. To make an inarticulate noise.—

When thou could'st not, savage,  
Shew thine own meaning, but would'st *gabble*  
like

A thing most brutish, I endow'd thy purposes  
With words that made them known.

*Shakespeare. Temp.*  
Flocks of fowl, that when the tempests roar,  
With their hoarse *gabbling* seek the silent shore.

*Dryden's Æn.*  
2. To prate loudly without meaning.—Have you no wit, manners, nor honesty, but to *gabble* like tinkers at this time of night? Do you make an alehouse of my lady's house? *Shakespeare.*—

Which made some think, when he did *gabble*,  
Th' had heard three labourers of Babel. *Hudibras.*

Such a rout, and such a rabble,  
Run to hear Jack Pudding *gabble*. *Swift.*

\* GABBLER. *n. f.* [from *gabble*.] A prater; a chattering fellow.

(1.) \* GABEL. *n. f.* [*gabelle*, Fr. *gabello*, Ital. *gafel*, Sax. a tribute.] An excise; a tax.—The *gabels* of Naples are very high on oil, wine, and tobacco. *Addison on Italy.*

(2.) **GABEL**, [Lat. *Gabella*, *Gabium*, *Gablagium*, *g. e. Feßigal*,] has the same signification among the ancient English writers, that **GABELLE** had in France, before the revolution. It has been variously used, for a rent, custom, service, &c. Where it was a payment for rent, those who paid it were termed **GABLATORS**. Formerly when mentioned without any addition, *gabel* signified the tax on salt, though afterwards it was applied to all other taxes. In the ci-devant French customs, the *gabelle*, or tax on salt, is said to have had its rise in 1286, under Philip IV. Philip V. took a double per livre on salt, by an edict in 1318, which he promised to remit when he was delivered from his enemies; which was renewed by Philip VI. in 1345; and the duty was raised to 4 deniers per livre; king John returned it in 1355; and it was granted to the dauphin in 1358, to ransom king John. It was continued by Charles V. in 1366; after his decease, it was suppressed, but revived again by Charles VI. in 1382. Louis XI. raised it to 12 deniers per livre; and Francis I. in 1542, to 24 livres per muid. It was afterwards so greatly augmented that it was estimated to constitute  $\frac{1}{2}$  of the whole revenue of the kingdom; so that a minot of salt at last paid a duty of 52 livres, 8 sols, and 6 deniers. Philip VI. first established granaries and officers of the gabelles, and prohibited all others from selling salt. From that period, the commerce of salt for inland consumption continued wholly in the king's hands, every grain of it being sold by his farmers. This very odious and oppressive tax was early abolished by the National Assembly.

(3.) **GABEL**, in geography, a town of Bohemia, in the circle of Boleslaw, 45 miles N. of Prague.

**GABELLE**. See **GABEL**, § 1, 2.

**GABERSTORE**, a town of Germany, in Stiria, 10 miles WSW. of Gnaa.

**GABIAN**, a village of France in the dept. of Herault, 7 miles NW. of Pezenas. It has a mineral spring, near which petroleum issues from a rock.

**GABIANO**, a village of the Cisalpine republic, in the dept. of Mela, and ci-devant province of Brescia.

**GABII**, in ancient geography, a town of Latium, midway almost between Rome and Preneste to the E. often mentioned in the history of Tarquin I. It is now extinct.

**GABIN**, a town of Poland, in the Palatinate of Rawa, 40 miles W. of Warsaw.

**GABINIAN LAWS**, in Roman antiquity, laws instituted upon several occasions by persons of the name of *Gabinus*: 1. *Gabinia-lex de Comitibus*, by A. *Gabinus* the tribune, A. U. C. 614; requiring that in the public assemblies for electing magistrates, the votes should be given by tables, and not *viva voce*: 2. *De Comitibus*, which made it a capital punishment to convene any clandestine assembly, agreeable to the old law of the 12 tables: 3. *De Militia*, by A. *Gabinus* the tribune, A. U. C. 685. It granted Pompey the power of carrying on the war against the pirates, during 3 years, and of obliging all kings, governors, and states, to supply with all the necessaries he wanted, over as far as 400 *Stadia* from the sea: 4. *De*

*Usura* by Aul. *Gabinus* the tribune, A. U. C. ordaining that no action should be granted for recovery of any money borrowed upon interest to be lent upon larger. This was an ancient practice at Rome, which obtained the name *usuram facere*: 5. Against fornication.

**GABINUS CINCTUS**, in Roman antiquity, a particular way of tucking the gown, by which it forwards on the breast, and tying it into a knot as the people of **GABII** did at a solemn festival on the sudden attack of an enemy, in order to be fitter for action. In this manner the Romans used to declare war, to sacrifice, and to divide the spoils of the enemy; and then he was called *præcinctus*.

(1.) \* **GABION**. *n. f.* [French.] A wide basket which is filled with earth to make a fortification or intrenchment.—His battery was all along with *gabions*, and cafts filled with *Knolles*.

(2.) **GABIONS**, in fortifications, are made of osier twigs, of a cylindrical form, 4 feet high and 4 wide; which, being filled with earth, serve as a shelter from the enemy's fire.

**GABISE**, a town of Asiatic Turkey, in the circle of 28 miles SE. of Constantinople.

**GABLAGIUM**. } See **GABEL**, § 2.  
**GABLATORS**. }

(1.) \* **GABLE**. *n. f.* [*gaval*, Welsh; *gabl*, French.] The sloping roof of a building, care that all your brick-work be covered with tiles, according to the new way of building out *gable ends*, which are very heavy, and apt to let the water into the brick-work. *See the Husbandry*.

(2.) **GABLE**, or **GABLE-END**, of a house, is the triangular end from the cornice or eaves to the top of the house.

**GABLENZ**, a town of Upper Saxony, in the circle of Erzgebürg, 6 miles NNW. of Zwickau.

**GABOU**, or **JABOU**, a country of Africa, between Benin and Dahomy, 150 miles from the coast.

(1.) **GABRES**, or **GAURES**, a religious sect in Persia and India; called also **GAURES**, **GAURES**, **GAURES**, **GAURES**, &c. See **MAGI**. Those sect are dispersed through the country, and to be the remains of the ancient Persians, followers of Zoroaster, being worshippers of fire. They have a suburb at Isfahan, called **GABAD**, or *the town of the Gaurs*, where they are employed in the meanest drudgery: some of them are dispersed through other parts of Persia, they principally abound in Kerman, the most barren province in the whole country, where the hometans allowed them liberty and the exercise of their religion. Several of them fled many years ago into India, and settled about Surat, and their posterity still remain. There is also a great number of them at Bombay. They are ignorant, offensive people, extremely superstitious, and very rigorous in their morals, and very earnest in their dealings. They believe a reward and a future judgment, and worship only one God. Although they perform their worship with fire, and direct their devotion toward the sun, for which they have an extraordinary veneration, yet they strenuously maintain, they worship neither; but that, as these are

reflive symbols of the Deity, they turn them in their devotional services. Some ofed, that these are Perfians formerly con-Christianity, who, being afterwards left lves, mingled their ancient superstitious truths and practices of Christianity, and l for themselves a religion apart: and ge, that throughout the whole of their doctrine and practice, we may discern Christianity, though much defaced; ciation, the magi, the massacre of the r Saviour's miracles, his persecutions, &c.

**GABRES** is also a name given by the Turks ristians, signifying *infidels*, or people of a on; or rather, as Leunclavius observes, r gentiles; the word *Gabre* among them, e same signification as *pagan* or *infidel* r Christians, and denoting any thing not an.

**GAC**, a town of France, in the dept. of 12 miles NE. of Rhodéz.

**GABRIEL**, (גבריאל, Heb. *i. e.* the strength one of the principal angels in heaven: a few events, in which this exalted being rned, recorded in scripture. He was e prophet Daniel, to explain to him the ram and goat, and the mystery of rks. He was sent to Zecharias, to de- cium the future birth of John the Baptist; onths after, to the Virgin Mary, at Na- o warn her of the birth of Jesus Christ. ometans call him the *faithful spirit*; and as, by way of metaphor, the *peacock of* In the 2d chapter of the Koran, it is t *subsoever is an enemy to Gabriel shall ned.* It was Gabriel, Mahomet pretend- brought the revelations which he publish- who conducted him to heaven mounted : animal Borak.

**GABRIEL**, in geography, a mountain of ia Cork, 12 miles S. of Bantry.

**GABRIEL ST**, an island of S. America, in 1, discovered by S. Cabot, in 1526.

**GALILITES**, in ecclesiastical history, a sect aptists that appeared in Pomerania, ia ) named from Gabriel Scherlinz; who, ing been for some time tolerated in that was obliged to remove, and died in Po-

**GALL**, a town of France, in the dept. of Orne, W. of Aigle, and 13½ E. of Argentan.

**GALL**, a town of France, in the dept. of n, 9 miles NE. of Rocheford.

**GAD**, (גד, Heb. *i. e.* a troop,) one of the rchs, the son of Jacob by Zilpah, and or of the tribe of the Gadites.

**GAD**, in ancient geography, a district of dan Palestine, situated between Gilead kingdom of Bashan on the N. and that morites to the S. having the Jordan to the bounded by various nations on the E. so om the tribe of that name.

**GAD**, the tribe of the GADITES.

**GAD**, a prophet who attended David during cution by Saul, and gave him various ad- is afterwards. He wrote a history of Da- , which is lost.

(5.) **GAD**, in ancient geography, a river in the country of the Gadites, called also Arnon. See **ANNON**.

(6.) \* **GAD**. *n. f.* [*gad*, Sax. *gaddur*, Islandick, a club.] 1. A wedge or ingot of steel.—Flemish steel is brought down the Rhine to Dort, and other parts, some in bars, and some in *gads*; and therefore called Flemish steel, and sometimes *gad* steel. *Moxon's Mech. Exer.* 2. It seems to be used by *Shakespeare* for a stile or graver, [from *gad*, Saxon, a goad.]—

I will go get a leaf of brass,  
And with a *gad* of steel will write these words.  
*Shakespeare.*

(7.) **GAD**, among miners, a small punch of iron, with a long wooden handle, used to break up the ore. One of the miners holds this in his hand, directing the point to a proper place, while the other drives it into the vein, by striking it with a sledge-hammer.

\* **To GAD**. *v. n.* [Derived by *Skinner* from *gadfly*; by *Junius* from *gadau*, Welsh, to forsake; thought by others only the preterite of the old word *agaan*, to go.] To ramble about without any settled purpose; to rove loosely and idly.

How now, my headstrong, where have you been *gadding*?

—Where I have learnt me to repent. *Shakespeare.*

—Give the water no passage, neither a wicked woman liberty to *gad* abroad. *Ecclef. xxv. 25.*—

The lesser devils rose with ghastly rore,  
And thronged forth about the world to *gad*;  
Each land they filled, river, stream, and shore.  
*Fairfax.*

—Envy is a *gadding* passion, and walketh the streets, and doth not keep at home. *Bacon.*—

*Gad* not abroad at ev'ry quest and call  
Of an untrained hope or passion;  
To court each place or fortune that doth fall,  
Is wantonness in contemplation. *Herbert.*

Thee, shepherd, thee the woods and desert  
caves,  
With wild thyme and the *gadding* vine o'er-  
grown,  
And all their echos moan. *Milton.*

A fierce loud buzzing breeze; their stings draw  
blood,  
And drive the cattle *gadding* thro' the wood.  
*Dryden.*

She wreaks her anger on her rival's head;  
With furies frights her from her native home,  
And drives her *gadding*, round the world to  
roam. *Dryden.*

—There's an ox lost, and this cockcomb runs a *gadding* after wild fowl. *L'Esfrange.*—No wonder their thoughts should be perpetually shifting from what disgusts them, and seeking better entertainment in more pleasing objects, after which they will unavoidably be *gadding*. *Locke.*

**GADARA**, in ancient geography, a strong town of the Peræa, in Decapolis, restored by Pompey after its demolition by the Jews. (*Josephus*.) After Herod's death, it was joined to Syria, by Augustus.

**GADARENES**, the inhabitants of **GADARA**, and the adjacent country. See next article.

**GADARENORUM AGES**, in ancient geography, the country of the Gadarenes, called by

Matthew the country of the GERGENSES, a district that lay between Gadara and Gergefa, otherwise called *Gerafa*, both which lay within the Decapolis on the other side Jordan.

GAD-BEE. See GAD-FLY, and OESTRUS, N° 1.

\* GADDER. *n. f.* [from *gad*.] A rambler: one that runs much abroad without business.—A drunken woman, and a *gadder* abroad, causeth great anger, and she will not cover her own shame. *Becluf. xxvi. 8.*

\* GADDINGLY. *adv.* [from *gad*.] In a rambling, roving manner.

GAEBÜSCH, a town of Germany, in the duchy of Mecklenburg, near which, the Swedes defeated the Danes in 1712. It is 16 miles W. NW. of Schwerin.

GADEMIR, or ? a country of Africa, W. of (1.) GADEMIS, } Fezzan, containing 92 towns and villages.

(2.) GADEMIS, or GADEMIR, the capital of the above country, lies 300 miles from the sea coast. Lon. 11. o. E. Lat. 31. 30. N.

GADEN, a town of Austria, 10 miles W. of Vienna.

GADERSLEBEN, a town of Saxony, 20 miles E. of Halberstadt

GADES, or GADIRA, in ancient geography, a small island in the Atlantic, on the Spanish coast, 25 miles from the Pillars of Hercules. It was sometimes called TARTESSUS, and *Brythia* according to Piny. Geryon, whom Hercules killed, is said to have resided in it. *Hercules Gaditanus* had there a celebrated temple, in which all his labours were engraved with excellent workmanship.

(1.) \* GADFLY. *n. f.* [*gad* and *fly*; but by *Skinner*, who makes it the original of *gad*, it is called *gadfly*. Supposed to be originally from *goad*, in Saxon, *gad* and *fly*.] A fly that when he stings the cattle makes them gad or run madly about; the breed.—The fly called the *gadfly* breedeth of somewhat that swimmeth upon the top of the water, and is most about ponds. *Bacon*. Light fly his slumbers, if perchance a flight

Of angry *gadflies* fasten on the herd. *Töomsf.*

(2.) GAD-FLY. See OESTRUS.

GADIAG, a town of Russia, in the prov. of Tchernigow, 12 miles SE. of Tchernigow.

GADIRA. See GADÉS.

GADI FANI, the people of GADES.

GADITANUS, a surname of Hercules.

GADITES, one of the 12 tribes of Israel, who inhabited the country on the E. side of Jordan. See GAD, N° 2. They amounted to 45,650, when they came out of Egypt, but decreased in the wilderness to 5150. They were carried captives by Tiglath pileser.

GADONA, or } a country of Africa, S. of the  
GADUA, } Senegal, containing mines of gold, iron, and nitre. Lon. 8. o. W. Lat. 13. 30. N.

GADUS, in ichthyology, a genus of fishes belonging to the order of jugulares. The head is **th**; there are seven cylindrical rays in the **nostril** membrane; the body is oblong, **ciduous scales**; the whole fins are covered **the common skin** of fish: the rays of the

back fins are blunt, and those of the sharp. There are 17 species, distinguished by their cirri, and the number of fins. The most remarkable are the

1. GADUS BARBATUS, the **FOUR** to a large size, seldom exceeding a f It is distinguished from all others depth; one of the size above mentioned near 4 inches deep in the broadest back is very much arched, and castin- lour of the fins and tail are black; 2 of the pectoral fins is a black spot. line is white, broad, and crooked. even at the end, and of a dusky colour of the body is white; but more the back than the belly, and tinged It is called at Scarborough a *kieg*, delicate fish.

2. GADUS CARBONARIUS, the **C** of a more elegant form than the **cc** generally grow to the length of 2½ fe about 28 or 30 lb. at most. The **h** the under jaw a little longer than the tail is broad and forked. They vary Some have their back, nose, dorsal of a deep black; the gill-covers silver the ventral and anal fins, and the **l** Others are dusky, others brown; **h** lateral line is straight and white, **a** parts, or the ventral and anal fins which takes its name from the black **c** sometimes assumes. **Belon** calls it imagining that it was so named by from its producing the Ichthyocolla: gives the true cyonology. Their **f** men on most of our rocky and deep particularly those of the north of Scotland swarm about the Orkneys, where the greatest support of the poor. The to appear on the Yorkshire coast in the of July, in vast shoals, and are then a and an half long. In August they are inches, and are taken in great number angling rod; they are esteemed very grow so coarse when a year old, that eat them. Fish of that age are from 8 long, and begin to have a little black gills and on the back; this blackness they grow older. The fry is known names in different places: they are **c** borough *parrs*; and when a year About 20 years ago such a quantity fished that part, that for several weeks possible to dip a pale into the sea without some. Though this fish is so little esteemed, it is salted and dried for sale.

3. haddock ever since that miracle. Large haddock is to be in roe in the middle of November and continues so till the end of January; time till May they are very thin-tailed; season. In May they begin to recover; old sized fish are then very good, and improving till the time of their perfection small ones are extremely good from May to July, and some even in February, March, and April. Those which are not old enough to be taken by the fishermen assert; that in rough weather haddock sink down into the sand and ooze on the bottom of the sea, where they shelter themselves from storm is over; for in stormy weather haddock are taken, and those that are taken immediately after a storm have mud on their backs. They live on young herrings and other small fish in winter on the stone-coated worms, *SERPULA*, which the fishermen call *serpula*. The grand shoal of haddock comes on the Yorkshire coast. It is remarkable that it appeared in 1766, on the 10th of October and exactly on the same day in 1767: it extended from the shore near 3 miles and in length from Flamborough head to the castle, and perhaps much farther. An idea may be given of their number by the following fact: Three fishermen, with a crew of a mile from Scarborough hastily loaded their boat with them, taking each time about a ton of fish; put down their lines beyond the distance of five miles from the shore, they caught a great quantity of haddock, which shows how exactly they keep their limits. The best haddock is from 8d. to 1s. per score, the smaller haddock and even a halfpenny per score. Haddock quit the coast as soon as they are in season, and leave behind great quantities of fish. It is said that they visit the coast of Denmark and Jutland in summer. It is remarkable that providentially, that all kinds of fish (such as mackerel) which frequent the Yorkshire coast, approach the shore, and as they return they are in high season, and retire from the coast to become unfit for use. It is the same in the London markets. They do not come in a great bulk, one of 14 lb. being an average, but these are extremely coarse; weighing only from 2 to 3 lbs.

*GADUS LOTA*, the BURBOT, in its body resembles an eel, only shorter and different in its motions also resemble those of an eel. They are besides very smooth, slippery, and the head is very ugly, being flat, and that of a toad; the teeth are very numerous. On the end of the nose are small beards; on the chin another. The scales are some are dusky, others are of a yellowish spotted with black, and sometimes white; and the belly in some is white; but these are frequently concealed by the species abounds in the lake of Geneva, and is met with in the lakes Maggiore and in Britain it is found in the Trent; but plenty in the Witham, and the great Lincolnshire. It is a very delicate

ART I.

fish for the table, though of a disgusting appearance when alive. It is very voracious, and preys on the fry and lesser fish. It does not often take bait, but is generally caught in weels. The largest taken in our waters weigh between 2 and 3 lb. but abroad they are sometimes found of double that weight.

(5.) *GADUS MERLANGUS*, the WHITING, is a fish of an elegant make; the upper jaw is the longest; the eyes are large, the nose is sharp; the teeth of the upper jaw are long, and appear above the lower when closed. The colour of the head and back is a pale brown; the lateral line white, and crooked; the belly and sides are silvery, the last streaked lengthwise with yellow. These fish appear in vast shoals in spring, keeping at the distance of about half a mile to that of three from the shore. They are caught in vast numbers by the line, and afford excellent diversion. They are the most delicate, as well as the most wholesome, of any of the genus: but they do not grow to a large size, the biggest not exceeding 20 inches; and even that is very uncommon, the usual length being 10 or 12; though, it is said, that whittings from 4 to 8 lb. in weight have been taken in the deep water at the edge of the Dogger Bank.

(6.) *GADUS MERLUCCIUS*, the HAKE, is found in vast abundance on many of our coasts, and those of Ireland. There was formerly a vast stationary fishery of hake on the Nymph Bank off Waterford; immense quantities appearing there twice a-year; the first shoal coming in June, during the mackerel season; the other in Sept. at the beginning of the herring season, probably in pursuit of those fish; it was usual for six men with hooks and lines to take a 1000 hakes in one night, besides a considerable quantity of other fish. These were salted and sent to Spain, particularly to Bilboa. We know not the present state of this fishery; but Mr Smith, who wrote the history of the county of Waterford in 1746, complains of its decline. Many of the gregarious fish are subject to change their situations, and desert their haunts for numbers of years, and then return. Mr Smith instances the loss of the haddock on the Waterford shores, where they used to swarm; and the capriciousness of the herrings, which so frequently quit their stations, is well known. Sometimes the irregular migration of fish is owing to their being followed and harassed by an unusual number of fish of prey, such as the sharks; sometimes to deficiency of the smaller fish, which served them as food; and lastly, in many places to the custom of trawling, which not only destroys their spawn deposited in the sand, but also destroys or drives into deeper waters numberless worms and insects, the repast of many fish. The hake is in England esteemed a very coarse fish, and is seldom admitted to table either fresh or salted. When cured, it is known by the name of *Poor John*. These fish are from 1½ to near 3 feet long; they are of a slender make, of a pale ash colour on their backs, and of a dirty white on their bellies.

(7.) *GADUS MINUTUS*, the POOR, is the smallest species yet discovered, being little more than 6 inches long. On the chin is a small beard; the eyes are covered with a loose membrane; on each side of the gill-covers and jaws there are 9 pairs

tures. The colour on the back is a light brown; on the belly a dirty white. It is taken near Marfeilles, and sometimes in such quantities as to become a nuisance; for no other kinds of fish are taken during their season. It is esteemed good, but incapable of being salted or dried. Beion says; that when it is dried in the sun, it grows as hard as horn. We owe the discovery of this kind in our seas to the Rev. Mr Jago.

(8.) *GADUS MOLVA*, the *LING*, is usually from 3 to 4 feet long, but have been caught 7 feet long. The body is very slender; the head flat: the upper jaw is longest; the teeth in that jaw are small and very numerous; in the lower, few, slender, and sharp: on the chin is a small beard. They vary in colour, some being of an olive hue on the sides and back, others cinereous; the belly white. The ventral fins are white: the dorsal and anal edged with white. The tail is marked near the end with a transverse black bar, and tipped with white. Its English name *ling* is derived from its length, being a corruption of *long*. It abounds about the Scilly Isles, on the coasts of Scarborough, Scotland and Ireland, and forms a great branch of trade. It was considerable so long ago as the reign of Edward III. an act for regulating the price of lob, *ling*, and cod, being made in his 31st year. In the Yorkshire seas they are in perfection from the beginning of Feb. to that of May, and some to the end of it. In June they spawn, depositing their eggs in the soft oozy ground of the mouth of the Tees. At that time the males separate from the females, and resort to some rocky ground near Flamborough Head, where the fishermen take great numbers without ever finding any of the female fish among them. While a ling is in season its liver is very white, and abounds with a fine flavoured oil; but as soon as it goes out of season, the liver becomes as red as that of a bullock, and affords no oil. The same happens to the cod and other fish in a certain degree, but not so remarkably as in the ling. When in perfection, a very large quantity of oil may be melted out of the liver by a slow fire; but if a violent sudden heat be used for that purpose, they yield very little. The oil, which nature hoards up in the cellular membranes of the fishes, returns into their blood, and supports them in the engendering season, when they generate with so much eagerness as to neglect their food. Vast quantities of ling are salted for exportation as well as for home consumption. To be cut or split for curing, it must measure 26 inches or upwards from the shoulder to the tail. if less than that, it is not reckoned a sizeable fish, and consequently not entitled to the bounty on exportation; such are called *drizzles*, and are in season all summer.

(9.) *GADUS MORHUA*, the common cod, is *cicereous* on the back and sides, and commonly spotted with yellow: the belly is white; but they vary much, both in colour and shape, particularly that of the head. The side line is white, broad, & straight, till opposite the vent, when it bends in the tail. Codlings are often taken of a orange, and even red colour, while they are on the rocks; but on changing their colour to the colour of other codfish. The body is of equal length, and at the end of the

lower is a small beard; the teeth are in the palate as well as in the jaws. It is found only in the northern seas; being called *deletius* calls it, an *ocean fish*, and never in the Mediterranean Sea. It affects cold and secans confined between the latitude 50°; those caught N. and S. of that being either bad, or in small numbers. Greenland cod are small, and emaciated; very voracious, and suffering in those situations of provision. Most other species of fish inhabit the cold seas, or such as lie within that can just claim the title of *temperate*. *Islands*, called *cherny*, which, according to some, are better tasted than the land kind. The great rendezvous of cod fish is on the banks of Newfoundland and other sand-banks off the coasts of Canada, Nova Scotia, and New England. In those situations, on account of the woody and sandy bottoms; and their vicinity to the seas, where they span in full security of food forces them, as soon as the seas are open, to repair thither for subsistence taken N. of Iceland, but on the S. and they abound: they are again found by the coasts of Norway, in the Baltick, Orkney and Western Isles; after which numbers decrease, in proportion as they farther S. and they are never found in the straits of Gibraltar. Before the discovery of Newfoundland, the greater fisheries of the seas of Iceland, and off our Western Isles, which were the grand resort of ships of commercial nations; but the greatest met with near Iceland. The English thither before 1415: Henry V. was obliged to give the king of Denmark satisfaction for irregularities committed on those subjects. In the reign of Edward IV. the English were excluded from the fishery by treaty forbidden to resort there, under forfeitures and goods. Notwithstanding this, they afterwards allowed a ship of Hull to land, and there to relade fish and other goods, out regard to any former restrictions. The prohibition of the English in latter times was far confirmed: for Q. Elizabeth asked permission for fish in these seas from Christian IV. of Denmark; but afterwards she instructed her ambassador that court to insist on the right of a fishery. In the reign of James I. however, there were fewer than 150 ships employed in the fishery; which indulgence might arise from the king's marriage with princess Anne of Denmark; but the Spanish, the French, and the Dutch had greatly the advantage of the English fisheries at the beginning, as appears from that in the seas of Newfoundland in the number of ships belonging to each thus:—Spaniards, 120, besides 2000 came from Biscay to take whale for about 5, or 6,000 tons; Portuguese 150 tons; French and Bretons 150, or 200 tons; English, from 50 to 50. The increase of that now resort to those fertile banks of Britain enjoys the greatest share; which

treasures, as it brings wealth to individual strength to the state. See FISHERY, All this immense fishery is carried on by and line only. They fish from the depth 60 fathoms, according to the inequality of the bottom, which is represented as a vast mountain of water, above 500 miles long, and near the coast; and that seamen know when they approach by the great swell of the seas and the noise that impend over it. The bait is hermit fish called a *capelin*, a shell-fish called *bits* of sea fowl; and with these are sufficient to find employment for near 100,000 Irish seamen, and to afford subsistence to a more numerous body of people at home who are engaged in the various manufactures so vast a fishery demands. The food of the cod is either small fish, worms, testaceous animals, such as crabs, large whelks, &c. their digestion is so powerful as to digest the greatest part of the shells they swallow. They are very voracious, and catch at any small object they perceive moved by the water, even pebbles, which are often found in their stomachs.

The fishermen are well acquainted with the air bladder, or sound of the cod; and they are very dexterous in perforating this part of the fish with a needle, in order to disengage the air; for without this operation it could not rise under water in the well boats, and be brought to market. The sound of the cod is a delicacy often brought from New-England.

Ifinglass is also made of this part by the fishermen: a process which deserves the notice of the natives of the north of Scotland, where these fish are plentiful. See ICING. Providence has kindly ordained, that the cod fish, so useful to mankind, should be so prolific as to supply more than the deficiencies of multitudes annually taken. Leeuwenhoek estimated 9,384,000 eggs in a cod-fish of a size; a number, sure, that will baffles the efforts of man, or the voracity of the insects of the ocean, to exterminate, and which affords to all ages an inexhaustible supply of fish. In our seas they begin to spawn in the month of April, and deposit their eggs in rough and stony rocks. Some continue in roe till the month of April. They in general recover after spawning than any other fish; therefore common to take some good ones all the year. When out of season, they are thin and flabby; and the lice chiefly fix on the sides of their mouths. The fish of a middling size are esteemed, and are chosen by their customers for their size and roundness, especially near the tail; and the absence of the fucus or pit behind the head; and the regular undulated appearance of the sides, as if they were ribbed. The glutinous parts of the head lose their delicate flavour, after 24 hours out of the water, even when these and other fish of this genus are fresh. One mentioned by Mr Pennant as the largest that he ever heard of taken in Scotland, weighed 78 lb. the length was 5 feet, and the girth round the shoulders was taken at Scarborough in 1755, and was 12 inches. But the general weight of these

fish in the Yorkshire seas, he says, from 14 to 40 lib. This species is short in proportion to its bulk, the belly being very large and prominent.

(10.) *GADUS MUSTELA*, the FIVE-BEARDED COD, very much resembles the LOTA. (See N. 4.) The beards on the upper jaw are 4, viz. two at the very end of the nose, and two a little above them: on the end of the lower jaw is a single one. The fish are of a deep olive brown, their belly whitish. They grow to the same size as the lota. The Cornish fishermen are said to whistle, and cry *bod, bod, vean*, when taking this fish, as if by that they facilitated the capture. In the same manner the Sicilian fishermen repeat their *massu di pajanu*, &c. when they are in pursuit of the sword fish.

(11.) *GADUS POLLACHIUS*, the POLLACK, has the under jaw longer than the upper; the head and body rises pretty high, as far as the first dorsal fin. The side line is incurvated, rising towards the middle of the back, then sinking and running straight to the tail; it is broad and of a brown colour. The colour of the back is dusky, sometimes inclining to green: the sides beneath the lateral line are marked with lines of yellow; and the belly is white. This species is common on many of our rocky coasts: during summer they are seen in great shoals frolicking on the surface of the water, and flinging themselves into a thousand forms. They will then bite at any thing that appears on the top of the waves, and are often taken with a goose feather fixed to the hook. They are very strong, being observed to keep their station at the feet of the rocks in the most turbulent and rapid sea. They are good eating. They do not grow to a very large size; the biggest seldom exceed 6 or 7 lb. but some have been taken near Scarborough, during winter, that weighed near 28 pounds. They are there called *leets*.

(12.) *GADUS TORICUS*, the TORSK, *tuik*, or *brismack*, is a northern fish; and as yet not discovered lower than about the Orkneys, and even there it is rather scarce. In the seas about Shetland, it swarms, and forms (barrelled or dried) a considerable article of commerce. The length is about 20 inches, the greatest depth 4½, the head is small; the upper jaw a little longer than the lower; both jaws furnished with many small teeth; on the chin is a small single beard: from the head to the dorsal fin is a deep furrow. The colour of the head is dusky: the back and sides yellow; belly white; edges of the dorsal, anal, and caudal fins, white; the other parts dusky; the pectoral fins brown.

**GAEL**, a town of France in the dep. of Ille and Vilaine, 1 mile S. of St Maen, and 10 W. of Montfort.

(1.) **GÆLIC**, *adj.* belonging to the *Gaels*, *Celts*, or ancient Scots Highlanders.

(2.) **GÆLICK LANGUAGE**, the language of the ancient and modern Highlanders of Scotland. See HIGHLANDERS. It is esteemed the most ancient as well as the purest dialect of the Celtic, now spoken. It has all the marks of an original language. Most of its words are expressive of some property or quality in the objects which they denote. This, with the variety of its sounds, (many of which, especially those that express the soft and

affinity, are peculiar to it,) renders it highly adapted for poetry. It was the language of the Scottish Court, till the reign of Malcolm Canmore, and was even spoken so late as that of Robert Bruce, particularly in a parliament held by him at Ardchattan. Its alphabet consists of 18 letters, of which 5 are vowels. "Those who understand it, (says the rev. Dr James Robertson, of Callander,) know its energy and power; the ease with which it is compounded; the boldness of its figures; its majesty in addressing the Deity, and its tenderness in expressing the finest feelings of the human heart. But its genius and constitution, the structure of its nouns and verbs, and the affinity it has to some other languages are not so much attended to. These point at a very remote era, and seem to deduce its origin from a very high antiquity. The verbs have only 3 tenses, which is the simplest and most natural division of time. The persons of each tense are distinguished, by adding pronominal particles to each person. The 3d person singular of each verb has genders, or admits of a masculine and feminine particle affixed. The moods are the indicative, imperative and infinitive. The subjunctive differs from the indicative only by the addition of one syllable to the verb, and a conjunction before it. The imperative has only the second person in both numbers. The infinitive is often used as a substantive noun, expressive of the abstract signification of the verb. There is only one conjugation, and one declension. The cases of the nouns are marked by different particles, or by a change of the last vowel. The degrees of comparison are formed by placing certain syllables before the adjective; and the superlative frequently by a repetition of the positive." These and many other peculiarities of the Gaelic language are mentioned by Dr Robertson, and illustrated by numerous examples, in *Sir J. Sinclair's Stat. Account*, Vol. XI, p. 611—619: to which we must refer the reader who wishes for farther information respecting this ancient language; which, the Dr says, has "a very striking affinity to the Eastern languages."

gather gage of her. They likewise call  
it of feet that a vessel sinks in the wa-  
ter's gage; this they find by driving a  
pike near the end, and putting it down  
colder till the nail catch hold under it;  
the feet as the pike is under water is  
the gage.

is, AQUIS-MERCURIAL, an apparatus  
invented by Dr Hales, and applied in various  
branches of trees, to determine the  
quantity which they imbibe moisture. In *Plate*  
3. *Fig. 1.* is a cylindric glass, e. g. of an  
inch within, and 8 inches long. Into this  
is introduced the branch of a young thriving  
tree, about 3 feet long, with lateral bran-  
ches, the diameter of the transverse cut being  
about an inch. Having fitted the joint *r*  
at *r*, by folding a piece of sheep's skin  
over it, it is cemented with a mixture of  
red turpentine melted together, in such  
a manner as to make a very stiff clammy paste

when cold, and over the cement folds of wet blad-  
ders are bound firmly with pack-thread. To the  
lower end *e* of the large tube, a smaller tube *e e*  
is cemented, being about  $\frac{1}{2}$  of an inch diameter,  
and 18 inches long, and in substance full  $\frac{1}{4}$  of an  
inch thick. These tubes are cemented together at  
*e*, with common hard brick-dust, or powdered  
chalk cement, and the joint is farther secured with  
the cement of bees wax and turpentine, over which  
a wet bladder is bound. The apparatus being  
thus prepared, the branch is turned downwards,  
and the glass tube upwards, and then both tubes  
are filled with water; with the finger applied to  
the open end of the small tube, it is inverted and  
immersed in the glass cistern *x*, full of mercury  
and water. In this situation the lower end of the  
branch was immersed 6 inches in water, viz. from  
*r* to *i*; the water was imbibed by the branch at  
its transverse cut *s*; and during its ascent into the  
sap-vessels of the branch, the mercury rose in the  
tube *e e* from the cistern *x*, so that in half an  
hour it was risen  $5\frac{1}{2}$  inches high, as far as *z*.  
The height of the mercury indicated, in some  
measure, the force with which the sap was im-  
bibed, though not the whole force; because, while  
the water was imbibed by the branch, its trans-  
verse cut was covered with innumerable little he-  
mispheres of air, and many air-bubbles issued out  
of the sap vessels, which partly filled the tube *e e*,  
as the water was drawn out of it: and therefore  
the height of the mercury could only be propor-  
tionable to the excess of the quantity of water  
drawn off, above the quantity of the air which  
issued out of the wood. If the quantity of air is-  
suing from the wood had been equal to the quan-  
tity of water imbibed, it is plain that the mercury  
could not rise at all, because there would be no  
room for it in the tube: but if 9 parts in 12 of the  
water be imbibed by the branch, and only 3 such  
parts of air issue into the tube in the same time,  
the mercury must rise near 6 inches, and so pro-  
portionably in other cases. Dr Hales observed,  
that the mercury rose highest, in most cases, when  
the sun was clear and warm, and that it subsided  
3 or 4 inches towards evening, but rose again the  
next day as it grew warm, though seldom so high  
as at first. He adapted the size and shape of the  
glass apparatus to a great variety of branches of  
several sizes and of different kinds of trees, and re-  
peated the experiment above described, *mutatis*  
*mutandis*, in a variety of instances. See his *Vege-*  
*table Statics*, vol. i. chap. ii. p. 84, &c.

(3.) GAGE, BUCKET SEA, an instrument contri-  
ved by Dr Hales to find the different degrees of  
coolness and saltness of the sea, at different depths.  
It consists of a common household pale or bucket,  
with two heads; which have each a round hole in  
the middle, about 4 inches in diameter; covered  
with square valves opening upward; and that they  
may both open and shut together, there is a small  
iron rod fixed to the upper part of the lower valve,  
and the other end to the lower side of the upper  
valve. So that as the bucket descends with its  
sinking weight into the sea, both the valves may  
open by the force of the water, which thus has a  
free passage through the bucket. But when the  
bucket is drawn up, then both the valves shut by  
the force of the water at the upper part of the  
bucket

bucket; so that the bucket is drawn up full of the lowest sea water to which it has descended. When the bucket is drawn up, the mercurial thermometer fixed in it is examined; but great care must be taken to observe the degree at which the mercury stands, before the lower part of the thermometer is taken out of the water in the bucket, lest it be affected by the different temperature of the air. To keep the bucket in a right position, there are 4 cords fixed to it, reaching about 3 feet below it; to which the sinking weight is fixed. The result of several trials with this gage was, that when it was let down to different depths, from 360 feet to 5,346 feet, in lat. 25. 13. N. and lon. 25. 12. W. it was discovered by the thermometer, that the cold increased gradually in proportion to the depths, till it descended to 3,900 feet, viz. near three-fourths of a mile, whence the mercury in the thermometer came up at 53°; and though it afterwards sunk to 5,346 feet, i. e. a mile and 66 feet, it came up no lower; the warmth of the water upon the surface, and that of the air, was all that time 84°. When the water in the bucket was become of the same temperature with that on the surface of the sea, equal quantities of both were weighed and tried by the hydrometer; that from below was found to be the heaviest, and consequently the saltest. Dr Hales was probably led to the construction of this sea-gage from an instrument invented by Dr Hook, and designed for the same purpose. See *Plate CLX, fig. 2.* This consists of a square wooden bucket C, whose bottoms are so contrived, that as the weight A sinks the iron B, to which the bucket C is fastened by two handles D, D, on the end of which are the moveable bottoms or valves E E, and thereby draws down the bucket, the resistance of the water keeps up the bucket in the posture C, whereby the water, whilst the bucket is descending, hath a free passage through it; whereas, as soon as the bucket is pulled upwards by the line F, the resistance of the water to that motion beats the bucket downwards, and keeps it in the posture G, whereby the included water is kept from getting out, and the ambient water kept from getting in. *Phil. Transf. N° 9, p. 149. and N° 24, p. 447. or abr. vol. ii. p. 260*

(9.) GAGE, SEA, an instrument invented by Dr Hales and Dr Desaguliers for finding the depth of the sea; the description whereof is this: AB, *Plate CLXI, fig. 3,* is the gage-bottle, in which is cemented the gage-tube Ff in the brass cape at G. The upper end of the tube F is hermetically sealed, and the open lower end f is immersed in mercury, marked C, on which swims a small thickness or surface of treacle. On the top of the bottle is screwed a tube of brass HG, pierced with several holes to admit the water into the bottle AB. The body K is a weight hanging by its shank L, in a socket N, with a notch on one side at m, in which is fixed the catch / of the spring S, and, passing through the hole L, in the shank of the weight K, prevents its falling out when once hung on. On the top, in the upper part of the brass tube at H, is fixed a large empty ball, or full blown bladder J, which must not be so large, but that the weight K may be able to sink the whole under water. *The instrument thus constructed is used in the fol-*

lowing manner. The weight K being the gage is let fall into deep water, at the bottom: the socket N is somewhat than the shank L; and therefore, after K comes to the bottom, the gage will descend till the lower part of the socket gainst the weight; this gives liberty to fly out of the hole L, and let go the when this is done, the ball or bladder buoys up the gage to the top of the water the gage is under water, the water vacates the treacle and mercury in the by its pressure force it up into the tube the height to which it has been for greatest pressure, viz. that at the bottom shown by the mark in the tube which leaves behind it, and which is the only treacle. This shows into what space air in the tube Ff is compressed; and by the height or depth of the water weight produced that compression, nothing required. If the gage-tube Ff a scale might be drawn on it with the diamond, showing, by inspection, what water stands above the bottom. But of 10 inches is not sufficient for fathom at sea, since that, when all the air in the tube is compressed into half an inch of water is no more than 634 feet, which is half a quarter of a mile. If, to come make use of a tube 50 inches long, strength may be a musket-barrel, and air compressed into 100th part of h. then by saying, as 1 : 99 :: 400 : 39600 3300 feet; even this is but little more than a mile, or 2640 feet. But since it is supposed the cavities of the sea bear relation to the mountainous parts of the globe which are more than 3 miles above the surface; therefore, to explore such great depths, Doctor contrived a new form for his gage rather for the gage tube in it, as follows: *fig. 4.* is a hollow metalline globe covered on the top with a long tube AB, which is a 9th part of that globe. On the lower end D, it has also a short tube DE, to which mercury and treacle. The air contained in the compound gage-tube is compressed as before; but the degree of compression to which the treacle has been forced, can be seen through the tube; therefore, at that end, a slender rod of metal or wood with a knob on the top of the tube AB, will mark the treacle, and show it when it is forced up. If the tube AB be 50 inches long, and bore that every inch in length should contain an inch of air, and the contents of the globe together 500 cubic inches; then when compressed within 100th part of its original extent, the treacle will not approach more than 5 inches of the top of the tube, which is to the depth of 3300 feet of water as above; at this depth will compress the air into a space nearly, viz. 2½ inches, which contains 6600. which is a mile and a quarter. A tube of that space, or 1½ inch, will show the same depth, viz. 13200 feet, or 2½ miles probably very nearly the greatest depth

**GE, SLIDING**, a tool used by mathematic-makers for measuring and set-ances.

**GS, TIDE**, is the name of an instrument terming the height of the tides by M. course of a voyage towards the south in the Resolution and Adventure, in 1774, and 1775. This instrument consists tube, whose internal diameter was  $\frac{1}{2}$  of an inch, lashed fast to a ten-foot d into feet, inches, and quarters: this tied to a strong post fixed upright and water. At the lower end of the tube ceding small aperture, through which was admitted. In consequence of this n, the surface of the water in the tube affected by the agitation of the sea, ht was not altered one roth of an inch, well of the sea was 2 feet; and M. Bailly, that with this instrument he could difference of one roth of an inch in the he tide.

**GE, WIND**, an instrument for measuring f the wind upon any given surface. It ed by Dr Lind, who gives the follow- tion of it. *Phil. Trans.* vol. lxxv. See il, fig. 5. This instrument consists of tubes AB, CD, of 5 or 6 inches in length, s, which are so much the better for be- are about four roths of an inch in dia- etry are connected together like a siphon, bent glass tube *ab*, the bore of which e roth of an inch in diameter. On the e of the leg A B there is a tube of latten is is kneed, or bent perpendicularly and has its mouth open towards F. er leg CD, is a cover with a round hole pper part of it, two roths of an inch in

This cover and the kneed tube are together by a slip of brass *e d*, which ives strength to the whole instrument, rves to hold the scale III. The kneed cover are fixed on with hard cement, wax. To the same tube is sodered a rafs *e*, with a round hole in it to receive spindle KL; and at *f* there is just ano- of brass sodered to the brass hoop *gb*, rounds both legs of the instrument. small shoulder on the spindle at *f*, upon : instrument rests, and a small nut at *i*, it from being blown off the spindle by

The whole instrument is easily turned n the spindle by the wind, so as always nd of the spindle has a screw on it; by ay be screwed into the top of a post or ide on purpose. It has also a hole at L. small lever for screwing it into wood : readiness and facility. A thin plate of odered to the kneed tube, about half an e round hole G, so as to prevent fall- ing into it. There is likewise a crook- B, (fig. 6.) to be put occasionally upon of the kneed tube F, to prevent rain g blown into the mouth of the wind t it is left out all night, or exposed in f rain. The force or momentum of the be ascertained by this instrument, by

filling the tubes half full of water, and pushing the scale a little up or down, till the o of the scale, when the instrument is held up perpendicularly, be on a line with the surface of the water in both legs of the wind gage. The instrument being thus adjusted, hold it up perpendicularly, and turning the mouth of the kneed tube towards the wind, observe how much the water is depressed by it in the one leg, and raised in the other. The sum of the two is the height of a column of water which the wind is capable of sustaining at that time; and every body that is opposed to that wind will be pressed upon by a force equal to the weight of a column of water, having its base equal to the altitude of the column of water sustained by the wind in the wind gage. Hence the force of the wind upon any body, where the surface opposed to it is known, may be easily found; and a ready comparison may be made betwixt the strength of one gale of wind and that of another. The force of the wind may be likewise measured with this instrument, by filling it until the water runs out at the hole G. For if we then hold it up to the wind as before, a quantity of water will be blown out; and if both legs of the instrument are of the same bore, the height of the column sustained will be equal to double the column of water in either leg, or the sum of what is wanting in both legs. But if the legs are of unequal bores, neither of these will give the true height of the column of water which the wind sustained. But the true height may be obtained by the following formulae. Suppose that after a gale of wind which had blown the water from A to B, fig. 7, forcing it at the same time through the other tube out at L, the surface of the water should be found standing at some level DG, and it were required to know what was the height of the column EF or AB, which the wind sustained. In order to obtain this, it is only necessary to find the height of the columns DB or GF, which are constantly equal to one another; for either of these added to one of the equal columns AD, EG, will give the true height of the column of water which the wind sustained. I. Let the diameters AC, EH, of the tubes, be respectively represented by  $cd$ ; and let  $a=AD$ , or EG, and  $x=DB$ , or GF: Then it is evident, that the column DB is to the column EG, as  $c^2x$  to  $d^2a$ . But these columns are equal.

Therefore  $c^2x=d^2a$ ; and consequently  $x=\frac{d^2a}{c^2}$ .

II. But if at any instant of time whilst the wind was blowing, it was observed, that, when the water stood at E, the top of the tube out of which it is forced, it was depressed in the other to some given level BF, the altitude at which it would have stood in each, had it immediately subsided, may be found in the following manner: Let  $l=AB$  or EF.—Then it is evident that the column DB is equal to the difference of columns EF, GF. But the difference of these columns is as  $d^2b-a^2x$ ;

and consequently  $x=\frac{d^2b}{c^2+d^2}$ . For the cases when

the wind blows in at the narrow leg of the instrument: Let  $ab=EF=l$ ,  $ED$  or  $AD=a$ ,  $GF=$   
 $DB=x$ , and the diameters  $EH, GA$ , respectively

$\equiv d, c$ , as before. Then it is evident, that the column AD is to the column GF as  $ac^2$  to  $d^2x$ . But these columns are equal; therefore  $d^2x \equiv ac^2$ ; and

consequently  $x \equiv \frac{ac^2}{d^2}$ . It is also evident that the

column AD is equal to the difference of the columns AB, DB; but the difference of these columns is as  $bc^2 - c^2x$ . Therefore  $d^2x \equiv bc^2 - c^2x$ .

Whence we get  $x \equiv \frac{bc^2}{d^2 + c^2}$ . The use of the small

tube of communication  $a b$ , fig. 5, is to check the undulation of the water, so that the height of it may be read off from the scale with ease and certainty. But it is particularly designed to prevent the water from being thrown up to a much greater or less altitude, than the true height of the column which the wind is able at that time to sustain, from its receiving a sudden impulse whilst it is vibrating either in its ascent or descent. As in some cases the water in this instrument might be liable to freeze, and thus break the tubes, Dr Lind recommends a saturated solution of sea salt to be used instead of it, which does not freeze till Fahrenheit's thermometer falls to 0.

(1.) \* To GAGE. *v. a.* [*gager*, French.] 1. To wager; to depon as a wager; to impawn; to give as a caution, pledge, or security.—

A moiety competent

Was gaged by our king, *Shak Hamlet*.—He found the Turkish merchants making merr'y: unto these merchants he gave due salutations, gaging his faith for their safety, and they likewise to him. *Knolles's History*. 2. To bind by some caution or surety; to engage.—

My chief care

Is to come fairly off from the great debts  
Wherein my time, something too prodigal,  
Hath left me gaged. *Shakespeare*.

3. To measure; to take the contents of any vessel of liquids particularly. More properly *gauge*. See GAUGE.—

We shall see your bearing.

—Nay, but I bar to-night: you shall not gage me  
By what we do to night. *Shak. Merch. of Venice*.

that ye would gain the time, because ye see the  
thing is gone from me. *Dan. ii. 8.* 6. To obtain  
whatever, good or bad.—Yeshou! I not have loosed  
from Crete, and to have gain'd this harm and loss.  
*Acts, xxvii. 21.* 7. To win against opposition.—  
They who were sent to the other part, after a  
short resistance gain'd it. *Clarendon*.—

Pat fees from the defended Unbrian draws,  
And only gains the wealthy client's caule.  
*Dryden's Persius*.

O love! for Sylvia let me gain the prize,  
And make my tongue victorious as her eyes. *Pope*.  
8. To draw into any interest or party.—

Come, with presents, laden from the port,  
To gratify the queen and gain the court. *Virg.*  
If Pyrrhus must be wrought to pity,  
No woman does it better than yourself:

If you gain him, I shall comply of course. *Phil.*  
9. To obtain as a wooer.—

He never shall find out fit mate, but such  
As some misfortune brings him, or mistake,  
Or whom he wishes most shall seldom gain  
Through her perverse, but shall see her gain'd  
By a far worse. *Milton.*

to To reach; to attain.—  
The West still glimmers with some streaks of  
day:

Now spurs the lated traveller apace,  
To gain the timely inn. *Shak. Macbeth*.

Death was the post, which I almost did gain:  
Shall I once more be tost into the main? *Waller*.  
Sun! sound his praise

In thy eternal course, both when thou climb'st,  
And when high noon hast gain'd, and when thou  
fall'st. *Milton*.

—We came to the roots of the mountain, and  
had a very troublesome march to gain the top of  
it. *Addison on Italy*.—

Thus sav'd from death, they gain the Phestan  
shores,

With shatter'd vessels and disabled oars. *Odyss.*

11. To GAIN over. To draw to another party or  
interest.—The court of Hanover should have en-  
deavoured to gain over those who were represent-  
ed as their enemies. *Swift*.

(2.) \* To GAIN. *v. n.* 1. To grow rich; to have  
advantage; to be advanced in interest or happi-  
ness.—Thou hast taken usury and increase, and  
thou hast greedily gained of thy neighbours by ex-  
tortions. *Isak. xxii. 12.* 2. To encroach; to come  
forward by degrees: with *on*.—

When watchful herons leave their watry stand,  
And mounting upward with erected flight,  
Gain on the skies, and soar above the fight.

*Dryden's Virgil.*  
So on the land, while here the ocean gains,  
In other parts it leaves wide sandy plains. *Pope*.

3. To get ground; to prevail against: with *on*.—  
The English have not only gained upon the Vene-  
tians in the Levant, but have their cloth in Venice  
itself. *Addison*. 4. To obtain influence with: with  
*on*.—My good behaviour had gained so far on the  
emperor, that I began to conceive hopes of liber-  
ty. *Swift*.

(4.) To GAIN THE WIND, in sea language, is  
to arrive on the weather side or to windward of  
some

some other vessel in sight, when both are plying to windward, or sailing as near the wind as possible.

(1.) GAINAGE, GAINAGIUM, in ancient writers, signifies the draught oxen, horses, wain, plough, and furniture, for carrying on the work of tillage by the yokemen and villains. Gainage is the same with WAINAGE. Bracton, lib. 1. cap. 9. speaking of lords and servants, says, *Ut si eos destruant, quod solum non possit eis esse wainagium suum.* And again, lib. iii. tract. 2. cap. 1. *Filii non amerciantur, nisi salvo wainagio suo.* For anciently, as it appears both by Magna Charta and other books, the villain, when amerced, had his gainage free, that his plough might not stand still: and the law, for the same reason, still allows a like privilege to the husbandman, that is, his draught horses are not in many cases distrainable.

(2.) GAINAGE is also used for the land itself, or the profit raised by cultivating it.

GAINBATESA, a town of Naples, in the county of Molise, 18 miles ESE. of Molise.

\* GAINER. *n. f.* [from *gain.*] One who receives profit or advantage.—The client, besides retaining a clear conscience, is always a *gainer*, and by no means can be at any loss, as seeing, if the composition be overhard, he may relieve himself by recourse to his oath. *Bacon's Off. of Alienation.*—

If what I get in empire

I lose in fame, I think myself no *gainer.* *Denb.*—He that loses any thing, and gets wisdom by it, is a *gainer* by the loss. *L'Esrange.*—By trade, we are as great *gainers* by the commodities of other countries as of our own nation. *Addison's Freeholder.*

GAINFARHN, a town of Austria, one mile SSW. of Baden.]

\* GAINFUL. *adj.* [*gain* and *ful*.] 1. Advantageous; profitable.—He will dazzle his eyes, and bait him in with the luscious proposal of some *gainful* purchase, some rich match, or advantageous project. *Soub.* 2. Lucrative; productive of money.—

Nor knows he merchants *gainful* care. *Dryd.*  
 Maro's muse commodious precepts gives,  
 Instructive to the swains, nor wholly bent  
 On what is *gainful*: sometimes she diverts  
 From solid counsels. *Philips.*

\* GAINFULLY. *adv.* [from *gainful.*] Profitably; advantageously.

\* GAINFULNESS. *n. f.* [from *gainful.*] Profit; advantage.

\* GAINGIVING. *n. f.* [*gainst* and *give.*] The same as *misgiving*; a giving against: as *gainfaying*, which is still in use, is saying against, or contradicting. *Hanmer.*—It is but foolery; but it is such a kind of *gaingiving*, as would perhaps trouble a woman. *Shak. Ham.*

\* GAINLESS. *adj.* [from *gain.*] Unprofitable; producing no advantage

\* GAINLESSNESS. *n. f.* [from *gainless.*] Unprofitableness; want of advantage.—The parallel holds too in the *gainlessness* as well as laboriousness of the work: miners, buried in earth and darkness, were never the richer for all the ore they *digged*; no more is the insatiable miser. *Decay of Piety.*

\* GAINLY. *adv.* [from *gain.*] dily; dexterously. Out of use.

\* To GAINSAY. *v. a.* [*gainst*] To contradict; to oppose; to con- to dispute against.—Speeches, which another, must of necessity be applied one and the same subject. *Hooker.*—  
 Too facile then, thou didst not  
 Nay, didst permit, approve, and

z. To deny any thing.—

I never heard yet

That any of those bolder vices w  
 Less impudence to *gain/say* what  
 Than to perform it first. *Shak.*

\* GAINSAYER. *n. f.* [from *gain* ment; adversary.—Such as may sati when suddenly, and besides expects quire the same at our hands. *Hook* for this cause, challenged as manifest Scripture, even in that which we r ture unto the people. *Hooker.*—It v of conviction to all *gain/sayers.* *Hann* fought themselves a name by being but failed of their purpose. *Fell.*

(1.) GAINSBOROUGH, a town shire, 150 miles from London, seated near the sea. It is a large well built has a pretty good trade. The north neighbourhood is noted for horse Danes, when they invaded the king their ships to this place; and their king was murdered. See EN 18. It lies 12 miles NW. of Lincoln W. Lat. 53. 27. W.

(2.) GAINSBOROUGH, Thomas English painter of landscapes and p at Sudbury, in Suffolk, in 1727. self taught, he united the brilliant with the simplicity of Rydrael. T was equally distinguished for his virt impoverished himself by his genero the needy. He died in 1788.

\* 'GAINST. *prep.* [for *against.*] ! Tremble, ye nations! who, se Laugh'd at those arms, that 'gain bore.

\* To GAINSTAND. *v. a.* [*ga* To withstand; to oppose; to resist word, but not in use.—Love prove ant, that durst with the sword of i *gainstand* the force of so many en *Sidney.*

OAJO, a village of Maritime A Dogado of Venice.

\* GAIRISH. *adj.* [*gerrian*, to d 1. Gaudy; showy; splendid; fr four will outrage in apparel, hug strous hats, and *gairish* colours. *A*

I call'd thee then poor shadow |  
 The presentation of but what I w

 Where no profaner eye may look  
 Hide me from day's *gairish* eye.

magantly gay; flighty.—Fame and glory a man out of himself: it makes the mind gairish, scatters the spirits, and leaves a dissolution upon all the faculties. *Soub.*  
**RISHNESS.** *n. f.* [from *gairish*.] 1. Fine-tling gaudiness. 2. Flighty or extravagant. —Let your hope be without vanity, or of spirit, but sober, grave, and silent.

**ARLOCH.** [Gael. *i. e.* a short lake.] a Scotland, in Ross-shire, 32 miles long, and, consisting chiefly of hills and moorlands, afford good pasture, but the arable part of small extent, and consequently the corn and potatoes do not supply the necessaries 8 months in the year. The coast affords safe harbours, and is famous for its cod fisheries. Sir Hector M'Kenzie the 2d, sends to market annually from 30, to 40, exclusive of the quantity consumed at home. The population in 1792, stated by Sir Dan. M'Intosh, in his report to Sir J. was 2100, and had increased 150, in 1800. Two persons died lately aged 100 each.

**ARLOCH,** a small lake in the above parish, to which it gives name, so close by the sea that the sea covers it at high tides.

**ARLOCH BAY,** a bay on the W. coast of Ross-shire, famous for its fishery of cod, &c. It is one of the Orkney Islands.

**ERN,** a town of Germany, in Stiria. *G. n. f.* [*gat*, Dutch.] 1. A way; as, *gait*.—

God youth, address thy *gait* unto her; her loved knees; stand at her door. *Sbak.*  
 ; walk.—

Thought regarding, they kept on their *gait*, her vain allurements did forsake. *F. 2.*  
 art so lean and meagre waxen late,  
 hence thy legs uphold thy feeble *gait*.

*Hubberd's Tale.*  
 inner and air of walking.—  
 Juno comes; I know her by her *gait*.

*Sbak.*  
 in his person, in his aspect, the appearance of a great man, which he preserved in his old age. *Clare.*—

A third, who, by his *gait* and demeanour, seems the prince of hell.

*Milton.*  
 Leviathans  
 wing, unwieldy, enormous in their *gait*.

*Milton.*  
 I describ'd his way,  
 on speed, and mark'd his airy *gait*.

**OR GALA WATER,** a river of Scotland, in the county of Dumfries, which runs into the Tweed, about 2 miles above Melrose.

**TITES,** in natural history, a substance resembling FRENCH CHALK, in many respects different from it in colour. The ancient Egyptians used it in medicine as an astringent, and for the cure of ulcers of the eyes. At present it is little regarded, being esteemed inferior to MOROCHTHUS.

**GALACTOPHAGI,** and } [from *γαλακτοφάγοι*, *galactophagoi*, milk; *φαγω*, I eat; and *πρω*, I drink.] in antiquity, persons who lived wholly on milk, without corn or any other food. Certain nations in Scythia Asiatica, as the Getz, Nomades, &c. are famous in ancient history, as *galactophagi*. Homer makes their eulogy, *Iliad*, lib. iii. Ptolemy, in his geography, places the Galactophagi between the Rhiphæan mountains on one side, and the Hircanian sea on the other.

**GALACZ,** GALASI, or GALATZ, a town of European Turkey, in Bulgaria, near the Danube, 54 miles W. of Ismael, and 20 SSW. of Bender; between the Pruth and the Seret.

\* **GALAGE.** *n. f.* A shepherd's clog. Not in use.—  
 My heart's blood is nigh frome, I feel;  
 And my *galage* grown fast to my heel. *Spenser.*

**GALAM,** a fort of Africa, on the Senegal, built by the French, but ceded to Britain in 1763, it was taken by the French during the American war, and again ceded to Britain in 1783.

**GALAN,** a town of France, in the dep. of the Upper Pyrennees, 15 miles E. of Tarbes.

(1.) \* **GALANGAL.** *n. f.* [*galange*, French.] A medicinal root. The lesser *galangal* is in pieces, about an inch or two long, about the thickness of a man's little finger; of a brownish red colour, hot and pungent. The larger *galangal* is in pieces, about two inches or more in length; and an inch in thickness; its colour is brown, with a faint cast of red in it: it has a disagreeable but much less acrid and pungent taste. *Hill.*

(2.) **GALANGAL.** See KEMPFERIA, N° 1.

**GALANTHUS,** the SNOW-DROP, in botany: A genus of the monogynia order, belonging to the hexandria class of plants; and in the natural method ranking under the 19th order, *Spatheaceæ*. There are 3 concave petals; and the nectarium consists of 3 emarginated petals; the stigma is simple. There is but one species, viz. the

**GALANTHUS NIVALIS,** a bulbous rooted flowery perennial, rising but a few inches in height, and adorned at top with small tripetalous flowers of a white colour. There are 3 varieties, viz. the common single-flowered snow-drop, the semi-double snow-drop, and the double snow-drop. They are beautiful little plants; and are much valued on account of their early appearance, often adorning the gardens in January or February, when scarce any other flower is to be seen. They frequently burst forth when the ground is covered with snow, and continue very often till the beginning of March, making a very ornamental appearance, especially when disposed in clusters towards the fronts of the borders, &c. The single kind comes first into bloom, then the semi-double, and after that the double. They succeed in any soil, and multiply exceedingly by offsets from the roots.

**GALARED,** a town of Sweden, in Blekingen.  
**GALARGUES,** or } a town of France, in the  
**GALARQUES,** } dep. of Gard, 6 miles SE. of Sommieres.

**GALARS,** a town of Transylvania, 16 miles SE. of Hunyad.

(1.) **GALASHIELS,** a parish of Scotland, in the

the counties of Roxburgh and Selkirk, of an irregular triangular form, about  $5\frac{1}{2}$  miles broad, seated on the Tweed, which divides it into two parts, and separates the counties. The surface is hilly and affords good pasturage. The climate is dry and healthy. The soil, S. of the Tweed, is deep, heavy, cold and wet; but on the N. dry, shallow, and remarkably full of small stones; which, nevertheless, it has been found dangerous to remove, as they reflect heat, retain moisture, and thus contribute to the production of most luxuriant crops. The parish contains 3000 acres, of which 1500 are arable, 6000 in pasture, 200 under wood, and 200 in moor, lakes, banks of rivers, &c. Oats, barley, wheat, peas, clover, and potatoes, are raised. The population in 1791, stated by the rev. Mr Douglas, in his report to Sir J. Sinclair, was 914, and had decreased 84, since 1755. The number of sheep was about 5000.

(2.) GALASHIELS, a small town in the above parish, containing 581 inhabitants in 1791. It has a considerable manufacture of coarse woollen cloth; 43 looms being employed, and 52,000 yards made annually. Tanning, carpentry, and other branches are also carried on. It has 5 fairs, in March, July, Sept. Oct. and Nov. It is seated at the conflux of the Gala and Tweed, 25 m. S. by E. of Edinburgh, and 5 N. of Selkirk.

GALASI. See GALACZ.

GALASO, a town of Naples in Otranto.

(1.) GALATA, a great suburb of Constantinople, opposite to the seraglio, on the other side of the harbour, where the Greeks, Armenians, Franks, Christians, and Jews inhabit, and are allowed the exercise of their respective worships.

(2.) GALATA, an island near the coast of Tunis. Lon. 9. 30. E. Lat. 38. 15. N.

GALATÆ, the inhabitants of GALATIA.

GALATÆA, or Γ in mythology, a sea nymph, GALATHÆA, } daughter of Nereus and Doris. She was beloved by the Cyclops Polyphemus, whom she treated with disdain; while Acis, a shepherd of Sicily, enjoyed her affection. The Cyclops killed his rival with a piece of a rock while he reposed on the bosom of Galatæa. The nymph, inconsolable for the loss of Acis, as she could not restore him to life, changed him into a fountain.

GALATEO, a town of Naples in Calabria Ultra, 8 miles ESE. of Nicotera.

GALATI, a town of Sicily, in the valley of Demona, 12 miles SW. of Pati.

GALATIA, the ancient name of a province of Asia Minor, now called AMASIA: It was bounded on the E. by Cappadocia, on the S. by Pamphilia, on the N. by the Euxine sea, and on the W. by Bithynia. It was the N. part of Phrygia Magna; but upon being occupied by the Gauls, was called *Galatia*; and because situated amidst Greek colonies, and its natives mixed with Greeks, GALLOGRÆCIA. Strabo calls it *Galatia*, and *Gallogræcia*; hence a twofold name of the people, GALATIÆ and GALLOGRÆCI. The Greeks called it GALLIA PARVA, to distinguish it from GALLIA TRANSALPINA, both which they called *Galatia*: It was reduced by the Romans under Augustus, and now belongs to the Turks. Here St Paul founded a church. See GALATIANS, § 2.

(1.) GALATIANS, the people of GALATIA.

(2.) GALATIANS, EPISTLE TO THE, a cal book of the New Testament, written by the apostle Paul to the primitive Christians in Asia, to reclaim them from the observations and ordinances, into which they had been seduced by the Judaizing teachers.

GALATOLA, a town of Naples, in the province of Otranto, 4 miles ESE. of Nardo.

GALATON, a village of Fifeshire, in the parish of Dyfart, containing 431 inhabitants in 1791. Its population had increased 227 since 1756. Lining and nail making are the chief trades.

GALATZ. See GALACZ.

GALAX, in botany: A genus of the pentandria order, belonging to the pentandria plants; and in the natural method rank those of which the order is doubtful. The leaf is salver-shaped; the calyx decapetalous, capsular, unilocular, bivalved, and elastic.

GALAXIA, in botany: a genus of the pentandria order, belonging to the Monadelphic plants.

(1.) \* GALAXY. n. f. [γαλαξίς; galaxias] The milky way; a stream of light in the sky.

A broad and ample road, whose dust  
And pavement stars, as stars to thee;  
Seen in the galaxy. Milton's Paradise Lost.

A brown, for which heaven would  
The galaxy, and stars be tann'd. Cowley's Essay on Criticism.

Several lights will not be seen,  
If there be nothing else between;  
Men doubt, because they stand so thick  
If those be stars that paint the galaxy.

—We dare not undertake to shew what  
is brought to us by those innumerable  
ft galaxy. Bentley.

(2.) The GALAXY, is that long white track, which seems to encompass the heavens, and is easily perceivable in a clear sky, especially when the moon does not shine. It is called in Greek γαλαξίας, of γάλα, γαλαξίς, Milk, and in Latin *via lactea*, the milky way, on account of its colour and appearance. And there are many fables about the spilling of Juno's milk as the cause of its whiteness. It passes between Sagittarius and Gemini, and divides the sky into two parts; it is unequally broad; in some places single, in others double. The ancient philosophers, speak of the Galaxy as a stream of vapours, drawn into that part by certain stars disposed in the region of the heavens; and that it is the same fixed stars, and that it is the height of the highest planets, set Aristotle's opinion; placed the Galaxy in the region of the fixed stars, and concluded nothing but an assemblage of an infinity of minute stars. Since the invention of the telescope, this opinion has been abundantly confirmed. By directing a good telescope to any part of the milky way, where before we only saw a whitened stream, we now discern an innumerable multitude of little stars, so remote, that they confound them. (See ASTRONOMY, B)

Monnier still disputes this opinion, and the whiteness to be occasioned by some kind of matter. See his *Inst. Astr.* p. 60.

**GA.** Serrius Sulpicius, emperor of Rome, 7th of the Cæsars, born the 24th Dec. 5. He was gradually raised to the highest of the state, and exercised his power in the most with the greatest equity. He dedicated his time to solitary pursuits, to avoid the example of Nero. Expressing his disapprobation of the emperor's oppression in the provinces, he caused him to be put to death; but he himself was the executioner, and was publicly sacrificed. When seated on the throne, he allowed himself to be governed by favourites, who oppressed the citizens. Exemptions were sold at a price; and impunity even for murder was granted with money. Such irregularities grieved the people; and Galba refusing to supply the money he had promised them, banished him in the 73d year of his age, the 6th month of his reign. The virtues which made Galba so bright in Galba, when a private man, disappeared when he ascended the throne; who had showed himself the most impartial, forgot his duty when emperor.

**GALLY,** a town of Ireland, in Limerick.

**GALBANUM.** *n. f.* We meet with it sometimes in loose granules, called drops of Galbanum, which is the purest, and sometimes in pieces. It is soft, like wax, and ductile between the fingers; of a yellowish or reddish colour; its smell is strong and disagreeable. It is of a nature between a gum and a resin, being as hard as a resin, and soluble in water as a gum, but not dissolve in oil as pure resins do. It is the produce of an umbelliferous plant. *Hill's Medic.*—I yielded indeed a pleasant odour, best myrrh; as *galbanum. Ecclef. xxiv. 15.*

**GALBANUM** issues from the stem of an erous plant, growing in Persia and many parts of Africa. See **BUBON**, § 1, 2. The juice is thick, viscid, soft, tenacious; of a strong smell, and a warm taste; the better sort is in small masses, composed of clear white particles. Geoffroy relates, that a dark greenish oil obtained from this by distillation, which, after repeated rectifications, becomes of an elegant blue colour. The purer sorts of galbanum, said by some to dissolve entirely in wine, or water; but these liquors are only parastrua with regard to this drug; nor do wine or oils prove more effectual in this respect. The best solvent is a mixture of two parts of wine and one of water. Galbanum a virtue with gum ammoniac, but is gene- rally counted less efficacious in asthma, and in hysterical complaints. It is an ingredi- ent in gum pills, the gum plaster, and some medicinal compositions.

**BIATE,** a town of the Cisalpine republic, in the dept. of Montagna, and late county of Coteda on the W. bank of lake Como, opposite to Brugg.

**BRUNN,** a town of Germany, in Austria, in the NW. of Brugg.

**DER,** a town in the Isle of Canary.

**GALE,** Dr John, an eminent minister a-

mong the Baptists, born at London in 1686. He studied at Leyden, and afterwards at Amsterdam, under Dr Limborch. He was chosen minister of the Baptist congregation at Barbican; where his preaching, being chiefly practical, was greatly re- spected by people of all persuasions. He died in 1721. Four volumes of his sermons were published after his death. His *Reflections on Dr Wall's History of Infant Baptism* is the best defence of the Baptists ever published, and the reading of that performance induced the learned Mr William Whiston and Dr Foster to become Baptists.

(2.) **GALE,** Theophilus, an eminent noncon- formist minister, born in 1628. He was invited to Winchester in 1657, and continued a stated preacher there until the re-establishment of the church by Charles II; when he rather chose to suffer the penalties of the act of conformity, than to submit to it contrary to his conscience. He was afterwards engaged by Philip lord Wharton as tu- tor to his sons, whom he attended to an academy at Caen, in Normandy; and afterwards became pastor to a congregation of Dissenters in Holborn. He died in 1678; and is principally known by an elaborate work, intitled, the *Court of the Gentiles*, calculated to show, that the Pagan philosophers derived their most sublime sentiments from the Scriptures.

(3.) **GALE,** Thomas, D. D. and F. R. S. a learned divine, born at Scruton, in Yorkshire, in 1636. He was educated at Cambridge, and became pro- fessor of Greek in that university. He was after- wards chosen head master of St Paul's school, Lon- don; and wrote those elegant inscriptions on the monument erected in memory of the conflagra- tion in 1666. In 1676, he was made a prebendary in St Paul's; and being elected a F. R. S. present- ed a Roman urn to the society. About 1697, he gave to the new library of Trinity college, in Cambridge, a great number of Arabic MSS.; and in 1697 was admitted dean of York. He died in that city in 1702; and was interred in the cathed- ral, where a monument was erected to his mem- ory. He was a great historian, one of the best Greek scholars of his age, and corresponded with the most learned men at home and abroad. He published, 1. *Historiæ Poetiæ Antiquæ Scriptores*, 8vo. 2. *Opuscula Mythologica, Ethica, & Physica*, in Gr. and Lat. 8vo. 3. *Herodoti Historia*, fol. 4. *Historiæ Anglicanæ Scriptores quinque*, in fol. 5. *Historiæ Britannicæ, Saxonicæ, Anglo-Danicæ, Scrip- tores quindecim*, fol. 6. *Rhetores Selecti, &c.*

(4.) **GALE,** Roger, F. R. & A. S. S. eldest son of the preceding (N<sup>o</sup> 3.) was educated at Trinity college, Cambridge, of which he was chosen fellow in 1697. He was M. P. for N. Allerton, in the 3 first British Parliaments. He was first Vice-pre- sident of the Society of Antiquaries, and Treas- urer to the Royal Society. He died in 1744, and was esteemed one of the most learned men of his age. He published several valuable books, par- ticularly an edition of Antoninus's Commentary.

(5.) **GALE,** Samuel, younger brother to Roger (N<sup>o</sup> 4.) was also eminent for his learning and knowledge of antiquities. He died in 1754, aged 72.

(6.) \* **GALE.** *n. f.* [*gbaling*, hasty, sudden, Ger- man.] A wind not tempestuous, yet stronger than a breeze.—

What happy gale  
Blows you to Padua here, from old Verona!

*Shakefp.*

Winds

Of gentlest gale Arabian odours fann'd  
From their soft wings, and Flora's earliest smells.

*Milton.*

Fresh gales and gentle air.

*Milton.*

Umbria's green retreats

Where western gales eternally reside. *Addison.*

(7.) GALE, in sea language, a term of various import. When the wind blows not so hard but that a ship may carry her top sails a-trip, (that is, hoisted up to the highest,) they say it is a loom gale. When it blows very strong, it is a stiff, strong, or fresh gale. See next article.

To GALE, *v. n.* When two ships are near one another at sea, and, there being but little wind blowing, one of them finds more of it than the other, they say that the one ship gales away from the other.

GALEA, in antiquity, a light casque, head-piece, or morrion, which came down to the shoulders, commonly of brass. Camillus, according to Plutarch, ordered those of his army to be of iron, as being the stronger metal. The lower part of it was called *buccula*, and on the top was a crest. The Velites wore a light galea, made of the skin of some wild beast, to make it more terrible.

GALEANO, Joseph, a learned physician of Palermo, born in 1605. He was author of several medical works, and published a Collection of the Sicilian Poets, in 5 vols. He died in 1675.

GALEASSE. See GALEASS.

\* GALEATED, *adj.* [*galeatus*, Lat.] 1. Covered as with a helmet.—A galeated echinus copped, and in shape somewhat more corick than any of the foregoing. *Woodw. on Foss.* 2. [In botany.] Such plants as bear a flower resembling an helmet, as the monkhood.

GALEGA, in botany, a genus of the decandria order, belonging to the diadelphica class of plants; and in the natural method ranking under the 3rd order, *Papilionacee*. The calyx is composed of subulated nearly equal dents or segments; the legumen has oblique striæ, and seeds lying between them.

GALEGOS, a town of Portugal, in Entre-duero-e-minho, 4 miles NE. of Barcelos.

(1.) GALEN, Claudius, prince of the Greek physicians after Hippocrates, was born at Pergamus, in Asia Minor, A. D. 131. His father being possessed of a fortune, and well versed in philosophy, astronomy, geometry, and architecture, instructed his son in the first rudiments of learning, and afterwards procured him the greatest masters of the age. Galen, having finished his studies, chose physic for his profession, studied the works of Hippocrates, and at length resolved to travel, to converse with the most able physicians in all parts, and to take every opportunity of inspecting on the spot the plants and drugs of the countries thro' which he passed. With this view he went to Alexandria, where he staid some years; thence he travelled through Cilicia, Palestine, Crete, Cyprus, Lemnos, and the Lower Tyria; in which last places he obtained a thorough insight into the nature of the Lemnian earth, and the opobalsamum;

after which he returned home by sea. Galen had been 4 years at Pergamus, practice was attended with extraordinary success when some commotions induced him to Rome, where he resolved to settle: but he gave of his superior skill, added to shown him by several persons of very high rank, created him so many enemies among the faculty, that he was obliged to depart after having resided there 4 or 5 years, not long returned to Pergamus, when called by the emperors Aurelius and Verus to their death, he retired to his native country where he died, about A. D. 200. He was a Greek; and is said to have composed 2000 works which were unhappily burnt in the temple of the Vestal Virgins. The best editions of those that remain, printed at Basil in 1538, in 5 vols. and in 1625, in 7. Galen was of a weak constitution, as he himself asserts; but he overcame this, by his temperance and skill in exercise, and lived to a great age. One of his rules was to rise from table with some degree of appetite. He is justly considered as the greatest physician of antiquity, next to Hippocrates; he performed such surprising cures, that he was accused of magic.

(2.) GALEN, in geography, a military island of New York, 12 miles NW. of the city.

(1.) GALENA, in mineralogy, a species of lead ore.

(2.) GALENA, in ancient pharmacy given by Andromachus to the theriac effect in bringing on a pleasing calm blood and spirits.

GALENBULON, a town of Madagascar, 71. 50. E. of Ferro. Lat. 17. 20. S.

GALENIA, in botany, a genus of the order, belonging to the octandria class and in the natural method ranking under the order, *Succulente*. The calyx is trisid; corolla; the capsule is roundish and didymous.

(1.) GALENIC, or } *adj.* in medicine  
(1.) GALENICAL, } plied to that considering and treating diseases, from the principles of Galen, or introduced by him. This author, collecting and digesting the principles of physicians before him had done, and every thing according to the strictest of the Peripatetics, set physic on a new foundation, introduced the doctrine of the 4 elemental qualities and their degrees; and of humours, or temperaments.

(2.) GALENICAL is more frequently contradistinguished from *chemical*. The of *galenical* and *chemical* was occasioned by the division of the practitioners of medicine into GALENISTS and CHEMISTS, on the introduction of chemistry into medicine. The chemists, by attributing to themselves every kind of merit, stirred up an opposition to their party founded on the invariable adherence of the faculty to the ancient practice. And this division has long ceased, yet the distinctions which resulted from it is still to be seen.

(3.) GALENICAL MEDICINES are those which are formed by the easier preparations

ic. by infusion, decoction, &c. and by multiplying ingredients; while chemists draw their more intimate and virtues by means of fire and elaborate ions, as calcination, digestion, fermenta-

**ALENISTS**, a denomination given to sicians as practise, prescribe, or write on ical principles. They stand opposed to *ists*. See **GALENICAL**, § 2. The galechemists are now accommodated; and our physicians use the preparations and of both.

**ALENISTS**, or } in church history, a branch  
**ALENISTS**, } of Mennonites or Anabap-  
take in several of the opinions of the  
or rather Arians, touching the divinity  
aviour. In 1664, the Waterlandians di-  
two parties, of which the one were  
*ists*, from their leader Abraham Gale-  
the other *Apostolians*.

**ALENUS**, Abraham, a learned and elo-  
of Amsterdam, who considered  
as a system that laid much less  
in this practice; and who was for ta-  
the communion of the Mennonites all  
to acknowledge the divine origin of the  
the Old and New Testament, and led  
virtuous lives.

**ALENUS**, Claudius. See **GALEN**, N<sup>o</sup> 1.  
**ION**. See **GALLEON**.

**ALOPHIS**, in botany, a genus of the angio-  
order, belonging to the didynamia class  
1; and in the natural method ranking un-  
4d order, *Ferticillate*. The upper lip  
rolla is a little crenated or arched; the  
more than bicentate.

**ALOTTI**, Martio, secretary to Matthias,  
Hungary, tutor to his son John, and li-  
Buda, was born at Narni, in Italy. He  
d a work entitled, *De homine interiore et*  
*ejus*, in 4to. and a collection of bon mots  
Matthias. Being invited by Lewis XI. of  
to his court, he went to Lyons, but meet-  
ing unexpectedly, he, in descending hap-  
ly his respects to the monarch, fell, and be-  
corpulent, was so much hurt, that he  
after.

**ALERA**, a town of Italy, in the prov. of  
nio, between Rome and Bracciano.

**ALERA**, two towns of Spain; 1. in  
2, 5 miles SSW. of Tortosa; 2. in Gra-  
miles SSE. of Huefca.

**ALERIA**, a gulf on the NW. of Corfica.

**ALERICULATE**. *adj.* [from *galerus*, Lat.]  
as with a hat.

**ALERICULUM**, in Roman antiquity, a cap  
th by men and women, consisting of skin,  
dressed with human hair, that the arti-  
ering could scarcely be distinguished from  
real. They were used by those whose  
s thin; and by wrestlers, to keep their  
r from receiving any injury from the nasty  
h which they were rubbed all over before  
excised. They seem to have resembled  
s.

**ALIRON**, a town of Celebes, 15 miles from  
r, famous for its fishery.

**GALETTA**, an island in the Mediterranean,  
anciently called **ZGIMURUS**.

**GALEY**, a river of Ireland, which rises in Li-  
merick, runs through Kerry, and falls into the  
Feal.

**GALFALLY**, a town of Ireland, in Tipperary,  
32 miles SE. of Limerick. Lon. 8. 20. W. Lat.  
52. 15. N.

**GALGACUS**, the name given by Tacitus and  
other Roman historians, to the King of Scots,  
who opposed Agricola, called by Buchanan, and  
our other Scots historians, *Corbræus Galdus*. See  
**AGRICOLA**, and **SCOTLAND**.

**GALGON**, a town of France, in the dept. of  
Gironde, 5 miles N. of Libourne.

**GALHARA**, a town of Portugal, in Beira;  
22 miles NE. of Coimbra.

**GALIC**. See **GÆLIC**, § 1, 2.

**GALICANA**, a town of Italy, in Lucca.

(1.) **GALICIA**, a province of Spain, bounded  
on the N. and W. by the ocean, on the S. by  
Portugal, and on the E. by Asturias and Leon.  
The air is temperate along the coast, but in other  
places, cold and moist. Galicia affords good pas-  
ture, but is not populous. It produces wine, flax,  
citrons and other fruits: and the mountains af-  
ford gold, copper, lead, iron, and vermilion,  
wood, &c. It contains 64 towns and cities, and  
about 242,264 families. It was anciently a king-  
dom under the Suevi. St Jago di Compostella is  
the capital.

(2.) **GALICIA**, or **GUADALAXARA**, a country  
of Mexico, containing 7 provinces. It has mines  
of silver and copper, and abounds with corn.  
The climate is temperate. Guadalaxara is the  
capital.

(3.) **GALICIA**, the modern name given to a  
large country in the S. of Poland, which was  
seized on by the late emp. Joseph II, and annex-  
ed to the Austrian dominions. It comprehends  
a part of Red Russia and the palatinate of Lem-  
berg; and is separated from Hungary by the Car-  
pathian mountains. It is 280 miles long, and from  
60 to 100 broad. Lemberg, or Leopold, is the  
capital. Its chief articles of commerce are corn,  
wood, cattle, hides, wax, honey, salt, copper,  
lead and iron.

**GALIGNANA**, a town of Maritime Austria,  
in the ci-devant Venetian Istria, 14 miles NE. of  
Rovigno.

**GALILEE**, in ancient geography, a province  
of Judea, bounded by mount Lebanon on the N.  
by the Jordan and the sea of Galilee on the E. by  
the Chifon on the S. and by the Mediterranean on  
the W. It was the scene of many of our Saviour's  
miracles; but the bounds of the country are not  
now well known, nor the places where many of  
the towns stood. It belongs to the Turks.

**GALILEANS**, a sect of the Jews. Their found-  
er was one Judas, a native of Galilee, who, esteem-  
ing it an indignity for the Jews to pay tribute to  
strangers, raised up his countrymen against the  
edict of Augustus, which had ordered a taxation  
of all the subjects of the Roman empire. They  
insisted that God alone should be owned as Lord.  
In other respects they were of the opinion of the  
Pharisees; but, as they judged it unlawful to pray  
for infidel princes, they separated from the rest  
of

of the Jews, and performed their sacrifices apart. As our Saviour was supposed to be a native of Galilee, and his apostles were mostly Galileans they were suspected to be of this sect; and it was on this principle, as St Jerome observes, that the Pharisees laid a snare for him; by asking, Whether it was lawful to give tribute to Cæsar; that in case he denied it, they might have an occasion of accusing him.

(1.) GALILEO, Galilei, the famous mathematician and astronomer, was the son of a Florentine nobleman, and born in 1564. He had from his infancy a strong inclination to philosophy and mathematics; and made prodigious progress in these sciences. In 1592, he was chosen professor of mathematics at Padua; and during his abode there invented the telescope; or, according to others, improved that instrument, so as to make it fit for astronomical observations: See *ASTRONOMY, Index*. In 1611, Cosmo II, grand duke of Tuscany, lent for him to Pisa, where he made him professor of mathematics, with a handsome salary; and soon after inviting him to Florence, gave him the office and title of *principal philosopher and mathematician to his highness*. He had been but a few years at Florence, before he was convinced, that Aristotle's doctrine, however ill-grounded, was held too sacred to be called in question. Having observed some solar spots in 1612, he printed that discovery in 1613, at Rome; in which, and in some other pieces, he ventured to assert the truth of the Copernican system, and brought several new arguments to confirm it. For these he was cited before the inquisition; and, after some months imprisonment, was released upon a simple promise, that he would renounce his heretical opinions, and not defend them by word or writing. But having afterwards, in 1632, published at Florence his "Dialogues of the two greatest systems of the world, the Ptolemaic and Copernican," he was again cited before the inquisition, and committed to the prison of that dreadful court at Rome. On June 22d N. S. 1632, the congregation convened; and in his presence pronounced sentence against him and his books, obliging him to abjure his errors in the most solemn manner; committed him to the prison of their office during pleasure; and enjoined him, as a saving penance, for three years, to repeat once a-week the 7 penitential psalms: reserving to themselves, however, the power of moderating, changing, or taking away altogether or in part, the above-mentioned punishment and penance. On this sentence, he was detained a prisoner till 1634: and his *Dialogues of the system of the World* were burnt at Rome. He lived ten years after this, 7 of which were employed in making still further discoveries with his telescope. But by the continual application to that instrument, added to the damage he received in his sight from the nocturnal air, his eyes grew gradually weaker, till he became totally blind in 1639. He bore this calamity with patience and resignation, worthy of a great philosopher. The loss neither broke his spirit, nor hindered the course of his studies. He supplied the defect by constant meditation: whereby he prepared a large quantity of materials, and began to dictate his *own conceptions*; when, walking away by de-

grees, he expired at Arcetti near Florence Jan. 1642, N. S. aged 78. Among various inventions of which Galileo was the author that of the simple pendulum, which he had in use of in his astronomical experiments. He wrote a great number of treatises, several of which published in a collection by Signor Mendel under the title of *L'opera di Galilei Galileo*. Some of these, with others of his pieces, translated into English and published by T. Salisbry, Esq; in his mathematical collection &c. in two volumes folio. A volume also of letters to several learned men, and solutions of several problems, were printed at Bologna. Besides these, he wrote many others, which unfortunately lost through his wife's superstition, who, solicited by her confessor, gave him to peruse her husband's MSS. of which he took away as many as he thought not fit to be published.

(2.) GALILEO, Vincenzio, the son of the preceding, was also an eminent mathematician; is famous for improving his father's discovery of the pendulum, by applying it to clocks. He made the experiment at Venice in 1649; and M. H. afterwards carried the invention to perfection.

GALINACEUS LAPIS. See GALLIUM.

GALINGEN, a town of Prussia, in the province of Natagen; 4 miles S. of Bartenstein.

GALINHAS, a river of Africa, which rises in Hondo, and runs into the Atlantic 33 miles S. of Scherbro.

\* GALIOT. *n. f.* [*galiotte*, French.] A small galley or sort of brigantine, built very light, and fit for chase. It carries but one mast, and has three patereroes. It can both sail and row, and has 16 or 20 seats for the rowers, with a man to each oar. *Dist.*—Barbarossa sent a number of notable pyrates with thirty galiots, who, in the year 1571, were valiantly encountered, and defeated, again to their galiots. *Knolles's Hist.*

GALIPAGO ISLES, several uninhabited islands in the South Sea, on both sides of the equator, near Terra Firma, belonging to Spain. Lat. between 83. 40. and 89. 30. W. Lat. from 3° to 10° N.

GALISTEO, a town of Spain, in the province of Extremadura, 10 miles E. of Coria.

(1.) GALITSCH, a town of Russia, in the province of Kholm, 56 miles ENE. of Kholm. Lon. 60° 15' E. of Ferro. Lat. 57. 56. N.

(2.) GALITSCH, a large lake of Russia, 50 miles S. of Kholm, and 50 miles in circumference.

GALIUM, in botany, a genus of the tetragynia order, belonging to the tetrandria class of plants; and in the natural method ranking in the 47th order, *Stelutæ*. The corolla is tubular, 5-petalous and plain; and there are two rows of seeds. There are many species; of which the most remarkable are the following:

1. GALIUM APERINE, CLIVERS, or GRASS, has a square, very rough, jointed, weak stem, 2, 3, or 4 feet long, and several upright branches are opposite; the joints hairy at the top; the leaves, consisting of 8 or 10 at each joint, narrow, pointed, above rough, beneath smooth and carinate: the seeds are rough; flowers small, few, on slender foot-stalks on the top of the branches. It is common in fields by the

&c. The expressed juice of this plant  
 usually, and the bruised leaves applied  
 poultice, are said to have been used  
 as a cure for the cancer. The effects  
 though sure, the course, it is said,  
 is to be continued for 9 or 10 months.  
**LIUM VERUM**, the **YELLOW LADY'S**  
**W.** has a firm, erect, brown, square,  
 leaves generally 8 in each whirl, linear,  
 brittle, and often reflex; branches short,  
 two from each joint, terminating in  
 small yellow flowers. It grows com-  
 dry ground, and on road sides. The  
 agulate boiling milk; and the best  
 beefe is said to be prepared with them.  
 prescribe them in hysteric and epilep-  
 Boiled in alum water, they tinge wool  
 The roots dye a red not inferior to mad-  
 which purpose they are used in the island  
 in the *Edinburgh Medical Commentaries*  
 accounts of some violent scorbutic com-  
 ing cured by the juice of this plant.  
 goats eat the plant; horses and swine  
 cows are not fond of it.

**GALL.** *n. f.* [*gala*, Saxon; *galle*,  
 1. The bile, an animal juice remarkable  
 posed bitterness.—

like my milk for gall, you murdering  
 sister! *Sbak.*

my tongue, a heart of gall,  
 f's spring, but sorrow's fall. *Sbak.*

sition informs us of a vulgar error, ter-  
 gall bitter, as their proverb implies  
 bitter as gall; whereas there's nothing  
 sweeter; and what is most unctuous must  
 take of a sweet favour. *Harvey.*—Gall is  
 a resolvent of curdled milk: *Boerhaave*

at a time one drop of the gall of an eel  
 cels. *Arbut.* 2. The part which con-  
 sists.—The married couple, as a testimony  
 concord, did cast the gall of the sacri-  
 the altar. *Brown.* 3. Any thing ex-  
 bitter.—

either write, my queen,  
 with mine eyes I'll drink the words you  
 said,

the ink be made of gall. *Sbak. Cymb.*  
 Poison be their drink.

more than gall, the daintiest meat they  
 eat! *Sbak.*

kill insults, and you must still adore;  
 that the honey's much, the gall is more.

*Dryd. Juv.*  
 or; malignity.—They did great hurt  
 title, and have left a perpetual gall in the  
 the people. *Spenser on Ireland.* 5. Anger;  
 or mind.—

lose your hero were a lover,  
 he before had gall and rage;  
 was dispirited and low,

as the fight, and shuns the blow. *Prior.*  
 it hurt by fretting off the skin. [From

 as the former, as a gangrene is to a gall

*Gov. of the Tongue.* 7. [From *galla.*]  
 gallnuts are preternatural and accident-  
 ally, produced on trees; but those of the

**PART. I.**

oak only are used in medicine. We have *Orien-  
 tal* and *European galls*: the *Oriental* are brought  
 from *Aleppo*, of the bigness of a large nutmeg,  
 with tubercles on their surface, of a very firm tex-  
 ture, and a disagreeable, acerb, and astringent  
 taste. The *European galls* are of the same size,  
 with perfectly smooth surfaces: they are light,  
 often spongy, and cavernous within, and always  
 of a lax texture. They have a less austere taste,  
 and are of much less value than the first sort.  
 The general history of galls is this: An insect of  
 the fly kind wounds the branches of the trees, and  
 in the hole deposits her egg: the lacerated vessels  
 of the tree, discharging their contents, form a  
 tumour or woody case about the hole, where the  
 egg is thus defended from all injuries. This tu-  
 mour also serves for the food of the tender mag-  
 got, produced from the egg, which, as soon as  
 it is in its winged state, gnaws its ways out, as  
 appears from the hole found in the gall; and  
 where no hole is seen, the maggot, or its remains,  
 are sure to be found within. It has been observed,  
 that the oak does not produce galls in cold coun-  
 tries: but this observation should be confined to  
 the medicinal galls; for all those excrescences  
 which we call oak-apples, oak-grapes, and oak-  
 cones, are true galls, though less firm in their  
 texture. *Hill.*—Besides the acorns, the oak bear-  
 eth galls, oak-apples, and oak-nuts. *Bacon's*  
*Nat. Hist.*—*Malpighi*, in his treatise of galls, un-  
 der which name he comprehends all preternatural  
 and morbose excrescences, demonstrates that all  
 such excrescences, where any insects are found,  
 are excited by some venenose liquor, which, to-  
 gether with their eggs, such insects shed. *Ray on*  
*Creation.*—The *Aleppo galls*, wherewith we make  
 ink, are no other than cases of insects, which are  
 bred in them. *Derham.*

(2.) **GALL**, in the animal economy, (§ 1. *def.*  
 1.) See **BILE**, § 1, and **ANATOMY**, § 300. Gall  
 was generally given amongst the Jews to persons  
 suffering death under the execution of the law, to  
 make them less sensible of their pain; but gall  
 and myrrh are supposed to have been the same  
 thing; because at our Saviour's crucifixion, St  
 Matthew says, they gave him vinegar to drink  
 mingled with gall; whereas St Mark calls it wine  
 mingled with myrrh. Perhaps they distinguished  
 every thing bitter by the name of gall. The  
 Greeks and Romans also gave such a mixture to  
 persons suffering a death of torture. Many ex-  
 periments have been made upon the gall of differ-  
 ent animals, but few conclusions can be drawn  
 from them with any certainty; as there must al-  
 ways be a considerable difference between the  
 effects of acids, or other menstria, upon dead  
 matter, and in the living system. Dr *Perclval*,  
 however, hath shown, that putrid bile may be  
 perfectly corrected and sweetened by an admixture  
 of the vegetable acids, vinegar, and juice of le-  
 mons. These, he observes, have this effect much  
 more completely than the mineral ones; and  
 hence, he thinks, arises the great usefulness of the  
 vegetable acids in autumnal diseases; which are  
 always attended with a putrescent disposition of  
 the bile, owing to the heat of the preceding sum-  
 mer. He takes notice of a common mistake  
 among physicians, who frequently prescribe elixir

of vitriol in those  
juice would be m  
effect of acids on  
see why the imme  
ous to digestion  
gall should be it  
but as acids have  
fectly mild and sw  
ably pernicious to the  
of the food - which  
cannot be accot  
d. Hence the body is  
deprived of its p  
nourishment and support,  
the blood becomes  
rapid and watery, and a fatal  
cachexy unavoidably ensues. This has been the  
case with many unfortunate persons, who, in  
order to reduce their excessive corpulency, have  
indulged themselves in the too free use of vinegar.  
From the mild state of the gall in young children,  
Dr Percival also thinks it is, that they are so much  
troubled with acidities.

(3.) GALL, in natural history, (§ 1. def. 7.)  
denotes any protuberance, or tumour, produced  
by the puncture of insects on plants and trees of  
different kinds. These galls are of various forms  
and sizes, and no less different with regard to  
their internal structure. Some have only one  
cavity, and others a number of small cells com-  
municating with each other. Some of them are  
as hard as the wood of the tree they grow on,  
whilst others are soft and spongy; the first being  
termed *gall-nuts*, and the latter *berry-galls*, or  
*apple-galls*. See CYNIPS. The external coat of  
the excrescence described above (§ 1. def. 7.) is  
dried by the air; and grows into a figure which  
bears some resemblance to the bow of an arch,  
or the roundness of a kernel. This little ball re-  
ceives its nutriment, growth, and vegetation, as  
the other parts of the tree, by slow degrees, and  
is called the *gall-nut*. The worm, that is hatched  
under this spacious vault, finds in the substance  
of the ball, which is as yet very tender, a nourish-  
ment suitable to its nature; gnaws and digests it  
till the time of its transformation to a nymph,  
and from that state soon changes into a fly. After  
this, the insect disengages itself from its confine-  
ment, and takes its flight into the open air. The  
case, however, is different with respect to the  
*gall-nut* that grows in autumn. The cold weather  
frequently comes on before the worm is transfor-  
med into a fly, or before the fly can pierce through  
its inclosure. The nut falls with the leaves; but  
although it might now be supposed that the fly  
within is lost, yet in fact its being covered up so  
close is the means of its preservation. Thus it  
spends the winter in a warm house, where every  
crack and cranny of the nut is well stopped up;  
and lies buried under a heap of leaves, which  
preserve it from the injuries of the weather. This  
apartment, however, though so commodious a  
retreat in winter, is a prison in spring. The fly,  
rouled out of its lethargy by the vernal heat,  
breaks its way through, and ranges where it  
pleases. A very small aperture is sufficient, as at  
this time the fly is but a diminutive creature.  
Besides, the ringlets whereof its body is composed  
and become pliant in the passage. A very  
tiny of oak galls, put into a solution of  
water, though but very weak, gives it

a purple or violet colour: which,  
stronger, becomes black; and on t  
depends the art of making our writin  
the arts of dying and dressing leathe  
manufactures. See INK. The best  
from Aleppo: these are not quite  
smooth like the other sorts, but  
tubercles on the surface. Galls have a  
styptic taste, without any smell: th  
strong astringents, and as such have  
times made use of both internally and  
but are not much taken notice of in  
practice. Some recommend an ointn  
dered galls and hog's lard as very effe  
tain painful states of hæmorrhoids; and  
that the internal use of galls has cu  
tents after the Peruvian bark has failed  
of galls with a bitter and aromatic ha  
poised as a substitute for the bark.

(4.) GALL, ST, or ST GALLEN, a  
town in Swisserland, in the Upper Th  
a rich and celebrated abbey, whose ab  
lar prince of the German empire, and  
the 72 Benedictines who compose  
He formerly possessed the sovereignty  
but the inhabitants shook off his au  
became independent; and the vari  
which since that period have arisen  
two rival parties have been compromis  
terposition of their allies, the Swiss ca  
town is entirely Protestant, and  
ment aristo-democratical. The sub  
abbot, whose territory is distinct, ar  
tholics. The abbey, in which this p  
is situated close to the town, and in  
its territory; as the latter is also entir  
ed by the possessions of the prince.  
owes its flourishing state to the ur  
dustry of the inhabitants, and to a v  
commerce, arising chiefly from its ma  
lien, muslin, and embroidery. To t  
longing to the abbey, which is very n  
well-arranged, and which contains  
of the classic writers, we are indebt  
nius Arbiter, Silius Italicus, Valerius  
Quintilian, copies of which were f  
1413. St Gallen is seated in a nar  
valley, between two mountains, i  
small streams, 37 miles NE. of Zi  
9. 22. E. Lat. 47. 26. N.

ALLA, a nation of Ethiopia, originally  
as Mr Bruce supposes, under the line,  
sing the profession of shepherds, which  
continue to do. For many years, they  
have been constantly migrating north-  
ough the cause of this migration is not  
At first they had no horses; the reason  
was, that the country they came from  
low these animals to breed; but as they  
d northward and conquered some of the  
a provinces, they soon furnished them-  
th such numbers, that they are now  
irely cavalry, and make little account  
y in their armies. On advancing to the  
of Abyssinia, the multitude divided, and  
sted their course towards the Indian  
ster which, having made a settlement in  
n part of the continent, they turned  
l into the countries of Bali and Dawaw,  
y entirely conquered, and settled there  
Another division having taken a wester-  
spread themselves in a semicircle along  
of the Nile; surrounding the country  
, and passing eastward behind the country  
ows, extended their possessions as far as  
ries of the Gongas and Gafats. Since  
the Nile has been the boundary of their  
; though they have frequently plunder-  
ometimes conquered, the Abyssinian  
on the other side of the river, but have  
de any permanent settlement in these  
third division has settled to the S. of the  
ry of Shoa, which the governor of that  
has permitted, in order to form a bar-  
st him and the territories of the empe-  
rom he scarcely acknowledges any de-

pendence. The Galla are of a brown complexion,  
and have long black hair; but some of them who  
live in the valleys are intirely black. At first their  
common food was milk and butter; but since  
their intercourse with the Abyssinians, they have  
learned to plough and sow their land, and to  
make bread. They seem to have a predilection  
for the number 7, as each of the three divisions  
already mentioned are subdivided into seven tribes.  
In their behaviour they are extremely barbarous;  
and live in continual war with the Abyssinians,  
whom they murder without mercy as often as  
they fall into their hands. They cut off the pri-  
vities of the men, and hang them up in their  
houses by way of trophies; and are so cruel as to  
rip up women with child, in hopes of thus de-  
stroying a male. Yet notwithstanding their ex-  
cessive cruelty abroad, they live under the strictest  
discipline at home; and every broil or quarrel is  
instantly punished according to the nature of the  
offence. Each of the three divisions of the Galla  
has a king of its own; and they have also a kind  
of nobility, from among whom the sovereign can  
only be chosen: however, the commonalty are  
not excluded from rising to the rank of nobles, if  
they distinguish themselves very much in battle.  
None of the nobility can be elected till upwards  
of 40 years of age, unless he has with his own  
hand killed such a number of enemies, as added  
to his own age makes 40. There is a council of  
each of the 7 tribes, which meets separately in its  
own district, to settle how many are to be left  
behind for governing and cultivating the territory,  
and other matters of importance. These nations  
have all a great veneration for a tree which grows  
plentifully in their country, called *wansey*, and  
which these superstitious people are even said to  
adore as a god. Their assemblies for the choice  
of a king are held under one of these trees; and  
when the sovereign is chosen, they put a bludgeon  
of this wood in his hand by way of sceptre, and  
a garland of the flowers upon his head. The  
Galla are reported to be very good soldiers, es-  
pecially in cases of surprise; but, like most other  
barbarians, have no constancy nor perseverance  
after the first attack. They will, however, per-  
form extraordinary marches, swimming rivers  
holding by the horse's tail, and are thus enabled  
to do very great mischief by the rapidity of their  
movements. They are excellent light horse for a  
regular army in an hostile country; but are very  
indifferently armed on account of the scarcity of  
iron among them. Their principal arms are lances  
made of wood sharpened at the end and hardened  
in the fire; and their shields are composed only  
of one single fold of bull's hide; so that they are  
extremely apt to warp by heat, or become too  
soft in wet weather. They are exceedingly cruel;  
and make a shrill horrid noise at the beginning of  
every engagement, which greatly terrifies the  
horses, and very often the barbarous riders which  
oppose them. The Galla are somewhat below  
the middle size, but extremely light and nimble.  
The women are fruitful; and suffer so little in  
child-bearing, that they do not even confine them-  
selves for a single day after delivery. They  
plough, sow, and reap the corn, which is trod-  
den out by the cattle; but the men have all the

the cattle in the fields. In their customs, filthy to the last degree; plaiting their round the guts of oxen, which they likewise round their middle, and which by the quick satisfaction occasion an abominable stench. They anoint their heads and whole bodies with grease; in which, as well as in other respects, they greatly resemble the Hottentots. It has been supposed that they have no religion whatever; but Mr Bruce is of opinion that this is a mistake. The wanzey, he says, is undoubtedly worshipped by all the three nations as a god; and they have likewise certain stones which are worshipped as gods. They also worship the moon, and some stars, when in certain positions, and at some particular seasons of the year. They all believe in a resurrection; and have some faint notions of a state of happiness, but no idea of future punishment. Some of them to the S. profess the Mahometan religion, but those to the E. and W. are generally pagans. They all intermarry with each other; but will not allow strangers to live among them, though the Moors have found out a method of trading safely with them. The commodities they deal in are blue Surat cloths, myrrh, and salt; the last being the most valuable article. The marriages among the Galla are celebrated with some of the disgusting customs of the Hottentots; and after these ceremonies the bridegroom promises to give the bride meat and drink while she lives, and to bury her when dead. Polygamy is allowed among them; the women solicit their husbands to take others to their embraces, that they may have numerous families of children, who may be capable of defending them against their enemies; as the Galla; according to Mr Bruce always fight in families, whether against foreign enemies or with one another.

(2.) GALLA, a town of Arabia, 24 miles SE. of Taza.

(3.) GALLA, a town in Ceylon. See GALLE.

(1.) GALLAM, a kingdom of Africa.

(2.) GALLAM, the capital of the above kingdom, is seated on the Senegal. Lon. 9. 55. W. Lat. 14. 25. N.

GALLAN, or ST GALLAN, an island of Peru.

GALLAND, Anthony, a learned antiquarian, member of the Academy of inscriptions, and professor of Arabic in the Royal College of Paris, was born of poor parents at Rollo, in Picardy. Having studied at the Sorbonne and other universities, he travelled into the east; where he acquired great skill in the Arabic tongue, and in the manners of the Mahometans. He wrote several works; the principal of which are, 1. An Account of the Death of the Sultan Osman, and the Coronation of the Sultan Mustapha. 2. A Collection of Maxims, drawn from the works of the Orientals. 3. A Treatise on the Origin of Coffee: and 4. he translated The Arabian Nights Entertainments.

(1.) \* GALLANT. *adj.* [*galant*, French, *gala*, fine dress, Spanish.] 1. Gay; well dressed; showy; splendid; magnificent.—A place of broad rivers, wherein shall go no gally with oars, neither shall *gallant* ships pass thereby. *Jf.* xxxiii. 21.

The gay, the wife, the *gallant*, and the grave, Subdu'd alike, all but one passion have. *Walker.*  
2. Brave; high spirited; daring; magnanimous.

—Scorn, that any should kill his uncle, seek his revenge in manner *gallant* enough.  
But, fare thee well, thou art a *gallant*.

—A *gallant* man, whose thoughts fly at the best game, requires no further insight. *D.*  
Fine; noble; spacious.—

There are no tricks in plain and simple;  
But hollow men, like horses hot at hand,  
Make *gallant* shew and promise of the

4. Courty with respect to ladies.—He did show *gallant* and how brave a thing it was for his highness to make a journey into Spain to fetch home his mistress. *Clarendon.*—

When first the soul of love is sent abroad,  
The gay troops begin  
In *gallant* thought to plume their paint

(2.) \* GALLANT. *n. f.* [from the *a.* 1. A gay, sprightly, airy, splendid man.  
The new proclamation.

—What is't for?  
—The reformation of travell'd *gallants*  
That fill the court with quarrels, talk  
lors.

—The *gallants* and lusty youths of Naples  
and offered themselves unto Vastius. *Kn.*  
The *gallants*, to protect the lady's  
Their fauchions brandish'd at the grill

*Gallants*, look to't, you say they're  
sprights.  
But I'll come dance about your beds:

2. A whoremaster, who caresses women and bauch them.—One, worn to pieces, shews himself a young *gallant*. *Shak.*—left the good-man at home, and brought her *gallant*. *Spektator.* 3. A wooer; courts a woman for marriage. In the text senses it has commonly the accent on the syllable.

(3.) GALLANT, in geography, a town of Gary, 3 miles SSW. of Serat.

\* GALLANTLY. *adv.* [from *gallant* Gayly; splendidly. 2. Bravely; nobly; proudly.—You have not dealt so *gallantly* as we did with you in a parallel case: *li* paper was brought here from England, ordered to be burnt by the common *Swiss*.

\* GALLANTRY. *n. f.* [*galanterie*, 1. Splendour of appearance; show; magnificent glittering grandeur; ostentatious finery.

Make the sea shine with *gallantry*,  
The English youth flock to their admirers.  
2. Bravery; nobleness; generosity.—  
nence of your condition, and the *gallant*  
principles, will invite gentlemen to the  
canonizing study of nature. *Glanville's S.*  
A number of gallants.—Hector, Deiphobus,  
all the *gallantry* of Troy, I would have  
day. *Shak.* 4. Courtship; refined address  
men.—

The martial Moors in *gallantry* refined  
Invent new arts to make their charms

low; lewdness; debauchery.—It looks of compounding between virtue and a woman were allowed to be vicious, he be not a profligate; as if there were joint where gallantry ends, and infamy *vist*.

ARATO, a town of the Cisalpine republic department of Olone, and late duchy 20 miles WNW. of Milan.

ARDON, a town of France, in the dg- of Eure and Loire, 12 miles W. of and 4 NE. of Chartres.

LADDER. See ANATOMY, *Index*.

LLE, the name of several engravers, of principal was Cornelius, who flourish- :600. He learned the art of engraving utber, and imitated his stiff style, till he ome, where he resided a considerable there acquired that freedom, taste, and s of drawing which are found in his best le settled at Antwerp upon his return /, where he carried on a considerable in prints. His best prints are those done cae.

LLS, or PORT GALLE, a sea-port town n the SW. coast of Ceylon. It was taken ch from the Portuguese in 1640; and by 1 in Feb. 1796. See CEYLON. It is 98 f Candy. Lon. 80. 20. E. Lat. 6. 0. N. LEAS. *n. f.* [*galeas*, French.] A heavy vessel, with both sails and oars. It car- masts, but they cannot be lowered, as y. It has thirty-two seats for rowers, r seven slaves to each. To carry three ms at the head, and at the stern there are of guns. *Dist.*—The Venetians pretend d set out, in case of great necessity, thir- f war, a hundred galleys, and ten ga- *ddison on Italy*.—

My father hath no less hree great argosies, besides two *galeasses*, reive tight gallees. *Sbak.*

ALLEGO, a river of Spain, which rises reneces, and runs into the Ebro oppo- offa.

ALLEGO, a town of Spain, in the prov. 18 miles SSE. of Salamanca.

EMBERG, a town of Germany, in Car- miles E. of Laubach.

ENEK, a town of Germany, in Carnio- les SE. of Stein.

ENSTAIN, a town of Germany in Sti- les W. of Reiffing.

GALLEON. *n. f.* [*galion*, Fr.] A large 14 or sometimes 5 decks, now in use on- the Spaniards.—I assured them that I y for them at Trinidad, and that no uld drive me thence, except I were sunk fire by the Spanish *galleons*. *Raleigh*.— iber of vessels were 130, whereof *galeas- alleons* 72, goodly ships, like floating tow- rles. *Bacon's War with Spain*.

ALLEONS are employed in the Spanish lia trade. The Spaniards send annually s; the one for Mexico, which they call us. See FLOTA, N° 1. By a general n made in Spain, it has been established,

that there should be 12 men of war and 5 tenders annually fitted out for the armada or galleons; 8 ships of 600 tons burden each, and 3 tenders, one of 100 tons, for the island Margarita, and two of 80 each, to follow the armada; for the New Spain fleet, two ships of 600 tons each, and two tenders of 80 each; and for the Honduras fleet, two ships of 500 tons each: and in case no fleet happened to sail any year, 3 galleons and a tender should be sent to New Spain for the plate. They sail from Cadiz in January, that they may arrive at Porto Bello in April; where, the fair being over, they may take aboard the plate, and be at Havannah with it about the middle of June; where they are joined by the flota that they may return to Spain with the greater safety.

GALLEOT. See GALIOT. All the seamen on board a galleot are soldiers, and each has a musket by him.

(1.) \* GALLERY. *n. f.* [*galerie*, French; derived by *Du Cange* from *galeria*, low Latin, a fine room.] 1. A kind of walk along the floor of a house, into which the doors of the apartments open; in general, any building of which the length much exceeds the breadth.—In most part there had been framed by art such pleasant arbors, that, one with another, they became a gallery aloft from tree to tree, almost round about, which below gave a perfect shadow. *Sidney*.—

High lifted up were many lofty towers,  
And goodly galleries fair overlaid. *Spenser*  
Your gallery

Have we pass'd through, not without much content. *Sbak.*

—The row of return on the banquet side, let it be all stately galleries, in which galleries let there be three cupolas. *Bacon*.

A private gallery 'twixt th' apartments led,  
Not to the foe yet known. *Denham*.

—Nor is the shape of our cathedrals proper for our preaching auditories, but rather the figure of an amphitheatre, with galleries gradually overlooking each other; for into this condition the parish churches of London are driving apace, as appears by the many galleries every day built in them. *Graunt*.

—There are covered galleries that lead from the palace to five different churches. *Addison on Italy*.  
2. The seats in the playhouse above the pit, in which the meaner people sit.—

While all its throats the gallery extends,  
And all the thunder of the pit ascends. *Pope*.

(2.) GALLERY, in gardening, an ornament made with trees of different kinds. Galleries are very common in the French gardens, but are seldom introduced into the British ones, especially since the taste for clipped trees has been exploded. For those, however, who may still choose to have them, Mr Miller gives the following directions. In order to make a gallery in a garden with porticoes and arches, a line must first be drawn of the length you design the gallery to be; which being done, it is to be planted with hornbeam; as the foundation of the gallery. The management of galleries is not difficult. They require only to be digged round about; and sheared a little when there is occasion. The chief curiosity is in the ordering the fore part of the gallery, and in forming the ar- ches.

ches. Each pillar of the porticoes or arches ought to be 4 feet distant from one another, and the gallery 12 feet high and 10 feet wide, that there may be room for 2 or 3 persons to walk abreast. When the hornbeams are grown to the height of 3 feet, the distance of the pillars well regulated, and the ground-work of the gallery finished, the next thing to be done is to form the frontispiece; to perform which, you must stop the hornbeam between two pillars for that purpose, which forms the arch. As it grows, cut off those boughs which outshoot the others. In time they will grow strong, and may be kept in form by the sheers. Portico galleries may be covered with lime trees.

(3.) GALLERY, in a ship, that beautiful frame, which is made in the form of a balcony, at the stern of a ship without board; into which there is a passage out of the admiral's or captain's cabin, and is designed for the ornament of the ship.

(4.) GALLERY, in fortification, a covered walk across the ditch of a town, made of strong beams covered with planks, and loaded with earth: sometimes it is covered with raw hides, to defend it from the artificial fires of the besieged.

(5.) GALLERY OF A MINE is a narrow passage or branch of a mine carried on under ground to a work designed to be blown up. See MINE.

GALLESE, a town of Italy in the province of Patrimonio, 25 miles N. of Rome.

\* GALLETYLE. *n. f.* I suppose this word has the same import with *gallipot*.—Make a compound body of glass and *galletyle*; that is, to have the colour milky like a chalcedon, being a stuff between a porcelane and a glass. *Bacon*.

(1.) \* GALLEY. *n. f.* [*galea*, Ital. *galere*, Fr. derived, as some think, from *galea*, a helmet, pictured anciently on the prow; as others from *γαλιππος*, the swordfish; as others from *galleon*, expressing in Syriac men exposed to the sea. From *galley* come *galleas*, *galleon*, *galliot*.] 1. A vessel driven with oars, much in use in the Mediterranean, but found unable to endure the agitation of the main ocean.—

Great Neptune grieved underneath the load  
Of ships, hulks, *gallies*, barks, and brigandines.

*Fairfax*.

—In the ages following, navigation did every where greatly decay, by the use of *gallies*, and such vessels as could hardly brook the ocean. *Bacon's New Atlantis*.—Jason ranged the coasts of Asia the Less in an open boat, or kind of *galley*. *Raleigh's History*.—

On oozy ground his *gallies* moor;

Their heads are turn'd to sea, their sterns to shore.

*Dryden*.

2. It is proverbially considered as a place of toil-some misery, because criminals are condemned to row in them.—The most voluptuous person, were he tied to follow his hawks and his hounds, his dice and his courtships every day, would find it the greatest torment that could befall him: he would fly to the mines and the *gallies* for his recreation, and to the spade and the mattock for a diversion from the misery of a continual uninterrupted pleasure. *South*.

(2.) GALLEYS are low flat-built vessels, furnished with one deck, and navigated with sails and oars. The largest sort are employed only by

the Venetians. They are commonly 162 feet above, and 133 feet by the keel: 32 feet with 23 feet length of stern-post. They are furnished with three masts, and 32 banks of oars, every bank containing two oars and every oar managed by 6 or 7 seven slaves, who are all chained thereto. In the fore part they have 3 little batteries of cannon, of which the lowest of two 36 pounders, the 2d of two 24 pounders and the uppermost of 2 two-pounders: three more are also planted on each quarter. The complement of men for one of these galleys is 1000 or 1200. They are esteemed very convenient for bombarding or making a descent upon an enemy's coast, as drawing but little water; having by their oars frequently the advantage over a ship of war, in light winds or calms, by commanding the latter near the surface of the water, and by scouring her whole length with their shot, at the same time keeping on her quarter or so as to be out of the direction of her cannon. The galleys next in size to these, which are called *half galleys*, are from 120 to 130 feet long, 18 feet broad, and 9 or 10 feet deep. They have two masts, which may be struck at pleasure: they are furnished with two large lateen sails, and several pieces of cannon. They have commonly 25 banks of oars. A size still less than these are called *inter galleys*, carrying from 12 to 16 banks of oars. There are very few galleys now besides these in the Mediterranean, which are found by experience to be of little utility except in fine weather; a circumstance which renders their service extremely precarious. They generally keep close under the shore, but sometimes venture out to sea to form a summer cruise.

GALLEY-HEAD, a promontory of Ireland on the coast of Cork, on the extremity of which stands Dundede Castle. This is sometimes fatally shaken by sailors, for the Old Head of Kinfales, the light of the latter is not seen. It lies 18 miles SSW. of Bandon bridge. Lon. 8. 54. W. 51. 31. N.

\* GALLEY-SLAVE. *n. f.* [*galley* and *slave*]. A man condemned for some crime to row in a galley.—As if one chain were not sufficient to keep a poor man, he must be clogged with innumerable chains: this is just such another freedom as the Turkish *galley-slaves* do enjoy. *Bramb*.—Hardened *galley-slaves* despise manumission. *Dec. of B.*

The surges gently dash against the shore,  
Flocks quit the plains, and *galley-slaves* their  
Gale

GALLEY-WORM, in zoology. See LULUS.  
GALL-FLY, in entomology. See CYNIPS.

(1.) GALLI, in antiquity, a name given to the priests of Cybele, from the river Gallus in Phrygia; but of the etymology of the name we have no certain account. All that we learn about them is, that they were eunuchs and Phrygians, and in their solemn processions they danced, bowed, drummed, cut and slashed themselves, playing on timbrels, pipes, cymbals, &c. and driving asses loaded with the sacred trumpets of the deity. When a young man was to be initiated, he was to throw off his clothes, run crying to the midst of their troop, and there cut off his sword and castrate himself; after this he was

the street with the parts cut off, in his row them into some boufe, and in the fe put on a woman's drefs. Thefe priefts names alfo of *Carates*, *Corybantes*, and The chief prieft was called *Archi-Gallus*. ler of priefthood is found both amongft and Romans. See *Lucret.* lib. ii. and *Juv.*

GALLI, the Gauls. See GALLIA and

GALLI, five fmall defolate iflands on the the Principato Citra of Naples. They ofed to be the *Syrænuſæ*, or iflands once l by the Sirens; which Ulyſſes paſſed with caution and hazard. Great revolutions, , have been occaſioned in their ſhape, ſize, ber, by the effects of ſubterranean fire; e learned perſons go ſo far as to aſſert, e rocks have riſen from the bottom of the Homer's time; conſequently, that thoſe dwelt on ſome other ſpot, probably *Sicapri*. The tradition of Sirens reſiding ts is very ancient and univerſally admit- t what they really were, diveſted of their and poetical diſguiſe is not eaſy to diſco- re *SIREN*. The *Syrænuſæ* were only three er; and therefore if theſe and the *Galli* ame, two more muſt have ſince riſen, or re have been ſplit into five by a ſubter- convolution. On the largeſt is a watch- id the next has a deſerted hermitage. The ifland is only a narrow ſemicircular ridge with a ſhallow coat of ſoil; two other lit- ble, and ſome jagged rocks juſt peeping a- le waves, correſpond with this one ſo as to he outline of a volcanic crater. The com- of them all is at top a calcareous rock ex- ſhaken, tumbled, and confuſed, mixed ſſes of breccia, diſpoſed in a moſt irregu- mer; below theſe is lava, and the deeper follows it the ſtronger are the marks of dow the ſurface of the water, and in ſome above it, the layers are complete blocks of . Hence we may preſume, that central re heaved up to light the torriſied ſubſtan- originally lay near their focus, with all the diate ſtrata that covered them from the he layers incline downwards from E. to e air ſeems to have forced its way into the maſs while in fuſion, and by checking ings cauſed many large caverns to be left eſe iflands are uncultivated and uninhabit- the old hermit of *St Antonio* died. Myr- rs moſt of the ſurface.

GALLIA, in ancient geography, a large coun- Europe, called *GALATIA* by the Greeks. habitants were called *GALLI*, *CELTÆ*, *ERI*, and *Celtoſythe*. Ancient Gaul was into 4 different parts by the Romans, cal- *lia* [*Belgica*, *Narbonenſis*, *Aquitania*, and though *Julius Cæſar* divides it only into *Belgicæ* theſe grand diviſions there is often made of *Gallia Cifalpina* or *Citerior*, and *ſina* or *Uterior*, which laſt comprehend- whole of Gaul, properly ſo called, as poſ- y the ancient Gauls. The inhabitants at warriors, and overcame the Roman ark the city of Rome, and invaded Greece

in different ages. They ſpread themſelves over the greateſt part of the world. They were very ſuperſtitious in their religious ceremonies, and re- vered their priefts as if they had been gods. They long maintained bloody wars againſt the Romans, and *Cæſar* reſided 10 years in their country before he could entirely ſubdue them. See *GAUL*.

1. GALLIA AQUITANICA contained the late provinces of *Poitou*, *Saintonge*, *Guienne*, *Berry*, *Limoſin*, *Gaſcogny*, *Auvergne*, &c. and was ſituated between the *Garumna*, the *Pyrenean mountains*, and the ocean.

2. GALLIA BELGICA was the largeſt province, bounded by Germany, *Gallia Narbonenſis*, and the German ocean; and contained the modern countries of *Alſace*, *Lorraine*, *Picardy*, with part of the *Low Countries*, of *Champagne*, and of the iſle of France.

3. GALLIA CÆLTICA, or *LUGDUNENſIS*, was bounded by Belgium, *Gallia Narbonenſis*, the Alps, and the ocean. It contained the countries heretofore known by the names of *Lyonnois*, *Tou- raine*, *Franche Comté*, *Senenois*, *Suwiſerland*, and part of *Normandy*. It was alſo called *Comata*, be- cauſe the people ſuffered their hair to grow to an uncommon length.

4. GALLIA CISPALPINA, or *CITERIOR*. By theſe names the Romans underſtood that part of Gaul which lies in Italy, on *this ſide of the Alps*, in regard to the inhabitants of Rome. They alſo ſtiled it *Gallia Togata*, becauſe the Roman gowns called *togæ* were worn by the people. It is now chiefly comprehended in the *CISPALPINE REPUB- LIC*.

5. GALLIA CISPADANA was applied to a part of Italy conquered by ſome of the Gauls; and meant the country on *this ſide of the Po*, with reſpect to Rome. See *CISPADANA*.

6. GALLIA NARBONENſIS, which contained the provinces lately called *Languedoc*, *Provence*, *Dauphiné*, and *Savoij*, was bounded by the Alps and *Pyrenean mountains*, by *Aquitania*, Belgium, and the *Mediterranean*. *Gallia Narbonenſis* was called *Braccata*, on account of the peculiar covering of the inhabitants for their thighs.

7. GALLIA TRANSALPINA, or *ULTERIOR*, was the name given by the Romans to that part of Gaul, which lay *beyond the Alps*, in regard to Rome.

8. GALLIA TRANSPADANA, was the name given to that part of Italy, conquered by the Gauls, which lay *beyond the Po*, in reſpect of Rome.

GALLIANO, a town of the *Ciſalpine republic*, in the dept. of *Montagna*, and *ci-devant* duchy of *Milan*, 6 miles SSE. of *Como*.

(1.) \* GALLIARD. *n. ſ.* [*gaillard*, French; imagined to be derived from the Gauliſh *ard*, genius; and *gay*.] 1. A gay, briſk, lively man; a fine fellow.—

Selden is a *galliard* by himſelf. *Cleaveland*.  
2. An active, nimble, ſpritely dance. It is in both ſenſes now obſolete.—I did think, by the excellent conſtitution of thy leg, it was form'd under the ſtar of a *galliard*. *Shakeſpeare's Twelfth Night*.—  
There's nought in France

That can be with a nimble *galliard* won:  
You cannot revel into dukedoms there. *Sb. H. V.*  
—If there be any that would take up all the time,  
let him find means to take them off, and bring o-

use to do with those that  
*Bacon*.—The triplas and  
 re an agreement with the  
 as when *galliard* time and  
 in the medley of one dance. *Bacon*.  
 GALLIARDA, ( *y* 1, *def.* 2.)  
 iently in great request, con-  
 motions and actions, some-  
 times along the room,  
 and sometimes a. It was also called *Roman-  
 esque*, because brought from Rome. Thomot Ar-  
 beau, in his Orchestography, describes it as con-  
 sisting of 5 steps and 5 positions of the feet, which  
 the dancers performed before each other, and  
 whereof he gives us the score or tablature, which  
 is of six minims and two triple times.

GALLIARDA, in the Italian music, a tune  
 that belongs to the dance, called GALLIARD. The  
 air of it is lively in triple time.

\* GALLIARDESE. *n. f.* [French.] Merriment;  
 exuberant gaiety. Not in use.—At my nativity  
 my ascendant was the watery sign of Scorpius; I  
 was born in the planetary hour of Saturn, and I  
 think I have a piece of that leaden planet in me:  
 I am no way facetious, nor disposed for the mirth  
 and *galliardise* of company. *Brown's Rel. Med.*

GALLIC, or } *adj.* belonging to, or origina-  
 GALLICAN, } ting from France.

\* GALLICISM. *n. f.* [*gallicisme*, French; from  
*gallicus*, Latin.] A mode of speech peculiar to the  
 French language: such as, he *figured* in contro-  
 versy; he *held* this conduct; he *held* the same lan-  
 guage that another had *held* before: with many  
 other expressions to be found in the pages of *Bo-  
 lingbroke*.—In English I would have *Gallicisms* a-  
 voided, that we may keep to our own language,  
 and not follow the French mode in our speech.  
*Felton on the Classics.*

GALLICO, a town of Naples, in Calabria Ul-  
 tra, 5 miles N. of Reggio.

\* GALLIGASKINS. *n. f.* [*Galige Gallo-Vas-  
 conum*. *Skinner*.] Large open hose. Not used but  
 in ludicrous language.—

*My galligaskins, that have long withstood  
 The Winter's fury, and encroaching frosts,  
 By time subdued, what will not time subdued,  
 An horrid chasm disclose.* *Philips.*

\* GALLIMATIA. *n. f.* [*galimatias*, French.]  
 Nonsense; talk without meaning.

\* GALLIMAUFREY. *n. f.* [*galimaufreé*, Fr.]  
 1. A hoch-poch, or hash of several sorts of broken  
 meat; a medley. *Hanmer*.—They have made of  
 our English tongue a *gallimaufrey*, or hodge podge  
 of all other speeches. *Spenser*. 2. Any inconsis-  
 tent or ridiculous medley.—They have a dance,  
 which the wenches say is a *gallimaufrey* of gam-  
 bols, because they are not in't. *Spak. Wint. Tale*.  
 —The painter who, under pretence of diverting  
 the eyes, would fill his picture with such varieties  
 as alter the truth of history, would make a ridi-  
 culous piece of painting, and a mere *gallimaufrey*  
 of his work. *Dryd. Duf.* 3. It is used by *Shake-  
 speare* ludicrously of a woman.—

Sir John affects thy wife.  
 —Why, sir, my wife is not young.  
 —He woos both high and low, both rich and poor;  
 loves thy *gallimaufrey*, friend. *Shak.*

GALLINACEOUS, *adj.* an appella-  
 to the birds of the order of the gallinæ.

GALLINACEUS LAPIS, a glossy sub-  
 duced by volcanic fires; the same with  
*obsidianus* of the ancients. A species of it  
 from Paris, of a beautiful black, refer  
 colour of a large crow, in that coun-  
*gallinago*.

GALLINÆ, in ornithology, an order.  
 See ORNITHOLOGY.

GALLINARA, an island of the Li-  
 public, on the coast of Genoa, 10 mile  
 nale. Lon 25. 50. E. of Ferro. Lat 44

(1.) GALLING, or EXCORIATION  
 cine. See EXCORIATION.

(2.) GALLING OF A HORSE'S BACK,  
 occasioned by heat, and the chafing of  
 the saddle. To prevent it, some take a  
 well garnished with hair, and fit it ne  
 the pannel of the saddle, so that the  
 may be next the horse. When a hors  
 galled upon a journey, take out a li  
 stuffing of the pannel over the swelling  
 a piece of soft white leather on the in  
 pannel; anoint the part with salt butte  
 ry evening wipe it clean, rubbing it t  
 soft, anointing it again with butter, or  
 of that, with grease; wash the swellin  
 every evening with cold water and  
 strew it with salt, which should be left  
 horse be saddled in the morning.

GALLINULE. See FULICA, N° 3

GALLIO, a district of Maritime Aul  
 the SETTE COMMUNI, or seven commu-  
 cenza. In 1762, the church and above  
 were burnt.

GALLIOPOLIS, or GALLIPOLIS, 2  
 of the United States, in the North W  
 ritory, seated on the Ohio, 140 miles  
 lumbia, 300 SW. of Pittsburgh, and 5  
 Philadelphia. The inhabitants are chic  
 Lon. 83. 9. W. Lat. 39. 2. N.

\* GALLIOT. *n. f.* [*galliotte*, Fren  
 swift galley.—Barbarossa departing out  
 pontus with eighty gallees, and certa  
 shaped his courie towards Italy. *Knolk*

GALLIPAGO ISLES. See GALIP.

(1.) GALLIPOLI, a sea port town  
 in the province of Otranto, with a b  
 It stands on a rocky island, joined to  
 nent by a bridge. From the remotest  
 this was a station so favourable to com  
 every maritime power wished to secu  
 nothing has been done to improve its  
 vantages. Mr Swinburn informs us,  
 ther harbour nor shelter for shipping.  
 demolished Gallipoli for its adherence  
 rick of Arragon. The Venetians treat  
 great cruelty in the 15th century; and  
 was pillage by the turks. To preserve  
 ture calamities, Charles V. repaired an  
 ened its fortifications; and from that  
 the present war, it has enjoyed the  
 peace and trade, which have rendered  
 opulent and gayest town upon the coa  
 its inhabitants do not exceed 6000 i  
 Contumptions and spitting of blood ar  
 occasioned by the great subtilty of the

d from every quarter. The buildings are, and some of the churches have good

The cotton trade brings in about cats a year. Silk and saffron were formerly of traffic; but heavy duties and oppressive caused them to be abandoned. The soil, but from dryness of climate, and want of soil, the vintage frequently fails. great support of the place: two thirds of its olive plantations are exported to the north of Italy. Neapolitans also buy up the oils, from year to year, and an olive appears upon the tree; and is afterwards settled by public authority 11 miles W. of Otranto. Lon. 18. 10. N. 18. N.

**LIPOLI**, a sea port town of European in the province of Romania, seated at the sea of Marmora; with a good harbor and a bishop's see. It contains about 20,000 Greeks, and a great number of Jews. It is a handsome structure, with domes and a lead. The town is an open place, with other defense than a paltry square of houses of the Greeks and Jews have above 3½ feet high, to prevent the enemy riding into their houses. Lon. 26. 1. 40. 24. N.

**LIPOLIS**. See GALLIOPOLIS.

**LIPOT**. *n. f.* [*gleye*, Dutch, shining livery. *Gala*, or gallypot, is a fine paint-

A pot painted and glazed, commonly used for medicines.—Plato said his master Socrates the apothecary's *gallypots*, that had heads, apes, owls, and satyrs; but without drugs. *Bacon's Apophth.*—

*gallypots* in nice discipline are set; *gallypots* are rang'd in alphabet. *Garth*. *trinus* thought it unsafe to trust the real *gallypots* to any man. *Spect.*— that dost *Aesculapius* deride, or his *gallypots* in triumph ride. *Fenton*. **UM**, in botany. See GALIUM.

**ULLO**, an island of the South Sea, near of Peru, which was the first place where the Spaniards when they attempted the conquest of Peru; it is also the place where the Spaniards used to come for wood and water, and in their vessels. Lon. 88. 0. W. Lat. 2. 30. N.

**ULLO**, an island of S. America, in the Gulf of Popayan. Lat. 2. 40. N.

**ULORÆCIA**, a country of Asia Minor, in Cappadocia. It was inhabited by Gauls; who assumed the name of *ULORÆCIA*, because a number of Greeks had fled to them in their emigration. See GA-

**ULLIS**, John; born at Paris in 1632, was a scholar; but chiefly noted for having a conjunction with M. de Sallo who formed the first publisher of the *Journal des Sçavans* first journal was published Jan. 5, 1665; but entirely criticized new works so rigorously, that the whole tribe of authors united and were. De Sallo declined entirely after the publication of the 3d number: but Gallois sent out a 4th on January 4th, 1666; **PART; L**

though not without a most humble advertisement at the beginning, wherein he declared, that the author "would not presume to criticize, but simply give an account of the books." This, with the protection of M. Colbert, reconciled the public to it; and thus began literary journals, which have been continued from that time to this, under various titles, and by various writers. Gallois continued his journal to 1674, when more important occupations obliged him to turn it over to other hands. M. Colbert had taken him into his house to teach him Latin; and when he lost his patron in 1683, he was first made librarian to the king, and then Greek professor in the royal college. He died in 1707.

**GALLO-MANIA**, *n. f.* [from *Gallia*, France; and *mania*, madness.] a new word, which owes its origin to the present political ferment in public opinion: used in contempt respecting the opinions of those who are supposed to be infected with the principles now generally prevailing in France, as to religion or government. It might have been long ago applied to the general taste among the higher ranks, for French fashions, French cookery, the affectation of French words and phrases, &c. in preference to English.

(1.) **GALLON**. *n. f.* [*gelo*, low Latin.] A liquid measure of four quarts.—Beat them into powder, and boil them in a gallon of wine, in a vessel close stopped. *Wispman's Surg.*

(2.) **GALLON** is a measure of capacity both for dry and liquid things, but differs according to the quality of the thing measured: For instance, the wine gallon contains 231 cubic inches, and holds 8 lb. avoirdupois of pure water; the beer and ale gallon contains 281 solid inches, and holds 10 lb. 3¼ oz. avoirdupois of water; and the gallon for corn, meal, &c. 272½ cubic inches, and holds 9 lb. 13 oz. of pure water.

**GALLOON**. *n. f.* [*galon*, French.] A kind of close lace, made of gold or silver, or of silk alone.

**GALLOP**. *n. f.* [from the verb.] The motion of a horse when he runs at full speed; in which, making a kind of a leap forwards, he lifts both his forelegs very near at the same time: and while these are in the air, and just upon the point of touching the ground, he lifts both his hind legs almost at once. *Farrier's Dict.*

**To GALLOP**. *v. n.* [*galoper*, French. Derived by all the etymologists, after *Budæus*, from *καλωζω*; but perhaps it comes from *gant*, all; and *loopen*, to run, Dutch; that is, to go on full speed.] 1. To move forward by leaps, so that all the feet are off the ground at once.—

I did hear

The galloping of horse: who was't came by?

*Shak Spens*

His steeds will be restrain'd,

But gallop lively down the western hill. *Donne.*

In such a shape grim Saturn did restrain  
His heav'nly limbs; and slow'd with such a mane  
When half surpriz'd, and fearing to be seen,  
The leacher gallop'd from his jealous queen.

*Dryden's Virgil;*

2. To ride at the pace which is performed by leaps.—Seeing such streams of blood as threatened a drowning life, we galloped toward them to part them. *Sidney.*—

D d

The

They 'gan espy  
An armed knight towards them gallop fast,  
That seemed from some feared foe to fly. *F. 2.*  
—He who fair and softly goes steadily forward, in  
a course that points right, will sooner be at his  
journey's end, than he that runs after every one  
he meets, though he gallop all day full speed.  
*Locke.* 3. To move very fast.—

The golden sun  
Gallops the zodiack in his glitt'ring coach. *Sh.*  
—Whom doth time gallop withal?  
—With a thief to the gallows. *Sbak.*  
—He that rides post through a country may, from  
the transient view, tell how in general the parts lie:  
such superficial ideas he may collect in galloping  
over it. *Locke.*

(1.) \* GALLOPER. *n. f.* [from *gallop.*] 1. A  
horse that gallops.—Mules bred in cold countries  
are much better to ride than horses for their walk  
and trot; but they are commonly rough gallopers,  
though some of them are very fleet. *Mort. Husb.*  
2. A man that rides fast, or makes great haste.

(2.) GALLOPER, in artillery, is the name of a  
carriage, which serves for a pound and a half gun.  
This carriage has shafts so as to be drawn without  
a limber, and is thought by some to be more con-  
venient and preferable to other field carriages;  
and it may likewise serve for our light three and  
six pounders.

GALLOTS, ISLE AUX, an island of Canada,  
in the St Lawrence. Lat. 43. 33. N.

GALLOW, *n. f.* See GALLOWES.

\* To GALLOW. *v. a.* [*agalwan*, to fright, Sax.]  
To terrify; to fright.—

The wrathful skies  
Gallow the very wand'ers of the dark,  
And make them keep their caves. *Sbak. K. L.*  
(I.) GALLOWAY, in geography, a county of  
Scotland, which is divided into two districts; the  
western, called *Upper*, and the eastern, *Lower*.

1. GALLOWAY, LOWER, or the Stewartry of  
Kirkcudbright. See KIRKCUDBRIGHT.

2. GALLOWAY, UPPER, or the county of Wig-  
ton. See WIGTON.

(II.) GALLOWAY, a township of New Jersey,  
in Gloucester county.

(III. i.) \* GALLOWAY. *n. f.* A horse not more  
than fourteen hands high, much used in the North;  
probably as coming originally from Galloway, a  
shire in Scotland.

(ii.) GALLOWAY, in zoology. Tradition re-  
ports that this kind of horses sprung from some  
Spanish stallions, which swam on shore from some  
of the ships of the famous Spanish armada,  
wrecked on the coast; and coupling with the  
mares of the country, furnished the kingdom  
with their posterity. They are much esteemed,  
and of a middling size, strong, active, nervous,  
and hardy.

(IV.) GALLOWAY. See GALWAY, N° 1.

(V.) GALLOWAY, MULL OF, the south cape or  
promontory of all Scotland, in the county of Gal-  
loway, on the Irish sea. Lon. 1. 43. W. of Edin-  
burgh. Lat. 54. 44. N.

(VI.) GALLOWAY, NEW, a town of Scotland,  
in Kirkcudbrightsh. near the Ken, 15 miles N. of  
Kirkcudbright.

\* GALLOWGLASSES. *n. f.* 1. It is worn like-

wife of footmen under their shirts  
which footmen the Irish call *gallo*  
which name doth discover them also  
English; for *gallogla* signifies an Er  
or yeoman. And he being so arm  
shirt of mail, down to the calf of h  
long broad ax in his hand, was the  
*armature*; and was instead of the  
now weareth a corset, before the co  
or almost invented. *Spenser on Ir.*  
otherwise than *Spenser*.] Soldiers an  
Irish, who serve on horseback.—

A puissant and mighty pow'  
Of *galloglasses* and stout kernes,  
Is marching hitherward in proud

(1.) \* GALLOWES. GALLOWES. *n.*  
by some in the singular; but by mo  
plural, or sometimes has another pl  
*Galgo*, Gothic; *gealga*, Saxon; *galg*  
some derive from *gag*, high, other  
Welsh, power: but it is probably  
*galloas*, to fright, from *agalwan*, th  
ing the great object of legal terrour  
had over two posts, on which malefa  
ed.—This monster sat like a hangm  
of *galloas*; in his right hand he was  
ing a crown of laurel, in his left h  
money. *Sidney*.—I would we were al  
and one mind good; O, there w  
of gaolers and *galloas*. *Shakesp. C*

† prophesied, if a *galloas* were  
This fellow could not drown.  
—He took the mayor aside, and w  
that execution must that day be do  
fore required him that a pair of *gal*  
erected. *Hayward*.—A poor fellow,  
*galloas*, may be allowed to feel the f  
while he is upon Tyburn road. *Swin*  
that deserves the gallows.—

Cupid hath been five thousand  
—Ay, and a shrewd unhappy *gallo*

(2.) GALLOWES, among our ances  
ed *furca*, fork; a name by which i  
minated abroad, particularly in Fra  
In this latter country, the reason of  
subsists; the gallows being a real f  
the ground, across the legs whereof  
to which the rope is tied. See FU

GALLS IADI, a town of Sw  
Gothland, 50 miles E. of Gothenb

(1.) GALLUS, Cornelius, an a  
poet, born at Forum Julium, in C  
a particular favourite with August  
made him governor of Egypt: bu

in there occasioned his banishment and the  
 is estate; for grief of which he put an end  
 wa life. He wrote 4 books of love elegies;  
 gil has complimented him in many places.  
 GALLUS, the Cock, in ornithology. See  
 IVUS.

GALLUS, a river of Phrygia.  
 LY, in printing, a frame into which the  
 itor empties the lines out of his composing  
 id in which he ties up the page when it is  
 ed. The galley is formed of an oblong  
 board, with a ledge on three sides, and a  
 o admit a false bottom called a *galley lice*.

Y-HEAD. See GALLEY-HEAD.

NEIKIRCHEN, a town of Austria.

OMBATZ, a town of Servia, 20 miles  
 of Orsova.

OPINA, in botany, a genus of the digynia

closering to the tetrandria class of plants.

OVSKOI, a fort of Russian Siberia.

DWAH, or GHALVAH, a town of Africa,  
 4 on the Nile.

ALSTON, a parish of Scotland, in Ayr-  
 miles long, and from 4 to 5 broad. The  
 ntly light and gravelly, partly rich clay  
 l. The climate is moist but healthy. The  
 of arable acres is 7,200. Oats are the  
 duce; peas, beans, potatoes, wheat, and  
 also cultivated. There are many fine old  
 rticularly very large firs in the parish.

elm measures 24 feet round, 12 feet of  
 the top, and spreads into 24 branches,  
 which is itself a large tree. Great quan-  
 tities of excellent cheese are made, and about 1000  
 of flax are annually manufactured in the  
 parish. The population, in 1790, stated by the  
 author, in his report to Sir J. Sinclair, was  
 and had increased 564 since 1755. The  
 of sheep was above 2,600. There are se-  
 veral retreats of Sir William Wallace, in  
 it, some of which still bear the name of  
 patriot. See BIG, N° 1; WALLACE-  
 : There are 3 lint mills, 1 paper, and  
 12 in the parish. One of these last, seat-  
 ed at Irvine, is called *Patie's Mill*, and claims  
 the honor of having given birth to Ramsay's ce-  
 lebrated, *The Last of Patie's Mill*.

ALSTON, a flourishing village in the above  
 parish, seated on the great roads from E-  
 dinburgh to Ayr, and from Glasgow to Dumfries,  
 it through it. The population, in 1790,  
 was 1,200. It has two great fairs, in July and  
 in the evening before St Peter's fair fires  
 on all the adjacent hills.

ALLA, a town of Sardinia, 14 miles S.

YS, } or GAULTIES, mountains of Ire-  
 ES, } land, in the counties of Limerick,  
 and Cork.

NISM. See ELECTRICITY, *Index*.

AS, a town of Portugal, in Alentejo;  
 NW. of Estremoz.

WAY, or GALLOWAY, a county of  
 the province of Connaught, 76 miles  
 E. to W. and 40 broad; bounded by  
 the N. of Clare, Tipperary, King's County,  
 and the sea. The Shannon washes  
 on the E. and SE. and forms a lake

several miles long. The county contains 27 ba-  
 ronies, 13 boroughs; 28 churches, 116 parishes,  
 about 28,200 houses, and 142,000 soul. The  
 climate is warm and the soil fertile. The chief  
 towns are Gaiway, (N° 2.) Tuain; Ballinalloe,  
 and Loughrea. Before the Union with Great Bri-  
 tain, this county sent 2 representatives to parlia-  
 ment, for itself, and 6 from the boroughs.

(2.) GALWAY, the capital of the above county,  
 (N° 1.) is surrounded with strong walls, has large  
 straight streets, and the houses are built of stone.  
 It has a good trade into foreign parts, on account  
 of its harbour, which is defended by a fort. It is  
 governed by a mayor, sheriffs, and recorder; and,  
 before the Union, returned two members to parlia-  
 ment. It has but one parish church, which is  
 a large and beautiful Gothic structure; an ex-  
 change; barracks for 20 companies of foot, a  
 charter school, and an hospital. It was one of the  
 strongest towns in the kingdom: it held out some  
 time against general Ginckle, who invested and took  
 it after the battle of Aughrim. Its fortifications  
 were then repaired; the walls are flanked by bas-  
 tions, but are mostly decayed. The salmon and  
 herring fisheries are carried on here with great  
 spirit, and employ 700 boats; the quantity of  
 kelp manufactured and exported is considerable;  
 and the linen manufacture, is important. In 1296,  
 Sir William de Burgh founded a monastery here  
 for Franciscan friars, on St Stephen's island, situ-  
 ated without the N. gate of the town. His tomb  
 was discovered in June 1779, 4 feet under ground,  
 with his family arms, and a very long broad sword,  
 elegantly carved thereon. Near the W. gate of  
 the town, without the walls, was the monastery of St  
 Mary of the hill. There are no remains of it ex-  
 cept the cemetery; the building having been de-  
 molished by the townsmen, in 1652, to prevent  
 Cromwell from turning it into a fortification.  
 This town is seated on the bay of Galway, 49  
 miles WSW. of Athlone, and 96 W. of Dublin.  
 Lon. 8. 58. W. Lat. 53. 15. N.

(3.) GALWAY, a township of New York, in the  
 county of Saratoga.

(4.) GALWAY BAY, a large bay of the Atlantic,  
 on the W. coast of Ireland; 20 miles long and 7  
 broad. The N. side of it is dangerous for ships.

GAMA, Vasco DE, a Portuguese admiral, ce-  
 lebrated for his discovery of the East Indies by the  
 Cape of Good Hope, was born at Synes; and, in  
 1497, was sent to the Indies by king Emanuel:  
 he returned in 1502, and sailed thither again with  
 13 vessels richly laden. He was made viceroy of  
 the Indies by king John III; and died at Cochín  
 on the 24th Dec. 1525. Stephen and Christo-  
 pher De Gama, his sons, were also viceroys of  
 the Indies, and celebrated in history.

GAMACHES, a town of France, in the dep. of  
 Somme, 12 miles SW. of Abbeville.

GAMBACH, a town of Germany, in the princi-  
 pality of Solms Braunfels, 2 m. W. of Munzenberg.

\* GAMBADA. } *n. f.* [*gamba*, Italian, a leg.]

\* GAMBADO. } Spatterdashes; boots worn  
 upon the legs above the shoe.—The pettifogger  
 ambles to her in his *gambadoes* once a week. *Den-  
 nis's Letters*.

GAMBAIS, a town of France, in the d-part.  
 of Seine and Oise; 3 miles E. of Houdan.

**GAMBOLO**, a town of the dep. of Tessino, and cit. 2 miles from Vigevano. It is one of the Cisalpine republic, on the river Po, and is ci devant Cremona.

**GAMBARE**, a town of the Cisalpine republic, situated on the Naviglio, 18 miles from Milan. It had 2000 citizens, in 1797. It is in the district of the Cisalpine republic, in the dep. of the Mela, on the confines of Mantua; containing 3 parishes, and 4000 citizens.

(1.) **GAMBARE**, a district of Maritime Austria, in the Dogado, W. of Venice, extending from the banks of the lakes to the Paduan. The soil is fertile, but the climate is not healthy.

(2.) **GAMBARE**, a village in the above district, (N<sup>o</sup> 1.) on the Brenta. It has a chapel on the ruins of the abbey of St Ilario.

**GAMBARO**, a town of Italy, in the duchy of Placentia, 24 miles S. of Placentia.

**GAMBASCA**, a town of Italy, in Piedmont, and in the marquisate of Saluzzo, on a rivulet which runs into the Po, 6 miles W. of Saluzzo.

(1.) **GAMBIA**, a country of Africa, ceded to Britain by the peace, in 1783.

(2.) **GAMBIA**, a large river of Negroland in Africa, generally supposed to be a branch of the Niger. See **NIGER**, **NILE**, and **SENEGAL**.

**GAMBINA**, a river of Italy, in the Cisalpine republic, and department of Upper Po.

\* **GAMBLER**. *n. f.* [A cant word, I suppose, for *game* or *gamester*.] A knave whose practice is to invite the unwary to game and cheat them.

**GAMBLE'S STATION**, a fort of the United States, in Tennessee, 12 miles from Knoxville.

(1.) \* **GAMBOGE**. *n. f.* *Gamboge* is a concreted vegetable juice, partly of a gummy, partly of a resinous nature, heavy, of a bright yellow colour, and scarce any smell. It is brought from America and the East Indies, particularly from Cambaja, or Cambogia. *lill.*

(2.) **GAMBOGE** is partly of a gummy, and partly of a resinous nature. See **CAMBOGIA**. It is chiefly brought to us in large cakes or rolls from Cambaja in the East Indies. The best sort is of a deep yellow or orange colour, breaks shining and free from dross; it has no smell, and very little taste, unless kept in the mouth for some time, when it impresses a slight sense of acrimony. It immediately communicates to spirit of wine a bright golden colour, and almost entirely dissolves in it; Geoffroy says, except the sixth part. Alkaline salts enable water to act upon this substance powerfully as a menstruum; the solution is somewhat transparent, of a deep blood-red colour, and passes the filtre; the dulcified spirit of sal ammoniac readily and entirely dissolves it, and takes up a considerable quantity; and this solution mixes either with water or spirit, without growing turbid. As a pigment, it makes a beautiful yellow, which is much used by the painters. Dr Lewis says, that it makes a beautiful and durable citron yellow stain upon marble, whether rubbed in substance on the hot stone, or applied in form of a spiritous tincture. When it is rubbed on cold marble, the stone must after-

wards be heated, to make the colour. As a medicine, gamboge evacuates both ways; some condemn it as acting with great violence, and occasioning dangerous cathartes. Geoffroy seems fond of it, and says, that he has frequently given from 4 to 8 grains, without its proving at all emetic; and if given in a liquid form, and sufficient quantity, it stands not in need of any corrector. In the form of a bolus or pill, it is most apt to operate, but very rarely has this effect if it be mixed with *mercurius dulcis*. He nevertheless cautions against its use where the patient cannot easily bear it. It has been used in dropsy with tartar or jalap, or both, to quicken the operation. It is also recommended by some for the cure of the tape-worm, in a dose of 15 grains, with an equal quantity of tartar emetic, in cases of the tape-worm, is ordered in the morning; and if the patient is expelled in 2 or 3 hours, it is repeated the 3d time with safety and efficacy.

It is also recommended by some, that it has been given to this extent in the cure of the tape-worm, that it has been given to this extent in the cure of the tape-worm, that it has been given to this extent in the cure of the tape-worm, that it has been given to this extent in the cure of the tape-worm.

\* **GAMBOL**. *n. f.* [from the verb *gambol*, a hop; a leap for joy.—A gentleman once showed me a spaniel, that would be still toying upon him, and playing a thousand tricks.]

Bacchus through the conquer'd  
And boasts in gambols frisk'd before  
god.

2. A frolick; a wild prank.—

For who did ever play his gambol  
With such unsufferable rambles?

\* **To GAMBOL**. *v. n.* [*gamboller*, to dance; to skip; to frisk; to jump for joy.]

Bears, tigers, ounces, par  
Gambol'd before them. *Mit.*  
The king of elfs, and little fair  
Gambol'd on heaths, and danc'd o

The monsters of the flood  
Gambol around him in the wat'ry  
And heavy whales in aukward me

2. To leap; to start.—

'Tis not madnes  
That I have utter'd; bring me to  
And I the matter will record, wt  
Would gambol from.

**GAMBON**, a river of France, w  
the Seine, near Andely.

\* **GAMBREL**. *n. f.* [from *gambrel*, Ital.] The leg of a horse.—What an admirable, than for the principles of tendon to be so mixed as to make it and yet to have the strength of iron by the weight which the tendon, ly, *gambrel*, doth then command, when with a man upon his back. *Creag.*

**GAMBRON**, **GOMBRON**, or **BE**  
a city of Persia. See **GOMBRON**.

**VISSA**, a town of Maritime Austria, miles E. of Cabo of Istria.

**ME. s. f.** (*gamas*, a jest, Islandick.) any kind.—

we had pastimes here, and pleasing

people.

*games* are done, and Cæsar is returning.  
*Shakepeare.*

when ent'ring the Olympick *game,*  
a huge ox upon his shoulders came. *Denb.*

**ME**, in law, (*s. 1. def. 8.*) signifies birds, or  
fish or killed by fowling or hunting. The  
name of such animals *feræ naturæ* as are known  
denomination of *game*, with the right of  
taking, and destroying them, is vested  
in the crown, and from him derived to such of

his subjects as have received the grant of a chace, a  
park, or free warren. By the law of nature, indeed,  
every man, from the prince to the peasant, has an  
equal right of pursuing, and taking to his own use,  
all such creatures as are *feræ naturæ*, and there-  
fore the property of nobody, but liable to be seized  
by the first occupant. But it follows, (says Black-  
stone,) from the very end and constitution of so-  
ciety, that this natural right, as well as many others  
belonging to man as an individual, may be restrain-  
ed by positive laws enacted for reasons of state, or  
for the supposed benefit of the community. This  
restriction may be either with respect to the *place*  
in which this right may, or may not, be exercised;  
with respect to the *animals* that are the subjects  
of this right; or with respect to the *persons* allowed  
or forbidden to exercise it. And, in consequence  
of this authority, we find, that the municipal  
laws of many nations have exerted such power of  
restraint; have in general forbidden the entering  
on another man's grounds, for any cause, without  
the owner's leave; have extended their protection  
to such particular animals as are usually the ob-  
jects of pursuit; and have invested the preroga-  
tive of hunting and taking such animals in the so-  
vereign of the state only, and such as he shall au-  
thorize. Many reasons have concurred for making  
these constitutions: as, 1. For the encouragement  
of agriculture and improvement of lands, by gi-  
ving every man an exclusive dominion over his  
own soil. 2. For the preservation of the several  
species of these animals, which would soon be  
extirpated by a general liberty. 3. For prevention  
of idleness and dissipation in husbandmen, artificers,  
and others of lower rank; which would be the  
unavoidable consequence of universal licence. 4.  
For prevention of popular insurrections and re-  
sistance to the government, by disarming the bulk  
of the people: which last is a reason oftener meant  
than avowed, by the makers of forest or game  
laws. Nor, certainly, in these prohibitions is  
there any *natural* injustice, as some have weakly  
enough supposed: since, as Puffendorf observes,  
the law does not hereby take from any man his  
present property, or what was already his own;  
but barely abridges him of one means of acquiring  
a future property, that of occupancy; which in-  
deed the law of nature would allow him, but of  
which the laws of society have in most instances  
very justly and reasonably deprived him. Yet, how-  
ever defensible these provisions in general may be,  
on the footing of reason, or justice, or civil policy,  
we must, notwithstanding, acknowledge, that, in  
their present shape, they owe their immediate ori-  
gin to slavery. It is not till after the irruption  
of the northern nations into the Roman empire,  
that we read of any other prohibitions, than that  
natural one of not sporting on any private grounds  
without the owner's leave. With regard to the  
rise and original of our present civil prohibitions,  
it will be found, that all forest and game laws were  
introduced into Europe at the same time, and by  
the same policy, that gave birth to the feudal  
system; when those swarms of barbarians issued  
from their northern hive, and laid the foundation  
of most of the present kingdoms of Europe on the  
ruins of the western empire. For when a con-  
quering general came to settle the economy of a

conquished country, and to part it out among his soldiers or feudatories, who were to render him military service for such donations; it behoved him, in order to secure his new acquisitions, to keep the *ruffici* or natives of the country, and all who were not his military tenants, in as low a condition as possible, and especially to prohibit them the use of arms. Nothing could do this more effectually than a prohibition of hunting and sporting: and therefore it was the policy of the conqueror to reserve this right to himself, and such on whom he should bestow it; which were only his capital feudatories or greater barons. And, accordingly, we find, in the feudal constitutions, one and the same law prohibiting the *ruffici* in general from carrying arms, and also proscribing the use of nets, snares, or other engines for destroying the game. This exclusive privilege well suited the martial genius of the troops, who delighted in a sport, which in its pursuit and slaughter bore some resemblance to war. *Vita omnis (says Cæsar, speaking of the ancient Germans) in venationibus atque in studiis rei militaris consistit.* And Tacitus in like manner observes, that *quoties bella non incunt, multum venatibus, plus per otium transgunt.* And indeed, like some of their modern successors, they had no other amusement to entertain their vacant hours; they despising all arts as effeminate, and having no other learning than was couched in such rude ditties as were sung at the solemn carousals, which succeeded these ancient huntings. And it is remarkable, that in those nations where the feudal policy remains the most unaltered, the forest or game laws continue in their highest rigour. In France, before the revolution, all game was properly the king's; and in some parts of Germany it is death for a peasant to be found hunting in the woods of the nobility. With us in Britain, also, hunting has ever been esteemed a most princely diversion and exercise. The whole island was replenished with all sorts of game in the times of the Britons; who lived in a wild and pastoral manner, without inclosing or improving their grounds; and derived much of their subsistence from the chase, which they all enjoyed in common. But when husbandry took place under the Saxon government, and lands began to be cultivated, improved, and inclosed, the beasts naturally fled into the woody and desert tracts, which were called the *forrests*; and, having never been disposed of in the first distribution of lands, were therefore held to belong to the crown. These were filled with great plenty of game, which our royal sportsmen reserved for their own diversion, on pain of pecuniary forfeiture for such as interfered with their sovereign. But every freeholder had the full liberty of sporting upon his own territories, provided he abstained from the king's forests. However, upon the Norman conquest, a new doctrine took place; and the right of pursuing and taking all beasts of chase or *venary*, and such other animals as were accounted *game*, was then held to belong to the king, or to such only as were authorized under him. And this, as well upon the principles of the feudal law, that the king is the ultimate proprietor of all the lands in the kingdom, they being all held of him as the chief lord, or lord *paramount of the see*; and that therefore he has

the right of the universal soil, to enter it and to chase and take such creatures at his pleasure: as also upon another maxim of the common law, that these animals are *bona vacantia* having no other owner, belong to the king as prerogative. As therefore the former real right held to vest in the king a right to pursue them any where, the latter was supposed to vest in the king, and such as he should authorize, an exclusive right. This right, thus vested in the crown, was exerted with the utmost rigour, and after the time of the Norman establishment, not only in the ancient forests, but in the new ones which the Conqueror made, by laying out vast tracts of country, depopulated for the purpose, and reserved solely for the king's diversion; in which were exercised the most tyrannical and oppressive, under colour of forest laws for the sake of preserving the beasts of chase, to kill any of which, within the limits of the forest, was as penal as the death of a man. And in consequence of the same principle, king John issued a royal interdict upon the *swinged* as well as the *footed* creation: *capturam quivum per totam Angliam interdixit.* The cruel and unparliamentary hardships, which these forest laws create to the subject, occasioned our ancestors to be anxious for their reformation, as for the relaxation of the feudal rigours and the other exactions imposed by the Norman family; and accordingly the immunities of *charta de foresta* as well as the *charter of the forest* were intended for, and extorted from the king, with much difficulty, as those of *magna charta*. By this charter, confirmed in parliament (chap. III.) many forests were disafforested, or the king's forests were regulated, and the rigour of their oppressive privileges, and regulations made in the regimen of such as remained, particularly killing the king's deer was made no longer a capital offence, but only punished by imprisonment, or abjuration of the realm; and by a variety of subsequent statutes, together with the long acquiescence of the crown without asserting the forest laws, this prerogative is now no longer a grievance to the subject. But the king reserved to himself the *forest* for his own private diversion, so he granted out from time to time other tracts of land to his subjects under the name of *chases* or *parks*; or gave them licence to hunt in their own grounds; which included smaller forests in the hands of a subject, but governed by the forest laws; and by the common law no person is at liberty to take or kill any beast of chase, but such as hath an ancient chase or *warren*, unless they be also beasts of prey. As to a superior species of game, called *beasts and free warren*; the liberty of taking or killing them is another franchise, or royalty, derived likewise to the crown, and called *free warren*; a word which signifies preservation or custody: as the liberty of taking and killing fish in a stream or river is called a *free fishery*; of which however, no new franchise can at present be granted by the express provision of *magna charta* cap. 16. The principal intention of granting these franchises, or liberties, was in order to protect the game, by giving him a sole and exclusive power of killing it himself, provided he pursued it by other persons. And no man but he who

the warren, by grant from the crown, which supposes one, can justify sporting upon another man's soil; nor thorough strictness of common law, either of sporting at all. However new this may seem, it is a regular consequence as been before delivered, that the sole hunting and destroying game belongs to the king. This appears, as well from the deduction here made, as because he has his subjects an exclusive right of taking which he could not do, unless such a right inherent in himself. And hence it follows that no person whatever, but he who derives his right from the crown, is by law intitled to take or kill any beast of his own game whatsoever. It is true, that, in consequence of the crown, the frequent close warren in ancient times, and the multitude of new penalties of late by certain laws preserving the game, this exclusive right of the king is little known or considered, so that many are exempted from these motions looking upon himself as at liberty to be pleased with the game: whereas it is strictly true, and that no man, unless he is qualified he may vulgarly be esteemed, to encroach on the royal prerogative of game, unless he can show a particular grant; or some authority under the sanction of parliament. As to the latter, there are instances wherein an express permission was ever given by statute; the one in 127. altered by 9 Jac. I. c. 11. and repealed by 22 and 23 Car. II. c. 25. authority, so long as they remained in the hands of the owners of free warren, to lords of manors to appoint game-keepers, for the use of such lord or lady; and some alteration still subsists, and plainly shews power not to have been in them in the truth of the matter is, that these game-keepers are not qualified to kill game: but only to receive a fine and formal process of an action against an injured, who perhaps too might receive, these statutes inflict additional penalties covered either in a regular or summary way of the king's subjects, from certain inferior rank who may be found offender-articular. But it does not follow that they are liable from these additional penalties as forfeited to kill game. The circumstance is, that the penalties, are not prohibitions but exemptions. And these are not only liable to the penalties of the game, but also, if they kill game within the limits of any royal franchise, they are liable to the penalties of such who may have the sole or free warren therein. Upon the

whole, it appears, that the king, by his prerogative, and such persons as have, under his authority, the ROYAL FRANCHISE OF CHASE, PARK, OR FREE WARREN, (See these articles,) are the only persons who may acquire any property, however fugitive and transitory, in these animals *ferre nature*, while living; which is said to be vested in them *propter privilegium*. And such persons as may thus lawfully hunt, fish, or fowl, *ratione privilegii*, have only a qualified property in these animals: it not being absolute or permanent, but lasting only so long as the creatures remain within the limits of such respective franchise or liberty, and ceasing the instant they voluntarily pass out of it. It is held indeed, that if a man starts any game within his own grounds, and follows it into another's, and kills it there, the property remains in himself. And this is grounded on reason and natural justice; for the property consists in the possession; which possession commences by the finding it in his own liberty, and is continued by the immediate pursuit. And so, if a stranger starts game in one man's chase or free warren, and hunts it into another's liberty, the property continues in the owner of the chase or warren; this property arising from privilege, and not being changed by the act of a mere stranger. Or if a man starts game on another's private grounds, and kills it there, the property belongs to him on whose grounds it was killed, because it was also started there; this property arising *ratione soli*. Whereas if, after being started there, it is killed in the grounds of a third person, the property belongs not to the owner of the first ground, because the property is local; nor yet to the owner of the second, because it was not started in his soil; but it vests in the person who started and killed it, though guilty of a trespass against both the owners. See LAWS, RESPECTING GAME.

(3.) GAMES, in antiquity, (§ 1. *def.* 9.) were public diversions, exhibited on solemn occasions. Such among the Greeks were the Olympic, Pythian, Isthmian, Nemean, &c. games; and, among the Romans, the Apollinarian, Circensian, Capitoline, &c. games. See APOLLINARIAN, FUNERAL, § 3, OLYMPIC, PYTHIAN, &c.

(4.) GAMES, MODERN, are usually distinguished into those of exercise and address, and those of hazard. To the first belong chess, tennis, billiards, &c. and to the latter those performed with cards, or dice, as back-gammon, ombre, picquet, whist, &c. See BACK-GAMMON, CARDS, DICE, GAMING, &c.

\* To GAME. *v. n.* [*gaman*, Saxon.] 1. To play at any sport. 2. To play wantonly and extravagantly for money. *Gaming* leaves no satisfaction behind it: it no way profits either body or mind. *Locke*.

(1.) \* GAMECOCK. *n. s.* [*game* and *cock*.] Cocks bred to fight. They manage the dispute as fiercely as two gamecocks in the pit. *Locke*.

(2.) GAME-COCK. See COCK-FIGHTING.

\* GAME-EGG. *n. s.* [*game* and *egg*.] Eggs from which fighting cocks are bred.—

Thus boys hatch *game-eggs* under birds of prey,

To make the fowl more furious for the fray.

Gartb.  
(1.) GAME.

*n. f.* [game and keep.] A  
er game, and sees it is not

**AMELIA**, in Grecian antiquity, a nuptial  
her sacrifice, held in the ancient Greek  
y before a marriage; so called,  
had of shaving themselves on  
esenting their hair to some  
ad particular obligations.

**AMELION**, in the ancient chronology, was  
the 8th month of the Athenian year, containing 29  
days, and answering to the end of January and  
beginning of February. It was thus called, as be-  
ing, in the opinion of the Athenians, the most  
proper season of the year for marriage.

**GAMELORA**, an island in the Mediterranean,  
near the NE. coast of Tunis, 3 miles E. of Cape  
Zibeeb.

\* **GAMESOME**. *adj.* [from *game*.] Frolick-  
some; gay; sportive; playful; sportful.—Geron,  
though old, yet *gamesome* kept one end with Cos-  
ma. *Sidney*.—

I am not *gamesome*; I do lack some part  
Of that quick spirit that is in Antony.

*Shakefp. Jul. Cesar.*

The *gamesome* wind among her tresses plays,  
And curlteth up those growing riches short.

*Evilfax.*

Belial, in like *gamesome* mood.

*Milton.*

—This *gamesome* humour of children should  
rather be encouraged, to keep up their spirits and  
improve their strength and health, than curbed or  
restrained. *Locke*.

\* **GAMESOMELY**. *adv.* [from *gamesome*.]  
Merrily.

\* **GAMESOMENESS**. *n. f.* [from *gamesome*.]  
Sportiveness; merriment.

\* **GAMESTER**. *n. f.* [from *game*.] 1. One  
who is vitiously addicted to play.—Keep a *game-  
ster* from the dice, and a good student from his  
book, and it is wonderful. *Shakefp.*—A *gamester*,  
the greater master he is in his art, the worse man  
he is. *Bacon*.—

*Gamesters* for whole patrimonies play;

The steward brings the deeds, which must con-  
vey

The whole estate.

*Dryd. Juv.*

—Could we look into the mind of a common  
*gamester*, we should see it full of nothing but  
trumps and mattadores: her slumbers are haunt-  
ed with kings, queens, and knaves.—*Addis.*—

All the superfluous whims relate,

That fill a female *gamester's* pate,

What agony of soul she feels

To see a knave's inverted heels.

*Swift.*

—Her youngest daughter is run away with a *game-  
ster*, a man of great beauty, who in dressing and  
dancing has no superiour. *Law*. 2. One who is  
engaged at play.—

When lenity and cruelty play for kingdoms,

The gentler *gamester* is the soonest winner. *Sbak.*

—A man may think, if he will, that too eyes see  
no more than one; or that a *gamester* seeth always  
more than a looker on: but, when all is done,  
the help of good counsel is that which setteth busi-  
ness frait. *Bacon*. 3. A merry frolicksome per-  
son.—

You're a merry *gameste*

My lord Sands.

*Shakefp*

4. A prostitute. Not in use.—

She's impudent, my lord

And was a common *gamester* to the

**GAMET**, an island of Denmark, 3  
the continent, and 8 WSW. of Ripen

(1.) **GAMING**, the art of playing  
any game, particularly those of hazard  
dice, tables, &c. Gaming has at all  
considered as of pernicious consequ  
commonwealth: and is therefore sev  
bited by law. It is esteemed a practi  
to supply, or retrieve, the expences of

is proper that laws should be, and be  
licely, that gentlemen may consider w  
they wilfully incur, and what a con

sharpers; who, if successful in play, are paid with honour, or, if unsuccessful in their power to be still greater gainers ing. See § 3.

**CHANCE IN.** Hazard, or chance, of mathematical consideration, because of more and less. Gamesters either set an equality of chance, or are supposed

This equality may be altered in the game, by the greater good fortune of one of the gamesters, whereby he has a better chance, so that his share in is proportionably better than at first. and less runs through all the ratios of equality and infinite difference, or from an little difference till it come to an infiniteness, whereby the game is determined. game, therefore, with regard to the is a chance of the proportion the two to each other. The probability of an eater or less, according to the number of which it may happen, compared with ices by which it may either happen or fail. ivre, in a treatise de Mensura Sortis, has the variety of chances in several cases in gaming, the laws of which may be l by what follows. Suppose  $p$  the num- s in which an event may happen, and ber of cases wherein it may not happen, have the degree of probability, which is her as  $p$  to  $q$ . If two gamesters, A and on this footing, that, if the cases  $p$  hap- all win; but if  $q$  happen, B shall win,

ke be  $a$ ; the chance of A will be  $\frac{p a}{p+q}$ , f B  $\frac{q a}{p+q}$ ; consequently, if they sell the

es, they should have that for them re- on. that, if A throw two or more ces rows, he shall win; otherwise B shall it is the ratio of their chances? Since : one case wherein an ace may turn up, herein it may not, let  $a=1$ , and  $b=5$ . since there are eight throws of the die,

nd you will have  $a+b^n-b^n-nab^{n-1}$ ,  $-1$ : that is, the chance of A will be B as 663991 to 10156525, or nearly as and B are engaged at single quoits; playing some time, A wants 4 of being 6; but B is so much the better game- is chance against A upon a single throw as 3 to 2; What is the ratio of their Since A wants 4, and B 6, the game ed at nine throws; therefore, raise  $a+b$  h power, and it will be  $a^9+9 a^8 b+36 b^2+126 a^7 b^2+126 a^6 b^3$ , to  $84 a^5 b^4+36 b^5+6^9$ : call  $a$  3, and  $b$  2, and you will tio of chances in numbers, viz. 1759077

A and B play at single quoits, and A gamester, so that he can give B 2 in 3: ratio of their chances at a single throw? e chances as  $x$  to 1, and raise  $x+1$  to hich will be  $x^3+1 x^2+3 x+1$ . Now ld give B 2 out of 3, A might under- three throws running; and consequent-

PART I.

ly the chances in this case will be as  $x^3$  to  $3x^2+3x+1$ . Hence  $x^3=3x^2+3x+1$ ; or  $2x^3=3x^2+3x-3x+1$ . And therefore  $x\sqrt{2}=x+1$ ; and, con- sequently,  $x=\frac{1}{\sqrt{2}-1}$ . The chances, therefore, are

$\frac{1}{\sqrt{2}-1}$ , and 1, respectively. Again, suppose I have two wagers depending, in the first of which I have 3 to 2 the best of the lay, and in the second. 7 to 4; What is the probability I win both wagers? I. The probability of winning the first is  $\frac{3}{5}$ , that is the number of chances I have to win, divided by the number of all the chances: the probability of winning the second is  $\frac{7}{11}$ ; therefore, multiply- ing these two fractions together, the product will be  $\frac{21}{55}$ , which is the probability of winning both wagers. Now, this fraction being subtracted from 1, the remainder is  $\frac{34}{55}$ , which is the probability I do not win both wagers: therefore the odds against me are 34 to 21. II. If I would know what the probability is of winning the first, and losing the second, I argue thus; the probability of winning the first is  $\frac{3}{5}$ , the probability of losing the second is  $\frac{4}{11}$ : therefore multiplying  $\frac{3}{5}$  by  $\frac{4}{11}$ , the pro- duct  $\frac{12}{55}$  will be the probability of my winning the first, and losing the second; which being subtrac- ted from 1, there will remain  $\frac{43}{55}$ , which is the probability I do not win the first, and at the same time lose the second. III. If I would know what the probability is of winning the second, and at the same time losing the first, I say thus: The probability of winning the second is  $\frac{7}{11}$ ; the probability of losing the first is  $\frac{2}{5}$ : therefore, multi- plying these two fractions together, the product  $\frac{14}{55}$  is the probability I win the second, and also lose the first. IV. If I would know what the probability is of losing both wagers, I say, the probability of losing the first is  $\frac{2}{5}$ , and the probability of losing the second  $\frac{4}{11}$ : therefore the probability of losing them both is  $\frac{8}{55}$ : which, being subtrac- ted from 1, there remains  $\frac{47}{55}$ : therefore, the odds of losing both wagers is 47 to 8. This reasoning is applicable to the happening or failing of any e- vents that may fall under consideration. Thus if I would know what the probability is of missing an ace four times together with a die, this I con- sider as the failing of four different events. Now the probability of missing the first is  $\frac{1}{6}$ , the second is also  $\frac{1}{6}$ , the third  $\frac{1}{6}$ , and the fourth  $\frac{1}{6}$ ; therefore the probability of missing it four times together is  $\frac{1}{6} \times \frac{1}{6} \times \frac{1}{6} \times \frac{1}{6} = \frac{1}{1296}$ ; which being subtracted from 1, there will remain  $\frac{1295}{1296}$  for the probabili- ty of throwing it once or oftener in four times; therefore the odds of throwing an ace in four times, is 671 to 625. But if the flinging of an ace was undertaken in three times, the probability of mis- sing it three times would be  $\frac{1}{6} \times \frac{1}{6} \times \frac{1}{6} = \frac{1}{216}$ ; which being subtracted from 1, there will remain  $\frac{215}{216}$  for the probability of throwing it once or oftener in three times: therefore the odds against throwing it in three times are 125 to 91. Again, suppose we would know the probability of throwing an ace once in four times, and no more: since the probability of throwing it the first time is  $\frac{1}{6}$ , and of missing it the other three times, is  $\frac{5}{6} \times \frac{5}{6} \times \frac{5}{6}$ , it follows, that the probability of throwing it the first time, and missing it the other three successive

§ 6

www.

times, is  $\frac{1}{5} \times \frac{1}{5} \times \frac{1}{5}$ ; because it is possible to hit every throw as well as the first, it follows, that the probability of throwing it once in four throws, and missing it the other three, is  $\frac{1}{5} \times \frac{4}{5} \times \frac{4}{5} \times \frac{4}{5}$ ; which being subtracted from 1, there will remain  $\frac{80}{125}$  for the probability of throwing it once, and no more, in four times. Therefore, if one undertake to throw an ace once, and no more, in four times, he has 100 to 796 the worst of the lay, or 5 to 8 very near. Suppose two events are such, that one of them has twice as many chances to come up as the other; what is the probability that the event, which has the greater number of chances to come up, does not happen twice before the other happens once, which is the case of flinging 7 with two dice before 4 once? Since the number of chances is as 2 to 1, the probability of the first happening before the second is  $\frac{2}{3}$ , but the probability of its happening twice before it is but  $\frac{2}{3} \times \frac{2}{3}$  or  $\frac{4}{9}$ : therefore if 5 to 4, seven does not come up twice before four once. But, if it were demanded, what must be the proportion of the facilities of the coming up of two events, to make that which has the most chances come up twice, before the other comes up once? The answer is, 12 to 5 very nearly: whence it follows, that the probability of throwing the first before the second is  $\frac{12}{17}$ , and the probability of throwing it twice is  $\frac{12}{17} \times \frac{12}{17}$ , or  $\frac{144}{289}$ : therefore the probability of not doing it is  $\frac{145}{289}$ : therefore the odds against it are as 145 to 144, which comes very near an equality. Suppose there is a heap of 13 red cards, and another heap of 13 black cards. What is the probability, that, taking one card at a venture out of each heap, I shall take out the two aces? The probability of taking the ace out of the first heap is  $\frac{1}{13}$ , the probability of taking the ace out of the second heap is  $\frac{1}{13}$ ; therefore the probability of taking out both aces is  $\frac{1}{13} \times \frac{1}{13} = \frac{1}{169}$ , which being subtracted from 1, there will remain  $\frac{168}{169}$ : therefore the odds against me are 168 to 1. In cases where the events depend on one another, the manner of arguing is somewhat altered. Thus, suppose that out of one single heap of 13 cards of one colour I should undertake to take out first the ace; and, secondly, the two: though the probability of taking out the ace be  $\frac{1}{13}$ , and the probability of taking out the two be likewise  $\frac{1}{13}$ : yet, the ace being supposed as taken out already, there will remain only 12 cards in the heap, which will make the probability of taking out the two to be  $\frac{1}{12}$ ; therefore the probability of taking out the ace, and then the two, will be  $\frac{1}{13} \times \frac{1}{12}$ . In this last question the two events have a dependence on each other; which consists in this, that one of the events being supposed as having happened, the probability of the other's happening is thereby altered. But the case is not so in the two heaps of cards. If the events in question be  $n$  in number, and be such as have the same number  $a$  of chances by which they may happen, and likewise the same number  $b$  of chances by which they may fail, raise  $a+b$  to the power  $n$ . And if A and B play together, on condition that if either one or more of the events in question happen, A shall win, and B lose, the probability of A's winning will be

$$\frac{a^n + b^n - 1}{a+b}; \text{ and that of B's winning will be } \frac{b^n}{a+b};$$

for when  $a+b$  is actually raised to the only term in which  $a$  does not occur is  $b^n$ : therefore all the terms but the last are able to A. Thus if  $n=3$ , raising  $a+b$  to the power 3, all the terms but the last are favourable to A; and therefore the probability of winning will be  $\frac{a^3 + 3a^2b + 3ab^2}{a+b}$ , or

and the probability of B's winning will be  $\frac{b^3}{a+b}$ .

But if A and B play on condition, that two or more of the events in question shall win; but in case one only happens, B shall win; the probability of A's winning will be  $\frac{a^n + b^n - nab^{n-1} - \dots - b^n}{a+b}$ ; for the only

term which  $aa$  does not occur are the terms  $nab^{n-1}$  and  $b^n$ .

(3.) GAMING, LAWS AGAINST. Car. II. c. 7. if any person by playing shall lose more than 100l. at one time, he shall not be compellable to pay the debt; but the winner shall forfeit treble the value, and the loser to the informer. 9 Ann. c. 14. enacts, that all bonds, mortgages, and securities, given for money won at play, shall be void: that all mortgages and incumbrances made upon the same consideration, shall be void: that the heir of the mortgager, if the person at one time loses 200l. at play, shall not be compellable to pay the debt; but the winner, and recover it back by law; and, in case the loser does not pay, the person may sue the winner for treble the debt; and the plaintiff in either case shall be bound to swear upon oath: and in all these suits no privilege of parliament shall be allowed. The statute farther enacts, that if any person cheats at play, and at one time loses more than 100l. or any valuable thing, he shall be liable to be imprisoned, and shall forfeit five times the value, shall be deemed infamous, and shall be liable to corporal punishment as in case of witchcraft. By several statutes of the reign of king Charles II. all private lotteries by tickets, cards, or otherwise, particularly the games of faro, basset, hazard, passage, rolly-polly, and all other games with dice, except backgammon, are prohibited, under a penalty of 200l. for him that first introduces such lotteries, and 50l. a-time for every subsequent person. Public lotteries, unless by authority of parliament, and all manner of ingenious devices, such as the denomination of sales or otherwise, which in the end are equivalent to lotteries, are prohibited by a great variety of statutes, and heavy pecuniary penalties. But particularly the laws will be ever lame and deficient, if the games of mere chance are at once prevented, without the invention of sharper's being swifter than the law, which only hunt for one device to another. The statute 11 Geo. II. c. 19. to prevent the multiplicity of heinous matches, directs that no person shall be allowed to play for a sum of money, or any other valuable thing, the value of 200l. to be paid by the

ing, and 200l. by such as advertise the  
y statute 21 Geo. II. c. 34. the statute 9  
urther enforced, and some deficiencies  
the forfeitures of that act may now be  
in a court of equity; and, moreover,  
n be convicted, upon information or in-  
of winning or losing at any sitting 10l.  
ithin 24 hours, he shall forfeit five times

Thus careful has the legislature been  
t this destructive vice: which may show  
aws against gaming are not so deficient,  
as and our magistrates in putting those  
ecution.

W. of Marburg.

LACANOR, or } a town of the isle of  
LADOUR, } Bechian, one of the

EMER. *n. f.* [Of uncertain etymology;  
rom *grand mere*, and therefore used com-  
old women.] The compellation of a  
rresponding to gaffer: as, *Gammer* Gus-  
dle, an old play.

ING, and } Two towns of Austria,  
ING MARKET, } 20 m. E. of Waidhofen.

LAMMON. *n. f.* [*gambone*, Ital.] 1. The  
f an hog salted and dried; the lower  
: stich.—

or what price thy venal tongue was sold;  
*gammone* of some sev'n years old. *Juv.*  
*manus*, that give a relish to the taste,  
cted fowl, and fish, come in so fast,  
e the first is out, the second sinks.

*Dryden's Pers.*

of play with dice.—

The quick dice,  
der leaping from the box, awake  
inding *gammone*. *Thomson's Autumn.*  
MMON, § 1. *def. 2.* See BACK-GAMMON.  
IONING, among seamen, denotes sec-  
s of a rope taken round the bowsprit,  
d through holes in knees of the head,  
ater security of the bowsprit.

UT. See GAMUT.

U, a town of the Helvetic republic, part-  
anton of Schweitz, and partly in that  
5 miles S. of Appenzel.

U, a parish of Scotland, on the coast  
ire, 9½ miles long, and 3½ broad. The  
y barren, but in many places very fertile,  
is almost one continued chain of stupen-  
s, 200 yards high, and abounds with  
haddock, turbot, &c. The salmon  
the Dover is let by the E. of Fife, for  
year. The church was built in 1004,  
likely to last for many ages more. The  
in 1790, stated by the rev. Mr Wilson,  
et to Sir J. Sinclair was 3000, and was  
bled since 1732. Longevity is common.  
er, Mr Wilson, was in his 97th year,  
ransmitted his Statistical Account; se-  
r persons were then living above 90;  
rman died a few years before aged 109.  
has been much improved by the exer-  
se earl of Fife, the late Mr Garden of  
d Lord Gardenston.

LAMUT. *n. f.* [*gama*, Ital.] The scale  
notcs.—

Madam, before you touch the instrument,  
To learn the order of my fingering,  
I must begin with rudiments of art,  
To teach you *gamut* in a briefer sort. *Shak.*

When by the *gamut* some musicians make  
A perfect song, others will undertake,  
By the same *gamut* chang'd to equal it:  
Things simply good can never be unfit. *Donne.*

Long has a race of heroes fill'd the stage,  
That rant by rote, and through the *gamut* rage;  
In songs and airs express their martial fire,  
Combat in trills, and in a fugue expire. *Addis.*

(2) GAMUT, GAMMUT, or GAM-ut. See  
MUSIC. The invention of this scale is owing to  
Guido Aretin, monk of Arezzo, in Tuscany, a-  
bout A. D. 1009; though it is not so properly an  
invention, as an improvement on the diagram or  
scale of the ancients. See ARETIN, N° 2. Several  
alterations have been made in the *gamut*; M. le  
Maire, particularly, has added a 7th note; viz. *fi*  
and the English usually throw out both *ut* and *fa*  
and make the other five serve for all.

(1.) GAN, a city of China, of the first rank;  
capital of the province of Se-tchuen. Lon. 13. 28.  
W. of Peking. Lat. 31. 16. N.

(2.) GAN, a town of France, in the department  
of the Lower Pyrenees, 4½ miles S. of Pau, and  
10 E. of Oleron.

(3.) \* GAN, for *began*, from *'gis* for *begin*.—  
The noble knight *'gan* feel  
His vital force to faint. *Spenser.*

GANA, a town of Arabia Felix.

(1.) GANARA, a populous and fertile country  
of Africa, on the banks of the Niger.

(2.) GANARA, the capital of the above country.  
The natives trade in gold, senna, and slaves. Lon.  
16. 0. E. Lat. 12. 20. N.

GANAT, a town of France, in the department  
of Allier, on the Loire; 25 miles NE. of Moulins.

\* To GANCH. *v. a.* [*ganciare*, from *gancio*, a  
hook, Italian; *ganche*, French.] To drop from  
a high place upon hooks by way of punishment;  
a practice in Turkey, to which *Smith* alludes in  
his *Pocockius*.—

Cohors catenis qua pia stridulis  
Gemunt onusti, vel sude trans sinum  
Luctantur aëta, pendulive  
Sanguineis trepidant in uncis. *Muse Angl.*

GANDANOOKS, or EGYPTIAN HERRINGS,  
in ichthyology, a species of fish, belonging either  
to the genus of CLUPEA or SCOMBER, of which  
vast shoals are caught in the Forth, about the  
end of Sept. J. F. Erskine, Esq. of Marr, thus  
describes them in his Statistical Account of Alloa.  
“ They have a faint resemblance of the mackerel,  
but with a long sharp bill like a snipe. This be-  
comes fatal to them on our muddy banks, as the  
bill is fixed in the mud; and in this way they are  
entangled, and caught in great quantities, on the  
ebbing of the tide. They are not unpleasant, but  
rather dry. They are, however, a great relief to  
many poor people. *Stat. Acc.* Vol. VIII. p. 598.

GANDE, a river of Germany, which runs in-  
to the Leine, 4 miles WSW. of Ganderheim.

GANDELU, a town of France, in the depart-  
ment of Aisne, 8 miles WNW. of Chateau Thier-  
ry, and 9 N. of Ferte.

(1.) \* GANDER. *n. f.* [*gandra*, Saxon.] The  
male

mate  
as the  
five g

deep drinketh the goose  
—One *gander* will serve  
*lib.*

GANDICOT, or ) a town and fort of Indof-  
GANDICOTTA, } tan, in the circar of Cud-  
dapa, on a mountain near the Penner. The  
road to it is narrow, and cut in the rock, along  
the side of a dreadful precipice. Near it is a dia-  
mond mine. It is seated in the dominions of the  
late Sultan Tippoo, now belonging to Britain. It  
lies 87 miles NW. of Nellore, and 33 WNW. of  
Cuddapa.

GANDINA, or ) a populous town of the Ci-  
(1.) GANDINO, } saline republic, in the de-  
partment of Serio, and ci-devant Venetian prov.  
of Bergamasco; 10 miles NW. of Bergamo. It  
is well built, and has a good trade in cloth and silk.

(2.) GANDINO. See SERIANA. N° 2.

GANEAM, a town in the island of Ceylon,  
60 miles SSE. of Columba.

GANESBOROUGH. See GAINSBOROUGH.

GANET ISLANDS, a cluster of small isles, near  
the E. coast of Labrador. Lon. 56. 10. W. Lat.  
54. o. N.

GANFORD, a town in Durham, near Barnard.

\* GANG. *n. f.* [from the verb.] A number  
herding together; a troop; a company; a tribe;  
a herd: It is seldom used but in contempt or ab-  
horrence.—Oh, you pauperly rascals! there's a  
knot, a gang, a pack, a conspiracy against me:  
*Shak: Merry Wives.*—As a gang of thieves were  
robbing a house, a mastiff fell a barking. *L'Espr.*

Admitted in among the gang,  
He a3, and talks as they befriend him. *Prior.*

\* To GANG. *v. n.* [*gangen*, Dut. *gangan*, Sax.  
*gang*, Scottish.] To go; to walk; an old word  
not now used, except ludicrously.—  
But let them gang alone,  
As they have brew'd, so let them bear blame.

—Your flaunting beaux gang with their breasts o-  
pen. *Arbutnot.*

GANGANELLI. See CLEMENT XIV.

GANGEA. See GANDJA.

GANGELT, a town of Germany, in the cir-  
cle of Westphalia, and ci-devant duchy of Juliers;  
now annexed to the French republic, and  
included in the dept. of the Roer: 12 miles SSE:  
of Ruremond.

(1.) GANGES, a large and celebrated river of  
India. It rises in the mountains which border on  
Little Thibet, in 96° lon. E. and 31° 45' lat. N. It  
crosses several kingdoms, running from N. to S.  
and falls into the bay of Bengal by several mouths.  
The waters are lowest in April and May, and  
highest before the end of September. It over-

flows yearly like the Nile; and renders it  
fruitful as the Delta in Egypt. The  
these parts hold the water of this river in  
neration; and it is visited annually by a  
ous number of pilgrims from all parts.  
The British have several settlements on it.  
The greatest happiness that many of the  
wish for, is to die in this river. See I  
FOOTER.

(2.) GANGES, a town of France, in  
of Herault, 20 miles NE. of Lodeve, a  
of Montpellier.

(3, 4.) GANGES ISLANDS, two small i-  
tween Borneo and the Gulf of Siam.  
45. E. Lat. 4. 55. N.

\* GANGHON. *n. f.* [French.] A kin-  
er. *Ainsworth.*

(1.) \* GANGLION. *n. f.* [*ganlion*].  
in the tendinous and nervous parts.—B  
usually represent every bone dislocated  
possibly it be but a ganglion, or other  
mour, or preternatural protuberance of  
of a joint. *Wifeman.*

(2.) A GANGLION, in anatomy, is a  
quently found in the course of the ne  
which is not morbid; for wherever any n  
out a branch, or receives one from an  
where two nerves join together, there is  
a ganglion or plexus, as may be seen at  
ning of all the nerves of the medulla spi  
in many other places of the body.

(3.) A GANGLION, in surgery, (*§ 1.*)  
tubercle, generally moveable, in the e  
internal part of the carpus, upon the t  
ligaments in that part; usually without  
to the patient.

\* To GANGRENATE. *v. a.* [from g  
To produce a gangrene; to mortify.—  
terized, *gangrenated*, *fulcrated*, and mo-  
come black, the radical moisture or vit  
suffering an extinction. *Brown's Vulgar*

(1.) \* GANGRENE. *n. f.* [*gangren*  
*grana*, Lat.] A mortification; a stopp-  
ulation followed by putrefaction.—T  
ment may be transferred unto the cure of  
either coming of themselves, or introdu-  
much applying of opiates. *Bacon's Nat*  
She saves the lover, as we gangren.

By cutting hope, like a lopt limb, aw:

ions are subject to mortification, so  
dies they are apt to *gangrene* after o-  
at fat be not speedily digested out.  
*urgery.*

**RENOUS.** *adj.* [from *gangrene.*] Mor-  
icing or betokening inortification.—  
turning acrimonious, corrodes the  
lucing hæmorrhages, pustulæ red,  
l, black and *gangrenous.* *Arbutnot.*

**WAY.** *n. f.* In a ship, the several  
ages from one part of it to the other.  
**WEEK.** *n. f.* [*gang* and *week.*] Ro-  
when processions are made to lus-  
inds of parishes. *Diæ.*

**COULOR,** a town of India, belong-  
reat Mogul, 131 miles E. of Bagna-  
a very rich diamond mine. Lon. 82.  
15. 46. N.

**I,** a town of Indostan, on the bay of  
nging to Britain. Lon. 85. 20. E.  
N.

**CHIE BRIDGE,** a remarkable bridge  
rth Esk, in the Mearns, consisting of  
52 feet wide, standing on two trek-  
ks. at a great height above the river:  
J. Black, in 1732. See **BLACK**, N° 5.  
**T,** a town of France, in the dept. of  
ci-devant prov. of Bourbonnois; 27  
Moulins.

**LOR,** an island in the Gulf of St Law-  
Bird Island. Lat. 48. 0. N.

**NET,** or **SOLAND GOOSE.** See **RA-**  
N° 2.

**SET ISLAND,** an island in the South  
e N. coast of New Zealand.

a town of European Turkey in Ro-  
iles NE. of Gallipoli.

**IZ,** a town of Germany, in Stiria.

**CH,** a town of Germany in Austria,  
V. of Maulterg.

**T,** a town of France, in the dept. of  
nees, 4 miles S. of Pau.

**R,** a town of Germany, in the Tirol-  
WNW. of Landeck.

**ANTELOPE.** **GANTLET.** *n. f.* [*gant-*  
corrupted from *gantelope*, *gant*, all,  
to run, Dutch.] A military punish-  
rich the criminal running between the  
es a lash from each man.—

ould'st thou, friend, who hast two legs

thou to run the *gantlet* these expose,  
le company of hob-nail'd shoes? *Juv.*  
ntlemen are driven with a whip, to  
let through the several classes. *Locke.*

**TELOPE,** IN SHIPS OF WAR, is exe-  
following manner: The whole ship's  
posed in two rows, standing face to  
sides of the deck, so as to form a lane  
go forward on one side, and return  
other; each person being furnished  
twisted cord, called a *knittle*, having  
ts upon it. The delinquent is then

stripped naked above the waist, and ordered to  
pass forward between the two rows of men, and  
aft on the other side, a certain number of times,  
rarely exceeding three, during which every per-  
son gives him a stripe as he runs along. In his  
passage through this painful ordeal, he is some-  
times tripped up, and very severely handled while  
incapable of proceeding. This punishment, which  
is called *running the gantlet*, is seldom inflicted,  
except for such crimes as will naturally excite a  
general antipathy among the seamen; as, on some  
occasions, the culprit would pass without recei-  
ving a single blow.

(3.) **GANTELOPE, IN THE LAND SERVICE.**  
When a soldier is sentenced to run the gantelope,  
the regiment is drawn out in two ranks facing  
each other; each soldier, having a switch in his  
hand, lashes the criminal as he runs along naked  
from the waist upwards. While he runs, the  
drums beat at each end of the ranks. Sometimes  
he runs 3, 5, or 7, times, according to the nature  
of the offence. The major is on horseback, and  
takes care that each soldier does his duty.

**GANTLET.** See **GANTELOPE** and **GAUNT-**  
**LET.**

**GANTON,** a town near Scarborough, Yorksh.  
**GAN-YE,** a town of China, of the 3d rank, in  
the prov. of Se-Tchuen, 52 miles W. of Hoa.

**GANYMEDES,** in mythology, a beautiful  
youth of Phrygia, son of Tros and brother to Ilius,  
kings of Troy; or, according to Lucian, the son  
of Dardanus. Jupiter was charmed with him;  
and carrying him away, made him his cup-bearer  
in the room of Hebe. Some say that he caused  
him to be carried away by an eagle, and others  
affirm he was himself the ravisher under the form  
of that bird. He deified this youth; and to com-  
fort his father made a present to him of some of  
those swift horses that the gods rode upon.

**GANZA.** *n. f.* [*ganza*, Spanish, a goose.] A  
kind of wild goose, by a flock of which a virtuous  
was fabled to be carried to the lunar world.—

They are but idle dreams and fancies,  
And favour strongly of the *ganza's.* *Hudib.*  
(1.) **GAOGA,** a country of Africa, W. of Nubia.

(2.) **GAOGA,** a town in the above territory, feat-  
ed on a large lake. Lon. 26. 0. E. Lat. 16. 0. N.

(1.) \* **GAOL.** *n. f.* [*geol*, Welsh; *geole*, Fr.]  
A prison; a place of confinement. It is always  
pronounced and too often written *jail*, and some-  
times *goal*.—

Then am I the prisoner, and his bed my *gaol.* *Sb.*  
Have I been ever free, and must my house

Be my retentive enemy, my *gaol*? *Sb. Timon.*  
—If we mean to thrive and do good, break open  
the *gaols*, and let out the prisoners. *Shak. H. VI.*

(2.) **GAOL.** Every county has two *gaols*, one  
for debtors, which may be any house where the  
sheriff pleases; the other for the peace and mat-  
ters of the crown, which is the county *gaol*. If  
a *gaol* be out of repair, or insufficient, &c. jus-  
tices of peace, in their quarter-sessions, may con-  
tract with workmen for the rebuilding or repair-  
it; and by their warrant order the sum agreed on  
for that purpose to be levied on the several hun-  
dreds, and other divisions in the county by a just  
rate, 11 & 12 Will. III. c. 19. See **PRISON.**

\* **To GAOL.** *v. a.* [from the noun.] To im-  
prison;

prison; to commit to gaol.—*Gaoling* vagabonds, was chargeable, pesterous, and of no open example. *Bacon*.

(1.) \* **GAOLDELIVERY.** *n. f.* [*gaol* and *deliver*.] The judicial process, which, by condemnation or acquittal of persons confined, evacuates the prison.

Then doth th' aspiring soul the body leave,  
Which we call death; but were it known to all,  
What life our souls do by this death receive,

Men would it birth or *gaoldelivery* call. *Davies*.  
—These make a general *gaoldelivery* of souls, not for punishment. *South*.

(2.) **GAOL-DELIVERY.** The administration of justice being originally in the crown, in former times our kings in person rode through the realm once in 7 years, to judge of and determine crimes and offences; afterwards justices in eyre were appointed; and since, justices of assize and gaol-delivery, &c. A commission of gaol-delivery is a patent, in nature of a letter from the king to certain persons, appointing them his justices, or two or three of them, and authorising them to deliver his gaol, at such a place, of the prisoners in it: for which purpose it commands them to meet at such a place, at the time they themselves shall appoint; and informs them, that, for the same purpose, the king hath appointed his sheriff of the same county to bring all the prisoners of the gaol, and their attachments, before them at the day appointed. The justices of gaol delivery are empowered by the common law to proceed upon indictments of felony, trespass, &c. and to order to execution or reprieve: they may likewise discharge such prisoners, as on their trials are acquitted, and those against whom, on proclamation being made, no evidence has appeared: they have authority to try offenders for treason, and to punish many particular offences, by statute 2 *Hawk.* 24. 2. *Hale's Hist. Placit. Cor.* 35.

(1.) \* **GAOLER.** *n. f.* [from *gaol*.] Keeper of a prison; he to whose care the prisoners are committed.—

This is a gentle provost; seldom, when  
The steeld *gaoler* is the friend of men. *Sbak*.  
I know not how or why my surly *gaoler*,  
Hard as his irons, and insolent as pow'r  
When put in vulgar hands, Cleanthes,  
Put off the brute. *Dryden's Cleomenes*.

—From the polite part of mankind she had been banished and immured, 'till the death of her *gaoler*. *Tatler*.

(2.) **GAOLERS.** Sheriffs are to make such gaolers for whom they will be answerable: but if there be any default in the gaoler, an action lies against him for an escape, &c. yet the sheriff is most usually charged; 2 *Inst.* 592. Where a gaoler kills a prisoner by hard usage, it is felony; 3 *Inst.* 52. No fee shall be taken by gaolers, but what is allowed by law, and settled by the judges, who may determine petitions against their extortions, &c. 2 *Geo. II. c.* 22.

**GAONS**, a certain order of Jewish doctors, who appeared in the East, after the closing of the *d.* The word *Gaons* signifies *excellents*, or as in the divinity schools we formerly *ble, Sublime, Resolute, Angelic*, and The Gaons succeeded the *Schub* about the beginning of the 6th

century. Chanan Meischtia was the first of the Gaons. He restored the Pandebita, which had been shut up for

(1.) **GAP**, in geography, a town of 1 capital of the dept. of the Upper Alps merly of the late county of Gapençois. ed on the Rhone, at the foot of a mount mineral spring. In 1692, it was bui D. of Savoy. It lies 15 miles S. of Gre 24 N. of Sisteron. Lon. 6. 10. E. Lat

(2.) \* **GAP.** *n. f.* [from *gape*.] 1. A in a broken fence.—

Behold the despair,  
By custom and covetous pates,  
By *gaps* and openings of gates. *T*  
With terrors and with furies to f  
And crystal wall of heav'n; whic  
wide,

Roll'd inward, and a spacious *gap* di  
Into the wasteful deep. *Milt*

—Bushes are most lasting of any for de or to mend *gaps*. *Mort. Husb.*—I sought says God, that should make up the l stand in the *gap* before me, for the l should not destroy it. *Rogers.* 2. A The loss of that city concerned the Ch monweal: manifold miseries afterwards the opening of that *gap* to all that side c dom. *Knolles.* 3. Any passage.—

So stands the Thracian herdsman  
Spear

Full in the *gap*, and hopes the hunte  
And hears him rustling in the wood.

4. An avenue; an open way.—The fo of England passed into them a great p prerogatives; which though then it w tended, and perhaps well deserved, yet a *gap* of mischief lies open thereby, t with it were well flopt. *Spenser.* 5. deficiency.—If you violently proceed a mistaking his purpose, it would make in your honour. *Sbak. K. Lear.*—No botch or *gap* in the works of nature.

Any interstice; a vacuity —  
Each one demand, and answer to  
Perform'd in this wide *gap* of time,  
We were differ'd. *Sbak. Win*

—That I might sleep out this great *g*  
My Anthony is away. *Sbak. Ant. Cleo*

To make 'twixt words and lines b  
Wide as meridians in maps.

—One can revive a languishing conver sudden surprising sentence; another is tertous in seconding; a third can fill with laughing. *Swift.* 7. An opening of in speech during the pronunciation of five vowels.—The hiatus, or *gap* bet words, is caused by two vowels openi other. *Pope.* 8. To stop a **GAP**, is to some mean shift: alluding to hedges in dead bushes, 'till the quicksets will gr

His policy consists in setting traps  
In finding ways and means, and stop

is none more concerned for her rights?  
Who would stand in the Gap? *Leffey*.  
GAP. *v. n.* [*gapan*, Saxon.] 1. To  
mouth wide; to yawn.—  
: men there are love not a gaping pig;  
that are mad, if they behold a cat.

*Shakeſp.*  
or yawning, and stretching, do pass from  
in; for that that causeth gaping and  
is when the spirits are a little heavy  
pour. *Arbutnot.*—

retches, gapes, unglues her eyes,  
s if it be time to rise. *Swift*.  
n the mouth for food, as a young bird.

As callow birds,  
mother's kill'd in seeking of the prey,  
heir nest, and think her long away;  
each leaf that stirs, each blast of wind,  
: the food which they must never find.

*Dryden*.  
a drought the thirsty creatures cry,  
ke upon the gather'd clouds for rain,  
first the mariflet meets it in the sky,  
th wet wings joys all the feather'd train,

*Dryden*.  
re earnestly; to crave: with for.—  
: grim death appears in all her shapes;  
agry grave for her due tribute gapes.

*Denham*.  
y fortune be not thou a slave;  
it hath thou to fear beyond the grave?  
u who gap'st for my estate, draw near;  
ould whisper somewhat in thy ear.

*Dryden*.  
Ber.—What shall we say of those who  
r days in gaping after court favour and  
ts? *L'Eſt*. 5. With at.—Many have  
he church revenues; but, before they  
low them, have had their mouths stop-  
e church-yard. *South*. 6. To open in  
holes.—

ffume my noble father's person,  
k to it, altho' itself should gape  
me hold my peace. *Shak. Hamlet*.  
that ground gape, and swallow me alive,  
I shall kneel to him that slew my father.

*Shak. Hen. VI*.  
at horse-muffel, with the fine shell, doth  
rut as the oysters do. *Bacon's Nat. Hist*.  
eption of one is as different from the  
of the other, as when the earth falls  
r the incisions of the plough, and when  
d greedily opens itself to drink in the  
aven, or the refreshments of a shower.  
be mouth of a little artery and nerve  
the cavity of these vessels. *Cheyne's*  
7. To open with a breach.—

lanks, their pitchy coverings wash'd a-  
f,  
ld, and now a yawning breach display:  
ring waters, with a hostile tide,  
ro' the ruins of her gaping side. *Dryd*.

these actions can be performed by ali-  
rell as medicines, is plain; by observing  
of different substances upon the fluids  
when the vessels are open and gape by a  
rburst. 8. To open; to have an hiatus.  
not, to the best of my remembrance,

one vowel gaping on another for want of a caesura  
in this poem. *Dryden*. 9. To make a noise with  
open throat.—

And, if my muse can thro' past ages see,  
That noisy, nauseous, gaping fool is he. *Reſt*.  
10. To stare with hope or expectation.—

Others with gape t' anticipate  
The cabinet designs of fate;  
Apply to wizards, to foresee  
What shall, and what shall never be. *Hud*.

11. To stare with wonder.—Parts of different spe-  
cies jumbled together, according to the mad ima-  
gination of the dawber; and the end of all this to  
cause laughter: a very monster in a Bartholomew  
fair, for the mob to gape at. *Dryd. Duſt*.—

Where elevated o'er the gaping crowd,  
Clasp'd in the board the perjurd head is bow'd,  
Betimes retreat. *Gay's Trivia*.

12. To stare irreverently.—They have gaped upon  
me with their mouth. *Job. xvi. 30*.

GAPENCOIS, a ci-devant county of France,  
in the prov. of Upper Dauphiny, 27 miles long  
and 18 broad. Gap was the capital. It is now  
included in the dept. of Upper Alps.

GAPENNES, a town of France in the dept.  
of Somme, 7 miles NE. of Abbeville.

\* GAPER. *n. f.* [from *gape*.] 1. One who  
opens his mouth. 2. One who stares foolishly.  
3. One who longs or craves.—The golden shower  
of the dissolved abbey lands rained well near into  
every gaper's mouth. *Carter's Survey*.

GAPSAL, a town of Russia, 36 miles SW. of  
Revel.

\* GAP TOOTHED. *adj.* [*gap* and *toothed*.]  
Having interstices between the teeth.—The reeve,  
miller, and cook, are distinguished from each o-  
ther, as much as the mincing lady prioress and  
the broad speaking gap-toothed wife of Bath. *Dryd*.  
*Fab. Pref*.

(1.) \* GAR, in Saxon, signifies a weapon;  
so *Eadgar* is a happy weapon; *Ethelgar*, a noble  
weapon. *Gibson's Camden*.

(2.) GAR, or HORN-FISH. See ESOX.  
\* To GAR. *v. a.* [from *giera*, Icelandic.] To  
cause; to make. Obsolete. It is still used in  
Scotland.—

Tell me, good Hobbino!, what gars thee greet?  
What! hath some wolf thy tender lambs yorn?  
Or is thy bagpipe broke, that sounds so sweet?

Or art thou of thy loved lass forlorne. *Spens*.  
GARA, or LOUGH GARA, a lake of Ireland,  
in Sligo county, 20 miles S. of Sligo.

GARABUSA, an island in the Mediterranean,  
near the W. coast of Candia, taken by the Turks  
in 1692. Lon. 41. 8. E. Lat. 35. 36. N.

GARAC, a town of France, in the dept. of Cha-  
rente, 4 miles ESE. of Angouleme.

GARACHIA, or } a town on the W. coast of  
GARACHICO, } the isle of Teneriffe.

GARACK, or BAHREIN, an island in the gulf  
of Persia, near the mouth of the Euphrates.

GARAMA, in ancient geography, the capital of  
the Garamantes in Lybia Interior; near the spring  
of the Cinyphus, now in ruins. It lay S. of Gætulia,  
extending from the springs of the Cinyphus, and  
the Gir, to the mountains which form at the *Fal-  
lus Garamantica*, (Pliny): or from the springs of  
the Bagrades to the lake Nuba, (Ptolemy)

See GARAMA.

side, a very ingenious letter-founder, and his printing types, free of the Gothic, or (as it is called) black letter, and brought it before him, and of being scarcely ever excelled by his successors in that useful art. His types were prodigiously multiplied: both by the great number of matrices he struck, and the types founded in resemblance of his in all parts of Europe. Thus in Italy, Germany, England, and Holland, the book-sellers by way of recommending their books, distinguished the types by his name; and in particular, the small Roman was by way of excellence known among the printers of these nations by the name of *Garamond's small Roman*. By the special command of K. Francis I. he founded three sizes of Greek types for the use of Robert Stephens, who with them printed all his beautiful editions of the New Testament, and other Greek authors. He died at Paris in 1561.

GARAN, an island of Scotland, on the coast of Sutherland, 3 miles ESE. of Cape Wrath.

GARASSE, Francis, a remarkable jesuitical writer, the first author of that irreconcilable enmity which so long subsisted between the Jesuits and Janseuists, in the church of Rome, was born at Angoulesme, in 1585, and entered the Jesuits college in 1600. As he had a quick imagination, a strong voice, and a peculiar turn to wit, he became a popular preacher in the chief cities of France; but distinguished himself still more by his writings, which were bold, licentious, and produced much controversy. The most considerable in its consequence was intitled *La somme theologique des veritez capitales de la religion Chretienne*; which was first attacked by the abbot of St Cyran, who observing in it a prodigious number of falsifications of the scriptures and of the fathers, besides many heretical and impious opinions, conceived the honour of the church required him to undertake a refutation. Accordingly he published a full answer to it; while Garasse's book was also under examination of the doctors of the Sorbonne, by whom it was afterwards condemned. Garasse replied to St Cyran; but the Jesuits were forced to remove their brother to a distance from Paris; where, probably weary of his inactive obscurity, when the plague raged at Poitiers, in 1631, he begged leave of his superior to attend the sick, in which charitable office he was infected and died.

GARAUP, a Cape of France, in the dept. of Var, and ci-devant prov. of Provence, near Antibes. It runs far into the sea and forms the bay of Cannes.

GARAZU, a town of Brazil, 25 miles N. of Olinda.

\* GARB. *n. f.* [*garbe*, French.] 1. Dress; cloaths; habit.—

Thus Belial, with words of reason's garb,

Counsel'd ignoble ease and peaceful sloth.

*Milton.*

himself into the garb, and habit of a

professor of physic, and sets up. *L'Es.* of dress.—

What garboils she awak'd. *Skak. A*

**HANSKOL**; a town of Russia in Siberia, 80 miles S. of Tobolsk.

**LA**, a town of Spain, in the province of 18 miles N. of Tortosa.

**ILASSO DE LA VEGA**, or **GARCIA LA VEGA**. See **VEGA**.

**LNIA**, in botany; a genus of the order, belonging to the dodecandria class and in the natural method ranking with order, *Sisyrinchia*. The calyx is tetramerous; there are 4 petals; the berry is one, and crowned with a shield-like there is but one species; viz.

**11A MANGOSTANA**, a tree of great elegance producing the most pleasant fruit of known. See *Plat. CLX, fig. 4.* This has been very accurately described by Dr. in honour of whom, Linnæus gave it the 35th vol. of the *Philos. Transf.* It informs us, to about 17 or 18 feet high, straight taper stem like a fir, having a stem in form of an oblong cone, composed of branches and twigs, spreading out equal-sided without leaving any hollow. Its

oblong, pointed at both ends, entire, of a shining green on the upper side, and on the back. Its flower is composed almost round, or a little pointed; their resembles that of a rose, only deeper and

The calyx of this flower is of one rounded, and cut into 4 lobes. The two lobes are something larger than the lower

are greenish on the outside, and of a red within; the red of the upper ones is more than that of the lower ones. This loses all the parts of the flower; it is by a pedicle, which is green, and comes out of the end of a twig above the

of leaves. The fruit is round, of the small orange, from an inch and an half diameter. The body of this fruit is of one cavity, composed of a thick rind, like that of a pomegranate, but softer, and fuller of juice. Its thickness is com-

a quarter of an inch. Its outer colour brown purple, mixed with a little grey green. The inside of the peel is a rose

and its juice is purple. This skin is of an astringent taste, like that of a pomegranate does it stick to the fruit it contains. The surface of this fruit is a furrowed globe, divided into segments, like those of an orange, but un-

size, and not adhering to each other. The number of these segments is always equal to the rays of the top which covers the fruit. There are often in these segments, the bigger

There are often in the same fruit leg- big again as any of those that are on the stem. These segments are white, a little fleshy, membranous, full of juice like raspberries, of a taste of strawberries

put together. Each of the segments in- each of the figure and size of an almond if its shell, having a protuberance on one side. These seeds are covered with two

is, the outermost of which serves for a protective filaments and membranes of which is composed. The substance of these  
**PART I.**

seeds comes very near to that of chestnuts, as to their consistency, colour, and astringent quality:

"This tree (says Dr. Garcin,) originally grows in the Molucca islands, where it is called *mangostan*; but has been transplanted from thence to the islands of Java and Malacca, at which last place it thrives very well. Its tuft is so fine, so regular,

so equal, and the appearance of its leaves so beautiful, that it is at present looked upon at Batavia as the most proper for adorning a garden and affording an agreeable shade. There are few

seeds, however, to be met with in this fruit that are good for planting, most part of them being abortive." He adds, that one may eat a great deal of this fruit without any inconvenience; and that it is the only one which sick people may be

allowed to eat without any scruple. Other writers concur in their praises of this fruit. Rumphius observes, that the mangostan is universally acknowledged to be the best and wholesomest fruit that grows in India; that its flesh is juicy, white; almost transparent, and of as delicate and agreeable a flavour as the richest grapes; the taste and smell

being so grateful, that it is scarce possible to be cloyed with eating it. He adds, that when sick people have no relish for any other food, they generally eat this with great delight; but, should they refuse it, their recovery is no longer expected.

"It is remarkable (says he) that the mangostan is given with safety in almost every disorder. The dried bark is used with success in the dysentery and tenesmus; and an infusion of it is esteemed a good

gargle for a sore mouth or ulcers in the throat. The Chinese dyers use this bark for the basis of a black colour, to fix it the firmer." Captain Cook, in his *Voyage round the World*, vol. iii. p.

737, says this tree is peculiar to the East Indies. The fruit is about the size of the crab-apple, and of a deep red wine colour. On the top of it is the figure of 5 or 6 small triangles joined in a circle; and at the bottom several hollow green leaves,

which are remains of the blossom. When they are to be eaten, the skin or rather flesh must be taken off; under which are found 6 or 7 white kernels, placed in a circular order; and the pulp with which these are enveloped is the fruit, than which nothing can be more delicious: It is a

happy mixture of the tart and the sweet, which is no less wholesome than pleasant; and, like the sweet orange, is allowed in any quantity to those who are afflicted with putrid or inflammatory

fevers.

**GARCON**, or **GARSOON**, a French term, literally signifying a boy, or young man unmarried, applied to certain inferior officers, among us called *grooms*, *garçones*. Thus all the servants in the late French king's chambers, wardrobe, &c. who held the lesser offices thereof under the proper officers, were called *garçons de la chambre, de la garderobe, &c.*

(1.) **GARD**. *n. f.* [*garde*, French.] Wardship; care; custody.

(2.) **GARD**, in geography, a department of France, comprehending part of the ci devant province of Languedoc. It is bounded on the N. by the departments of Lozere and Ardeche; on the E. by the Rhone; on the S. by the Mediterranean, and

and on the W. by those of Nîmes is the Capital. An ancient Roman aqueduct in the time of Augustus Caesar, is the water of the spring of Uzès. It is 160 feet in length, and is supported by three bridges, reared one above the other, the uppermost of these bridges is a great bridge of stone, without any arches, on which this aqueduct runs. Lewis XIV. when he visited it, the damages which this structure had sustained by time, caused a new one to be built, which now passes over the lower range of arches. The lake of the Cisalpine republic, near the city of Padua, in the province of Austria, the line of the canal of Campo Formio runs through it. It is formed by the union of the Saraca and the Tusciano; and is 30 miles long, from 2 to 10 broad, and 100 feet deep. The whirlwinds from the mountains of Trent and Verona give it a stormy motion resembling the waves of the sea. It was anciently named *Benacus*, and is described by Virgil in his *Georgics*, lib. 2. as peculiarly subject to these tempestuous motions:

"*Benacus with tempestuous billows veit.*"

From this its ancient name is derived the modern name of the department, *Benaco*, which is seated on its banks. Its fish are famous for their delicious flavour: and the fishery was formerly farmed at 8000 silver ducats. It belonged entirely to Verona before the treaty of Campo Formio.

(2.) **GARDA**, an open town of Maritime Austria, in the Veronese, N. of Lacize; anciently a fortress, with a citadel now in ruins, where the empress Adelheit widow of Lothair, and wife of Otho I, was confined by Berenger II. It is seated at the end of the lake, (N. 1.) 17 miles NW. of Verona. Lon. 11. 4. E. Lat. 45. 36. N.

(3.) **GARDA**, a district of Maritime Austria, in the Veronese, containing 8 parishes.

**GARDANNE**, a town of France, in the department of the mouths of the Rhone, 9 miles NNE. of Marseilles.

**GARDANT**, or **GUARDANT**, in heraldry, denotes any beast full-faced and looking right forward.

**GARDE**, a town of France, in the department of Vaucluse, and district of Toulon; 6 miles W. of Hieres.

**GARDEIAH**, a town of Africa, the capital of Beni-Mezzab. Lon. 2. 30. E. Lat. 32. 15. N.

**GARDELEN**, or **GARDELIN**, a town of Brandenburg, famous for its beer, and cloth manufacture; 44 miles WNW. of Brandenburg.

(1.) **GARDEN**, Francis, Lord Gardenstone, the 2d. son of Alexander Garden of Troup, Esq, by Jean, daughter of Sir Francis Grant, Lord Cullen, was born at Edinburgh, 24th June, 1721. After passing through the usual course of liberal education, at that university, he studied the law at Edinburgh, and was admitted a member of the faculty of

Advocates in 1744. He soon began to distinguish himself in his practice as an advocate, by his native rectitude of understanding, and his imagination, as well as by a manly and independent argument, which is often more than counterpoised by a sophistical artifice. Although his life seemed to throw obstructions in the way of his rising to eminence in his profession, by his being too often to indulge in the pursuit of pleasure, yet the native vigour of his mind raised him so high in the public estimation, that he was distinguished with little or no political interest, and rose to the high legal functions of Advocate Depute, and Solicitor General. He held several different offices, particularly the office of Advocate Depute, in which he distinguished himself no less by his liberal views, independent and uninterested conduct. His professional success as a lawyer derived the highest lustre from his conduct in the Douglas cause, in which he was assisted by Mr Wedderburn, (the present Lord Advocate,) before the parliament of 1762. His knowledge in the law, and fluent command of the French language, procured him distinction. In 1764, he was promoted to the office of a Judge in the courts of Justice. The former of these offices he held till his death, but resigned the latter in 1770. His talents and conduct in both were equalled by integrity and discernment, and candour. He was remarkable for his decisions in civil causes; and his moderation in criminal trials did equal honour to his head and his heart. In 1762, he purchased the estate of Johnstone, in Kincardineshire, after he had set on foot a plan of the most judicious improvement of its value by an extension of the town of Laurencekirk; which, from being only a burgh of 7 houses, containing only 54 persons, was raised to the rank of a burgh of barony, given him by the King, and filled with its own magistrates, and filled with industrious inhabitants, who carry on important manufactures, and have a weekly market, &c. See LAURENCEKIRK. In Dec. 1785, upon the death of his father, he succeeded to the estate of Troup, which was valued at a year, and a fortune of 40,000l. The income of the late Lord Gardenstone's income had never been adequate to the liberal expenses of his rank and the generosity of his nature, but the addition of this estate naturally led him. But this additional income enabled him to pursue his generous propensities to the full extent, and the instance of his liberality to a man of no fortune is a striking instance of the liberality we have mentioned in our notice of the late Dr Brown. (See BROWN, N. 7.) Similar instances of his private benevolence, which he was never disposed to be condescended on, did our room permit, we could not entirely pass over, but his lordship's zeal for the principles of the Constitution having led him not to take an active part himself, in promoting the improvement of the Royal Boroughs, but also to influence a merchant in Aberdeen with whom he was intimate, to show equal zeal in the cause, his business had been considerably advanced, and Lord Gardenstone no sooner got possession

he made his mercantile friend a present  
 The same liberal principles of public  
 philanthropy led him to give 100l. to the  
 Society for the Borough reform, as well  
 as to the association for the Aboli-  
 tion of the African Slave Trade: in which last  
 he took a zealous and active part, by  
 attending at several of the Society's first public  
 meetings in Edinburgh, and signing their adver-  
 sive resolutions in the Newspapers. On  
 the 17th of 1786, he set out for Dover, on his  
 way to France. After visiting Paris, he  
 went to Provence, and spent the winter at  
 Aix; in spring 1787, he returned northwards;  
 he visited Geneva, Switzerland, the Netherlands,  
 and the Provinces; passed through Germany  
 and having surveyed all its great cities,  
 numerous monuments of its ancient  
 grandeur as well as its many natural curiosities,  
 returned to his native country, in 1789,  
 after an absence of 3 years, in much better health  
 than he left it. He died at his seat at Mor-  
 ar Edinb'gh, on the 21st July 1793;  
 he was 57 years of his age. With regard to his  
 person he was above the middle size, robust and  
 handsome; he dressed in the dress of a  
 philosopher; he was without garden, though in all other particu-  
 lars he was like Adonis' gardens,  
 which one day bloom'd and fruitful were the  
 next.  
 My lord of Ely, when I was last in Holbourn,  
 I saw good Strawberries in your garden there.  
 —In the royal ordering of gardens, there ought to  
 be gardens for all the months in the year. Bacon.  
 —In every garden should be provided flowers,  
 fruit, shade and water. Temple.  
 My garden takes up half my daily care,  
 And my field asks the minutes I can spare.  
 2. A place particularly fruitful or delightful.—  
 I am arriv'd from fruitful Lombardy,  
 The pleasant garden of great Italy.  
 3. GARDEN is often used in composition for bor-  
 oughs, or belonging to a garden. 4. Garden-  
 mould. Mould fit for a garden.—They delight  
 most in rich black garden-mould, that is deep  
 and light, and mixed rather with sand than clay.  
 5. Garden-tillage. Tillage used in  
 cultivating gardens.—Peas and beans are what  
 belong to garden-tillage as well as that of the field.  
 6. Garden-ware. The produce of  
 gardens.—A clay bottom is a much more pernicious  
 soil for trees and garden-ware than gravel.  
 His lordship wrote many anony-  
 mous poems in prose and verse, which were pub-  
 lished in his younger years in different periodical  
 papers, and which, it is to be regretted, have  
 been collected and reprinted. Being a great  
 admirer of Spenser, he began a series of Critical  
 essays on the Fairy Queen, displaying the beauties  
 and faults of the poet, in the Gentleman and  
 the Critic, published at Edinburgh in 1774,  
 after the stopping of that work at the end of  
 which he put an end to his lordship's criticisms  
 in a long and elegant poem, and he never resumed them  
 in any form. As a public speaker his  
 manner was natural and energetic. There  
 was a simplicity and modulation in the tone of his  
 speech which attracted attention and delighted the

hearers. We cannot close this brief memoir,  
 which want of room only obliges us to shorten,  
 without mentioning, that the erection of St Ber-  
 nard's well near Edinburgh, upon the model of  
 the Temple at Tivoli in Italy, for the benefit  
 of the health of the citizens of that metropolis, will  
 afford a lasting monument of lord Gardenstone's  
 taste, as well as of his public spirit. See BER-  
 NARD'S WELL, ST.

(2.) GARDEN. n. f. [*gardd*, Welsh; *jardin*,  
 French; *giardino*, Italian.] 1. A piece of ground  
 inclosed, and cultivated with extraordinary care,  
 planted with herbs or fruits for food, or laid out  
 for pleasure.—

They promises are like Adonis' gardens,  
 Which one day bloom'd and fruitful were the  
 next.

My lord of Ely, when I was last in Holbourn,  
 I saw good Strawberries in your garden there.

—In the royal ordering of gardens, there ought to  
 be gardens for all the months in the year. Bacon.  
 —In every garden should be provided flowers,  
 fruit, shade and water. Temple.

My garden takes up half my daily care,  
 And my field asks the minutes I can spare.

2. A place particularly fruitful or delightful.—  
 I am arriv'd from fruitful Lombardy,  
 The pleasant garden of great Italy.

3. GARDEN is often used in composition for bor-  
 oughs, or belonging to a garden. 4. Garden-  
 mould. Mould fit for a garden.—They delight  
 most in rich black garden-mould, that is deep  
 and light, and mixed rather with sand than clay.  
 5. Garden-tillage. Tillage used in  
 cultivating gardens.—Peas and beans are what  
 belong to garden-tillage as well as that of the field.  
 6. Garden-ware. The produce of  
 gardens.—A clay bottom is a much more pernicious  
 soil for trees and garden-ware than gravel.

(3.) GARDEN. See GARDENING.  
 (4.) GARDEN BAY, a bay on the E. coast of  
 Newfoundland. Lon. 54. 50. W. Lat. 49. 42. N.

(5.) GARDENS, FLOATING. Abbé Clavigero,  
 in his History of Mexico, says, that when the Mex-  
 icans were brought under subjection to the Col-  
 huacan and Teapanecan nations, and confined to the  
 miserable little islands on the lake of Mexico, they  
 had no land to cultivate, until necessity compelled  
 them to form moveable fields and gardens, which  
 floated on the waters of the lake. The method  
 which they adopted, to make these, and which  
 they still practise, is extremely simple. They  
 plait and twist together willows and roots of marsh  
 plants or other materials, which are light, but  
 capable of supporting the earth firmly united.  
 Upon this foundation they lay the light bushes  
 which float on the lake; and over all, the mud  
 and dirt which they draw up from the bottom.  
 Their regular figure is quadrangular; their length  
 and breadth various; but generally they are about  
 8 perches long, and not more than 3 in breadth,  
 and have less than a foot of elevation above the  
 surface of the water. These were the first fields  
 which the Mexicans had after the foundation of

plants thrive in them surpris-  
ly; the mud of the lake affords a very fertile soil,  
and requires no water from the clouds. In the  
large gardens there is commonly a little tree, and  
even a little hut to shelter the cultivator and de-  
fend him from rain or the sun. When the *Chi-  
nampa*, or owner of a garden, wishes to change  
his situation, to remove from a disagreeable neigh-  
bour, or to come nearer to his own family, he  
gets into his little vessel, and by his own strength  
alone if the garden is small, he tows it after him,  
and conducts it wherever he pleases. That part  
of the lake, where these floating gardens are, is a  
place of high recreation, where the senses receive  
all possible gratification.

(6.) GARDENS, HANGING, in antiquity, gardens  
raised on arches by Nebuchadnezzar king of Ba-  
bylon, to gratify his wife Amyctis, daughter of  
Astyages king of Media. Q. Curtius makes them  
equal in height to the walls of the city, viz. 50  
feet. They contained a square of 400 feet on  
every side, and were carried up into the air in  
several terraces laid above one another, and the  
ascent from terrace to terrace was by stairs 10 feet  
wide. The arches sustaining the whole pile were  
raised above one another, and it was strengthened  
by a wall, surrounding it on every side, of 22 feet

first cultivated maize, pep-

### INTRODUCTION.

#### SECT. I. DEFINITIONS.

GARDENING is thus defined by Dr John-  
son:

\* GARDENING. *n. s.* [from *garden*.] The act  
of cultivating or planning gardens.—My composi-  
tions in *gardening* are after the Pindarick man-  
ner, and run into the beautiful wildness of nature,  
without affecting the nicer elegancies of art. *Spett*.

In the preceding definition, Dr Johnson is ma-  
nifestly deficient. GARDENING is an ART, which  
comprehends a great variety of *arts*, both of the  
planting and cultivation of gardens. Considered  
in its utmost extent, whatever contributes to ren-  
der the scenes of vegetable nature delightful, forms  
a part of gardening; but in its more limited sense,  
it denotes the cultivation of gardens for the sake  
of their produce. In this last sense, as the most  
important, we mean chiefly to treat of it.

#### SECT. II. HISTORY of GARDENING.

GARDENING, says Mr Walpole, in his *History*

of *Modern Gardening*, was probabl  
first arts that succeeded to that of bu  
and naturally attended property an  
possession. Culinary, and afterwa  
herbs, were the objects of every hea  
it became convenient to have them  
without seeking them at random i  
meadows, and on mountains, as  
were wanted. When the earth cea  
spontaneously all those primitive lux  
ture became requisite, separate incl  
ing herbs grew expedient. Fruits  
same predicament; and those most i  
demanded attention, must have ent  
extended the domestic inclosure.

NOAH planted a vineyard, and  
wine, and every body knows the  
Thus we acquired vineyards, as w  
gardens, and orchards. No doub  
of all these sorts was the garden of E  
radite was a great deal larger than a  
read of afterwards, being inclosed  
Pison, Gihon, Hiddekel, and Euph  
ry tree that was pleasant to the sigh

ew in it; and as two other trees were like-  
und there, of which not a slip or sucker  
s; it does not belong to the present dis-  
After the Fall, nobody was suffered  
r into the garden; and the poverty and  
ies of our first ancestors hardly allow-  
time to make improvements in imita-  
it, supposing any plan had been prefer-  
A cottage and a slip of ground for a cab-  
a gooseberry-bush, such as we see by the  
a common, were in all probability the ear-  
sts and gardens: a well and bucket succeed-  
the Pison and Euphrates. As settlements in-  
d, the orchard and the vineyard followed;  
e earliest princes of tribes possessed just the  
ries of a modern farmer.  
ters, we may well believe, remained long in  
tuation; and we have reason to think, that  
any centuries the term *garden* implied no  
than a kitchen garden or orchard. The  
s of ALCINOUS, in the *Odyssey*, is the most  
med in the heroic times. No admirer of  
it can read his description without rapture.  
continues our author, what was that boast-  
trading with which

the gods ordain'd  
e grace Alcinous and his bappy land?  
e diverted of harmonious Greek and bewitch-  
etry, it was a small orchard and vineyard,  
ome beds of herbs and two fountains that  
ed them, inclosed within a quick-set hedge.  
hole compass of this pompous garden in-  
four acres:  
e acres was th' allotted space of ground,  
d with a green inclosure all around.  
aces were apples, figs, pomegranates,  
alives, and vines. Alcinous's garden was  
ed by the poet, enriched by him with the  
gift of eternal summer, and no doubt an  
e of imagination surpassing any thing he  
ever seen. As he has bestowed on the same  
y prince a palace with brazen walls and co-  
ms of silver, he certainly intended that the gar-  
d should be proportionably magnificent. We  
are, therefore, that, as late as Homer's age,  
nclosure of 4 acres, comprehending orchard,  
ard, and kitchen garden, was a stretch of  
y the world at that time had never beheld."  
ase this era, however, we have in the sacred  
ags hints of a garden still more luxuriously  
ned. We allude to the Song of Solomon,  
p. ii. v. 1.) part of the scene of which is un-  
dly laid in a garden. Flowers and fruits  
particularly spoken of as the ornaments and  
produce of it; and besides these, aromatic ve-  
ables formed a considerable part of the gratifi-  
ions it afforded. The camphor and the cinna-  
m tree, with all trees of frankincense, and  
the chief spices flourished there, (*Cant. iv. 12.*)  
LONDON tells us, (*Ecc. ii. 4, 5.*) That he made  
great works:—gardens and orchards, and  
led in them trees of every kind. Indeed we  
suppose his gardens to have been both amp-  
and uniformly furnished, seeing the kinds, na-  
e, and properties of the vegetable tribes, were  
ourite study with the royal philosopher, and  
e deemed a subject worthy of his pen: for we  
told, that he wrote of plants, from the great

cedar of Lebanon down to the hyssop of the wall.  
(*2 Kings iv, 33.*) Fountains, and streams of water  
appear also to have had a share in the composition;  
probably for ornament as well as use.

The HANGING GARDENS of Babylon were a  
still greater prodigy. But as they are supposed to  
have been formed on terraces and the walls of the  
palace, whither soil was conveyed on purpose, Mr  
Walpole concludes, "they were what sumptuous  
gardens have been in all ages till the present, un-  
natural, enriched by art, possibly with fountains,  
statues, balustrades, and summer-houses, and  
were any thing but verdant and rural." Others,  
however, have allowed them greater praise.  
They seem, in many respects, to have been laid  
out with good taste. Their elevation not only  
produced a variety and extent of view, but was  
also useful in moderating the heat. Such a si-  
tuation would likewise suit a greater variety of  
trees and plants than a plain surface, and would  
contain a larger as well as a more diversified ex-  
tent.

The suiting of the situation to the nature of the  
trees seems, from the account given by Josephus,  
(*Contra Apion, lib. i. § 19.*) to have been one view  
in the erecting the building in such a manner.  
And the success seems to have been answerable,  
as the trees (says Quintus Curtius, lib. 5.) flourish-  
ed extremely well, and grew as tall as in their na-  
tive situations. On the whole, they seem to have  
been formed with judgment and taste, and well  
adapted to the situation and circumstances.

The eastern gardens appear to have been plant-  
ed adjoining to the house or palace to which they  
belonged. Thus, king Ahasuerus went immedi-  
ately from the banquet of wine to walk in  
the garden of the palace. *Esther, vii. 7.* The  
garden of CYRUS, at Sardis, mentioned by Xeno-  
phon, seems to have been contiguous to the pa-  
lace; as was that of ATTALUS, mentioned by  
Justin. l. 36. c. 4. The hanging gardens at Ba-  
bylon, were not so much adjacent to the palace,  
as a part of the palace itself, since several of the  
royal apartments were beneath them. *Diod. lib. 2.*

We are not certain what the taste for gardening  
was among the Greeks. The ACADEMUS was a  
wooded shady place; and the trees appear to  
have been of the olive species. It was situated be-  
yond the limits of the walls, and adjacent to the  
tombs of the heroes; and tho' we are not inform-  
ed of the particular manner in which this grove  
was laid out, it may be gathered from Pausanias's  
*Attica*, that it was elegantly ornamented. At the  
entrance was an altar dedicated to Love. Within  
the Academus, were the altars of Prometheus, the  
Muses, Mercury, Minerva, and Hercules; and  
at a small distance was the tomb of Plato. So  
that, in all probability, it was highly adapted by  
art, as well as nature, to philosophic reflection  
and contemplation.

PLUTARCH tells us, that before the time of Ci-  
mon, the Academus was a rude and uncultivated  
spot: but that it was planted by that general, and  
had water conveyed to it. It was divided into gym-  
nasia, or places of exercise, and philosophic walks,  
shaded with trees. These are said to have flourish-  
ed very well, until they were destroyed by Sylla,  
along with those in the Lyceum. Near the acade-  
my

were the gardens of the philosophers, of which Epicurus; which, however, were but small. The scene of Plato's *Dialo-* concerning Beauty is elegantly described as on the banks of the river Ilissus, and under shade of the plantane; but as no artificial arrangement of objects is mentioned, the prospect is to have been merely natural.

The art of gardening does not appear to have been among the Romans, otherwise than as a matter of utility, till a very late period; at least the writers on husbandry, Cato, Varro, Columella, and Palladius, make no mention of a garden as an object of pleasure, but solely with respect to its productions of herbs and fruits. The gardens of Lucullus are the first we find mentioned of remarkable magnificence; though indeed from the extravagance to which these were arrived, it is evident, they could not be the first. Plutarch speaks of them as incredibly expensive, and equal to the magnificence of kings. They contained artificial elevations of ground to a surprising height, of buildings projected into the sea, and vast pieces of water upon land. In short, his extravagance was so great, that he acquired the appellation of the *Roman Xerxes*. It is not improbable, from the consideration of Lucullus having spent much time in Asia, in a situation wherein he had an opportunity of observing the most splendid constructions of this kind, that these gardens might be laid out in the Asiatic style. The vast masses of building said to have been erected, might have borne some resemblance, in the arrangement and style, to the Babylonian gardens.

The *TUSCULAN VILLA* of Cicero, though often mentioned, is no where described in his works, so as to give an adequate idea of the style in which his gardens were disposed.

Little is to be traced in Virgil relative to this subject. Pines, it seems probable, were a favourite ornament in gardens; (*Ecl.* vii. 65.) and flowers, roses especially, were much esteemed, (*Georg.* IV. 118.) perfumes indeed having been always highly valued in warm climates. Virgil places Anchises in Elysium, in a grove of bays, of the sweet-scented kind. The Pæstan roses were chiefly valued for their excellent odour; and the same quality appears to be the cause why they were placed by Tibullus as ornaments to the Elysian fields. There appears also to have prevailed among the Romans a piece of luxury relative to gardens, which is equally prevalent at present among us, namely, the forcing of flowers at seasons of the year not suited to their natural blowing: and roses were then, as at present, the principal flowers upon which these experiments were tried; as appears from Martial, Lampridius, and others. See *Epig.* l. vi. ep. 80, &c.

When Roman authors, (Mr Walpole remarks,) whose climate infused a wish for cool retreats, speak of their enjoyments in that kind, they sigh for grottoes, caves, and the refreshing hollows of mountains, near irriuous and shady founts; or boast of their porticoes, walks of plants, canals, baths, and breezes from the sea. Their gardens are never mentioned as affording shade and shelter from the rage of the dog-star. PLINY

gives us descriptions of two of his villas. As he

used his Laurentine villa for his winter retreat, it is not surprising that the garden makes no considerable part of the account. All he says of that the *gestatio* or place of exercise, which surrounded the garden (the latter consequently being very large), was bounded by a hedge of box, and where that was perished, with roses, that there was a walk of vines; and that most of the trees were fig and mulberry, the soil not being proper for any other sorts. On his Tusculan villa he is more diffuse; the garden makes a considerable part of the description:—and what he says of the principal beauty of that pleasure-ground is exactly what was the admiration of this country about 60 years ago; box trees cut into most various animals, letters, and the names of the master and the artificer. In an age when architecture displayed all its grandeur, all its purity, and all its taste, when arose Vespasian's amphitheatre, the temple of Peace, Trajan's forum, Domitian's baths, Adrian's villa, the ruins and vestiges of which excite our astonishment; a Roman consul, a popular emperor's friend, and a man of elegant literature and taste, delighted in what the moderns scarcely admire in a college garden. All the gradations of Pliny's corresponded exactly to those laid out by London and Wile on the same principles. He talks of slopes, terraces, a wilderness, shrubs methodically trimmed, a marble basin, pipes spouting water, a cascade falling into the basin, bay trees alternately planted with pines, and a straight walk, from whence issued paths, others parted off by hedges of box and yew trees, with obelisks placed between every two paths. There wants nothing but the embroidery of flowers, to make a garden in the reign of Trajan serve for the description of one in that of King William III. In one passage, however, Pliny seems to have conceived that natural irregularity might be a beauty: *in opere urbanissimo*, says he, *velut illati ruris imitatio*. Something like a natural view was contrived amidst so much polished art and position. But the idea soon vanished, lines were immediately enveloped the slight scene, and natural beauties and inscriptions in box again succeeded to compensate for the daring intrusion of nature.

In the paintings found at Herculaneum are a few traces of gardens, as may be seen in the volume of the prints. They are small square enclosures, formed by trellis-work and espaliers, and regularly ornamented with vases, fountains, and careatides, elegantly symmetrical, and proper for the narrow spaces allotted to the garden of a house in a capital city.

From these remarks, it appears how natural and insensibly the idea of a kitchen garden grew into that which has for so many ages been peculiarly termed a *garden*, and by our ancestors in the country distinguished by the name of a *pleasure garden*. A square piece of ground was originally parted off in early ages for the use of the family—to exclude cattle, and ascertain the produce—it was separated from the fields by a hedge, the pride and design of privacy increased, the garden was dignified by walls; and in climates where the sun were not lavished by the ripening glow of natural soil, fruit trees were assisted and sheltered from rounding winds by the like expedient; for

of luxury, which have swelled into geometrics, have almost all taken their source in simple fountains of reason.

Nature and prospect were thus excluded, the art of making square gardens inclosed, pomp and solitude combined to calling that might enrich and enliven the unanimated partition. Fountains, first in use, which grandeur loves to disguise out of sight, received embellishments of marbles, and at last, to contradict nature, tossed their waste of waters into rising columns. Art, in the hands of had at first been made a succedaneum in the hands of ostentatious wealth, it means of opposing nature; and the reversed the march of the latter, the more sought its power was demonstrated. assured by the line were introduced in ascending streams, and terraces were hoisted opposition to the facile slopes that unite the valley to the hill. Balustrades beset precipitate and dangerous elevations, of steps rejoined them to the subjacent flat in the terrace had been dug. Vases and were added to the unnecessary balconies, a furnished the lifeless spot with mimictions of the excluded sons of men. Thus and expence were the constituent parts impetuous and selfish solitudes; and evement that was made, was but a step in nature. The tricks of water-works are unwary, not to refresh the panting and parterres embroidered in patterns of coat, were but the childish endeavours and novelty to reconcile greatness to ascended on.

As these impotent displays of false taste, were applied to the lovely wildness of which nature has distinguished each variety of tree and shrub. The venerable romantic beech, the useful elm, even the circuit of the lime, the regular round yew, and the almost moulded orange were corrected by such fantastic admirers of art. The compass and square were of more stations than the nursery-man. The meek, the quincunx, and the etoile, unsatisfying sameness on every royal and den. Trees were headed, and their sides ray; many French groves seem green upon poles. Seats of marble, arbours, near-houses, terminated every vista; and even where the space was too large to being remarked at one view, was so exact, as Pope observed,

—each alley has a brother,  
if the garden just reflects the other,  
flowers were more defensibly subjected to regularity. As Milton expressed it,  
Leisure

gardens took his pleasure.  
The garden of Marshal de Biron at Paris, contains acres, every walk was buttoned on by lines of flower-pots, which succeed in rows.

It does not precisely appear what our ancestors called a bower: it was probably an arbour;

sometimes it meant the whole fenced inclosure, and in one instance it certainly included a labyrinth. Rosamond's bower was indisputably of that kind; though whether composed of walls or hedges, we cannot determine. A square and a round labyrinth were so capital ingredients of a garden formerly, that in Du Cerceau's architecture, who lived in the time of Charles IX. and Henry III. there is scarce a ground plot without one of each.

In Kip's Views of the Seats of our Nobility and Gentry, we see the same tiresome and returning uniformity. Every house is approached by two or three gardens, consisting perhaps of a gravel walk and two grass plats or borders of flowers. Each rises above the other by two or three steps, and as many walls and terraces, and so many iron gates, that we recollect those ancient romances in which every entrance was guarded by giants or dragons. Yet though these and such preposterous inconveniences prevailed from age to age, good sense in this country had perceived the want of something at once more grand and more natural.

These reflections, and the bounds set to the waste made by royal spoilers, gave origin to PARKS. They were contracted forests, and extended gardens. Hentzer says, that, according to Rous of Warwick, the first park was that at Woodstock. If so, it might be the foundation of a legend that Henry II. secured his mistress in a labyrinth: it was no doubt more difficult to find her in a park than in a palace, where the intricacy of the woods and various lodgings buried in covert might conceal her actual habitation. It is more extraordinary that, having so long ago stumbled on the principle of modern gardening, we should have persisted in retaining its reverse, symmetrical and unnatural gardens. That parks were rare in other countries, Hentzer, who travelled over great part of Europe, leads us to suppose, by observing that they were common in England. In France they retain the name, but nothing is more different both in compass and disposition. Their parks are usually square or oblong inclosures, regularly planted with walks of chestnuts or limes, and generally every large town has one for its public recreation.

“One man, one great man we had (continues Mr Walpole), on whom nor education nor custom could impose their prejudices; who, ‘on evil days though fallen, and with darkness and solitude compassed round’ judged that the mistaken and fantastic ornaments he had seen in gardens were unworthy of the Almighty hand that planted the delights of Paradise. He seems with the prophetic eye of taste to have conceived, to have foreseen modern gardening; as Lord Bacon announced the discoveries since made by experimental philosophy. The description of Eden is a warmer and more just picture of the present style than Claud Lorraine could have painted from Hagley or Stourhead. The first lines we shall quote exhibit Stourhead on a more magnificent scale:

Thro’ Eden went a river large,  
Nor chang’d his course, but thro’ the shaggy hill  
Pass’d underneath ingulph’d: for God had  
thrown

That mountain as his garden mould, high rais’d  
Upon the rapid current——

Hagley

 Of stateliest view—

and then recollect, that the author of this sublime vision had never seen a glimpse of any thing like what he has imagined ; that his favourite ancients had dropped not a hint of such divine scenery ; and that the conceits in Italian gardens, and Theobalds and Nonfuch, were the brightest originals that his memory could furnish. His intellectual eye saw a nobler plan, so little did he suffer by the loss of sight. It sufficed him to have seen the materials with which he could work. The vigour of a boundless imagination told him how a plan might be disposed, that would embellish nature, and restore art to its proper office, the just improvement or imitation of it.

“ Now let us turn to an admired writer, posterior to MILTON, and see how cold, how insipid, how tasteless is his account of what he pronounced a perfect garden. We speak not of his style, which it was not necessary for him to animate with the colouring and glow of poetry. It is his want of ideas, of imagination, of taste, that deserve censure, when he dictated on a subject which is capable of all the graces that a knowledge of beautiful nature can bestow. Sir WILLIAM TEMPLE was an excellent man ; MILTON, a genius of the first order.

“ We cannot wonder that Sir William declares in favour of parterres, fountains, and statues, as necessary to break the sameness of large grass plats, which he thinks have an ill effect upon the eye, when he acknowledges that he discovers fancy in the gardens of Alcinous. Milton studied the ancients with equal enthusiasm, but not bigotry ; and had judgment to distinguish between the want of invention and the beauties of poetry. Com-

pare his paradise with Homer's garden, ascribed to a celestial design. For Sir just to observe, that his ideas center in a garden. He had the honour of his country many delicate fruits, and he took care to dispose them to the best advantage.

“ The best figure of a garden (say the ancients) is a square or an oblong, and either upon a descent : they have all their beauties in the air, the view, make amends for the want of space, which is very great in situating the terrace-walks, in levelling the grounds, and the stone stairs that are one to the other. The perfectest garden I ever saw, either at home or abroad, was that of Moor-park in Hertfordshire, it about 30 years ago. It was made by the late Duchess of Bedford, esteemed among the best of her time, and celebrated by Dr Johnson with very great care, excellent composition, but much cost ; but greater sums may be expended in a way without effect or honour, if the garden is not in proportion to money, or ‘ if nature is not improved ;’ which I take to be the great rule in every thing else, as far as it respects the improvement of our lives but of our [We shall see how natural that ad-

was.] Because I take the garden to have been in all kinds the most perfect, at least in the figure and disposition, I will ascribe it to those that meet with such a situation above the regard of common expense the side of a hill, upon which the descent is not very steep. The length of the terrace walk, where the best rooms and those of the greatest use are, lies upon the breadth of the garden. The great parlour opens into the middle of the gravel-walk that lies even with it, as I remember, about 300 paces broad in proportion ; the border set with laurels and at large distances, with the beauty of orange trees out of flower. From this walk are three descents by steps, in the middle, and at each end a large parterre. This is divided by gravel walks, and adorned with eight statues in the several quadrants of the terrace walk, are two fountains, and the sides of the parterre are rare large cloisters open to the garden, and the sides of stone, and terminating in other summer-houses even with the terrace, which are paved with stone, and the walks of shade, there being none in the whole parterre. Over these two cloisters are two terraces covered with lead and fountains ; and the passage into these airy of the two summer-houses at the end of the terrace walk. The cloister facing the terrace is covered with vines, and would have been for an orange-house, and the other with other more common greens, and I do not think been cast for that purpose, if gardening had been then in as much vogue now. From the middle of this parterre are three steps flying on each side

between them, covered with lead, and the lower garden, which is all fruit-trees about the several quarters of a wilderness, very shady; the walks here are all green, and embellished with figures of shell rock-mountains, and water-works. If the hill ended with the lower garden, and the park, they might have added a terrace of all greens; but this want is supplied in garden on the other side the house, all of that sort, very wild, shady, and a little rough rock-work and fountains. This park when I was acquainted with it, and in that place, I think, that I have seen in my time before or since, at home or abroad. It is unnecessary to add any remarks on this.

Any man might design and build a garden, who had been born in and never of Holborn. It was not, however, peculiar to William Temple to think in that way. How many Frenchmen are there who love their gardens, and still prefer unnatural steps and shady cloisters covered with Nautre, the architect of the groves and Versailles, came hither on a mission to our taste. He planted St James's and the Parks—no great monuments of his in-

ter, to do farther justice to Sir William Temple, or omit what he adds: "What I have seen of the best forms of gardens is meant only of a garden in some sort regular; for there may be a garden wholly irregular, that may, for ought, be more beautiful than any of the others: it may owe it to some extraordinary disposition of the soil, or some great race of vegetation in the contrivance, which may be divided by disagreeing parts into some figure, but yet, upon the whole, be very agreeable. I have seen in some places a garden more of it from others, who have seen among the Chinese, a people whose gardening seems to lie as wide of ours in Europe as our country does. Their greatest reach in gardening is employed in contriving figures, the beauty shall be great and strike the eye, but in any order or disposition of parts, that is commonly or easily observed. And though I have not any notion of this sort of beauty, but I find a particular word to express it: and I find it hit their eye at first sight, they award it is fine or is admirable, or any other word of esteem; but I should hardly advise these attempts in the figure of gardens, they are adventures of too hard attempt for any common hands; and though they may have more honour if they succeed well, and more dishonour if they fail, and it is not in their power they will; whereas in regular figures it is easy to make any great and remarkable

figure. Mr KENT and a few others were not content with a garden, or we might still be going up and down the open air. It is true, we have lately, as Sir William Temple did, and imitations of nature in the gardens of the Chinese. The former is certainly

ART. I.

tainly true: they are as whimsically irregular, as European gardens are formally uniform and unvaried:—but with regard to nature, it seems as much avoided, as in the squares and oblongs and straight lines of our ancestors. An artificial perpendicular rock starting out of a flat plain, and connected with nothing, often pierced through in various places with oval hollows, has no more pretension to be deemed natural than a lineal terrace or a parterre. The late Mr Joseph Spence, who had both taste and zeal for the present style, was so persuaded of the Chinese Emperor's pleasure-ground being laid out on principles resembling ours, that he translated and published, under the name of Sir Harry Beaumont, a particular account of that inclosure from the Collection of the Letters of the Jesuits. But except a determined irregularity, one can find nothing in it that gives any idea of attention being paid to nature. It is of vast circumference, and contains 200 palaces, besides as many contiguous for the eunuchs, all gilt, painted, and varnished. There are raised hills from 20 to 60 feet high, streams and lakes, and one of the latter five miles round. These waters are passed by bridges:—but even their bridges must not be straight—they serpentine as much as the rivulets, and are sometimes so long as to be furnished with resting-places, and begin and end with triumphal arches. The colonades undulate in the same manner. In short, this pretty gaudy scene is the work of caprice and whim, and, when we reflect on their buildings, presents no image but that of unsubstantial tawdriness. Nor is this all. Within this fantastic Paradise is a square town, each side a mile long. Here the emperor of the court, to entertain his imperial majesty with the bustle and business of the capital in which he resides, but which it is not of his dignity ever to see, act merchants, and all sorts of trades; and even delightedly exercise for his royal amusement every act of knavery that is practised under his auspicious government. Methinks this is the childish sojourn and repose of grandeur, not a retirement from public affairs to the delights of rural life. Here too his majesty *plays at agriculture*: there is a quarter set apart for that purpose; the eunuchs sow, reap, and carry in their harvest, in the imperial presence; and his majesty returns to Peking, persuaded that he has been in the country.

Having thus cleared our way by ascertaining what have been the ideas of gardening in all ages, as far as we have materials to judge by, it remains to show to what degree Mr Kent invented the new style, and what hints he had received to suggest and conduct his undertaking.

We have seen what Moor-park was, when pronounced a standard. But as no succeeding generation in an opulent and luxurious country contents itself with the perfection established by its ancestors, more perfect perfection was still sought; and improvements had gone on, till Loadon and Wise had stocked all our gardens with grants, animals, monsters, coats of arms, and mottoes, in yew, box, and holly. Absurdity could go no farther, and the tide turned. Bridgman, the next fashionable designer of gardens, was far more chaste; and whether from good sense, or that the nation had been struck by the admirable paper in the

G g

Guardian.

N<sup>o</sup> 173, he banished verdant sculpture, and even revert to the square precision of the old age. He enlarged his plans, did not make every division tally to its opposite, though he still adhered much to straight lines: the rest he diversified by wilder-ness with loose groves of oak, though still surrounded by hedges. As his reformation proceeded, he ventured, in the royal garden and park, to introduce cultivated fields, and the appearance of a forest, by the sides of the endless and tiresome walks that stretched from one into another without intermission. It was not till other innovators had broken through from rigid symmetry.

The capital stroke, the leading step to all that followed, was the destruction of walls and boundaries, and the invention of fosses—an idea then deemed so astonishing, that the common people called them Ha! Ha's! to express surprise at finding a sudden and unperceived change to their walk.

A sunk fence may be called the *leading step*, for these reasons. No sooner was this simple element made, than levelling, mowing, and the contiguous ground of the garden without the sunk fence was to be harmonized with the lawn within; and the garden in its turn was to be set free from its prim regularity, that it might assort with the milder country without. The sunk fence ascertained the specific garden; but that it might not draw too obvious a line of distinction between the neat and the rude, the contiguous out-lying parts came to be included in a kind of general design; and when nature was taken into the plan, under improvements, every step that was made pointed out new beauties, and inspired new ideas. At that moment appeared Kent, painter enough to taste the charms of landscape, bold, and opinionative enough to dare and to dictate, and born with a genius to strike out a great system from the twilight of imperfect essays. He leaped the fence, and saw that all nature was a garden. He felt the delicious contrast of hill and valley changing imperceptibly into each other, tasted the beauty of the gentle swell or concave scoop, and remarked how loose groves crowned an easy eminence with happy ornaments; and while they called in the distant view between their graceful stems, removed and extended the perspective by delusive comparison.

“ Thus the pencil of his imagination bestowed all the arts of landscape on the scenes he handled. The great principles on which he worked were perspective, light, and shade. Groups of trees broke too uniform or too extensive a lawn; evergreens and woods were opposed to the glare of the champaign; and where the view was less fortunate, or so much exposed as to be beheld at once, he blotted out some parts by thick shades, to divide it into variety, or to make the richest scene more enchanting by reserving it to a farther advance of the spectator's step. Thus, selecting favourite objects, and veiling deformities by screens of plantations; sometimes allowing the rudest waste to add its soil to the richest theatre: he realized the compositions of the greatest masters

in painting. Where objects were wanting to animate his horizon, his taste as an architect bestowed immediate termination. His buildings, seats, his temples, were more the works of pencil than of his compasses. We owe the restoration of Greece and the diffusion of a taste to his skill in landscape.

“ But of all the beauties he added to the face of this beautiful country, none surpassed his management of water. Adieu to canals, circular fountains, and cascades tumbling down marble fronts; that last absurd magnificence of Italian and French villas. The forced elevation of cataracts was more. The gentle stream was taught to serpentine seemingly at its pleasure; and where distinguished by different levels, its course appeared to be concealed by thickets properly interspersed and glittered again at a distance, where it might be supposed naturally to arrive. Its borders were smoothed, but preserved their waving irregularity. A few trees scattered here and there on its banks sprinkled the tame bank that accompanied its meanders; and when it disappeared among the hills, shades descending from the heights towards its progress, and framed the distant prospect of light under which it was lost, as it turned to either hand of the blue horizon.

“ Thus, dealing in none but the colours of nature, and catching its most favourable features, men saw a new creation opening before their eyes. The living landscape was chastened or polished and transformed. Freedom was given to the forest trees: they extended their branches unretained and where any eminent oak, or master beech, escaped maiming and survived the forest, and bramble was removed, and all its horrors were restored to distinguish and shade the scene. Where the united plumage of an ancient forest extended wide its undulating canopy, and venerable in its darkness, Kent thinned the most ranks, and left but so many detached scattered trees, as softened the approach of glare and blended a chequered light with the lengthened shadows of the remaining columns.

“ Succeeding artists have added new strokes to these touches; perhaps, improvements brought to perfection some that have been tried. The introduction of foreign trees and plants, we owe principally to Archibald D. Argyle, who contributed essentially to the richness of colour peculiar to our modern landscape. The use of various greens, the contrast of forms between our forest trees and the northern and West India firs and pines, are improvements more recent to Kent, or but little known to him. The willow, and every florid shrub, each tree of a pale or bold leaf, are new tints in the composition of our gardens.

“ But just as the encomiums are that have been bestowed on Kent's discoveries, he was without assistance nor faults. Mr Pope undoubtedly contributed to form his taste. The design of the Prince of Wales's garden at Carlton was evidently borrowed from the Poet's Temple at Ham. There was a little of affected modesty in the latter, when he said, of all his works, he was most proud of his garden. And yet it was a vast effort of art and taste to impress so

very on a spot of five acres. The  
gh the gloom from the grotto to the  
the retiring and again assembling  
lucky groves, the larger lawn, and  
of the termination at the cypresses  
to his mother's tomb, are managed  
judgment; and though Lord Peter  
ed him

is quincunx, and to rank his vines,  
not the most pleasing ingredients of  
peelive.

outed professed art (for the modern  
rts his talents, to conceal his art,)  
ther reformers, knew not how to  
st limits. He had followed Nature,  
her so happily, that he began to  
works were equally proper for imi-  
lenfington garden, he planted dead  
a greater air of truth to the scene—  
son laughed out of this excess. His

His was, that nature abhors a straight  
mics, for every genius has his apes,  
ink that she could love nothing but  
oked. Yet so many men of taste of  
oted themselves to the new improve-  
t is surprising how much beauty has  
out, with how few absurdities. Still  
s the reformation seems to have been  
far. Though an avenue crossing a  
ating a lawn, and intercepting views  
to which it leads, are capital faults;  
venue cut through woods, perhaps  
ng a park, has a noble air, and

trmen running before coaches,  
the inn what lord approaches,

ie habitation of some man of distinc-  
er places the total banishment of all  
atness immediately about a house,  
quently left gazing by itself in the  
ark, is a defect. Sheltered, and e-  
ks, in so very uncertain a climate as  
mforts ill exchanged for the few pic-  
s we enjoy; and whenever a family  
warm and even something of an old  
den, from the landscape designed for  
undertaker in fashion, without inter-  
he picture, they will find satisfactions  
s which do not invite strangers to  
their improvements."

ave brought down the history of this  
the present period. And from what  
it must be evident, that GARDEN-  
erfection to which it is now brought  
entitled to a place of considerable  
the liberal arts. "It is, says Mr  
s superior to landscape-painting as a  
representation: It is an exertion of  
ject for taste; and being realised now  
raint of regularity, and enlarged be-  
ropes of domestic convenience, the  
al, the most simple, the most noble  
ure, are all within its province. For  
r confined to the spots from which it  
ie; but regulates also the disposition  
ments, of a park, a farm, a forest,

&c. and the business of a gardener is to select and  
apply whatever is great, elegant, or characteristic,  
in any of them to discover, or to show all the ad-  
vantages of the place upon which he is employed;  
to supply its defects, to correct its faults, and to  
improve its beauties."

But though all these encomiums are justly due  
to gardening, upon the large scale of an ornamen-  
tal garden, including a park, farm, forest, &c. yet  
we apprehend that enough has been said upon  
this subject here, and under the article FARM, §  
IV, 1—4. And therefore we shall restrict the re-  
maining part of this treatise, to the description of  
such a plan of gardening, as will be found to an-  
swer best for those, who wish to prefer the *utile*  
to the *decorum*, and to regard usefulness and conve-  
nience more than ornament.

### SECT. III. Of the CHOICE of GROUND for a GARDEN.

IN the choice of a place proper for a garden,  
the most essential points to be considered are, the  
situation, the soil, the exposure, water, and prof-  
pect.

I. The situation ought to be such as is whole-  
some, and in a place neither too high nor too  
low; for if a garden be too high, it will be ex-  
posed to the winds, which are very prejudicial to  
trees; and if it be too low, the dampness, the  
vermin, and the venomous creatures that breed in  
ponds and marshy places, will add much to its  
insalubrity. The best situation is on the side of  
a hill, especially if the slope be easy, and almost  
imperceptible; if a good deal of level ground be  
near the house; and if it abounds with springs of  
water: for, being sheltered from the fury of the  
winds and the violent heat of the sun, a temperate  
air will be enjoyed; and the water that descends  
from the top of the hill, either from springs or  
rain, will not only supply fountains, canals, and  
cascades for ornament, but, when it has performed  
its office, will water the adjacent valleys, and, if  
it be not allowed to stagnate, will render them  
fertile and wholesome.

II. A good soil is next to be considered; for it is  
scarce possible to make a fine garden in a bad soil.  
There are indeed methods of meliorating ground,  
but they are very expensive; and sometimes, when  
the expence has been bestowed of laying good earth  
three feet deep over the whole surface, a whole  
garden has been ruined, when the roots of the  
trees have reached the natural bottom. To judge  
of the quality of the soil, observe whether there  
be any heath, thistles or such like weeds, growing  
spontaneously in it; for they are certain signs that  
the ground is poor. Or if there be large trees  
growing thereabouts, observe whether they grow  
crooked, ill shaped, and grubby; and if they be  
of a faded green, and full of moss, or infested with  
vermin: in all such cases, the place is to be re-  
jected. But if it be covered with grass fit for  
pasture, the depth of the soil may be tried. To  
know this, dig holes in several places, six feet  
wide and four deep; and if there be three feet of  
good earth it will do very well, but less than two  
will not be sufficient. The quality of good ground  
is neither to be stony nor too hard to work; nei-  
ther

**G A R D E N I N G.      S E C T.**

, too moist, nor too sandy and light; and clayey, which is the worst of gardens.

The next requisite is water; the want of one of the greatest inconveniencies that attend a garden, and will bring a certain mortification whatever is planted in it, especially in drier droughts that often happen in a hot situation in summer; besides its usefulness in gardens for making fountains, canals, &c. which are the greatest ornaments of

the last thing to be considered, is the propriety of a fine country; and though this is not absolutely necessary, yet it is one of the most agreeabilities of a fine garden: Besides, if a garden is planted in a low place that has no kind of prospect, it will not only be disagreeable but unprofitable.

**PART. IV. Of LAYING OUT and PLANTING GARDENS.**

GARDENS are usually distinguished into FLOWER GARDENS, FRUIT GARDENS, and KITCHEN GARDENS. The first being designed for pleasure and ornament, should be placed in the most conspicuous part, that is, next to the back front of the house; and the two latter, being designed for use, should be placed less in sight. But though the fruit and kitchen gardens are here mentioned as distinct, yet they are now usually united; as they equally require a good soil and exposure, and should both be placed out of the view of the house.

In the laying out and planting of gardens, the beauties of nature should always be studied; for the nearer a garden approaches to nature, the longer it will please. According to Mr Miller, the area of a handsome garden may take up 30 or 40 acres, but no more; and the following rules should be observed in the disposition of it. There ought always to be a descent of at least three steps from the house to the garden; this will render the house more dry and wholesome, and the prospect on entering the garden more extensive. The first thing that ought to present itself to view should be an open lawn of grass; which ought to be considerably broader than the front of the building; and if the depth be one half more than the width, it will have a better effect: If on the sides of the lawn there are trees planted irregularly, by way of open groves, the regularity of the lawn will be broken, and the whole rendered more like nature.

For the convenience of walking in damp weather, this lawn should be surrounded with a gravel walk, on the outside of which should be borders 3 or 4 feet wide for flowers; and from the back of these the prospect will be agreeably terminated by a slope of ever-green shrubs; which, however, should never be suffered to exclude agreeable prospects, or the view of handsome buildings. These walks may lead through the different plantations, gently winding about in an easy natural manner; which will be more agreeable than either those long straight walks, too frequently seen in gardens, or those serpentine windings that are twisted about into so many short turns as to render it difficult to walk in them; and as no

garden can be pleasing where there is a want of shade or shelter, these walks should lead as far as possible into plantations, where persons may walk in private, and be sheltered from the wind.

Narrow rivulets, which have a constant stream if they are judiciously led about the garden, have a better effect than large stagnating ponds or pools so frequently made in large gardens. If wilderesses are intended, they should not be made into stars and other ridiculous figures, nor into mazes or labyrinths, which in a great degree appear trifling.

In a word, the several parts of a garden should be diversified; but in places where the eye is directed in the whole at once, the two sides should always be the same. In designs, the aim should always be at what is natural. The general disposition of a garden and of its parts ought to be accommodated to the different situations of ground, to humour its inequalities, to propose the number of sorts of trees and shrubs to be planted in each part, and to shut out from the view of the garden no objects that may become ornamental; these extended views of the subject are not to be present purpose.

A practical attention to a garden, is by some esteemed a degrading employment. It is true indeed, that pastoral and agricultural manners we may form a judgment from the dignified descriptions of Virgil, are greatly degenerated. The employments of the shepherds and husbandmen are now become mean and sordid. The work of the garden is usually left to a peasant. Not unreasonable to assign the labour, which we esteem without amusement, to those who are sufficiently amused by the prospect of their wages. The operations of grafting, of inoculating, of pruning, of transplanting, are curious experiments of natural philosophy; and that they are pleasing to well as curious, those can testify who read what they felt on seeing their attempts in the different branches of practical gardening attended with success. Among the employments suitable to the age, Cicero has enumerated the superintending of a garden. It requires no great exertion of mind or body; and its satisfactions are of a kind which please without violent agitation. Its beneficial influence on health is an additional reason for an attention to it at an age when inactivity abounds.

In almost every description of the seats of the blessed, ideas of a garden seem to have presented themselves. The word PARADISE is synonymous with garden. The fields of Elysiun, that sweetest of poetical scenes, were adorned with all that imagination can conceive to be delightful. Some of the most pleasing passages of Milton, are those in which he represents the happy pair engaged in cultivating their blissful abode. Poets have always been delighted with the beauties of a garden. Lucretius is represented by Juvenal as reposing in his garden. Virgil's Georgics prove him to have been conversed with rural scenes; though, to the surprise of his readers, he has not assigned a book to the subject of a garden. Shenstone made it his subject (See FARM, § IV, 1.) but, with all his taste and fondness for it, he was not happy in it. The most delightful scenes which he created at the LEAS

him, it is said, little pleasure in the spectators. The truth is, he made the most of his grounds, which should have amusement of his life, the business of it; and ved himself in such troubles, by the ex- occasioned, as necessarily excluded tran- yment.

Indeed, in comparison, possess territories extensive, and sufficiently well adapted to an ornamented farm. Still fewer are supporting the expence of preserving it condition. But let not the rich suppose monopolized the pleasures of a garden. For of an acre, or a small portion, may real pleasure, from observing the pro- vegetation, even in a plantation of cul- ture. A very limited tract, properly at- tended, will furnish ample employment for an hand. Nor let it be thought a mean care; the hand that raised the cedar, formed the garden on the wall. Even the orchard, culti- vated for advantage, exhibits beauties un- in the shrubbery; nor can the green-house an appearance to excel the bloom of the almond.

The kitchen garden ought to be situated on one side of the house, near the stables, from whence it may be easily conveyed into it; and a fence built the wall, borders should be made of stone, which, according to Mr Miller, ought to be 10 feet broad. Upon these borders, ex- tended to the south, many sorts of early plants may be sown; and upon those exposed to the sun may be sown some late crops, taking care to plant any deep-rooting plants, especially peas, too near the fruit-trees.

It is best to divide the ground into quar- ters of equal figures for these are a square or an oblong if the ground will admit of it; otherwise it may be of that shape which will be most ad- vantageous. The size of these quarters should be proportioned to that of the garden; if too small, they will be lost in walks, and the quarters enclosed by espaliers of fruit trees, the plants will grow up slender, for want of a more open situation. The walks should also be proportioned to the size of the ground: these in a small garden should be 6 feet broad, but in a large one on each side of the walk there should be a border 3 or 4 feet wide between it and the wall. In these borders may be sown small or any other herbs that do not take deep roots. They should continue long; but they should not be planted with the same plants two years

in the same quarter nearest to the stables, and best defended from the cold winds, should be the hot- beds for early cucumbers, melons, &c. and to the north there should be a passage from the stables, the through which a small cart may enter. The most important points of general culture consist in digging and manuring the soil, and giving proper distance to each plant, according to their different growths: as also in keeping them free from weeds; for which purpose, always ob- serve to keep the dunghills free from them, so that their seeds will be constantly brought in along with the dung.

#### SECT. V. *The GARDINER'S KALENDAR.*

Under this head we proceed to point out what is proper to be done in the different months of the year, in the Kitchen-Garden, Flower-Garden, Orchard, &c. It is necessary, however, to mention here, that the arrangement in the following Kalendar, was originally drawn up for the climate of England; but will suit those parts of Scotland where the climate is mild, equally well, upon allowing a difference of 10 or 12 days later for sowing or planting. Where the seasons are still more backward, a proportional allowance will be made by the judicious gardiner, or practitioner in this pleasant art.

#### JANUARY.

**KITCHEN GARDEN.** Asparagus, in this season, being one of the greatest rarities which the art of gardening affords, ought to be planted every month, to have a regular succession of it till April, as it is above 3 weeks before it will be fit to cut, and the 4th hotbed should now be made. Beans of the early Mazagan sort must be planted for the second crop. Beets and cabbages of every sort, intended to procure seed from, should now be planted, if it was omitted in October. Carrots, to draw young, for the first crop, should now be sown; and those intended for seed should be planted. Cauliflower plants under glasses and frames should be covered with pea-straw, or mats, to defend them from the frost. Celery should be dug up as soon as the frost begins, for daily use, and the other covered with straw. Cress, mustard, radish, and rape, should be sown every week on a hotbed. Cucumbers for the first crop, to come in early in March, should now be sown. As soon as they are three or four days old put each into a small pot, and every week sow more to have plenty of plants. Dung should be wheeled into the kitchen garden in frosty weather, when other work cannot be done. Endive should be dug up, like the celery, as soon as the frost begins, and the rest covered with straw. Ground lying vacant should be dug up, if omitted in October, and thrown up into ridges. Hotbeds and loam should be prepared for asparagus, cucumbers and melons. Lettuces under glasses should be examined, and, if they be killed, sow more on a hotbed. Mint should be planted in pots, and if there be no hotbed, it will grow in a warm room. Mushroom beds will require regular attendance, and frost and rain must be kept out by dry straw and mats. Onions, to draw young, should be sown on a warm border. Peas under the south wall, for the first crop, should have the earth drawn up to them in a dry day, and sticks placed to them to defend them from the violence of the winds; and sow the second crop. Plant asparagus for the 4th crop. Beans for the 2d crop of mazagans. Beets, Cabbages, carrots, parsneps for seed. Mint and potatoes on a hotbed. Onions for eschalions and seed. Radishes for the 2d crop, sow in a warm situation, and the first crop on a hotbed. Small fallading, as cress, mustard, rape, radishes, sow every week on a hotbed. Sow carrots for the first crop, and the second of peas. Sow on hotbeds, carrots and cucumbers for the first crop. Cress, mustard, radish,

radish, and rape for fallads: Sow likewise turneps.

**FLOWER GARDEN and SHRUBBERY.** Anemones which were planted in the autumn will require to be covered with pea-straw, rotten tan, or mats. Auricula and polyanthus seeds may now be sown in boxes or pots in mild weather. Auriculas should be sheltered from violent rains and frost by mats; and at the end of the month fresh earthed. Beds for bulbous roots should be digged and thrown up into ridges, that they may be planted the first fine weather, if any roots remain unplanted; but it is bad policy not to plant them in October or the beginning of November. Bulbous-rooted flowers in boxes or glasses should be removed in frosty weather, before eight, from the windows; nor should they be set on chimney-pieces until they are in flower, for shade draws all flowers up very weak. Boxes made 5 inches deep, 3 wide, and 16 long, filled with light sandy earth, without any dung, are better than glasses, and will not require so much trouble. Stir up the earth often with a table fork. Carnations must be sheltered from violent rains and frost by mats. Plant at the end of the month, or sooner if the weather be mild, all sorts of bulbous roots, crocuses, as jonquils, narcissuses, polyanthus-narcissuses, snowdrops, tulips, &c. Plant flowering shrubs which are hardy, and flower early, as almonds, double-flowering cherries, honeysuckles, lilacs, mezerions, roses, &c. Shrubs and trees of all sorts may be planted at the end of this month. Sow auricula and polyanthus seeds in pots or boxes. Trenches should be cut to carry off the water, if it stands any where, after heavy rains.

**FRUIT GARDEN and ORCHARD.** Apple trees should be pruned as soon as the violent frosts are over. Espaliers ought always to be repaired before the buds of the trees begin to open. The fruit room should be often examined, to pick out all fruit which begins to decay; and nail mats before the windows to keep out the frost. Ground for planting should be prepared by digging the holes ready; and if wet, a cart-load of good loam should be brought for each standard tree, and formed into a little hill before the tree be planted. Scrape off the moss from all fruit trees. Orchards in general are much neglected, by not cutting out the dead wood and branches that cross each other. Pear trees require pruning, both standards, espaliers, and against walls, as soon as the weather becomes mild. Prune currants, gooseberries, and raspberries. Strawberries in pots may be placed on hotbeds for forcing. Vines should not be pruned till towards the end of the month.

**GREENHOUSE.** Air may be given to the plants, if the weather be mild. Fire must be made if it freezes, and particularly when it begins to thaw, or if it is foggy weather, to dry the house; for dampness is as prejudicial as cold; and if there be no fire, light a few candles in frosty weather. To know for a certainty when it begins to freeze, set a pan of water near the windows. Leaves, which are any way decayed, should be constantly bed off, particularly from the geraniums. Succulent plants, such as aloes, ficoides, &c. should have any water this month. Water for all other plants should be the softest that can be had; and the chillness should

be taken off by letting it stand in the shade 12 days before it is used; and this month should be given very sparingly. Windows in the greenhouse should be kept very close, by paper or mats of paper where the wind blows in, for tributes to the frost; and if the windows are covered with mats, take them down in time to admit the light; for if plants stand in the dark, their leaves will soon fall. The outward door should be opened as possible; but, to have it proper, there should be another door leading through a shed.

#### FEBRUARY.

**KITCHEN GARDEN.** Asparagus should have the mats taken off the glasses, except in the coldest snows; for without light it will not grow, and the 5th and last crop should be sown in a hotbed. Beans of the early sorts may now be planted for the 3d crop, and at the end of the month the first crop of the large sorts, for, long-podded, &c. Sow Beets, in boxes or ground be digged very deep. Broccoli and broccoli will want earthing up, and the dead leaves be first picked off. Sow for the 2d crop of sugarloaf, and the first crop of the large sorts, and plant out those sown in August. Sow at the end of the month for the general crop in a deep sandy soil. Cauliflowers under glass should be examined, all the dead leaves picked off, and the earth stirred up. In mild weather plant out some out, leaving only the strongest under each glass. Sow the 2d crop of the gentle hotbed. Sow cellery, for the first crop in a gentle hotbed, and draw earth up to the level of what remains in the ground, in dry weather sow coleworts, for the first crop: cress and radish every week on hotbeds. Cucumber beds should be constantly attended to, to keep them up to the proper heat, and another made for the plants sown the last month: when they have 3 or 4 rows plant them out, 3 or 4 to each light, and sow more seed. Tye up endive for blanching, and plant out some for seed. Escalots, and shallots, should not be deferred till the roots will be very small. Ground for the cant should be digged and thrown up in time to prepare it ready for sowing. Hotbeds should now be planted. Hotbeds for cucumbers, and small sallading, prepare plenty of dung. Sow leeks, and mark them for seed. Plant out lettuces from under glass, if the weather be mild, and sow the 2d crop of the gentle hotbed, and sow plenty of air to the forced ones. Sow at the beginning of the month for the first crop, when about 3 days old, plant each in a pot, and plant mint in pots on a hotbed. Delight in room beds from wet. Sow Onions at the end of the month or beginning of the next for the first crop: weed those sown in autumn, and sow some for seed. Sow parsley for edgings curled, very thin on a bed, to grow for lining of dishes, and the large root for parsneps on ground digged very deep. The ground should have the earth drawn off them, as they advance, in dry weather require sticking. Sow marrowfats and marrowleaves, and the 3d crop of hotfurs. P

ring, for the last crop. Beans for a 3d indiffer, for the first: Cauliflowers from glasses: Endives for blanching and feed. garlic, and rocambole: Horse-radish, from under glasses: Leeks, onions, and r feed: Potatoes on hotbeds, for the Uncover radishes in mild weather, and sow on again at night. Sow beets, cab- rots, cauliflowers, coleworts, fennel, uces, mustard, onions, parsley, par- s, radishes, spinach. Sow on hotbeds, s, celery, cress, cucumbers, melons, adith, rape for sallads. Sow Spinach, pp, and hoe the winter crop if it be too ater should be carried away, if it stands rains, by cutting trenches.

GARDEN and SHRUBBERY. Anemones culuses should not be deferred planting id weather, or they will flower weak; ds should be prepared some time before rdy annual flowers, such as sweet peas, candy-tuft, alysson, corn-bottles, per- ced some few others, may be now sown, ill flower very early. Auriculas must d by mats from wet, the decayed leaves pulled off, and fresh earthed. Box for ay be planted in mild weather. Bul- of every kind unplanted should not be e first opportunity which offers of mild and let the beds be thrown up into rid- hand. Bulbous roots in boxes, pots, require a regular attention to water d the earth should be stirred up once a unations must be fresh potted, and from heavy rains by mats. Flowering d forest trees of all sorts, except ever- ay be planted at the end of the month. ks, if intended to be made next month, ve the ground prepared by levelling it. or sowing amaranths, balsams, and other uals, should be prepared, and the seed e end of the month. Hyacinths, which ground, should be covered with mats by hoops. Mignonette must be sown ed, or it will do in a pot placed in a n where the sunshine comes; but let the n very thin. Perennial-rooted flowers, d of the month, may be removed from eds, and the old roots transplanted. ones and ranunculuses: Box for edg- end of the month: Bulbous and tube- of all sorts: Flowering shrubs and or- trees: Forest trees of all sorts, except . Shrubbery should be digged over l smooth, to destroy the young weeds to shoot; but the trees should first be Strubs of all sorts should have the ken off, and, if small, be planted in beds nder until they are stronger; and any now be planted. Sow at the end of the dy annuals and mignonette.

GARDEN and ORCHARD. Apple and should be finished pruning the first her. Piant Cuttings of currants and es. Prepare Grafts of apples and pears. dies, against peaches, nectarines, and in the beginning of the month; they about two feet higher than the walls,

that they may be set sloping; and must be fasten- ed with stakes, and remain there till the fruit is set. Sow kernels of apples and pears, for stocks. Planting all sorts of fruit trees should be finished early in the month, and the roots covered with mulch. Pruning wail trees should be finished. Straw- berries may be planted at the end of the month, and the old beds dressed; those on hotbeds must be frequently watered. Vines, finish pruning be- fore they bleed. Wall-trees, as apricots, necta- rines, peaches, plums, pears, should be finish- ed pruning in the month, and those done in Octo- ber must be examined, and the dead ends cut off.

GREENHOUSE. Admit air, very freely in mild weather. Earth the top of the pots, but first take out the old an inch deep. Fire must be made in this foggy weather to dry the house. Leaves this month decay very fast; therefore they will require picking off almost every day, but especially from the geraniums. Myrtles, oranges, winter cherries, and some others, water frequently, but not too much at a time. Succulent plants, as aloes, scoides, &c. must not have any water given them in this month, for it will cause them to rot. Water the plants which require it frequently, but very sparing- ly; for too much moisture in the house will injure the plants. Windows may be opened for a few hours in the middle of the day, but should be shut again about two o'clock, or whenever it begins to be foggy.

M A R C H.

KITCHEN GARDEN. Alifanders sown in au- tumn, should be hoed to a foot asunder, and more seed sown. Aromatic shrubs and herbs on beds, weed and fresh earth, early in the month; and sow and plant more of all sorts. Dress artichokes, and take the suckers off for a fresh plantation. Asparagus seed must now be sown to raise roots for forcing, and for fresh beds; at the end of a- bout 12 years, destroy the old beds, but take up the roots and force them: By now and then making one new bed, a constant succession may be kept up in full vigour. Plant out that which was sown last year. Fork up the beds, and rake them smooth, but do not leave the alleys above six inches lower than the top of the bed. Water the beds in a morning, in dry weather, early in the month, with the drainings from a dunghill, to forward them. Make fresh plantations in moist weather. Plant beans, for the 4th early crop, and the 2d of Windfors. Cut off the tops of thoe in flower. Finish sowing beets. Sow boorcole of various sorts, for the first crop. Sow broccoli, of the early sort for the first crop. Cabbages, sow the 3d crop of sugarloaf, the 2d of red, and the first of favoys. Sow carrots now for the principal crop. Sow capsicums, for pickling, on a hot- bed. Cauliflowers must be planted out, leaving two only of the strongest to each glass: draw earth up to the stems, and prop up the glasses. Prick out thoe sown last month, and sow the 3d crop. Prick out the first crop of celery from the seedbed, and sow the 2d. Chardons must be sown, and cives planted. Prick out the first crop of colewort. Cress, mustard, radish, and rape, may now be sown in the open ground for sallading; and cover the seed for a few days with a mat, or place

place hand-glasses over it. Sow cress and mustard, very thin for seed. Cucumber beds must be kept to a good heat, by cutting off some around the sides, and adding fresh hot dung instead of it. Plant out the 2d crop on a fresh bed. About the 20th sow seeds of the turkey, and some for bell-glasses. Prepare hotbeds for planting cucumbers, and melons. Plant Jerusalem artichokes. Sow leeks. Sow kidney beans at the end of the month, on a warm border. Plant out lettuces, from under the glasses. Sow the third crop of coss or other sorts. Plant out melons, from the first hotbed. Sow cantaloupes for the 2d crop, and some on a tan-bed, and for bell-glasses. Mint-beds, weed and earth, and plant more. Mushroom beds, make for summer use. Nasturtiums for pickling, sow at the end of the month. Carefully weed onion beds before the weeds are high; and finish sowing the principal crop. Sow parsley, both curled and large-rooted. Finish sowing parsneps. Earth up peas in dry weather and stick. Sow the 2d crop of marrowfats. Plant artichokes, asparagus, beans, cives, cucumbers, Jerusalem artichokes, lettuces, melons, mushrooms, potatoes, and tarragon. Plant aromatic herbs and shrubs; as balm, camomile, lavender, mint, pennyroyal, rosemary, rue, sage, savory, thyme, &c. Pot and sweet-herbs should now be sown. Slip pot-marjoram, savory, and thyme. Weed potatoes, and plant the principal crop. Sow radishes, the 4th crop, and rampions. Sow alfanders, angelica, asparagus, basil, beets, borage, boorecole, broccoli, burnet, cabbages, capicums, carrots, cauliflowers, celery, celeriac, chardons, chervil, clary, corianders, cress, cucumbers, dill, fennel, hyssop, kidney beans, leeks, lettuces, marjoram, marygolds, melons, mustard, nasturtiums, onions, parsley, parsneps, peas, purslane, radishes, rampions, falfasy, savory, scorzonera, sea-kale, skirrets, sorrel, spinach, tarragon, thyme, tomatoes, turneps, water-creffes. Weed spinach, and sow the 2d crop. Plant tarragon, and sow tomatoes. Turneps, sow the first crop. Sow water-creffes, in a moist place, or where it may be constantly supplied with waste water from the pump. Destroy weeds, while small, which will save future trouble.

**FLOWER GARDEN and SHRUBBERY.** Anemones and ranunculuses, if any remain unplanted, must not be deferred longer than the first mild day. Anemones in flower should be covered with mats in windy or rainy weather. Annual flowers which are tender, (See Catalogue, SACR. VII.) if sown early in the month, will require a 2d hotbed to be transplanted into; and if not sown, should not be deferred any longer, to have them early and strong. Sow those also mentioned in § II. of the general Catalogue, on a moderate hotbed. Annual flowers of all the hardy sorts in the Catalogue may be sown about the middle of the month in small patches where they are to remain; hollow the earth out in the form of a basin, fifteen inches over, and an inch deep, and sow the seeds very thin all over it, and not a small patch in the middle, as is too frequently the custom. Auriculas should be removed into the stand, and if some flat *gyfter-stells* be laid on the earth, they will keep moist, and save trouble in watering them. Bor-

ders of the flower-garden will require over or weeded, to destroy weeds when they begin to shoot, and then raked, that they may be neat. Box for edgings, in mild weather, should be covered with mats, and the roots in beds should be covered in rainy or stormy weather, and the plants gently up with one's fingers to destroy those also in the house must be covered to. Carnations, if not potted, should be done the beginning of this month. Shrubs, and trees of all sorts, may be sown in mild weather; then cover the roots turned downwards, with moss, fern, or some such things, to keep the ground moist, which is better, and gives less trouble in watering. Plant flowering shrubs and forest trees, early in the month, and cover them. Grass walks must be swept and rolled, and walks will need turning and rolling, and weeded, and cleaned from moss with a broom. Hyacinths must be covered with canvass, to prevent their flowers from blowing, but not kept too close. Larkspurs or patches, must be thinned and not more than 8 or 10 inches. Mignonette, should be transplanted, and sown. Myrtles, winter cherries, and greenhouse plants, planted against walls, have the mats rolled up in fine weather, and dust washed off from their leaves, and again at night. Perennial and biennial flowers must be sown on beds, very thin, that they may be strong; those sown last year should be planted, and the old roots of the perennials and annuals from the seedbeds should be edgings: Evergreens of all sorts: Perennials, dividing their roots, and seedlings of forest trees: Shrubs and trees early in the month. Strawberries and thistle for edging. Strawberries should be pruned early in the month, the runners taken off, and planted a foot at least, and the rows two feet apart: the ground should be dug, and then raked over, that it may be neat and clean. Sow tender annuals in hotbeds: Annuals that are hardy in the ground: Biennials and perennials on beds, and trees of almost every sort. Strawberries for an edging to the shrubbery, at six feet apart; the flowers make a pleasing appearance, afterwards you will have very large fruit being in a single row. Plant straw against a south wall, which will produce flowers, and ripen the fruit. Constantly weeds by hoeing while small, with a mat made to cut both ways, by which you may always keep your shrubbery in a very little trouble.

**FRUIT GARDEN and ORCHARD.** Apples, pines, and peach trees, should be planted before them, to defend the blossoms; or else stick branches of yew, or amongst them, but hurdles are the best, which have mats nailed over them, and then taken away by degrees, by first taking them at the bottom, towards the end of the month. Graft trees, and cut down the buds. Place hurdles, before the wall trees.

ought to be finished pruning at the end of the month, if omitted till then; the late planted should be cut off. Pruning trees of all sorts should be begun at the beginning of the month. Straw should now be attended to; hoe them, pull the weeds, and stir up the earth; then spread some very rotten dung over them. Those on hotbeds want watering, and the dead leaves should be taken off, to let the sun come to the plantations may now be made. Vines should be layered; draw some strong bearing into the bottom of the pot, and set it into the ground; and then they may be planted the next season, and produce the next year; plant cuttings. Finish pruning, and mulch those lately planted.

**USE.** Give air freely in the middle of the month, except the wind be very cold. Earth the pots, but take the old earth out.

Place geraniums near the windows, air being drawn up weak. Myrtles, roses, and other hardy plants, will want watering, and, if the weather be mild, may be taken to make more room, but let them stand in place at first. Orange trees, if their leaves are yellowed, will want washing with a weak water. Those with ill shaped leaves should be cut down, and placed on a strong hotbed. Kidneys in pots, good strong seed, and set an inch asunder, they will grow about plants may now have a little of mulch at a time. Water the plants twice a day, and only when the sun is out the water should be set in the house to get it to take off the chillness, and so on. Windows may be opened for a little in the middle of all fine days.

#### APRIL.

**GRASSES.** April being the latest time for sowing principal crops of the kitchen garden directed to be performed last month, if omitted, or the weather would not be done early in this. Aromatic herbs of all the following sorts should be sown, as balm, camomile, penny royal,

spearmint, tansy, lavender, rosemary, southernwood, wormwood, &c. sowing and planting asparagus early in the month.

Let the beds be forked and raked, and watered twice a week with drainings.

Cut off every bud, however small; if not, they weaken the stems;

weeding in general only practiced by the best gardeners. Never suffer any weeds to grow, if they are an inch high, for they bring up very much. Beans in flower bear tops cut off; and draw the stalks up close to the wall by strings, and so on.

Plant the third crop of Watercress, which should have the first crop pricked the 2d sown. Cabbages of the early sort have their leaves tied up to prevent rotting. Prick out from the seedbed the 1st crop, the 2d of red, and the 3d of white. Prick out cauliflowers, from the seed-

bed, to prevent their growing weak, upon another hotbed. Weed carrots, thin the first crop, and sow the 2d to draw young. Search for caterpillars upon cabbages and apple-trees particularly. Cauliflowers should have the earth drawn up very high to raise the glasses, and a piece of brick put under each corner, and at the end of the month taken quite away. Break down the leaves when the flowers of any begin to appear; earth the 2d crop and prick out the third. Celery, prick out the 2d crop, and sow the third. Sow cress and mustard, every weak. Cucumber beds must be attended to, and plenty of air given them, when mild; and, if the heat declines, fresh dung must be added to the sides. Make a gentle hotbed within the ground for those that are to be under bell or hand glasses, and plant them on it at the end of the month. Sow more seed, that you may have plenty of plants. Endive planted out for seed should be earthed up, and the first crop sown. Sow snocchio, in drills a foot asunder, for the first crop. Hotbeds for sowing of melons for bell glasses must be prepared, and loam and rotten dung procured, to be ready. Sow kidney beans, the 2d crop, and the first of the scarlet flowering. Tie up lettuces, to assist their cabbaging; those in beds should be thinned to a foot distance; others planted out, and the 4th crop sown very thin in an airy place. Melon beds will require to be kept up to a good heat, and the 2d and 3d crop planted out. Finish making mushroom beds, early in the month, which will last till September. Onion beds must be attended to, to keep clear from weeds as soon as any appear, and sow the second crop to draw young. Thin Parsley for garnishing dishes, and leave those plants which have the best curled leaves. Sow the lace-rooted. Earth up peas frequently, and stick them as soon as any tendrils appear. Sow the 3d crop of marrowfat. Plant beans, and mushrooms. Plant cucumbers and melons on fresh hotbeds. Potatoes should now be finished planting. Pot and sweet herbs may still be sown and planted; and weed and earth the beds. Sow purslane, on a warm border in rich earth. Sow radishes, for a 3th crop in a cool place. Ship and plant out last year's rosemary, rue, sage, savory, and thyme. Search often for insects and flies. Sow aromatic herbs and shrubs; mint, lavender, peas, purslane, and dracifera. Sow garden radish, in a cool place. Turnips, hoe the first crop and sow cucumbers and melons. Sow spinach, the 2d crop, the 2d. Weed all the beds of seedlings, when the weeds are small, and any other crop sown.

**FLOWER-GARDEN AND BARKENETRY.** Anemones in stormy weather will still require covering with mats. Annual flowers on hotbeds will require thinning, and those of the strongest must be planted two together, &c. Hardy annuals, if not sown early, should be sown as directed in March, should be decanted into pots, and sown very thin. Annuals in bloom must be constantly attended to, and defended from violent winds, but not have plenty of air in mild weather; the seedbeds will want frequent and gentle waterings. Fruit of plants may be sown or shipped, but the strongest plants will be raised from seed. Biennial and perennial flowers, finish sowing early in the month. Needs of the borders of the nursery and kitchen-garden.

turn, cut off every flower-bud which now appears, from 2 or 3 trees, and water them well for about ten days afterwards. Seeds of every sort of flowers which are ripe should be gathered. Shrubberies should be often hoed with a Dutch hoe, to destroy the young weeds; and shrubs and flowers in pots should be set in pans, and often watered. Sow annuals to flower late in autumn; as alyssons, candy tufts, carnations, yellow sun-tories, larkspurs, lavateras, yellow lupins, mignonne, poppies, dwarf stocks, pansies, and sweet-scented peas. Still plant tuberoses, to flower late in autumn. Tulips, if out of bloom, should have their seed-vessels broken off, and the early ones taken up. Water annuals, seedlings newly planted, and shrubs and trees, very often in dry weather. Weeds should particularly be prevented from going to seed: the most expeditious method is to cut them up with a Dutch hoe, made to cut both ways; and if neatly done, the borders will not require raking afterwards, if cut while very small.

**FRUIT GARDEN and ORCHARD.** Apricots should be thinned for the 2d time, and all fore-night shoots pulled off. Blighted trees should have hog's dung spread over the border; then fork up the ground and water it well. Pull off curled leaves, water the trees all over, and strew tobacco dust on the leaves; or fumigate them with tobacco smoke, which will greatly help to destroy the insects. Examine budded trees often, and pull off improper shoots. Caterpillars must be searched for upon apple trees, and destroyed. Disbud all the wall trees, by pulling off buds which come out in improper places. Espalier trees should be examined to disbud them and train in the shoots. Grafted trees should have the clay taken off, if properly united. Nectarines and peaches will require thinning for the first time, and the trees to be disbudded. Forced strawberries should have the dead leaves pulled off, and be frequently watered. Those which are beginning to flower, or have lately been planted, must be often watered in dry weather. It is not generally known that hantboys and chilli strawberries do not, like all the other species, produce hermaphrodite flowers, but male and female flowers on separate plants; and persons ignorant of this fact, allege their hantboys are blind; whereas those flowers which turn black in the middle are male plants, and never will produce fruit. To make a plantation properly, let a person skilled in botany examine them when in flower; he will then easily distinguish the male from the female, and give a quarter of an inch of soil. Most of the annuals are published with the male ones marked with a cross; but there can be no mistake in distinguishing the sexes. The female is indeed the most fertile, but neither will flower without the assistance of the male; and the male will not bear fruit unless propagated by the male. The male plants in a new plantation, do not in the first year.

The male plants may be distinguished by a cross above the flower, if covered with a flower pot for a few days after; 3 male will do for every 24 female. None

will require a constant attendance to pull shoots, especially where two come together to nail the branches. Water trees late in autumn or any infected with insects.

**GREENHOUSE.** Air must be given free on cold nights. American aloes must be watered, and placed near the window out geraniums towards the end of the month except those with variegated leaves-myrtles which are small, out of the month plant them in a bed of light rich earth. Trees must be fresh potted, if not done in autumn and as soon as the leaves of mulberry the size of a half crown, it shows that the tree is settled, and they may safely be potted. Water constantly the young trees down or any on the hotbeds. Seedling plants attended to, and shaded with mats, when it is hot in the middle of the day, and be watered. Succulent plants should be earthed up, but not shifted; and may still remain towards the windows, and be sparingly watered. Water plants frequently a little at a time, rather than too much. Windows may be kept open all day, and at the end of the month, all night, to acclimate plants by degrees to the open air.

JUNE.

**KITCHEN GARDEN.** Aromatic herbs and shrubs, for drying and distilling, gather; they are in the greatest perfection; flowers begin to open. Beans will stand earthing, and the tops of those which are sown should be cut off. Beets should be set at their proper distance of 12 or 14 inches. Plant the first crop of kale, and sow the 2d crop; plant the first, pick out the 2d, or 4th crop. Cabbages, plant the 2d crop, the 4th and sow the 5th. Red cabbages, 2d crop, and sow the 3d. Savoys, plant the 2d, and sow the 3d. Turneps, &c. for cattle, as described in the 1st month, sow for the 2d crop. Carrots, finish hoeing, and leave them 6 or 8 inches distant at least. Capsicums, finish out, and hoe and water them often; for in late seasons they will not be brought very forward early. Search for caterpillars on cabbages and apple trees. Carrots, plant the 3d crop, and pick out the 2d; the 3d crop of cabbages, pick out, and sow the 4th. Colcled and long cabbages, finish out, and hoe and water them often. Cucumbers, finish out, and hoe and water them often. Lettuce, finish out, and hoe and water them often. Onions, finish out, and hoe and water them often. Peas, finish out, and hoe and water them often. Potatoes, finish out, and hoe and water them often. Radishes, finish out, and hoe and water them often. Spinach, finish out, and hoe and water them often. Swiss chard, finish out, and hoe and water them often. Turneps, finish out, and hoe and water them often. Watercress, finish out, and hoe and water them often. Parsnips, finish out, and hoe and water them often. Carrots, finish out, and hoe and water them often. Cabbages, finish out, and hoe and water them often. Lettuce, finish out, and hoe and water them often. Onions, finish out, and hoe and water them often. Peas, finish out, and hoe and water them often. Potatoes, finish out, and hoe and water them often. Radishes, finish out, and hoe and water them often. Spinach, finish out, and hoe and water them often. Swiss chard, finish out, and hoe and water them often. Turneps, finish out, and hoe and water them often. Watercress, finish out, and hoe and water them often. Parsnips, finish out, and hoe and water them often.

ishes distant, to be ready for transplanting. Sow the 6th crop of lettuces in a row, and thin those for seed to a foot distance, and melons in frames with mats in the day, and lay pieces of broken earth or dishes under the fruit. Plant out the oiled papers. Examine often the beds, that they do not want water. Onions to 6 or 8 inches distant. Thin beds for garnish, and the large rooted to beds. Parsneps must be thinned to 10 rows. Sow the last marrowfat pease in a row. Plant lettuces and melons. Weed and sweet herbs often, and gather for use before they begin to flower; then tie in small bunches, and hang them across shady room to dry. Prick out broccoli, cauliflower, and celery. Sow turneps par-radishes. Sow radishes, the 7th crop, and bored, and black Spanish, in a cool place. Coleseed may now be sown. Seeds of all to be gathered as they ripen, and defended. Sow spinach, the 5th crop, thin in a cool place. Sow the following crops, and leave them at proper distances, as, beets, at 10 or 12 inches at roots, at 2 or 10 inches. Leeks may be left in beds at 8 or 10 inches. Parsneps, at 6 inches. Turneps at 6 or 8 inches. Sow rows of turneps, and hoe the others. Water the seedlings and cuttings frequently. The young crops is of the utmost consequence this month, especially if it be a rainy season; not on any account be omitted; nor weeds run to seed.

**FRUIT GARDEN and SHRUBBERY.** Take notice before their leaves are quite withered they will be more readily found. Annuals in the hotbeds will require fresh potting, but will want frequent watering. Annuals in the borders should have the earth stirred a hoe, and be often watered, and more so in autumn, as described under last month. Biennials and perennials, transplant from the hotbeds and shrubbery frequently. Box may be cut always do it in moist weather. Budded flowers of every sort, whose leaves are withered, should be taken up before they are entirely disappear, and put into shallow boxes, as directed for hyacinths, as they are. Carnations require to be examined often, and tied up to the sticks. Search for insects. Evergreens may be clipped in moist weather.

Grass and gravel walks will often require to be mowed, but it should be done after rain, and the roots may be drawn out without injury; they will often want mowing and rolling. Hyacinths, as soon as dried, should be taken up of the ground, then rubbed with a woolen cloth to clear them entirely from earth, and put in wooden drawers; but they should be put into flower-pots, earthen pans, or brick floors, for they will contract a mildewiness, which will make them rot.

Insects of all sorts should be fought for and destroyed. Kidney beans will want earthing, sticking, and the runners to be trained to the sticks. Mignonette, from the seedbeds, should be transplanted into small pots, and only 3 put into each; it will then be ready to put into larger pots, or upon the borders. Myrtles, and other greenhouse plants against walls, should be often watered, all fore-right shoots pulled off while small, and the others nailed to the walls with long narrow shreds of fine cloth. Plant out perennials and biennials from the seedbeds in showery weather; and, if the sun should be very hot soon after, cover each plant with a flower-pot, until they have taken root. Pinks may now be increased by making pipings or cuttings, but a glass must be placed over them. Plant out all annuals from the seedbeds and hotbeds: biennials and perennials from the seedbeds: mignonette both in pots and on borders: pipings of carnations and pinks. Attend to ranunculuses, and take them up as soon as the leaves are quite withered. Rose trees may now be layered and budded, and some very rotten dung spread on the ground, and dugged in, and often watered; the flies and grubs must also be attended to. Seedlings of trees, shrubs, or flowers, should be covered with mats in the daytime, and often watered; but, if in pots, remove them into the shade. Seeds of all sorts which are ripening should be attended to, and gathered before they drop out of the pods. By a little attention to them, in most seasons, enough may be got for the next year, and the expence of buying saved. Shrubberies ought frequently to be looked over; all straggling branches should be cut off or tied up; and the grounds stirred with a Dutch hoe. Shrubs in pots may be set in pins, and watered often. Sow annuals, as described under last month, to flower in autumn, in any vacancies that may be on the borders of the shrubbery or flower garden. Tulips should be taken up before their leaves are quite decayed, that they may be found more readily; and if any of the offsets be very small, plant them again directly, and lay the roots to dry in shallow boxes. Tulips produce new bulbs every year, and the old ones decay entirely; therefore they should never be taken up until the new bulbs are quite formed. Water annuals in pots constantly; seedbeds of all sorts; and shrubs and trees lately planted. Weeds, in this month, it is of the utmost consequence to destroy before they flower. When cut down they should be raked up and carried away, for many sorts will otherwise ripen their seeds lying on the ground.

**FRUIT GARDEN and ORCHARD.** Apple trees in espaliers must be often examined; all fore-right shoots should be taken off while small, and the others regularly trained to their proper distances. Search for caterpillars. If the standard apple trees be infested with caterpillars, light some damp straw, and with a fork direct the smoke through the tree, and they will soon be suffocated, and instantly drop down. Apricots must be thinned for the 3d and last time, and the shoots frequently nailed up. Blighted trees must be constantly attended to, as directed last month. Bud apricots, cherries, and peach trees. Search for caterpillars upon

upon apple trees. Cherry trees against walls should be covered with nets, to defend the fruit from birds. Look over the espalier trees often, and train the shoots in regular order. Nail up fig trees with very strong shreds. Nail up every week shoots of wall trees. Nectarines and peaches will require thinning the 2d time, nailing up the shoots and pinching off the ends where vacancies want filling up. Nail up pears and plums as they shoot, and pull off all fore-right shoots. Keep stocks, intended to be budded, free from weeds. Strawberries in flower will need frequent watering in dry weather. Lay tiles or wheat straw under the fruit of the scarlets, and pull off all decayed leaves; this will keep the fruit clean, and cause it to ripen sooner by several days. Cut off all runners as fast as they shoot. To make some fresh beds, reserve the first runners, as they are the strongest. Attend to the flowering of the hautboys, as directed under last month. Vines require constant attendance, in rubbing off improper buds, and nailing up the shoots. Water those trees frequently which are blighted: all newly planted trees in dry weather; and strawberries in flower.

**GREENHOUSE.** Air may now be given very freely in the greenhouse, and the windows may be kept open all night. Fresh earth alone, and place near the windows, but take out the Americans. Plant cuttings of various sorts, under bell or hand glasses, at the end of the month. Earth all the plants every month at top, if not suited. It makes them look neater, and grow better. Geranium seedlings sown in March will now require pricking out, and cuttings planted under glasses. March jessamines, lemons, and oranges. Layer jessamines, oleanders, &c. Plant myrtle cuttings at the end of the month under glass, but never take them off till they have grown two inches. Orange trees, if not taken out at the end of last month, will require it at the beginning of this. Clean well the leaves which are matted, or have insects on them, with a sponge and warm water. Inarching may now be performed. Those on hot-beds, and the young seedlings, must be attended to, and the stems of the old trees should be frequently washed. Often water seedling plants of all sorts; shade them in the middle of the day, and prick out the strongest to make room for others. Succulent plants may now be shifted, the offsets taken off, placed near the windows, and be often watered. Watering some of the plants will be necessary almost every day.

### JULY.

**KITCHEN GARDEN.** Aromatic herbs, flowers, and shrubs, gathered last month, if hung on lines will soon be dried. It is then better to strip off the leaves and flowers from the stalks, and put them into paper bags, which will preserve their flavour better, and keep them free from dust. Continuing to gather them before their flowers are too much opened. Asparagus if wished for in autumn, must be attended to at the beginning of this month; the stalks must be cut down, and, if it be dry weather, the beds must be very well watered with the draining from a dunghill. Next day fork them up lightly, and take them smooth; if the weather continues dry, water them every night

for a week, and in about 8 or 10 days they will be fit to cut. If this be done every year, leave or 3 beds uncultivated at spring, and make some more to allow for this double crop. Beans, plant the 5th crop of mazagan, and the 4th of Windsor, late crops. Finish thinning of beets to their proper distance. Plant the 2d crop of kale, prick out the 3d, and the first of Arjou. Plant out the 3d crop of broccoli, and prick out the 4th. Prick out the 4th crop of cabbages, and prick out the 3d crop of red cabbages. Plant the 2d crop of Savoys, and prick out the 3d. Cabbage turneps, &c. for cattle, prick out the 3d crop. Sow carrots to draw young, the 3d crop. Earth up and often water capsicums. Plant the 4th crop of cauliflowers. Plant the 2d of cress, and prick out the 5th. Finish sowing coleworts, and rape. Prick out the 2d crop of coleworts. Stick cucumbers on the open ground with branches of elm or other sticks. Lay tiles under endive, or tie up the first crop; plant the 2d, the 3d, and sow the 4th very thin. Take up the first crop of eschalots and garlic for present use. Sow finocchia the 4th crop. Sow kidney beans, on a south wall, the 5th and last crop. Still plant lavender and rosemary cuttings. Plant out leeks in double rows, at six inches distance, and a foot between the rows. Sow the 7th crop of lettuces in a cool place; and hoe those intended for feed. Melons must be frequently attended to. Water melons in dry weather. Pull onions, when the leaves begin to wither, out of the ground. Prick out the first crop of Welsh onions, and the last crop to draw young. Sow the 3d crop of parsley on a south wall. Peas sown last month will now require sowing. Sow the 4th crop of hotspurs. Prick out the first crop of red cabbages, rosemary, and Savoys. Gather the herbs and sweet herbs for drying; and, as fast as they are dried, strip off the leaves, and put them into paper bags. Prick out broccoli, cabbages, coleworts, and boarcole. Sow radishes, the 1st crop; also turnep-rooted, and black Spanish; and hoe the first. Seeds of all sorts must be attended to, and gathered as they ripen. Sow rape and turnep-radishes. Sow spinach the 6th crop, in a cool place, very thin. Sow turneps, the 5th and principal crop for winter use, and hoe the other crops. Water the first of seedlings, and all young crops. Weeds must be constantly attended to, and raked off the ground, or else many sorts will ripen as they are on the ground.

**FLOWER GARDEN and SHRUBBERY.** Annuals in pots require a constant attention, lest they should want water; and those on the borders require sowing and tying. Seeds nearly ripe must be watched and gathered, else many sorts will be lost. Annuals, to flower late in autumn, may still be sown. Auriculas and polyanthes from the seed bed should be transplanted upon a shady border, and, if possible, in rainy weather. Finish cutting of box and evergreen shrubs. Bud the curious sorts of jessamines, roses, &c. Bulbous roots must still be attended to, to take up dry and clean, and then put in shallow wooden boxes. Saffron crocus, and many other sorts, which flower in autumn, may now be planted. Carnations must be constantly watered, earwigs sarked for, and

pipings made. Evergreens, if requi-  
now be transplanted, but it should be  
in weather; and let the clipping be fi-  
brats and gravel walks must be frequent-  
mowed, and rolled. Hyacinths should  
need to see that there is no mould-  
ing them; and if any be decayed, they  
them away. Kidney beans must be exa-  
they are trained to the sticks, and watered  
ather. Lilies of many sorts, if they have  
ering, may be taken up; but the roots  
of moisture, that the small offsets must  
d again directly. Mignonette should  
wn to flower in winter, and more put

Myrtles, and other greenhouse plants  
alls, will require frequent nailing and

Finish planting perennials and bienni-  
seed beds. Pinks, finish making pipe  
ettings. Plant auricula and polyanthus  
; biennial and perennial seedlings: cut-  
carnet lychnis and pinks: evergreens, if  
er be rainy; mignonette into pots: off-  
sets: offsets of autumnal flowering bulbs:  
of carnations and pinks: saffron-crocus.  
sets must be taken up, and laid in the  
dry; then well cleaned from earth, and  
show boxes, or put into paper boxes. Fi-  
ing and budding of rose trees. Seedling  
ons, and flowers, must be properly wa-  
watered. Seeds now begin to ripen very  
efore must be constantly attended to,  
red. Shrubberies will require frequent  
in pruning or hoeing. Sow the last crop  
annuals and mignonette. Tulips should  
taking up, and as soon as dry, the earth  
be rubbed off, and then laid in shallow  
Water annuals in pots often, seedbeds,  
trees, and shrubs planted this spring,  
if it be rainy this month, grow very fast;  
the ground should be frequently hoed,  
seeds suffered to run to seed.

**GARDEN and ORCHARD.** Destroy ants,  
wasps, as soon as they appear, by hang-  
es half filled with sugar, or honey and  
Often look over apricot trees; pull off  
ght shoots, and nail those which are to

Attend to blighted trees, and water the  
often. Budding of apricots, cherries, and  
finish. Currants intended to be prefer-  
autumn, should now be covered with  
often examine espalier trees, and train in  
s. Fig trees require nailing up as they  
ith strong nails and long shreds. Fruit  
gathered in the morning, as soon as the  
ried the dew from it, and before it is  
nd then laid in a cool room. The fruit  
ould now be prepared; it should be situ-  
be south, the shelves neat and clean, the  
ered with ties, or else white washed or  
white. Destroy insects of all sorts. Nail  
week the shoots of wall trees. Thin necla-  
peaches for the 3d and last time, and nail  
shoots. Water strawberries in flower  
y in dry weather, and pull off decayed  
Tie up the fruit of the hantboys and o-  
e forts to sticks. Cut off all runners af-  
rst, and these should be planted out as  
ome rain falls. Vines must be very often

attended to, to nail up the shoots, and pull off all  
in proper buds. Wall trees require constant at-  
tention, to nail up and water in very dry weather.  
Water the blighted and new planted trees: straw-  
berries in flower, or runners lately planted.

**GREENHOUSE.** African aloes, and other suc-  
culent green-house plants, may now be set out in  
the open air. Cuttings of asters, geraniums,  
grewias, myrtles, &c. should now be planted un-  
der bell or hand glasses, which should not be taken  
off until they have grown an inch. Earth the  
tops of all the pots, first taking a little out. Plant  
geranium cuttings, and prick out the seedlings be-  
fore they are too thick. Those with variegated  
leaves do best in alcoves or under a little shelter.  
Paint and white-wash the greenhouse. Inarching  
and layering various sorts may still be performed.  
Plant myrtle cuttings under glasses, and water  
frequently near the glass, without taking them off.  
The small ones may be planted in beds. Orange  
trees must be examined: if there be insects under  
the leaves, wash them off. Shade and water those  
on hotbeds often. Plant stocks when four inches  
high, in separate pots. Pans should be placed un-  
der all the pots, as it is better for the plants, and  
saves much trouble in watering. Shade, water,  
and prick out seedling plants. Succulent plants,  
as a oes, cereufes, ficoides, and Indian figs, torch-  
thistles, &c. may now be set abroad. Watering  
the plants must be attended to every day.

#### AUGUST.

**KITCHEN GARDEN.** Sow alfanders, angelica,  
and chervil. Asparagus cut down last month will  
require constant watering. Beans planted last  
month will also want watering. Broccoli, broc-  
coli, cabbages, cauliflowers, and colewort, lately  
planted, will require hoeing around them, and  
earth must be drawn up to their stems. Plant out  
the 3d crop of broccoli. Cabbages, for the first  
crop at spring, should be sown about the 10th or  
12th day of the month. Prick out the 2d crop of  
cabbage turneps. Weed carrots sown last month  
as soon as they appear. Sow cauliflowers, for the  
first spring crop, about the 20th in rich earth,  
but shade them in the middle of the day by mats.  
Earth the first crop of celery for blanching, and  
plant out the third. Plant out some of the 2d  
crop of coleworts. Sow corn salad on beds. Ca-  
cumbers for pickling, either large or small, to  
have them fine, should now be gathered; and  
they will be free from spots, and save much trou-  
ble in greening. Train them regularly into the  
sticks. Often tie up endive for blanching; plant  
out the 3d crop, and thin the 4th. Take up et-  
chalots, garlic, and romamboe, if the stalks be  
quite withered: clean them from earth, and keep  
them in a dry place. Kidney beans, sown for  
the last crop, must be watered in dry weather.  
Finish planting out leeks. Lettuces, for standing  
through the winter, and for forcing, must now be  
sown very thin at 3 different times in the month:  
and plant out these last sown, on a south border.  
Melons, in rainy weather, must be defended from  
wet by putting hand glasses over them; and sticks  
placed for the picking melons to run up. Pre-  
pare mushroom beds, by having dung and spawu  
ready for the next month. Onions must be fre-  
quently

quently turned, that they may be well dried. Sow the 2d crop of Welsh onions. Gather pepper-mint for distilling, as soon as it begins to flower. Sow some hotspur peas, on a fourth border for the 5th and last crop. Plant celery, endive, leeks, and lettuces. Prick out Anjou, Brussels boorecole, cabbage-turneps, and turnep-rooted cabbages. Sow radishes, the 9th and last crop. Seeds, nearly ripe must be guarded from birds, particularly radish seeds. Sow cress, fennel, mustard, and furel. Sow the 2d crop of prickly broadcast spinach, and then, at spring, hoe it into beds 4 feet wide, with paths of 18 inches between the beds. Hoe, and sow the 6th crop of turneps. Water seedling beds in the morning. Weeds grow very fast in moist weather, and therefore must be hoed frequently, raked together and carried away.

**FLOWER GARDEN and STRAWBERRY.** Annuals in pots will want frequent watering, those on borders sticking and tying, and the seeds gathering of those nearly ripe. Anemone and auricula seeds are sown this month by many, but they do better in Jan. or Feb. Slip and fresh-pot the auriculas. Balsams, in pots, intended to raise seed from, must be removed into shelter. Plant bulbous roots, that flower in autumn, early in the month. Bulbous roots of all sorts should have their offsets planted at the end of the month. Take off carnations layers, and plant out the pipings from under the glasses. Finish clipping of evergreen trees and shrubs. Grass walks and lawns require frequent mowing. Gravel walks must be weeded and rolled. Take up lilies, if their leaves be decayed; but the offsets must be planted again directly. Plant mignonette in pots to flower in winter, and place them under a south wall. Myrtles and greenhouse plants against walls must be pruned and nailed, and constantly watered. Plant out the pipings of pinks if they have struck roots. Plant Guernsey lilies in pots. Attend to seeds of all sorts of flowers and shrubs, and gather them as they ripen. Remove seedlings in pots, to places where they will have the morning sun. Shrubberies will want frequent hoeing to keep down the weeds. Strawberry runners will require to be constantly taken off as they shoot out, to keep the borders and walks neat. Water plants in the morning, at the end of the month. Weeds must be frequently destroyed to prevent their running to seed.

**FRUIT GARDEN and ORCHARD.** Destroy ants, flies, and wasps, by supplying fresh bottles of sugar, or honey and water. Apple trees on espaliers will require frequent examining. Budding of all trees, finish, and pull off buds and shoots from the stocks. Currants intended to be preserved, finish covering with mats. Examine espalier trees, constantly to train in the shoots. Nail up fig trees, with strong nails. Gather fruit early in the morning, and lay it in a cool room. Finish the fruit room, by white washing or painting, and putting the shelves in order. Destroy insects of all sorts. Nail up every week the fruit trees. Nail up nectarines and peaches frequently. Attend to pear and plum trees, both on walls and against espaliers, constantly. Transplant strawberry runners if rooted, in rainy weather, and *cut off all the others* as they shoot. Vines must

be constantly nailed up, as they shoot and the bunches of grapes begin to be all weak shoots must be constantly nailed up. Water strawberry runners lately planted on blighted fruit trees.

**GREENHOUSE.** Take off the offsets both African and American, and plant in separate pots. Often water the cuttings of raniums, &c. Earth the tops of a Water geraniums and myrtles, and pour on the water gently. Oranges, the middle of the month. Prune an quire it, as this is the season of the Water the young stocks and those Finish the painting and white-washing of house. Finish pricking out seedling water and shade them. Shift the p require it into large pots, and earth Succulent plants should be shifted, an of the month be rainy, take them in freely, if the weather be dry, but morning.

## SEPTEMBER.

**KITCHEN GARDEN.** Aromatic herb should have their decayed stalks cut strength them; and transplant them. ed in July must be earthed up, and the ed off as soon as they begin to flower. the third crop of kale and the first of the other crops and earth them up. part of the 4th crop of broccoli, and other crops. Plant out the 5th crop prick out the first crop, on a south earth up any that want it. Plant out of favoys and red cabbages; and the cabbage-turneps. Hoe carrots sown i leave them at six inches distance. Caulif last month must be pricked out, water ed until they are rooted. Earth up th and break down the leaves if they beg Plant out the 4th crop of celery, and first and 2d to blanch. Chardons will blanching. Plant out more of the coleworts, a few at a time, to thin the cress and mustard, every week, and a the month under glasses. Cucumbers should be finished gathering; which the advantage of sticking them, and pick Plant out a little of the 4th crop of er it, and give the rest more room. to blanch. Echalots, garlic, and should have the offsets and small ro Lettuces must be thinned early in the sown thick, and pricked out on a sou about 4 or 5 inches asunder. Melons will now be fit to gather. Make mus at the beginning of the month. Gather for pickling. Finish sowing onions, i month, the 2d crop of Welsh. Wee last month before the weeds are l water-cresses. Prick out cabbages, c lettuces. Gather seeds constantly as Sow cress, mustard, turneps, and w Finish sowing spinach for spring use, s sown last month. Plant tarragon root: thin turneps, turnep-radishes, and bl radishes. Water in dry weather any

**W.** Weeds must be particularly attended to the onions, carrots, and lettuces, are small.

**GARDEN and SHRUBBERY.** Plant single flowered, at the end of the flower early. Annuals in pots must be watered to ripen the seeds. Remove that they may have the morning sun, slipping them. Balsams, cockscombs, or other curious annuals in pots, which to raise seeds from, must be placed in an alcove, greenhouse, or room to the south, and then the seeds will ripen.

Plant box for edgings, at the beginning of the month, or as soon as any rain falls. Plants of all sorts, early in the month; sets and lilies, and crown-imperials first. Greens, at the end of the month, if it be moist. Grass walks may now be made. Weed and roll paths often. Plant hyacinths, jonquils, muscades, polyanthus narcissuses, &c. at the month. Plant laurel cuttings, in

Layer laurustinutes and other shrubs, which flower late, as soon as their decayed, but plant the offsets again and all other sorts of lilies. Place Mignonette pots, under shelter. Myrtles and plants against walls must be constantly watered in dry weather. Plant out perennial feeders divide the old roots. Plant box for evergreens; crown-imperials and lilies in the month; cuttings of laurel, honey-suckles, shrubs and trees of all sorts, and after there has been some rain. Straw-thrift for edgings. Gather seeds, in the end of the day. Weed and earth seedling beds, hoe, and rake, shrubberies. Sow wall, as cornbottles, larkspurs, pansies, poppies, sweet peas, &c. to flower in spring. Constantly take off strawberry and replace any of the edgings which are up entirely the old plants; then take up the earth, and bring in fresh loam. Plants, and all sorts of bulbous roots, the month. Lay down turf for grass walks.

Hoe and rake weeds off the ground; either the seeds will ripen, and in wet weather roots will strike again.

**GARDEN and ORCHARD.** Destroy ants, and insects of all sorts constantly. Sow seeds on beds. Plant currant and gooseberries and trees. Nail up fig-trees fresh strong shreds. Attend to the fruit and pick out the rotten pears, or any which begin to decay. Put grapes for grape, gauze, or paper. Plant currants, raspberries, strawberries. Strawberries planted early in the month, and then they will be rooted before the frost begins. Dredges and plant some strong roots in pots to plant some alpine in pots, and put them in the shade, in cold wet weather, of foot, is proper to be spread on the borders. Vines will require frequent nailing;

**PART I.**

take off all the weak shoots, that the grapes may not be too much shaded.

**GREENHOUSE.** Remove aloe into the greenhouse in the beginning of the month, but leave out the American ones till the end. Plant cuttings and seedlings, in separate pots, and earth the tops of all the pots. Set in geraniums with variegated leaves, early in the month, and leave off watering the leaves. Take myrtles out of the ground and pot them. Fresh earth orange trees, thin the fruit, or most of it will fall off, and take them into the house at the end of the month. Take in succulent plants of all sorts, early in the month, and give them very little water. Take in aloe, variegated geraniums, and succulent plants, at the beginning of the month; orange trees and tender plants at the end; but myrtles and hardy plants may remain out till the beginning of the next month, unless there is an appearance of frosty nights. Water in the morning, and keep the windows open all night; leave off watering the geraniums over the leaves.

**OCTOBER.**

**KITCHEN GARDEN.** As October is the only time to crop a kitchen garden before winter, omit not any thing ordered now, till next month, and if it can be done at the beginning, instead of the end of the month, it will be much better, lest the rains should come on. Weed aromatic herbs and shrubs in beds, and spread some earth over them. Cut down asparagus stalks, hoe the weeds, and spread earth from the paths on them, but first a little rotten dung. Prepare hotbeds, for forcing, and plant three-year old plants for the first crop. Beans, the early mazagan, must be planted on a south border, for the first crop. Plant out anjou boorcole, the second crop, early in the month, and hoe the ground around the others. Plant out broccoli, the rest of the 4th crop. Plant out half the cabbages, sown in August, of the early sorts, in a warm situation. Plant cabbage-turneps, early in the month, and earth up the others. Finish hoeing carrots, sown in July. Attend to cabbages, beginning to flower, by breaking down the leaves. Those intended for glasses will want planting out; let there be six to each glass, and the rest in a frame, or under a south wall. Plant out celery, the 5th and last crop, and earth up the 2d to blanch. Finish planting coleworts. Sow cress, mustard, and radish, under glasses, and on a hotbed at the end of the month. Tie up endive, to blanch, or lay tiles on it, and plant more Plant eschalots, garlic, and rocambole. Throw up vacant ground into ridges. Hoe boorcole, broccoli, cabbages, and cabbage-turneps; and draw up earth to their items. Hoe carrots and spinach. Prepare hotbeds, for forcing asparagus and lettuce. Plant out lettuces, cabbage and brown Dutch, on asparagus beds, some under glasses, and others on hotbeds for forcing. Finish gathering melons for pickling. Plant mint, in pots, on a hotbed. Cover mushroom beds well with straw and mats, to defend them from rain. Onions will require to be very well weeded, and should be examined 2 or 3 times in the month. Sow peas, the early hotspurs, on a south border near the wall, for a

first crop. Plant on hotbeds asparagus for the first crop, and lettuces and mint. Plant out, to stand for seed, beets, cabbages, carrots, parsley, parsneps, turneps. Weed pot herbs and sweet herbs on beds; stir up the earth, and spread some over them. Seeds of all sorts should be threshed out, dried, and put into bags. Sow cress and mustard on hotbeds: Peas on a south border. Hoe spinach for the last time before winter. Destroy weeds in every part of the garden.

**FLOWER GARDEN and SHRUBBERY.** Any thing ordered last month, if omitted, finish early in this, as the beginning of this month is the proper time when the flower garden and shrubbery should be put into order before the winter. Finish planting anemones, to flower early, the first week in the month. Remove auriculas and carnations, into shelter, and in wet weather cover them with mats. Balsams, cockscombs, egg-plants, &c. intended to raise seed from, must be constantly attended to, to hasten the ripening of the seed. Turn over beds and composts for bulbous roots, frequently. Finish planting box for edgings, early in the month. Plant bulbous roots for forcing, in pots or boxes, and finish planting all others before the rain sets in. Plant crocuses, aconites, snowdrops, and any bulbous roots which flower early in the spring, at the beginning of the month. Plant evergreens of all sorts, early in the month. Finish laying grass walks, and repair any deficient places. Weed gravel walks, and roll them in dry weather. Plant hyacinths, jonquils, lilies, narcissus, and polyanthus narcissus, early in the month. Finish layering of shrubs. Take off layers and suckers, if rooted. Mignonette should be removed under glasses, or else into a greenhouse or warm closet. Finish planting perennials. Plant bulbous roots early in the month; as aconites, amaryllises, coral flags, crown-imperials, daffodils, garlic chives, irises, martagons, paneratiums, ranunculuses, snowdrops, star of Bethlehem, tulip, &c. Plant also perennials at the beginning of the month: shrubs and trees of all sorts: strawberries and thurst for edgings: place seedlings in pots, under a south wall in the ground; and weed and earth seedlings in beds. Gather seeds in the middle of the day. Finish pruning and hoeing shrub-beries; to lie neat for the winter. Finish planting shrubs and trees. Take off suckers and layers; and, if small, plant them in beds two feet asunder, to be ready against the next season. Finish planting tulips, early in the month, and all sorts of bulbous roots. Finish laying turf early in the month. Hoe and rake off weeds, or they will root again. If possible leave nothing ordered this month unfinished, on account of the uncertainty of the weather in the succeeding month.

**FRUIT GARDEN and ORCHARD.** Gather apples and pears in the middle of fine dry days. Plant apple trees at the end of the month. Plant currants, gooseberries, and raspberries. Examine grapes in bags, to see that they are not mouldy or decayed. Gather nectarines and peaches, in the middle of the day. Orchards or fruit trees intended to be planted, should have the ground prepared, and the holes digged some weeks before-hand; if the soil be very good, some loam and rotten dung should be mixed together, and

the trees planted in it. If the soil be poor, bring a cart load of earth at least, to form the earth into a little hill, above and plant the tree upon it, but first a foot deep in a circle of 4 feet. Gather peaches in the middle of the month, if not ripe, lay them in the sun for a week, or in a window; they are much improved, and eat gently like apples, and eating, the wine. Plant peach trees, at the end of the month. Plant fruit trees of all sorts of wall trees, but sweep off all with a birch broom. Finish dressing beds, and water the alpiacs frequently. Vines in pots should be made the holes ready, pour water in them gently turn them out of the pot in the hole and break it, and cannot be disturbed, and you will next year. Finish pruning and plant early in the month.

**GREENHOUSE.** Give air very day time, and leave some of the windows open until the end of the month. Take in the pots. Take in geraniums in the month, if not done the last; water them, or they will begin to shoot afresh constantly all decayed leaves. Clean before the plants are set in order; dead ones. Take in myrtles towards the month. Orange trees should be examined in this month; examine the leaves beneath them, for insects, which fasten themselves, and pick them off; if mildewed, wash them with warm water. Water succulent plants sparingly, myrtles, orange trees, winter chrysanths, and woody plants often. Open the windows in a fine day, but keep them shut in fog.

#### NOVEMBER.

**KITCHEN GARDEN.** Any thing ordered before the rain prevents. Cut do stalks, and earth them up. Asparagus beds must have air given to it; a plant the 2d bed; cut down the stalks, and dress the beds. Finish planting first crop. Plant beets, cabbages, a first crop. Take up carrots and lay them in a trench, or in a frame, in the middle of fine days. Give some air to cauliflowers under frames, in the middle of fine days. Cauliflowers, when dry, to blanch. Sow cress and radishes on hotbeds. Take up plant edout, and plant on the south side raised up two feet high. Throw up v into ridges. Prepare hotbeds for fungus and lettuces. Attend to lettuce and give them air in the middle of the month. Take up cauliflower and large rooted parsley. Draw ear and beans above ground, and place them in a trench, or in a frame, in the middle of fine days. Plant asparagus on a hotbed crop: endive on the south side of: beets, cabbages, and carrots, for seed potatoes, sort them, pick out the best, and reserve the best for use in winter. Short-topped radishes about the 15th

## DECEMBER.

beaten straw over the beds. Dig up tulips, and scorzonerias. Sow cress, mustardishes on hotbeds for small saladings, sowing again, if it be too thick. Drain off water; weed all the crops; and take seeds to prevent their rooting again.

**FRUIT GARDEN and SHRUBBERY.** November generally a very rainy month, if any opened to be omitted last month, let it be early in this. Bulbous roots, intended for forcing, may now be placed on shelves, and let all others be finished planting during the month. Those in pots or tubs be frequently watered, and placed as near the sun and light as possible; for in the winter they will draw up weak. Composts wanted for forcing, should now be collected; viz. manure, sand, willow earth, rotten tan, dung, &c. them be laid in dry sunny places, and frequently turned over, but by no means in the open air. Gravel walks near the house should be rolled a little when the weather will permit; their being kept hard prevents weeds growing; but never throw them up into the air. Leaves should be constantly swept up as they fall, or they will spoil the walks. Myrtles against walls should have two boards six inches wide fixed, one at each side, with a mat on top, on which a mat should be nailed up and down occasionally. Plant carnation and bulbous roots; particularly those intended for forcing. Shrubberies should be pruned, and hoed. All sorts of shrubs and trees should be finished planting early in the month; viz. sowing, straw, or turf, turned downwards, and laid over the roots to keep out the frost. Drains should be dug, and drains made to carry off the water wherever it stands; a large quantity, placed downwards in the earth, will do a great quantity of water.

**FRUIT GARDEN and ORCHARD.** Finish any plants sown last month, that has been omitted, if possible. Finish gathering apples and pears as they appear; and if they are not yet ripe, let them remain in together and sweated; the most sorts, which keep long, should be wiped with a cloth. Prune and plant apple and pear trees, and pull off the green figs. Attend to the fruit room; pick out every leaf, and all decayed apples or pears. Finish plantings at the beginning of this month, and trees. Finish planting and pruning of standard and wall trees, early in the month. Prune strawberries in pots for forcing, and attend to the alpine. Finish planting and pruning of wall trees.

**GREENHOUSE.** Give air in the middle of the day when very foggy. Earth the tops of any plants, when any mould appears on them. Pick off geranium leaves as they decay, rather than any others, and give them water frequently; also, all decayed leaves, as they decay, give air of the house very much. Succulents, as aloes, ficoides, &c. will require but little water; large aloes the most. Water plants often, but give them only little at a time; dampness is more prejudicial in a greenhouse than cold.

**KITCHEN GARDEN.** Asparagus must be planted for the 3d crop, and give it both light and air to colour it. If the beds be not warm enough, line them with fresh dung. Broccoli, cauliflower, and cabbages must be well earthed up, to keep them upright, and all decayed leaves picked off. Cauliflower plants must have air while the weather is mild, and pick off dead leaves. Earth up celery when dry, for blanching. Sow cress, mustard, and radishes, on hotbeds every week. Weed and turn over dunghills in frosty weather. Tie up endive for blanching. Hotbeds must be attended to, and plenty of hot dung and manure provided for cucumbers and melons. Lettuces under glasses must have air given them in the middle of mild days. Mushroom beds must have dry straw. Earth up peas and beans above ground. Roots preserved in sand, as carrots, potatoes, &c. should be finished before the frost sets in. Search for snails in the holes of the walls. Sow cress, mustard, and radishes, on hotbeds every week. Repair, grind, and put in order tools. Set traps to catch mice in; and make trenches to drain off the water.

**FLOWER GARDEN and SHRUBBERY.** Examine auriculae frequently, and pick off all decayed leaves. Bulbous roots for forcing must be constantly attended to, to give them water, which should always be soft; and change that in the glasses when foul. Carnations in pots should be plunged into the ground; but, if ashes or sand be put between the pots, it will keep them dryer than earth. Flowers and shrubs in pots should be plunged into the ground, to keep the frost from the roots. Forest trees may still be planted, if there be not much frost; otherwise it is better to defer it till spring. Shrubs and trees may still be pruned; and long litter, &c. laid over the roots of those lately planted. Trenches and drains should be made wherever the water stands.

**FRUIT GARDEN and ORCHARD.** Examine apples and pears in the fruit room; pick out such as appear the soundest of the best sorts, and wrap each in a piece of paper. This will cause them to keep several weeks longer. Repair espaliers; prune the trees; spread some rotten dung on the border, and fork it in. Finish pruning fig trees. Guard the fruit room from frost, but give it some air, when the weather is not very damp nor frosty. Examine the orchard, and take care that the newly planted trees are well flaked and mulched; and cut out the dead wood from the standard trees. Finish pruning and planting wall trees early in the month.

**GREENHOUSE.** Air must be given whenever the weather is mild and will permit it. Earth the tops of the pots, but first take out a little of the old. Frost must be guarded against, by keeping the doors and windows close, when it begins to freeze. Constantly pick off decayed leaves. Myrtles and other greenhouse plants against walls will require to have mats placed before them, and, in the middle of fine days, before the frost is set in, rolled up, but let down again at night. Long litter, or rotten tan, should also be laid over the roots

# G A R D E N I N G.

SECT

the frost. Myrtles may al-  
pits made against a south  
by frosty weather with mats  
near a foot thick. Many are preserved  
near London, with only hurdles  
er the pit, without any glass, and covered  
in frost with straw and mats. Succu-  
s will require but very little water. Wa-  
dants which require it very sparingly.  
windows for 3 or 4 hours in the middle  
day.

*A TABLE shewing the NUMBER of  
required of EACH SORT of VEGETABLES,  
a REGULAR SUCCESSION through the  
with the TIME of SOWING and PLANT.*

## GARDEN PLANTS, SEEDS, and ROOTS.

	<i>No. of Crops.</i>	<i>Time of Sowing, &amp;c.</i>
Asparagus	1	Mar. or Apr.
— forced	5	Oct. Nov. Dec. Jan. Feb.
— in autumn	1	July, if cut down
Balm	1	Mar. or Apr.
Basil	1	Mar. or Apr.
Beans, early	5	Oct. Jan. Feb. Mar. July
— late	4	Feb. Mar. Apr. July
Beets	1	Feb. or Mar.
Broccoli or kale	3	Mar. Apr. June
— Anjou	2	May, June

Rue	1	Mar. or Apr.
Sage	1	Mar. or Apr.
Salsafy	1	Mar. or Apr.
Savory	1	Mar. or Apr.
Savoy cabbage	3	Mar. May, June
Scorzoneria	1	Mar. or Apr.
Scotch kale	3	Mar. Apr. June
Sea kale	1	Mar. or Apr.
Skirrets	1	Mar. or Apr.
Sorrel	2	Mar. Aug.
Spinach	6	Feb. to July
— Winter	2	July, Aug. or Sept.
Tansey	1	Mar. or Sept.
Tarragon	1	Mar. or Sept.
Thyme	1	Mar. or Apr.
Tomatoes	1	Mar. or Apr.
Turneps	6	Mar. or Aug.
— for seed	1	Feb.
Turnep-cabbage	2	May, June
Turnep-radish	2	June, July
Water-cress	2	Mar. Sept.

# GARDENING

## CATALOGUE OF FLOWERS, SHRUBS, TREES USUALLY CULTIVATED.

### FENDER ANNUAL FLOWERS.

on a strong hotbed the last week in March, first in March, transplanted afterwards in another at 4 inches distance; then in small pots in May; afterwards in larger, and of June placed in the open air.

- |              |                    |
|--------------|--------------------|
| 1. Ice plant | 6. Humble plant    |
| 2. Tombs     | 7. Sensitive plant |
| 3. Ants      | 8. Stramoniums     |
| 4. amaranths |                    |

### II. ANNUAL FLOWERS.

on a moderate hotbed in March or planted afterwards before they are too high light earth, and covered with mats; in month or six weeks into pots, or border-flower-garden.

- |  |                      |
|--|----------------------|
| 1. French marygold   | 8. French marygold   |
| 2. lilia, blue   | 9. Marvel of Peru    |
| 3. rom   | 10. Mignonette       |
| 4. marygold  | 11. Nolana           |
| 5. ic after  | 12. Palma Christi    |
| 6. or Indian   | 13. Stock Julyflower |
| 7. mthemum.  | 14. Sultan, yellow   |
| 8. them, six numbers to them, correct these, to distinguish each sort when | 15. Zinnia           |

### III. HARDY ANNUAL FLOWERS.

in March or April on the borders of a garden. Those marked thus †, barely, may be sown in the beginning of the flower early. Hollow the earth out a little basin, about a foot over, and deep; draw a circle near the edge half an inch, and drop a few seeds in it; thin after they appear, and leave them at 6 inches, but the large sorts wider. In May, they will want frequent watering. As the seeds as they ripen, and you may save some of buying any in another season.

- |                  |                                   |
|------------------|-----------------------------------|
| 1. flower †      | 23. Mallow                        |
| 2. igit          | 24. Mignonette                    |
| 3. th            | 25. Nasturtium †                  |
| 4. stea          | 26. Nigella, or devil in a bush † |
| 5. Moldavian     | 27. Parsley, or hearts-ease       |
| 6. e             | 28. Peas, sweet scented †         |
| 7. ust †         | 29. Petricaria †                  |
| 8. Lobel's †     | 30. Poppy †                       |
| 9. lar trefoil   | 31. Safflower, or bastard saffron |
| 10. d and white  | 32. Snail trefoil                 |
| 11. ulus         | 33. Snap-dragon                   |
| 12. tle †        | 34. Stock July-flower †           |
| 13. er, spurting | 35. Sun flower                    |
| 14. y, yellow    | 36. Sweet sultan                  |
| 15. g trefoil    | 37. Tobacco                       |
| 16. ort          | 38. Venus's, looking-glass †      |
| 17. orn          | 39. Venus's navelwort             |
| 18. r †          | 40. Xeranthemum                   |

In July, sow again annual stock, candy tuft, convolvulus minor, cornbottles, Lobel's catchfly, and yellow lupines, and they will flower until the frost kills them.

### IV. BIENNIAL FLOWERS.

To be sown in March or April in beds very thin; as soon as the plants touch one another, thin them, and leave them at 4 or 6 inches asunder; those drawn out, plant at the same distance. In July transplant them all upon beds, at eight inches asunder; there to remain till the end of September, when they must be planted upon the borders of the flower garden, and they will produce their flowers the next summer, after which they will perfect their seeds and die.

- |                          |                        |
|--------------------------|------------------------|
| 1. Canterbury bell       | 7. Poppy, yellow horn- |
| 2. Colutea, Æthiopian    | 8. Rocket              |
| 3. French honeysuckle    | 9. Scabious            |
| 4. Globe thistle         | 10. Stock Julyflower   |
| 5. Honesty, or moon-wort | 11. Sweet-William      |
| 6. Mallow tree           | 12. Tree Primrose      |
|                          | 13. Wall flower        |

### V. PERENNIAL FLOWERS.

Which, if sown in the same manner as the biennials, and transplanted into the borders of the flower garden, will continue for several years.

- |                 |                      |
|-----------------|----------------------|
| 1. Alysson      | 11. Ox-eye daisy     |
| 2. Auricula     | 12. Pea, everlasting |
| 3. Bee larkspur | 13. Pinks            |
| 4. Campanula    | 14. Polyanthus       |
| 5. Carnation    | 15. Rhubarb          |
| 6. Columbine    | 16. Rose campion     |
| 7. Flax         | 17. Snap dragon      |
| 8. Fox glove    | 18. Valerian         |
| 9. Hawkweed     | 19. Greek valerian   |
| 10. Hollyhock   |                      |

### VI. PERENNIAL FLOWERS.

Which are propagated by dividing their roots in spring, in March or April; or in the autumn, in September.

- |                      |                        |
|----------------------|------------------------|
| 1. Adonis flower     | 26. Fraxinella         |
| 2. Anemone           | 27. Fumatory           |
| 3. Asphodel          | 28. Garlic             |

| 5. Cornflags      | 18. Polyanthus Narcifus |
| 6. Crocuses       | 19. Ranunculus          |
| 7. Crown imperial | 20. Silyrinchium        |
| 8. Cyclamen       | 21. Snowdrop            |
| 9. Daffodil       | 22. Star of Bethlehem   |
| 10. Garlic Moly   | 23. Tuberoses           |
| 11. Hyacinth      | 24. Tulips              |
| 12. Jonquil       |                         |
| 13. Iris          |                         |

To be taken up in April, May, and June, as soon as their leaves are withered, and planted again in September or October, but their offsets in August. The ranunculuses and anemones not to be planted till February. The feed to be sown in February, in boxes.

## VIII. BULBOUS-ROOTED FLOWERS.

- |              |                     |
|--------------|---------------------|
| 1. Amaryllis | 5. Daffodil, sea    |
| 2. Colchicum | 6. Lily, Belladonna |
| 3. Crocus    | 7. — Guernsey       |
| 4. Cyclamen  | 8. Saffron          |

These flower in autumn. They require to be planted in August, and to be taken up in April or May, as soon as their leaves are decayed; but their offsets in July.

## IX. DECIDUOUS FLOWERING SHRUBS and ORNAMENTAL TREES.

To be planted in March, April, September, and October.

- |                           |                                |
|---------------------------|--------------------------------|
| 1. Acacia, rose-flowering | 9. Bigonia or Trumpet flower   |
| 2. Almond tree            | 10. Bladder fena               |
| Allspice                  | 11. Bramble                    |
| thæa                      | 12. Buckthorn                  |
| h, mountain               | 13. Caragana                   |
| ona, or papaw             | 14. Cassioberry bush           |
| ry tree                   | 15. Catalpa, or Trumpet flower |

## X. DECIDUOUS FOREST TREES.

To be planted from the middle of February the beginning of April, and from September to December.

- |              |                 |          |
|--------------|-----------------|----------|
| 1. Acacia    | 9. Elder        | 17. Ma   |
| 2. Alder     | 10. Elm         | 18. Nel  |
| 3. Ash       | 11. Hickery     | 19. Oak  |
| 4. Beech     | 12. Hornbeam    | 20. Plat |
| 5. Birch     | 13. Horse-chef- | 21. Pop  |
| 6. Chestnut  | 14. Larch [nut  | 22. Tul  |
| 7. Crab-tree | 15. Lime        | 23. Wa   |
| 8. Cypress   | 16. Magnolia    | 24. WI   |

## XI. EVERGREEN FLOWERING SHRUBS and ORNAMENTAL TREES.

To be planted in March, April, September, and October.

- |                                   |                   |
|-----------------------------------|-------------------|

| 13. Nut-tree   | 20. Vine      |
| 14. Peach      | 21. Walnut    |

The following method may be taken for *preserving*  
the blossoms of fruit-trees in spring. Procure  
rep-hurdles made of hazel or willow  
about 2 or 3 feet higher than the walls,  
just before the blossoms of the fruit-  
trees are to open, place these before the trees,  
and when in windy weather with stakes,  
the air being taller than the walls are high,  
the hurdles be set sloping about two feet from the  
end of the walls, which will keep them steady.  
When the fruit is set, and entirely out of danger,  
the hurdles may be taken quite away, and by keeping in a dry  
place they will last many years, and will be al-  
most as good as new for lighting  
the trees unfit for any other use.

An experiment that was made, the hurdles  
were laid before the trees in December; they  
yielded a crop of peas, and both seemed to  
be benefited, particularly the peas. Poi-  
sons might also thus be defended in spring,  
the hurdles being forwarder; at least it is worth trying  
if the walls are not too high.

### XIV. HARDY GREENHOUSE PLANTS.

To be planted against a south wall, in the open  
ground, the roots covered with tan or long litter.  
These will not be killed except in very severe frosts,  
and then they generally shoot up afresh from their  
roots. By this method, many curious plants,  
formerly only kept in greenhouses, will now orna-  
ment the walls, where they will appear in great-  
er vigour and beauty, and many may produce  
both flowers and fruit, which they will not do  
when confined in pots in a greenhouse.

ENSTONE, Lord. See GARDEN, No 1.  
ENSTONE, or } a small town of Scotland,  
ENSTOWN, } on the N. coast of Banff,  
about 6 miles E. of Banff; containing 10  
fishing boats, and 300 souls, in 1790.

INIA, or GARDENIA, a genus of the  
2d order, belonging to the pentandria  
plants and in the natural method ranking  
30th order; *Contort.* The lobes of the  
corolla bent obliquely to the right.

RDINER, Col. James, a brave and pi-  
ous officer in the army, the son of Capt. Patrick  
of the family of Torwood-Head, by  
his second wife Hodge of Gladmuir. His father had  
been in the army under K. William III and Q.  
Anne, and died in Germany, after the battle of  
Blenheim.

His maternal uncle, Col. Hodge, was  
killed in the battle of Steenkirk, in 1692; and  
his brother, Robert Gardiner, at the siege  
of Namur, in 1695. Our hero was born at Cur-

## G A R

riden, Jan. 10th, 1688. He was educated at Lin-  
lithgow, and made a very considerable progress  
in the languages; but having a kind of hereditary  
attachment to the military life, he served very ear-  
ly as a cadet; and at 14 years of age, bore an en-  
sign's commission in a Scots regiment in the Dutch  
service, wherein he continued till 1702; when he  
received a similar commission in a British regiment  
from Q. Anne, which he bore in the famous bat-  
tle of Ramillies. In this memorable action, being  
sent on a desperate service, with a party of what  
is called the FORLORN HOPE, he very narrowly  
escaped with his life. While calling to his men,  
a musket ball entered his mouth, and without  
touching his tongue or his teeth, went through  
his neck, and came out about 1½ inch on the left  
side of the vertebræ. Not feeling the pain at first,  
he began to suspect he had swallowed the ball, till  
he fell with loss of blood. After this he passed  
two nights and all next day in the open air, in ex-  
treme

could we and had his wound dressed by an ignorant barber-surgeon; in spite of which he recovered. In 1706, he was raised to a lieutenantcy, and soon after was made a cornet in Lord Stair's reg. of Scots Greys; and in 1715, a capt. lieut. of dragoons. When the E. of Stair went ambassador to France, he appointed him his master of horse. In 1715, he was promoted to a captaincy, and in 1717 to a majority. In 1724, he was made major of an older regiment; in 1730, he was advanced to the rank of lieut. colonel, and in 1743, to that of colonel of a regiment of dragoons; at the head of which he fell, fighting bravely for his country, at the battle of Preston-pans, on the 21st Sept. 1745; in the 58th year of his age. In his person he was tall, graceful, strong built, and well proportioned. And being endowed with a strong constitution, he in his younger years plunged so deep in every fashionable vice, that his companions stiled him the *happy rake*. But in this vortex of vice and dissipation, he was suddenly arrested in a manner almost, if not entirely *miraculous*. Our limits permit us not to quote the full account of this *phenomenon* given by Dr Doddridge, in his work entitled *Remarkable passages in the Life of Col. Gardiner*; but the substance of it is as follows: In July 1719, Major Gardiner, having spent the sabbath evening with some gay company till 11, and having an assignation with a married woman at 12, in order "to kill the tedious hour," took up a book, left by his mother or aunt in his chamber, entitled the *Christian Soldier*; wherein he expected to find some amusement from the author's spiritualizing the terms of his profession. But while reading it carelessly, he was surpris'd by a sudden and extraordinary blaze of light; and upon looking up, beheld to his astonishment a visible representation of our Saviour on the cross, suspended in the air, and surrounded with glory; while at the same time he thought he heard a voice, saying, "Oh sinner, did I suffer this for thee, and are these thy returns?" Struck with this amazing phenomenon, he sunk down in his arm chair, and continued for some time insensible; from which circumstance Dr Doddridge often suggested to him, that he was perhaps all the time asleep, and dreaming; but he himself considered it as not a dream, but a real waking vision. Be that as it may, the consequences were as salutary, as if an angel had been sent express from heaven to convert him; and from that time to his death he became as eminently distinguished for piety as he had formerly been for profanity. In July 1726, he married Lady Frances Erskine, daughter of the E. of Buchan, by whom he had 13 children. From the numerous anecdotes recorded of this great and good man by Dr Doddridge, we shall only add one more, which may afford an useful example to others in an age wherein duelling is so frequent. He had been so much addicted to this fashionable folly in his younger years, that he had fought 3 duels, before he was quite a man; but being challenged to fight a 4th after his conversion, he made this calm reply;—"I fear *sinning*, though you know I do not fear *fighting*." Dr Doddridge has summed up his character in few words, in the

quotation from Virgil prefixed as a motto to his work:

— *Justior alter*

*Nec pietate fuit, nec bello major &*

(2.) GARDINER, Mrs Richmond, d. Col. Gardiner, and wife of Mr Laurence, a writer in Edinburgh, was authoress of several entitled *Anna and Edgar*; and of many other satirical pieces, inserted in the Magazine and other periodical works. She died at Edinburgh.

(3) GARDINER, Stephen, Bp. of Worcester and chancellor of England was born at Edmonds, in 1483. He was natural son of Richard Woodville, the brother of Q. Elizabeth I. and was educated at Cambridge. He signed the divorce of Henry VIII. from the queen of Spain; and abjured the pope's supremacy. He wrote *De vera et falsa obedientia*, in which he speaks of the king: yet in Edward VI's reign he opposed the reformation, and was imprisoned; but was released by Q. Mary. He drew up the articles of impeachment between her and Philip II. of Spain. He was silent against the reformers, but on his death he often repeated these words, *Erravi cum Petro, non flevi cum Petro*; "I have sinned, but I have not repented like Peter."

1555.

GARDINGEN, a town of Denmark, in the duchy of Sleswick; 28 miles WSW. of Flensburgh.

GARDIOLE, a town of France, in the dept. of Tarn, 18 miles SE. of Lavaur.

GARDNER, a town of Massachusetts, in Worcester county, 60 miles NW. of Boston.

(1.) GARDON, a river of France, in the dept. of the Lozere, crosses that of the Rhone 4 miles N. of Nimes.

(2.) GARDON OF ALAIS, a river of France, which rises in the dept. of the Gard, and runs into the above river N<sup>o</sup> 1.

GARDONNE, a town of the Cisalpine Republic, in the dept. of Benaco, and ci-devant of Verona, containing 1300 citizens, and on an extensive trade, in guns, &c.

GARDOUCH, a town of France, in the dept. of the Upper Garonne, 15 miles SE. of Toulouse.

GARDSBY, a town of Sweden in the island of Smaland, 28 miles N. of Wexio.

\* GARE. *n. f.* Coarse wool grown in the legs of sheep. *Dist.*

GARED, a town of Africa, in Morocco.

GARENCIERES, a town of France, in the dept. of Seine and Oise, 4 m. NW. of Paris.

GARENNE, a town of France, in the dept. of Paris, 6 miles ENE. of Paris.

GAREOULT, a town of France, in the dept. of Var, 5 miles S. of Brignol.

GARET, a town of Barbary, in Fez.

GARFETE, a town of Portugal, in the province of Beira.

GARGANO, a town of Naples, in the province of Terra di Lavoro, 7 miles N. of Mount St Angelo.

GARGANVILLARD, a town of France, in the dept. of Landes, 7 miles NW. of Riviers.

GARGARA, a town of Asiatic Turkey, in the prov. of Natolia; 20 miles W. of Adria.

(1.) \* GARGARISM. *n. f.* [*γάργαρα*, *garijme*, French.] A liquid form of uric acid, which washes the mouth with. *Quincy*.—*Apoph.*

draw the rheum down by the patient's Nat. Eff.

**GARGARISMS** are used when the mouth is inflamed, or ulcerated. A small quantity is taken into the mouth, and moved about, and then spit out; or if the patient cannot do this, the liquor may be injected into the throat. When gargles are required, they should be more frequently repeated than is common practice.

**GARGARISE**. *v. a.* [*γάργαρα*; *gargara*.] To wash the mouth with medicinal liquor. —Vinegar, put to the nostrils, or gargarism, eases the hiccough; for that it is said to inhibit the motion of the spirit. *12. Hist.*—This being relaxed, may make the larynx; as when we *gargarise*. *Elements of Speech.*

**GARGET**. *n. f.* A distemper in cattle.—It appears in the head, maw, or in the teats. *Mort. Husb.*

**GARGET**, consists in a swelling of the throat, and the neighbouring parts; to prevent the return of this in the spring is recommended.

**GARLIC**, a distemper in geese, which by stoppage of the head frequently proves mortal. Three cloves of garlic, beaten in a mortar with butter, made into little balls, and given fast, are the ordinary means of cure.

**GARLESSE**, a town of France, in the department of Argenton, 5 miles SE. of Argenton.

**GARGLE**. *n. f.* [from the verb.] A liquor with which the throat is washed.—His throat was washed with one of the gargles set down in the article of cure. *Wifeman.*

**GARGLE**. *v. a.* [*gargouiller*, French; *gurgeln*, Germ. the throat.] 1. To gargle the throat with some liquor not suffered to descend.—Gargle twice or thrice with decoction of peroxycrate. *Harvey*.—The excision made, the patient will soon be stopt by gargling with decoction of peroxycrate. *Wifeman's Surgery*.

2. To comb, and then they order every hair to be washed with the gargle well their throats. *Dryd. Pers.* 3. To play in the throat. An improvement of the former.

4. To sing. —The which only warble long, and sing in their throats a song. *Waller*. —I am arm'd you were, you ceas'd a while to doat sense gargl'd in an eunuch's throat. *Fenton*.

**GARGLE**. *n. f.* An exudation of nervous matter, or the like, which indurates and immoveable tumour. *Quincy*.

**GARGOL**, or } a quadra, or district, of the region of Benaco, } the Cisalpine republic, in the ci-devant Brescian, comprising 1 town, (N<sup>o</sup> 2.) 5 parishes and several villages.

**GARGOL**, a town in the above district, situated on lake Garda, containing 3,400 inhabitants in 1797. It is 21 miles NE of Brescia.

**GARGOL**. *n. f.* A distemper in hogs.—The disease is called *gargol* in hogs, hanging down of the eyes, staggering, and loss of appetite. *Portiner*.

**GARGUNNOCK**, or } a parish of Scotland, } land, in Stirlingshire, } bank of the Forth, 6 miles long from N. to S. and 3½ broad.

**PART I.**

The surface is partly hilly and 3000 acres are moor lands. The soil of the rest is partly light and sandy, partly rich loam and clay. Husbandry is much improved by liming, inclosing, &c. but the roads are still bad, and miltures are not entirely abolished. Grounds formerly over-run with thistles and furze, now produce 10 bolls per acre, of wheat, barley, or oats. Peas, beans, hay, and potatoes, are also cultivated. The population in 1793, stated by the rev. Mr James Robertson, in his report to Sir J. Sinclair, was 830, and had decreased 126, since 1755.

(2.) **GARGUNNOCK**, a village in the above parish, containing about 90 houses and 400 souls, in 1793. Each house has a small garden.

(3.) **GARGUNNOCK**, **PEEL OF**, an ancient fort in the above parish, which was taken by Sir W. Wallace by stratagem from the English; but of which few relics now remain, though its site is still pointed out.

**GARIA**, a bay on the S. coast of Newfoundland, 22 miles E. of Cape Ray.

**GARIDELLA**, in botany, *Fennel flower of Crete*, a genus of the trigynia order, belonging to the dodecandria class of plants; and in the natural method ranking under the 26th order, *Labialis-filique*. The calyx is pentaphyllous, with leaves resembling flower-petals; there are five bilabiate and bifid nectaria; the capsules are polyispermous, and adhering together.

**GARIEVITZA**, or Mount Claudius, a mountain of Sclavonia, 16 miles N. of Krailiovelika.

(1.) **GARIGLIANO**, a river of Naples, which runs into the Mediterranean, 8 miles E. of Gaeta.

(2.) **GARIGLIANO**, one of the 11 departments, into which the ci-devant Neapolitan republic was divided in 1798-9.

**GARIOCH**, **CHAPEL OF**, a parish of Aberdeenshire, anciently called **LOGIE-DURNO**, seated on the N. side of the Don; about 8 miles long from N. to S. and 7 broad. The climate is dry and healthy, the surface hilly; and the soil various. Oats and bear are the chief produce. There are considerable plantations of trees, which thrive well. The population in 1793, stated by the rev. Mr Shand in his report to Sir J. Sinclair, was 986, and had decreased 365, since 1755. The number of sheep was 1550, horses 209, and black cattle 859.

**GARITENA**, a town of European Turkey in the Morea, 32 miles W. of Argos.

**GARIVAN**, a town of Turkey in Bulgaria, near the Danube, 22 miles SW. of Driftra.

**GARIZIM**. See **GERIZIM**.

(1.) \* **GARLAND**. *n. f.* [*garlande*, *guirland*, Fr.] 1. A wreath of branches or flowers.—

Strephon, with leavy twigs of laurel-woo,  
A garland made, on temples for to wear;]

For he then chosen was the dignity  
Of village-lord that Whitsuntide to bear. *Sidu.*

A reeling world will never stand upright,  
'Till Richard wear the garland of the realm.

—How! wear the garland! do'st thou mean  
the crown?

—Ay, my good lord. *Shak. Richard III.*

Then party-colour'd flow'rs of white and red  
She wove, to make a garland for her head. *n.*

*Dryden's Fables.*  
Vanquish

Vanquish again; though she be gone,  
Whose *garland* crown'd the victor's hair,  
And reign; though she has left the throne,  
Who made thy glory worthy thy care. *Prior*.  
Her gods and godlike heroes rise to view.

And all her faded *garlands* bloom anew. *Pope*.  
2. The top; the principal; the thing most prized.  
With every minute you do change a mind,  
And call him noble, that was now your hate,  
Him vile, that was your *garland*. *Shak*.

(2.) GARLAND is derived by Hicks from *gardel banda*, which in the northern languages signify a *nosegay artfully wrought with the hand*. The word (*9* *1. def. 1.*) denotes ornaments of flowers, fruits, and leaves, intermixed; anciently much used at the gates of temples, where feasts and solemn rejoicings were held; or at any other place where marks of public joy or gaiety were required, as at triumphal arches, tournaments, &c.

(3.) GARLAND is also used for a chaplet made of feathers, or sometimes of precious stones, worn on the head in the manner of a crown.

(1.) GARLIC, in botany. See ALLIUM.

(2.) \* GARLICK, *n. f.* [*gar*, Saxon, a lance; and *lick*, the leek that shoots up in blades. *Skinner*. *Allium*, Latin.] It has a bulbous root, consisting of many small tubercles included in its coats: the leaves are plain: the flowers consist of six leaves, formed into a corymbus on the top of the stalk; and are succeeded by subrotund fruit, divided into three cells, which contain roundish seeds. *Miller*.—*Garlick* is of an extremely strong smell, and of an acrid and pungent taste. It is extremely active, as may be proved by applying plasters of *garlick* to the feet, which will give a strong smell to the breath. *Hill*.—*Garlick* has, of all our plants, the greatest strength, affords most nourishment, and supplies most spirits to those who eat little flesh. *Temple*.—

'Tis mortal sin an onion to devour;  
Each clove of *garlick* is a sacred pow'r;  
Religious nations sure, and blest abodes,  
Where ev'ry orchard is o'er-run with gods. *Tate*.

(3.) \* GARLICK PEAR-TREE, *n. f.* This tree is pretty common in Jamaica, and several other places of America, where it usually rises to the height of 30 or 40 feet, and spreads into many branches. When the flowers fall off the pointal, it becomes a round fruit, which, when ripe, has a rough brownish rind, and a mealy sweet pulp, but a strong scent of *garlick*. *Miller*.

(4.) GARLICK PEAR TREE. See CRATEVA.

(5.) \* GARLICK WILD, *n. f.* A plant.

\* GARLICKEATER, *n. f.* [*garlick* and *eat*.]  
A mean fellow.—

You've made good work,  
You and your apron men, that stood so much  
Upon the voice of occupation, and  
The breath of *garlickeaters*. *Shak. Coriolanus*.  
GARLIESTOWN, a village of Scotland, in  
Wigtonshire, in the form of a crescent; contain-  
ing 450 inhabitants in 1790.

GARLIN, a town of France, in the dept. of  
Pyrenees, 16 miles N. of Pau.

NE, a village in Cornwall.

MENT, *n. f.* [*guariment*, old Fr.]  
which the body is covered; cloaths;

Hence, rotten thing, or I shall shake  
Out of thy *garments*. *Shak*.

—Our leaf, once fallen, springeth no  
ther doth the sun or summer adorn us:  
the *garments* of new leaves and flowers

Fairest thing that shines below,  
Why in this robe dost thou appear?  
Would'st thou a while more perfect  
Thou must at all no *garment* wear.

Three worthy persons from his bed  
And dy'd his *garment* with their feat

—The peacock, in all his pride, does  
half the colours that appear in the *gar*  
Brittish lady, when she is dressed. *Speck*  
him that sues for the coat, i. e. the *shir*  
*garment*, take the cloak also, is a proverb  
too; for in the truth of the letter, a  
likely matter of a law-suit, and signifies  
testing sufferance of such small losses. *A*

(2.) GARMENT. See DRESS and HA  
GARN, a town of Sweden, 12 m. N  
GARNACHE, a town of France, in  
of the Vendee, 3 miles NNE. of Chall  
GARNARD, a town in the Isle of V

(1.) \* GARNER, *n. f.* [*grenier*, Fr  
place in which threshed grain is stored]

Earth's increase, and foison plenty  
Barns and *garriers* never empty. *Sh*

(1.) \* GARNET, *n. f.* [*garnato*, Ital,  
low Latin; from its resemblance in col  
grain of the pomegranate.] The *garn*  
of a middle degree of hardness, betwe  
phire and the common crystal. It is fo  
rious sizes. Its surfaces are not so smo  
lite as those of a ruby, and its colour is  
strong red, with a plain admixture of b  
degree of colour is very different, and  
wants much of the brightness of the ru  
The *garnet* seems to be a species of the  
of the ancients: the Bohemian is red, w  
cast of a flame colour; and the Syrian is  
a slight cast of purple. *Woodward's Me*

(2.) GARNET, in natural history.  
NATE. When pure and free from blem  
little inferior in appearance to the orie  
Among lapidaries and jewellers, genui  
are known by different names accordi  
different degrees of colour. 1. The gar  
ly so called, is the finest and most valu  
being of a very deep blood-red with a  
mixture of blue. 2. The rock ruby; a  
improperly given to the garnet when it  
ry strong but not deep red, and has a

blue: this is a very beautiful gem. 3. The or scira garnet; that of a yet brighter proaching to the colour of native cinnabar, faint blue tinge. 4. The almadine, a garnet a little paler than the rock ruby.

**GARNET COLOUR.** See GLASS.  
**GARNETS, COUNTERFEIT,** are made as follows:—Take prepared crystal, 2 oz. red lead, 6 grains manganese, 16 gr. zaffre, 3 gr.: Mix all well, and into a crucible. cover it well with lute, and in a potter's kiln for 24 hours. Or take 2 oz. minium, 5½ oz. manganese, 15 gr. red, 4 gr. Mix and bake them as above.  
**GARNISH.** *n. f.* [from the verb.] 1. Ornament; decoration; embellishment.—

So are you, sweet,  
 in the lovely garnish of a boy. *Sbat.*  
 Matter and figure they produce;  
 garnish this, and that for use;  
 seek to feed and please their guests. *Prior.*  
 garnishes strewed round a dish. 3. [In gaols.]

A cant term. 4. *Penitencula carceraria;* acknowledgment in money when first a prisoner is taken into a gaol. *Ains.*  
**GARNISH.** *v. a.* [garnir, Fr.] 1. To deck with ornamental appendages.—There were rich garnished their proud heights with robes. *Sidney*—

With within with flowers was garnished,  
 when mild Zephyrus amongst them blew,  
 breathe out bounteous smells, and painted  
 colours shew. *Spenser.*

With taper light  
 the beautiful eye of heaven to garnish,  
 useful and ridiculous excess. *King John.*  
 He was a terrestrial garden, garnished with  
 lighting both the eye and taste. *Kaleigb.*  
 The streets were garnished with the citizens,  
 in their liveries. *Bacon's Henry VII.* 2.  
 garnish a dish with something laid round it.  
 What expence and art, how richly drest!  
 'd with 'sparagus, himself a feast!

*Dryden's Juvenal.*  
 To man lards salt pork with orange-peel,  
 garnishes his lamb with spitcock'd eel.

*King's Cookery.*  
 garnish with fetters. A cant term.

**GARNISHMENT.** *n. f.* [from garnish.] Ornament; embellishment.—The church of Sancta Maria in Padoua is a sound piece of good art, the materials being ordinary stone, without ornament of sculpture, ravish the beholders.

**GARNITURE.** *n. f.* [from garnish.] Furniture; ornament.—They conclude, if they fall garniture of their knees, that they are in furniture of their heads. *Gov. of T.*—  
 sense, which pleas'd your fires an age  
 o,

without the garniture of show. *Granv.*  
 she has poured out her charms upon the  
 part of our species, so they are very assiduous  
 following upon themselves the finest garniture.  
*Speator.*

GAR, a river of the Cisalpine republic, in the  
 of Lower Po. It is one of the  
 of the Po, and falls into the Adriatic  
 Port of Garo.

(1.) **GARONNE,** a fine river in the S. of France, which rises in the Pyrenees, and taking a NW. direction, waters Toulouse and Bourdeaux, below which it is joined by the Dordogne, and thence to its entrance into the bay of Biscay is called the GIRONDE. It has a navigable communication with the Mediterranean by its junction with the cidevant Royal Canal. See CANAL, § 6.

(2.) **GARONNE, UPPER,** a department of France, bounded on the N. by that of Lot; on the NE. by that of Tarn; on the SE. by those of Aude and Arriege; on the S. by Spain, and on the W. by the dept. of the Upper Pyrenees and Gers. It contains part of the cidevant province of LANGUEDOC. The Garonne runs through it. Toulouse is the capital.

\* **GAROUS.** *adj.* [from *garum.*] Resembling pickle made of fish.—In a civet cat an offensive odour proceeds, partly from its food, that being especially fish; whereof this humour may be a garous excretion, and olidous separation. *Brown.*

**GARRACHICA,** a sea port town of the isle of Teneriffe. It was destroyed by an earthquake, and overwhelmed by an eruption of the volcano on the Peak, in 1704; so that houses are now built where ships then lay at anchor.

**GARRAF,** a town of Spain in Catalonia, on the coast, 10 miles SW. of Barcelona.

(1.) \* **GARRAN.** *n. f.* [Erse.] It imports the same as gelding. The word is still retained in Scotland.] A small horse; a hobby. A Highland horse, which, when brought into the North of England, takes the name of *galloway*.—When he comes forth, he will make their cows and garrans to walk, if he doth no other harm to their persons. *Spenser.*—Every man would be forced to provide winter-fodder for his team, whereas common garrans shift upon grass the year round; and this would force men to the enclosing of grounds, so that the race of garrans would decrease. *Temple.*

(2.) **GARRAN,** in geography, a river of England, which runs into the Wye. See GARNER, N° 2.

**GARRESSIO,** a town of Italy, in Piedmont; 9 miles SW. of Ceva.

(1.) \* **GARRET.** *n. f.* [garite, the tower of a citadel, Fr.] 1. A room on the highest floor of the house.—

The mob, commission'd by the government,  
 Are seldom to an empty garret sent. *Dryden.*  
 —John Bull skipped from room to room; ran up stairs and down stairs, from the kitchen to the garret. *Arbutnot.*

On earth the god of wealth was made  
 Sole patron of the building trade;  
 Leaving the arts the spacious air,  
 With licence to build castles there:  
 And 'tis conceiv'd their old pretence,  
 To lodge in garrets, comes from thence. *Swift,*

2. Rotten wood. Not in use.—The colour of the shining part of rotten wood, by day-light, is in some pieces white, and in some pieces inclining to red, which they call the white and red garret. *Bacon.*

(2.) **GARRET,** or } an island in the Pacific ocean,  
**GARRET DENNIS.** } about 42 miles in  
 circumference, N. of New Ireland. The natives

armed with lances, bows and  
 L 5. E. Lat. 2. 30. S.  
 ARRIVE n. f. [from *garret*.] An in-  
 of a garret.  
 TETSTOWN, a town of Meath, Ireland.  
 LOCK, David, Esq; the great Roscius of  
 country, who for near 40 years shone  
 luminary in the dramatic hemisphere,  
 at the Angel Inn at Hereford, in 1716.  
 His father, Capt. Peter Garrick, was a French refuge-  
 gee, and had a troop of horse which were then  
 quartered in that city. This rank he maintained  
 in the army for several years, and was a major at  
 his death. Mr Garrick received the first rudiments  
 of his education at Litchfield; which he  
 afterwards completed at Rochester, under the cele-  
 brated Mr Colson, since professor at Cambridge.  
 Dr Johnson and he were fellow students at the  
 same school; and went up to London to push  
 themselves into active life, in the same coach. On  
 the 9th March 1736, he was entered at Lincoln's  
 Inn. He soon quitted the law and followed for  
 some time the business of a wine merchant; but  
 at last he gave way to the irresistible bias of his  
 mind, and joined a travelling company of comedians  
 at Ipswich, where he went by the name of  
*Lyddle*. Having in this poor school of Apollo got  
 some acquaintance with the theatric art, he burst  
 at once upon the world, in 1740-1, in all the lustre  
 of perfection, at the little theatre in Goodman's  
 Fields, then under the direction of Henry Giffard.  
 The character he first performed was Richard III.  
 in which, like the sun bursting from behind a  
 cloud, he displayed in the earliest dawn a some-  
 what more than meridian brightness. His unpa-  
 ralleled excellence quite astonished the public. To  
 see a young man, in his 24th year, and a mere  
 novice to the stage, reaching at one step to that  
 height of perfection, which the then capital perform-  
 ers of the English stage, had not been able to ap-  
 proach half way, after an experience of many  
 years, was a phenomenon that could not but  
 become the object of universal speculation and ad-  
 miration. The theatres at the west end of the  
 town were deserted; Goodman's Fields, from  
 being the rendezvous of citizens and their wives,  
 became the resort of all ranks of men; and Mr  
 Garrick continued to act till the close of the sea-  
 son. Being offered very advantageous terms for  
 performing in Dublin during part of the summer  
 1741, he went over, and found the same just ho-  
 mage paid to his merit, which he had received  
 from his own countrymen. In the following win-  
 ter he engaged with Fleetwood then manager of  
 Drury Lane: in which he continued till the year  
 1745, when he again went over to Ireland, and  
 continued there the whole season, joint manager  
 with Mr Sheridan of the theatre royal in Smock  
 Alley. Thence he returned to England, and en-  
 gaged for the season of 1746 with Mr Rich at Co-  
 vent Garden. This was his last performance as  
 an hired actor; for in the close of that season Mr  
 Fleetwood's patent for the management of the  
 theatre in Drury Lane being expired, Mr Gar-  
 rick and Mr Laey purchased the property of it,  
 and in winter  
 and it with the greatest part of Mr Fleet-  
 y, and with the addition of Mr

Barry, Mrs Pitchard, and Mrs Cibber, in  
 vent Garden. To trace Mr Garrick thro  
 various occurrences of his life, would sw  
 count to many pages. Suffice it to say,  
 nued in the full enjoyment of fame to t  
 of his retirement. His universality of e  
 never once admitted of a competitor.  
 comedy, and farce, the lover and the  
 jealous husband who suspects his wife  
 cause, and the thoughtless lively rake w  
 it without design, were all alike his ow  
 and ridicule, doubt and despair, trau  
 tenderness, compassion and contempt;  
 lousy, fear, fury, and simplicity; all to  
 possession of his features, while each of  
 peared to be the sole possessor of his  
 the several characters of Lear and Ham  
 ard, Dorilas, Romeo, and Lufignam  
 Ranger, Bayes, Druggier, Kitely, Brut  
 nedict; we saw the muscular conforma  
 our ideas attached to them all. In his  
 ture, from whom alone this great perf  
 rowed all his lessons, is inexhaustible,  
 darling son, and truest representative,  
 limited scope for the diversity of his g  
 manner of imitating her various pr  
 There is one part of his theatrical con  
 will ever be recorded to Mr Garrick  
 while virtue, morality, and purity of p  
 ners, are held in esteem: and that is  
 which he showed to banish from the sta  
 plays that carry with them an immora  
 and to prune from those which do n  
 whole, tend to promote the interests o  
 scenes of licentiousness, as a redundan  
 and liveliness of imagination had induc  
 our comic writers to indulge in, and  
 too prevalent spirit of gallantry and ir  
 given sanction to. The purity of t  
 stage was beyond a doubt much mor  
 blished during the administration of th  
 minister, that it had ever been during  
 managements. He carried his moral,  
 pious principles with him into the te  
 ment of the theatre itself, and rescued  
 from that obloquy which had hither  
 the profession. Of a class of men  
 accounted blackguards, unworthy the  
 of the virtuous, he made gentlemen, t  
 with society, and introduced them to t  
 of social life. The theatre was no lon  
 ed the nursery of vice; and the mor  
 ous, and even the religious part of n  
 not hesitate to partake of the ration  
 ment of a play, when they could pas  
 evening undisgusted with the licenti  
 uncorrupted by the immorality, of th  
 Notwithstanding the numberless and  
 vocations attendant on his profession  
 and his station as a manager; yet hi  
 genius frequently burst forth in variou  
 ductions in the dramatic and poetic  
 merit of which leads us to regret his  
 to compose more extensive and impo  
 Though his merit as an author is not  
 magnitude, yet his great knowledge  
 manners, of stage effect, and his ha  
 lively and striking satire, made him;

d his prologues and epilogues in parti-  
 ch are almost innumerable, possess such  
 perfection, both in the conception and  
 as to stand unequalled. His Ode on  
 of Mr Pelham run through 4 editions  
 in six weeks. His Ode on Shakespeare  
 by piece; and when delivered by him-  
 self most capital exhibition. His altera-  
 tions of Shakespeare and other authors have  
 been successful, and at times exploded. The  
 scene of the grave-digger's scene from Hamlet  
 to be forgiven by the frequenters of the  
 Drury Lane. Though necessary to the  
 of the scene, they are unwilling to lose  
 ering wit and humour; and it must be  
 at exuberances of that kind, though  
 the uniformity, yet increase the luxuri-  
 e piece. Among the plays he altered  
 following: Every man in his Humour,  
 Jonson; Romeo and Juliet, Winter's  
 crime and Petruchio, Cymbeline, Ham-  
 om Shakespeare; Gamesters, a come-  
 Shirley; and Isabella, from Southerne.  
 original productions, The Farmer's  
 and Linco's Travels, interludes; The  
 Lettice, Lying Valet, Misa in her Teens,  
 set, Irish Widow, and other comedies  
 ; The Enchanter, a musical entertain-  
 liput, the Christmas Tale, and many o-  
 have thus traced him to the period of  
 neot in spring 1776; when, full of  
 a splendid fortune, and advancing in  
 ought to enjoy in the vale of life that  
 nd honourable ease, which he had so  
 id by the activity and merits of his dra-  
 ma. But short was the period allotted to  
 enjoyment: for he died on the 20th  
 leaving not a single rival in excellence  
 to compensate for his loss.

NISH POINT, a cape of Ireland, on  
 east of Cork, 1½ m. N. of Codd's Head.  
 S, a town of France, in the dep. of  
 Gennes, 20 miles SE. of Bayonne.

GARRISON. *n. f.* [*garrison*, Fr.] 1.  
 aced in a fortified town or castle to de-

low oft he said to me,  
 t no souldier fit for Cupid's *garrison*.

*Sidney*,  
 1 place stored with soldiers.—  
 n the old Roman wall so ill confin'd,  
 ew chain of *garrisons* you bind. *Waller*.  
 e of being placed in a fortification for

Some of them that are laid in *garrisons*  
 no great hurt to the enemies. *Spenser*.  
 RRISON, (§ 1. def. 2.) and WINTER  
 are sometimes used indifferently for  
 ing; when the troops are placed in it  
 subsistence during the winter, and  
 eeping the regular guard. Du Cange  
 word from the corrupt Latin *garniso*,  
 latter writers use to signify all manner  
 s, arms, victuals, &c. necessary for the  
 a place, and sustaining of a siege.

ARRISON, a town of Ireland, in Fermans  
 iles SE. of Ballyshannon. Lon. 7. 43.  
 4. 25. N.

\* To GARRISON. *v. a.* [from the noun.] To  
 secure by fortresses.—

Others these forces join,  
 Which *garrison* the conquests near the Rhine.  
*Dryden's Juv.*

GARRISTOWN, a town of Ireland; in the  
 county of Dublin, and province of Leinster.

GARROWS, a county of Asia in India, E. of  
 Bengal, S. of the Burrampooter, and W. of Af-  
 sam.

\* GARRULITY. *n. f.* [*garrulitas*, Latin.] 1.  
 Loquacity; incontinence of tongue; inability to  
 keep a secret.—

Let me here  
 Expiate, if possible, my crime,  
 Shameful *garrulity*. *Milton*.

2. The quality of talking too much; talkativeness.  
 —Some vices of speech must carefully be avoid-  
 ed: first of all, loquacity or *garrulity*. *Ray on the*  
*Creation*.

\* GARRULOUS. *adj.* [*garrulus*, Lat.] Prate-  
 tling; talkative.—

Old age look out,  
 And *garrulous* recounts the feats of youth.  
*Thomson*.

GARSCH, a town of Austria, 4 miles SSE. of  
 Horn.

GARSTANG, a populous town of Lancash.  
 22½ miles from London, in the post road between  
 Preston and Lancaster. It is near a mile in length,  
 but built very irregularly. The church is a state-  
 ly Gothic structure. It is seated on the Wyre,  
 which, by the late inland navigation, communi-  
 cates with the Mersey, Dee, Ribble, Ouse, Trent,  
 Darwent, Severn, Humber, Thames, Avon, &c.  
 which navigation, including its windings, extends  
 above 500 miles, in the counties of Lincoln, Not-  
 tingham, York, Westmoreland, Chester, Stafford,  
 Warwick, Leicester, Oxford, Worcester, &c.  
 Garstang is 10 miles S. of Lancaster, and 22½  
 NNW. of London: Lon. 2. 53. W. Lat. 55. 56. N.

GARSTON, the name of 4 English villages:  
 1. in Berks, near Hungerford: 2. in Hertfordsh.  
 3. in Lancashire: and 4. in Staffordshire, NE. of  
 Cheattle.

GARTACH, a town of Suabia, in the duchy  
 Wirttemberg, 4½ miles NNW. of Heilbronn.

GARTAU, a town of Lunenburg Zell, 12 m.  
 E. of Lucknow, and 48 ESE. of Lunenburg.

GARTEMPE, a river of France, which runs  
 into the Creuse, near Roche-Pofay, in the dep. of  
 Indre and Loire.

(1.) \* GARTER. *n. f.* [*gardus*, Welsh; *gar-  
 tier*, French; from *gar*, Welsh, the binding of  
 the knee.] 1. A string or ribband by which the  
 stocking is held upon the leg. Let their heads be  
 sleekly comb'd, their blue coats brush'd, and their  
*garters* of an indifferent knit. *Shak.*—When we  
 rest in our cloaths we loosen our *garters*, and o-  
 ther ligatures, to give the spirits free passage.  
*Ray.*—

Handsome *garters* at your knees. *Swift*.  
 There lay three *garters*, half a pair of gloves,  
 And all the trophies of his former loves. *Pope*.

2. The mark of the order of the garter, the high-  
 est order of English knighthood.—

Now by my george, my *garter*.  
 —The

—The george, profan'd, hath lost his only honour;

The garter, blemish'd, pawn'd his knightly virtue.

You owe your Ormond nothing but a son,  
To fill in future times his father's place,  
And wear the garter of his mother's race.

*Dryden.*

3. The principal king at arms.

(2.) GARTER, in heraldry, a moiety, or the half of a BEND.

(3.) GARTER, ORDER OF THE, a military order of knighthood, the most noble and ancient of any lay order in the world, instituted by Edward III. The knights companions are generally princes and peers; and the king of England is the sovereign of the order. The number of knights was originally 26; but six were added in 1786, on account of the increase of the royal family. They are a corporation, having a great and little seal, &c. Their officers are a prelate, chancellor, register, king at arms, and usher of the black rod. They have also a dean, with 12 canons, and petty canons, vergers, and 26 pensioners or poor knights. The prelate is the head. This office has always been vested in the bishop of Winchester. Next to the prelate is the chancellor; which office is vested in the bishop of Salisbury, who keeps the seals, &c. The next is the register, who by his oath is to enter upon the registry, the scrutinies, elections, penalties, and other acts of the order with all fidelity: The dean of Windsor is always register *ex officio*. The 4th officer is Garter and King at arms, being two distinct offices united in one person. (See § 5.) He is the principal officer within the college of arms, and chief of the heralds. See KING AT ARMS. All these officers, except the prelate, have fees and pensions. The college of the order is seated in the castle of Windsor, within the chapel of St George, and the charter-house, erected by the founder for that purpose. The habit and ensign of the order are a garter, mantle, cape, george, and collar. The three first were assigned the knights companions by the founder; and the george and collar by Henry VIII. The garter challenges pre-eminence over all the other parts of the dress, as from it the order is denominated. It is the first part of the habit presented to foreign princes and absent knights, who, as well as all other knights elect, are therewith first adorned; and it is of so great honour and grandeur, that by the bare investiture with this noble ensign, the knights are esteemed companions of the greatest military order in the world. It is worn on the left leg between the knee and calf, and is enamelled with this motto, HONI SOIT QUI MAL Y PENSE. (See § 4.) The mantle is the chief of these vestments made use of upon all solemn occasions. The colour of the mantle is by the statutes appointed to be blue. The length of its train only distinguishes the sovereign from the knights companions. To the collar of the mantle is fixed a pair of long strings, anciently woven with blue silk only, but now round, and made of Venice gold and silk, surmounted with blue silk only, but now of the robe; with knobs or buttons at the end. The left shoulder has from been adorned with a large garter,

with the device, HONI SOIT, &c.

is the cross of the order, which was be worn at all times by king Charles I. the star was introduced, being a sort of diadem with beams of silver. The collar is composed of pieces of gold in the form of garters, the ground enamelled blue, and set with gold. In 1551, Edward VI. made alterations in the ritual of this order: that it should be in Latin, the original whereof was in his own hand-writing. He thought that the order should no longer be called *of St George*, but the *order of the garter* instead of the *George*, hung at the collar substituted a cavalier, bearing a book or tablet of his sword, with the word, *protegi* the sword, and *verbum Dei* on the book buckle in the left hand, and the word *on*. When the knights do not wear it they are to have a silver star on the left they commonly bear the picture of the cross enamelled on gold, and beset with diamonds the end of a blue ribbon, crossing the left shoulder. They are not to appear without the garter, on penalty of 6s. the register. The manner of electing a companion into this most noble order ceremonies of investiture, are these: the sovereign designs to elect a companion the chancellor of the order draws the garter, which, passing both under the sign manual and signet of the order, the person by Garter principal king at arms, which is of blue velvet bordered with gold wire, having the letters of the motto the time of election, buckled upon it by two of the senior companions, who come from the sovereign, to whom it was presented upon a velvet cushion, by the king at arms, with the usual reverence, the chancellor reads the following admonition by the statutes: "To the honour and pre-eminence, and in memorial of the blessed St George, tie about thy leg, for thy part of this noble garter; wear it as the symbol of this most illustrious order, never to be so laid aside; that thereby thou mayest be ed to be courageous; and having undertaken just war, in which thou shalt be engaged, mayest stand firm, valiantly fight, and conquer." The princely garter being put on, and the word of its significance pronounced, the knight elect is brought before the sovereign, who puts about his neck, kneeling, a blue ribbon, whereunto is appendant a gold cross within the garter, the image of St George on horseback, with his sword drawn, and a dragon. In the mean time the chancellor reads the following admonition: "this ribbon about thy neck, adorned with the image of the blessed martyr and soldier of St George, by whose imitation thou mayest so overpass both prosperous and adverse adventures, that having stoutly vanquished thy enemies both of body and soul, thou mayest only receive the praise of this transfer but be crowned with the palm of eternity." Then the knight elected kisses the

banks his majesty for the great honour; rises up, and salutes all the company, who return their congratulations. In the institution of this order, there have been kings and all kings, besides numerous sovereigns, enrolled as companions.

**ARTER, ORIGIN OF THE ORDER OF THE GARTER,** is variously related by historians. The most probable account is, that the king of Salisbury happening at a ball to drop the ring, the king took it up and presented it to him with these words, "*Mais soit qui mal y pense!*" to him that evil thinks. This accident led to the order and the motto; it being the first time that love and war together. The original statutes however there is not the least allusion to such a circumstance, farther conveyed in the motto. Camden, Fern, and others, the order to have been instituted on the occasion of the victory obtained by Edward over the king at the battle of CRESSY. That prince, according to historians, ordered his garter to be displayed as a signal of battle; in commemoration of which he made a garter the principal ornament of his armor, erected in memory of this signal vic- toria a symbol of the indissoluble union of the king and his people.

And they account for the motto, that the king having laid claim to the kingdom of France, denounced shame and defiance upon him who should dare to think amiss of the just enterprise undertaken for recovering his lawful crown; and that the bravery of those knights whom he had elected into this order was such as would enable him to maintain the quarrel, and that *thought ill* of it. This interpretation, however, appears to be rather forced. A more ancient origin of this order is given in *Becket's*, lib. vi. quoted by Granger, in the 1st to his *Biographical History*: viz. that it was instituted by Richard I. at the siege of Acres, and that 26 knights, who firmly stood by their sovereign, were clothed in blue leather about their waists, and that it was revived and perfected in the reign of Edward III.

**ARTER PRINCIPAL KING AT ARMS.** The principal king at arms, are two distinct offices in one person: Garter's employment is to attend the service of the order of the garter; for which he is allowed a mantle and badge, a house or castle, and pensions both from the king and knights, besides fees. He also carries the sword and sceptre at every feast of St George, when the sovereign is present, and notifies the names of such as are new chosen; attends the marriages of their installations, and funerals; and is employed in placing their arms over their seats; and in presenting the garter to foreign kings and princes, and in the service it has been usual to join him in the coronation of a king with some peer, or other person of rank. Garter's oath relates only to services performed within the order, and is taken before the sovereign and knights. As king at arms, is taken before the earl

**ARTER. v. a.** [from the noun.] To bind or fetter.—He, being in love, could not see his horse. *Shak.*—A person was wound-

ed in the leg, below the gartering place. *Wife-man's Surgery.*

(1.) **GARTH**, Sir Samuel, an excellent English poet and physician, descended from a good family in Yorkshire. He studied at Cambridge where he took the degree of M. D. in 1691, and was admitted into the college of physicians at London in 1693. He zealously promoted the erecting of the dispensary for the relief of the sick poor. This work of charity having exposed him and many other philanthropic physicians to the resentment of others of the same faculty, he ridiculed them, with peculiar spirit and vivacity, in a poem called the *Dispensary*, in six cantos, highly esteemed. He was one of the most eminent members of the Kit-Kat Club. See **KIT-KAT**. Upon the accession of George I. he was knighted, and made physician to his majesty, and the army. Nor were these more than just rewards of his physical as well as political merits. He had gone through the office of censor of the college in 1702; and practised always with a strict regard to the honour of the faculty, never prostituting the dignity of his profession, from interested motives, to any even the most popular and wealthy apothecaries. He had a very extensive practice, but was very moderate in advancing his own fortune; his humanity inclining him more to use the great interest he had, for the encouragement of other men of letters. He lived with the great in that degree of independence which became a man possessed of superior genius. One of his last performances was his translation of the 14th book, and the story of Cippus in the 15th of Ovid's *Metamorphoses*. These, with an English version of the rest, were published in 1717; and he prefixed an excellent preface to the whole, wherein he not only points out the principal beauties of the poem, but shows its uses, and how it may be read to most advantage. He died in Jan. 1718—19; and his death caused a general concern; which was particularly testified by lord Lansdown, a brother poet, though of a different party, in some admirable verses written on the occasion.

(2.) **GARTH**, *n. s.* [as if *girtb*, from *gird*.] The bulk of the body measured by the girdle.

(3.) **GARTH** is used in some parts of England for a little back-yard or close. It is an ancient British word. *Gardd*, in that language, signifies *garden*, and is pronounced *gartb*. It is also used for a dam or wear, &c.

**GARTH-MAN**, in the old English statutes, one who catches fish by means of fish garths, or wears. See **GARTH**, N° 3. By statute 17. Ric. II. c. 9. no fisher, nor garth-man, shall use any nets or engines to destroy the fry of fish, &c. The word is supposed to be derived from the Scotch word *gart*, the preterite of the verb, *To GAR*, *i. e.* to force or compel; because fish are forced by the wear to pass into a lopp, where they are taken.

**GARTLY**, a parish of Scotland, in Banffshire, 12 miles long from E. to W. 6 broad, and of an irregular oval form. It is divided nearly in the centre, by the Bogie, and bounded on the E. and W. by heath-covered hills. The soil is fertile, and produces luxuriant crops of oats, bear, peas, potatoes, turnips and cabbages; husbandry being much improved. The population in 1793, stated

by

by the rev. Mr James Scott, in his report to Sir J. Sinclair, was 1800, and had increased 472, since 1755. The number of horses was 340; of sheep, 4,500, and of black cattle, 1,500. A man died in it, in 1788, aged 102.

**GARTMORN DAM**, an artificial lake in Clackmannanshire, formed about the beginning of the 18th century, for the use of the Alloa coal-works. Mr J. F. Erskine of Marr thus describes it: When full it covers 162 English acres. The head is faced with rough hewn stone, and measures 320 yards. It has a sluice, which regulates the quantity of water to be conveyed into a lade, which first drives a mill for chipping wood and dye stuffs; next a lint mill; then it is conveyed into pipes forcing it up to 2 engines, that draw up the water and the coals from the pits; after which it is collected into a smaller dam, and conveyed thence in a lade, to a set of mills in Alloa for grinding wheat, oats, malt, and barley; which are capable of grinding 400 bolls, or 250 quarters in a day. There are 2 large wheels, 19 feet diameter in the centre of the house, which drive the whole machinery, in both ends of the mills. From these mills, the water falls into a rivulet, that runs through Alloa, drives a snuff and fulling mill, and passing through Mr Erskine's pleasure grounds, comes near the harbour, where it is again confined by a strong dam of earth, a large sluice, and a long trough, both of stone; which gives it a prodigious velocity for clearing the harbour; so that this little water, originally a branch of the Black Devon, is made to serve the most important purposes, by driving 7 mills besides cleaning the harbour. *Stat. Acc. Vol. VIII.*

(1.) **GARTZ**, a town of Germany, in Prussian Pomerania, near the marche of Brandenburg. Lon. 14. 18. E. Lat. 53. 13. N.

(2.) **GARTZ**, a town of Pomerania, in the isle of Rugen, on the site of the ancient Carenz.

**GARUAGH**, a town of Ireland, in Derry.

**GARVAGHY**, a town of Ireland, in Down.

(1.) **GARV.ALD**, [Gael. from *gar*, rugged, and *vald*, a burn.] a parish of Scotland, in Haddingtonshire, united with that of **BARO**, in 1702. Agreeably to its Gaelic name, it is watered by a very rugged rivulet, which, when swelled by the rains, overflows its banks. The two parishes extend from E. to W. 8½ miles, and from N. to S. about 4½. The air is pure and healthy. The soil is partly light gravel, and partly deep rich clay. Wheat, barley, oats, pease, turnips, potatoes and clover, are the produce. Husbandry is highly improved. The farmers are uncommonly intelligent. The population of both parishes in 1793, stated by the rev. Mr Andrew Nisbet, in his report to Sir J. Sinclair, was 730, and had decreased 44, since 1755. The number of horses was 314; of sheep 6080; and of black cattle, 575. There are several antiquities in the parishes, particularly the ruins of White-castle, the ancient castle of Yester, and a large fortification on a rising of a circular form, 1500 feet in circum-

**VALD**, a village in the above parish, situated on the rivulet above described, which, swelled to such a pitch, that it

had almost swept the village totally away, and left 214 inhabitants in 1793.

**GARVAO**, two towns of Portugal. 1. on the S. side of the Tajo, 12 miles from Oporto. 2. six miles W. of Ourique.

**GARVELACH**, an island on the N. side of Argyllshire, 8 miles SE. of the isle of Mull.

**GARVILANS**, an island on the N. side of Ireland, in Donegal, 2 miles ESE. of the town of Dungannon.

**GARUMNA**, a navigable river of Gaul, rising from the Pyrenees, anciently called Aquitain on the N.; but, by a law of Augustus, divided in the middle: the N. of Burdegala, into the Aquitain. It is now called GARONNE. Mela observes, unless it is swelled by winter rains, or by the snow, it is for a great part shoaly and scarce navigable; but when by the meeting tide, whereby its water is pelled, it is somewhat fuller, and the river advances, it is broader, till at length it forms an extensive frith; not only in vessels, but swelling like a raging sea, extremely, especially if the direction of the wind be one way and that of the current another.

(1.) **GARVOCK**, [Gael. *i. e.* the top of] a hill of Scotland, in Kincardineshire, 10 miles S. of the Grampians, one mile high, and steep on the N. side, but having a gradual ascent of 4 miles on the S.

(2.) **GARVOCK**, a parish in Kincardineshire, partly seated on the above hill, (N. 30. E. 10. S.) long and 4 broad, containing 8006 E. of which above one 3d is arable. The soil is moist; the soil is deep and wet, on a level. The high grounds are covered with heath and furze. Oats, barley, turnips, potatoes, wheat, are the produce. The population in 1793, stated by the rev. Mr Alexander Thrope, in his report to Sir J. Sinclair, was 460, and had decreased 295, since 1755. A large fair for horses, &c. is held in August.

**GARWOLIN**, a town of Poland, in the province of Pomerania, 36 miles N. of Custrin, and 53 N. of Danzig.

**GARZ**, a town of Pomerania, 36 miles N. of Custrin, and 53 N. of Danzig. It was surrounded with walls in 1258.

**GARZA**, a small river of the Cisalpine Gauls, in the dep. of Mela, and late province of Calabria.

**GARZIS**, a town of Africa, in the province of Melilla. The houses are built of mud.

(1.) \* **GAS**. *n. f.* [A word invented by Van Helmont.] It is used by Van Helmont, to signify, in general, a spirit which has been coagulated: but he uses it loosely for all kinds of spirits.

(2.) **GAS** is a general name for all kinds of aerial kind, except common air. It is derived from the German *gascht* or *gasst*, signification of wind, or the ebullition or expulsion of elastic fluids from substances by fermentation or effervescence. It was first given by Van Helmont to the vapour which he obtained from the vapour of coal, the same with the fluid after it has been fixed air, now carbonic acid, and other facitious airs. From him it has been employed by modern philosophers as a general one for all the elastic fluids above

inverfant. Under the article **AEROL-  
TURE** and properties of these fluids are  
according to the tenets and language  
they, and others, at the time when that  
celebrated work *On different kinds of Air*  
occupied the attention of the philosophi-  
Many additional discoveries, however,  
since made, and a new language in-  
indicative of the component parts of  
gases undergoing any chemical change,  
will find the subject treated in a still  
improved way under the article **CHEMISTRY**.  
**ARN**, a town of Sweden, in the prov. of  
1, 43 miles NNE. of Carlstadt.

**IGN**. See **GASCOIN**.  
**SCOIGNE**, George, an English poet  
lived in the reign of Q. Elizabeth. He  
was of Essex, of an ancient family, and edu-  
cated at Oxford and Cambridge. From thence  
he went to Gray's Inn, but, having a genius  
for the law, he travelled and for some  
years in the army in the Low Countries.  
He then went to France, where he became  
acquainted with a Scottish lady, and married her.  
He returned to England, and settled once  
more at Gray's Inn, where he wrote most of his  
poems. In the latter part of his life he spent in his  
estate of Walthamstow, where he died in  
1600. He was the character of a polite gentleman, a  
good companion, *et vir inter poetas sui seculi pre-  
santissimus*. His plays, first printed separately,  
were afterwards re-printed with other poems, in  
1616; in 1577 and 1587.

**SCOIGNE**, Sir William, chief justice of  
the bench under Henry IV.; a most learned  
judge, who, being insulted on the  
bench by the then prince of Wales, afterwards  
with great coolness and intrepidity com-  
mitted him to prison; and by this seasonable firm-  
ness laid the foundation of the future glory of  
that monarch, who from this event dated  
his reign from licentiousness. It is not  
surprising that the prince struck Sir Wil-  
liam, as recorded by Shakespeare; but all authors  
agree that he interrupted the course of justice to  
be served. Sir William died in 1413.  
**THIGH**, or **GASCOIGN**, is the hinder thigh  
of a ham, which begins at the stifle, and reaches  
to the hending of the ham.

**GAZONADE**. *n. f.* [French; from *Gascogne*,  
a province for boasting.] A boast; a brag;  
as it is a *gaizonade* to please me, that your  
good fortune was increased to one hundred  
times; I left you? *Swift*.

**GAZONADE**. *v. n.* [from the noun.] To  
brag; to bluster.

**GASCONES**, or **VASCONES**, the ancient in-  
habitants of Gascony, called by the moderns, *Bas-  
ques*, or *GASCOONS*. See next articles.

**GAU**, a ci devant province of France,  
situated between the N. by Languedoc  
and the Pyrenees on the S. and by the  
ocean on the W. It had its name from  
the Gauls, its ancient inhabitants. After  
being subdued by the Franks, they had for  
kings of their own, who were subject  
to the kings of Aquitaine; but both were at last  
conquered by the kings of France. It produces  
**PART. I.**

corn, wine, fruit, tobacco, hemp, brandy, prunes,  
&c. It now forms along with **ARMAGNAC** the  
department of **GERS**.

**GASCOONS**, the people of the ci-devant pro-  
vince of Gascony. They are noted for a corrupt  
pronunciation of the French tongue, as well as  
for boasting and rhodomontade.

**GASCUENA**, a town of Spain, in New Castile,  
30 miles NNW. of Cuenca.

**GASEOUS**, *adj.* Belonging to Gas. See **GAS**.

\* **GASH**. *n. f.* [from the verb.] 1. A deep and  
wide wound.—

He glancing on his helmet, made a large  
And open *gash* therein; were not his target,  
That broke the violence of his intent,  
The weary soul from thence it would discharge.

*Spenser.*

A perilous *gash*, a very limb lopt off.

*Shakspeare. Hen. IV.*

—Hamilton drove Newton almost to the end of  
the lists; but Newton on a sudden gave him such  
a *gash* on the leg, that therewith he fell to the  
ground. *Hayward*.—

But th' ethereal substance clos'd,

Not long divisible; and from the *gash*

A stream of nectarous humour issuing flow'd.

*Milton.*

2. The mark of a wound. I know not if this be  
proper.—I was fond of back-sword and cudgel  
play, and I now bear in my body many a black  
and blue *gash* and scar. *Arbutnot*.

\* **To GASH**. *v. a.* [from *hacher*, to cut, French.  
*Skinner*.] To cut deep so as to make a gaping  
wound; to cut with a blunt instrument so as to  
make the wound wide.—Where the Englishmen  
at arms had been defeated, many of their horses  
were found grievously *gashed* or gored to death.  
*Hayward*.—Wit is a keen instrument, and every  
one can cut and *gash* with it; but to carve a beau-  
tiful image requires art. *Tillotson*.—

See me *gash'd* with knives,

Or fear'd with burning steel. *Rowe's R. Conu.*

Streaming with blood, all over *gash'd* with  
wounds,

He reel'd, he groan'd, and at the altar fell.

*A. Phillips.*

**GASK**, [Gael. *i. e.* a slope,] a parish of Perth-  
shire, bounded on the S. by the Earn, and in form  
nearly a square, each side of which is above two  
miles. An ancient Roman causeway runs through  
it, and the ground *slopes* gradually down from it  
on each side. This causeway is 20 feet broad,  
and is in high preservation; being composed of  
rough stones laid close together; leading W. to  
one camp still visible in the parish of Muthil, and  
E. to another in that of Scone. Vestiges of other  
two camps on the N. and S. surrounded by ditches,  
are also visible. The air is dry and healthy; the  
soil is fertile, and produces wheat, barley, oats,  
pease, potatoes, turnips, and clover. The po-  
pulation, stated by the rev. Mr David Kemp, in  
his report to Sir John Sinclair, was 485, in 1790;  
when there were 50 sheep, 131 horses, and 648  
black cattle in the parish.

\* **GASKINS**. *n. f.* [from *Gascogne*. See **GAL-  
LIGASKINS**.] Wide hose; wide breeches. An  
old ludicrous word.—

If one point break, the other will hold;  
Or, if both break, your *gaskins* fall. *Shakefp.*  
\* **GASP.** *n. f.* [from the verb.] 1. The act of opening the mouth to catch breath. 2. The short catch of breath in the last agonies.—

His fortunes all lie speechless, and his name  
Is at last *gasp*. *Shakefp. Cymbeline.*  
Ah, Warwick, Montague hath breath'd his  
last;  
And to the latest *gasp* cry'd out for Warwick.

*Shakefp. Hen. VI.*  
If in the dreadful hour of death,  
If at the latest *gasp* of breath,  
When the cold damp bedews your brow,  
You hope for mercy, shew it now. *Addis. Ros.*

\* **To GASP.** *v. n.* [from *gaber* Skinner; from *gisse*, Danish, to sob, *Junius*.] 1. To open the mouth wide; to catch breath with labour.—

The sick for air before the portal *gasp*. *Virg.*  
They rais'd a feeble cry with trembling notes;  
But the weak voice deceiv'd their *gasp*ing throats.

*Dryden.*  
The *gasp*ing head flies off; a purple flood  
Flows from the trunk. *Dryden's En.*  
The ladies *gasp'd*, and scarcely could respire;  
The breath they drew no longer air, but fire.

*Dryden.*  
—A scantling of wit lay *gasp*ing for life, and groaning  
beneath a heap of rubbish. *Dryden's Spanish  
Friar.*—The rich countrymen in Austria were faint  
and *gasp*ing for breath. *Brown's Trav.*—

Pale and faint,  
He *gasp*s for breath; and, as his life flows from him,  
Demands to see his friends. *Addison's Cata.*

2. To emit breath by opening the mouth convul-  
sively.—

I lay me down to *gasp* my latest breath;  
The wolves will get a breakfast by my death.

*Dryden.*  
He staggers round, his eyeballs roll in death,  
And with short sobs he *gasp*s away his breath.

*Dryden's An.*  
3. To long for. This sense is, I think, not proper,  
as nature never expresses desire by *gasp*ing.—  
The Castilian and his wife had the comfort to be  
under the same master, who, seeing how dearly  
they loved one another, and *gasp*ed after their li-  
berty, demanded a most exorbitant price for their  
ransom. *Spektator.*

**GASPAR ISLAND,** an island and channel in  
**GASPAR STRAITS,** the Eastern Seas, between  
the isles of Banca and Billiton. Lon. 107.00. E.  
Lat. 1.45. S.

**GASPARINI,** a celebrated grammarian, born  
at Barzizia, about 1370, who contributed much  
to the revival of learning in Europe. He read  
Cicero, Cæsar, Virgil, &c. entered into their spi-  
rit, and communicated it to his pupils. He was  
invited to be professor of belles lettres at Padua,  
but the duke of Milan retained him and loaded  
him with favours. He wrote commentaries on  
Cicero, and Letters and Orations, reprinted in  
1723, with a curious and useful preface. He died  
in 1431.

**GASPE,** or **GACHEPE,** a bay and head land  
America, S. of Florell isle, E. of Lower Ca-  
1 W. of the Gulf of St Lawrence.

**GASPEE,** or **NAMQUIT POINT,** in  
America, projecting from the W. in  
Providence. Here a British armed schu-  
ed *the Gaspee*, was burnt the 10th Jun  
about 60 men from Providence, paint-  
dians.

**GASPESIA,** a tract of country,  
Canada, S. of the Lawrence, and N. of  
Bay.

**GASSE,** a town of Piedmont, on  
miles S. of Chivasso.

**GASSENDI,** one of the most cele-  
brious philosophers France has produced, was bo-  
rner, about 3 miles from Digne in P  
1592. When a child, he took delight  
at the moon and stars in clear uncloud  
This frequently drew him into bye-pla  
his eyes undisturbed; by which means  
had him often to seek, with many an  
They therefore put him to school  
where he soon made such extraordina  
in learning, that some persons, who  
cimens of his genius, resolved to ha  
moved to Aix, to study philosophy in  
a learned minor friar. He was afterw  
to be professor of rhetoric at Digne  
was quite sixteen years of age; and h  
engaged in that office but three years;  
dying, he was made professor in his re  
There he composed his *Paradoxical Ex*  
which, coming to the hands of Nich  
that great patron of learning joined  
Walter prior of Valette in promoting  
he having entered into holy orders, wa  
canon of the church of Digne and D. I  
obtained the rectorship of that church.  
fondness for astronomy grew up with  
and his reputation daily increasing,  
1645, appointed royal professor of mat  
Paris. This institution being chiefly c  
astronomy, he read lectures on that  
crowded audiences. However, he did n  
place long; for a dangerous cough an  
tion of the lungs, obliged him, in 164;  
to Digne for the benefit of his native air  
wrote against the metaphysics of Desc  
divided with that great man the phil  
his time, almost all of whom were C  
Gassendians. He joined to his knowle  
sophy and the mathematics, an ac  
with the languages and a profound  
He wrote, 1. Three volumes on Ep  
sophy; and six others, which contain  
philosophy. 2. Astronomical Work  
Lives of Nicholas de Peiresc, Epicu  
nicus, Tycho Brahe, Puerbachius,  
montanus. 4. Epistles, and other tre  
his works were collected together, :  
at Lyons, in 1658, in 6 vols folio.

Paris, in 1655, aged 63.

**GASSENHOVEN,** a town of the  
public, in the dept. of the Dyle, and in  
Netherlands, 3 miles NE. of Tirlemor  
13. E. Lat. 50. 50. N.

\* **GAST.** *v. a.* [from *gast*, Sax. See  
To make aghast; to fright; to shock  
to fear; to affray.—

he saw my best alarmed spirits  
the quarrel's right, rous'd to th' en-  
counter,

then *galled* by the noise I made,  
leicely he fled. *Shak. K. Lear.*

**EIN**, a town of Bavaria, in the arch-  
of Salzburg, 16 miles SW. of Rad-  
36 S. of Salzburg; famous for its warm  
mines of gold, lead, and iron.

**EL**, a river of Wales, which runs into  
17, in Caernarvonshire.

**STER**, a ci-devant bailiwick of Switzer-  
canton of Schwitz and Glaris.

**STER**, a fort of Africa, in the country  
fa.

**ROSTEUS**, the STICKLE BACK, in  
7, a genus of fishes belonging to the  
toracici. There are 3 rays in the men-  
the gills; the body is carinated; and  
some distinct prickles before the back  
are 11 species distinguished by the  
prickles on the back. One of these,

**ROSTEUS ACULEATUS**, stickle-back,  
or sharpling, is common in many of the  
rs. In the fens of Lincolnshire and some  
proceed from them, they are found in  
quantities. At Spalding, once in 7 or  
razing shoals appear in the Welland,  
up the river in form of a vast column,  
supposed to be the multitudes that have  
d out of the fens by the floods of seve-  
and collected in some deep hole, till e-  
with numbers, they are periodically  
attempt a change of place. The quan-  
vat, that they are used to manure the  
trials have been made to get oil from  
idea may be conceived of this vast shoal,  
ld, that a man being employed by the  
take them, has got for a considerable  
lay by selling them for a halfpenny per  
his species is seldom two inches long;  
rp spines on the back, that can be raised  
d at pleasure. The colour of the back  
an olive green; the belly white; but  
lower jaws and belly are of a bright

**OUND**. See GAZE HOUND.

**IOIS**. See GATINOIS.

**RF**, a town of Bohemia, in the circle  
tz, 8 miles SE. of Leitmeritz.

**UNI**, a town of Turkey, in the Morea,  
of Chiarenza.

**ELL**, Francis, Bp. of Chester, was  
2, appointed preacher to the society  
Inn, in 1694, and made Bp. of Chel-  
s. He preached a course of sermons  
lectures; engaged in the Trinitarian  
with Mr Collins and Dr Clarke; and  
two excellent pieces, intitled, *Christian*  
*and A Moral Proof of a Future State*. He  
the rights of the university of Oxford  
Abp. of Canterbury, in the appoint-  
warden of Manchester college; and  
violent proceedings against Bp. Atter-  
house of lords, though he disliked the  
itary principles. He died in 1725.

**STRICK**, *adj.* [from *γαστήρ*.] Belong-  
chly.

(2.) **GASTRICK JUICE**, a thin pellucid liquor,  
which distils from certain glands in the stomach,  
for the dilution, &c. of the food. See **ANATOMY**,  
*Index*.

**GASTROCNEMIUS**. See **ANATOMY**, § 217.

**GASTROMANCY**, γ [from *γαστήρ*, the belly,  
**GASTROMANTIA**, { and *μαντήρ*, divination,}

a kind of divination practised among the ancients,  
by means of words coming or seeming to come  
out of the belly. There is another kind of *gastro-*  
*mancy*, which is performed by means of glasses, or  
other round transparent vessels, within which cer-  
tain figures appear by magic art. It is thus call-  
ed, because the figure appears as in the belly of  
the vessels.

(1.) \* **GASTRORAPHY**. *n. f.* [from *γαστήρ* and *ραφή*.]  
In strictness of etymology signifies no more than  
sewing up any wound of the belly; yet in com-  
mon acceptation it implies, that the wound of  
the belly is complicated with another of the in-  
testine. *Sharp's Surg.*

(2.) **GASTRORAPHY**. See **SURGERY**, *Index*.

(1.) \* **GASTROTOMY**. *n. f.* [from *γαστήρ* and *τομή*.]  
The act of cutting open the belly.

(2.) **GASTROTOMY** is also called the **CÆSARIAN**  
**OPERATION**. See **MIDWIFERY**.

\* **GAT**. The preterite of *gēt*.—Moses *gat* him  
up into the mount. *Ex. xxiv. 18.*

(1.) **GATA**, a town of Spain, in Estremadura,  
55 miles NNW. of Conza.

(2.) **GATA**, a river of Spain, which rises near  
the town (N<sup>o</sup> 5.) and runs into the Alagon, 15  
miles NNW. of Conza.

**GATAKER**, Thomas, a learned critic and di-  
vine, born at London, in 1574. He studied at St  
John's college, Cambridge, and was afterwards  
chosen preacher at Lincoln's Inn; which he quit-  
ted in 1612, for the rectory of Rotherhithe. In  
1620, he made a tour through the low countries;  
and in 1624, published at London a book, entitled,  
"Transubstantiation declared by the confession of  
the Popish Writers to have no necessary founda-  
tion in God's Word." He wrote also a defence of  
this discourse. In 1642, he was appointed one of  
the assembly of divines, and was engaged with  
them in writing annotations upon the Bible. He  
died in July 1654, in the 80th year of his age. He  
published also, 1. A Dissertation upon the Style of  
the New Testament. 2. *De nomine tetragramma-*  
*ta*. 3. *De diphthongis, sive bivocalibus*. 4. An Edi-  
tion and Translation of Marcus Antoninus's Me-  
ditations. 5. A Collection of Sermons, in folio;  
and many other works. His piety and charity  
were very exemplary; and his modesty was so  
great, that he declined all ecclesiastical dignity.  
His extensive learning was much admired; his  
house was a private seminary, and many foreigners  
resorted to him to receive advice in their studies.

(1, i.) \* **GATE**. *n. f.* [from *gat*, Saxon.] 1. The  
door of a city, castle, palace, or large building.—  
Open the *gate* of mercy, gracious God!

My soul flies thro' these wounds to seek thee.  
*Shakesp.*

*Gates of monarchs*  
Are arch'd so high, that giants may jet through,  
And keep their impious turbans on, without  
Good-morrow to the sun. *Shak. Cymbeline.*

L 1 3 2. A

2. A frame of timber upon hinges to give a passage into inclosed grounds.—

Know'st thou the way to Dover?

—Both stile and gate, horseway and footpath.

*Shakesp.*

3. An avenue; an opening.—Auria had done nothing but wisely and politickly, in setting the Venetians together by the ears with the Turks, and opening a gate for a long war. *Knolles's History of the Turks.*

(ii.) GATE, (§ I, i. def. 1.) See ARCHITECTURE. Thebes, in Egypt, was anciently stiled the city with a hundred gates. In ancient Rome there was a triumphal gate, *porta triumphalis*. In modern Rome there is the *jubilee gate*, which is only opened in the year of a grand jubilee. The gates of London were many of them converted into gaols or prisons, as Ludgate, Newgate, &c. but they are now removed. The lesser or bye-gates are called *posterns*. Gates through which coaches &c. are to pass, should not be less than 7 feet broad, nor more than 12; the height,  $1\frac{1}{2}$  the breadth.

(II.) GATE, or GAIT, in the manege, called in French *train*, is used for the going or pace of a horse.

(III.) GATES, in a military sense, are made of strong planks, with iron bars, to oppose an enemy. They are generally made in the middle of the curtain, from whence they are seen, and defended by the two flanks of the bastions. They should be covered with a good ravelin, that they may not be seen or enfiladed by the enemy. These gates, belonging to a fortified place, are passages through the rampart, which may be shut and opened by means of doors and a portcullis. They are either private or public:

1. GATES, PRIVATE, are those passages by which the troops can go out of the town unseen by the enemy, when they pass to and from the relief of the duty in the outworks, or on any other occasion which is to be concealed from the besiegers.

2. GATES, PUBLIC, are those passages through the middle of such curtains, to which the great roads of public ways lead. The dimensions of these are usually about 13 or 14 feet high, and 9 or 10 feet wide, continued through the rampart, with proper recesses for foot passengers to stand in, out of the way of wheel carriages.

(IV.) GATES OF HELL, an expression used in scripture figuratively to denote either the *grave* or the *powers of darkness*, i. e. the devil and his angels. The Mahometans use it literally, and suppose that hell has 7 gates. The first, they pretend, is that where Mussulmans, who incur the guilt of sin, will be tormented; the 2d is for the Christians; the 3d for the Jews; the 4th for the Sabins; the 5th for the Magians or worshippers of fire; the 6th for Pagans and idolaters; and, the 7th for hypocrites, who make an outward show of religion, but have none.

GATEHOUSE, a town of Scotland, in Kirkcudbrightshire, on the mouth of the river Fleet, 13 miles W. of Kirkcudbright. It has 3 regular streets, and carries on a cotton manufacture.

GATES, a county of North Carolina, in Eden-1. bounded on the N. by Virginia, and was a county. It contained 3173 citizens,

and 2119 slaves, in 1795. Hertford town.

GATESHEAD, a village of Durham kind of suburb of Newcastle, though in other county, being divided by the *gate* in the middle, having the arms on one side, and those of Newcastle on which is the boundary between the bishopric of Northumberland. The church is a fine one with a very high tower, seen at a great distance, and in the church yard are several monuments. There are few traces left of a monastery, except a stone gateway, modern erection. The house covers a great deal of land. Here live the coal pit men.

\* GATEVEIN. *n. f.* The *vena porta* a king that loved wealth, he could not have trade sick, nor any obstruction in the *gatevein* which disperseth that *con's* Henry VIII.

\* GATEWAY. *n. f.* [gate and way] through gates of inclosed grounds, between inclosures are so many, that cart between one field and another.

(1.) GATH, or GETH, in ancient times a city of the Philistines, and one of the most famous for having given birth to David made a conquest of it, and made it subject to his successors, till the death of the kingdom of Judah. Rehoboam rebuilt it; king Uzziah retook it, and Hezekiah more reduced it under his subjection, about 5 or 6 miles from Jamnia, about 31 W. of Jerusalem.

Some authors, among whom is F. Calmet, have committed an egregious mistake in making it the most southern, and Ekron the most northern of the Philistine cities; as if these had been the boundaries of their dominions, when they were not above 5 miles asunder; and Gath was one of the five satrapies S. Josephus explains himself plainly enough, when he says, that he took all the Philistine cities from Gath, there being many more cities of that name; signifies in the Hebrew a *wine press*. Some of the name of Geth or Gath are mentioned by Eusebius and St Jerome, whose situation of them, plainly shows them to be different places from this, and from each other. This city recovered its liberty in the time of the prophets Amos and Hosea, and was afterwards demolished by Hazael; since which it became of but little notice till the time of the holy war, when Saladin of Jerusalem built a castle on its ruins.

(2.) GATH, GATH-EPHER, or GATH OPPER, a town of the tribe of Dan, in Galilee, a place of the tribe of Dan. Joshua makes this city to be part of the tribe of Dan; and St Jerome, in his commentary on the prophet, says, that it was two miles from another place otherwise called *Diocesarea*.

(3.) GATH RIMMON, a city belonging to the tribe of Dan. St Jerome places it in the tribe of Dan, on the way from Eleuthero to Diospolis, given to the Levites of Kohath's family.

THE RIMMON, a city in the tribe of  
likewise given to the Kohathites.

THE RIMMON, a city in the half tribe of  
on this side Jordan, also given to the

left; to bring into one place.—*Gather*  
ed they took stones and made an heap.  
to get in harvest.—The seventh year we  
sow, nor *gather* in our increase. *Lev.*  
3. To pick up; to glean.—

His opinions

tified the king for his divorce,  
d from all the famous colleges. *Shak.*  
the highway, *gather* out the stones. *If*  
I will spend this preface upon those from  
aye *gathered* my knowledge; for I am  
herer. *Wotton.*—To pay the creditor,  
him his rent, he must *gather* up money  
a. *Locke.* 4. To crop; to pluck.—

What have I done?

my youth, my beauty, and my love  
ner gain'd, but slighted and betray'd;  
e a rose just *gather'd* from the stalk,  
y smelt, and cheaply thrown aside,  
her on the ground! *Dryd. Span. Fryar.*  
semble.—They have *gathered* themselves  
gainst me. *Job.*—All the way we went  
e *gathered* some people on both sides,  
n a row. *Bacon's New Atlantis.* 6. To

to accumulate.—He that by usury and  
n increaseth his substance, shall gather it  
at will pity the poor. *Prov.* 7. To se-  
ake.—Save us, O Lord, and *gather* us  
ng the heathen, to give thanks unto thy  
e. *Pf. cvi. 47.* 8. To sweep together.—  
dom of heaven is like unto a net that was  
be sea, and *gathered* of every kind. *Mat.*  
To collect charitable contributions. 10.  
into one body or interest.—I will *gather*  
him, besides those that are *gathered* un-  
f. *lvi. 8.* 11. To draw together from a  
diffusion; to compress; to contract.—

Immortal Tully shone,  
oman rostra deck'd the consul's throne;  
ing his flowing robe he seem'd to stand,  
to speak, and graceful stretch'd his hand.

*Pope.*

gain.—

*gather*s round upon her in the chace;  
breathes upon her hair with nearer pace.

*Dryden.*

sucker needlework. 14. To collect lo-  
o know by inference.—That which, out  
of reason or of God, men probably *ga-*  
s be expedient, they make it law. *Hooker.*  
reason that I *gather* he is mad,  
ad tale he told to day at dinner,  
own door being shut against his entrance.

*Shak.*

we had seen the vision, we endeavour'd  
to Macedonia, assuredly *gathering* that  
had called us. *Acts.*—From this doctrine  
creasing and lessening of sin in this re-  
ason *gather*, that all sins are not alike  
d, as the stoicks of ancient times, and  
powers, have falsely imagined. *Perkins.*—

Return'd

By night, and listening where the hapless pair  
Sat in their sad discourse, and various plaint.

Thence *gather'd* his own doom. *Milt. Par. Lqß.*  
—Madamoiselle de Scudery, who is as old as a Si-  
byl, is translating Chaucer into French; from which  
*gather* that he has formerly been translated into  
the old Provençal. *Dryden.* 15. To draw toge-  
ther in needlework. 16. To **GATHER Breatb.** [A  
proverbial expression.] To have respite from any  
calamity.—

The luckless lucky maid

A long time with that savage people staid,  
To *gather breath*, in many miseries. *Spenser.*  
(2.) \* To **GATHER.** *v. n.* 1. To be condensed;  
to thicken.—

If ere night the *gath'ring* clouds we fear,  
A song will help the beating storm to bear.

*Dryden's Pastorals.*

When *gath'ring* clouds o'ershadow all the  
skies,

And shoot quick lightnings, weigh, my boys!  
he cries. *Dryden.*

When the rival winds their quarrel try,  
South, East and West, on airy courses born,  
The whirlwind *gathers*, and the woods are torn.

*Dryden.*

Think on the storm that *gathers* o'er your  
head,

And threatens every hour to burst upon it.

*Addison's Cato.*

2. To grow larger by the accretion of similar mat-  
ter.—Their snow-ball did not *gather* as it went;  
for the people came in to them. *Bacon's Hen. VII.*  
3. To assemble.—There be three things that mine  
heart feareth; the slander of a city, the *gathering*  
together of an unruly multitude, and a fallie ac-  
cusation. *Eccelus. xxvi. 5.* 5. To generate pus or  
matter.—Ask one, who by repeated restraints hath  
subdued his natural rage, how he likes the change,  
and he will tell you 'tis no less happy than the  
ease of a broken imposthume after the painful *ga-*  
*thering* and filling of it. *Decay of Piety.*

\* **GATHER.** *n. f.* [from the verb.] Pucker; cloth  
drawn together in wrinkles.—

Give laws for pantaloons,

The length of breeches, and the *gathers*,  
Part cannons, periwigs and feathers. *Hudib.*

\* **GATHERER.** *n. f.* [from *gather*.] 1. One  
that gathers; one that collects; a collector.—I  
will spend this preface upon those from whom I  
have gathered my knowledge; for I am but a *ga-*  
*therer* and disposer of other men's stuff. *Wotton's*  
*Preface to Elements of Architecture.* 2. One that  
gets in a crop of any kind.—I was a herdman and  
a *gatherer* of sycamore fruit. *Amos.*—

Nor in that land

Do poisonous herbs deceive the *gatherer's* hand,  
*May's Virgil.*

\* **GATHERING.** *n. f.* [from *gather*.] Collec-  
tion of charitable contributions.—Let every one  
lay by him in store, that there be no *gatherings*  
when I come. 1 *Cor. xvi. 2.*

GATINOIS, or GASTINOIS, a ci-devant pro-  
vince of France, 45 miles long and 30 broad. In  
the 11th century, it had counts of its own, but  
was afterwards joined to Anjou. It was next di-  
vided

vided into *Gatinois*, *Orleanois*, and *François*; and now forms part of the departments of the Seine and Marne, Seine and Oise, and Loiret.

GATON, a village NW. of Cambridge.

GATRE, a town of Yorksh. SW. of Wheatley.

GATSCH, a town and castle of Hungary, 12 miles E. of Korpona.

GATTA, a level district of Maritime Austria, in Dalmatia, in the province of Poglizza.

(1.) \* GATTEN-TREE. *n. f.* A species of Corsican cherry.

(2.) GATTEN-TREE. See CORNUS, N° I.

GATTEVILLE, a town of France, in the department of the Channel, N. of Barfleur.

GATTINARI, a town of Italy, in the lordship of Vercelli, on the Sesia; 15 miles N. of Vercelli.

GATTON, a borough of Surry, 19 miles from London, on the side of a hill on the road to Ryegate. It is supposed to have been known to the Romans, from their coins and other antiquities being found there. It is a borough by prescription; and has sent members to parliament ever since the 29th of Henry VI. It was formerly a large town; but is now a mean village, with a small church, and without either fair or market. The members are returned by its constable, who is annually chosen at the lord of the manor's court.

GAVALS, a town of Russia, 28 m. S. of Viborg.

(1.) GAVARDO, GOVARDO, or GUARDO, a district of the Cisalpine republic, in the dept. of Mela, and ci-devant province of Bresciano, containing 10 parishes, and 8000 souls, in 1797.

(2.) GAVARDO, GOVARDO, or GUARDO, a town of the Cisalpine republic, in the above district, (N° 1.) containing 2000 citizens in 1797. Near it, the French, under Gen. Buonaparte, defeated the Austrians, in 1796, and took 1,800 prisoners. It is seated on the Chiese, 7 miles W. of Lake Garda, and 10 NE. of Brescia. Lon. 10. 9. E. Lat. 45. 40. N.

GAVAREEA, CAPE. See COOK, N° III. § 7.

GAUBIL, Anthony, a French author, born at Caillac in 1708. He was sent a missionary to China, and acted as interpreter at the Court of Peking. He published a History of Gengis khan, and a translation of the *Chou King*. He died in 1709.

GAUBIUS, Hieronymus David, a celebrated physician of Holland. He studied under the illustrious Boerhaave; and became so much his favourite, that he resigned the chemical chair in his favour. He taught at Leyden with great applause for 40 years. His reputation was extended all over Europe by several valuable publications, particularly by his *Institutiones Pathologiae Medicinalis*, and his *Adversaria*, which have contributed not a little to the improvement of medicine. He died at Leyden 29th Nov. aged 76.

\* GAUDE. *n. f.* [The etymology of this word is uncertain: *Skinner* imagines it may come from *gaude*, French, a yellow flower, yellow being the colour. *Junius*, according to his custom; and Mr *Lye* finds *gaude*, in signify deceit or fraud, from *gawaw-cheat*. It seems to me most easily *gaudium*, Latin, joy; the cause of joy: thence aptly applied to

any thing that gives or expresses pleasure. In Scotland this word is still retained, shewy bawble, and the person fooled [Scotland denotes a yellow flower.] At a fine thing; any thing worn as a sign is not now much used.—

He stole th' impression of her fan  
With bracelets of thy hair, rings, & ceits,

Knacks, trifles, nosegays, sweetmeats  
The sun is in the heav'n, and the  
Attended with the pleasure of the v  
Is all too wanton, and too fall of g  
To give me audience. *Shak.*

\* To GAUDE. *v. a.* [*gaudeo*, Latin] to rejoice at any thing.—

Go to a gossip's feast, and *gaude*  
After so long grief such nativity.

GAUDEN, Dr Joseph, son of John earl of Mayfield in Essex, was born at 1605. At the commencement of the 17th century he followed, on his taking part with the king. Upon the establishment of the Presbyterian church government he followed the ruling powers, and was one of the assembly of divines who met at Westminster in 1643, and took the covenant. He offered some objections to it, his afterwards struck out of the list. Nor did he espouse the cause of the parliament because they adhered to their first avowed principle of forming only, instead of destroying, an episcopacy. In this spirit he signed the declaration to the army against the violent party that affected the life of the king; and after his execution published the famous *Portraiture of his Sacred Majesty's Life and Sufferings*; which ran through in the course of a year. Upon the death of Charles II. he was promoted to the see of Worcester, and in 1662 removed to Worcester, where he died, the same year. He wrote many controversial pieces suited to the times, and to the views. The *Eikon Basilike* he published in 1649, king's private meditations; though on this there has been a long controversy. After the king's death, his widow, in a letter to her sons, calls it *The Jewel*; and said, he had hoped to make a fortune by it; she had a letter of a very great man would clear up that he writ it. This as the earl of Clarendon had predicted, was eagerly espoused by the anti-royalists, in order to disparage Charles I. But it has been proved that Gauden had too luxuriant an imagination, which betrayed him into a rankness of style in an Asiatic way; and thence, as Bp. Burnet argues, it may be concluded, that but the king himself, was the true auth

in which there is a nobleness and thought, with a greatness of style, that is looked on as the best written book in language at the time.

ENS, ST., a town of France, in the department of Upper Garonne, and late province of Guyenne, seated on the Garonne; 8 miles N.E. of Bordeaux. Lon. 6. 56. E. Lat. 43. 2. N.

ERY. *n. f.* [from *gaude.*] Finery; of luxury of dress.—The triumph was not only a gaudery, but one of the wisest and most salutary institutions that ever was. *Bacon's Essays.*—It is but one remove from death, and is nothing about us but what looks like a reparation for it, scarce ever appears in the high mode, the flaunting garb, the gaudery of youth; with cloaths as rich and as much in the fashion, as the persons themselves is usually grown out of it.

AVEL. *n. f.* A provincial word for Let it lie upon the ground or *gavel* eight

EL, among builders. See GABLE.

(3.) GAVEL, in law, tribute, toll, custom, or yearly revenue; of which we had in old time several kinds. See GABBE, N° 1, 2.

(1.) GAVELET, in law, an ancient and special cessavit used in Kent, where the custom of gavel-kind continues, by which the tenant, if he with-draws his rent and services due to the lord, forfeits his land and tenements. The process is thus. The lord is first to seek by the steward of his court, from 3 weeks to 3 weeks, to find some distress upon the tenement, till the 4th court; and if at that time he find none, at this 4th court it is awarded, that he take the tenement in his hand in name of a distress, and keep it a year and a day without manuring; within which time, if the tenant pays his arrears, and make reasonable amends for the with-holding, he shall have and enjoy his tenement as before: if he come not before the year and day be past, the lord is to go to the next county court with witnesses of what had passed at his own court, and pronounce there his process, to have further witnesses; and then by the award of his own court, he shall enter and manure the tenement as his own: so that if the tenant desired afterwards to have and hold it as before, he must agree with the lord; according to this old saying: "Has he got since any thing given, or any thing paid, then let him pay five pound for his were, e'er he become heald again." Other copies have the first part with some variation; "Let him nine times pay, and nine times repay."

(2.) GAVELET is also a writ used in the hutt-ings, given to lords of rents in London. Here the parties, tenant and demandant, appear by *faire facias*, to show cause why the one should not have his tenement again on payment of his rent, or the other recover the lands on default thereof.

(1.) \* GAVELKIND. *n. f.* [In-law.] A custom whereby the lands of the father are equally divided at his death amongst all his sons, or the land of the brother equally divided among the brothers, if he have no issue of his own. This custom is of force in divers places of England, but especially in Kent. *Cowel.*—Among other Welsh customs he abolished that of *gavelkind*, whereby the heirs female were utterly excluded, and the bastards did inherit as well as the legitimate, which is the very Irish *gavelkind*. *Davies on Ireland.*

(2.) GAVELKIND is a tenure belonging to lands in the county of Kent, and formerly universal in Ireland. (See ENGLAND, § 42.) The word is said by Lambard to be compounded of three Saxon words, *gaf, eal, kyn*, "omnibus cognatione proximis data." Veritegan calls it *gavelkind*, quasi "give all kind," that is, to each child his part: and Taylor, in his history of *gavelkind*, derives it from the British *gavel*, i. e. a hold or tenure, and *cenned*, "generatio aut familia;" and so *gavel-cenned* might signify *tenura generationis*.—It is well known what struggles the Kentish men made to preserve their ancient liberties, and with how much success those struggles were attended. And as it is principally here that we meet with the custom of gavel-kind (though it was and is to be found in some other parts of the kingdom), we may conclude, that this was a part of those liberties; agreeable to Mr Selden's opinion, that *gavel-kind*

velkind, before the Norman conquest, was the general custom of the realm. The distinguishing properties of this tenure are principally these: 1. The tenant is of age sufficient to alienate his estate by feoffment; at the age of 15. 2. The estate does not escheat in case of an attainder and execution for felony; their maxim being, "the father to the bough, the son to the plough." 3. In most places he had a power of devising lands by will, before the statute for that purpose was made. 4. The lands descend, not to the eldest, youngest, or any one son only, but to all the sons together; which was indeed anciently the most usual course of descent all over England, though in particular places particular customs prevailed; and it must be allowed, that it is founded on strict justice, however contrary to the present general practice.

GAVELKOVON, a town of Lower Bavaria, 20 miles SE. of Landshut.

GAVELLO, a populous town of the Cisalpine republic, in the dep. of Benaco, and ci-devant Veronese; on the road to Ferrara.

GAVEREN, a town of the French republic, in the dep. of the Scheldt, and late prov. of Flanders; seated on the Scheldt, 7 miles from Ghent.

GAUERS, a town of Silesia, in the principality of Neisse, 5 miles NNW. of Patzschau.

GAVETA, a town of Naples, in the Capitana-ta, 16 miles SSW. of Manfredonia.

GAUGAMELA, in ancient geography, a village of Aturia, lying between the rivers Lycus and Tigris; famous for Alexander's victory over Darius. It is said to have been allowed to Darius Hytaspes for the maintenance of a camel; and hence the name. It was near a more considerable place called *Arbela*; whence the latter gave the name to the victory. See *ARBELA*, § 2.

(1.) \* GAUGE. *n. f.* [from the verb.] A measure.—This plate must be a *gage* to file your worm and groove to equal breadth by. *Moxon*.—If money were to be hired, as land is, or to be had from the owner himself, it might then be had at the market rate, which would be a constant *gage* of your trade and wealth. *Locke*.—Timothy proposed to his mistress, that she should entertain no servant that was above four foot seven inches high; and for that purpose had prepared a *gage*, by which they were to be measured. *Arbutnot's John Bull*.

(2.) GAUGE. See GAGE.

(3.) GAUGE LINE. See GAUGING, § 4.

(4.) GAUGE POINT of a solid measure, the diameter of a circle whose area is equal to the solid content of the same measure.

(1.) \* To GAUGE. *v. a.* [*gauge, jauge*, a measuring rod, French. It is pronounced, and often written, *gage*.] 1. To measure with respect to the contents of a vessel. 2. To measure with regard to any proportion.—The vanes nicely *gauged* on each side, broad on one side, and narrow on the other, both which minister to the progressive motion of the bird. *Derham's Physic. Theol.*—

is nothing more perfectly admirable in it, than that artful manner in Homer, of taking *r gaging* his heroes by each other, and evaluating the character of one person by comparison of it to some other he is made to

(2.) To GAUGE. See To GAGE.

(1.) \* GAUGER. *n. f.* [from *gaug* whose business is to measure vessels or —Those earls and dukes have been with royal jurisdiction; and appointed civil officers, as sheriff, admiral, *gaug* cheator. *Carew*.

(2.) A GAUGER, is a king's officer, pointed to examine all tuns, pipes, and barrels, of wine, beer, ale, oil, &c. and give them a mark of allowance, &c. are sold in any place within the extent of the

(1.) GAUGING. See GEOMETRY

(2.) GAUGING ROD, an instrument gauging or measuring the contents of That usually employed is the four foot rod. It is commonly made of box, &c. of 4 rules, each a foot long and about of an inch square, joined together by 3 l by which means the rod is rendered when the 4 rules are quite opened, a foot when they are all folded together. The first face of this rod, marked 4, are diagonal lines; one for beer and the wine; by means of which the contents of a common vessel in beer or wine gallons is readily found by putting the rod in at the hole of the vessel till it meets the top of the head of the vessel with the flange to the bung-hole. For distinction of the there is written thereon, *beer* and *wine*. On the second face, 5, are a line of the gauge line; which is a line expressed in areas of circles, whose diameters are in round inches in ale gallons. At the end of this face is written *ale area*. On the third face, 6, are scales of lines; the first, at the end of which is written *hog-head*, is for finding how many there are in a hog-head when it is not with its axis parallel to the horizon. The second, at the end of which is written *B. L.* is for a *butt lying*, is for the same use as that first. The 3d line is to find how many wanting to fill up a butt when it is full to the end of it is written *B. S.* signifying *butt standing*. In the half of the 4th face of the rod, 7, there are 3 scales of lines, for finding the number of gallons in a firkin, kilderkin, and butt; with their areas parallel to the horizon. These are distinguished by the letters, *F. K. L.* for a *firkin, kilder-kin, and barrel*.

(3.) GAUGING ROD, USE OF THE LINES ON THE. To find the content in beer or wine gallons, put the brazed gauging rod into the bung-hole of the vessel, and thrust the diagonal lines upwards, and thrust the end to the meeting of the head and flange with chalk make a mark at the bung-hole of the vessel, and also on the lines of the rod, right against, over or under when the brazed end is thrust home to the end of the vessel: then turn the gauging rod to the other end of the vessel, and thrust the end home to the end as before. Lastly, the mark made on the gauging rod come to the mark made on the bung-hole with the rod thrust to the other end; which is

le on the diagonal lines will, on the show the whole content of the cask in ne gallons. If the mark made on the be not right against that made on the you put it the other way, then right mark made on the bung-hole m be a the diagonal lines; and the division on at line between the two chalks will effect's whole contents in beer or wine Thus, e. gr. if the diagonal line of a 8 inches four tenths, its contents in s will be near 51, and in wine gallons will be open, as a half-barrel, ten, of d the measure from the middle on the head and staves be 38 inches, the dia gives 122 beer gallons; half of which, the content of the open hal. tub. If large vessel, as a tun or copper, and sl line taken by a long rule proves 70 in- content of that vessel may be found y inch at the beginning end of the dia- call ten inches. Thus ten inches be inches; and every tenth of a gallon ions; and every whole call 1000 gal- mple. At 44.8 inches on the diagonal s 200 gallons; so that 4 inches 48 parts, 44 inches 8 tenths, is just two tenths now called 200 gallons; so also if the be 76 inches and 7 tenths, a close cask gonal will hold 1000 beer gallons; but an but half so much, viz. 500 beer gallons.

**USING ROD, USE OF THE GAUGE THE.** To find the content of any cylin- in ale gallons; seek the diameter of 1 m inches, and just against it on the is the quantity of ale gallons contained ch deep: this multiplied by the length nder will give its content in ale gall ns. Suppose the length of the vessel 32.06, diameter of its base 25 inches; to find e content in ale-gallons? Right against on the gauge-line is one gallon and 745 n; which multiplied by 32.06, the length, 447 gallons for the content of the ves- diameter of a hoghead being 25 he head diameter 22 inches, and the 06 inches; to find the quantity of ale tained in it?—Seek 25. the bung dia- the line of inches; and right against it uge-line you will find 1.745; take one 3d ch is .580, and set it down twice: seek 22 the head diameter, and against it you will :gauge-line 1.356; one third of which add- ce .580. gives 1.6096; which multiplied th 32.06, the product will be 51.603776, nt in ale gallons. Note, this operation that the aforesaid hoghead is in the si- middle frustum of a spheroid. The lines on the two other faces of the rod ly; you need only put it downright in- ag-hole (if the vessel you desire to know tity of ale-gallons contained therein be the opposite staves; and then where the the liquor cuts any one of the lines ap- l to that vessel, will be the number of ntained in that vessel.

a town of the Ligurian republic, 25 of Genoa.  
 . PART. I.

**GAVIA**, a town of Spain, 4 m. SW. of Granada.  
**GAUJAC**, a town of France, in the dep. of Landes, 12 miles SE. of Dax.

(1.) **GAUL**, the English translation of **GAL-LIA**, the ancient name given by the Romans to the country that now forms the republic of France.—The original inhabitants were descend- ed from the Celtes or Gomerians, by whom the greatest part of Europe was peopled; the name of **GALLI**, or **GAULS**, being probably given them long after their settlement in that country. See **GALLIA**.

(2.) **GAUL, HISTORY OF, TO ITS FIRST INVA- SION BY THE ROMANS**—The ancient history of the Gauls is entirely wrapped up in obscurity and darkness; all we know concerning them for a long time is, that they multiplied so fast, that their country being unable to contain them, they pour- ed forth in vast multitudes into other countries, which they generally subdued, and settled in. It often happened, however, that these colonies were so molested by their neighbours, that they were obliged to send for assistance to the mother country. This was always very easily obtained. The Gauls were always ready to send forth great numbers of new adventurers; and as these spread desolation wherever they came, the very name of *Gauls* proved terrible to most of the neighbouring nations.—The earliest excursion of these people, of which we have any distinct account, was into Italy, under a famed leader, named *Bellovesus*, a- bout A. A. C. 622. He crossed the Rhone and the Alps, till then unattempted; defeated the He- trurians; and seized upon that part of the coun- try, since known by the names of *Lombardy* and *Piedmont*.—The 2d grand expedition was made by the *Cœnomani*, a people dwelling between the Seine and the Loire, under a general, named *Etiolis*. They settled in those parts of Italy since known by the names of *Breisciano*, *Cremonese*, *Maniuan*, *Car- niola*, and *Venetia*; now included in the Cisalpine republic and Maritime Austria. In a 3d excur- sion, 2 other Gaulish nations settled on both sides of the Po; and in a 4th the Boii and Lingones set- tled in the country between Ravenna and Bologna. The time of these 3 last expeditions is uncertain. The 5th expedition of the Gauls was more re- markable than any of the former, and happened about 200 years after that of Bellovesus. The *Se- nones*, settled between Paris and Meaux, were in- vited into Italy by an Etrurian lord, and settled themselves in Umbria. Brennus their king laid siege to Clusium, a city in alliance with Rome; and this produced a war with the Romans, in which the latter were at first defeated, and their city taken and burnt; but at length the whole ar- my of the Gauls was cut off by **CAMILLUS**, inso- much that not a single person escaped. The Gauls after this undertook some other expeditions against the Romans: in which, though they al- ways proved unsuccessful, by reason of their want of military discipline; yet their fierceness and courage made them so formidable to the re- public, that, on the first news of their march, ex- traordinary levies of troops were made, sacrifices and public supplications offered to the gods, and the law which granted an immunity from military service to priests and old men, was, for a time, abo- lished. Against the Greeks, the expedition of the

is was very little more successful than against the Romans. The first of these we hear of was about A. A. C. 279, the year after Pyrrhus had invaded Italy. At this time, the Gauls, finding themselves greatly overstocked with inhabitants at home, sent out 3 great colonies to conquer new countries. One of these armies was commanded by Brennus another by Cerethrius, and the 3d by Belgius. The first entered Panonia or Hungary; the second Thrace; and the 3d marched into Illyricum and Macedonia. Here Belgius at first met with great success; and enriched himself by plunder to such a degree, that Brennus, envying him, resolved to enter the same countries, in order to share the spoil. In a short time, however, Belgius met with such a total defeat, that his army was almost entirely destroyed; upon which Brennus hastened to the same place. His army at first consisted of 150,000 foot and 15,000 horse: but two of his principal officers revolted, and carried off 20,000 men, with whom they marched into Thrace; where, having joined Cerethrius, they seized on Byzantium and the western coast of Propontis, making the adjacent parts tributary to them.—To retrieve this loss, Brennus sent for fresh supplies from Gaul; and having increased his army to 150,000 foot, and upwards of 60,000 horse, he entered Macedonia, defeated the general who opposed him, and ravaged the whole country. He next marched towards the straits of Thermopylae, to invade Greece; but was stopped by the forces sent to defend that pass against him. He passed the mountains, however, as Xerxes had formerly done; upon which the guards retired, to avoid being surrounded. Brennus then having ordered Acichorius, the next to him in command, to follow at a distance with part of his army, marched with the bulk of the forces to Delphi, in order to plunder the rich temple there. This enterprise proved very unfortunate: a great number of his men were destroyed by a dreadful storm of hail, thunder, and lightning; another part of his army was destroyed by an earthquake; and the remainder, imagining themselves attacked by the enemy, fought against each other the whole night, so that in the morning scarce one half of them remained. The Greek forces then poured in upon them from all parts; and that in such numbers, that though Acichorius came up in due time with his forces, Brennus found himself unable to make head against the Greeks, and was defeated with great slaughter. He himself was desperately wounded; and so disheartened by his misfortunes, that, having assembled all his chiefs, he advised them to kill all the wounded and disabled, and to make the best retreat they could; after which he put an end to his own life. On this occasion it is said, that 20,000 of these unhappy people were executed by their own countrymen. Acichorius then set out with the remainder for Gaul; but, being obliged to march through the country of their enemies, the calamities they met with by the way were so grievous, that not one of them reached their own country. A just

story say the Greek and Roman authors, for various intentions against Delphi. The Gauls often felt the effects of the Gauls' outrage, thought proper at last,

in order to humble them, to invade them. Their first successful attempt was about 118, under Quintus Marcius Rex. He way betwixt the Alps and the Pyrene laid the foundation for conquering that country. This was a work of immense itself, and rendered still more difficult by the position of the Gauls, especially those of the Stæni, who lived at the foot of the Alps, the people finding themselves overpowered by the Romans, set fire to their houses, killed the men and children, and then threw themselves into flames. After this Marcius built Narbonne, which became the capital of a province.

(3.) GAUL, HISTORY OF, TO ITS SUBJUGATION BY CÆSAR. Scaurus, the first of the Marcius, also conquered some Gaulish nations, and to facilitate the sending troops from Rome to that country, he made several excursions between them, which before were almost impossible. These successes gave rise to the Cimbri and Teutones. See CIMBRI and TEUTONES, &c. From this time, the Gauls ceased to be formidable to the Romans, and seem to have been for some time on good terms with them. At last, however, the Helvetii led a war with the republic, which broke far over the Alps, and ended in the total conquest of the country. Orgetorix was the first of them; who had engaged a vast number of countrymen to burn their towns and villages, and to go in search of new conquests. Julius Cæsar, to whose lot the whole country of Gaul fell, made such haste to come and suppress them, that he got to the Rhone in 8 days; bridged the bridge of Geneva, and, in a few days, finished the famed wall between that mountain and mount Jura, now St Claude, which extends 16 miles in length, with towers and castles at proper distances, and that ran the whole length of it. According to his own account, he did not set out till the 1st of April; and yet this huge work was finished in the 8th day of the month: so that, in the 8 days he was a-coming, it must all be done in about 5 days; a prodigious consideration, he had but one legion there, though the whole country had given aid. Whilst this was doing, and the Helvetii he wanted were coming, he sent for the Helvetii, who had sent to demand a passage through the country of the Allobroges, till he had received reinforcements; and then flatly refused it, whereupon a dreadful battle ensued; they lost 130,000 men, in spite of all the reinforcements, besides a number of prisoners, among which was the wife and daughter of Orgetorix, the chief of this unfortunate expedition. The rest fled, and begged they might be permitted to settle among the Aedui, from whom they were naturally sprung; and, at the request of the Aedui, they were permitted to go. The Gauls were constantly in a state of variance with one another, and Cæsar, who knew how to make the most of these intestine broils, soon became the umpire of all their contentions. Any one who applied to him for help, were his

against whom Ariovistus, king of the Ger-  
 joined with the Averni, who inhabited the  
 of the Loire, had taken the country of the  
 from them, and obliged them to send  
 to him. Cæsar forthwith sent to demand  
 titution of both, and, in an interview which  
 after obtained with that haughty and  
 rous prince, had almost fallen a sacrifice to  
 sity; upon which he bent his whole pow-  
 er upon him, forced him out of his strong in-  
 nens, and gave him a total overthrow. A-  
 s escaped, with difficulty, over the Rhine;  
 two wives, and a daughter, with a great  
 of Germans of distinction, fell into the  
 ror's hand: Cæsar, after this signal victo-  
 his army into winter quarters, whilst he  
 ver the Alps to make the necessary prepara-  
 for the next campaign. By this time all  
 in general were so terrified at his suc-  
 cess as they entered into a confederacy against  
 nans as their common enemy. Of this  
 s, who had been left in Gaul, sent Cæsar  
 upon which he immediately left Rome,  
 le such dispatch, that he arrived upon their  
 in about 15 days. On his arrival, the  
 submitted to him; but the rest, appoint-  
 ha king of the Sueffones, general of all  
 ces, which amounted to 150,000 men,  
 directly against him. Cæsar, who had  
 n the bridge of the Axona, (now AIXNA,)  
 ight horse and infantry over it; and whilst  
 rs were encumbered in crossing that river,  
 ish terrible slaughter of them, that the ri-  
 filled with their dead, insomuch that their  
 served for a bridge to those who escaped.  
 victory struck such terror into the rest,  
 y dispersed themselves; immediately after  
 the Sueffones, Bellovaci, Ambionens, and  
 hers, submitted to him. The Nervii, in-  
 imed with the Atrebatens and Veromandui  
 them; and having first secured their wives  
 éren, made a vigorous resistance for some  
 ut were at length defeated, and the great-  
 of them slain. The rest, with their wives  
 men, surrendered, and were allowed to  
 their own cities and towns as formerly.  
 uaticus were next subdued; and, for their  
 y, were sold for slaves, to the number of  
 Young Crassus, the son of the triumvir,  
 also 7 other nations, and took possession of  
 ies; which not only completed the con-  
 of the Belgæ, but brought several nations  
 yond the Rhine to submit. The Veneti,  
 nt inhabitants of Vannes in Brittany, who  
 a likewise obliged to send hostages to the  
 or, in the mean time, made great prepara-  
 by sea and land to recover their liberty.  
 then in Illyricum, equipped a fleet on the  
 and having given the command of it to  
 went and defeated them by land, as Bru-  
 ny sea; and having put their chief men to  
 old the rest for slaves. The Unelli, with  
 x their chief, together with the Lexovii  
 ercii, were about the same time subdued  
 nus, and the Aquitani by Crassus, with  
 of 30,000 men. There remained nothing  
 countries of the Morini and Menapii to be

conquered of all Gaul. Cæsar marched against  
 them, but found them so well intrenched in their  
 inaccessible fortresses, that he contented himself  
 with burning and ravaging their country; and ha-  
 ving put his troops in winter quarters, he again  
 passed over the Alps, to have a more watchful  
 eye on some of his rivals there. He was, howe-  
 ver, soon after obliged to defend his Gaulish con-  
 quests against a body of Germans, who were at-  
 tempting to settle there, to the number of 400,000.  
 These he totally defeated, and then resolved to  
 carry his conquering arms into Germany. See  
 GERMANY.

(4.) GAUL, HISTORY OF, TO ITS TOTAL CON-  
 QUEST BY CÆSAR. Cæsar, upon his return into  
 Gaul, found it labouring under a great famine,  
 which had caused a kind of universal revolt. Cot-  
 ta and Sabinus, who were left in the country of  
 the Eburones, (now LIÈGE,) were betrayed into  
 an ambush by Ambiorix, one of the Gaulish chiefs,  
 and had most of their men cut off. The Adu-  
 atici had fallen upon Q. Cicero, who was left  
 there with one legion, and had reduced him to  
 great straits: while Labienus, with his legion, was  
 attacked by Indutiomarus, at the head of the  
 Rhemi and Senones; but by one bold sally, he put  
 them to flight, and killed their general. Cæsar  
 acquired no small credit by quelling all these re-  
 volts; but each victory cost so many of his troops,  
 that he was forced to have recourse to Pompey  
 for a fresh supply, who readily granted him two  
 of his own legions to secure his Gaulish conquests.  
 But the Gauls, ever restless under a foreign yoke,  
 raised up a new revolt, and obliged him to return.  
 His fear lest Pompey should gain the affections of  
 the Roman people, had obliged him to strip the  
 Gauls of their gold and silver, to bribe them over  
 to his interest; and this was no small cause of  
 those frequent revolts which happened during his  
 absence. He quickly, however, reduced the Nervii,  
 Aduatici, Menapii, and Treviri; the last of whom  
 had raised the revolt under the command of Ambio-  
 rix: but he found the flame spread much farther, e-  
 ven to the greatest part of the Gauls, who had cho-  
 sen Vercingetorix their generalissimo. Cæsar was  
 forced to leave Insurbria, whither he had retired to  
 watch the motions of Pompey, and, in the next  
 of winter, to repass the Alps into the province of  
 Narbonne. Here he gathered his scattered troops  
 with all possible speed; and, in spite of the bad  
 weather, besieged and took Noviodunum, (now  
 NOYONS;) and defeated Vercingetorix, who was  
 come to its relief. He next took the city of Avar-  
 ricum, (now BOURGES,) one of the strongest in  
 Gaul, and which had a garrison of 40,000 men:  
 of whom he made such a dreadful slaughter, that  
 hardly 200 escaped. Whilst he was besieging  
 Gergovia, the capital of the Arverni, he was in-  
 formed that the Nitiobriges, (or Agenois,) were in  
 arms; and that the Ædui were sending to Vercin-  
 getorix 10,000 men, whom they were to have sent  
 to reinforce Cæsar. Upon this news, he left Fabius  
 to carry on the siege, and marched against the Ædui.  
 These, upon his approach, submitted, in appear-  
 ance, and were pardoned; but soon after that  
 whole nation rose, and murdered all the Italian  
 troops in their capital. Cæsar, on this, resolve t

to raise the siege of Gergovia, and at once attack the enemy's camp, which he did with some success; but when he thought to have gone to Noviodunum, where his baggage, military chest, &c. were left, he heard that the Ædui had carried them off, and burnt the place. Labienus, justly thinking that Cæsar would need his assistance in the condition he now was, went to join him, and in his way defeated a Gaulish general, named *Camulogens*, who came to oppose his march: but this did not hinder the revolt from spreading all over Celtic Gaul, whither Vercingetorix had sent for fresh supplies, and, in the mean time, attacked Cæsar; but was defeated, and forced to retire to Alesia, a strong place, now called ALISE. Hither Cæsar hastened, and besieged him; and, having drawn a double circumvallation, with a view to starve him in it, as he was likely to have done, refused all offers of a surrender from him. At length, the long expected reinforcement came, consisting of 160,000 men, under 4 generals, who made several fruitless attacks on Cæsar's trenches; but were defeated in 3 several battles, which at length obliged Vercingetorix to surrender at discretion. Cæsar used all his prisoners with great severity, except the Ædui and Arverni, by whose means he hoped to gain their nations, which were the most potent of Celtic Gaul; nor was he disappointed; for both of them submitted to him, and the former received him into their capital, where he spent the winter, after putting his army into winter quarters. This campaign being one of the hardest he had ever made, so he gained more glory by it than any Roman general had done before: yet he could not procure from the servile senate, now wholly devoted to his rival, a prolongation of his consulship; upon which he is reported to have laid his hand upon his sword, and said, that *that* should do it. He was as good as his word; and the Gauls, upon their former ill success, resolving to have as many separate armies as provinces, in order to embarrass him the more, Cæsar, and his generals Labienus and Fabius, were forced to fight them one after another; which they did, however, with such success, that, notwithstanding the hardness of the season, they subdued the Biturges, Carnuti, Rhemi, and Bellovaci, with their general Correus; by which he at once quieted all the Belgic provinces bordering on Celtic Gaul. The next who followed were the Treviri, the Eburones, and the Sudes, under their general Dunmarus. The last place which held out against him was Uxellodunum; which was defended by the two last acting generals of the Gauls, Drapes, the Senonian, and Luterius, the Cadurcean. The place being strong and well garrisoned, Cæsar was obliged to march thither from the farthest part of Belgic Gaul; and soon after reduced it, for want of water. Here again he caused the right hands of all that were fit to bear arms to be cut off, to deter the rest from revolting a-fresh. Thus was the conquest of Gaul finished from the Alps and Pyrenees to the Rhine, all which vast tract was now reduced to a Roman province under the government of a prætor. During his several expeditions into Gaul, Cæsar is said to have

taken 800 cities; to have subdued 30 nations; and to have defeated, in several battles, three millions of men, of whom one million was killed, and another taken prisoner.— See the articles FRANCE and ROME.

GAULAN. See GAULON.

GAULANITIS, or GAULONITIS, a part of Bathan to the S. bordering on Gad. It was divided into

1. GAULANITIS INFERIOR, which lay on the lake of Genesareth; and
2. GAULANITIS SUPERIOR, which lay to Arabia.

GAULMIN, Gilbert, a French author, born in 1607. He wrote poems and critical works, which were much admired in his own time, but little esteemed. He died in 1665.

GAULON, or GOLAN, the capital of the Gaulanitis Superior; a Levitical city of refuge.

GAULONITE, the people of Gaul.

(1.) GAULOS, in ancient geography, an island of Sicily, in the African sea, at Melite, with commodious harbours; it was a colony of Phœnicians; now called MILES W. of Malta.

(2.) GAULOS, a town in the above island.

GAULS, the ancient inhabitants of Gaul, § 1—4. The Gauls were divided into a great number of different tribes, who were continually at war with one another, and at variance among themselves.

The Gauls, that not only all their cities, cantons, and districts, but almost all their families, were divided into, and torn by factions; and this undoubtedly facilitated the conquest of the whole. The character of all these people was an extreme of liberty, even to ferocity. This they carried to such an extreme, that either on the approach of servitude, or incapacity of action through wounds, or chronic diseases, they put their own lives, or prevailed upon their enemies to kill them. In cities, when they found themselves so straitly besieged that they could no longer, instead of thinking how to obtain reasonable terms of capitulation, their chief care was to put their wives and children to death, then to kill one another, to avoid themselves slavery. Their excessive love of liberty, and contempt of death, according to Strabo, facilitated their conquest by Cæsar; and their numerous forces upon such an enemy as Cæsar, their want of conduct, and proved the ruin of the whole. Their profession was hunting; and indeed, confined their vast forests with which their country was filled, and the multitude of wild beasts which they hunted and destroyed them, to prevent their being rendered totally uninhabitable. Besides this, however, they had also tilth, dromes, horse and chariot races, tilts and tournaments; at all of which the bards assisted in their poems, songs, and musical instruments. For an account of their religion, see DRUID. The Gauls were excessive

which they were very profuse; as, in northern nations, they were great eaters and drinkers. Their chief diet was beer and wine. Their tables were never set but with little bread, which was hard, and easily broken in pieces: and this they did in a very slovenly manner, cutting the piece in their hands, and holding it with their teeth. What they could not cut with a little knife or dirk, they cut with their girdles. When the company was at the *Corymbes*, or chief of the feast, either one of the richest, noblest, or bravest, with the master of the feast; the rest took their places next to their rank, having their servants hold their backs behind them. These feasts seldom were accompanied with bloodshed; but if the feast proved otherwise, it was generally accompanied not only with songs, but with dances, in which the combatants were armed cap-a-pee, and beat time with their swords upon their shields. On certain occasions, they dressed themselves in the skins of beasts, and that attire accompanied the procession of their deities or heroes. Others dressed themselves in masquerade habits, some of which were of a very indecent and obscene nature, and played several antic and ridiculous tricks. This last custom continued until the conversion to Christianity.

**GAULT**, a town of France, in the department of Cher, 8 miles N. of Montdoubleau.  
**GAURIA**, in botany, a genus of the order, belonging to the decandria class, and in the natural method ranking under the order, *Bicornes*. The exterior calyx is five, the interior quinquefid; the corolla nectarium consists of ten tubulated lobes, the capsule is quinquelocular, covered with the exterior calyx formed in the shape of a

**GAURDORF**, a town of Austria, 9 miles S. of Vienna.  
**GAUR**, a river in Durham, which runs into the sea at Bishop's Auckland.  
**GAUNT**, *adj.* [As if *gewant*, from *gapan*, Sax.] Thin; slender; lean; meagre.

That name befits my composition!  
 I am indeed, and *gaunt* in being old;  
 My grief hath kept a tedious fast;  
 I abstain from meat that is not *gaunt*?  
 How long time have I watch'd;  
 I breed leanness, leanness is all *gaunt*:  
 I am sure that some fathers feed upon  
 A fast; I mean my childrens looks;  
 I am in fasting thou hast made me *gaunt*:  
 I am for the grave, *gaunt* as a grave,  
 My hollow womb inherits nought but bones.  
*Shak. Richard II.*  
 Her stiff, *gaunt* and grim, her slight purf'd,  
 Their fasten'd fangs in blood embred.

*Dryden's Fables.*  
**GAUNT**, in geography. See **GHENT**.  
**GAULLED**, *adj.* in the manege, a term used of a horse whose belly shrinks up towards the back.

**GAUNTLET**, *n. f.* [*gantelet*, French.]

An iron glove used for defence, and thrown down in challenges. It is sometimes in poetry used for the *cellus*, or boxing glove.—

A scaly *gauntlet* now, with joints of steel,  
 Must glove this hand. *Shak. Henry IV.*  
 Feel but the difference, soft and rough;  
 This a *gauntlet*, that a muff. *Cleveland.*  
 Some shall in swiftness for the goal contend,  
 And others try the twanging bow to bend;  
 The strong with iron *gauntlets* arm'd shall stand,  
 Oppos'd in combat, on the yellow sand. *Dryden.*  
 Who naked wrestled best, besmear'd with oil;  
 Or who with *gauntlets* gave or took the foil.

*Dryden's Fables.*  
 The funeral of some valiant knight  
 May give this thing its proper light:  
 View his two *gauntlets*; these declare  
 That both his hands were us'd to war. *Prior.*  
 So to repel the Vandals off the stage,  
 Our vet'ran bard resumes his tragick rage;  
 He throws the *gauntlet* Otway us'd to wield,  
 And calls for Englishmen to judge the field.

*Southern.*  
 (2.) **THE GAUNTLET**, [from *gant* or *gant*, Fr. a glove] in chivalry, was worn by cavaliers when armed at all points. The fingers were covered with small plates. The calque and gauntlets were always born in the ancient marches. They were introduced about the 12th or 13th century.

(3.) **GAUNTLET**. } See **GANTELOPE**.  
**GAUNTLOPE**. }

\* **GAUNTLY**, *adv.* [from *gaunt*,] Leanly; slenderly; meagerly.

(1.) \* **GAVOT**, *n. f.* [*gavotte*, French.] A kind of dance.—The disposition in a fiddle to play tunes in preludes, sarabands, jigs and *gavots*, are real qualities in the instrument. *Mart. Scriblerus.*

(2.) **GAVOT**, } or **GAVOTTE**, is a kind of  
**GAVOTTA**, } dance, the air of which has two  
 brisk and lively strains in common time, each of which is twice played over. The first has usually 4 or 8 bars; and the 2d contains 8, 12, or more. The first begins with a minim, or two crotchets, or notes of equal value, and the hand rising; and ends with the fall of the hand upon the dominant or mediant of the mode, but never upon the final, unless it be a rondeau: and the last begins with the rise of the hand, and ends with the fall upon the final of the mode.

(3.) **GAVOTTA**, **TEMPI DI**, is when only the time or movement of a *gavotte* is imitated, without any regard to the measure or number of bars or strains.—Little airs are often found in sonatas, which have this phrase to regulate their motions.

(1.) **GAUR**, a country of Asia, between Balk and Candahar.

(2.) **GAUR**, the capital of the above country, 152 miles NNW. of Candahar, and 150 E. of Herat.

(1.) **GAURA**, in botany, *Virginian Loose-Strife*, a genus of the monogynia order, belonging to the octandria class of plants; and in the natural method ranking under the 17th order, *Calycantemæ*. The calyx is quadrifid and tubular; the corolla pentapetalous, with the petals rising upwards. The nut is inferior, monoispermous, and quadrangular.

(2.) **GAURA**, in geography, a town of Peru, in the prov. of Chançay, containing 200 houses and 2 churches. Its chief trade is in beef and salt.

(3.) **GAURA**,

(3.) GAURÁ, a river of Perú, in Chançay.  
 GAURABAD. See GABRES, N<sup>o</sup> 1.  
 GAVRAY, a town of France, in the dep of the Channel, 13 miles N. of Avranches, and 3 S. of Coutances.  
 GAVRES, } or GABRES. See GABRES, N<sup>o</sup> 1.  
 GAURS, }  
 GAUSE. See GAÜZE.

The GAUTS or INDIAN APENNINES, a stupendous wall of mountains, extending from Cape Comorin, the S. extremity of the peninsula of Indostan, to the Tapti, or Surat river, at unequal distances from the coast; seldom more than 60 miles, commonly about 40, and in one part it approaches within 6 miles. They rise abruptly from the country of Concan, supporting, in the nature of a terrace, a vast extent of fertile and populous plains, which are so elevated as to render the air cool and pleasant. The height is supposed to be from 3000 to 4000 feet. This celebrated ridge does not terminate in a point, when it approaches the Tapti; but, departing from its meridional course, it bends eastward, in a wavy line, parallel to the river; and is afterwards lost among the hills, in the neighbourhood of Burrhanpou. In its course along the Tapti, it forms several passes or descents, whence the name *Gauts*, (which means a landing place) towards that river. The alternate NE. and SW. winds, called MONSOONS, occasion a rainy season only on one side, viz. on the windward side of these mountains. See BALAGATE, N<sup>o</sup> 2.

(1.) GAUZE. *n. f.* A kind of thin transparent silk.—Silken cloaths were used by the ladies; and it seems they were thin, like gauze. *Arb. on Coins.*

Brocades and damasks, and tabbies and gauzes, are lately brought over. *Sawist.*

(2.) GAUZE, GAUSE, or GAWSE, in commerce, is woven sometimes of silk, and sometimes only of thread. To warp the silk for making gauze, they use a peculiar kind of mill, upon which the silk is wound: this mill is a wooden machine about 6 feet high, having an axis perpendicularly placed in the middle thereof, with 6 large wings, on which the silk is wound from off the bobbins by the axis turning round. When all the silk is on the mill, they use another instrument to wind it off again on two beams: this done, the silk is passed through as many little beads as there are threads of silk; and thus rolled on another beam to supply the loom. There are figured gauzes; some with flowers of gold and silver, on a silk ground: these last are chiefly brought from China.

(3.) The GAUZE LOOM resembles the common loom, but has several appendages peculiar to it. See LOOM.

GAWILE. See GVALGUR.

\* GAWK. *n. f.* [*geac. Saxon.*] 1. A cuckow.  
 2. A foolish fellow. In both senses it is retained in Scotland.

\* GAWN. *n. f.* [corrupted for *gallon.*] A small tub, or lading vessel. A provincial word.

GAWNAGH, LOUGH, a lake of Ireland in Longford, 15 miles NE. of Longford.

\* GAWN-TREE. *n. f.* [*Scottish.*] A wooden frame on which beer calks are set when turned.

GAWRAH, a river of Indostan.

GAY, John, a celebrated English poet,

descended from an ancient family in Devonshire. He was born at Exeter, and educated at the school of Barnstaple, under Mr Ray, who bred a mercer, but having a small fortune, and considering the attendance on a shop would be an injury to the education of his talents, he resolved to go to the university. In 1713, when he was secretary to the duchess of Monmouth, he accompanied the earl of Clarendon to France. On Q. Anne's death, he returned to England, where he lived in the highest esteem and friendship with many persons of the highest rank. He was particularly taken with the Duchess of Devonshire, then princess of Wales, read in MS. his tragedy of the *Cop*, which in 1726 dedicated his *Fables*, by permission of the duke of Cumberland. From this time he was shown to him, and numberless professions of friendship, it was supposed, that he would have been provided for in some office of distinction and abilities. But in 1727, he was offered the place of gentleman of the bed-chamber to one of the youngest princesses, which he thought rather an indignity to a man of his rank; and warm remonstrances were made on his behalf by his sincere friends and patrons, the duchess of Queensberry, who withdrew in disgust. Mr Gay's dependence on the favours of the great, he has himself and humorously described in his *Hare with many friends*. The profits of his poetry he lost in 1720, in the S. Sea scheme; but his very extraordinary encouragement from the public soon made ample amends for his private disappointments. For, in 1726, he published his *Beggar's Opera*; the success of which was not only unprecedented, but incredible. It had an uninterrupted run for 63 nights in the first season, and in the ensuing one with equal success. It spread into all the great towns of England, acted in many places 30 and 40 times; at Bath and Bristol 50; made its progress into Scotland, and Ireland, in which last it acted for 24 successive nights; and was performed at Minorca. Not contented with the reading and representing the card-table and drawing-room, the theatre and closet; the ladies in their favourite songs engraven upon the screens and other pieces of furniture rated with them. It short, the success was so striking, and so perfectly adequate to the taste of all ranks that it overthrew the long idolized, and which Denham and other writers had in vain, by the force alone, endeavoured to drive from the public taste. The profits were so great to the author and Mr Rich the manager, that they gave rise to a popular pun, viz. *Tba Rich gay, and GAY rich*. In consequence of this success, Mr Gay was induced to write to it, which he entitled *Polly*. But the rivalry between him and the court, and the report of his having wrote seditious verses, occasioned a prohibition of it to be

ertain, at the time when every thing shines for the rehearsal. A very common, however, accrued to him from the of it afterwards in 4to. He wrote several dramatic pieces, and many valuable &c. Among the latter, his *Trivia*, or *walking the streets of London*, though critical attempt, recommended him to and friendship of Mr Pope; but as dramatic works, his *Beggar's Opera* ever stand as an unrivalled masterpiece, his poetical works, his *Fables* hold the of estimation. Mr Gay's disposition and affable, his temper generous, and tion agreeable. But he had one foible, icident to men of great literary ability excess of indolence, without any So that, though his emoluments were, riods of his life, very considerable, he ers greatly straitened in his circum- r could he prevail on himself to follow f his friend Dean Swift, who endea- ersuade him to purchase an annuity, e for the exigencies of old age. Mr ure, after having undergone many vic- fortune, and being for some time orted by the duke and duchess of y, died at their house in Burlington Dec. 1732. He was interred in West- bey, and a monument erected to his t their expence; with an inscription of his merits, and an epitaph in verse e.

**AY. adj.** [*gay*, French.] 1. Airy; cheer-; frolick.—

h flow the waves, the zephyrs gently

's  
smil'd, and all the world was *gay*. *Pope*.

a town of Moravia, in Hardisch.

'A, a town of Spain in Valencia, 30 Valencia.

**TY. n. f.** [*gayeté*, French; from *gay*.]

liness; airiness; merriment. 2. Acts pleasure.—

om those *gayeties* our youth requires

ise their minds, our age retires. *Deub*.

show.—

*gayety* and our guilt are all besmirch'd,  
*ay* marching in the painful field.

*Shak. Henry V.*

**AD**, a peninsula of Massachusetts, on Martha's Vineyard, 3½ miles long and It has evident marks of 4 or 5 old vol- me of them called the *Devil's Den*, is with grass, and is 20 rods over at top, et high at the sides. Lon. 70. 50. W. N.

**X. adv.** 1. Merrily; cheerfully; airily;

2. Splendidly; pompously; with great show,

The ladies, *gayly* dress'd, the Mall adorn.

With curious dyes, and paint the sunny morn,

*Gay*,

Like some fair flow'r, that early Spring supplies,

That *gayly* blooms, but ev'n in blooming dyes,

*Pope*.

† **GAYNESS. n. f.** [from *gay*.] Gayety; fiery. Not much in use.

**GAYOT DE PETAVAL**, Francis, a French writer of the 18th century, born in 1673. He published an interesting work, entitled *Causés Celebres*, in 20 vols. 12mo. and died in 1743, aged 70.

(1.) **GAZA**, Theodore, a famous Greek in the 15th century, born in Thessalonica, in 1398. His country being invaded by the Turks, he retired into Italy; where he at first supported himself by transcribing ancient authors. His uncommon parts and learning soon recommended him to public notice. In 1450, he was invited to Rome by Pope Nicholas V; and on his death, in 1456, to Naples, by king Alphonso: who dying in 1458, he returned to Rome, where cardinal Bessarion procured him a benefice in Calabria. He was one of those to whom the revival of learning in Italy was principally owing. He translated from the Greek into Latin, Aristotle's History of Animals, Theophrastus on plants, and Hippocrates's Aphorisms; and put into Greek, Scipio's Dream, and Cicero's Treatise on Old Age. He wrote a Grammar and several other works in Greek and Latin; and died at Rome in 1478, aged 80.

(2.) **GAZA**, in ancient geography, a principal city and one of the five satrapies of the Philistines. It was situated about 100 stadia from the Mediterranean, on an artificial mount, and strongly wall- ed round. It was destroyed by Alexander the Great, and afterwards by Antiochus. In the time of the Maccabees it was a strong and flourishing city; but was destroyed a 3d time by Alexander Jannæus. At present it contains only about 2000 inhabitants. The buildings are mean, both as to the form and matter. Some remains of its ancient grandeur appear in the handsome pillars of Pavian marble which support some of the roofs; while others are disposed of here and there, in different parts of almost every beggarly cottage. On the top of the hill, at the NE. corner of the town, are the ruins of large arches sunk low into the earth, and other foundations of a stately building, whence some of the bathaws have carried off marble pillars of an incredible size. Soap and cotton cloths are the chief manufactures. The latter employs 500 looms. Gaza is the resi- dence of a Turkish bathaw. It was taken by the French under Gen. Kleber in Feb. 1799. It lies 50 miles SW. of Jerusalem. Lon. 34. 45. E. Lat. 31. 28. N.

(3.) **GAZA, NEW**, a sea port of GAZA, N° 2.

\* **GAZE. n. f.** [from the verb.] 1. Intent re- gard; look of eagerness or wonder; fixed look.—

Being lighten'd with her beauty's beam,

And thereby fill'd with happy influence,

And lifted up above the world's gaze,

To sing with angels her immortal praise. *Spens*;

Do but note a wild and wanton herd,

If any air of musick touch their ears,

You shall perceive them make a mutual stand,

Their

Then savage eyes turn'd to a modest gaze,  
By the sweet power of musick. *Shak.*

Not a month  
Fore your queen dy'd, she was more worth  
such gazes

Than what you look on now. *Shak. Wint. Tale.*  
With secret gaze,

Or open admiration, him behold,  
On whom the great Creator hath bestow'd  
Worlds. *Milton's Paradise Lost.*

—Pindar is a dark writer, wants connexion, as to  
our understanding, soars out of sight, and leaves  
his readers at a gaze. *Dryd.*—After having stood  
at gaze before this gate, he discovered an in-  
scription. *Addison's Freeholder.* 2. The object  
gazed on.—

I must die  
Betray'd, captiv'd, and both my eyes put out;  
Made of my enemies the scorn and gaze;  
To grind in brazen fetters, under task,

With my heav'n-gifted strength. *Milton's Agon.*  
(1.) \* To GAZE [*αγαλλίζω*, or rather *γεσσαν*, to  
see, Sax.] To look intently and earnestly; to  
look with eagerness.—

What see'st thou there? King Henry's diadem,  
Inchas'd with all the honours of the world:  
If so, gaze on. *Shak. Henry IV.*

From some she cast her modest eyes below;  
At some her gazing glances roving flew. *Fairf.*  
—Gaze not on a maid, that thou fall not by those  
things that are precious in her. *Ecclesi. ix. 5.*—

A lover's eyes will gaze an eagle blind. *Shak.*  
High stations tumults, but not bliss create;  
None think the great unhappy, but the great.  
Fools gaze and envy; Envy darts a sting,  
Which makes a swain as wretched as a king.

*Young.*  
(2.) \* To GAZE. *v. a.* To view steadfastly.—

Strait toward heav'n my wond'ring eyes I  
turn'd,

And gaz'd a while the ample sky. *Milton.*  
\* GAZEFUL. *adj.* [*gaze* and *full*.] Looking  
intently.—

The brightness of her beauty clear,  
The ravish'd hearts of gazeful men might rear  
To admiration of that heavenly light.

*Spenser on Beauty.*  
(1.) \* GAZEHOOND. *n. f.* [*gaze* and *hound*;  
*canis acasus*, *Skinner*.] A hound that pursues  
not by the scent, but by the eye.—

See'st thou the gazehound! how with glance  
severe

From the close herd he marks the destin'd deer!  
*Tickel.*

(2.) GAZE-HOUNDS, or GAST-HOUNDS, are  
much used in the north of England: they are  
fitter in an open champaign country than in bushy  
and woody places. If a well-taught gaze-hound  
takes a wrong way, he will return upon a signal  
and begin the chase afresh. He is also excellent  
at spying out the fattest of a herd; and having se-  
parated it from the rest, will never give over the  
pursuit till he has worried it to death.

(1.) \* GAZEL. *n. f.* An Arabian deer.

(2.) GAZEL, or } in zoology. See CAPRA, §  
GAZELLA, } VII, N° 4; and § VIII.

\* GAZER. *n. f.* [*from gaze*.] He that gazes;

one that looks intently with eagerness  
tion.—

In her cheeks the vermil red did  
Like roses in a bed of lilies shed;  
The which ambrosial odours from  
And gazers sense with double pleasur

I'll Ray more gazers than the best  
Bright as the sun, her eyes the gaz  
And, like the sun, they shine on all  
—His learned ideas give him a tran-  
sient light; and yet, at the same time, discer-  
nment which the common gazer never  
*Wait's Logick.*

(1.) \* GAZETTE. *n. f.* [*gazetta* is  
halfpenny, the price of a news paper  
the first was published at Venice.]  
publick intelligence. It is accented di-  
the first or last syllable.—

And sometimes when the loss is  
And danger great, they challenge a  
Print new additions to their seats,  
And emendations in gazettes.

—An English gentleman, without geog-  
not well understand a gazette. *Locke*  
not hear a name mentioned in it that  
bring to mind a piece of the gazette.  
All, all but truth, falls dead-bor-  
press;

Like the last gazette, or the last ad-  
(2.) GAZETTE is with us confined

per of news published by authority.  
English gazette was published at C  
court being there, in a folio half she-  
1665. On the removal of the court  
the title was changed to the *London G*  
Oxford gazette was published on Tu-  
London on Saturdays: and these have  
to be the days of publication ever since

(1.) \* GAZETTEER. *n. f.* [*from*  
A writer of news. 2. An officer appoin-  
lish news by authority, whom *Steele* c-  
ell minister of state.—

Satire is no more: I feel it die  
No gazetteer more innocent than I.

(2.) GAZETTEER, in literature, is  
nerally used as a title for Geographic  
ries, giving a brief account of the va-  
tries, kingdoms, cities, towns, reput  
the world, in alphabetical order.

\* GAZINGSTOCK. *n. f.* [*gaze*  
A person gazed at with scorn or ab-  
These things are offences to us, by m-  
zing stocks to others, and objects of the  
derision. *Ray.*

GAZNA, a city of Asia, once im-  
ted, and the capital of a very extens-  
but which is now either entirely ruin-  
come of so little consideration, that it  
ken notice of by geographers. This  
ciently an emporium and fortress of Za-  
the confines of India. During the va-  
conquests of the Arabs, all this count-  
reduced under their subjection. On-  
of the power of the khalifs, however,  
pire established by Mahomet and his su-  
divided into a number of independent

which were but of short duration. of the Hegira 384, answering to A. D. of Gazna, with some part of the ady, was governed by Mahmud Gazni; a great conqueror, and reduced un- tion a considerable part of India and a. This empire continued in the fa- nud Gazni for upwards of 200 years. uccessors, however, possessed his a- therefore the extent of the empire, reasing, was very considerably dimi- after his death. The Seljuks took the greatest part of the Persian domi- ; and in the 347th year of the He- : of the Gazni sultans were entirely one of the Gauri, who conquered the reigning prince, and bestowed s on his own nephew, Gayathoddin

These new sultans proved greater than the former, and extended their rther than even Mahmud Gazni had did not however, long enjoy the so- Gazna; for in 1218, Jenghiz Khan ured the greatest part of China and rary, began to turn his arms west- et out against Gazna at the head of . To oppose this formidable army,

the reigning sultan, could muster men; and, in the first battle, 160,000 perished. After this defeat, Moham- ring to risk a 2d battle, distributed oug the strongest fortified towns in s; all of which Jenghiz Khan took ther. The rapid progress of his con- d, almost exceeds belief. In 1219 : had reduced Zarnuck, Nur Bokha- ganak, Uzkant, Alshath, Jund, Ton- l, and Samarcand. Mohammed, in ic, fled first to Bokhara; but on the Jenghiz Khan's army, quitted that id to Samarcand. Even here he did o trust himself, though it was garri- ,000 of his bravest troops; but fled rays into Ghilan in Persia, where he n a strong fortress, called *Eshabad*. o found out in this retreat, he fled to ic Caspian sea, called *Abikhun*; where days, leaving his empire, such as it is Jaloloddin. The new sultan was at bravery and experience in war; ould stop the progress of the Moguls. :221, they made themselves masters ddoms of Korazim and Khorasan, very where such massacres as were f before or since. In the mean time embled his forces with the utmost l defeated two detachments of the

He had been lately

RT I.

joined by 3 Turkish commanders, each of whom had a body of 10,000 men under his command. After his victories over the Moguls, these officers demanded the greatest share of the spoils; which being refused, they left him. He endeavoured to make them hearken to reason; and sent letters to them, representing the inevitable ruin which must attend their separation, as Jenghiz Khan was ad- vancing against them with his whole army. At last they were persuaded to lay aside their animosi- ties, but it was now too late; for Jenghiz, being informed of what passed, detached 60,000 horie to prevent their joining the sultan's army; who, finding himself deprived of this powerful aid, re- tired towards the Indus. When he was ar- rived there, he stopped in a place where the stream was most rapid and the place confined, with a view both to prevent his own soldiers from flying, and to hinder the whole Mogul army from at- tacking him at once. Ever since his departure from Gazna he had been tormented with a colic; yet, at a time when he suffered most, hearing that the enemy's vanguard was arrived at a place in the neighbourhood called *Herder*, he quitted his litter, and, mounting a horse, marched with some of his chosen soldiers in the night; surpris- ed the Moguls in their camp; and having cut them almost all to pieces, without the loss of a man on his side, returned with a considerable booty. Jeng- hiz Khan, finding by this that he had a vigilant e- nemy to deal with, proceeded with great circum- spection. When he came near the Indus, he drew out his army in battalia: to Jagatay and Oktay, his sons, he gave the command of the right and left wings; and put himself in the centre, with 6000 of his guards. On the other side, Ja- loloddin prepared for battle like one who had no resource but in victory. He first sent the boats on the Indus farther off; reserving only one to carry over his mother, wife, and children: but un- luckily the boat split when they were going to embark, so that they were forced to remain in the camp. He himself took the command of the main body. His left wing, drawn up under shelter of a mountain which hindered the whole right wing of the Moguls from engaging at once, was com- manded by his vizir: and his right by a lord na- med *Amin Malek*. This lord began the fight; and forced the enemy's left wing, notwithstanding the great disparity of numbers, to give ground. The right wing of the Moguls likewise wanting room to extend itself, the sultan made use of his left as a body of reserve, detaching thence some squadrons to the assistance of the troops who stood in need of them. He also took one part of them with him when he went at the head of his main body to charge that of Jenghiz Khan; which he did with so much resolution and vigour, that he not only put it in disorder, but penetrated into the place where Jenghiz Khan had originally taken his sta- tion: but that prince, having had a horse killed under him, was retired from thence, to give orders for all the troops to engage. This disadvantage had almost lost the Moguls the battle; for a report be- ing spread that the enemy had broken through the main body, the troops were so much discouraged that they would have fled, had not Jenghiz Khan encouraged them by riding from place to place to

N n

dicw

show himself. At last, however, Jaloloddin's men, who were in all 30,000, having fought a whole day, with ten times their number, were seized with a panic, and fled. One part of them retired to the rocks on the shore of the Indus, where the enemy's horse could not follow them; others threw themselves into the river and were drowned, though some had the good fortune to cross over in safety; while the rest, surrounding their prince, continued the fight through despair. The sultan, however, considering that he had scarce 7000 men left, began to think of providing for his own safety: therefore, having bidden a final adieu to his mother, wife, and children, he mounted a fresh horse, and spurred him into the river, which he crossed in safety, and even stopped in the middle of it to insult Jenghiz Khan, who was now arrived at the bank. His family fell into the hands of the Moguls; who killed all the males, and carried the women into captivity. Jaloloddin being landed in India, got up into a tree to preserve himself from wild beasts. Next day, as he walked melancholy among the rocks, he perceived a troop of his soldiers, with some officers, three of whom proved to be his particular friends. These, at the beginning of the defeat, had found a boat in which they had sailed all night, with much danger from the rocks, shelves, and rapid current of the river. Soon after, he saw 300 horse coming towards him; who informed him of 4,000 more that had escaped by swimming over the river; and these also soon after joined the rest. In the mean time an officer of his household, named *Jamalarrazad*, knowing that his master and many of his people were escaped, ventured to load a very large boat with arms, provisions, money, and stuff to clothe the soldiers, with which he crossed the river. For some time after, the sultan's affairs seemed to go on prosperously, and he gained some battles in India; but the Indian princes, envying his prosperity, conspired against him, and obliged him to repass the Indus. Here he again attempted to make head against the Moguls; but was at last defeated and killed by them, and a final end put to the once mighty empire of Gazna. The metropolis was reduced by Oktay; who no sooner entered the country in which it was situated, than he committed the most horrid cruelties. The city was well provided with all things necessary for sustaining a siege; had a strong garrison and a brave and resolute governor. The inhabitants, expecting no mercy from Jenghiz Khan, resolved to make a desperate defence. They made frequent sallies on the besiegers, several times overthrew their works, and broke above 1000 of their battering rams. But one night, after an obstinate fight, part of the city walls fell down; and a great number of Moguls having filled up the ditch, entered the city sword in hand. The governor perceiving all was lost, at the head of his bravest soldiers rushed into the thickest of his enemies, where he and his followers were all slain. However, Gazna was not entirely destroyed, nor were the people all killed; for after the massacre had continued 4 or 5 hours, Oktay stopt it, and taxed those who were left alive, to redeem themselves and the city. It does not, however, appear, that after this time Gazna ever made any

considerable figure.—It was taken by A. D. 1222.

GAZNIN, a town of Asia, in the Candahar, 106 miles E. of Candahar.

GAZOLDO, a town of the Cisalpi in the dep. of Mincio, and *ci devau* Mantua, 13 miles WNW. of Mantua.

BAER, or GIABER, a celebrated philosopher, and mathematician of Arabia, is supposed to have been the inventor of ALGEBRA; he must have flourished before A. D.

BAER, a king or chief of the Arabs, promiscuous with the above philosopher, (N<sup>o</sup>. wrote several tracts on chemistry, or rather, in Latin; printed from a copy in 1711, at Dantzick, in 1682, in 1660. In it is filled not only *rex Arabum*, but *philosophicissimus*; and in two of these tracts, *Investigationis Magisterii*, and *Testamentibus animalium*, &c. he is also filled, though it seems difficult to account for distant titles.

BAER, John, a physician and astronomer who flourished in the 9th century. He commented on Ptolemy's *Syntaxis Mathematica*; he attempted to correct his Astronomer; he is stiled him the Calumniator of Hermetus; he wrote several other works, and Boetius stiled him a learned chemist. But his writings are stuffed with the jargon of the day; that Dr Johnson traces the derivation of *Gibberish* from them. See GIBBERISH.

BAIDORF, a town of Saxony, in the circle of Querfurt, one mile N. of Dahme.

BAIE, a town of Upper Saxony, in Thuringia NNW. of Erfurt.

BAIZ, a town of Bohemia, in the circle of Leitmeritz.

BAK. See GABRES, N<sup>o</sup>. 1.  
BAK, in natural history, a name given by the ancients to their terrible poison, the smallest which kills when mixed with the blood. That it is a venomous froth or humour that issues from the mouths of their most poisonous animals; which they procure in this fatal way hanging up the creatures by the tails, and ing them to enrage them: they collect the froth in small vessels as it falls; and when they have it, they either poison a weapon with it, or mix any part of the flesh introduce the poison into it; which is said to be an immediate death.

BAK. n. s. [*geac*, a cuckoo; *geck*, Germ. *wick*, Scottish.] A bubble easily imposed upon. Obsolete.—Why did you suffer to taint his noble heart and brain with a drowsy, and to become the *geck* and other's villainy? *Sbak. Cymbeline*.—Have you suffer'd me to be imprison'd, to be the most notorious *geck* and gull of the invention play'd on? *Twelfth Night*.  
BAK. v. a. [from the noun.] To cheat;

BAK. See LACERTA.  
BAK, William, goldsmith in Edinburgh, an ingenious unsuccessful artist, deserves to be remembered for his attempt to introduce an improvement of printing. The invention, first

practised by Ged, in 1735, was simply this. From any types of Greek or Roman, or any other character, he formed a plate for every page, or sheet of a book, from which he printed, instead of using a type for every letter, as is done in the common way. This was first practised, but on blocks of wood, by the Chinese and Japanese, and pursued in the first essays of Colster the European inventor of the present art. "This improvement (says James Ged the inventor's son) is principally considerable in 3 most important articles, viz. expence, correctness, beauty and uniformity." But these improvements are contrived. In July, 1749, William Ged entered into partnership with William Fenner, a London Stationer, who was to have half the profits, in consideration of his advancing all the money requisite. To supply this, Mr John James, then an architect at Greenwich (who built Sir Gregory Page's house, Bloomsbury church, &c.) was taken into the scheme, and afterwards his brother Mr Thomas James, a letter-founder, and James Ged the inventor's son. In 1730, these partners applied to the university of Cambridge for printing bibles and common prayer books by blocks instead of single types; and, in consequence, a lease was sealed to them, April 23d. 1731. In their attempt they sunk a large sum of money, and finished only two prayer-books; so that it was relinquished and the lease given up in 1738. Ged imputed his disappointment to the villany of the pressmen, and the ill treatment of his partners (which he specifies at large), particularly Fenner, whom John James and he were advised to prosecute but declined it. He returned to Scotland in 1733, where he gave his friends a specimen of his performance, by an edition of *Salustius*. But being still unsuccessful, and having failed in obtaining redress from Fenner, who died insolvent, he was preparing again to set out for London, to join with his son James as a printer there, when he died Oct. 19. 1749. Thus ended his life, and his project; which, ingenious as it seems, is not likely to be revived, if, as Mr Mores suggests, "it must, had it at first succeeded, have soon sunk under its own burden."

GEDALIA, a Jewish Rabbi, who wrote a Treatise on the Creation; and an account of a Series of Traditions from Adam to A. D. 761. He died in 1448.

GEDDES, James, born in 1710, of a respectable family in Scotland, was educated for the bar, and practised several years; but died of a consumption before he arrived at the age of 40. He published *An essay on the composition and manner of writing of the ancients*; and left behind him several other tracts.

GEDERN, a town of Germany, in the circle of the Upper Rhine, belonging to the Prince of Stolberg, 24 m. ENE. of Francfort on the Maine.

GEDIDA, a town of Arabia Deserta, 60 miles W. of Ana.

\* GEE. A term used by waggoners to their horses when they would have them go faster.

GEELE, GHEELE or GHELE, a town of the French republic, in the dep. of Dyle, and adjacent prov. of Brabant, 10 miles NW. of Diest.

GEEMSKERSKOI Nos, a cape on the E.

coast of Nova Zembla. Lon. 95° E. of Ferro. Lat. 77. 10. N.

GEENON. See BEN-HINNON and GEHENNA.  
GEEONG, a town in the island of Borneo. Lon. 117. 10. E. Lat. 5. 10. N.

GEERVLIET, a town of the Batavian republic, in the isle of Putten, dep. of Amstel, and late prov. of Holland, 5 miles from the Briel.

GEESCH, a town of Abyssinia, on the Nile.

(1.) \* GEESE. The plural of *goose*.

(2.) GEESE. See ANAS, N° 4, and GOOSE.

GEETE, a river of the French republic, in the dep. of Dyle, and late prov. of Brabant. It runs into the Demer at Dalen.

GEEVACH, mountains of Ireland, between the counties of Leitrim and Roscommon, 9 miles NE. of Boyle.

GEEZ. See ETHIOPIA, § 32.

(1.) GEFE, a river of Sweden, in the prov. of Gestrícia, which runs into the Gulf of Bothnia, 10 miles below the town, N° 2.

(2.) GEFE, or GIAWLE, an ancient and populous town of Sweden, in Gestrícia, divided and surrounded by an arm of the Gulf of Bothnia, which forms it into two islands. The harbour is good, the chief exports are iron, pitch, tar, and planks. It is 60 miles N. of Upsal. Lon. 17. 1. E. Lat. 60. 50. N.

GEFREES, a town of Franconia, in the county of Bayreuth, 12 miles NNE. of Bayreuth.

GEGE, a river of Prussian Lithuania, which runs into the Wilde, 2 miles SE. of Plafchken.

GEGENBACH. See GEGENBACH.

GEGENDE, a town of Turkey, in Bulgaria.

GEGENY, a town of Hungary.

GEGNO, a town of the Cisalpine republic, in the dept. of Lario, and ci-devant county of Como, on the E. bank of Lake Como.

GEHENNA, } [ΓΗΕΝΝΑ, Gr. of ΓΗΕΝΝΑ, Heb. the  
GEHINNON, } valley of Hinnom.] a scripture term which has given some trouble to the critics. It occurs in St Matthew, v. 22. 29. 30. x. 28. xviii. 9. xxiii. 15. 33. Mark, ix. 43. 45. 47, Luke, xii. 5. James, iii. 6. The authors of the Louvain and Geneva versions retain the word *gehenna* as it stands in the Greek; the like does M. Simon: the English translators render it by *bell* and *bell-fire*, and so do the translators of Mons and Father Bohours. In the valley of Hinnom, near Jerusalem, there was a place named ΤΟΡΗΕΤ, where the idolatrous Jews sacrificed their children to Moloch, by fire. (See BEN-HINNON, and ΜΟΛΟΧ.) K. Josias, to render this place for ever abominable, made a common sewer of it, where all the filth and carcases of the city were cast; and where a continual fire was kept up, to burn those carcases; for which reason, as the Jews had no proper term in their language to signify *bell*, they made use of *gehenna* or *gehinnon*, to denote a fire unextinguishable.

GEHMEN, a town of Germany in Westphalia, on the Aa, in the bishopric of Munster, 16 miles NE. of Wesel.

GEHOFEN, a town of Saxony, 3 miles S. of Artern, in the county of Mansfeld.

GEHRDEN, a town of Saxony, in the principality of Calenberg, 6 miles WSW. of Hanover.

GEHREN, a town of Saxony, 10 miles S. of Arnstadt.

GEIL, a river of Germany, which joins the Danube, runs through Carinthia, and falls into the Drave near Willach.

GEILBERG, a mountain of Carinthia, in the public, in the dep. of the Roer, and duchy of Juliers, 8 miles NW. of Juliers.

GEILSDORF, a town of Saxony, in the county of Vogtland, 5 miles SSW. of Plauen.

GEISENFELD, a town of Upper Saxony, 10 miles SE. of Ingoldstadt, and 10 N. of Hofen.

GEISENHEIM, a town of Germany, in the electorale of Mentz, now included in the French republic, and dept. of Rhine, 17 miles W. of Mentz.

GEISING, a town of Saxony, in the county of Meissen, one mile S. of Laueritz.

GEISINGEN, a town of Germany, in the principality of Furstenberg, 10 miles N. of Schaffhausen, and 29 NW. of Ulm.

GEISLEDE, a river of Germany, in the county of the Lower Rhine, which runs into the Moselle, 12 miles W. of Ulm.

(1.) GEISMAR, a town of Hesse, 12 miles NNW. of Cassel, and 22 W. of Kassel.

(2.) GEISMAR, a village of Hesse, in the county of Fulda, 3 miles WNW. of Fulda.

GEISPOLTZHEIM, or GEISPOTZHEIM, a town of the Lower Rhine; 2 miles E. of Molsheim, SSW. of Strasburg.

GEISSELBORING, a town of Bavaria, 32 miles S. of Salzburg.

GEISSING SEE, a lake of Carinthia, in the county of Fritzlach, 40 miles N. of Leipzig, and 40 W. of Dresden.

GELA, in ancient geography, a city of Sicily, on the S. of Sicily, so named after GELAS. It was built by colonists from Crete, 45 years after the building of the city, in the 3d year of the 22d Olympiad, 690: and originally called *Lindii*, from the Lindus, a city of Rhodes, there first. This city, after having been destroyed by Phintias, tyrant of Syracuse; and the inhabitants were re-settled in a new city called *Phintias* after his name, called TERRA NUOVA.

\* GELABLE. *adj.* [from *gelu*, Lat. *gelare*, to freeze.] may be congealed, or concreted into ice.

GELANI, GELENSES, or GELOI, inhabitants of GELA.

GELAS, in ancient geography, a city of Sicily, now called *Fiume di Terra Nuova*.

GELATINA, JELLY. See JELLY.

\* GELATINE. *adj.* [from *gelatus*, Lat. *gelatus*, to freeze.] ed into a gelatinous substance.

\* GELATINOUS. *adj.* [from *gelatus*, Lat. *gelatus*, to freeze.] ed into a gelatinous substance.

That pellucid gelatinous substance is an excrement cast off from the fish that inhabit the main. *Wood-worms* always see their eggs laid carefully upon it.

the matter, in which they are reposit-

in the English old customs, a Saxon  
 sive *money, or tribute*. It also denot-  
 ication for some crime committed :  
 gold, in their ancient laws, was used for  
 a man slain; and *orfgeld*, of a beast.

 cy took away the very manhood of it.

NHARIUS, Gerard Eobanus, an his-  
 NHAUR, } torian and Protestant  
 a at Nimeguen in 1482. He studi-  
 learning at Deventer, and went through  
 of philosophy at Louvaine, where he  
 a very strict friendship with several  
 n, and particularly with Erasmus. He  
 nder and historian to Charles of Austria,  
 ards to Maximilian of Burgundy. At  
 embraced the Protestant religion; taught  
 Marburg; and afterwards divinity till  
 in 1542. He wrote, 1. History of Hol-  
 History of the Low Countries; 3. His-  
 tishops of Utrecht; and other works.  
 DER. *n. s.* [from *geld*.] One who per-  
 act of castration.—

later with *gelders*, as many one do,  
 k of a dozen to geld away two. *Tuffer*.  
 ny-gelder did blow his horn  
 a cat, but cry'd reform. *Hudib.*

IRLAND. See GUELDERLAND.

ELDER-ROSE. *n. s.* [I suppose brought  
 terland.] The leaves are like those of  
 tree: the flowers consist of one leaf, in  
 rose form. *Miller*.—The *gelder-rose* is in-  
 suckers and cuttings. *Mort.*

LPER ROSE. See VIBURNUM, N° 2.

LDER ROSE, VIRGINIAN. See SPIRÆA.

ERS. See GUELDRÈS.

ELDING. *n. s.* [from *geld*.] Any animal  
 particularly an horse.—Though natu-  
 be more males of horses, bulls or rams,  
 les; yet artificially, that is, by making  
 oxen and weathers, there are fewer.  
 The lord lieutenant may chuse out one  
 horses, and two of the best *geldings*;  
 shall be paid 100l. for the horse, and  
 e for the *geldings*. *Temple*.

LDING signifies also the operation of  
 any animal, particularly horses. A colt  
 lded at 9 or 15 days old, if the testicles  
 e down; as the sooner he is gelt, the  
 ill be for his growth, shape, and courage;  
 orse may be gelt at any age, if proper

care is taken in performing the operation. The  
 manner of doing it is usually this: The beast be-  
 ing cast down on some soft place, the operator takes  
 the testicles between his foremost and his great  
 finger, and, sitting the scrotum, presses the stones  
 forth; then taking a pair of nippers made very  
 smooth, either of steel, box, or brasil wood, he  
 claps the chord to the testicle between them, a  
 very little above where the stones are set on, and  
 presses them so hard that the course of the blood  
 through the artery is interrupted; then with a thin,  
 drawing, cauterising iron, he sears away the tes-  
 ticle. This done, he takes a hard plaster, made of  
 rosin, wax, and turpentine, well dissolved toge-  
 ther, and melts it on the seared part, till he has  
 laid a good thickness of it upon the cauterized  
 edge. When this is done to one testicle, the nip-  
 pers are loosened, and the like is done to the other;  
 and the two incised edges of the scrotum are  
 brought close together, and kept in that situation  
 by pieces of sticking plaister. If the part inflames  
 violently, the horse should be bled, and a poultice  
 of rye meal, linseed-meal, and water, should be  
 applied. A considerable improvement, however,  
 on this operation, would be, to perform it exact-  
 ly as in the human subject, either applying a strong  
 ligature round the chord of the testicle, or taking  
 up the blood vessels separately; for the method  
 commonly used is sometimes fatal to the horse, ow-  
 ing to the violent inflammation brought on by the  
 actual cautery. The manner of gelding a hog is  
 as follows:—The operator, after having made two  
 crotchets or slits or incisions on the midst of the stones,  
 presses them out, and takes off the stone. But an-  
 other general method, yet somewhat more diffi-  
 cult, is, first, to cut on the side of one stone, and  
 after having drawn and cut it off, the operator  
 puts in his fingers at the same slit, and with a lan-  
 cet cuts the skin between the two stones, and by  
 that slit presses out the other stone; and thus there  
 is but one incision made in the cod. Boar pigs  
 ought to be gelded about six months old; yet  
 they are commonly gelded about 3 or 4 weeks old.

GELENAU, a town of Upper Saxony, 5 miles  
 WNW. of Greiffenstein.

GELENHAUSEN, a small imperial town of  
 Germany, in Wetteravia, with a castle built by  
 the emperor Frederick I. Lon. 8. 13. E. Lat.  
 50. 20. N.

GELENIUS, Sigismund, a learned and excel-  
 lent man, born of a good family at Prague, about  
 1498. Erasmus, conceiving an esteem for him at  
 Basil, recommended him to John Frobenius as a  
 corrector for his printing-house; which laborious  
 charge he accepted, and had a great number of  
 Hebrew, Greek, and Latin books to correct; he  
 also translated many works himself from the Greek  
 into Latin; and published a dictionary in four  
 languages, Greek, Latin, German, and Slavonia-  
 nian. Profitable and honourable employments  
 were offered him in other places, but nothing  
 could tempt him to quit his peaceful situation at  
 Basil. He died in 1555. All his translations are  
 highly esteemed.

GELENSES. See GELANI.

GELINOTTE, or GRUS. See TETRAO.

GELISE, a river of France, which runs into the Baïse, at Lavardac.

GELLERT, Christian Furchtegott, one of the finest geniuses Germany has produced, was born at Hayinchen, in Misnia, in 1715, and studied at Leipzig; at which university he was for many years professor of philosophy and the belles lettres, He, early distinguished himself by his talent for poetry; and contracted a strict friendship with the most learned and polite writers in Germany. All his works are filled with sentiment, and bear evidence of the sweetness of his disposition. The most considerable of them are his comedies, spiritual songs, moral poems, sacred odes, fables, and tales. He died in 1769, much lamented.

GELLI, John Baptist, an eminent Italian writer, born at Florence, in 1498. He was bred a tailor, but had such an extraordinary genius, that he acquired several languages, and made an uncommon progress in the belles lettres; and though he continued always to work at his trade, became acquainted with all the wits and learned men at Florence, and his merit was universally known. He was chosen a member of the academy there, and the city made him a burgher. He acquired the highest reputation by his works, which are, 1. *I Capricci del Bottai*, 4to. containing ten dialogues, in the manner of Lucian. 2. *La Circe*, 8vo. This also contains ten dialogues, and treats of human nature. It has been translated into Latin, French, and English. 3. Dissertations in Italian on the poems of Dante and Petrarch. 4. The comedies of *La Sporta* and *La Errore*; and other works. He died in 1563.

GELLIBRAND, Henry, a laborious astronomer of the 17th century, born at London, in 1597. He became so enamoured with mathematical studies, that on the death of his father, he entered a student at Oxford, and devoted himself solely to them. On the death of Mr Gunter, he was recommended by Mr Briggs to the trustees of Gresham college, for the astronomical professorship there; to which he was elected in 1617. His friend Mr Briggs dying in 1630, before he had finished his *Trigonometria Britannica*, it was finished by Gellibrand at his request. He wrote several other works, chiefly tending to the improvement of navigation; and died in 1636.

GELLIUS, Aulus, a celebrated grammarian, who lived in the 2d century under Marcus Aurelius and some succeeding emperors. He wrote a collection of observations on authors, for the use of his children; and called it *Noctes Attice*, because composed in the *nights* of a winter he spent at Athens. The chief value of it is for preserving many facts and monuments of antiquity not to be

found elsewhere. Critics and grammarians bestowed much pains on this writer.

in botany, (§ 1. def. 2.) See GEMMA.  
s, in natural history, are divided into  
the pellucid and semipellucid.

PELLUCID. The bodies composing  
gems are bright, elegant, and beauti-  
naturally and essentially compound,  
in small detached masses, extremely  
great lustre.

SEMIPELLUCID. The bodies compo-  
s, are stones naturally and essentially  
not inflammable nor soluble in water,  
tached masses, and composed of crys-  
tal, debas'd by earth: however, they  
highly debas'd, and are of great beauty  
less, of a moderate degree of transpa-  
are usually found in small masses.

25. HARDNESS AND COLOURS OF. The  
of gems depends principally on obser-  
hardness and colour. Their hardness  
ly allowed to stand in the following  
diamond the hardest of all; then the  
emerald, jacinth, amethyst, gar-  
chalcedony, onyx, jasper, agate, por-  
marble. This difference, however, is  
constant, but frequently varies.  
Gems may be allowed to succeed the onyx;  
the family of metallic glassy fluors seem  
next. In point of colour, the diamond  
or its transparency, the ruby for its pur-  
ple for its blue, the emerald for its  
jacinth for its orange, the amethyst  
its carnation, the onyx for its tawny,  
agate, and porphyry, for their verme-  
l, and variegated colours, and the gar-  
transparent blood-red. All these gems  
nes found coloured and spotted, and  
quite limpid and colourless. In this case,  
the cutter knows how to distinguish their  
ecies by their different degrees of hard-  
the mill. For the cutting or polishing  
the fine powder of the fragments of  
are next in degree of hardness is always  
to grind away the softer; but as none of  
arder than the diamond, it can only  
be by its own powder. Cronstedt ob-  
serves in general, that the colours of the  
emerald are said to remain in the fire,  
of the topaz flies off: hence it is usual  
to topaz, and thence substitute it for the

“ Their colours (says our author) are  
supposed to depend upon metallic vapo-  
r may they not more justly be supposed  
to be a phlogiston united with a metallic  
ber earth? because we find that metal-  
lic which are perfectly well calcined give  
no any glass; and that the manganese,  
in hand, gives more colour than can be  
in the small quantity of metal which is  
extracted from it.” M. Magellan is of opi-

nion, that their colour is owing chiefly to  
the mixture of iron which enters their composition.  
The sentiment of Cronstedt, that phlogiston was  
a share in their production, is exploded by the new  
doctrines, which deny the existence of phlogiston.  
See CHEMISTRY, *Index*.

(5.) GEMS, IMITATION OF. See PASTES.  
(6.) GEMS, TEXTURE AND COMPONENT PARTS  
OF. With regard to the texture of gems, M. Ma-  
gellan observes, that all of them are foliated or  
laminated, and of various degrees of hardness.  
Whenever the edges of these laminæ are sensible  
to the eye, they have a fibrous appearance, and  
reflect various shades of colour, which change  
successively according to their angular position  
to the eye. These are called by the French *éba-*  
*torantes*; and what is a blemish in their transpa-  
rency, often enhances their value on account of  
their scarcity. But when the substance of a gem  
is composed of a broken texture, consisting of va-  
rious sets of laminæ differently inclined to each  
other, it emits at the same time various irradia-  
tions of different colours, which succeed one an-  
other according to their angle of position. Gems  
of this kind are called OPALS, and are valued in  
proportion to the brilliancy, beauty, and variety  
of their colours. Their crystallization doubtless  
depends on the same cause which produces that of  
salts, earths, and metals; (See CRYSTALLIZATION)  
but as to the particular configuration of each  
species of gems, we can hardly depend upon  
any individual form as a criterion to ascertain each  
kind; and when we have attended with the ut-  
most care to all that has been written on the sub-  
ject, we are at last obliged to appeal to chemi-  
cal analysis, because they very often assume va-  
rious forms. The following table shows the com-  
ponent parts of gems according to the analysis of  
Bergman and M. Achard; B denoting Bergman's  
analysis, and A that of Achard.

The chrysoptase from Koseinitz in Silesia was  
likewise analysed by M. Achard; who found that  
it contained 456 grains of silicious earth, 13 of  
calcareous, 6 of magnesia, 3 of copper, and 2 of  
iron. “ This (says M. Magellan) seems to be the  
only gem that contains no argillaceous earth.”

(1.) \* To GEM. v. a. [*gemma*, Lat.] To adorn,  
as with jewels or buds.

(2.) \* To GEM. v. n. [*gemma*, Lat.] To put  
forth the first buds.—

fast rose in the stately trees, and spread  
 air branches, hung with copious fruit; or

MAAGIDID, or DELGUMUTU, a town of  
 Morocco, 45 miles SW. of Morocco.

(1.) GEMAPPE, or JEMAPPES, a village of  
 the French republic, in the  
 department so named, (N<sup>o</sup> 2.) formerly in the province  
 of Austrian Hainault, rendered famous by  
 a bloody battle fought near it, on the 5th Nov.  
 1792, between the French under Dumourier, and  
 the Austrians under Clairfait; wherein, after a  
 most obstinate resistance, the latter who were  
 strongly posted on the heights of Gemappes, were  
 compelled to retreat to Mons. The loss on both  
 sides must have been great, as there has seldom  
 been a more obstinate contest. Perhaps Dumourier  
 underrated his own loss, when he stated it at only  
 900 men, and that of the Austrians at 4000. The  
 carnage was so great, that 3 coal pits near this  
 village were filled up with dead bodies of men and  
 horses. It is seated at the conflux of the Haine  
 and the Trouille, 2½ miles SW. of Mons.

(2.) GEMAPPES, or JEMAPPES, a department  
 of the French republic, comprehending the ci-  
 devant province of Austrian Hainault. See HAIN-  
 NAULT, N<sup>o</sup> 1. Mons is the capital.

GEMARA, or GHEMARA, the 2d part of the  
 TALMUD. The Hebrew word גמרה, *gemara*, is  
 commonly supposed to denote a supplement; but  
 in strictness it rather signifies complement, or per-  
 fection: being formed of the Chaldee גמר, *gemar*  
 or *gheemar*, "to finish, perfect, or complete any  
 thing." The rabbins called the Pentateuch simply  
 the *law*: the first part of the Talmud, which is only  
 an explication of that law, or an application there-  
 of to particular cases, with the decisions of the  
 ancient rabbins thereon, they call the *Mischna*, i.  
 e. "second law;" and the 2d part, which is a  
 more extensive explication of the same law, and a  
 collection of decisions of the rabbins posterior to  
 the *Mischna*, they call *Gemara*, q. d. "perfection,  
 completion, finishing;" because they esteem it  
 the finishing of the law, or an explication beyond  
 which there is nothing farther to be desired. The  
*Gemara* is usually called simply TALMUD, the  
 common name of the whole work. In this sense,  
 there are two *Gemaras* or Talmuds; that of Jeru-  
 salem and that of Babylon: though in strictness  
 the *Gemara* is only an explication of the *Mischna*,  
 given by the Jewish doctors in their schools. See  
 MISCHNA. A commentary. Mons. Tillemont ob-  
 serves, who wrote on the *Mischna*, by one Joha-  
 nan, whom the Jews placed about the end of the  
 2d century; but Fa. Morin proves, from the work  
 itself, wherein mention is made of the Turks, that  
 it was not wrote till the time of Heraclius, about  
 A. D. 620; and this is what is called the *Gemara*,  
 or *Talmud of Jerusalem*, which the Jews do not  
 use or esteem much because of its obscurity. They  
 set a much greater value on the *Gemara*, or Tal-  
 mud of Babylon, begun by one Asa; discontinued  
 for some time, on occasion of the wars with the  
 Sarmatians and Persians; and finished by one Josa,  
 about the year of the 7th century. See TALMUD.  
 The *Gemara* of the Talmud, in its latitude, in-  
 cludes the *Mischna* and the two *Gemaras*,

yet it is properly that of Asa and Josa  
 is meant under that name. This the  
 above all their other writings, and eve  
 level with scripture itself: in effect, th  
 it as the word of God, derived by tra  
 Moses, and preserved without inter  
 their time. R. Jehuda, and afterwar  
 nan, R. Asa, and R. Josa, fearing th  
 should be lost in the dispersion of th  
 lected them into the *Mischna* and t

GEMINI, in astronomy, the TWI  
 stellation or sign of the zodiac, the two  
 representing Castor and Pollux; and n  
 II. See ASTRONOMY, § 548.

GEMINIANI, Francis, a celebrated  
 and composer, born at Lucca in 1680.  
 He received his first instructions in music from  
 Scarlatti; and after that became a pupil  
 Ambrose Lunati, surnamed *Il Gobbo*, a  
 brated performer on the violin; after  
 became a disciple of Corelli. In 1711  
 to England; where he soon recommen-  
 dingly by his exquisite performance:  
 he published and dedicated to Baron K  
 chamberlain to K. George I. as electo-  
 ver, 12 sonatas *a violino violone e cembu*  
 fix with fugues and double stops; the l  
 of various measures, as allemandes, co  
 jiggs. This publication was so well  
 the baron, that he mentioned Gemir  
 king as an excellent performer; in c  
 of which he had the honour to perform  
 majesty, in concert with the celebra  
 But though Geminiani was exceeding  
 yet he had no talent at associating mu-  
 etry, nor do we find that he ever beca  
 performer. He was therefore obliged

abundance on the friendship of his patrons, profits which accrued to him from teaching; was also an enthusiast in painting, and stilly of his temper was such, that, to his passion, he neglected to exercise his talents, and involved himself in debts. In was offered the place of master and conductor of the state music in Ireland; but this could not be conferred on a Catholic, and Geminiani changed his religion. He then set himself to compose parts to the *opera quinta* of Corelli; make concertos of the first six of his solos work he completed, and, with the help of the royal family, published in 1726. In published his *opera seconda*, which celebrated minuet that goes by his name. shed many other pieces, the profits of which do not much mend his circumstances; but his was owing to his rambling disposition: was also an utter stranger to the business of an orchestra, and had no idea of the labours necessary in the instruction of singers. The performance of music to which they were engaged. The consequence of this was, *certo spirituale*, which he had advertised for benefit in 1748, failed in the performance; the audience, however, compassionate; the books were changed, and the performance was continued with compositions of his which he executed in such a manner as was got. The profits arising from this performance enabled him to take a journey to Paris; staid long enough to get plates engraven of his solos, and the parts of two operas. About 1755 he returned to England, advertised them for sale. In 1761, he returned to Ireland; and was kindly entertained by Mr Matthew Dubourg, who had been master of the king's band in London, through life, had ever been disposed to him friendly offices. Soon after Geminiani's arrival at Dublin, he was called upon by the king. Geminiani had spent many years in compiling an elaborate treatise on music, intended for publication; but soon after his arrival, by the treachery of a female servant, it was said, was recommended to him for her end, but that she might steal it, it was eyed away and could not be recovered. Geminiani's loss, and his inability to re-attain his end; at least he survived it a short time, dying on the 17th of Sept. 1762. His wing list comprises the whole of his publications, except 2 or 3 articles of small account. Solos for a violin, *opera prima*; six concertos for a violin, *opera seconda*; six concertos for a violin, *opera terza*; twelve solos for a violin, *opera quarta*; six solos for a violoncello, *opera quinta*; the same made into solos for a violin, *opera sexta*; 6 concertos for a violin, *opera settima*; rules for playing in taste; on good taste; the art of playing the violoncello from his first solos, *opera undecima*; accompaniment, two books; his first set of concertos in score; and the cu-

PART I.

chanted forest.—Of his solos the *opera prima* is esteemed the best. Of his concertos some are excellent, others of them scarce pass the bounds of mediocrity. The 4th of the third opera not only surpasses all the rest, but, in the opinion of the best judges of harmony, is the finest instrumental composition extant.

GEMINIANI, St., a town of Tuscany, on a mountain, in which is a mine of vitriol.

\* GEMINOUS. *adj.* [*geminus*, Lat.] Double.—Christians have baptized these *geminous* births, and double connascencies, with several names, as conceiving in them a distinction of souls. *Brown.*

\* GEMINY. *n. f.* [*geminus*, Latin.] Twins; a pair; a brace; a couple.—I have grated upon my good friends for three reptiles for you, and your couch fellow, Nim; or else you had looked through the grate, like a *gemony* of baboons. *Shakespeare.*—A *gemony* of asses split will make just four of you. *Congreve.*

GEMISTUS, George, surnamed *PIETAS*, a native of Constantinople; from which, upon its capture by the Turks, he retired to Florence. In 1438, he distinguished himself at the council of Florence, by his learning and abilities. He wrote, 1. "Commentaries upon the Magic Oracles of Zoroaster;" a work of profound erudition; 2. A Comparison between Plato and Aristotle; and 3. Historical Treatises; wherein he discovers great knowledge of Grecian history. He died aged above 100.

(I.) GEMMA, Reinier, an eminent Dutch physician, born in Friseland, in 1508. He was well versed in astronomy, and wrote several works on that and other branches of mathematics. He died in 1555, aged 47.

(II.) GEMMA, Cornelius, son of the preceding; was also famous for his knowledge of mathematics. He died in 1579, aged 44.

(III.) GEMMA, or BUD, in botany. See BOTANY, § 107—109. Buds, as well as bulbs, which are a species of buds, constitute that part of the herb called by Linnaeus *HYBERNACULUM*, or the winter quarters of the future vegetable: a very proper appellation, as it is during that severe season that the tender rudiments are protected. Plants, considered in analogy to animals, may be reckoned both viviparous and oviparous. Seeds are the vegetable eggs; buds, living scutules, or infant plants, which renew the species as certainly as the seed. Buds are placed at the extremity of the young shoots, and along the branches, being fixed by a short footstalk upon a kind of brackets, the remainder of the leaves, in the wings or angles of which the buds in question were formed the preceding year. They are sometimes placed single; sometimes two by two, either opposite or alternate; sometimes collected in greater numbers in whorls or rings. With respect to their construction, buds are composed of several parts artificially arranged. Externally, we find a number of scales that are pretty hard, frequently armed with hairs, hollowed like a spoon, and placed over each other like tiles. These scales are fixed into the inner plates of the bark, of which they appear to be a prolongation. Their use is to defend the internal parts of the bud; which, being unfolded, will produce, some, flowers, leaves,

O O

and

and stipulæ; others, footstalks and scales. All these parts, while they remain in the bud, are tender, delicate, folded over each other, and covered with a thick clammy juice, which is sometimes resinous and odoriferous, as in the tacahamac tree. This juice serves not only to defend the more tender parts of the embryo plant from cold, the assaults of insects, and other external injuries; but likewise from excessive perspiration, which, in its young and infant state, would be very destructive. It is conspicuous in the buds of horse-chestnut, poplar, and willow trees. In general, we may distinguish 3 kinds of buds; viz. 1. *Florifera*, that containing the flower; 2. *Folifera*, that containing the leaves; and 3. *Folifero-florifera*.

1. *GEMMA FLORIFERA*, termed by the French *bouton fleur*, or *à fruit*, contains the rudiments of one or several flowers, folded over each other, and surrounded with scales. In several trees, this kind of bud is commonly found at the extremity of certain small branches, which are shorter, rougher, and less garnished with leaves, than the rest. The external scales of this species are harder than the internal; both are furnished with hairs, and in general more swelled than those of the 2d sort. This species too is commonly thicker, shorter, almost square, less uniform, and less pointed; being generally terminated obtusely. It is called by Pliny *oculus gemme*; and is employed in that species of grafting called *inoculation*, or *budding*.

2. *GEMMA FOLIFERA*, termed by the French *bouton à feuilles*, or *à bois*, contains the rudiments of several leaves, which are variously folded over each other, and outwardly surrounded by scales, from which the small stipulæ, seated at the foot of the young branches, are chiefly produced. These buds are commonly more pointed than the former sort. In the hazel nut, however, they are perfectly round; and in horse-chestnut, very thick.

3. *GEMMA FOLIFERA ET FLORIFERA*. }  
4. *GEMMA FOLIFERO-FLORIFERA*. } third

sort of bud is smaller than either of the preceding; and produces both flowers and leaves, though not always in the same manner. Sometimes the flowers and leaves are unfolded at the same time. This mode of the flower and leaf bud is termed by Linnæus *gemma folifera & florifera*. Sometimes the leaves proceed or emerge out of this kind of bud upon a small branch, which afterwards produces flowers. This mode of the flower and leaf bud is termed by Linnæus *gemma folifero-florifera*, and is the most common bud of any. Such buds as produce branches adorned only with leaves, are called *barren*; such as contain both leaves and flowers, *fertile*. From the bulk of the bud we may often with ease foretell whether it contains leaves only, or leaves and flowers together, as in cherry and pear trees. Neither the buds produced on or near the root, called by authors *surianes*; nor those produced on the sides from the angles or wings of the leaves, are of strict propriety, an entire delineation of them; since the roots are wanting; and in such cases, the shoots are contained with leaves on the sides, but without flowers: but as a branch may be produced from a part similar to the whole plant,

and, if planted, would in process of time exhibit or produce roots and flowers, we may generally allow, that the bud contains the principles of the whole plant, or the principles of the whole plant may be unfolded *ad libitum*; and that the seed in containing a delineation of the plant in embryo: for although the bud contains the radicle, or plumula, of which the seed is formed, yet it would undoubtedly form one, if it were not for the earth. But as the medullary part of the bud is too tender, and by the action of the juice flowing into it from the earth would be exposed to putrefaction, the buds are generally inserted into the soil, but generally inserted with the root of another tree; yet placed so that the root of the marrow or pith, adhering to the branch, is inserted into the pith of the branch, and a fissure or cleft is made; by which means a large communication of juice. This process is called *inoculation*, and is generally practised with the first sort of bud described. From the obvious uses of this process, we may collect the reason why the Author has granted this sort of protection to most plants that are natives of cold climates; and that, on the other hand, denied it to such as, enjoying a benign atmosphere, have not their tender embryo-shoots exposed to injuries and predations from the severities of the winter. This latter kind are the plants of the forest, some of them very large trees; other small vegetables, of the shrub and underwood. Citron, orange, lemon, cassava, medicinal bladder-apple, shrubby swallow-wort, alate geraniums, berry-bearing alder, Cyprian Syrian mallow, baobab or Ethiopian fig, *justicia*, mild fena, the acacias and ferocoral tree, stinking bean-trefoil, medick, viburnum, sumach, ivy, tamarind, Barbadoes cherry, lavatera, rue, shrubby shades, Guinea henweed, cypress, liana, and savine, a species of juniper. On any of these whose root as well as stalk perishes a true bud is never produced; in such cases, however, are protruded small branchlets, like the feather, from the wings of the leaf, which wither without any farther expansion, and climb and have no lateral branches; but by their own nature or from abundance of the plants become branched, the ramifications obtain an increase similar to that of the whole plant. The same appearance of trees of warm countries, such as those on the above list, in which a plumula, or fissure sends forth branches without a scaly covering, in such countries, this tender part requires some defence or protection from cold. A scaly covering is peculiar to buds, as it protects the embryo included from all external injuries; we therefore speak of trees having buds naked or without scales, the meaning being they have no buds at all. The buds that are folded the following year, break forth in the evolved buds of the present year, in the manner as to put on the appearance of the buds in the wings or angles of the leaf, from which eminences or knots grow but little in summer; as, in that season, the sap

increase of the parts of the plant: but in  
when the leaves begin to wither and fall off,  
placed on the wings, increase; and the  
plant contained in the bud is so expand-  
the leaves and flowers, the parts to be e-  
be following year, are distinctly visible.  
horse-chestnut the leaves, and in cornel-  
flowers, are each to be observed in their  
buds. As each bud contains the rudimen-  
a plant, and would, if separated from  
vegetable, become quite similar to it;  
to shew the wonderful fertility of na-  
made a calculation, by which it appears,  
trunk scarce exceeding a span in breadth,  
uds (that is, herbs) may be produced.  
infinite number, then, of plants might  
from a very large tree!

**GEMMARY.** *adj.* [from *gem.*] Pertaining to  
jewels.—The principle and *gemmary* af-  
its transfluency: as for irradiancy, which  
in many gems, it is not discoverable in  
*gem's vulgar Errors.*

**GEMATIO,** } [from *gemma*, a bud;] a  
**GEMATION,** } term used by Linnæus, ex-  
of the form of the buds, their origin, and  
tent. See **BOTANY, Index.**

**GEMMEOUS.** *adj.* [*gemmeus*, Lat.] 1. Tend-  
ns.—Sometimes we find them in the *gem-*  
ter itself. *Woodw.* 2. Resembling *gema-*  
**MI**, a mountain of the Helvetic republic,  
great chain, which separates the canton  
from the Valais. It is 10,110 feet high,  
10 miles E. of Sion.

**GEMINGEN.** See **GEMINGEN.**

**GEMMOSITY:** *n. f.* [from *gem.*] The qua-  
ing a jewel. *Dist.*

**GEMONA**, a district of Maritime Austria,  
province of Friuli, containing 1 town, 2  
and 2000 inhabitants.

**GEMONA**, an ancient and opulent borough  
of Austria, in Friuli, 12 miles NNW.  
It was taken by the French in 1797.

**GEMINÆ SCALE,** or }  
**GEMINI GRADUS,** } was much the same  
as the gibbet in Britain. Some say they  
is denominated from the person who rai-  
; others, from the first criminal that suf-  
them; and others, from the verb *gemo*,  
or groan." The *gemonii gradus*, accord-  
ing to Plinius Victor and Sextus Rufus, was a  
ed on several steps, from whence they  
ed their criminals; others represent it as  
whereon offenders were executed, and af-  
exposed to public view. The *gemonie*  
is in the 10th region of the city, near the  
Juno. Camillus first appropriated the  
his use, A. U. C. 358.

**GEMMAYAC**, a town of France, in the dep. of  
Varente, 5 miles W. of Pons, and 10½ S.

**GEMMOTTE.** *n. f.* A meeting; The court of  
ed. Obsolete.

**GEMUND**, in Austria, 68 m. NW. of Vienna.  
**GEMUND**, **GEMUNDEN**, or **GEMUYD**, in  
east on the Traun See, 24 m. WSW.  
and 108 WSW. of Vienna; famed for  
wks.

3. **GEMUND**, in Carinthia, 10 miles NE. of  
Saxenburg, and 37 NW. of Clagenfurt.

4. **GEMUND**, or **GEMUNDEN**, in the circle of  
Franconia, and bishopric of Wurzburg, N. of the  
Maine; 27 miles W. of Schweinfurt, and 37 E.  
of Francfort. Lon. 9. 55. E. Lat. 49. 55. N.

5. **GEMUND**, or **GEMUNDE**, in the ci-devant  
duchy of Juliers, now annexed to the French re-  
public, and included in the department of the  
Roer. It is seated on the Roer, 24 miles SW. of  
Cologne, and 41 WNW. of Coblentz. Lon. 6.  
48. E. Lat. 50. 38. N.

6. **GEMUND**, or **GEMUND**, in Suabia, on the  
Reims, 24 miles E. of Stuttgart, and 30 N. by  
W. of Ulm. This town is imperial, and its ma-  
gistrates are chosen by the people. Lon. 9. 48.  
E. Lat. 48. 48. N.

**GEMUNDE.** See **GEMUND, N° 5.**

(1.) **GEMUNDEN**, a town of Hesse Cassel, 16  
miles SW. of Fritzlar, and 28 SW. of Cassel.

(2.) **GEMUNDEN**, a town of Germany, in the  
circle of the Upper Rhine, and late county of Lei-  
ningen; now included in the French republic and  
department of Mont Tonnerre.

(3, 4.) **GEMUNDEN.** See **GEMUND, N° 2 & 4.**

**GEMUYD.** See **GEMUND, N° 2.**

**GENADEL**, a mountain of Africa, in Nubia,  
over which the Nile runs, and forms a cataract;  
45 miles N. of Jalac.

**GENAP**, or **GENEFRE**, a town of the French  
republic, in the department of the Dyle, and late  
province Austrian Brabant, on the Dyle, 5 miles  
E. of Nivelles, and 15 SE. of Brussels. Lon. 4. 40.  
E. Lat. 50. 40. N.

**GENBERABA**, a town of Persia, in the pro-  
vince of Irak, 100 miles E. of Amadan.

**GENCAY**, a town of France, in the depart-  
ment of Vienne, 12 miles NNE. of Civray, and 4  
S. of Poitiers.

(1.) **GENDARMES**, or **GENS D'ARMES**, in the  
French armies, a denomination given to a select  
body of horse, on account of their succeeding the  
ancient gendarmes, who were thus called from  
their being completely clothed in armour. (See  
§ 3.) These troops were commanded by captain-  
lieutenants, the king and the princes of the blood  
being their captains; the king's troop, besides a  
captain-lieutenant, had two sub-lieutenants, 3 en-  
signs, and 3 guidons.

(2.) **GENDARMES, GRAND**, were a troop com-  
posed of 250 gentlemen; the king himself was  
their captain, and one of the first peers their cap-  
tain lieutenant, who has under him 2 lieutenants,  
3 ensigns, 3 guidons, and other officers.

(3.) **GENDARMES, SCOTS**, were originally in-  
stituted by Charles VII. of France, about the mid-  
dle of the 15th century, and formed a part of his  
guard; in which station also they acted under o-  
ther princes. It was their prerogative to take pre-  
cedence of all the companies of the gendarmerie  
of France; and, on particular occasions, they e-  
ven preceded the two companies of the king's  
mouquetaires. The sons of the Scottish monarchs  
were the usual captains of this company; and, af-  
ter Mary's accession to the throne, its command  
belonged to them as a right. Hence James VI.  
made a claim of it for his son prince Henry. This

and its elements were also enjoyed by Charles I. and the Duke of Lennox. George Gordon, Marquis of Huntly, succeeded him in 1624, and was appointed commander in chief when Charles II. ascended the English throne. It is not known whether Charles II. was ever captain of the company, but it was conferred on his brother the duke of York, who was captain of the Scots gendarmes till 1667, when he resigned his commission into the hands of the French king. Since that time no native of Great Britain has enjoyed this command. See GUARDS, SCOTS.

(4.) GENDARMES, SMALL, were the Scots gendarmes, the queen's, the dauphin's, the gendarmes of Anjou, Burgundy, the English and Flemish gendarmes, having each a captain-lieutenant, sub-lieutenant, ensign, guidon, and quarter-master. All these different gendarmeries are now abolished, in consequence of the revolution.

(1.) \* GENDER. *n. f.* [*genus*, Latin; *genre*, French.] 1. A kind; a fort. Not in use.—Our bodies are our gardens, to the which our wills are gardeners; so that if we will supply it with one gender of herbs, or distract it with many, the power and corrigible authority of this lies in our will. *Othello*.

The other motive,

Why to a publick court I might not go,

Is the great love the general gender bare me.

*Shak. Hamlet.*

2. A sex. 3. [In grammar.] A denomination given to nouns from their being joined with an adjective in this or that termination. *Clark*.—Cubitus, sometimes cubitum in the neutral gender, signifies the lower part of the arm on which we lean. *Arbutnot*.—Ulysses speaks of *Nauicaa*, yet immediately changes the words into the masculine gender. *Broome*.

(2.) GENDER, in grammar, (§ 1. *def.* 3.) is a division of nouns, to distinguish the two sexes. This was the original intention of gender: but afterwards other words, which had no proper relation either to the one sex or the other, had genders assigned them, rather out of caprice than reason; which is at length established by custom. Hence genders vary according to the languages, or even according to the words introduced from one language into another. Thus, *arbor*, a tree, in Latin is feminine, but *arbre* in French is masculine; and *dens*, a tooth, in Latin is masculine, but *dent* in French is feminine, though the meaning is the same. The oriental languages frequently neglect the use of genders, and the Persian has none at all. The Latins, Greeks, &c. generally content themselves to express the different genders by different terminations; as *bonus equus*, a good horse; *bona equa*, a good mare, &c. But in English we frequently go further, and express the difference of sex by different words: as boar, sow; boy, girl; buck, doe; bull, cow; dog, bitch, &c.—We have also about 24 feminines, distinguished from the males, by the variation of the termination of the male into *es*; of which number are abbot, abbess; count, countess; actor, actress; prince, princess, &c. which is all that our language knows of any thing like genders. The Greek and Latin, besides the masculine and feminine, have the neuter, common, and the doubtful gender; and like-

wife the epicene, or promiscuous, which single gender and termination include several kinds.

(1.) \* To GENDER. *v. a.* [*engendre*, French.] 1. To beget. 2. To produce; to cause. *Tim. ii. 23.*

(2.) \* To GENDER. *v. n.* To come to breed.—

A cistern for foul toads

To gender in.

—Thou shalt not let thy cattle gender of diverse kind. *Lev. xix. 19.*

GENDRAY, a town of France, in the department of Jura, 10 miles E. of Auxonne.

(1.) GENDRE, Gilbert Charles L. of St Aubin, counsellor in the parliament and master of requests. He wrote several works, but is chiefly distinguished by his *Traité sur la perfection de l'art et de la science*, 9 vols 12mo; a curious performance by historic examples, the empire of the arts and science. He died in 1746, aged 59.

(2.) GENDRE, Lewis LE, an ecclesiastic born at Rouen, in 1659. He became abbot of Notre Dame at Paris, and abbot of N. at Claire Fontaine. He wrote a great number of works; the principal are: 1. The Manners and Customs of the French, in the different monarchies. 2. An History of France, 7 vols folio, and in 7 12mo. 3. The Life of D'Amboise. 4. An Essay on the reign of Louis the Great. He died in 1733, aged 74.

GENEALOGICA ARBOR, or TREE OF SANGUINITY, signifies a genealogy drawn out under the figure of a tree, with its stock, branches, &c. The genealogies are usually represented in circles, rising upwards, and aside each other. This is called *stemma*, a word signifying crown or the like. See CONSANGUINITY and the plate there referred to.

\* GENEALOGICAL. *adj.* [from *genealogy*, French.] Pertaining to descents or families; pertaining to the history of the successions of houses.

\* GENEALOGIST. *n. f.* [*genealogiste*, French.] He who traces descents.

(1.) \* GENEALOGY. *n. f.* [*genealogia*, Greek.] History of the succession of families; or of descent in order of succession; a pedigree. The ancients ranged chaos into seven ages, and in that order successively rising or descending, as if it were a pedigree or genealogy.

(2.) GENEALOGY comprehends a full account of the relations and alliances of a family, both in the direct and collateral line. In the military orders, it is required that the candidates produce their genealogy, to prove they are noble by so many descents.

GENEHOA, a kingdom of Africa, in the west of Senegal.

GENEP, or GENNEP, a strong town of Prussia, in the circle of Westphalia, subject to the king of Prussia, but now annexed to the French republic, and department of the Moselle, near the Maas. SW. of Cleves. Lon. 5. 48. E. Lat. 51. 12. N.

**GENERABLE**, *adj.* [from *genero*, Lat.] That be produced or begotten.

**ENERAC**, a town of France, in the department of Gard, 5 miles S. of Nîmes.

**GENERAL**, *adj.* [*general*, French; *generalis*, Latin.] 1. Comprehending many species or individuals; not special; not particular.—To conclude from particulars to *generals* is a false way of *arg.* *Broom*. 2. Lax in signification; not confined to any special or particular import.—

If the author speaks more strictly and particularly on any theme, it will explain the more and *general* expressions. *Watts*. 3. Not restricted by narrow or distinctive limitations.—An abstract idea is an idea in the mind, considered as separated from time and place, and so capable to represent any particular being that is conformable to it. *Locke*. 4. Relating to a whole class or species of men, or a whole kind of any being. *Locke*, because some have been admitted with a *general* fault, make that fault *general* which is particular. *Whitgift*. 5. Publick; comprising the

—*How would we deign him burial of his men,  
He disburied at St Colmeskill isle,  
A thousand dollars to our gen'ral use. Macb.  
The fault they to express how much they  
prais'd,  
For the general safety he despis'd,  
Milton's Paradise Lost.*

directed to any single object.—If the same be peculiarly evil, that *general* aversion will be directed into a particular hatred against it. *Spratt*.  
—*My relation to all—  
The wall of Paradise upspring,  
To our general fire gave prospect large,  
Neither empire neighb'ring round. Mil.  
Common; though not universal. 9. Common;*

I've been bold,  
That I knew it the most *general* way. *Timon*.  
*General* is appended to several offices: as, *Attorney General, Solicitor General, Vicar General*.

**GENERAL**, *n. s.* 1. The whole; the totality; the main, without insisting on particulars. That which makes an action fit to be commanded or forbidden, can be nothing else, in *general*, a tendency to promote or hinder the attainment of some end. *Norris*.—In particulars our judgment begins, and so spreads itself by degrees to *generals*. *Locke*.—I have considered Milton's *Paradise Lost* in the fable, the characters, the sentiments, and the language; and have shewn that *generals*, in *general*, under each of these heads.

—An history painter paints man in *general*; a portrait painter a particular man, and commonly a defective model. *Reynolds*. 2. The whole; the interest of the whole. Not in use. Neither my place, nor aught I heard of business, shraided me from my bed; nor doth the *general* hold on me; for my particular grief

its and swallows other sorrows. *Otbello*.  
*vulgar*; not in use.—The play, I remembered not the million; 'twas caviare to the *l's* but it was, as I received it, and others, judgment in such matters cried in the top *act*, an excellent play. *Shak. Hamlet*. 4. [*General*, Fr.] One that has the command over an

army.—A *general* is one that hath power to command an army. *Locke*.—The *generals* on the enemy's side are inferior to several that once commanded the French armies. *Addison*.—

The war's whole art each private soldier knows,  
And with a *gen'ral's* love of conquest glows.

*Addison*.  
(3.) **GENERAL**, § 1. *def.* 10. See ATTORNEY, SOLICITOR, &c.

(4.) **GENERAL** is also used for the chief of an order of monks; or of all the houses and congregations established under the same rule; as, the general of the Franciscans, Cisterians, &c.

(5.) **GENERAL** is also used for a particular march, or beat of drum; being the first which gives notice, commonly in the morning early, for the infantry to be in readiness to march.

(6.) **GENERAL, ADJUTANT**, in the art of war, one who attends the general, (See § 9.) assists in councils, and carries the general's orders to the army. He distributes the daily orders to the majors of brigade. He is likewise charged with the general detail of the duty of the army. The majors of brigade send every morning to the adjutant-general an exact return, by battalion and company of the men of his brigade. In a day of battle he sees the infantry drawn up; after which, he places himself by the general, to receive any orders which may regard the corps of which he has the detail. In a siege, he orders the number of workmen demanded, and signs the warrant for their payment. He receives the guards of the trenches at their rendezvous, and examines their condition; he gives and signs all orders for parties. He has an orderly serjeant from each brigade of infantry in the line, to carry such orders as he may have occasion to send from the general.

(7.) **GENERAL ASSEMBLY**. See ASSEMBLY, § 1. PRESBYTERIAN, and SCOTLAND.

(8.) **GENERAL CHARGE**, in law. See CHARGE, § 8.

(9.) **GENERAL IN CHIEF OF AN ARMY**, (§ 2, *def.* 4.) in the art of war. See WAR.

(10.) **GENERAL, LIEUTENANT**. See LIEUTENANT-GENERAL.

(11.) **GENERAL, MAJOR**. See MAJOR-GENERAL.

(12.) **GENERAL OF ARTILLERY**. See ORDINANCE.

(13.) **GENERAL OF FOOT**, and } are officers  
(14.) **GENERAL OF HORSE**, } next under  
the general of the army, and have upon all occasions an absolute authority over all the horse and foot.

(15.) **GENERAL TERMS**, among logicians, those which are made the signs of general ideas. See LOGIC and METAPHYSICS.

(16.) **GENERAL WARRANT**. See WARRANT.  
(1.) \* **GENERALISSIMO**, *n. s.* [*generalissimo*, French, from *generalis*.] The supreme commander. It is often rather a title of honour than office.—Commission of *generalissimo* was likewise given to the prince. *Clarendon*.—Pompey had deserved the name of great; and Alexander, of the same cognomination, was *generalissimo* of Greece. *Brown*.

(2.) **GENERALISSIMO** is called also *captain-general*, and simply *general*. He commands all the

—*Commission of generalissimo was likewise given to the prince. Clarendon.—Pompey had deserved the name of great; and Alexander, of the same cognomination, was generalissimo of Greece. Brown.*

(2.) **GENERALISSIMO** is called also *captain-general*, and simply *general*. He commands all the

—*Commission of generalissimo was likewise given to the prince. Clarendon.—Pompey had deserved the name of great; and Alexander, of the same cognomination, was generalissimo of Greece. Brown.*

military

military powers of a nation; gives orders to all the other general officers; and receives no orders himself but from the king. M. Balzac observes, that cardinal Richelieu first coined this word, of his own absolute authority, upon his going to command the French army in Italy.

\* **GENERALITY.** *n. f.* [*generalité*, French; from *general*.] 1. The state of being general; the quality of including species or particulars.—Because the curiosity of man's wit doth with peril wade farther in the search of things than were convenient, the same is thereby restrained unto such generalities as, every where offering themselves, are apparent to men of the weakest conceit. *Hooker*.—These certificates do only in the *generality* mention the parties contumacies and disobedience. *Ayliffe*. 2. The main body; the bulk; the common mass.—Necessity, not extending to the *generality*, but resting upon private heads. *Raleigh's Ess.*—By his own principles he excludes from salvation the *generality* of his own church; that is, all that do not believe upon his grounds. *Tillotson*.—The *generality* of the English have such a favourable opinion of treason, nothing can cure them. *Addison*.—They publish their ill-natured discoveries with a secret pride, and applaud themselves for the singularity of their judgment, which has found a flaw in what the *generality* of mankind admires. *Addison*.—The wisest were distracted with doubts, while the *generality* wandered without any ruler. *Rogers*.

\* **GENERALLY.** *adv.* [from *general*.] 1. In general; without specification or exact limitation.—I am not a woman to be touch'd with so many giddy fancies as he hath *generally* taxed their whole sex withal. *Shak.*—*Generally* we would not have those that read this work of *Sylva Sylvarum*, account it strange that we have set down particulars untried. *Bacon's Nat. Hist.* 2. Extensively, though not universally. 3. Commonly; frequently. 4. In the main; without minute detail; in the whole taken together.—*Generally* speaking, they live very quietly. *Guardian*.—*Generally* speaking, they have been gaining ever since, though with frequent interruptions. *Swift*.—*Generally* speaking, persons designed for long life, though in their former years they were small eaters, yet find their appetites encrease with their age. *Blackmore*.

\* **GENERALNESS.** *n. f.* [from *general*.] Wide extent; though short of universality; frequency; commonness.—They had, with a general consent, rather springing by the *generalness* of the cause than of any artificial practice, set themselves in arms. *Sidney*.

\* **GENERALTY.** *n. f.* [from *general*.] The whole; the totality.—The municipal laws of this kingdom are of a vast extent, and include in their *generality* all those several laws which are allowed as the rule of justice and judicial proceedings.

\* **GENERANT.** *n. f.* [*generans*, Latin.] The begetting, or productive power.—Some believe the soul made by God, some by angels, and some by the *generant*: whether it be immediately created or traduced hath been the great ball of contention. *Glanville*.—In such pretended generations the *generant* or active principle is supposed to be sun, which, being an inanimate body, cannot otherwise than by his heat. *Ray*.

(1.) \* **TO GENERATE.** *v. a.* [*generare*, Latin.] 1. To beget; to propagate.—Tho' which being wild *generate* seldom, *generate* often. *Bacon's Nat. Hist.* 2. To life; to procreate.—

God created the great whales, & Soul living, each that crept, which The waters *generated* by their kind Or find some other way to *generate* Mankind. *Milton's I.*

3. To cause; to produce.—Sounds where there is no air at all. *Bacon*. *generates* a quantity of good chyle, & *generate* milk. *Arbutn. on Alim.*

(2.) **TO GENERATE**, in music, is to signify the operation of that mechanical nature, which every sound has in producing more different sounds. Thus any, however simple, produces along with it an octave, and two other sounds extraneous, viz. its twelfth above, that is to say, its fifth; and the other the 7th above the other words, the double octave of it. Whether we suppose this procreation to result from an aptitude in the texture of certain particles in the air, vibrating to our ears vibrations that bear relations one to another, as being divided once by the partial and total oscillations of a musical string; or from whatever texture we choose to trace it; the principle found thus to produce another vibration, is said to *generate*. The same principle, applied, by Signior Tartini and his followers, to any two sounds which, simultaneously, produce a third.

**GENERATED**, or **GENITED**, *part. p.* by some mathematical writers, for that which is produced, either in arithmetic, by addition, division, or extraction of root; or in geometry, by the invention of the conic sections, and sides; or of extreme and mean proportion, without arithmetical addition and subtraction.

**GENERATING LINE**, or **FIGURE**, in geometry, is that which, by its motion, produces any other figure, plane or solid. *GENESIS*, § 3.

(1.) \* **GENERATION.** *n. f.* [from *generare*, French.] 1. The act of producing.—Seals make excellent generation: but then the dilation of time without any new sealing, shews they cease to produce. *Bacon's Nat. Hist.*—

He longer will delay, to hear the  
His *generation*, and the rising birth  
Of nature, from the unapparent de-  
—If we deduce the several races of man  
several parts of the world from *generation*  
must imagine the first numbers of them  
any place agree upon any civil conference  
assemble as so many heads of families  
represent. *Temple*. 2. A family; a race.  
Y'are a dog.

—Thy mother's of my *generation*  
she, if I be a dog? *Shak. Timon*.  
offspring.—

of barb'rous Scythian,  
 t makes his generation messes,  
 his appetite, shall to my bosom  
 neighbour'd. *Shak. King Lear.*  
 inaccession; one gradation in the scale  
 al descent.—This generation shall not  
 these things be fulfilled. *Matt. xxiv.*  
 fourth generation they shall come  
 1. *Gen.*—A marvellous number were  
 be conquest of Palestine, which with  
 ue they performed, and held that  
 ne few generations. *Raleigh's Ess. 5.*  
 y some of the ancients a generation  
 t 100 years; by others at 120; by 0-  
 30, 25, and 20: but it is remarked,  
 untinuanee of generations is so much  
 ey come nearer to the more ancient  
 et.—Every where throughout all gene-  
 iges of the Christian world, no church  
 ed the word of God to be against it.

ERATION is also used, though some-  
 perly, for genealogy, or the series of  
 ced from the same stock. Thus the  
 t Matthew commences with the book  
 ation of Jesus Christ, &c. The latter  
 curate translators, instead of generation  
 l genealogy.

ERATION, in mathematics, is used for  
 on or production of any geometrical  
 f equations, curves, solids, &c.

ERATION, in physiology. (§ 1. *def. 1.*)  
 MY, *Index.*

ERATION, in theology. The Father  
 me divines to have produced his Word  
 a all eternity, by way of generation;  
 occasion the word generation raises a  
 a: that procession, which is really  
 he way of understanding, is called ge-  
 cause in virtue thereof, the Word be-  
 o him from whom he takes this origi-  
 St Paul expresses it, is the figure or  
 substance, *i. e.* of his being and nature.  
 t is, they say, that the second Person  
 ty is called the Son.

ERATION. (§ 1. *def. 5.*) See AGE.  
 makes three generations in an hundred  
 h computation appears from the lat-  
 of political arithmetic to be pretty just.  
 ERATION OF FISHES. See ICHTHYO-  
 ZOOTOLOGY.

ERATION OF INSECTS. See ENTO-  
 MOLA; and ZOOTOLOGY.

ERATION OF PLANTS. See BOTANY.

ERATIVE. *adj.* [*generatif*, French, from  
 n.] 1. Having the power of propa-  
 gation; gave to all, that have life, a power  
 thereby to continue their species and  
*Ray's Hist.*—In grains and kernels the  
 is but the nutriment of that generative  
 disproportionable unto it. *Brown.*  
 ; having the power of production;  
 there hath been such a gradual dimi-  
 nution of the generative faculty upon the earth,  
 ere not the like decay in the produc-  
 tions? *Bentley.*

GENERATOR. *n. s.* [from *genero*, Latin.]  
 which begets, causes, or produces.—

Imagination assimilates the idea of the generator  
 into the reality in the thing engendered. *Brown's*  
*Vulg. Err.*

(2.) GENERATOR, in music, signifies the principal  
 sound or sounds by which others are pro-  
 duced. Thus the lowest C for the treble of the  
 harpsichord, besides its octave, will strike an atten-  
 tive ear with its twelfth above, or G in alt, and  
 with its seventeenth above, or E in alt. The C,  
 therefore, is called their generator, the G and E  
 its products or harmonics. But in the approxi-  
 mation of chords, for G, its octave below is sub-  
 stituted, which constitutes a fifth from the gener-  
 ator, or lowest C; and for E, is likewise sub-  
 stituted its 15th below, which, with the above  
 mentioned C, forms a third major. To the lowest  
 notes, therefore, exchanged for these in alt by  
 substitution, the denominations of products or  
 harmonics are likewise given, whilst the C retains  
 the name of their generator. But still according  
 to the system of Tartini, two notes in concord,  
 which when sounded produce a third, may be  
 termed the concurring generators of that third.  
 See *Generation Harmonique, par M. Rameau*; also  
 that delineation of Tartini's system, called *The*  
*power and principles of harmony.*

(1.) \* GENERICAL, GENERICK. *adj.* [*gene-  
 rique*, French; from *genus*, Latin.] That which  
 comprehends the genus, or distinguishes from an-  
 other genus, but does not distinguish the species.  
 —The word consumption being applicable to a  
 proper and improper, to a true and bastard con-  
 sumption, requires a generical description quadrate  
 to both. *Harvey.*—Though wine differs from other  
 liquids, in that it is the juice of a certain fruit;  
 yet this is but a general or generick difference; for  
 it does not distinguish wine from cyder or perry:  
 the specifick difference of wine, therefore, is its  
 pressure from the grape. *Watts's Logick.*

(2.) GENERICAL NAME, in natural history, the  
 word used to signify all the species of natural bod-  
 ies, which agree in certain essential and peculiar  
 characters, and therefore comprehending all of  
 the same GENUS family or kind; so that the word  
 used as the generical name equally expresses every  
 one of the genus, and other words expressive of  
 the peculiar qualities or figures of each species are  
 added, in order to denote them distinctly, and  
 make up what is called the specific name. See  
 BOTANY and ZOOLOGY.

\* GENERICALLY. *adv.* [from *generick*.]  
 With regard to the genus, though not the species.  
 —These have all the essential characters of sea-  
 shells, and shew that they are of the very same  
 specifick gravity with those to which they are so  
 generically allied. *Woodward.*

\* GENEROSITY. *n. s.* [*generosité*, French; *gene-  
 rofitas*, Latin.] The quality of being generous;  
 magnanimity; liberality.—Can he be better prin-  
 ciple in the grounds of true virtue and generosity  
 than his young tutor is? *Locke on Educ.*—It would  
 not have been your generosity, to have passed by  
 such a fault as this. *Locke.*

\* GENEROUS. *adj.* [*generosus*, Latin; *gene-  
 reux*, French.] 1. Not of mean birth; of good  
 extraction. 2. Noble of mind; magnanimous;  
 open of heart.—

f a vigorous kind,  
of the mind. *Dryden.*  
ness to defend  
t friend. *Swift.*  
k fann'd the poet's fire,  
and with reason to admire.

*Pope.*  
common, not more learn'd than

rous as his noble blood. *Pope.*  
who wit and gold refines,  
he ripens mines. *Pope.*  
Theano, heav'nly fair,  
anger with a mother's care.

*Pope.*  
ch forms, with such length,  
stness, as you use for your-  
all little ill-natured passions  
ow great and *generous*, de-

delight in  
is used of animals. Spritely;

the imperial eagle does not stay  
Till the whole carcase he devour,  
As if his *gen'rous* hunger understood  
That he can never want plenty of food,  
He only sucks the tasteful blood. *Cowley.*

Aetæon spies  
Hisop'ning hounds, and now he hears their cries:  
A *gen'rous* pack. *Addison.*

4. Liberal; munificent.—  
When from his vest the young companion  
bore  
The cup the *gen'rous* landlord own'd before,  
And paid profusely with the precious bowl,  
The stinted kindness of this churlish soul. *Parn.*  
Fatt by the margin of her native flood,  
Whose wealthy waters are well known to fame,  
Fair as the bordering flowers the prince's  
flood,

And rich in bounty as the *gen'rous* stream.  
*Heigh on Pharaoh's Daughter.*

5. Strong; vigorous.—Having in a digestive fur-  
nace drawn off the ardent spirit from some good  
sack, the phlegm, even in this *generous* wine, was  
copious. *Boyle.*—

Those who in southern climes complain,  
From Phœbus' rays they suffer pain,  
Must own that pain is well repaid,  
By *gen'rous* wines beneath a shade. *Swift.*

\* GENEROUSLY. *adv.* [from *generous*.] 1.  
Not meanly with regard to birth. 2. Magnani-  
mously; nobly.—

When all the gods our ruin have foretold,  
Yet *gen'rously* he does his arms withhold.

*Dryd. Ind. Emp.*  
3. Liberally; munificently.

\* GENEROUSNESS. *n. f.* [from *generous*.]  
The quality of being generous.—Is it possible to  
conceive that the overflowing *generousness* of the  
divine Nature would create immortal beings with  
mean or envious principles? *Collier on Kindness.*

GENESAN, a town in Asiatic Turkey, in the  
Arabian Irak, 90 miles from the sea.

(1.) \* GENESIS. *n. f.* [*genèse*, French]  
eration; the first book of *Moses*, which treats  
e production of the world.

(2.) GENESIS, the first book of the O  
ment, contains the history of the creat  
the lives of the first patriarchs. This bo  
at the head of the Pentateuch. Its auth  
to be Moses; it contains the relation  
years, viz. from the beginning of the  
the death of Joseph.—The Hebrews calle  
*sebitb*, because it begins with that wor  
in their language signifies "in the be  
The Greeks gave it the name *genesis*, *g. d*  
tion or generation, because it begins wit  
story of the production or generation of  
This book, besides the history of the  
contains an account of the original innoc  
fall of man; the propagation of mank  
rise of religion; the general defection an  
tion of the world; the deluge; the restora  
world; the division and peopling of th  
and the history of the first patriarchs to  
f Joseph. It was easy for Moses to be  
f the truth of what he relates in this b  
cause it came down to him through sev  
for from Adam to Noah there was one  
Methuselah, who lived so long as to  
both: in like manner Shem conversed w  
and Abraham; Isaac with Abraham an  
from whom the facts recorded in this bo  
asily be conveyed to Moses by Amr  
was contemporary with Joseph.

(3.) GENESIS, in geometry, denotes  
mation of a line, plane, or solid, by th  
or flux of a point, line, or surface. See  
ONS. The genesis or formation, *e. g.*  
globe or sphere, is conceived by sup  
semicircle to revolve upon a right lin  
from one extreme thereof to the other,  
axis, or axis of circumvolution: the r  
revolution of that semicircle is the gene  
sphere, &c. In the genesis of figures,  
line or surface that moves is called the *a*  
and the line round which, or, according  
the revolution or motion is made, the *D*

GENESIUS, Joseph, a Greek histor  
flourished about A. D. 940. He wrote  
of Constantinople from Leo to Basilius  
and Latin. It was printed at Venice in

(1.) GENESSEE, a large tract of lan  
York, bounded on the NW. and N. by  
tatio; E. by Onondago county; S. by  
vania; and W. by lake Erie and the Ni

(2.) GENESSEE, a river of New Yor  
runs into lake Ontario; in Lon. 77. 40.  
44. 10. N.

(3.) GENESSEE, a township of New  
Ontario county. It had 217 electors in

GENEST, Charles Claude, a French  
at Paris in 1636. He wrote a didactic  
the proofs on the existence of God, an  
mortality of the soul; and several trage  
died in 1720 aged 84.

(1.) \* GENET. *n. f.* [French. The  
originally signified a horseman, and perh  
tleman or knight.] A small-sized we  
tioned Spanish horse.—You'll have you  
neigh to you; you'll have *coufers* fo  
and *genets* for germanes. *Sbak. Otbello.*  
more likely that frogs should be enge

, than Spanish *genets* be forgotten by *Ray*.

his statue too, where plac'd on high, & underneath him seems to fly. *Juv.* NET, GENNET, or JENNET, in the To ride *a-la-genette*, is to ride after the vion, so short that the spurs bear upon flank.

EIL, a town of France, in the dep. of Loire,  $7\frac{1}{2}$  miles N. of Baugé.

HLIA, in antiquity, a solemnity kept of some person deceased.

THLIACAL. *adj.* [*γινθλιανθ*.] Per- nativities as calculated by astronomers; nfigurations of the stars at any birth. t immediately before he was slighting hose foolish astrologers, and *genethliac-* rists, that use to pry into the horoscope *Howel*.

HLIACI, in astrology, [from *γινθλιανθ*, eration, or nativity,] persons who e- ptes, and pretend to foretel what shall

by means of the stars which presided ity. The ancients called them CHAL-

IATHEMATICI. Hence the several ci- bu laws, made against mathematicians,

t the *genethliaci* or astrologers. They ed Rome by a formal decree of the se- yet found so much protection from the

the people, that they remained there- ed. Hence an ancient author speaks *hominum genus, quod in civitate nostra*

*etabitur & retinebitur.* ETHLIACKS. *n. f.* [from *γινθλιανθ*.] : of calculating nativities, or predict- re events of life from the stars pred- he birth.

THLIATICK. *n. f.* [*γινθλιανθ*.] He who nativities.—The truth of astrological is not to be referred to the constella- *genethliaticks* conjecture by the disposi- er, and complexion of the person.

ges; and the *natives* were the sons of these inha- bitants, who possess additional advantages.

(2.) GENEVA, a city of Switzerland, on the confines of old France and the ci devant duchy of SAVOY, now annexed to the French republic, and capital of the department of Lac Lemman. It is seated on the banks of the Rhone, just at its efflux from the lake of Geneva; and part of it is built on an island in the river. It is handsome, well fortified, and pretty large; the streets in general are clean and well paved, but the principal one is encumbered with a row of shops on each side between the carriage and foot paths. The latter is very wide, and protected from the weather by great wooden pent-houses projecting from the roofs; which, though very convenient, give the street a dark and dull appearance. The houses are generally constructed of free stone, with base- ments of limestone; the gutters, spouts, ridges, and outward ornaments, being made of tinned iron. Some of them have arched walks or piazzas in front. The place called *Treille* is very agree- able, being planted with Linden trees, and com- manding a fine prospect of the lake, with several ranges of rocks rising behind one another, some covered with vineyards and herbage, and others with snow, having openings between them. Im- mediately below Geneva the Rhone is joined by the Arve, a cold and muddy stream, rising among the Alps, and deriving a considerable part of its waters from the Glaciers. The Rhone is quite clear, and transparent, so that the muddy water of the Arve is distinguishable from it even after they have flowed for several miles together. There are 4 bridges over the Rhone before it joins the Arve; and from it the city is supplied with water by an hydraulic machine which raises it 100 Paris feet above the level. This city lies 45 miles NE. of Chambery, 60 NW. of Lyons, and 135 of Turin. Lon. 5. 55. E. Lat. 46. 11. N.

(3.) GENEVA, ACADEMY AND LEARNED MEN OF. This city is remarkable for the number of l arned men it has produced. The reformed doc- trines of religion were very early received in it, being preached there in 1533 by William Farel and Peter Viret of Orbe, and afterwards finally estab- lished by the celebrated John Calvin. Of this reformer Voltaire observes, that he gave his name to the religious doctrines first broached by others, in the same manner that Americus Vesputius gave name to the continent of America, which had formerly been discovered by Columbus. But Vol- taire in this, as in many other assertions is wrong. It was not Calvin that gave his name to the doc- trines, but the public at large, whereas Vesputi- us expressly *stole* the honour due to Columbus. It was by the assiduity of this celebrated reformer, and the influence that he acquired among the ci- tizens, that a public academy was first established in the city, where he, Theodore Beza, and some of the more eminent first reformers, read lectures with uncommon success. The intolerant spirit that formerly prevailed in Geneva is now total- ly annihilated. The advantages of the academy at Geneva are very conspicuous among the citi- zens, even the lower class of them being exceed- ingly well informed; so that, according to Mr

P P CCLF,

Coxe, there is not a city in Europe where learning is so generally diffused. "I received great satisfaction (says he) in conversing even with several tradesmen upon topics both of literature and politics; and was astonished to find in this class of men so uncommon a share of knowledge; but the wonder ceases when we are told that all of them were educated at the public academy." In this seminary the industry and emulation of the students are excited by the annual distribution of prizes to those who distinguish themselves in each class. The prizes consist of small medals, but are conferred with such solemnity as cannot fail to produce a striking effect upon the minds of youth. There is also a public library to which the citizens have access, and which undoubtedly tends greatly to that universal diffusion of learning so remarkable among the inhabitants. It was founded by Bonniard, remarkable for his sufferings in the cause of the liberties of his country. Having been a great antagonist of the dukes of Savoy, against whom he asserted the independence of Geneva, he had the misfortune at last to be taken prisoner, and was imprisoned for six years in a dungeon below the level of the lake, in the castle of Chillon, which stands on a rock in the lake, and is connected with the land by a draw-bridge. In 1536 this castle was taken from Charles III. of Savoy by the canton of Berne, assisted by the Genevans, who furnished a frigate (their whole naval force) to besiege it by sea. Bonniard was now taken from his dungeon, where by constant walking backward and forward, his only amusement, he had worn a hollow in the floor which consisted of solid rock. Bonniard considered the hardships he had endured as ties which endeared him to the city, and became a principal promoter of the reformation by the mild methods of persuasion and instruction. He closed his benefactions by the gift of his books and MSS. and bequeathed his fortune towards the establishment and support of the seminary. His works, which chiefly relate to the history of Geneva, are preserved with great care. The library contains 25,000 volumes with many MSS. of which an account has been published by the reverend M. Sennebier the librarian, who has likewise distinguished himself by several literary works. Messrs Bonnet, Saussure, Mallet, and De Luc, are the other most distinguished literary geniuses of which Geneva can boast. The last is particularly remarkable for the perfection to which he has brought the barometer, and which is now so great, that very little more seems possible to be done. His cabinet merits the attention of naturalists, as containing many rare and curious specimens of fossils, which serve to illustrate the theory of the globe. It may be divided into 3 parts: 1. Such as enable the naturalist to compare the petrifications of animals and vegetables with the same bodies which are still known to exist in our parts of the globe. 2. To compare these petrifications of animals with the same bodies which are known to exist in different countries. 3. To consider the petrifications of those bodies which are no longer known to exist. The 2d part comprehends the stones under 3 points of view: 1. Those of the primitive mountains, which contain no animal bodies; 2. Those of the secondary mountains, which

contain only marine bodies; 3. The tertiary terrestrial bodies. The 3d part contains lavas and other volcanic productions distinguished into two classes: 1. Those which come from volcanoes now actual. 2. Those from extinguished volcanoes. (4.) GENEVA, CHIEF BUILDINGS. The principal buildings are, 1. The Mayor's town-house, a plain ancient edifice with several rooms, in which the councils assemble, and public entertainments are held; and in which a weekly concert is held by subscription every winter. The ascent to the upper part of the city is by a paved acclivity; which is so gentle, that horses and mules can ascend it. 2. The church of St Peter's cathedral, is an ancient Gothic building with a modern portico, of 7 large Corinthian columns, red and white marble from Rochfort. The most remarkable is the tomb of I. Roban. 3. The arsenal is in good order, and supplied with arms sufficient for 10,000 men. There are many ancient suits of arms, and scaling ladders, lanthorns, hatchets, &c. the Savoyards in their treacherous attack on the city in 1602. (See § 7.) are here preserved. The magazines contain 120 cannon barrels. 4. The hospital is a large building, by which and other charities 1000 people are maintained. 5. The fortifications, which are now in the department of Mont Blanc, and the Helvetic republic; and the lake is guarded by a double jetty. (5.) GENEVA, CI-DEVANT GOVERNMENT. See § 8.

(6.) GENEVA, HISTORY OF, FROM THE ESTABLISHMENT OF THE REPUBLIC. In the time of Charlemagne and territory of Geneva made part of the empire, and, under his successors, they were subject to the German emperors. By the imbecility of these princes, however, the Genevans acquired such authority, that the emperor had no other way of counterbalancing it than by augmenting the privileges of the people. In those days the bishops and counts had constant wars with the people, which the Genevans siding sometimes with one, and sometimes with the other, they obtained an extensive privilege from both. The house of Savoy purchased the territory, and succeeded with additional power. The bishop therefore united to resist their encroachments, and, during this period, the government was strangely complicated, by the various interests of the 3 parties. The counts of Savoy had at last the address to dissolve the union between the bishops and citizens, by giving them an episcopal see for their brothers, and children; by which means their power gradually so extensive, that towards the commencement of the 16th century, C

gh the government was accounted retained an almost absolute authority over the people, and exercised it in a most unjust manner. Thus violent commotions and the citizens became divided into parties, one of which, viz. the patriots *Eidgenossen* or *confederates*; the party being disgraced by the appellation *us* or *flaves*. The true period of Geneva may therefore be considered as commencing with the treaty concluded with Berne in 1526; in consequence of which the duke was deprived of his authority, the bishop from the city, and the reformed reli- gious form of government intro- duced; war commenced with Savoy on the 15th; but the Genevans proved an overmatch to their enemies by their own bravery and the assistance of the inhabitants of Berne.

LEGAL HISTORY OF, TO THE ABOLITION OF THE GENERAL ASSEMBLIES. In 1584, Geneva concluded a treaty with Zurich and Bern, which it is allied to the Swiss cantons. In 1602, Geneva made their last attempt against Savoy, when the city was treacherously taken in the night time during a profound silence; soldiers had scaled the walls, and got into the town before any alarm was given; but repulsed by the desperate valour of a few patriots who perished in the encounter. A breach was effected to one of the gates by the gunners; but the gunner was killed before he could be discharged. The war occasioned by this was next year concluded by a treaty, which has ever since been observed as a day of national fast; though the independence of Geneva was formally acknowledged by the king of France in 1754. The restoration of tranquillity without, in consequence of the above treaty, however soon followed by the flames of discord, so common in popular governments; so that during the whole of the 17th and 18th history of Geneva affords little more than a record of the struggles betwixt the aristocratic and popular parties. About the beginning of the 18th century the power of the Grand Council became almost absolute; but to restore the authority, an edict was procured in 1707 from the Imperial party, enacting that every 5 years a general council of the citizens and burghers should be summoned to deliberate upon the affairs of the republic. In consequence of this law, a general assembly was convened in 1712; and the object of that assembly was to abolish the Grand Council which they had been convened. A pro- ceeding so extraordinary can scarcely be accounted for on the principles of popular fickleness and weakness. Rousseau, in his Miscellaneous Works, has given an account of the artifices of the magistrates, and the terms marked on the billets then in use, the question being put, "Whether the Grand Council should be abolished?" the words *or rejection*, put upon the billets by the magistrates, were given, might be interpreted as a consent.

Thus, if the billet was chosen on which the word *approbation* was written, the opinion of the council which rejected the assemblies

was approved; and by the word *rejection*, the periodical assembly was rejected of course. Hence several of the citizens complained that they had been deceived, and that they never meant to reject the general assembly; but only the opinion of the council.

(8.) GENEVA, HISTORY OF, TO THE INSURRECTION IN 1781. In consequence of the abolition of the general assemblies, the power of the aristocratical party, was greatly augmented, till at length, the inhabitants, exerting themselves with uncommon spirit and perseverance, found means to limit the power of the magistrates, and enlarge their own rights. In 1776, as Mr Coxe informs us, the government might be considered as a mean betwixt that of the aristocratical and popular cantons of Switzerland. The members of the senate, or little council of 25, enjoyed in that capacity several very considerable prerogatives. By them half the members of the great council were named; the principal magistrates were supplied from their own body; they convoked the great and general councils, deliberating previously upon every question which was to be brought before these councils. They were vested also with the chief executive power, the administration of finances, and had in a certain degree the jurisdiction in civil and criminal causes. Most of the smaller posts were likewise filled by them; and they enjoyed the sole privilege of conferring the burghership. These, and other prerogatives, however, were balanced by those of the great council and the privileges of the general council. The former had a right to choose the members of the senate from their own body; receiving appeals in all causes above a certain value, pardoning criminals, &c. besides which they had the important privilege of approving or rejecting whatever was proposed by the senate to be laid before the people. The general council, or assembly of the people, was composed of the citizens and burghers of the town; their number in general amounting to 1500, though usually not more than 1200 were present; the remainder residing in foreign countries, or being otherwise absent. They met twice a-year, chose the principal magistrates, approved or rejected the laws and regulations proposed by the other councils, imposed taxes, contracted alliances, declared war or peace, and nominated half the members of the great council, &c. But the principal check to the power of the senate arose from the right of *re-election*, or the power of annually expelling 4 members from the senate at the nomination of the *syndics* or principal magistrates, and from the right of representation. The *syndics* were 4 in number, chosen annually from the senate by the general council; and 3 years elapsed before the same members could be again appointed. In choosing these magistrates, the senate appointed from its own body 8 candidates, from whom the 4 *syndics* were to be chosen by the general council. The latter, however, had it in their power to reject not only the first 8 candidates, but also the whole body of senators in succession: in which case, 4 members of the senate retired into the great council; and their places were filled by an equal number from that council.

to the power of representation, every citizen had the privilege of applying to the senate to procure a new regulation in this respect or of remonstrating against any act of the magistracy. To these remonstrances the magistrates were obliged to give an explicit answer; for if a satisfactory answer was not given to one, a second was immediately presented. The representation was made by a greater or smaller number of citizens according to the importance of the point in question. Since 1776, however, several changes have taken place. This right of *re-election*, which the aristocratic party were obliged to yield to the people in 1768, soon proved very disagreeable, being considered by the former as a kind of ostracism; for which reason they caught at every opportunity of procuring its abolition. They were now distinguished by the title of *negatives*, while the popular party had that of *representants*; and the point in dispute was the compilation of a new code of laws. This measure the negatives opposed, as supposing that it would tend to reduce their prerogatives; while, on the other hand, the representants used their utmost endeavours to promote it, in hopes of having their privileges augmented by such means. At last in January 1777, the negatives were obliged to comply with the demands of their antagonists; and a committee for forming a new code of laws was appointed by the concurrence of the little, great, and general councils. The committee was to last for two years, and the code to be laid before the three councils for their joint approbation or rejection. A sketch of the first part of the code was presented to the little and great councils on the 1st. Sept. 1779, that they might profit by their observations before it was presented to the general council. Great disputes arose; and at length it was carried by the negatives that the code should be rejected and the committee dissolved. The opposite party complained of this as unconstitutional, and violent disputes ensued; the issue of which was, that the great council offered to compile the code, and submit it to the decision of the public. This did not give satisfaction to the popular party, who considered it as insidious; the contentions revived with more fury than ever, until at length the negatives supposing, or pretending to suppose, that their country was in danger, applied to the guarantees, France, Zurich, and Berne, intreating them to protect the laws and constitution. This was productive of no good effect; so that the negatives found no other method of gaining their point than by sowing dissension among the different classes of inhabitants. The *natives* were discontented and jealous on account of many exclusive privileges enjoyed by that class named *citizens*; they were besides exasperated against them for having, in 1770, banished 8 of the principal natives, who pretended that the right of burghership belonged to the natives as well as to the citizens, and demanded that this right should be gratuitously conferred instead of being purchased. The negatives, in hopes of making such a considerable addition to their party, courted the natives by all the methods they could think of, promising public declaration, that they were ready to **upon** them those privileges of trade and

commerce which had hitherto been confined solely to the citizens. The designs of the natives were likewise openly favoured by the king of France, and dispatches were even sent to the French resident at Geneva, to be communicated to the principal natives who sided with the aristocratic party. The attorney-general, perceiving this mode of interference to be unconstitutional, presented a spirited remonstrance by which the French court were so much affected, that they procured his deposition from office; and thus their party was very considerably increased among the natives. The representants endeavoured to conciliate the favours of the same party, and even promised what hitherto opposed in the strongest manner to facilitate the acquisition of the burghership to bestow it as the recompense of any good behaviour. Thus two parties were formed among the natives themselves; and the becoming every day worse and worse, an insurrection took place on the 5th Feb.

(9.) GENEVA, HISTORY OF, TO THE REVOLUTION IN 1782. A dispute, accompanied with violent reproaches, having commenced between two neighbouring and opposite parties, a battle would have immediately taken place, if it not been for the interposition of the authorities on the one side, and the chiefs of the party on the other. The tumult was beginning to subside, when a discharge of musquetry from the arsenal. Some young men, who sided with the negatives, having taken possession of the arsenal, had fired by mistake upon several of their own party, and had killed one and wounded another. This was considered by the representants as the signal for a general insurrection on which they instantly took up arms, and were divided into 3 columns to the arsenal; but finally only a few young men who had rashly followed the orders, they permitted the rest to retire unmolested. In the opinion of some persons, however, this affair was preconcerted, and the representants are said to have been the first aggressors, having thus taken up arms in haste to lay them down. They took possession of all the avenues to the city; and their being summoned next morning by the authorities to fulfil their engagements with respect to the burghership, they held several meetings with the negatives on that subject, but without success, tho' the latter readily agreed to an augmentation of the commercial privileges of the native burghership. The committee, however, absolutely refused to facilitate the acquisition of burghership. The committee, however, at the number and threats of the natives, issued up an edict, permitting the natives to trade, and to hold the rank of officers in military associations; and conferred the burghership on more than 100 persons, taken from the peasantry and inhabitants, and even from the peasantry of the territory. This was approved by the negatives not daring to make their protest. Thus the popular party imagined, that they had got a complete victory; but they soon found themselves deceived. They were prevailed upon by deputies from Zurich and Berne, who were sent to conciliate the differences, to lay

this was no sooner done, than the edict declared the edict in favour of the be null and illegal. - The senate declares of the same opinion; and main- the assent of the councils had been ly through fear of the representants under arms, and whom none at that oppose. The representants, exasperated by the proceedings, presented an- nounce on the 18th March, 1782, sum- magistrates once more to confirm the month afterwards received the laco- that "The government was neither able to confirm it." The natives, selves disappointed in their favourite; very time they had such strong hopes it, behaved like frantick people, and tumult took place. The most mode- popular party endeavoured in vain to ry, by dispersing themselves in different the city; and the citizens, finding t last obliged either to abandon the natives or to join them openly, hasti- the latter measure; after which, as now oppose them, the officers of the s took possession of the town, and insurrection. Various negotiations l on with the negatives, to prevail up- ratify the edict, but without success: few of the magistrates were confined lar party along with the principal nel as they expected the interference of count of what they had done, they prolong the confinement of the pri- to keep them as hostages for their In the mean time the body of citi- s if their power was already establi- sed several members of both councils, n their stead, an equal number of per- re favourable to the cause of the re- The great council thus new-modell- l the edict for conferring the burgher- number of the natives; and appoint- tee of safety, composed of 11 mem- considerable authority. By this com- public tranquillity was re-established; the fortifications were ordered to be and the people were buoyed up by the ous notions of their own prowess, and that France either durst not attack not incline to do so. In consequence error, they refused every offer of re- made from the other party; until at ere dispatched against them by the king and the canton of Berne; and their nerals, Messrs de la Marmora and ndered to act in concert with the nder M. de Jaucourt, who had ad- e frontiers with a considerable detach- Geneva, however, continued to fortifications with indefatigable la- easants flocked from all quarters to ring to mount guard and work at the without any pay; women of all ded to the walls, encouraging the d assisting them in their labour. The iver, advanced in such force, that of discernment foresaw that all resist-

ance would be in vain. The French general Jau- court, on the 29th June 1782, dispatched a mes- sage to the Syndics; in which he insisted on the following humiliating conditions: 1. That no per- son should appear on the streets under pain of mi- litary punishment. 2. That a certain number of citizens, among whom were all the chiefs of the representants, should quit the place in 24 hours, 3. That all arms should be delivered to the 3 ge- nerals. 4. That the deposed magistrates should be instantly re-established: And lastly, That an answer should be returned in two hours. By this message, the people were thrown into the utmost despair; and all without exception resolved to perish rather than accept of terms so very dis- graceful. They instantly hurried to the ramparts with a view of putting their resolution in force; but in the mean time the Syndics found means to obtain from the generals a delay of 24 hours. During this interval, not only men of all ages prepared for the approaching danger, but even wo- men and children tore the pavement from the streets, carrying the stones up to the tops of the houses, with a view of rolling them down upon the enemy, in case they should force their way into the town. About 30 women and girls, dres- sed in uniforms, offered to form themselves into a company for the defence of their country. The committee of safety accepted their services, and placed them in a barrack secure from the cannon of the besiegers. The negatives were greatly al- armed at this appearance of desperate resistance; and some of the most moderate among them endeavoured, but in vain, to effect a reconciliation. At the hour in which it was expected that the at- tack would begin, the ramparts were filled with defenders; and though the most zealous of the popular party had calculated only on 3000, up- wards of 5000 appeared in the public cause. The French general, however, justly alarmed for the prisoners, who were now in imminent danger, a- gain prolonged the period proposed for the capi- tulation. By these repeated delays, the ardour of the defendants began to abate. The women first began to figure to themselves the horrors of a town taken by an assault, and given up to an enraged and licentious soldiery; many timid per- sons found means not only to disguise their own fears, but to inspire others with them under the pretence of prudence and caution: at last the committee of safety themselves, who had so stren- uously declared for hostilities, entirely changed their mind. Thinking, however, that it would be dangerous to propose surrendering in the pre- sent temper of the people, they assembled the citi- zens in their respective circles, representing that if the city should be attacked in the night, it would be no longer possible to convene them; for which reason they recommended to them that each circle should nominate several deputies with full authority to decide in their stead; adding, that they ought to appoint those, who, from their age and respectability were capable of assisting their country by their advice, while others were de- fending it by their valour. Thus a new council, composed by about 100 citizens, was formed; in which the chiefs, by various manœuvres, first intimidating, and then endeavouring to persuade

of necessity of surrendering, at the thoughts of the presence of the city, and entrance of general emigration. A ship to be delivered to the city, the chiefs summoned from their posts, ordered the cannon and batteries to be rendered unfit for service, and at last took care of themselves by quitting the town. The people were in the utmost despair; and left the town in such multitudes, that when the Sardinians entered it in the morning, they found it almost deserted. This was followed by the restoration of the former magistrates, a complete subjection of the popular party, and the establishment of a military government.

(10.) GENEVA, HISTORY OF, TO THE REVOLUTION IN 1789. The changes which took place on this occasion were as follow: 1. An abolition of the right of re-election. 2. The abolition of that right by which the general council nominated half the vacancies in the great council. 3. The right of remonstrating was taken from the citizens at large, and vested in 36 adjuncts, who might be present in the great council the first Monday of every month. They enjoyed a right of representation, and in consequence of that had a deliberative voice; but on the whole, were so insignificant, that they were nicknamed *Les Images*, or "The shadows." 4. The introduction of the *grabeau*, or annual confirmation of the members of the senate and of the great council, vested entirely in the latter. By this law part of the authority both of the senate and general council was transferred to the great council; and by subjecting the senate to this annual revision, its power was greatly lessened, and it was made in fact dependent upon the general council. 5. The circles or clubs in which it was customary to convene the citizens, and all public assemblies whatever, were prohibited: and so rigorously was this carried into execution, that even the *Society of Arts* were prohibited from meeting. 6. The militia were abolished; firing at marks, even with bows and arrows, was prohibited, and the town, instead of being guarded by its own citizens, was now put under the care of 1000 foreign soldiers, whose colonel and major were both to be foreigners. These troops were to take an oath of fidelity to the republic, and of obedience to the great council and the committee of war; but were under the immediate command and inspection of the latter, and subject to the superior control of the former. 7. No person was permitted to bear arms, whether citizen, native, or inhabitant. 8. Several taxes were imposed without the consent of the general council; but in time to come it was provided, that every change or augmentation of the revenue should be submitted to that body. 9. Several privileges with regard to trade and commerce, formerly possessed by the citizens alone, were now granted to both citizens and inhabitants. It was not to be expected, that this constitution would be agreeable to people who had such a strong sense of liberty, and had been accustomed to put such a value upon it, as the Genevans. From what

has been already related, it might seem reasonable to conclude, that an almost universal emigration would have taken place; but after the excitement had time to subside, most of the emigrants fled at first, returned; and, in the opinion of Coxe, not more than 600 finally left the country on account of the revolution in 1782. The emigrants principally settled at Brussels and Cologne, where they introduced the arts of printing and watch making. Soon after the revolution, indeed, a memorial, signed by above 1000 persons of both sexes, all either possessed of property, or versed in trade or manufactures, was presented to the earl of Temple, then viceroy of Ireland, expressing a desire to be reunited to that kingdom. The proposal met with the approbation of the Irish parliament, and was directed towards defraying the expences of their emigration, and affording them a proper settlement in the island. Lands were purchased for 800000 l. in a convenient situation near Waterford; and the new town of GENEVA was actually completed at the end of 10,000 l.; a charter was granted with considerable privileges; the standard of gold was altered for the accommodation of the watch makers; and the foundation of an academy was proposed upon an useful and liberal plan. Several emigrants landed in Ireland, in July 1783; but the nation had expended nearly 30,000 l. upon the scheme, it was suddenly abandoned. This was principally to have been owing to the delays necessarily occasioned in the execution of the complicated plan; and in some degree to the high demand of the Genevan commissioners, who required many privileges inconsistent with the constitution of Ireland. By these delays the Genevans were induced to abandon the scheme, and to return to their former place of residence. Ever since the revolution, who had already landed, though many of them were discontented at the public expence, were discontented at the new town prepared for their reception, and as those among the proposed emigrants who possessed the greatest share of property were ready withdrawn their names, the remainder did not choose to remain in the country where they had not capital sufficient to carry on any considerable trade or manufacture. A petition was presented by the Genevan commissioners, requesting that 10,000 l. of the 50,000 l. voted for the appropriation to the forming a capital; but which had been voted for other purposes, should be of course rejected: in consequence of which the Genevans relinquished the settlement at Waterford, and soon after quitted the island of Ireland, and returned to their former place of abode, where they were far from inclined to submit to the yoke with patience, and were obliged to pay heavy taxes to maintain a military force to keep themselves in subjection; so intolerable did this appear, that in every thing seemed ready for another revolution. The success of this seemed more probable than that of the former, as France was not in a condition to interfere as formerly. The ferment soon rose to such a height, that the government was obliged to call in the aid of troops to quell a tumult which happened in the

duced only a temporary tranquillity; an-  
 mult took place on the 26th of Jan. 1789,  
 inst. of the publication of an edict raising  
 of bread a farthing per pound. On this  
 de instantly rose; plundered the bakers  
 id next day a carriage loaded with bread  
 ted by soldiers was plundered in its way  
 strribution office. The soldiers fired on  
 e, by which one man was killed and an-  
 anded: but the tumult still increasing,  
 rs were driven away; and the body of  
 sed was carried in a kind of procession  
 : town house, as a proof of the violence  
 :ffusion of the aristocratic party. The ma-  
 in the mean time, spent their time in  
 on, instead of taking any effectual me-  
 suelling the insurrection. The citizens,  
 ther hand, attacked and carried two of  
 , dangerously wounded the commanding  
 he attempted to allay the fury of both  
 At last the magistrates dispatched against  
 nsiderable body of troops, whom they  
 he insurgents would not have the courage  
 but in this they were mistaken. The  
 ad formed a strong barricade, behind  
 ey played off two fire-pumps, filled with  
 ater and soap lyes, against the extremities  
 idges which the military had to cross be-  
 could attack them. The commanding  
 is killed and several of his men wounded  
 scharge of small arms from windows;  
 ones of the pavement were carried up to  
 of houses to be thrown down upon the  
 they should force the barricades and  
 into the streets. The tumult, in the  
 e, continued to increase, and was in dan-  
 -oming universal; when the magistrates,  
 would be impossible to quell the insur-  
 -hout a great effusion of blood, were re-  
 -the necessity of complying with their  
 One of the principal magistrates re-  
 -person to the quarter of St Gervais,  
 and an edict for lowering the price of  
 -anted a general amnesty, and releas-  
 -ed insurgents who had been taken into  
 Thus a momentary calm was produ-  
 -the leaders of the insurrection, sensible  
 -magistrates were either unable or unwill-  
 -ploy a sufficient force against them, re-  
 -take advantage of the present opportu-  
 -procure a full change of government.  
 -urrection, therefore, took place on the  
 -be month, in which the soldiers were  
 -at their posts, disarmed, and the gates  
 -the people. The magistrates then, con-  
 -at all opposition was fruitless, deter-  
 -comply with the demands of their anta-  
 -their full extent: and the aristocratical  
 -denly changing their sentiments, renoun-  
 -ment that system to which they had  
 -obstinately adhered. On the applica-  
 -solicitor-general, therefore, for the re-  
 -the ancient liberties of the people, the  
 -of bearing arms, re-establishment of the  
 -d of their circles or political clubs, the  
 -the garrison from the barracks, and  
 -if the representants who were banished  
 -these moderate demands were received

with complacency, and even satisfaction. The  
 preliminaries were easily settled, and a new edict  
 of pacification was published under the title of  
*Modifications à l'Édition de 1782*, and approved by  
 the senate, great council, and general council.  
 So great was the unanimity on this occasion, that  
 the modifications were received by a majority of  
 1321 against 52. The pacification was instantly  
 followed by marks of friendship betwixt the two  
 parties which had never been experienced before:  
 the sons of the principal negatives frequented the  
 circles of the burghers; and the magistrates ob-  
 tained the confidence of the people, by dismissing  
 the military, evacuating the barracks, and devo-  
 ting them to the use of the university and public  
 library. In a word, the constitution established  
 in 1789, gave general satisfaction, as a just me-  
 dium between the too democratic form established  
 in 1768, and the too aristocratic one established in  
 1782. The history of the republic from this period  
 to its union with France, being necessarily connec-  
 ted with that of the French revolution, will be  
 noticed under that article. See REVOLUTION.

(11.) GENEVA, INHABITANTS OF. The city  
 is by far the most populous in Switzerland, con-  
 taining about 30,000 inhabitants, of whom, how-  
 ever, 5000 are generally supposed to be absent.  
 The district dependent upon it does not contain  
 above 16,000. The people are very active and  
 industrious, and carry on an extensive commerce.

(12. II.) GENEVA, LAKE OF. This lake, which  
 was anciently called LEMANUS, (whence the pre-  
 sent name of the department, LAC LEMAN,) is in  
 the shape of a crescent; along the concave side  
 of which Mr Coxie travelled 54 miles, Switzerland  
 forms the concave, and the department of Mont  
 Blanc, (the ci-devant Savoy,) the convex part;  
 the greatest breadth being about 12 miles. The  
 country on the side of Mont Blanc is full of high  
 and craggy mountains; but from Geneva to the  
 environs of Lausanne it slopes to the margin of  
 the lake, and is very rich and fertile. The banks  
 rise considerably in the neighbourhood of Lausanne,  
 and form a most beautiful terrace, with a rapid  
 descent a few miles beyond the town. A plain  
 begins in the neighbourhood of Vevey, which  
 continues for a great way beyond the end of the  
 lake, but contracts towards the water by the ap-  
 proach of the mountains. The lake itself appears  
 at a distance of a beautiful blue colour, and the  
 water is very clear and transparent. Near Gene-  
 va the coast abounds with pebbles; between that  
 city and Lausanne it is sandy; from thence to  
 Chillon it is bounded by hard calcareous rocks;  
 and the extremity of the shore is a marsh formed  
 by mud collected from the Rhone. The great-  
 est depth of this lake, found by M. de Luc, is  
 160 fathoms. Here the birds called *tippet grebes*  
 appear in December; but retire in February to  
 other places where they breed, and make float-  
 ing nests of reeds, as the lake of Geneva affords  
 none. This lake, like all others situated between  
 mountains, is subject to sudden storms. The  
 Rhone runs through its whole extent from its E.  
 to its SW. extremity; after which it passes through  
 the city and divides it into two unequal parts.

(III.) GENEVA, a lake of Upper Canada, which  
 forms

forms the W. extremity of Lake Ontario, to which it is joined by a short and narrow strait.

(IV.) GENEVA, a post town of New York, in Onondago county, at the NW. corner of Lake Seneca, on the road from Albany to Niagara: 74 miles W. of Oneida castle, and 460 NW. by N. of Philadelphia. Lon. 1. 40. W. of that city. Lat. 42. 49. N.

(V. i.) \* GENEVA. *n. f.* [A corruption of *genevra*, French, a juniper berry.]—We used to keep a distilled spirituous water of juniper in the shops. At present only a better kind is distilled from the juniper-berry: what is commonly sold is made with no better an ingredient than oil of turpentine, put into the still, with a little common salt and the coarsest spirit. *Hill's Mat. Med.*

(ii.) GENEVA, or GIN, is an ordinary malt spirit, distilled a second time, with the addition of some juniper-berries. Originally, the berries were added to the malt in the grinding; so that the spirit thus obtained was flavoured with the berries from the first, and exceeded all that could be made by any other method. At present, they leave out the berries entirely, and give their spirits a flavour by distilling them with a proper quantity of oil of turpentine; which, though it nearly resembles the flavour of juniper-berries, has none of their valuable virtues.

(VI.) GENEVA, DUCHY OF. See GENEVOIS.

(VII.) GENEVA, NEW. See N<sup>o</sup> I. § 10.

GENEVANS, the people of GENEVA.

GENEVESSE, the territory of Geneva. See GENEVA, N<sup>o</sup> I. § 1.

(1.) GENEVIEVE, ST, the patroness of the city of Paris, flourished in the end of the 5th century, and died A. D. 512. Five years after her death, Clovis erected the church of St Genevieve, under the name and invocation of St Peter, where her relics, are, or were till lately, preserved, her shrine visited and her image carried with great processions and ceremonies.

(2.) GENEVIEVE, ST, fathers or religious of, a congregation of regular canons, established in France, in the 17th century. It was a reform of the Augustine canons, begun by St Charles Faure, in the abbey of St Vincent de Senlis, in 1618. In 1634, the abbey was made elective; and a general chapter, composed of the superiors of 15 houses, who had received the reform, chose F. Faure coadjutor of the abbey of St Genevieve, and general of the congregation. It increased very much, and before the abolition of monachism, consisted of above 100 monasteries; in some of which the religious were employed in the administration of the parishes and hospitals; and in others, in the instruction of ecclesiastics. It took its name from the abbey of St Genevieve, which was the chief of the order, and whose abbot was the general. The abbey itself was named from the Saint. See N<sup>o</sup> I.

(3.) GENEVIEVE, ST, or MISSIRE, a village of Louisiana, on the Mississippi, opposite Kaskaskias, 12 miles from Fort Chartres.

GENEVILLIERS, a town of France in the dep. of Paris, 2 miles W. of St Denys.

GENEVOIS, or the DUCHY OF GENEVA, a *ci-devant* province of France, bounded on the N. *itserland*, on the E. by Faucigny, on the

S. by Savoy Proper, and on the W. Anciently Geneva and its territory in it. It is now annexed to France in the department of Mont Blanc.

GENEURO, a mountain betw and the *ci-devant* province of Dauph Briançon and Sufa.

GENGENBACH, an imperial many, in Suabia, on the Kinzig; of Strasburg, and 22 N. of Friburg.

GENGIS KHAN, the renowned the Moguls, a barbarous and bloody See JENGHIZ KHAN, and MOGUL.

GENGOUX, ST, *ci-devant* Le R France in the department of Sac and *ci-devant* prov. of Burgundy, wines; seated on a mountain 17 Chalons. Lon. 4. 43. E. Lat. 46.

(2.) GENIAL GODS, in the Paga deities who were supposed to prefi ration. The *genial* gods, says Festu air, fire, and water. The twelve l with the sun and moon, were somet ed in the number.

\* GENIALLY. *adv.* [from *genial*. naturally.—Some men are *genially* di opinions, and naturally averse to oth 2. Gayly; cheerfully.

\* GENICULATED. *adj.* [*geni*. Knotted; jointed.—A piece of so plant seeming to be part of a sugar on *Fossils*.

\* GENICULATION. *n. f.* [*gei*. Knottiness; the quality in plants o or joints.

GENIEZ, ST, a town of Fran of Aveiron, and late prov. of Rou the birthplace of Abbe Raynal, an NE. of Rhodéz. Lon. 3. 6. E. La

GENII, in the Mahometan theo intermediate beings, supposed to men and angels. They are of a gro the latter, but much more active than the former. Some of them ar bad, and they are capable of futu damnation like men. The Orienta these genii inhabited the world n years before the creation of Adam, princes, who all bore the common r mon; that falling at length into an corruption, Eblis was sent to dri remote part of the earth, there u and that some of that generation were by Tahmrath, one of the an Persia, forced to retreat into the l tain of Kaf. Of this king's success

to many fabulous and romantic stories. We suppose several ranks and degrees of species among this kind of beings; peculiarly called *Jin*, or *genii*; some *ies*; some *Divs*, or giants; and others *fates*.

**E**, a town of France in the dep. of oire, 3 miles N. of Loches.

**G. n. f.** [*genio*, Italian; *genius*, Latin.] particular turn of mind.—Some *genius* able of pure affection; and a man is said for it as much as for poetry, or science. *Tatler*.

**GLOSSI**, and } in anatomy. See **ANATOMY**, § 201.

**TOMA**, in botany, a genus of the order, belonging to the pentandria class. The calyx is a turbinated quinquefid; the corolla monopetalous and tubular; short filaments; the anthers seeds very numerous and subangulate in a filiform receptacle.

**A**, in botany, a genus of the monogynous, belonging to the pentandria class of in the natural method ranking under *Contorta*. The corolla is wheel-shaped stigma club-shaped; the berry bilobed nesting in a carnosus heart-shaped.

**ST GENIS**, a town of the French dep. of Mont Blanc, and ci de Savoy, on the Guier; 12 miles W. Lon. 5. 30. E. Lat. 45. 40. N.

**A**, **BROOM**, or **DYERS-WEED**, a genus of the diadelphia order, belonging to the diadelphia plants; and in the natural method to the 3d order, *Papilionaceae*. The biate, the upper lip bidentate, the identate; the vexillum is oblong and turned back from the pifil and stamens several species; of which the following most remarkable:

**CYTISUS**, or **CYTISO GENISTA**, a shrub; which is too well known to mention. Its young flowers are sometimes as pickles; and the plant, when dried, is a tolerably pure alkaline salt. Dr the case of a dropical patient, who taking half a pint of a decoction of tops, with a spoonful of whole white every morning and evening. The decoction has been tapped three times, and tried several remedies before. An infusion of the decoction, has been known to produce effects. Cows, horses, and sheep, eat it.

**TINCTORIA** is also a native of the Alps with shrubby stalks 3 feet high, spear-shaped leaves placed alternate, and by several spikes of yellow flowers, pods. The branches are used by dyers for a yellow colour; from whence it is called *broom*, *green wool*, *wood waxen*.

A dram and a half of the powder operates as a mild purgative. A decoction is diuretic; and, like the decoction, is serviceable in dropical cases. *goats, and sheep, eat it.*

T L

(1.) \* **GENITALS**. *n. f.* [*genitalis*, Lat.] Parts belonging to generation.—Ham is conceived to be of Jupiter, who was the youngest son, who is said to have cut off the *genitals* of his father. *Brown*.

(2.) **GENITALS**. See **ANATOMY**, *Index*. **GENITE**, a town of France, in the dep. of Correz, 18 miles W. of Brive.

**GENITES**, among the Hebrews, those descended from Abraham, without any mixture of foreign blood. The Greeks distinguished by the name of *genites* such of the Jews as were issued from parents, who during the Babylonish captivity, had not allied with any gentile family.

\* **GENETING**. *n. f.* [A corruption of *Janeton*, French, signifying *Jane* or *Janes*, having been so called in honour of some lady of that name; and the Scottish dialect calls them *Janes* apples, which is the same with *Janeton*: otherwise supposed to be corrupted from *Juheting*.] An early apple gathered in June.—In July come early pears and plums in fruit, *genetings* and *codlins*. *Bacon*.

(1.) \* **GENITIVE**. *adj.* [*genitivus*, Latin.] In grammar, the name of a case, which, among other relations, signifies one begotten, as, the father of a son; or one begetting, as son of a father.

(2.) **The GENITIVE**, is the second case of the declension of nouns. The relation of one thing considered as belonging in some manner to another, occasioned in the Greek and Latin, a peculiar termination of nouns called the *genitive case*; but in the modern tongues a particle is prefixed to express the relation of this case. In English we prefix the particle *of*; in French *de* or *du*, &c. though in strictness there are no cases in either of these languages; inasmuch as they do not express the different relations of things by different terminations, but by prepositions.

(1.) \* **GENIUS**. *n. f.* [Latin; *genie*, French.] 1. The protecting or ruling power of men, places, or things.—

There is none but he

Whose being I do fear: and, under him,

My *genius* is rebuk'd; as it is said

Antony's was by Cæsar. *Shak. Macbeth.*

The *genius* and the mortal instruments

Are then in council; and the state of man,

Like to a little kingdom, suffers then. *J. Cas.*

And as I awake, sweet music breathe,

Sent by some spirit to mortals good,

Or th' unseen *genius* of the wood. *Milton.*

And the tame demon that should guard my throne,

Shrinks at a *genius* greater than his own. *Dryd.*

To your glad *genius* sacrifice this day;

Let common meats respectfully give way. *Dryd.*

2. A man endowed with superior faculties.—There is no little writer of Pindaricks who is not mentioned as a prodigious *genius*. *Addison*. 3. Mental power or faculties.—

The state and order does proclaim

The *genius* of that royal dame. *Wallis.*

4. Disposition of nature by which any one is qualified for some peculiar employment.—

A happy *genius* is the gift of nature. *Dryden*.—Your majesty's sagacity, and happy *genius* for natural history, is a better preparation for enquiries of this kind than all the dead learning of the schools. *Burnet's Theory*, Preface.—

One science only will one *genius* fit;  
So vast is art, so narrow human wit.

*Pope on Criticism.*

—The Romans, though they had no great *genius* for trade, yet were not entirely neglectful of it.  
*Arbutnot on Coins.* 5. Nature; disposition.—

Studious to please the *genius* of the times,

With periods, points, and tropes, he flurs his crimes.  
*Dryden.*

—Another *genius* and disposition improper for philosophical contemplations, is not so much from the narrowness of their understanding, as because they will not take time to extend them.

*Burnet's Theory.*—

He tames the *genius* of the stubborn plain. *Pope.*

(2.) *GENIUS*, (§ 1. def. 1.) a good or evil spirit or dæmon, whom the ancients supposed set over each person, to direct his birth, accompany him in life, and to be his guard. See *DÆMON*. Among the Romans, Festus observes, the name *genius* was given to the god who had the power of doing all things, *deum qui vim obtineret rerum omnium gerendarum*; which Vossius, *de Idol.* rather chooses to read *genendarum*, who has the power of producing all things; by reason Censorinus frequently uses *gerere* for *gignere*. Accordingly St Augustin, *de Civitate Dei*, relates, from Varro, that the *genius* was a god who had the power of generating all things; and presided over them when produced. Festus adds, that Ausulius spake of the *genius* as the Son of God, and the Father of men, who gave them life; others represented the *genius* as the tutelary god of each place: and it is certain, the last is the most usual meaning of the word. The ancients had their *genii* of nations, of cities, of provinces, &c. The following was a very common inscription on their medals, *GENIUS POPULI ROM.* “The genius of the Roman people;” or *GENIO POP. ROM.* “to the genius of the Roman people.” In this sense *genius* and *lar* were the same thing; as Censorinus and Apulius affirm they were. See *LARES* and *PENATES*. The Platonists, and other eastern philosophers, supposed the *genii* to inhabit the vast region of air between earth and heaven: That they were a sort of intermediate powers, who acted as mediators between gods and men: That they were the interpreters and agents of the gods; communicated their wills to men; and the prayers and vows of men to the gods. As they thought it below the majesty of the gods to enter into such trifling concerns, they esteemed this the lot of the *genii*, whose nature was a mean between the two; who derived immortality from the one, and passions from the other; and who had a body framed of an aerial matter. Most of the philosophers, however, held, that the *genii* of particular men were born and died with them; and Plutarch attributes the ceasing of oracles partly to the death of the *genii*. See *ORACLE*. Those heathens, who considered the *genii* as the guardians of particular persons, believed that they rejoiced and were afflicted at the good or ill fortune that befel their wards. They never, or very rarely, appeared to them; and then only in favour of some person of extraordinary virtue or dignity. They likewise held a great difference between the *genii* of different

men; and that some were much more than others: On this principle a wizard bids Antony keep at a distance from (Antony's *genius* was inferior to and less of that of Octavius. There were all who took a pleasure in persecuting, bringing them evil tidings: such was *terculus*, &c. which appeared to Brutus before the battle of Philippi. The latter called *larvæ* and *lemures*. See *LARVÆ* and *LEMURES*.

(3.) *GENIUS*, (§ 1. def. 4.) signifies a talent, which a man has received from nature, which a man has received from nature, but indifferently and with a great desire. To know the bent of nature is the most important concern. Men come into the world with a *genius* determined not only to a certain part of that art, in which alone they are capable of success. If they quit their art, they fall even below mediocrity in their art. Art and industry add much to natural talents, but cannot supply them when wanting. Every thing depends on nature. A painter often pleases without observing, whilst another displeases though he observes, because he has not the happiness of a *genius* for painting. A man born with a *genius* for commanding an army, and becoming a great general by the help of fortune, whose whole organical conformation is fitted for valour, is no obstruction to his presence of mind, his presence of mind makes no abatement of his valour. Such a disposition of mind is required by art: it can be possessed only by those who have brought it with him into the world. It has been said of these two arts may be applied to all other professions. The art of great concerns, the art of putting those employments for which they are formed, the study of physic, and even self, all require a *genius*. The Deity fits to allot peculiar talents to different men in order to render all men necessary to each other; the wants of men being the result of society. He has therefore given to particular persons, an aptitude to perform some things which he has rendered impossible to others; and the latter has facility granted them for other things, which facility has been refused to the former. Indeed he has made an unequal distribution of talents among his creatures; yet he has inherited none; and (cases of natural exception) a man divested of all kinds of talents, as great a phenomenon as an univert. From this diversity of *genius* arises that diversity of inclination in men, who are led to employments for which Providence designeth them with more or less impetuosity in proportion to the greater or lesser number of obstacles to surmount, to render themselves answering this vocation. Thus the inclinations of men are so very different, because the same mover, that is, the impulsive *genius*. This, (as with the painter,) is with one poet pleading, even when he is

while others are disagreeable, not their strict regularity. The genius, says Abbe Du Bos, consists in a movement of the organs of the brain; in motion of each of these organs; as quality of the blood, which disposes it, during exercise, so as to furnish spirits to the springs employed in the the imagination. Here he supposes noster's blood is heated; for that poets cannot invent in cool blood; is evident they must be wrought into a passion when they produce their fine one mentions a poet who never wrote ten his poetic fury hurried him into razy. The admirable pictures in nida and Florinda are alleged by some to be drawn at the expence of a disposition to real madness, into which he fell d. "Do you imagine, (says Cicero,) is wrote in cold blood? No, it was He must have been inspired with a to be able to write such admirable

a town of France, in the department of 7 miles N. of Chauny.

**NADIUS**, patriarch of Constantino-ceeded Anatolius in 458, was esteemed author; but all his works are lost pistle against Simony, and part of a St Cyril's Anathemas. He died

**NADIUS**, a bishop or priest of Mar wrote a work *De Dogmatibus Ecclesie* has been ascribed to St Augustin, among his works. He wrote another *Ecclesie Scriptoribus*. Both are extant in 492.

a town of France, in the department of Loire, near the Loire, 9 miles NW.

a town of Germany in the late times, now annexed to the French republic in the dep. of the Roer. It is on the Niers, near the Meuse, and 9 miles.

a town of France in the dep. of Ille and Vilaine, 5 miles NE. of Guerche.

**NESARETH**, in ancient geography, a town in Galilee, called also Cinnereth, *Cbinnereth*, by Moses; 140 stadia in length, and 10 in breadth; abounding in fish. It is on the *Sea of Galilee*, and St John calls it *Berias*.

**NESARETH**, a district on the lake.

**GENOA**, the **GENOESE REPUBLIC**, or the **REPUBLIC**, a small democratic state of Italy, lying along that part of the Mediterranean from it is called the *Gulf of Genoa*, 2 miles, but varying in its breadth from 1 to 9 miles. It is bounded on the N. from Piedmont, Montferrat, the Cisalpine Republic, Parma, a small territory belonging to the republic of Lucca. This part of the ancient **LIGURIA**, whence the name of the **LIGURIAN REPUBLIC**. It is 11. 27. and 9. 25. Lon. E. and between 45. 0. Lat. N.

(2.) **GENOA**, the capital of the **Ligurian republic**, is seated on the coast of the Mediterranean sea, at the bottom of the gulph, (§ 4.) partly on the flat, and partly on the declivity, of a pleasant hill; in consequence of which, it appears to great advantage from the sea. Two of the streets consist entirely of a double straight row of magnificent palaces, at least they did so before the late bombardment. The others, though clean and well paved, are crooked and narrow. The palaces of the ci-devant nobility are almost all of marble, and many of them are painted on the outside. Of these there is a vast number besides churches, convents, and hospitals. The palace where the ci-devant doge resided, and where the great and little council, and the two colleges of the procuratori and governatori assembled, is a large stone building in the centre of the city. It contains some fine paintings in fresco; two statues of Andrew and John Doria in white marble; and an arsenal, in which are said to be arms for 34,000 men, with a shield, containing 120 pistol barrels, and 33 coats of mail, which, it is said, were worn by as many Genoese heroines in a croifade. Of the churches, the finest are those of the Annunciation, St Mary Carignan, St Dominic, and St Martha. In the cathedral is an hexagonal cup made of a single emerald. An academy of painting, sculpture, civil and military architecture, was instituted here in 1751. The streets of Genoa are remarkably steep and narrow, yet one may walk in the night with the greatest safety, which is more than can be said of many cities in Italy. There are two fine stone bridges over the rivers Bonzevera and Bisagno, the first whereof washes the W. and the other the E. side of the city, within which there is also a surprising stone bridge joining two hills. The harbour, though large, is far from being safe; but no expence has been spared to render it safe and commodious. The wind to which it is most exposed, is the SW. called *Labreccio*. The place where the galleys lie, is called the *Darsena*, where before the revolution there were commonly a great number of Turkish slaves. On a rock, on the W. side of the harbour, is the *fanal* or light-house, a high tower, on the top of which is a lantern, containing 36 lamps. Genoa lies 62 miles SE. of Turin, 63 S. of Milan, and 224 NW. of Rome. Lon. 8. 41. E. Lat. 44. 25. N.

(3.) **GENOA**, **CONSTITUTIONS AND GOVERNMENT OF**. The ancient constitution, from the time of its establishment by the brave Andrew Doria, in 1528, was aristocratic, though not so much so as that of Venice. The nobility alone were capable of holding the chief offices in the republic. From this body were elected the Doge, the great council and the senate. The *doge*, or duke, was elected for two years, and was incapacitated from being re-elected for 5 years after; but had a procurator's office assigned him, and a pension of 500 scudi for life. No person could be elected doge till he was 50 years of age, and had left off trade for 15 years before. The great council consisted of 80 counsellors in whom the sovereignty chiefly resided. The senate consisted of 12 senators, who with the doge, had the administration of affairs. In Nov. 1791, this form

of government was overturned, hereditary titles and honours abolished, and a new democratic constitution established, by gen. Bonaparte, with a directory, two councils, &c. similar to the late constitution of France. (See FRANCE, § 61.) At present (Sept. 1800) some farther alterations are making in this constitution, which perhaps will be again new-modelled upon the plan of the present constitution of France, under consuls, &c.

(4.) GENOA, GULF OF, a semicircular gulf of the Mediterranean Sea, which washes the whole S. coast of Genoa, from the coast of the French republic, (ci-devant Nice and Monaco) on the W. to that of Lucca on the E.

(5.) GENOA, HISTORY OF. The ancient history of Genoa, like that of most other places, is wrapt up in fable. Some say, it was built by *Genuus*, a son of Saturn; others by the god *Janus*, agreeably to which origin, the ancient Latin authors often call it *Janua*. Be that as it may, the city of Genoa was a celebrated emporium in the time of the 2d Punic war; and having declared for the Romans, was plundered and burnt by Mago the Carthaginian. It was afterwards rebuilt by the Romans; and with the rest of Italy continued under their dominion till the overthrow of the western empire in 476. In 498, it fell under the power of Theodoric the Ostrogoth; who having defeated the usurper Odoacer, became king of Italy. Not long after, the Goths being almost entirely subdued by Belisarius, Justinian's general, Genoa was re-annexed to the Roman or rather eastern empire. In 670, it was plundered and burnt by the Lombards, whose king Brotharis erected it into a provincial dukedom. The Lombards continued masters of Genoa till 774, when they were conquered by Charlemagne. He reduced Liguria to its ancient bounds settled by Augustus, and erected it into a marquise: appointing his relation *Audemarus* the first count or margrave. In 806 the Genoese reduced Corsica. Genoa at this time being distinguished for its wealth and populousness, began to give its name to the whole coast; and continued under the dominion of these counts for about 100 years, till the Carlovingian race became extinct in Italy, and the empire was transferred to the German princes. In 935, while the Genoese forces were absent on some expedition, the Saracens surprised the city, which they plundered and burnt, putting to death a great number of the inhabitants, and carrying others into captivity. Having embarked their captives, together with an immense booty, they set sail for Africa: but the Genoese immediately returning, pursued the invaders; and having entirely defeated them, recovered all the captives and booty, and took a great number of the enemy's ships. About A. D. 950, the Franks having lost all authority in Italy, the Genoese began to form themselves into a republic, and to be governed by their own magistrates, who were freely elected, and took the name of *Consuls*. To support their independence, they applied themselves to commerce and navigation; and being apprehensive that some of the German emperors, who often invaded Italy, might renew their pretensions to their state, they acknowledged Berengarius III, D.

of Friuli, who had been elected emperor by authority of Italian nobles. Berengarius, who had endeavoured to maintain himself in his new dignity, endeavoured by his concessions to enlarge the number of his adherents: and accordingly confirmed the new republic in all its privileges. After this the Genoese began to extend their commerce from Spain to Syria, and from Egypt to Constantinople; their vessels being fitted for fighting as well as merchandising. Having thus acquired great reputation, they were invited in 1017, by the Pisans, who had likewise formed themselves into a republic, to join with them in an expedition against Sardinia, which had been conquered by the Moors. In this expedition they were successful; the island was reduced; but from this time enmity took place between the two republics, which did not end but with the ruin of that of Pisa. The first war with the Pisans commenced 30 years after the Sardinian expedition, and lasted 18 years; when the contending parties concluded a peace, they sent their united forces against the Moors in Africa, of whom they are said to have killed 100,000. The Genoese were very active in the time of the crusades, and had a principal share in the taking of Jerusalem. They also waged considerable wars with the Moors of Spain, of whom they generally got the better. They also prevailed against the neighboring states; and, in 1220, had enlarged their territories beyond the skirts of the Apennines, so that the rest of Italy looked upon them with a jealous eye: but in 1311, the factions which had reigned in the city, notwithstanding all its wealth and power, induced the inhabitants to submit 20 years to the dominion of the emperor Frederick VII. That emperor, however, died in 1312; and the vicar he had left soon after returned to Pisa, upon which the dissensions in Genoa revived with greater fury than ever. In 1308 a quarrel happened between the families of Spinola and Doria; which came to such a height, that both parties fought in the streets for 24 days without intermission, raised battering engines against each others houses, and filled the city with blood. At last the Spinolæ quitted the city, and retired to their territories in the Apennine mountains. The civil war continued till 1333; when, by the mediation of the king of Naples, it was agreed that all exiles should return to the city; that the republic should be governed by the king's officers, and all the offices of the state be equally divided between the Guelfs and the Ghibellines, the contending parties. By this ruinous war the coast of Genoa, formerly adorned with gardens and vineyards, was now reduced to the appearance of a barren waste. So great was the desolation, that, according to Petrarch, the spectators failed along were struck with astonishment and horror. Villani, a cotemporary author, says that the losses each party had sustained, might have been sufficient to have purchased a kingdom; the Genoese republic being esteemed in his time the richest and most powerful state in Christendom. Stella informs us, that, before the late war, the most extravagant profusion and luxury prevailed among the Genoese: but that, towards

by noble families were reduced to indigence that, for about 100 years after, it became dishonourable for the nobles to live in a plain manner. In 1336, both parties, from their animosities, sent two fleets of 20 each into the German ocean, to assist King Edward III. of France, against Edward III. of France. This naval expedition proved the cause of a remarkable revolution in the Genoese republic. The sailors accused their officers of withholding them of their pay, proceeded to a mutiny, and, having expelled the admiral and other commanders, seized the galleys. Philip of Savoy, chosen arbitrator, decided in favour of the sailors, and imprisoned 16 chiefs of the mutiny. Upon this several of the sailors left the city and returned to Genoa; where they went to the coast, repeating their mutinous complaints, which were eagerly listened to, upon a report that the mutineers were broke upon the coast. The factious spirit increased; and at Genoa insisted on having an abbot chosen for their chief, and 20 of the people, with consent of the captains of the republic, assembled for that purpose. While the multitude patiently expecting their decision, a meadow was cut out of a wooden bench, and called out Simon Bucanigree should be chosen abbot, his being instantly echoed by the people, who were first declared abbot, then lord, and duke, of Genoa. But the dissensions continued as violent as ever, notwithstanding the election of the new magistrate; and by these divisions the republic was at last so much weakened, that in 1390, Charles VI. King of France, declared Lord of Genoa. However, they were exceedingly impatient of the French yoke; and, in 1412, the duke of Milan obtained the sovereignty. With this situation they were equally displeased, and therefore revolted in 1436. In 1458, finding themselves pressed by a powerful fleet and army sent by Alfonso of Naples, they conferred the sovereignty of Genoa upon Charles VII. of France. But in 1478 they revolted, and, 4 years after, put themselves under the protection of the duke of Milan, from whom they revolted in 1478. He declared himself sovereign of the republic in 1490, and in 1499 the city and territories of Genoa were conquered by Lewis XII. of France. The weakness of the Genoese was not corrected by this misfortune. They revolted in 1506; but were again subdued by Lewis. In 1512 they revolted; and in 1516, the city was plundered by the Spaniards. In 1528, the duke of Savoy, then an admiral in the French service, undertook to rescue his country from the dominion of foreign-princes, and restore its liberty. He told his countrymen that the French, who had again obtained the sovereignty, had left them only a shadow of liberty, and pretended to protect them from their oppressors. To the nobility he represented the danger of suffering the government to be vested in the hands of foreigners less worthy of authority than themselves. Thus he soon formed a strong party, and when almost 3000 of the French garrison had been carried off by the plague, he ad-

vanced with 500 men. His friend having opened the gates of the city to him, he seized the principal posts, and thus became master of it without drawing his sword. The garrison retired to the forts, where they soon after capitulated, and being driven out of the city, Doria re-established the ancient form of government. See DORIA. The republic has since continued to preserve her liberty, though greatly fallen from her ancient splendor. In 1684, the Genoese having fallen under the resentment of Lewis XIV, the city was almost destroyed by a formidable bombardment. In 1688, it was bombarded by admiral Byng, and forced to capitulate; but the British government had no view of making a permanent conquest of it. In 1713, the emperor Charles VI. sold the town and marquisate of Finale to the republic, which 30 years after involved it in a bloody war; for in 1743, the Queen of Hungary having by the treaty of Worms ceded to the king of Sardinia her right to Finale, the Genoese formed an alliance with France, Spain and Naples; and, in 1745, declared war against the King of Sardinia, who soon made himself master of great part of the state, while several Genoese ports were bombarded by the British, and the city of Genoa was taken by the Imperialists: but after a terrible slaughter they were driven out by the Genoese; who again defeated them in 1747, when they attempted to recover it. In 1730, the island of Corsica revolted from the Genoese, and could never afterwards be reduced by them: for which reason they at last sold it to the French, who in 1770 totally reduced it. See CORSICA. As the revolution that took place in this state in 1797, and the other events that occurred during the present war, will necessarily be noticed under the article REVOLUTION, we shall only mention here, that the city of Genoa, after sustaining a long and severe siege, from the Austrian forces by land, and the British fleet, which blockaded the port by sea, was at last surrendered on the 7th June 1800, by general Massena, on the most honourable terms, after suffering the greatest hardships, the garrison having eaten all their horses, and being reduced to the last 3 oz. of "a wretched mixture of bran, oat chaff, and cocoa nut;" which they used for bread. Within two or three weeks after, however, the Austrians were obliged to give up the city to the French, a party of whom had been sent to its relief after the victory at Marengo, and were within a day's march of it, when the garrison capitulated.

(6.) GENOA, INHABITANTS OF. The total number of citizens of all ages in this republic is estimated at 150,000. As to their character, the Genoese in general are esteemed crafty, industrious, and inured to labour above the other Italians.

(7.) GENOA, MILITARY FORCE OF. In time of peace the republic usually keep a body of 5000 regular troops; viz. 4000 natives, 200 Germans, 500 Swiss, 300 Italians, and 100 bombardiers; but in war it has about 20,000 troops in all.

(8.) GENOA, PRODUCE OF. This country, though a great part of it is mountainous, and some of that barren, yet produces plenty of excellent fruit, good pasture, wood, garden stuffs, and mulberry trees; with some wine and oil, but

little

little corn. What is wanted of the last, is supplied from Lombardy, Sicily, or Naples.

(9.) GENOA, REVENUE OF. The ordinary revenue of this republic is estimated at two millions per annum.

(10.) GENOA, STRENGTH OF. The city of Genoa is surrounded on the land side with two walls, the outermost of which reaches beyond the mountain, and extends about 10 Italian miles in circumference. It is defended by bastions, and about 500 pieces of cannon are mounted on the outworks. The fortifications towards the sea are also remarkably strong. On the whole it may be pronounced impregnable; for Massena in his letter to Bonaparte said, "had it not been for want of subsistence we would have for ever held out in Genoa."

(11.) GENOA, TRADE OF. The trade of Genoa is chiefly in velvets, damasks, plush, silks, brocades, laces, gloves, sweetmeats, fruits, oil, Parmesan cheese, anchovies, and drugs from the Levant; but the badness of the harbour, and the high price of commodities, greatly check its commerce. In 1751, Genoa was declared a free port for ten years, under certain restrictions: in that called *Porto Franco*, any merchant may have a ware-house, and import or export goods duty-free; but such as are disposed of in the city, or on the continent, are taxed pretty high. The cis-devant nobility were allowed to trade in the whole sale way; to carry on velvet, silk, and cloth manufactures; and to have shares in merchant ships; and some of them, as the Palavicini, were actually the greatest merchants in Genoa. Another very profitable article of trade carried on is banking, and dealing in bills of exchange.

GENOELS, Abraham, an eminent painter of Antwerp, born in 1640. He excelled in portraits and landscapes.

GENOESE, the people of Genoa. See GENOA, § 6.

GENOLHAC, or GENOUILLAC, a town of France, in the dept. of Gard, 15 m. NW. of Alais.

GENOSA, a town of Naples, in the province of Otranto; 10 miles SE. of Otranto.

GENOUILLAT, a town of France, in the dept. of Creuse; 9 miles W. of Bouffac.

(1.) GENOUILLE, a town of France, in the dept. of Charente, 10 miles W. of St Jean.

(2.) GENOUILLE, a town of France, in the department of Vienne, 3 miles S. of Civray.

GENSAC, a town of France, in the dept. of Gironde, 9 miles SE. of Libourne.

GENSERIC, king of the Vandals in Spain, a barbarous conqueror of the 5th century. He succeeded his father Godefrilius, A. D. 428; defeated Hermeric, king of the Suevi; over-ran all Africa, conquered Barbary, took Carthage, ravaged Sicily, and sacked Rome. See BARBARY, § 3; ROME, &c. He died in 477.

GENSING, in botany. See PANAX.

\* GENT. *adj.* [*gent*, old French.] Elegant; soft; gentle; polite. A word now disused.—

Vespasian with great spoil and rage,  
Forewasted all: 'till Genuilla *gent*

Persuaded him to cease. *Fairy Queen.*

She that was noble, wife, as fair and *gent*,

Cast how she might their harmless lives preserve

\* GENTEEL. *adj.* [*gentil*, French.] 1. Polite; elegant in behaviour; civil.—He had a genteel manner of binding the chains of this kingdom than most of his predecessors. *Swift to Gay.*—The poets have no notion of genteel comedy, and fit into the most filthy double meanings, when they have a mind to make their audience merry. *Johnson on Italy.* 2. Graceful in mien.—

So spruce that he can never be genteel. *Tales*  
3. Elegantly dressed.—Several ladies that had twice her fortune, are not able to be always genteel, and so constant at all places of pleasure and expence. *Law.*

\* GENTEELLY. *adv.* [from *genteel*.] Elegantly; politely.—Those that would be genteelly led, need not purchase it at the dear rate of both atheists. *Glanville.*—After a long fatigue of eating and drinking, and babbling, he concludes the great work of dining genteelly. *South.* 2. Gracefully handsomely.

\* GENTEELNESS. *n. f.* [from *genteel*.] 1. Elegance; gracefulness; politeness.—He had a genius full of genteelness and spirit, having nothing that was ungraceful in his postures and dress. *Dryden's Dufresnoy.*—Parmegiano has dignified genteelness of modern effeminacy, by uniting with the simplicity of the ancients, and the grandeur and severity of Michael Angelo. *Reynolds.* Qualities befitting a man of rank.

GENTIAH, a town of Asia, in the country of Affam; 370 miles E. of Patna.

\* GENTIAN. *n. f.* [*gentiane*, French; *gentiana*, Latin.] Felwort or baldmony.—The root *gentian* is large and long, of a tolerably firm texture, and remarkably tough; it has a faintish disagreeable smell, and an extremely bitter taste. *Hill's Mat. Med.*—If it be fistulous, and the surface small, dilate it with *gentian* root. *Wifeman.*

GENTIANA, GENTIAN, in botany: A genus of the digynia order, belonging to the pentandria class of plants; and in the natural method ranked under the 20th order *Rotacee*. The corolla is monopetalous; the capsule bivalved and unilocular; there are two longitudinal receptacles. The most remarkable species are the following:

1. GENTIANA CENTAUREUM, the lesser CENTAURY of the shops, is a native of many parts of Britain. It grows on dry pastures; and its height is commonly proportioned to the goodness of the soil, as in rich soils it grows to the height of a foot, but in poor ones not above 3 or 4 inches. It is an annual plant with upright branching stalks garnished with small leaves, placed by pairs. The flowers grow in form of an umbel at the top of the stalk, and are of a bright purple colour. They come out in July, and the seed ripens in autumn. The plant cannot be cultivated in gardens. The tops are an useful aperient bitter, in which they are often used in the present practice of medicine.

2. GENTIANA LUTEA, the common GENTIAN of the shops. It is a native of the mountainous parts of Germany; whence the roots, the chief part used in medicine, are brought to this country. These have a yellowish brown colour,

er taste. The lower leaves are of an oval shape, a little pointed at the end, yellowish green, and have 5 large veins of each. The stalk rises 4 or 5 feet, clothed with leaves growing by pairs at almost embracing the stalk at their base, of the same form with the lower, but gradually in their size to the top. The flowers are in whorls at the joints on the upper part of the stalks, standing on short footstalks, in pairs in the wings of the leaves. They are of a yellow colour. The roots of this are often used in medicine as stomachic bitters; but they are less exceptionable than the roots of this class. Infusions of it flavoured with orange peel, are successful. Some years ago a poisonous species was discovered among the gentian brought from the East; the use of which occasioned violent and in some cases death. This root is distinguished from the gentian, by its being of a white colour, and void of bitterness. *GIANTELLA. n. f.* A kind of blue co-

**GENTILE. n. f.** [*gentilis*, Latin] 1. uncovenanted nation; one who knows not the God.—Tribulation and anguish upon that doeth evil, of the Jew first, and almost of all. *Rom. ii. 2.*—*Gentiles* or infidels, heathens, upon both the spiritual and temporal, have been in one pursuit conjoined.

A person of rank. Obsolete.—  
As a gilliflow'rs, trim in her pot;  
As a gilliflow'rs, for whom we do serve,  
As a gilliflow'rs, poor life to preserve.

**GENTILE. (s. i. def. 1.)** means a Pagan, or one of false gods. The Jews called all who were not of their race *goyim*, i. e. heathens in the Greek translations of the Old Testament rendered *gentes*; in which sense it is used in the New Testament; as in *Matth. 23. 15.* All these things do the Gentiles (or nations) do. Whence the Latin church also used the same sense as our *Gentiles*, especially in the New Testament. But the word *gentes* soon lost its original signification, and no longer meant all heathens; but those only who were neither Jews, nor Christians, but followed the superstitions of the heathens, and Romans, &c. In this sense it is used among the Christian writers, till their language, together with their religion, was corrupted, and by authority received in the emperors' edicts, *gentiles*, from *gentes*, came into use; in which words had two significations, viz. heathens, or laws concerning religion, they signify heathens, neither Jews nor Christians; and in the latter sense, they were used for all such as were not Christians.

**GENTILE. n. f.** in the Roman law and history, expresses what the Romans otherwise called *gentes*, whether they were allies of the Romans: but this word was used in a more general sense for all strangers not subject to the Roman law.

**GENTILESCHI, Horatio, an Italian pain-**

ter, born at Pisa in 1563. After painting with great reputation at Florence, Rome, Genoa, and other parts of Italy, he removed to Savoy, thence to France, and at last came over to England, upon the invitation of Charles I.; who appointed him lodgings in his court, with a considerable salary; and employed him in his palace at Greenwich, and other public places. The most remarkable of his performances in England, were the ceilings of Greenwich and York house. He did also a *Madona*, a *Magdalen*, and *Lot* with his two daughters, for king Charles. After the death of the king, when the royal collection was sold, nine of these pictures drew 600 l. His most esteemed work abroad was the portico of cardinal Bentivoglio's palace at Rome. He made several attempts in face-painting, but with little success; his talent lying altogether in histories, with figures as big as the life. After 12 years continuance in England, he died in 1647, aged 84; and was buried in the Queen's chapel at Somerset house. His head was drawn by Vandyke.

(2.) **GENTILESCHI, Artemisia**, daughter of the preceding, was little inferior to her father in painting history, and excelled him in portraits. She drew some of the royal family, and many of the nobility.

\* **GENTILESSA. n. f.** [Fr.] Complaisance; civility. Not used.—

She with her wedding-cloaths undressed  
Her complaisance and gentilefess. *Hudibras.*

(1.) **GENTILIS, Albericus**, professor of civil law at Oxford; an Italian by birth. He quitted Italy with his father, on account of religion. He wrote several works; 3 books in particular, *De jure belli*, which were useful to Grotius. He died at London in 1608.

(2.) **GENTILIS, Scipio**, brother to the former, and as celebrated a civilian, forsook his native country that he might openly profess the Protestant religion. He was counsellor of Nuremberg, and professor of law. In his lectures, as well as books, he mixed the flowers of polite learning with the thorns of the law. He died in 1616.

\* **GENTILISM. n. f.** [*gentilisme*, Fr. from *gentile*.] Heathenism; paganism.—If invocation of saints had been produced in the apostolical times, it would have looked like the introducing of *gentilism* again. *Stillingfleet.*

\* **GENTILITIOUS. adj.** [*gentilitious*, Latin.] 1. Endemial; peculiar to a nation.—That an unfavorable odour is *gentilitious*, or national unto the Jews, reason or sense will not induce. *Brown.* 2. Hereditary; entailed on a family.—The common cause of this distemper is a particular and perhaps a *gentilitious* disposition of body. *Arbutnot.*

\* **GENTILITY. n. f.** [*gentilité*, French; from *gentil*, French; *gentilis*, Latin.] 1. Good extraction; dignity of birth. 2. Elegance of behaviour; gracefulness of mien; nicety of taste. 3. Gentry; the class of persons well born.—Gavelkind must needs, in the end, make a poor *gentility*. *Davies on Ireland.* 4. Paganism; heathenism.—When people began to espy the fallhood of oracles, whereupon all *gentility* was built, their hearts were utterly averted from it. *Hooker.*

**GENTILLY, a town of France, in the dept.**

of Paris; 2 miles S. of Paris. It was the residence of the kings of the Merovingian and Carolingian races.

GENTIOUX, a town of France, in the dept. of Creuse, 9 miles SW. of Felletin.

(1.) \* GENTLE. *adj.* [*gentilis*, Lat.] 1. Well born; well descended; ancient, though not noble.—They entering and killing all of the *gentle* and rich faction, for honesty sake broke open all prisons. *Sidney*.—These are the studies wherein our noble and *gentle* youth ought to bestow their time. *Milton*.

Of *gentle* blood, part shed in honour's cause,  
Each parent sprung. *Pope*.  
2. Soft; bland; mild; tame; meek; peaceable.—I am one of those *gentle* ones that will use the devil himself with curtesy. *Shak*.—

Her voice was ever soft,  
*Gentle* and low; an excellent thing in woman. *Shak*.

As *gentle*, and as jocund, as to jest,  
Go I to fight. *Shak. Richard II*.  
—A virtuous and a good man, reverend in conversation, and *gentle* in condition. 2 *Mac*. xv. 12.  
The *gentlest* heart on earth is prov'd unkind. *Fairfax*.

Your change was wife; for, had she been deny'd,  
A swift revenge had follow'd from her pride:  
You from my *gentle* nature had no fears;  
All my revenge is only in my tears. *Dryden*.

—He had such a *gentle* method of reproving their faults, that they were not so much afraid as ashamed to repeat them. *Atterbury*. 3. Soothing; pacifick—

And though this sense first *gentle* musick found,  
Her proper object is the speech of men. *Davies*.

(2.) \* GENTLE. *n. f.* 1. A gentleman; a man of birth. Now out of use—

*Gentles*, do not reprehend;  
If you pardon, we will mend. *Shak*.  
Where is my lovely bride?  
How does my father? *Gentles*, methinks you frown. *Shak*.

2. A particular kind of worm.—He will in the three hot months bite at a flagworm, or at a green *gentle*. *Walton's Angler*.

\* To GENTLE. *v. a.* To make gentle; to raise from the vulgar. Obsolete.—

He to day that sheds his blood with me,  
Shall be my brother; be he never so vile,  
This day shall *gentle* his condition. *Shak*.

\* GENTLEFOLK. *n. f.* [*gentle* and *folk*.] Persons distinguished by their birth from the vulgar. The queen's kindred are made *gentlefolk*. *Shak. Richard III*.

—*Gentlefolks* will not care for the remainder of a bottle of wine; therefore set a fresh one before them. *Swift*.

(1.) \* GENTLEMAN. *n. f.* [*gentilhomme*, Fr. *gentiluomo*, Italian; that is, *homo gentilis*, a man of ancestry. All other derivations seem to be whimsical.] 1. A man of birth; a man of extraction, though not noble.—A civil war was within the bowels of that state, between the *gentlemen* and the peasants. *Sidney*.—

I freely told you all the wealth I had  
Ran in my veins; I was a gentleman. *Shak*.

He hither came a private *gentle*  
But young and brave, and of a  
Ancient and noble. *O*

You say a long descent  
Makes *gentlemen*, and that your  
Is much disparag'd to be match'

2. A man raised above the vulgar  
or post.—

Inquire me out some mean-born  
Whom I will marry straight to Clar

—He is so far from desiring to be a *man*, that he desires to be used as all. *Law*. 3. A term of complaisant ironical.—The same *gentlemen*, who piece of morality on the three naked hand in hand, would have found a one had there been four of them tance, and covered from head to

4. The servant that waits about the man of rank.—Sir Thomas More, when he gave up his chancellorship wife's pew, and used the usual words *gentleman* usher, Madam, my lord is

Let be call'd be  
That *gentleman* of Buckingham's

5. It is used of any man however high  
The earl of Hereford was reputed  
In England the most valiant *gentle*  
—The king is a noble *gentleman* as *Shak*.

(2.) GENTLEMAN (§ 1. def. 1.) comprehended all above the rank of yeoman; by even noblemen were truly called. See COMMONALTY, § 2. A gentle defined among heralds, to be one, who title, bears a coat of arms, or who have been freemen: and by the gentleman giveth, he is known to be descended from those of his name many hundred years before. The word of the French *gentil*, "fine, fast coming;" and the Saxon *man*. *Tullius homo* was used among the Romans denoted a race of noble persons, born of free or ingenuous whose ancestors had never been stripped of their freedom by law. Thus Cicero in his *tuiles sunt, qui inter se eodem sunt non* wards the declension of the Roman word by Ammianus Marcellinus two companies of brave soldiers, the *gentiles*, and the other *scutarii*. I think, we derive the names *gentlemen* Patquire also supposes the appellations *ceugers* to have been transmitted to Roman soldiery; it being to the *gentarii*, who were the bravest of the the principal benefices and portions assigned. See BENEFICE, § 2. I serving, that during the empire of the *scutarii* and *gentiles* had the best of all the soldiers, became inferior to apply the same names, *gentilhommes* to such as they found their kings provisions or appointments to. (

re confounded together by Sir Edward who observes, that every esquire is a gentleman and a gentleman is defined to be one who wears coat-armour." It is indeed a matter unsettled, what constitutes the distinction who is a real esquire; for it is not an ever-rever large, that confers this rank upon

Camden, who was himself a herald, describes them the most accurately; and he divides them into four sorts of them. See *ESQUIRE*, § 1, where he says, for *gentleman*, says Sir Thomas Smith, "a good cheer in this kingdom: for who lieth the laws of the realm, who studieth the sciences, who professeth liberal sciences, who can live idly and without manual labour, will bear charge and countenance of a gentleman, he shall be called master, and shall be a gentleman."

**GENTLEMAN USHER OF THE BLACK ROD.**

**GENTLEMEN OF THE CHAPEL;** officers of prayer and attendance in the royal chapel, number 32. Twelve of them are priests; 10, commonly called *clerks of the chapel*, perform the service of divine service. One is chosen for confessor of the household, to visit the sick, examine and pronounce the sacrament, and administer the sacrament. 20 clerks, well versed in music, is chosen for the service of the children, to instruct in music, and whatever else is necessary for the service of the chapel; a second is like-ganist; a third a lutanist; and a fourth a yeoman, and groom of the vestry attend the dean and subdean, and attend the other necessities for the chapel; has the whole care of the chapel, keeps the records and seats of the nobility and gentry; the his attendance within the chapel door, after it.

**GENTLEMANLIKE.** } *adj.* [gentleman and  
**GENTLEMANLY.** } *like.* } Becoming a

gentleman. — He holdeth himself a gentleman, but he will not work, which, he saith, is the life of a churl; but enureth himself to his trade of the gentlemanly trade of stealing.

**GENTLEMANLY.** — Pyramus is a sweet-fac'd man; and as one shall see in a summer's day; by gentlemanlike man. *Shakef.* — You will come up like a peasant, hiding from me ungentlemanlike qualities. *Shakef.* — Two clergy-candidates for a free-school, where a schoolmaster procured the place for the better person of the two. *Sawif.*

**GENTLENESS.** *n. f.* [from *gentle.*] 1. Dignity; goodness of extraction. 2. Softness; sweetness of disposition; meekness;

— My lord Sebastian,  
I, you speak, doth lack some gentleness.

*Shakef.*  
rave and haughty scorn of all,  
and monarchical;  
ness with that esteem'd,  
d slavish virtue seem'd. *Cowley.*

**PART. I.**

Still she retains

Her maiden gentleness, and oft at eve  
Visits the herds. *Milton.*

—The perpetual gentleness and inherent goodness of the Ormond family. *Dryd. Fab.* — Changes are brought about silently and insensibly, with all imaginable benignity and gentleness. *Woodward's Nat. Hist.* — Masters must correct their servants with gentleness, prudence, and mercy. *Rogers.* — Women ought not to think gentleness of heart despicable in a man. *Clarissa.* 3. Kindness; benevolence. Obsolete. —

The gentleness of all the gods go with thee.

*Shakef.*  
\* **GENTLESHIP.** *n. f.* [from *gentle.*] Carriage of a gentleman. Obsolete. — Some in France, which will needs be gentlemen, have more gentleness in their hat than in their head. *Afham.*

\* **GENTLEWOMAN.** *n. f.* [gentle and woman. See *GENTLEMAN.*] 1. A woman of birth above the vulgar; a woman well descended. — The gentlewomen of Rome did not suffer their infants to be so long swathed as poorer people. *Abbot's World.* —

Doth this sir Protheus

Often resort unto this gentlewoman? *Shakef.*  
—Gentlewomen may do themselves much good by kneeling upon a cushion, and weeding. *Bacon's Nat. Hist.* 2. A woman who waits about the person of one of high rank. —

The late queen's gentlewoman, a knight's daughter,

To be her mistress' mistress! *Shak. Hen. VIII.*  
Her gentlewomen, like the Nereids,  
So many mermaids, tended her i' th' eyes,  
And made their bends adorings. *Shakef.*

3. A word of civility or irony. — Now, gentlewoman, you are confessing your enormities; I know it by that hypocritical down-cast look. *Dryden.*

**GENTLIN,** a town of Lower Saxony, in the duchy of Magdeburg, 30 miles E. of Magdeburg.

\* **GENTLY.** *adv.* [from *gentle.*] 1. Softly; meekly; tenderly; inoffensively; kindly. —

My mistress gently chides the fault I made.

*Dryden.*  
—The mischiefs that come by inadvertency, or ignorance, are but very gently to be taken notice of. *Locke.* 2. Softly; without violence. —

Fortune's blows,

When most struck home, being gently warded,  
crave

A noble cunning. *Shakef. Coriolanus.*

—A sort of great bat, as men ly asleep with their legs naked, will suck their blood at a wound so gently made as not to awake them. *Gray's Mus.*

**GENTOOS,** in modern history, according to the common acceptation of the term, denote the professors of the religion of the bramins or brachmans, who inhabit the country called **HINDOOSTAN,** or **INDOSTAN,** in the East Indies, from the word *san,* a region, and *hindoo* or *hindoo*; which Ferishteh, as we learn from colonel Dow's translation of his history, supposes to have been a son of Ham, the son of Noah. Hindoo, however, is not the name by which the inhabitants originally styled themselves; but, according to the idiom of the *Sanscrit* which they use, *jumbodeep*, from

R 1

jumboe,

*Jumboo*, a jackall, an animal common in their country; and *deop*, a large portion of land surrounded by the sea; or *bberetkhyant*, from *khant*, i. e. a continent, and *bherbut*, the name of one of the first Indian rajahs. They have assumed the name of *Hindoos* only since the era of the Tartar government, to distinguish themselves from their conquerors the Mussulmen. The term *Gentoo* or *Gent*, in the Schanscrit dialect, denotes *animal* in general, and in its more confined sense, *man-kind*, and is never appropriated particularly to such as follow the doctrines of Brhima. The *Gentoo*s are divided into 4 great tribes, each of which has its own separate appellation; but they have no common or collective term that comprehends the whole nation, under the idea affixed by the Europeans to the word *Gentoo*. Mr Halhed, in the preface to his translation of the Code of *Gentoo* Laws, conjectures, that the Portuguese, on their first arrival in India, hearing the word frequently in the mouths of the natives, as applied to mankind in general, might adopt it for the domestic appellation of the Indians themselves; or perhaps their bigotry might figure from the word *Gentoo* a fanciful allusion to *Gentile*. The *Hindoos*, or *Gentoo*s, vie with the Chinese as to the antiquity of their nation. They reckon the duration of the world by four *jogues*, or distinct ages: The 1st is the *Suttee jogue*, or age of purity, which is said to have lasted about 3,400,000 years; during which the life of man was 200,000 years, and his stature 21 cubits: The 2d, the *Tirtah jogue*, or the age in which one third of mankind were reprobated; which consisted of 2,400,000 years, when men lived to the age of 10,000 years: The 3d, the *Dwapar jogue*, in which half of the human race became depraved; which endured to 600,000 years, when men's lives were reduced to 1000 years: and 4th, the *Collee jogue*, in which all mankind were corrupted, or rather diminished, which the word *collee* imports. This is the present era, which they suppose will subsist for 400,000, of which near 5000 are already past; and man's life in this period is limited to 100 years. Many authors suppose that most of the *Gentoo shasters*, or scriptures, were composed about the beginning of the *Collee jogue*: but an objection occurs against this supposition, viz. that the shasters take no notice of the deluge; to which the bramins reply, that all their scriptures were written before the time of Noah, and the deluge never extended to Hindostan. Nevertheless, it appears from the shasters themselves, that they claim a much higher antiquity than this; instances of which are recited by Mr Halhed. The doctrine of **TRANSMIGRATION** is one of the distinguishing tenets of the *Gentoo*s. It is their opinion, according to Mr Holwell, that those souls which have attained to a certain degree of purity, either by the innocence of their manners or the severity of their mortifications, are removed to regions of happiness proportioned to their respective merits; but that those who cannot so far surmount the prevalence of bad examples and the powerful degeneracy of the times, as to deserve such a promotion are condemned to undergo continual punishment in the animation of successive animal forms, until, at the stated period, another renovation of the four

*jogues* shall commence, upon the death of the present. They imagine six disks above this earth; the highest of which is the residence of **BRHIMA** or **BRAMA**, particular favourites. This sphere is a station of those men who never uttered and of those women who have voluted themselves with their husbands; which expressly enjoined in the code of the *Gentoo*s. This code, printed by the East India Company in 1776, is a very curious collection of laws and prudences, which was selected from originals in the Schanscrit language, by the learned **PUNDITS**, or lawyers; who were for this purpose from May 1773 to Feb afterwards translated into the Persian into English by Mr Halhed. The contained in this collection are interwoven the religion of the *Gentoo*s, and several of the highest authority. The curious reader will discover an astonishing similarity between the statutes of this code and many of the laws of the Jewish law; between the *chaturvarnis* or priests, and the Levites; the ceremony of the scape-goat under dispensation, and a *Gentoo* ceremony of *assumed jug*, in which a horse answers the place of the goat. Many obsolete usages, alluded to in many parts of the code, may also receive illustration from the statutes of this code. It appears from the code that the bramins who are the priests of the country, have resigned all legislative and executive power into the hands of the *rajah* or king; and no bramini is capable of the magistracy since the *Suttee jogue*. The only privilege of impurity they have appropriated to themselves is exemption from all capital punishments; they may be degraded, branded, imprisoned, or sent into perpetual exile; but it is every where ordained, that a bramini shall not die on any account whatsoever. The *Gentoo*s are divided into four original tribes into which the *Gentoo*s are divided, according to their theology, 1. the *four different members of Brhima*, who are supposed immediate agent of the creative spirit of the Almighty. These tribes are the **BRAMINS**, which proceeded from his forehead, whose office is to pray, read, and instruct; the **CHETTEREES**, which proceeded from his nose, whose office is to draw the bow, to fight, and to govern; 3. the **BICE**, which proceed from his belly or thighs, who are to provide food for the people; and 4. the **VAISHYAS**, who are to cultivate the soil, and to trade; and from his feet, which are ordained to support the earth, and to travel. Few Christians, says the author of the *Gentoo* code, have expressed their more becoming reverence of the great and merciful Providence, in all their actions, with a more extensive charity towards their fellow creatures, or every profession of the *Gentoo*s. It is indeed an article of the religion of the bramins, that God's all merciful Providence has not permitted such a number of nations to be created, if he had not found a pleasure in their varieties.

INELY. *adv.* [from *genuine*.] With- :tion; without foreign admixtures; : There is another agent able to analyze :odies less violently, more *genuinely*, :iversally than fire. *Boyle.*

INENESS. *n. f.* [from *genuine*.] Free- :ny thing counterfeit; freedom from

adulteration; purity; natural state.—It is not essential to the *genuineness* of colours to be du- rable. *Boyle.*

(1.) \* GENUS. *n. f.* [Latin.] In science, a class of beings, comprehending under it many spe- cies: as *quadruped* is a *genus* comprehending un- der it almost all terrestrial beasts.—A general idea is called by the schools *genus*, and it is one common nature agreeing to several other common natures: so animal is a *genus*, because it agrees to horse, lion, whale, and butterfly. *Watt's Logick.*—If mi- nerals are not convertible into another species, though of the same *genus*, much less can they be supposed reducible into a species of another *genus*. *Harvey on Consump.*

(2.) GENUS is also used for a character or man- ner applicable to every thing of a certain nature or condition: in which sense it serves to make capital divisions in divers sciences, as medicine, na- tural history, &c.

(3.) GENUS, in medicine. See MEDICINE, un- der the *Nojology*.

(4.) GENUS, in metaphysics and logic, denotes a number of beings which agree in certain gene- ral properties common to them all; so that a ge- nus is nothing else but an abstract idea, expressed by some general name or term. See LOGIC and METAPHYSICS.

(5.) GENUS, in music, by the ancients called *genus melodia*, is a certain manner of dividing and subdividing the principles of melody, *i. e.* the con- sonant and dissonant intervals, into their concin- nous parts. The moderns considering the octave as the most perfect of intervals, and that whereon all the cords depend, in the present theory of music, the division of that interval is considered as con- taining the true division of the whole scale. But the ancients went to work somewhat differently; the *diatessaron*, or fourth, was the least interval which they admitted as concord; and therefore they sought first how that might be most conven- iently divided; from whence they constituted the diapente and diapason. The diatessaron being thus, as it were, the root and foundation of the scale, what they called the *genera*, or kinds, a- rose from its various divisions; and hence they defined the *genus modulandi* to be the manner of dividing the tetrachord and disposing its 4 sounds as to succession. The genera of the music were 3, the ENHARMONIC, CHROMATIC, and DIATO- NIC. (See these articles.) The two first were va- riously subdivided; and even the last, though that is commonly reckoned to be without any species, yet different authors have proposed different di- visions, under that name, without giving any par- ticular names to the species, as were done in the other two.

(6.) GENUS, in natural history, a subdivision of any class or order of natural beings, whether of the animal, vegetable, or mineral kingdoms, all agreeing in certain common characters. See BO- TANY and ZOOLOGY.

(7.) GENUS, in rhetoric, Authors distinguish the art of rhetoric, as well as orations or discour- ses produced thereby, into 3 genera, demonstra- tive, deliberative, and judiciary. To the demon- strative kind belong panegyrics, genethliacons, ex- pithalamiums, funeral harangues, &c. To the delibe-

berative, perfusions, diffusions, commendations, &c. To the judiciary, accusations and defences.

GENZANO, a town of Naples in the prov. of Basilicata, 12 miles ESE. of Venosa.

\* GEOCENTRICK. *adj.* [*γῆ and κέντρον*; *geocentrique*, Fr.] Applied to a planet or orb having the earth for its centre, or the same centre with the earth. *Harris.*

\* GEODÆSIA. *n. f.* [*γεωδαισια*; *geodesie*, French.] That part of geometry which contains the doctrine or art of measuring surfaces, and finding the contents of all plain figures. *Harris.*

\* GEODÆTICAL. *adj.* [from *geodæsia*.] Relating to the art of measuring surfaces; comprehending or showing the art of measuring land.

GEOFFRÆA. See GEOFFRŒA.

GEOFFREY OF MONMOUTH, Bp. of St Asaph, called by our ancient biographers *Gallofridus Monumetensis*. Leland conjectures that he was educated in a benedictine convent at Monmouth, where he was born; and that he became a monk of that order. Bale, and after him Pits, call him archdeacon of Monmouth; and it is generally asserted, that he was made bishop of St Asaph, in 1151 or 1152, in the reign of K. Stephen. His history was probably finished after 1138. It contains a fabulous account of British kings, from Brutus the grandson of Æneas the Trojan to Cadwallader, in 690. But Geoffrey, though we may blame his credulity, was not the inventor of the legendary history. It is a translation from a MS. written in the British language, and brought to England from Armorica by his friend Gualter, archdeacon of Oxford. But the achievements of king Arthur, Merlin's prophecies, and many speeches and letters, were chiefly his own additions. In excuse for this historian, Mr Wharton judiciously observes, that fabulous histories were then the fashion, and popular traditions a recommendation to his book.

GEOFFRŒA, or } in botany, a genus of the  
GEOFFROYA, } decandria order, belonging to the diadelphia class of plants; and in the natural method ranking under the 32d order *Papilionaceæ*. The calyx is quinquefid, the fruit an oval plum; the kernel compressed. There is only one species, viz.

GEOFFROYA INERMIS, the cabbage-bark tree, a native of Brasil and Jamaica. See *Plate CLX, fig. 5*. The wood is used in building; but it is chiefly valued for its bark, which is administered as an anthelmintic medicine. From this medical property it is also called the *worm-bark tree*. This bark is of a grey colour externally, but black and

furrowed on the inside. It has a mild and sweetish taste, and a disagreeable sive given in cases of worms, in form of decoction, syrup, and extract. The decoction is preferred; and is made by slowly boiling of the fresh dried bark in a quart of wine, assume the colour of Madeira wine. Itself is the syrup; evaporated, it forms a solid mass. It commonly produces some sickness and sometimes violent effects, as vomiting, and fever. These last are said to be overcome by the use of warm water, castor oil, and tartaric acid. It should always be begun with small doses. But when properly and cautiously administered, it is said to operate as a ver anthelmintic, particularly for the expulsion of lumbrici, which are a very common case in the West India islands, where it is frequently employed. But it has, we believe, but little use in Britain.

GEOFFROY, Stephen Francis, M.D. celebrated physician, botanist, and chemist, Paris, in 1672. After having finished his studies at Paris, he travelled into England, Holland, and Italy. In 1704, he received the degree of M.D. and at length became professor of chemistry at the Royal College of Physicians of London, and of the Academy of Sciences. He wrote, 1. Several very curious Theſes, which were afterwards translated in French. 2. An excellent treatise intitled *Traictat de la Médecine, ou des Médicamentorum simplicium virtute, delectu, et usu*. He died at Paris in 1738.

\* GEOGRAPHER. *n. f.* [*γῆ and γραφή*, French.] One who describes the earth according to the position of its different parts. A greater part of the earth hath been explored than hath been known or described by the old geographers. *Ad Crater* by the old geographers. *Ad Crater* from sea to sea, from realm to realm.

And grow a meet geographer by love.

(1.) \* GEOGRAPHICAL. *adj.* [from *geography*.] Relating to geography.

(2.) GEOGRAPHICAL MILE, the farthest sea mile; being one minute, or the 60th part of a degree of a great circle on the earth.

\* GEOGRAPHICALLY. *adv.* [from *geographical*.] In a geographical manner; as the rules of geography.—Minerva lets to the knowledge of this country; she calls it to him. *Broome on the*

## G E O G R A P H Y.

### SECT. I. DEFINITIONS and DIVISIONS of the SCIENCE.

GEOGRAPHY is thus defined by Dr JOHNSON:

\* GEOGRAPHY. *n. f.* [*γῆ and γραφή*; *geographie*, French.] *Geography*, in a strict sense, signifies the knowledge of the circles of the earthly globe, and

the situation of the various parts of the earth. When it is taken in a little larger sense, it signifies the knowledge of the seas also; and in the sense of all, it extends to the various customs, manners, and governments of nations. *Waller* is extolled by the Greeks as attaining to the knowledge of heaven; but *geography* makes slight account of, when they discourse of *Andalusia*.

*g. Errs.*—According to ancient fables it sailed up the Danube, and from thence into the Adriatick, carrying their shoulders; a mark of great ignominy. *Arbutnet on Coins.*

**PHYSICAL GEOGRAPHY** is more accurately defined by Dr. HART as "the science that teaches and explains the nature and properties of the earth, as to its surface, magnitude, motions, celestial aspects, &c. with the various lines, real or imaginary, which divide its surface. Geography is distinguished from **TOPOGRAPHY**, as a part from the whole; and from **ASTRONOMICAL GEOGRAPHY**, as considering the whole visible world, and earth. And from **TOPOGRAPHY** it is distinguished, as the general and special, or universal and particular.

**PHYSICAL GEOGRAPHY** considers geography as either exterior: but **VARENIUS** more justly divides it into general and special, or universal and particular.

**GENERAL OR UNIVERSAL GEOGRAPHY** is that which considers the earth in general without respect to particular countries; or the affection to the whole globe, as its figure, motion, land, sea, &c.

**PARTICULAR OR TOPOGRAPHY** is that which contemplates the constitution of the several regions, or countries, their bounds, climate, seasons, weather, inhabitants, arts, language, &c."

**ASTRONOMICAL GEOGRAPHY** is that which is considered in a still more extensive view, by other modern writers, who divide it into **ASTRONOMICAL GEOGRAPHY**.

**ASTRONOMICAL GEOGRAPHY** comprehends that part of the science which treats of the measurement of the degree of the earth at different latitudes: Proportion of the circumference of the earth to the diameter of the equator: Circles of latitude and longitude: Division of its surface by latitude; by zones; by circles of longitude: Methods of finding the latitude and longitude: Representation of the earth's surface on a globe; and on a plane: by maps; by charts; stereographic, conical, and globular, &c. &c.

**PHYSICAL GEOGRAPHY** comprehends the description of the earth, according to the properties of the several substances, which compose it: The division into solid and fluid: division of the earth into air and water: The gravity, extent, depth, saltiness, productions, and general appearance of the ocean; the phenomena of the winds, whirlpools, &c. Division of the earth into stratified and unstratified; metallic veins, &c. Natural divisions of the earth from the constitution of its surface: Structure and height of mountains, &c. Divisions of the earth as considered in the atmosphere: View of its constitution: elasticity, density, and temperature: Congelation; evaporation; rain; rivers; springs, and lakes; motion, velocity, and direction of winds; inundations, &c. of rivers: The distribution of cold of its surface: Unequal distribution of heat in the atmosphere the cause of winds: The earth formed by the phenomena of the atmosphere, &c. &c.

It must be allowed, that this complete and comprehensive view of the science, is quite agreeable to the original meaning of the word, *Γεωγραφία*, which is derived from *Γη*, earth, and *γραφειν*, to write or describe; and may therefore be used to signify a description of the earth, both external and internal, in the fullest sense of the word. But as **PHYSICAL GEOGRAPHY** comprehends the subject of many other sciences, which will be found treated of under **AEROLOGY**, **CHEMISTRY**, **EARTH**, **ELECTRICITY**, **MAGNETISM**, **METALLURGY**, **MINERALOGY**, **RIVER**, **TIDE**, **WIND**, &c. &c. we mean to restrict the present treatise to **ASTRONOMICAL GEOGRAPHY**, and more especially to that branch of it above defined by **VARENIUS**, under the title of **GENERAL GEOGRAPHY**; the particular geography of the various countries, kingdoms, cities, towns, &c. being to be found in their order, under their respective names throughout this work.

## SECT. II. HISTORY OF GEOGRAPHY.

It is quite uncertain when geography began first to be studied among mankind. It is generally agreed, that the knowledge of it was derived to the Greeks, who first of the European nations cultivated this science, from the Egyptians or Babylonians; but it is impossible to determine which of these two nations had the honour of the invention. Herodotus tells us, that the Greeks first learned the poles, the gnomon, and the 12 divisions of the day, from the Babylonians. **PLINY**, and **DIOGENES LAERTIUS**, however, tell us, that **Thales of Miletus** first found out the passage of the sun from tropic to tropic; which he could not have done without the assistance of a gnomon. He is said to have been the author of two books, the one on the tropic, and the other on the equinox; both of which he probably determined by the gnomon; and thus he was led to discover the four seasons of the year, which are determined by the solstices and equinoxes.

**Thales** divided the year into 365 days; which was undoubtedly a method discovered by the Egyptians, and communicated by them to him. It is said to have been invented by **Mercurius Trimegistus**, who, according to **Eusebius**, lived about 50 years after the departure of the Israelites out of Egypt. **Pliny** tells us expressly, that this discovery was made by observing when the shadow returned to its marks; a clear proof that it was done by the gnomon. **Thales** also knew the method of determining the height of bodies by the length of their shadows, as appears by his proposing this method for measuring the height of the Egyptian pyramids. Hence many learned men have been of opinion, that as the use of the gnomon was known in Egypt long before the dawn of learning in Greece, the pyramids and obelisks, which to common travellers appeared to be only buildings of magnificence, were in reality as many sun-dials, built on a very large scale, with a design to ascertain the season of the year, by the variation of the length of their shadows. In confirmation of this opinion, it was found by **M. CHAZELLES**, in 1694, that the two sides, both of the larger and smaller pyramids, stood

## G E O G R A P H Y.

stood exactly N. and S.; so that they still form true meridian lines.

From the time of Thales, who flourished in the sixth century before Christ, very little seems to have been done towards the improvement of geography for 200 years. During this period, there is only one astronomical observation recorded; namely, that of METON and EUCTEMON, who observed the summer solstice at Athens, during the archonship of Apseudes, on the 21st of the Egyptian month Phamenoth, in the morning, being the 27th of June, A. A. C. 432. This observation was made by watching narrowly the shadow of the gnomon, and was done with a design to fix the beginning of their cycle of 19 years.

TIMOCHARIS and ARISTILLUS, who began to observe about A. A. C. 295, seem to have been the first who attempted to determine the longitudes and latitudes of the fixed stars, by considering their distances from the equator. One of their observations gave rise to the discovery of the precession of the equinoxes, which was first observed by HIPPARCHUS, about 150 years after; who also made use of their method, to delineate the parallels of latitude, and the meridians on the surface of the earth; thus laying the foundation of the science, as it is now studied.

The latitudes and longitudes, thus introduced by Hipparchus, were not however, much attended to till PTOLEMY'S time. STRABO, Vitruvius and Pliny, entered into a minute geographical description of the situation of places, according to the length of the shadows of the gnomon, without taking the least notice of the longitudes and latitudes.

But Hipparchus's discovery of the longitudes and latitudes soon laid a foundation for making maps, or delineations of the surface of the earth *in plano*, on a very different plan from what had been formerly attempted. Maps were at first little more than rude outlines and topographical sketches of different countries. The earliest were those of SESOSTRIS, mentioned by Eustathius; who says, that "this Egyptian king, having traversed great part of the earth, recorded his march in maps, and gave copies of his maps not only to the Egyptians, but to the Scythians, to their great astonishment."

Some imagine, that the Israelites made a map of the Holy Land, when they gave the different portions to the seven tribes at Shiloh, which seems extremely probable. for JOSHUA tells us, that they were sent to walk through the land, and that they *described it by cities in seven parts in a book*; and JOSEPHUS tells us, that when Joshua sent out people from the different tribes to measure the land, he gave them, as companions, persons well skilled in geometry, who could not be mistaken. (Josh. xviii. 8, 9.)

The first Grecian map on record is that of ANAXIMANDER, mentioned by STRABO, lib. i. p. 7. It has been conjectured, that this was a general map of the then known world, and it is supposed to be the one referred to by Hipparchus by the name of the *ancient map*.

ERATOSTHENES minutely describes a map made by ANAXAGORAS tyrant of Miletus, which will give us some idea of the maps of those

ages. He tells us, that Aristagoras of Cleomenes king of Sparta, with a view of convincing him to attack the king of Persia, palace at Susa, in order to restore their ancient liberty. It was traced by a piece of copper, and contained the intermediate meridians which were to be traversed in that manner. Herodotus tells us, that it contained "the circumference of the earth, the whole of the sea, and all the rivers;" but from the statophylax at that time, it may be fairly conjectured by the *whole sea* was meant no more than the Mediterranean: and therefore, the earth was divided into the coasts of that sea, and part of Lesser Asia, extending towards the Persian Gulf. The rivers were the Halys, and Tigris, which Herodotus mentions as necessary to be crossed in that expedition. It contained one straight line, called the *way*, which took in all the places of the world from Sardis to Susa. Of these there were 13,500 Roman miles of 5000 feet each.

These itinerary maps of the places were indispensably necessary in the time of ALEXANDER the Great. PTOLEMY quotes BÆTON as author of a book intitled, *The encampments of Alexander* and likewise Amyntas to the same purpose. Ptolemy tells us, that Diognetus and Bæton were surveyors of Alexander's marches, and that they made the exact number of miles according to the duration; which he afterwards confirmed by the letters of ALEXANDER himself. The same author also remarks that a copy of this great survey was given by Xenocles his son to PATROCLES the geographer, who, as Ptolemy informs us, was admiral of the fleets of Antiochus. His book on geography is quoted both by Strabo and Pliny: and Eratosthenes with the principal in constructing his map of the oriental world.

ERATOSTHENES first attempted to reduce geography to a regular system, and introduced a regular parallel of latitude. This was a certain place where the longest day was of the same length. He began it from the straits of Gibraltar; and it thence passed through the Mediterranean sea, and near the southern extremity of Sicily. Thence it was continued to the island of Rhodes and the Bay of Issus; entering Cilicia, and crossing the Euphrates, it was extended to the mountain Caucasus. By means of this line, he endeavoured to correct the errors of the ancient map. In drawing this parallel, he was regulated by observing the longest day was 14½ hours, which he afterwards determined to be the latitude of Rhodes. This first parallel through Rhodes was considered with a degree of preference as the foundation stone of all ancient maps; a degree of the then known world was attempted to be measured in stadia, according to the extent of that line, by the ancients.

Eratosthenes soon after attempted to draw other parallels of latitude, but also a meridian at right angles to these, passing

of Alexandria, down to Syene and Me-  
 sic at last undertook a still more arduous  
 to determine the circumference of the  
 in actual measurement of a segment of  
 great circles.

over the magnitude of the earth is in-  
 bleem which has probably engaged the  
 of astronomers and geographers ever  
 obular figure of it was known. ANAX-  
 s said to have been the first among the  
 o wrote upon this subject. ARCHY-  
 rentum, a Pythagorean, famous for his  
 ithematics and mechanics, also made  
 pts in this way; and Dr Long conjec-  
 these are the authors of the most an-  
 on, that the circumference of the earth  
 stadia. ARISTARCHUS of Samos is  
 have considered the magnitude of the  
 ell as of the sun and moon. ARCHI-  
 tions, that the ancients held the circum-  
 the earth to be 30,000 stadia; but it does  
 what methods were made use of by these  
 graphers to solve the problem. Perhaps  
 ted it by observations of stars in the  
 a the horizon, and actual mensuration  
 part of the circumference of the earth.  
 rls in his treatise *De Cælo*, affords a  
 is. In that work he says, that differ-  
 as through our zenith, according as  
 n is more or less northerly; and that  
 ern parts of the earth stars come above  
 n, which, if we go northward, are no  
 ble. Hence it appears, that there are  
 of measuring the circumference of the  
 by observing stars which pass through  
 of one place, and do not pass through  
 ther; the other by observing some stars  
 above the horizon of one place, and are  
 the same time to be in the horizon of a-  
 ratosthenes, made use of the former me-  
 h is the best, at Alexandria in Egypt, A.

He knew, that at the summer solstice  
 s vertical to the inhabitants of Syene, a  
 e confines of Ethiopia, under the tro-  
 icer, where they had a well built for  
 ce, on the bottom of which the rays of  
 perpendicularly on the day of the sum-  
 e. He observed by the shadow of a  
 erpendicularly in an hemispherical ba-  
 much the sun was on that day at noon  
 n the zenith of Alexandria; and found  
 x to be the 50th part of a great circle  
 ens. Then supposing Syene and Alex-  
 be under the same meridian, he con-  
 distance between them to be the 50th  
 great circle upon the earth; and this  
 ing by measure 5000 stadia, he conclu-  
 circumference of the earth to be 250,000  
 : as this number divided by 360 would  
 stadia to a degree, either Eratosthenes  
 ome of his followers assigned the round  
 o stadia to a degree; which multiplied  
 takes the circumference of the earth  
 dia; whence both these measures are  
 fferent authors as that of Eratosthenes.  
 ne of Pompey the Great, POSSIDONI-  
 a attempt to measure the circumference

of the earth by Aristotle's 2d method, viz. hori-  
 zontal observations. Knowing that the star called  
*Canopus* was but just visible in the horizon of  
 Rhodes, and that at Alexandria its meridian  
 height was the 48th part of a great circle in the  
 heavens, or  $7\frac{1}{2}$  deg.; answering to the like quan-  
 tity of a circle on the earth: then supposing them  
 both to be under the same meridian, and the dis-  
 tance between them to be 5000 stadia, the circum-  
 ference of the earth will be 240,000 stadia; which  
 is the first measure of Possidonius. But according  
 to Strabo, Possidonius made the measure of the  
 earth to be 180,000 stadia, at the rate of 300 sta-  
 dia to a degree. The reason of this difference is  
 thought to be, that Eratosthenes measured the  
 distance between Rhodes and Alexandria, and  
 found it only 3,750 stadia: Taking this for a 48th  
 part of the earth's circumference, which is the  
 measure of Possidonius, the whole circumference  
 will be 180,000 stadia. This measure was receiv-  
 ed by Marinus of Tyre, and is usually ascribed  
 to Ptolomy. Possidonius's method, however, is  
 found to be exceedingly erroneous, on account of  
 the great refraction in the stars near the horizon,  
 the difficulty of measuring the distance at sea be-  
 tween Rhodes and Alexandria, and from his sup-  
 posing these places under the same meridian,  
 when they are really very different. Cassini re-  
 marks, that taking exactly the mean betwixt the  
 last dimensions of Eratosthenes and Possidonius, a  
 degree of a great circle upon the earth will be  
 600 stadia, and a minute of a degree 10 stadia,  
 which is just a mile and a quarter of the ancient  
 Roman measure and a mile of the modern mea-  
 sure.

Several geographers, after the time of Eratosthe-  
 nes and Possidonius, made use of the different  
 heights of the pole in distant places under the same  
 meridian, to find the dimensions of the earth. About  
 A. D. 800, the khalif Almamun had the distance  
 measured of two places two degrees asunder, and  
 under the same meridian, in the plains of Sinjar  
 near the Red Sea. The result was, that the ma-  
 thematicians found the degree at one time to con-  
 sist of 56 miles, and at another of  $56\frac{1}{2}$ , or  $56\frac{3}{4}$ .

The next attempt to find the circumference of  
 the earth was in 1525, by FERNEL, a learned  
 French physician. To attain his purpose, he  
 took the height of the pole at Paris, going from  
 thence directly northwards, until he came to the  
 place where the height of the pole was one de-  
 grée more than at that city. The length of the  
 way was measured by the number of revolutions  
 made by one of the wheels of his carriage; and  
 after proper allowances for the declivities and  
 turnings of the road, he concluded that 68 Italian  
 miles were equal to a degree on the earth.

SNELLIUS, an eminent Dutch mathematician,  
 next attempted to measure the circumference of  
 the earth. Having taken the heights of the pole  
 at Alemaer and at Bergen op Zoom, he found  
 the difference to be  $1^{\circ} 11' 30''$ . He next mea-  
 sured the distance betwixt the parallels of these  
 two places, by taking several stations and forming  
 triangles; by means of which he found the de-  
 grée to consist of 341,676 Leyden feet. Having  
 measured the distance betwixt the parallels of Ale-  
 maer

## G E O G R A P H Y.

and Leyden, which differ only half a degree in their latitude, the calculation came out 342,120 Leyden feet to a degree. Hence he assigned the round number 342,000 Leyden feet to a degree; which, according to Picard, amounts to 55,021 French toises.

In 1635, Mr NORWOOD, an Englishman, took the elevations of the pole at London and at York; and having measured the distance betwixt the two parallels, assigned 69½ miles and two poles to a degree; each pole being reckoned 164 feet.

After 1654, RICCIOLUS made use of several methods to determine the circumference of the earth; from all which he concluded, that one degree contained 64,363 Bologna paces, which are equivalent to 61,650 French toises. The most remarkable attempt, however, was that of the French mathematicians, who employed telescopic sights for the purpose, which had never been done before. These are much the best; as by them the view may be directed to an object at a greater distance, and towards any point with more certainty; whence the triangles for measuring distances may be formed with greater accuracy than otherwise can be done. In consequence of this improvement, the fundamental base of their operations was much longer than that made use of by Snellius or Ricciolus. The distance measured was between the parallels of Sourdon and Malvoisine; between which the difference of the polar altitude is somewhat more than one degree. The result of the whole, as related by PICARD, was, that one degree contained 57,060 French toises.

As this problem can be the more accurately determined in proportion to the length of the meridian line measured, the members of the Royal Academy prolonged theirs quite across the kingdom of France, measuring it trigonometrically all the way. This work was begun in 1683, and finished in 1718. They used Picard's fundamental base, as being measured with sufficient accuracy; and an account of the whole was published by Cassini in 1720. In this work some mistakes were detected in the calculations of Snellius; and it was likewise shown, that there are errors in those of Ricciolus owing principally to the latter having taken too short a fundamental base, and not having paid sufficient attention to the effects of refraction. But though Snellius, had made some mistakes in his calculations, there is no reason to doubt the accuracy of his observations. Holland, by its flatness, is the fittest country in Europe for measuring an arc of the meridian; and Snellius had an uncommon opportunity of observing the exactness of his fundamental base, viz. the distance betwixt one tower at Leyden and another at Souterwode. A frost happened just after the country round Leyden had been overflowed; by which means he was enabled to take two stations upon the ice, the distance between which he carefully measured 3 times over; and then from these stations he observed the angles which the visual rays pointing at those towers made with the straight line upon the ice. From these considerations professor MUSCHENBROEK was induced to make new calculations and form triangles upon the fundamental base of Snellius, which he did in 1700; and from these he assigns

57,033 toises to a degree, which is more than had been done by the academicians.

In consequence of various opinions entertained concerning the true figure of the earth, and the magnitude of a degree upon the surface, Messrs MAUPERTUIS, CLAIRAULT, and L'ONTOUR, of France, were sent by Louis XIV. to measure an arc of the meridian in the regions of the earth.

They began their operations, assisted by CELSUS, an eminent astronomer of Sweden, in Swedish Lapland, in July 1736; and returned to Paris by the end of May following. They obtained the measure of that degree whose middle point was in lat. 66° 20' N. and found it to be 57,439 toises when reduced to the level of the sea. About the same time another company of astronomers were sent to South America, consisting of GODIN, BOUGUER, and CONDAMINE, to whom were joined Don JORGE JUAN DE ULLOA, of Spain. They sailed from Europe in 1735, and began their operations in the province of Quito in Peru, in October 1735, and finished them after many interruptions in 1743. The Spanish gentlemen published a separate account, and assigned for the length of the meridian, at the equator, 57,753 toises. M. Bouguer makes it 56,753 toises reduced to the level of the sea; and Cassini states it at 56,749 toises.

M. LA CAILLE, being at the Cape of Good Hope in 1752, found the length of an arc of the meridian in lat. 33° 18' 30" S. to be 57,060 toises. In 1755, Father BOSCOVICI found the length of a degree in lat. 43° to be 57,060 toises as measured between Rome and Rimini.

In 1740, Messrs Cassini again examined the length of the meridian in France; and, after making the necessary corrections, found the length of a degree whose middle point is in lat. 47° to be 57,074 toises; and in the lat. of Paris 57,050 toises. In 1764, F. BECCA found a portion of the meridian in the neighbourhood of Vienna, and found the length of a degree whose middle point was 44° 44' N. to be 57,024 toises. Vienna 3 degrees of the meridian were measured from which it may be concluded that an arc of the meridian in lat. 47° 40' N. may be reckoned to be 57,050 Paris toises. In 1766, Messrs MASON and WELLES measured a part of the meridian in Maryland, Pennsylvania, and found that the length of a degree whose middle point is 39° 40' N. to be 57,044 English feet, or 56,904½ toises.

To the history of these attempts to measure the length of the meridian, we may add that considerable additional information upon the subject may be expected, when the Survey of the Coast shall be completed, which was begun by late Gen. ROY some years ago, and continued in a style of accuracy greatly superior to any former system of geometrical operations. An important addition has also been made to our knowledge of the figure of the earth; by the very extensive arch of the meridian reaching from Denmark to Barcelona, measured by order of the Constituent Assembly of France, for the purpose of fixing an universal standard of weights and

elucidation of this problem of the circumference of the earth was essentially necessary for the radical principles of all maps; ANTOXYENES, though the best of which can boast, was nevertheless exceedingly and inaccurately. It contained little of the states of Greece; and the dominions of Alexander; digested according to the surveys above mentioned. He indeed, and has quoted, the voyages of into the great Atlantic ocean, which some faint idea of the western parts of it so imperfect, that they could not be put into the outlines of a chart. Strabo, as extremely ignorant of Gaul, Spain, Britain, Italy, the coasts of the Adriatic, and all the countries towards the east; made the distance between Epidamnus and Corchium on the Adriatic, and the bay of the Ægean sea, to be only 900 stadia, while it was above 2000; and enlarged the distance from Carthage to Alexandria to 15,000 stadia, when in reality it was only 9000.

The state of geography and the nature of it prior to the time of HIPPARCHUS; a closer connection between geography and astronomy, by determining the longitudes and latitudes from celestial observations, being steps to this new projection of the globe, had been in a great measure made easy by the discoveries, upwards of 50 years before the time of HIPPARCHUS, when he invented his noble method of measuring the surface of a sphere by spherical segments.

It has been often the occasion of making out the maps of different countries; and the progress of geography made great advances from the time of the Roman arms. In all the provinces conquered by that people, camps were everywhere erected at proper intervals; and roads were constructed with substantial materials, for making communication between them: and thus the progress of surveying was carried on accordingly throughout the extent of that large empire. The progress of a new survey of the countries where the scenes were laid; so that the materials of geography were accumulated by every additional conquest. Strabo tells us, that at the beginning of the Punic war, when HANNIBAL was preparing for expedition against Rome, the countries which he was to pass were carefully measured by the Romans.

CÆSAR caused a general survey of the empire to be made, by a decree of the senate. The surveyors, ZENODOXUS, THEOPHASTUS, POLYCLITUS, had this task assigned to them, and are said to have completed it in 25 years. The Roman itineraries, that are still extant, are the result of the care and pains they had been at, in making surveys in all the different provinces of the empire; and Pliny has filled the 3d, 4th, and 5th books of his Natural History with the geographical notices that were thus measured. A few maps are still preserved, known by the name of the *Peutingian Tables*, published by the Emperor Constantine, which give a sufficient specimen of the *Itinera Picta*, for

the clearer direction of their armies in their march.

The Roman empire had been enlarged to its greatest extent, and all its provinces well known and surveyed, when PROLEMY, in the reign of Antoninus Pius, about A. D. 150, composed his system of geography. The principal materials he made use of for composing this work, were the proportions of the gnomon to its shadow, taken by different astronomers at the times of the equinoxes and solstices; calculations founded upon the length of the longest days: the measures or computed distances of the principal roads contained in their surveys and itineraries; and the various reports of travellers and navigators, who often determined the distances of places by hearsay and conjecture. All these were compared together, and digested into one uniform body or system; and afterwards were translated by him into a new mathematical language, expressing the different degrees of longitude and latitude, according to the invention of Hipparchus; but which Ptolemy had the merit of carrying into full practice and execution, after it had been neglected for upwards of 250 years. With such imperfect and inaccurate materials, it is no wonder to find many errors in Ptolemy's system. Neither were these errors such as had been introduced in the more distant extremities of his maps, but even in the very centre of that part of the world which was best known to the ancient Greeks and Romans, and where all the famed ancient astronomers had made their observations. Yet this system, with all its imperfections, continued in vogue till the end of the 15th century.

The improvements in geography, which, since that period, have taken place, were owing to the great progress made in astronomy by Copernicus, Galileo, Newton, and other eminent men who lived within these 3 last centuries. More correct methods and instruments for observing the latitude were found out; and the discovery of Jupiter's satellites afforded a much easier method of finding the longitudes than was formerly known. The voyages also made by celebrated navigators of different nations, which were now become much more frequent than formerly, brought to the knowledge of the Europeans a vast number of countries totally unknown to them before. The late voyages of Captain Cook, made by order of his Britannic Majesty, have contributed more to the improvement of geography, than any thing that has been done during the 18th century. See COOK, N° III. § 2—II.

To these may be added the voyage made by VANDERCOUVER to explore the NW. coasts of America; and that of the unfortunate LA PEYROUSE in the South Sea: as well as the late important additions made to geographical knowledge by the discoveries made by Mr MUNGO PARK, in his Travels in the interior Parts of Africa. On the whole the geography of the utmost extremities of the globe is now in a fair way of being much better known to the moderns, than that of the most adjacent countries was to the ancients: at least with regard to the sea-coasts of these countries; for, as to their internal geography, it is less known now than before, except in a very few places. Still however, it must be owned, that geography is a science

even yet far from perfection. The maps of America and the eastern parts of Asia are, perhaps, more unfinished than any of the rest. Even the maps of Great Britain and Ireland are imperfect and unsatisfactory; and the great numbers of them, that are varied and republished, without any real improvement, confirm an observation made by Lord Bacon, that an opinion of plenty is one of the causes of want. The late Dr Bradley was of opinion, that there were but two places in England whose longitude might be depended upon as accurately taken; and that these were the observatory at Greenwich, and Serburn castle, the seat of the earl of Macclesfield in Oxfordshire; and that their distance was one degree in space, or four minutes in time. Even this was found to be inaccurate, the distance in time being observed by the late transit of Venus to be only 3 minutes and 47 seconds. It were well, however, if there were no greater errors with regard to other places; but if we examine the longitude of the Lizard, we shall find scarce any two geographers that agree concerning it; some making it  $4^{\circ} 40'$  from London; others  $5^{\circ}$ , and others  $5^{\circ} 14'$ : while some enlarge it to  $6^{\circ}$ . Our best maps are therefore still to be considered as unfinished works, where there will always be many things to be added and corrected, as future geographers may find time and opportunity.

The chief works on geography among the moderns are Johannes de Sacrobosco, (or John Hallifax,) *De sphaera*; Sebastian Munster's *Cosmographia Universalis*; Clavius, on the sphere of Sacrobosco; Piccioli's *Geographia et Hydrographia Reformata*; Weigelius's *Speculum Terræ*; De Chales's Geography, in his *Mundus Mathematicus*; Cellarius's Geography; Cluverii *Introductio in Universam Geographiam*; Leibnecht's *Elementa Geographica Generalis*; Stevenius's *Compendium Geographicum*; Wolfii *Geographia*, in his *Elementa Mathematica*; Busching's New System of Geography; Gordon's, Salmon's, and Guthrie's Grammars; and, above all, Varnius's *Geographia Generalis*, with Jurin's additions, the most scientific and systematical of any geographical work.

### SECT. III. Of the FIGURE and MAGNITUDE of the EARTH.

THE EARTH is one of the great bodies which compose the planetary system. It moves round the sun in an orbit nearly circular, and compleats its revolution in the course of a year, while at the same time it revolves continually upon its own axis, which is inclined to the plane of its orbit at an angle of  $66\frac{1}{2}$  degrees; the time of a revolution being 23 hours and 56 minutes. The revolution of the earth round the sun is called its ANNUAL MOTION, and the rotation it performs on its own axis is called its DIURNAL MOTION.

While the earth revolves round the sun in the course of its annual motion, its axis, round which the diurnal motion is constantly performed, moves always parallel to itself. It is by the parallelism the axis, and the annual motion of the earth, that the changes of the seasons are produced, as been already explained at large; (See ASTRONOMY, Part 3, Sect. 3,) while by the diurnal motion all places on the earth's surface are alternate-

ly turned towards the sun, and by the changes of day and night are produced. (See ASTRONOMY, § 412 and 413.)

That the earth is nearly of a spheroid may be proved by many arguments: these have been given under ASTRONOMY, § 389. See also BARTH, § IV, ii this conclusion has been drawn from observations which were not greatly complicated, and which were intimately connected with the common affairs of life, it is reasonable to conclude that the attention which was directed to determine the returns of the proper performing the labours of husbandry, regulation of civil affairs, would lead to an early period of society to form a pretence of the figure of the earth. When it was once known to be spherical, the curiosity would naturally lead him to endeavour to measure its dimensions; and we accordingly find in history, that such attempts were not long after been already noticed in last section. The accurate measure that was made of the length of a degree of the meridian, which we have any certain knowledge executed by M. PICCARD, in France, at the end of the last century, and which I have mentioned several times since that period. It is difficult to understand in what way this length could be measured; the direction of gravity is perpendicular to the earth's surface: it follows that the zenith of any place, or the heavens directly over our head, and the horizon which is a plane touching the earth at that place, will be continually changing as we change our position on the earth's surface. Hence it follows, that as we move towards N., the pole of the heavens, or the zenith, in which the earth's axis is directed, descends towards the sphere of the fixed stars, and more elevated above the horizon, the meridian altitude also of the stars in the regions of the heavens will appear to be diminished. By the elevation of the stars, we shall know the angle of the point of concurrence of perpendiculars drawn from the earth's surface at each extremity of the arc; for this angle is equal to the difference of the meridian altitude of the same star as seen from the extremities of the arc, diminished by the angle which the arc itself subtends as seen from the centre. This last angle is altogether insignificant, the number of degrees in the arc being only necessary to determine its length, which may be known measure, as a fathom, &c. but it will be a work of great labour to apply this method to an arc of great extent, it will be sufficient if the extremities be connected by a series of triangles, the base of one to those of a base line of 3, or 4000 fathoms, and considering the accuracy with which the angles of these triangles can be observed, the length of the arc may be found with great accuracy. It was in this way that degrees of the meridian have been repeatedly measured. In France, within these few years, an arc of the meridian extending from Dunkirk to Bayonne, and the degree whose middle is situated at Bayonne has by this means been found to be

the spherical figure be the most simple natural for man to suppose objects at form which he most readily conceives; the simplicity of nature is not always that of our conceptions. Infinitely various, Nature is only simple in her cause: economy consists in producing a great variety of circumstances, by means of a few general laws. The earth is a result of these laws, which vary in a great variety of circumstances; small variations, observed in the length of the meridian in France, sufficiently at such a deviation did exist; but they were unavoidable in such observations: an important phenomenon in a state of

ACADEMY OF SCIENCES, in which this has been warmly agitated, concluded with the difference of magnitude in the meridian, if real, would be most sensed by the comparison of degrees measured at the equator and towards the poles. A company of Academicians was sent to Lapland, where, having measured a degree of the meridian, they found it to contain 56,753 toises; at the lat. of 45° N. Other Academicians were sent to Lapland, about the lat. of 66° N. and found it to be 57,458 toises, which was a difference of 705 toises, or about the length of the degree at the equator by 68; to these measurements, it was concluded that the earth was not exactly spherical: the measurements of degrees made since have all tended to shew, that the meridian gradually increases from the poles.

It is the next curve in point of simplicity, and the earth has been considered as a spheroid formed by the revolution of a circle about its lesser axis; its oblateness or flattening, in the direction of its poles, is a consequence of the observed increase of the length of the meridian from the equator to the poles: the radii of these degrees being in the inverse ratio of the gravity, they are by the law of the perpendicularity of fluids perpendicular to the surface, with which the earth is in a great measure covered. They do not therefore, as in a sphere, tend to the centre of the spheroid; they are in the same direction, nor of the same length, as the radii drawn from the centre to the surface; which cut it obliquely every where: the two adjoining perpendiculars, drawn from the same meridian, meet each other at the poles: of the small terrestrial arc which they cut, the perpendiculars would be parallel, if the earth were a sphere: but in proportion as this arc is curved, they would meet at a distance: the distance is less, as the curvature of the arc is greater. Hence it follows, that seeing the length of the meridian is the point where the length of the ellipse is the least, the radius of a

degree at the pole, and consequently that degree itself, must be the greatest of any degree on the earth's surface. On the contrary, at the equator or at the extremity of the greater axis, the curvature is the least, and therefore the degree in the direction of the meridian is there the smallest. And in going from the equator to the pole, the degrees increase in such a manner, that if the ellipse be not very eccentric, the increase is nearly proportional to the square of the sine of the latitude.

If the earth were exactly an oblate spheroid, its magnitude, as well as the proportion of its axes, might be determined by the mensuration of two degrees in the direction of the meridian, as has been already explained. See EARTH, § IV, ii. It should also follow, that by a comparison of all the degrees hitherto measured, taken two and two, we should obtain the same proportion between the axes. This, however, has not been the case: The results have indeed shewn, that the earth is flattened at the poles; but they have left an uncertainty as to the quantity of the compression, extending from between the 170th to the 330th part of the radius of the equator. Between these two quantities, the former of which is nearly double of the latter, most of the results are placed; but in such a manner, that those most entitled to credit are much nearer to the least extreme than to the greatest.

In consequence of this disagreement in the result of comparisons of degrees of the meridian, measured in different latitudes, it has been concluded by mathematicians, that the figure of the earth is not that of a spheroid; nor does it even appear, that the parts of it on each side of the equator are exactly similar.

It will, however, be sufficient for the purpose of Geography, to suppose the earth a spheroid. Upon this hypothesis, LA PLACE, by a comparison of the arc of the meridian measured at the equator, and another measured between Dunkirk and Mountjoy, has found, that the polar diameter is less than the equatorial by one 334th part of the latter: and that a 4th part of the elliptic meridian is 5,130,740 toises; the toise being that used in measuring the earth in Peru, and reduced to a temperature of 16½ degrees of a mercurial thermometer, divided into 100 degrees from the freezing point to that of water, boiling under a pressure equivalent to a column of mercury 76 centimetres in height, or about 30 inches English measure. This determination also agrees nearly with the results from the combination of a great number of experiments made at different places of the earth, upon the pendulum.

Because the measure of a degree at the equator has been assumed, in the preceding calculation at 56,753 toises, it follows also from the method explained under the article EARTH, § IV, ii. that the equatorial diameter is 3,271,267, and the polar diameter 3,261,471 toises; the difference between them being 9,796 toises. From these data, and the rules of mensuration, it will be easy to find the surface, solidity, &c. of the earth, also the number of miles in a degree, &c.

The French government have taken the length of the quadrant of the meridian, as the basis of a new system of weights and measures. The ten millionth part of the quadrant has been assumed as

the *metre* or unit of linear measures, from which all the other measures are formed, by taking its multiples and submultiples according to the decimal mode of notation. Thus it appears the metre is expressed by the decimal fraction of the toise 513,074. For a full account of the measures of the French Republic, see MEASURE.

The following table of the dimensions of the earth is given by Dr HUTTON.

The diameter	79,579 $\frac{1}{2}$ miles
The circumference	25,000 miles
A degree contains	69 $\frac{1}{2}$ English miles
The superficies	198,944,206 square miles
The solidity	263,930,000,000 cubic miles.

SECT. IV. *Of the CIRCLES supposed to be DESCRIBED on the EARTH'S SURFACE.*

In geography the circles, which the sun apparently describes in the heavens, are supposed to be extended as far as the earth, and marked on its surface. In like manner we may imagine as many circles as we please to be described on the earth, and their planes to be extended to the celestial sphere, till they mark concentric ones on the heavens. The most remarkable of those supposed by geographers to be described in this manner are the following:

The **AXIS** of the earth is that imaginary line passing through the earth's centre, round which it continually revolves, from west to east.

The **POLES** of the earth are the points at which the axis meets the earth's surface. One of these is called the north pole, and the other the south pole. These correspond to the poles of the heavens, or the points where the earth's axis, when produced, meets the starry sphere.

The **EQUATOR** is a great circle on the earth's surface, equally distant from both poles, and corresponds to the equinoctial circle in the heavens. It divides the earth's surface into two equal portions called the *northern* and *southern hemispheres*. The equator is also sometimes called the **LINE**, or **EQUINOCTIAL LINE**.

The distance of any place, northward or southward from the equator, is called its **LATITUDE**, and is reckoned in degrees and minutes, &c. The distance between the poles and equator, which is a quadrant of a great circle passing thro' the poles, has by all geographers hitherto been supposed to be divided into 90 degrees; and each of these again subdivided into 60 minutes, &c. But some French astronomers, and in particular **LA PLACE**, in his *Exposition du Systeme du Monde*, as well as in his *Traite de Mecanique Celeste*, has adopted the decimal division of the meridian. They have supposed the distance between the equator and the poles to be divided into 100 degrees, and each degree to be subdivided into 100 minutes, each minute into 100 seconds, and so on.

All places lying on the north side of the equator are said to have north latitude: on the contrary, all places on the south side of the equator are said to have south latitude.

**PARALLELS OF LATITUDE** are lesser circles upon the earth's surface parallel to the equator. They are considered as indefinite in number; that lie directly east or west from each are said to lie in the same parallel of latitude.

The **TROPICS** are two lesser circles or parallels to the equator, and 23 $\frac{1}{2}$  degrees from it. That which lies on the north equator is called the **TROPIC OF CANCER**; that which lies on the south side is the **TROPIC OF CAPRICORN**. These correspond to the circles of the same name, and the sun's north and south declination in the heavens.

The **POLAR CIRCLES** are two lesser circles on the earth's surface, parallel to the equator, as far distant from the poles, which are as the tropics are from the equator. That which lies towards the north pole is called the **ARCTIC CIRCLE**, and that which lies towards the south pole is called the **ANTARCTIC CIRCLE**. To these there are corresponding circles in the heavens.

**Great circles** passing through the poles of the earth, and therefore perpendicular to the equator, are called **MERIDIANS**. The meridian passing through any particular place, lies in the same plane as the celestial meridian of that place. It divides the surface of the earth into two portions, called the *eastern* and *western* hemispheres, in respect of that place. The meridian is considered as indefinite in number; and any two lying directly north and south from each other are upon the same meridian. Sometimes the meridian of a place is understood to be the great circle, passing through that place, and tending from the one pole to the other. The other half of the circle is called the *opposite meridian*.

If we suppose 12 great circles, one of which is the meridian of a given place, to intersect each other at the poles of the earth, and divide the equator into 24 equal parts, these are called **HORARY CIRCLES** of that place. The poles are divided into 24 semicircles, corresponding to the 24 hours of the day, and the distance between each two of these is 15°, being the 24th part of 360°.

The **LONGITUDE** of any place on the earth is an arc of the equator intercepted between the meridian passing through that place and another meridian previously agreed upon, called the *first meridian*. The longitude is reckoned eastward and westward from the first meridian, by which means all places lying in the same hemisphere to the eastward of that place will have the same longitude; and all places lying in the other hemisphere to the westward of that place, will have the same longitude.

Geographers at different periods, and in different countries, have fixed upon different meridians for the first meridian. The rule anciently was to make it pass through the most distant to the west that was known. But moderns, knowing that there is no farthest part of the earth as can be considered the beginning, have laid aside that method of reckoning longitude. Ptolemy assumed the meridian passing through the southernmost of the Canary Islands for his first meridian. After him, as more islands were discovered in that quarter, the first meridian was removed farther off. The Arabian

**Fig. 8.**

id in the observations, will be so much as the motion of the celestial body, upon which observations are made, is the more hence it appears, that observations made of the moon, when at her least distance from the earth, are preferable to those made upon her when at her greatest distance. If the motion of the sun used to determine the longitude, since his motion is only about one 13th of that of the moon, it is evident that the errors in the longitude would be 13 times greater: from which it appears, that the moon is the only celestial body which is employed to determine the longitude. It also appears of what importance it is in the sciences of navigation and geography, that tables should be constructed of her mo-

on observations the longitudes and latitudes of a great number of places have been determined, and the position and extent of many countries accurately defined, concerning which there were erroneous opinions formerly were entertained. Much, however, yet remains to be done: the parts of Africa and America are yet to be measured entirely unknown, and even the parts frequently visited by navigators may have their positions more accurately determined than hitherto done.

The methods of finding the longitude are not stated; of these there is yet another much used by navigators; to whom an exact knowledge of the position, when at sea, and without any other method than the stars and compass, is of the greatest importance. It has been already observed, that in order to know the longitude of any place, it is necessary to know the difference between the time of noon, or of any other hour, at that place, and the time of noon, or of the same hour, at any place upon the first meridian; for every difference of time the longitude may be found, allowing 15° of longitude for every hour of time, and so in proportion for any period of time.

It appears, that if a traveller, or navigator, carries with him a watch, or time-keeper, so regulated as to show exactly the hours as reckoned at the place of his departure; by comparing the time shewn by the watch with the time as reckoned at any place he comes to, or as found by means of proper astronomical observations at that place, it is evident that he may immediately find its longitude. If in departing from the first meridian, he had known from any other meridian whose longitude was known, still it is evident that the longitude is to be found by the same method of observation. This method of finding longitude would be the most simple of all, if it were not a matter of great difficulty to carry time-keepers that shall go with perfect accuracy; more especially on board of a ship, where they are continually exposed to changes of position, as well as continual agitation. The watches that occur have however been over-looked, and ingenuity; and watches have been constructed that have gone with great accuracy for many months. See LONGITUDES.

#### SECT. VI. Of the DIFFERENT POSITIONS of the SPHERE.

If we could suppose an inhabitant of the earth capable of living at either of the poles, he would have always one of the celestial poles in his zenith and the other in his nadir, the equator coinciding with the horizon. Hence all the celestial parallels, are also parallel to the horizon; and hence a person, or people, are said to live in a PARALLEL SPHERE, or to have a *parallel horizon*.

Those who live under the equator have both poles in the horizon, all the celestial parallels cutting the horizon at right angles; whence they are said to live in a RIGHT SPHERE, or to have a RIGHT HORIZON.

Those who live between either of the poles and the equator are said to live in an OBLIQUE SPHERE, or to have an *oblique horizon*; because the celestial equator cuts his horizon obliquely, and all the parallels in the celestial sphere have their planes oblique to that of the horizon. In this sphere some of the parallels intersect the horizon at oblique angles, some are entirely above it, and some entirely below it; all of them, however, so situated, that they would obliquely intersect the plane of the horizon extended.

The largest parallel, which appears entire above the horizon of any place in N. latitude, is called by the ancient astronomers the ARCTIC CIRCLE of that place. Within this circle, *i. e.* between it and the arctic pole, are comprehended all the stars which never set in that place, but are carried perpetually round the horizon, in circles parallel to the equator.

The largest parallel, which is hid entirely below the horizon of any place in N. latitude, was called the ANTARCTIC CIRCLE of that place by the ancients. This circle comprehends all the stars which never rise in that place, but are carried perpetually round below the horizon, in circles parallel to the equator.

In a parallel sphere, however, the equator may be considered as both *arctic* and *antarctic* circles; for being coincident with the horizon, all the parallels on one side are entirely above it, and those on the other entirely below it. In an oblique sphere, the nearer any place is to either of the poles the larger are the arctic and antarctic circles, as being nearer to the celestial equator, which is a great circle. In a right sphere, the arctic and antarctic circles have no place; because no parallel appears either entirely above or below it.

By the ancients the arctic circle was called *maximus semper apparentium*, and *circulus perpetuæ apparitionis*; the antarctic circle on the other hand, being named *maximus semper occultorum*, and *circulus perpetuæ occultationis*.

By the arctic and antarctic circles, however, modern geographers in general understand two fixed circles, at the distance of 23½ degrees from the poles. These mark out the space all round the globe where the sun appears to touch the horizon at midnight in mid-summer, and to be entirely sunk below it in winter.

According to the different positions of the globe with regard to the sun, the celestial bodies exhibit

but different phenomena to the inhabitants. Thus, in a parallel sphere, they appear to move in circles round the horizon; in a right sphere, they appear to rise and set as at present, but always in circles cutting the horizon at right angles; but in an oblique sphere, the angle varies according to the degree of obliquity, and the position of the axis of the sphere with regard to the sun. The phenomena thence arising will be sufficiently understood from what is said under the article **ASTRONOMY**. From thence we will easily perceive the reason of the sun's continual change of place in the heavens: but though it is certain that this change takes place every moment, it is imperceptible for some time, unless by very nice astronomical observations. Hence we may generally suppose the place of the sun to be the same for a day or two together, though in a considerable number of days it becomes exceedingly obvious to every body. When he appears in the celestial equator, his motion seems for some time to be in the plane of that circle, though it is certain that his place there is only for a single moment; and in like manner, when he comes to any other point of the heavens, his apparent diurnal motion is in a parallel drawn throughout. Twice a year he is in the equator, and then the days and nights are nearly equal all over the earth. This happens in March and September; after which, the sun proceeding either northward or south, according to the season of the year, and the position of the observer, the days become longer or shorter than the nights, and summer or winter comes on, as is fully explained under the article **ASTRONOMY**.

The recession of the sun from the equator either northward or southward is called his **DECLINATION**; and is either north or south according to the season of the year; and when this declination is at its greatest height, he is then said to be in the tropic.

The space between the two tropics, called the **TORID ZONE**, extends 47 degrees of latitude all round the globe; and throughout the whole of that space the sun is vertical to some of the inhabitants twice a-year, but to those who live directly under the tropics only once. Throughout the whole torrid zone also there is little difference between the length of the days and nights. The ancient geographers found themselves considerably embarrassed in their attempts to fix the northern tropic; for though they took a very proper method, namely, to observe the most northerly place where objects had no shadow on a certain day, yet they found that on the same day no shadow was cast for a space of no less than 300 stadia. The reason of this was, the apparent diameter of the sun; which being about half a degree, seemed to extend himself over as much of the surface of the earth, and to be vertical every where within that space.

When the sun is in or near the equator, he  
 to change his place in the heavens most rapidly  
 so that about the equinoxes one may very  
 receive the difference in a day or two:  
 approaches the tropics this apparent  
 comes gradually slower; so that for a  
 days he seems to move at all.  
 commonly will be understood from

any map on which the ecliptic is described by drawing lines through every degree parallel to the equator, we shall perceive they all approach nearer and nearer each other at last, when we approach the point betwixt the ecliptic and tropic, several degrees scarce be distinguishable.

**SECT. VII. METHOD of FINDING of the DAY, and the BEGINNING of the TWILIGHT.**

As it is of considerable importance in Geography, to know the length of the day assigned place upon the earth, it will be proper to shew the manner of finding the time of the rising and setting of the sun, or any other of the celestial bodies. Let **PZES**, *Plate CLXII, Fig. 2.* represent the celestial meridian of any place, **P** and **E** the poles of the sphere; let **EQ** be the horizon, stereographically projected upon the plane of the meridian; let **I** be the 6 o'clock hour circle, and **m** the point of declination described by the sun on any given day of the year; the point in which it cuts the horizon; then **n** half the arch described by the sun within the horizon, and **O m** the half of the arch when below the horizon. Let **POS** be an hour circle passing through the sun in the horizon, and meeting the equator at **A**; the arch **EA** of the equator intercepted between the meridian and hour circle, and converted into time, (allowing 15 minutes will evidently give half the time that the sun will remain above the horizon, as 15 minutes will give half the time it remains below the horizon. As the arch **EC** contains 90 degrees, it is only necessary to find the arch **CA** which is called the sun's ascension, it being the difference between his right ascension, and his oblique ascension converted into time to add it to, or subtract from six hours, according as the place and sun's declination are of contrary names, that is both **N.** or both **S.** or the one **N.** and the other **S.** and the difference shall be half the length of the day required.

In the spherical triangle **CAO**, right angled at **A**, we have **AO** the complement of the sun's declination, to be found from astronomical tables; the angle **ACO** the complement of the sun's declination; and **CO** of the place, in order to find **AC** the sun's ascension. Hence from the principles of spherical trigonometry we have the following proportion:

As radius to the tangent of the latitude, so the tangent of the sun's declination to the tangent of the sun's ascension.

When the sun is in the same hemisphere as the place, and his declination is less than the complement of its latitude, which happens to places in the polar circle, the parallel of declination will not cut the horizon, and consequently the sun will not set during the time his declination exceeds the latitude; but when the sun and place

eres, then he will never rise at that  
his declination exceeds the co-la-  
ice it is easy to see how to find the  
sun begins to shine constantly upon  
within the polar circle; and also  
that place begins to be wholly in  
considerable time together.

observed in ASTRONOMY, Part III,  
twilight commences in the morn-  
the evening, when the sun is  $18^{\circ}$   
zon. The time of its commence-  
g, may be found by spherical trigo-  
nometry: *Plate CLXII, fig. 2.* Let  
h, P the pole of the sphere, and T  
sun,  $18^{\circ}$  below the horizon H R.  
triangle P Z T, we have P Z the  
pole from the zenith, which is e-  
latitude of the place, and P T the  
the sun's declination; also Z T,  
the sun from the zenith, which, in  
ways  $90^{\circ} + 18^{\circ}$  or  $108^{\circ}$ . From  
find the hour angle, Z P T, which  
the following proportion. Let V  
of the triangle. Then as sine Z P  
radius square, so is sine (V—Z P)  
T) to the square of the sine of  $\frac{1}{2}$   
ngle Z P T being turned into time  
ne from noon of the beginning or  
twilight.

*of the DIVISION of the EARTH'S SUR-  
CLIMATES and ZONES; and the DI-  
the SHADOWS of BODIES.*

ing the diversity in the length of  
ights, the rising and setting of the  
other phænomena already mention-  
t geographers divided the surface  
o certain districts, which they cal-  
; and instead of the method of de-  
uation of places by their latitude  
s we do now, they contented them-  
tioning the climate in which they

When more accuracy was requi-  
ioned also the beginning, middle,  
he climates.

ion, however, was certainly very  
urate: for the only method they had  
the difference was by the length of  
climate, according to them, was  
had the day in its most northerly  
r longer than in the most southerly.  
ng of their first climate, they took  
der which the day is  $12\frac{1}{4}$  hours  
ts of the world which lie nearer  
: being supposed to be in any cli-  
cause in a loose sense they may be  
a right sphere, or because they  
or thought to be uninhabitable by  
t. The northern climates were gene-  
be seven; which must have an equal  
bern climates corresponding with  
thern climates. according to the  
as follow: 1. Meroe. 2. Syene in  
alexandria in Egypt. 4. Rhodes.  
according to others, a parallel  
the Hellespont. 6. The parallel  
the mouth of the river Boristhe-  
pheaton mountains.—Each of these  
r 1.

places was supposed to be in the middle of the cli-  
mate; and as the southern parts of the globe were  
then very little known, the climates to the S. of  
the equator were supposed to be as far distant  
from that circle as the northern ones; in conse-  
quence of which they took their names from the  
latter.

A parallel was said to pass through the middle  
of a climate, when the day under that parallel is a  
quarter of an hour longer than that which passes  
through the most southerly part. Hence it does  
not divide the space into two equal parts, but that  
part next the equator will always be the larger of  
the two; because the farther we recede from that  
circle, the less increase of latitude will be sufficient  
to lengthen the day a quarter of an hour. Thus,  
in every climate there are 3 parallels; one mark-  
ing the beginning, the 2d the middle, and the 3d  
the ending of the climate; the ending of one be-  
ing always the beginning of another. Some of  
the ancients divided the earth by these parallels;  
others by a parallel did not mean a mere line,  
but a space of some breadth: and hence the pa-  
rallel may be understood as the same with half a  
climate.

This method of dividing the surface of the earth  
into climates, though now very much disused, has  
been adopted by several modern geographers. Some  
of these begin their climates at the equator, reckon-  
ing them by the increase of half an hour in the length  
of the day northward. Thus they go on till they  
come to the polar circles, where the longest day is  
24 hours: betwixt these and the poles they count  
the climates by the increase of a natural day in the  
length of time that the sun continues above the  
horizon, until they come to one where the longest  
day is 15 of ours, or half a month; and from this to  
the pole they count by the increase of half months  
or whole months, the climates ending at the poles  
where the days are six months long. The climates  
betwixt the equator and the polar circles are cal-  
led *hour climates*, and those between the polar cir-  
cles and the poles are called *month climates*.—In  
common language, however, we use the word  
CLIMATE in a very different sense; so that, when  
two different countries are said to be in different  
climates, we understand only that the temperature  
of the air, seasons, &c. are different.

The division of the earth into ZONES has aris-  
sen from the various appearances of the sun, and  
the effects of his light and heat upon different parts  
of it. These are five in number: 1. The torrid  
zone, lying between the two tropics for a space  
of  $47^{\circ}$  of latitude. This is divided into two equal  
parts by the equator; and the inhabitants have  
the sun vertical to them twice a-year, excepting  
only those who dwell under the tropics, to whom  
he is vertical only once. 2. The two temperate  
zones lie between the polar circles and the tropics,  
containing a space of  $43^{\circ}$  of latitude. And, 3.  
The two frigid zones lie between the polar circles  
and the poles. In these last the longest day is never  
below 24 hours; in the temperate zones it is never  
quite so much, and in the torrid zone it is never  
above 14. The zones are named from the degree  
of heat they were supposed to be subjected to.  
The torrid zone was supposed by the ancients to

T t

be.

ar circle, or by the eye placed in  
ar point, according to the rules of  
&c. of which there are several me-

**SECTION of GENERAL MAPS.** A  
world must represent two hemispheres;  
it be drawn upon the plane of that  
divides the hemispheres.

method is to project each hemisphere  
of some particular circle, by the  
**STEREOGRAPHIC PROJECTION**; which see;  
hemispheres on one common base or  
the plane of projection is that of a  
maps will be the E. and W. hemi-  
spheres meridians will be ellipses; and  
circles will be right lines. Upon the  
equinoctial, the meridians will be  
offing in the centre, which will re-  
side; the parallels of latitude will be  
that common centre; and the maps  
northern and southern hemispheres.

**PLATE CLXII**, is an orthographic projec-  
tion of the hemispheres upon the plane of

And *Fig. 4.* an orthographic projec-  
tion of the northern hemisphere upon the plane  
of the equinoctial. The fault of this way of drawing  
towards the outside the circles are  
other; and therefore equal spaces  
there are represented by very unequal  
map.

method is to project the same hemi-  
spheres by the rules of **STEREOGRAPHIC PROJEC-**  
TION; in which way all the parallels will be re-  
circles, and the meridians by circles

(For the nature and properties of  
this projection, See **PROJECTION OF THE**  
HEMISPHERES, at here the contrary fault occurs;  
towards the outides are too far a-  
bout the middle they are too near

method is therefore adopted to reme-  
dy both the former methods: viz.

E. and W. hemispheres, describe the

*Fig. 5. plate CLXII*, for the meridi-  
an projection; through the centre of  
the equinoctial EQ, and axis PN per-  
pendicular, making P and N, the north and  
south poles. Divide the quadrant PE, EN, NQ,  
EQ, into 9 equal parts, each representing 10  
degrees of latitude, beginning at  
the equinoctial EQ. Divide  
PN into 9 equal parts, beginning at  
the north pole P, draw circles  
through the corresponding points draw  
of latitude. Again divide CE and  
EN into 12 equal parts; and through the points of  
division draw circles, for the meridians. Thus the  
map is prepared to receive the names of the  
countries, kingdoms, cities, &c. in the

N. or S. hemisphere, draw AQBE,  
the equinoctial, dividing it into the four  
quadrants, AQ, QB, and BE; and each qua-  
drant into 12 equal parts; and through these points  
draw circles from the centre C, for the paral-  
lels of latitude; numbering them as in the figure.  
By this method, equal spaces on the earth  
will be represented by equal spaces on the map, as  
in the next section will bear; for a spherical

surface can no way be represented exactly upon a  
plane. Then the several countries, kingdoms, ci-  
ties, seas, islands, sea coasts, towns, &c. are to  
be marked in the map, according to their latitudes  
and longitudes.

In filling up the map, all places representing land  
are filled with such cities, towns, rivers, hills, &c.  
as the countries contain; but the seas are left  
white; the shores adjoining to them being shaded.  
Large rivers are marked by strong or double lines,  
drawn winding in the form of those they repre-  
sent; and small rivers are expressed by small  
lines. Different countries are best distinguished  
by different colours; at least the borders of them  
should be so distinguished. Forests are represented  
by small trees; and mountains are shaded to make  
them appear. Sands are denoted by numerous  
small points; and rocks under water by small  
crosses. The mariner's compass, with the 32  
points representing the winds, is drawn in any  
void space.

## II. CONSTRUCTION of PARTICULAR MAPS.

To draw a map of any particular country, its extent  
must be known as to latitude and longitude: as,  
Suppose Spain, lying between the N. latitudes 36°  
and 44°, and extending from 10° to 23° of longitude.  
So that its extent from N. to S. is 8° and from E.  
to W. 13°.

1. Draw the line AB, *fig. 7. plate CLXII*, for a  
meridian passing through the middle of the coun-  
try; on this, set off 8° from B to A, taken from  
any convenient scale; A being the north and B  
the south point. Through A and B draw the per-  
pendiculars CD, EF, for the extreme parallels  
of latitude. Divide AB into 8 parts or degrees,  
through which draw the other parallels of latitude,  
parallel to the former.

For the meridians, divide any degree in AB in-  
to 60 equal parts, or geographical miles. Then,  
because the length of a degree in each parallel de-  
creases towards the pole, (as appears from the  
annexed TABLE,) take the number of miles an-  
swering to the latitude of B, which is 48½ nearly,  
and set it from B, 7 times to E, and 6 times to  
F; so is EF divided into degrees. Again, from  
the same table take the number of miles of a de-  
gree in the latitude A, viz. 43½ nearly; which set  
off, from A, seven times to C, and six times to D.  
Then from the points of division in the line CD,  
to the corresponding points in the line EF, draw  
so many right lines for the meridians. Number  
the degrees of latitude up both sides of the map,  
and the degrees of longitude on the top and bot-  
tom. Also in some vacant place make a scale of  
miles; or of degrees, if the map represent a large  
part of the earth; to serve for finding the distan-  
ces of places upon the map.

Then make the proper divisions and subdivisions  
of the country; and having the latitudes and lon-  
gitudes of the principal places, it will be easy to  
set them down in the map; for any town, &c.  
must be placed, where the circles of its latitude  
and longitude intersect. For instance, GIBRAL-  
TAR, whose lat. is 36° 11' and lon. 12° 27' will  
be at G; and MADRID, whose lat. is 40° 10' and  
lon. 14° 44', will be at M. In like manner, the  
mouth of a river must be set down; but to de-  
scribe the whole river, the lat. and lon. of every

ry turning must be marked down, and the towns and bridges by and under which it runs. And so for woods, forests, mountains, lakes, forts, &c. The boundaries will be described by setting down the most remarkable places on the sea coast, and drawing a continued dotted line through them all. This method is very proper for small countries.

TABLE, showing the NUMBER of MILES contained in a DEGREE of LONGITUDE, in each PARALLEL of LATITUDE from the EQUATOR.

2. Maps of particular places, being portions of the globe, may be drawn after the same manner as the whole: *i. e.* either by the orthographic or stereographic projection of the sphere. But in partial maps, an easier method may be taken; thus: having drawn the meridian AB, *fig. 7*, and divided it into equal parts, as in the last method, draw lines through all the points of division perpendicular to AB, for the parallels of latitude; CD, *fig. 7*, being the extreme parallels. Then, to divide these, set off the degrees in each parallel, diminished as directed for the two extreme parallels *P*. in the last method; and through all the dividing points draw the meridians, which will be right lines; and which were right lines in the whole globe, because only the extreme paral-

ls were divided by the table. This method is proper for a large tract, as Europe, &c. in the parallels and meridians need only be divided every 5 or 10 degrees. This method is used in drawing maps; as all the parts are of their due magnitude, but a little distorted towards the outside, from the obliqueness of the meridians and parallels.

3. A 3d method may be adopted for a meridian: Divide it into 9 equal parts through the points of division, describe circles for the parallels of latitude, from the pole P, which represents the pole. See *fig. 8*. the height of the map; then CI parallel passing through the greatest latitude; EF will represent the equator. Divide the meridian EF into equal parts, of the same length in AB, both ways, beginning at B. Divide all the parallels into the same number of parts, but lesser, in proportion to the length of the several latitudes, as directed in the last method for the rectilineal parallels. Through all the corresponding divisions, draw lines which will represent the meridians, the first ones being EC and ED. Lastly number the parallels in degrees of lat. and lon., and place a scale of miles or degrees for the distances, either of miles or degrees for the distances. This is a very good method for large maps, and is called the GLOBULAR METHOD; all the parts of the earth being nearly of their due magnitude, except the parts near the outside, which are a little distorted on the outside.

When the place of which a map is intended is but small, *e. g.* if a county were to be drawn, the meridians, as to sense, will be parallel, and the whole will differ very little from a plane. Such a map may be made more exact than by the preceding rules, merely by measuring the distances in miles, and so laying them out in a plane rectangular map. But this method of map making belongs more properly to the ART, which see.

The USE OF MAPS is obvious from the preceding construction. The degrees of the meridians shew the latitudes and longitudes, and the scale of miles annexed, their distance from us, with regard to each other, as well as to the cardinal points, appearance; the top of the map being always the north, the bottom the south, the right hand the east, the left the west, unless the compass is annexed, shew the contrary.

#### SECT. X. GENERAL DESCRIPTION OF THE REPRESENTATION of the SPHERE.

HAVING discovered, by the preceding method, the true situation of the different parts of the earth with regard to each other, we know many other particulars relative to the earth, as their distance from us, the hour of the day, the season of the year, &c. at a particular place. As each of these problems would require a particular and somewhat tedious calculation, machines have been invented by which all the calculations may be performed, and every problem in geography may be

# GEOGRAPHY.

Fig. 1.  
Terrestrial Globe.

Fig. 4.

Fig. 5.

Fig. 2. Armillary Sphere.

Fig. 3. Celestial Globe.

and in the most easy and expeditious these machines are the celestial and lobes, and the armillary sphere; of hall now give a description, with the using them.

of the world be accurately delineated cal ball, the surface thereof will re-surface of the earth: for the bulk of nconsiderable with respect to that of hat they take off no more from its ran grains of sand do from the round-ommon globe: the diameter of the 8000 miles, and no known hill upon ve three miles in perpendicular height. sferver placed any where in the inde-

where there is nothing to limit his emote objects would appear equally i him; and to be placed in a vast con-, of which his eye is the centre. The ich nearer to us than the sun; some ts are sometimes nearer and sometimes n us than the sun; others never come is as the sun always is: the remotest ar system is beyond comparison nearer ny of the fixed stars are; and yet, all al objects appear equally distant from ore, if we suppose a large hollow sphere ave as many bright studs fixed to its ere are stars visible in the heaven, and

to be of different magnitudes, and be same angular distances from each o-stars are; the sphere will be a true re- of the starry heaven, to an eye sup-in its centre, and viewing it all around, nall globe, with a map of the earth placed on an axis in the centre of this re, and the sphere be made to turn his axis, it will represent the apparent he heavens round the earth.

t circle be so drawn upon this sphere, it into two equal parts or hemispheres, ne of the circle be perpendicular to the sphere, this circle will represent the IAL, which divides the heaven into two s, called the *northern* and the *southern*; and every point of that circle will distant from the POLES, or ends in the hat pole which is in the middle of the :misphere will be called the *north pole* of and that which is in the middle of the :misphere the *south pole*.

r great circle be drawn upon the sphere, manner as to cut the equinoctial at an g degrees in two opposite points, it will be ECLIPTIC, or circle of the sun's ap- al motion; one half of which is on ide of the equinoctial, and the other south.

stud be made to move eastward in this such a manner as to go quite round it, that the sphere is turned round west-imes upon its axis, this stud will repre- x changing his place every day a 365th ecliptic, and going round westward ay as the stars do; but with a motion over than the motion of the stars, ill make 366 revolutions about the axis re in the time that the sun makes only

365. During one half of these revolutions, the sun will be on the north side of the equinoctial; during the other half, on the south; and at the end of each half, in the equinoctial.

If we suppose the terrestrial globe in this machine to be about one inch in diameter, and the diameter of the starry sphere to be about 5 or 6 feet, a small insect on the globe would see a very little portion of its surface; but it would see one half of the starry sphere, the convexity of the globe hiding the other half from its view. If the sphere were turned westward round the globe, and the insect could judge of the appearances which arise from that motion, it would see some stars rising to its view in the eastern side of the sphere, whilst others were setting on the western; but as all the stars are fixed to the sphere, the same stars would always rise in the same points of view on the E. side, and set on the same points of view on the W. side. With the sun it would be otherwise; because the sun is not fixed to any point of the sphere, but moves slowly along an oblique circle in it. And if the insect should look towards the south, and call that point of the globe, where the equinoctial in the sphere seems to cut it on the left side, the east point; and where it cuts the globe on the right side, the west point; the little animal would see the sun rise north of the east, and set north of the west, for 182½ revolutions; after which, for as many more, the sun would rise south of the east, and set south of the west. And in the whole 365 revolutions, the sun would rise only twice in the east point, and set twice in the west.

All these appearances would be the same, if the starry sphere stood still (the sun only moving in the ecliptic), and the earthly globe were turned round the axis of the sphere eastward. For, as the insect would be carried round with the globe, he would be quite insensible of its motion, and the sun and stars would appear to move westward.

#### SECT. XI. DESCRIPTION of the TERRESTRIAL GLOBE.

THE equator, ecliptic, and tropics, polar circles, and meridians, are laid down upon the globe in the manner already described. The ecliptic is divided into 12 signs, and each sign into 30 degrees. Each tropic is 23½ degrees from the equator, and each polar circle is 23½ degrees from its respective pole. Circles are drawn parallel to the equator, at every 10 degrees distance from it on each side of the poles: these circles are called *parallels of latitude*. On large globes there are circles drawn perpendicularly thro' every 10th degree of the equator, intersecting each other at the poles; but on the globes of or under a foot diameter, they are only drawn through every 15th degree of the equator: these circles are generally called *meridians*, sometimes *circles of longitude*, and at other times *hour-circles*.

The globe is hung in a brass ring, A, fig. 1, plate CLXIII, called the *brass meridian*, and turns upon a wire in each pole sunk half its thickness into one side of the meridian ring; by which means that side of the ring divides the globe into two equal parts, called *eastern* and *western hemispheres*;

spheres; as the equator divides it into two equal parts, called the *northern* and *southern hemispheres*. The ring is divided into 360 equal parts or degrees, on the side wherein the axis of the globe turns. One half of these degrees are numbered, and reckoned from the equator to the poles, where they end at 90. Their use is to show the latitudes of places. The degrees on the other half of the meridian are numbered from the poles to the equator, where they end at 90: Their use is to show how to elevate either the north or south pole above the horizon, according to the latitude of any given place, as it is N. or S. of the equator.

The brazen meridian is let into two notches made in a broad flat ring called the *wooden horizon*, B, C; the upper surface of which divides the globe into two equal parts, called the *upper* and *lower hemispheres*. One notch is in the north point of the horizon, and the other in the south. On this horizon are several concentric circles, which contain the months and days of the year, the signs and degrees answering to the sun's place for each month and day, the 32 points of the compass, and the circles of amplitude and azimuth. The graduated side of the brazen meridian lies towards the east side of the horizon, and should be generally kept towards the person who works problems by the globes.

There is a small horary circle D, so fixed to the north part of the brazen meridian, that the wire in the north pole of the globe is in the centre of that circle; and on the wire is an index, which goes over all the 24 hours of the circle, as the globe is turned round its axis. Sometimes there are two horary circles, one between each pole of the globe and the brazen meridian.

There is a thin slip of brass, called the *QUADRANT OF ALTITUDE*, which is divided into 90 equal parts or degrees, answering exactly to so many degrees of the equator. It is occasionally fixed to the uppermost point of the brazen meridian by a nut and screw. The divisions end at the nut E, and the quadrant is turned round upon it.

There is also applied occasionally to the globe a magnetic needle, freely moving over a circle divided into four times 90 degrees; reckoning from the N. and S. points towards the E. and W. and also into the 32 points of the compass. As this needle makes nearly a certain constant angle with the meridian in every place, called the *variation*; therefore this compass, being added to the frame, will rectify the position of the meridian of the globe when the variation of the needle is known. Thus at London, the variation of the needle is at this time about 23 degrees northward; therefore, by moving the frame of the globe about till the needle settles itself over the 23d degree, reckoning westward from the north point or *fleur de lis*, we shall have the brass meridian coinciding with the true meridian. The compass is sometimes fixed between the legs underneath the globe.

#### SECT. XII. DESCRIPTION and USE of the ARMILLARY SPHERE.

THE exterior parts of this machine are, a compass of brass rings, (See Plate CLXIII. fig. 2.)

which represent the principal circles viz. 1. The equinoctial, AA, which to 360 degrees (beginning at its intersection with the ecliptic in Aries), for showing his right ascension in degrees; and also into 12 signs, for showing his right ascension in time. 2. The tropic, BB, which is divided into 12 signs into 30 degrees, and also into 12 days of the year; in such a manner that every degree or point of the ecliptic in which it stands on any given day, stands over that circle of months. 3. The tropic of Cancer, touching the ecliptic at the beginning in ♋, and the tropic of Capricorn FF touching the ecliptic at the beginning in ♎ each 23½ degrees from the equinoctial. The arctic circle E, and the antarctic circle G, each 23½ degrees from its respective pole. 4. The equinoctial colure GG, touching the north and south poles of the globe, and the equinoctial colure HH, and through the equinoctial points Cancer and Libra, in the ecliptic. 5. The solstitial colure HH, passing through the poles of the ecliptic, and through the solstitial points Cancer and Capricorn in the ecliptic. Each quarter of these colures is divided into 90 degrees, from the equinoctial to the poles of the world, for showing the declination of the sun, moon, and each quarter of the latter, from the equator, to its poles *b* and *d*, to the latitude of the stars.

In the north pole of the ecliptic there is fixed one end of a quadrant to the other end a small sun Y, which goes round the ecliptic BB, by turning in the south pole of the ecliptic there is fixed another quadrantal wire, which is another quadrantal wire, the moon Z upon it, which may be moved by the hand; but there is a particular mechanism for causing the moon to move in a circle which crosses the ecliptic at an angle of 5 degrees, at two opposite points called the *moon's nodes*, also for shifting these points back and forth along the ecliptic, as the moon's nodes shift in the ecliptic.

Within these circular rings is a flat brass meridian I, fixed on an axis KK, which passes through the north and south poles of the globe to those of the celestial sphere at L. This axis is fixed the flat celestial sphere at L, which may be set directly over the meridian place on the globe, and then turned round the globe, so as to keep still the flat meridian upon it. This flat meridian is graduated in the same way as the brass meridian of a common globe, its use is much the same. To this is added the moveable horizon MM, so as to be supported by two strong wires proceeding from its ends to the globe, and entering the opposite point of its equator, which is a moveable brass ring let into the globe around its equator. The globe may be held within this ring, so as to present the brazen meridian upon it, directly under the horizon LL. The horizon is divided into degrees all around its outermost edge, and the points of the compass for the declination of the sun and moon both in

celestial meridian LL, passes through the north and south points of the a common globe; but here, if the globe is turned round, the horizon and meridian

At the south pole of the sphere is a brass, fixed to the rings: and on the axis which goes round that circle, if turned round its axis.

The fabric is supported on a pedestal N, elevated or depressed upon the joint number of degrees from 0 to 90, by the arc P, which is fixed in the strong and slides in the upright piece R, in order to fix it at any other proper

There are two wheels (as in Dr Long's two pinions, whose axes come out either of which may be turned by the wheel W. When the winch is put upon and turned backward, the terrestrial horizon and celestial meridian, and the whole sphere of circles turn east, by south, to west, carrying the moon Z, round the same way, when it rises above and sets below the horizon; when the winch is put upon and turned forward, the sphere with the earth keep at rest; and the earth, with its meridian, turn round from W. by S. to the same points of the horizon to the north, to which these bodies came when at rest and they were carried round that they rise and set in the same points, and at the same time in the hour when the motion be in the earth or in

If the earthly globe be turned, the hour circle goes round its hour circle; but if the celestial globe be turned, the hour circle goes round its hour circle. And thus, by this construction, the globe is equally fitted to show either the motion of the earth or the apparent motion of the sun.

To use the sphere for use, first slacken the upright stem R, and taking hold of the globe move it up or down until the given latitude for any place be at the side of the globe, and then the axis of the sphere will be elevated so as to stand parallel to the ecliptic, if the machine be set north and south compass: This done, count the degrees of the north pole, upon the celestial meridian towards the north notch of the globe, until the horizon to that latitude; then turn the sun Y comes to the given place in the ecliptic, and the sun will be in the place for that day: find the place of the sun in the ecliptic, and also the place of the sun in the ecliptic, and set them right: lastly, turn the winch W, until it comes to the meridian LL, or until the sun comes to the sun (according as you here or earth to move), and set the hour XII, marked noon, and the whole globe be rectified. Then turn the winch, when the sun and moon rise and set, and the hour index will show the time for the given day.

Who understand the use of the globe

will be at no loss to work many other problems by this sphere, it is needless to enlarge any farther upon it.

#### SECT. XIII. DIRECTIONS for USING the TERRESTRIAL GLOBE.

In using globes, keep the east side of the horizon towards you (unless the problem requires to turn it), which side may be known by the word EAST upon the horizon; for then you have the graduated side of the meridian towards you, the quadrant of altitude before you, and the globe divided exactly into two equal parts, by the graduated side of the meridian.

In working some problems, it will be necessary to turn the whole globe and horizon about, that you may look on the west side thereof; which turning will be apt to jog the ball so, as to shift away that degree of the globe which was before set to the horizon or meridian: to avoid which inconvenience, thrust in the feather end of a quill between the ball of the globe and the brazen meridian; which, without hurting the ball, will keep it from turning in the meridian, whilst you turn the west side of the horizon towards you.

PROB. I. To find the latitude and longitude of any given place upon the globe.—Turn the globe on its axis, until the given place comes exactly under that graduated side of the brazen meridian on which the degrees are numbered from the equator; and observe what degree of the meridian the place then lies under; which is its latitude, N. or S. as the place is N. or S. of the equator.

The globe remaining in this position, the degree of the equator, which is under the brazen meridian, is the longitude of the place, which is E. or W.; as the place lies on the E. or W. side of the first meridian of the globe.—All the Atlantic ocean and America, are on the W. side of the meridian of London; and the greatest part of Europe, and of Africa, together with all Asia, are on the E. side of the meridian of London, which is reckoned the first meridian of the globe by the British geographers and astronomers.

PROB. II. To find the longitude and latitude of a place being given, to find that place on the globe.—Look for the given longitude in the equator (counting it eastward or westward from the first meridian, as it is mentioned to be E. or W.); and bringing the point of longitude in the equator to the brazen meridian, on that side which is above the south point of the horizon: then count from the equator, on the brazen meridian, to the degree of the given latitude, towards the N. or S. pole, according as the latitude is N. or S.; and under that degree of latitude on the meridian you will have the place required.

PROB. III. To find the difference of longitude, or difference of latitude, between any two given places.—Bring each of these places to the brazen meridian, and see what its latitude is: the lesser latitude subtracted from the greater, if both places are on the same side of the equator, or both latitudes added together if they are on different sides of it, is the difference of latitude required. And the number of degrees contained between these places, reckoned on the equator, when they are brought

brought separately under the brazen meridian, is their difference of longitude, if it be less than 180; but if more, let it be subtracted from 360, and the remainder is the difference of longitude required. Or,

Having brought one of the places to the brazen meridian, and set the hour index to XII, turn the globe until the other place comes to the brazen meridian; and the number of hours and parts of an hour, passed over by the index, will give the longitude in time; which may be easily reduced to degrees, by allowing 15 degrees for every hour, and one degree for every four minutes.

N. B. When we speak of *bringing any place to the brazen meridian*, it is the graduated side of the meridian that is meant.

PROB. IV. *Any place being given, to find all those places that have the same longitude or latitude with it.*—Bring the given place to the brazen meridian; then all those places which lie under that side of the meridian, from pole to pole, have the same longitude with the given place. Turn the globe round its axis: and all those places, which pass under the same degree of the meridian that the given place does, have the same latitude with that place.

Since all latitudes are reckoned from the equator, and all longitudes are reckoned from the first meridian, it is evident, that the point of the equator which is cut by the first meridian, has neither latitude nor longitude.—The greatest latitude is 90 degrees, because no place is more than 90 degrees from the equator: and the greatest longitude is 180 degrees, because no place is more than 180 degrees from the first meridian.

PROB. V. *To find the antæci, periæci, and antipodes of any given place.*—Bring the given place to the brazen meridian; and having found its latitude, keep the globe in that situation, and count the same number of degrees of latitude from the equator towards the contrary pole; and where the reckoning ends, you have the *antæci* of the given place upon the globe. Those who live at the equator have no *antæci*.

The globe remaining in the same position, set the hour index to the upper XII on the horary circle, and turn the globe until the index comes to the lower XII; then the place which lies under the meridian, in the same latitude with the given place, is the *periæci* required. Those who live at the poles have no *periæci*.

As the globe now stands (with the index at the lower XII), the *antipodes* of the given place will be under the same point of the brazen meridian where its *antæci* stood before. Every place upon the globe has its *antipodes*.

PROB. VI. *To find the distance between any two places on the globe.*—Lay the graduated edge of the quadrant of altitude over both the places, and count the number of degrees intercepted between them on the quadrant; then multiply these degrees by 60, and the product will give the distance in geographical miles: but to find the distance in miles, multiply the degrees by 69½, and the product will be the number of miles required. Or, take the distance betwixt any two places with a pair of compasses, and apply that extent to the equator; the number of degrees, intercepted be-

tween the points of the compasses, in degrees of a great circle: which extend either to geographical miles, miles, as above.

PROB. VII. *A place on the globe and its distance from any other place or places upon the globe, which a distance from the given place.*—Bring the place to the brazen meridian, and draw a quadrant of altitude to the meridian at that place; then keeping the globe in that position, turn the quadrant quite round upon the degree of the quadrant that touches the place; then the place which is equally distant with it from the given place will pass over all the other places equally distant with it from the given place, is the same as if one foot of a pair of compasses were set in the given place, and the other end extended to the second place, which is known; for if the compasses be then moved about the first place as a centre, the moving end will pass over all those places which are at the same distance with the second from it.

PROB. VIII. *The hour of the day at any given place, to find all those places where it is the same at that time.*—Bring the given place to the brazen meridian, and set the index to that hour; then turn the globe until the index points to the upper XII, and then all the places under the brazen meridian have the same hour.

N. B. The upper XII always stands for noon, and when the bringing of any place to the brazen meridian is mentioned, the side of the globe on which the degrees are reckoned is meant, unless the contrary side is expressed.

PROB. IX. *The hour of the day at any given place, to find what o'clock it is at any other place.*—Bring the given place to the brazen meridian, and set the index to that hour; then turn the globe, until the place where the hour is required comes to the meridian; the index will point out the hour at that place.

PROB. X. *To find the sun's place and his declinations for any given day.*—Look on the horizon for the given day; against it you have the degree of the ecliptic where the sun is (or his place) on that day. Find the same degree of that sign upon the globe, and having brought a quadrant of altitude upon the brazen meridian, observe what degree of the meridian stands over it; for that is the sun's declination reckoned from the equator.

PROB. XI. *The day of the month, to find all those places of the earth, where the sun will pass vertically on that day.*—Bring the given place in the ecliptic for the given day to the brazen meridian, and draw a quadrant of altitude to that point of the meridian; then turn the globe round its axis, all those places which pass under that point of the meridian are required; for as their latitude is the same as the declination of the sun, the sun must be directly over them at its respective noon.

PROB. XII. *A place being given, to find those two days of the year, when the sun shall be vertical to that place.*—Bring the place to the brazen meridian, and draw a quadrant of altitude to that degree of latitude that is exactly

then turn the globe round its axis, and elevate two degrees of the ecliptic which pass under that degree of latitude: lastly, find when the sun is in those degrees of the ecliptic are the days required: for on them, the sun's declination is equal to the latitude of the given place; and, consequently, he will be vertical to it at noon.

III. *To find all those places of the north where the sun begins to shine constantly, on any given day, from the 21st of the 23d of September.*—On these two days, in the equinoctial, and enlightens the whole from pole to pole: therefore, as the globe turns round its axis, which terminates in the north and south poles, every place upon it will go equally through light and dark, and so make the day and night equal to all places of the earth. But as the sun is from the equator, towards either pole, it enlightens as many degrees round that pole as it has declination from the equator: every place within that distance of the pole will go through any part of the dark, and the sun will not set to it. Now, as the sun's declination is northward from the 21st to the 23d of September, he must come round the north pole all that time; and so every day that he is in the northern tropic, enlightens upon the whole north frigid zone; so every place within the north polar circle goes through any part of the dark on that day. Therefore, bring the sun's place for the given day (by Prob. IX.) count as many degrees on the ecliptic from the north pole, as are equal to the sun's declination from the equator, and mark that point from the pole where the reckoning ends: turning the globe round its axis, observe which places in the north frigid zone pass directly under that mark; for they are the places required. This may be done for the south frigid zone, from the 23d of September to the 21st of March, which time the sun shines constantly on the

IV. *To find the place over which the sun is vertical at any hour of a given day.*—Having found the sun's declination for the given day (by Prob. IX.) mark it with chalk on the brazen meridian; then bring the place where you are (suppose London) to the brazen meridian, and set the globe to the given hour; which done, turn the globe on its axis, until the index points to XII; and the place on the globe, which is directly under the point of the sun's declination upon the meridian, has the sun that day at the zenith, or directly over head.

V. *The day and hour of a lunar eclipse; and to find all those places of the earth to which it will be visible.*—The moon is never eclipsed when she is full, and so directly opposite to the sun; that the earth's shadow falls upon her. Therefore, whatever place of the earth the sun is at that time, the moon must be vertical to the opposite of that place: so that the sun is visible to one half of the earth, and the moon to the other. Find the place to which the sun is vertical at the given hour (by Prob. XV.)

and elevate the pole to the latitude of that place, and bring the place to the upper part of the brazen meridian, as in the former problem: then, as the sun will be visible to all those parts of the globe which are above the horizon, the moon will be visible to all those parts which are below it, at the time of her greatest obscuration.

PROB. XVI. *To rectify the globe for the latitude, the zenith, and the sun's place.*—Find the latitude of the place (by Prob. I.), and if the place be in the northern hemisphere, raise the north pole above the north point of the horizon, as many degrees (counted from the pole upon the brazen meridian) as are equal to the latitude of the place. If the place be in the southern hemisphere, raise the south pole above the south point of the horizon as many degrees as are equal to the latitude. Then, turn the globe till the place comes under its latitude on the brazen meridian, and fasten the quadrant of altitude so, that the chamfered edge of its nut (which is even with the graduated edge) may be joined to the zenith, or point of latitude. This done, bring the sun's place in the ecliptic for the given day (found by Prob. X.) to the graduated side of the brazen meridian, and set the hour-index to XII at noon, which is the uppermost XII on the hour-circle; and the globe will be rectified.

PROB. XVII. *The latitude of any place, not exceeding 66½ degrees, and the day of the month, being given; to find the time of the sun's rising and setting, and consequently the length of the day and night.*—Having rectified the globe for the latitude, and for the sun's place on the given day (as directed in the preceding problem), bring the sun's place in the ecliptic to the eastern side of the horizon, and the hour-index will show the time of sun-rising; then turn the globe on its axis, until the sun's place comes to the western side of the horizon, and the index will show the time of sun-setting. The hour of sun-setting doubled, gives the length of the day; and the hour of sun-rising doubled, gives the length of the night.

PROB. XVIII. *The latitude of any place, and the day of the month, being given; to find when the morning twilight begins, and the evening twilight ends, at that place.*—This problem is often limited: for, when the sun does not go 18 degrees below the horizon, the twilight continues the whole night; and for several nights together in summer, between 49 and 66½ degrees of latitude; and the nearer to 66½, the greater is the number of these nights. But when it does begin and end, the following method will show the time for any given day. Rectify the globe, and bring the sun's place in the ecliptic to the eastern side of the horizon; then mark with chalk that point of the ecliptic which is in the western side of the horizon, it being the point opposite to the sun's place; this done, lay the quadrant of altitude over the said point, and turn the globe eastward, keeping the quadrant at the chalk mark, until it is just 18 degrees high on the quadrant; and the index will point out the time when the morning twilight begins: for the sun's place will then be 18 degrees below the eastern side of the horizon. To find the time when the evening twilight ends, bring the sun's place to the western side of the horizon, and

and the point opposite to it, which was marked with the chalk, will be rising in the east: then bring the quadrant over that point, and keeping it thereon, turn the globe westward, until the said point be 18 degrees above the horizon on the quadrant, and the index will show the time when the evening twilight ends; the sun's place being then 18° below the western side of the horizon.

PROB. XIX. *To find on what day of the year the sun begins to shine constantly, on any given place on the north frigid zone; and how long he continues to do so.*—Rectify the globe to the latitude of the place, and turn it about until some point of the ecliptic, between Aries and Cancer, coincides with the north point of the horizon where the brazen meridian cuts it; then find, on the wooden horizon, what day of the year the sun is in that point of the ecliptic; for that is the day on which the sun begins to shine constantly on the given place without setting. This done, turn the globe, until some point of the ecliptic, between Cancer and Libra, coincides with the north point of the horizon, where the brazen meridian cuts it; and find, on the wooden horizon, on what day the sun is in that point of the ecliptic; which is the day that the sun leaves off constantly shining on the said place, and rises and sets to it as to other places on the globe. The number of natural days, or complete revolutions of the sun about the earth, between the two days above found, is the time that the sun keeps constantly above the horizon without setting; for all that portion of the ecliptic, which lies between the two points which intersect the horizon in the very north, never sets below it; and there is just as much of the opposite part of the ecliptic that never rises; therefore the sun will keep as long constantly below the horizon in winter as above it in summer.

PROB. XX. *To find in what latitude the sun shines constantly, for any length of time less than 182½ of our days and nights.*—Find a point in the ecliptic half as many degrees from the beginning of Cancer (either toward Aries or Libra) as there are natural days in the time given; and bring that point to the north side of the brazen meridian, on which the degrees are numbered from the pole towards the equator: then keep the globe from turning on its axis, and slide the meridian up or down, until the foresaid point of the ecliptic comes to the north point of the horizon, and then the elevation of the pole will be equal to the latitude required.

PROB. XXI. *The latitude of a place, not exceeding 66½ degrees, and the day of the month, being given; to find the sun's amplitude or point of the compass, on which he rises or sets.*—Rectify the globe, and bring the sun's place to the eastern side of the horizon; then observe what point of the compass on the horizon stands right against the sun's place, for that is his amplitude at rising. This done, turn the globe westward, until the sun's place comes to the western side of the horizon, and it will cut the point of his amplitude at setting. Or, you may count the rising amplitude in degrees, from the east point of the horizon to that point where the sun's place cuts it; and the setting amplitude from the west point of the horizon to the sun's place at setting.

PROB. XXII. *The latitude, the sun's place, his altitude, being given; to find the hour of the day, and the sun's azimuth, or number of that he is distant from the meridian.*—Rectify the globe, and bring the sun's place to the height upon the quadrant of altitude; on the eastern side of the horizon, if the time be in the noon; or the western side, if it be in the noon: then the index will show the hour, and the number of degrees in the horizon, taken between the quadrant of altitude and the point, will be the sun's true azimuth at that time.

PROB. XXIII. *The latitude, hour of the day, the sun's place, being given; to find the sun's altitude and azimuth.*—Rectify the globe, and turn the index points to the given hour; then bring the quadrant of altitude over the sun's place on the ecliptic, and the degree of the quadrant cut the sun's place is his altitude at that time above the horizon; and the degree of the horizon cut the quadrant is the sun's azimuth, reckoned from the meridian.

PROB. XXIV. *The latitude, the sun's place, and his azimuth, being given; to find his place on the ecliptic, the day of the month, and how long he continues to do so.*—Rectify the globe for the latitude and zenith, and set the quadrant of altitude to the given azimuth in the horizon; keeping it there, turn the globe on its axis until the ecliptic cuts the quadrant in the altitude: that point of the ecliptic which cuts the quadrant there will be the sun's place; and the day of the month answering thereto will be the day over the like place of the sun on the wooden horizon. Keep the quadrant of altitude in the same position; and, having brought the sun's place to the brazen meridian, and the hour-index to XII at noon, turn back the globe, until the sun's place cuts the quadrant of altitude again, and the index will show the hour.

Any two points of the ecliptic, which are distant from the beginning of Cancer or of Aries, will have the same altitude and azimuth at the same hour, though the months be different; and therefore it requires some care in the use of the globe, not to mistake both the month and the day of the month; to avoid which, observe, that from the 21st of March to the 21st of June, that portion of the ecliptic which is between the beginning of Aries and beginning of Cancer is to be used; from the 21st of June to the 23d of September, be it the beginning of Cancer and beginning of Libra; from the 23d of September to the 21st of December, between the beginning of Libra and beginning of Capricorn; and from the 21st of December to the 20th of March, between the beginning of Capricorn and beginning of Aries. As one can never be at a loss to know in what quarter of the year he takes the sun's altitude and azimuth, the above caution with regard to the quarters of the ecliptic will keep him right in the month and day thereof.

PROB. XXV. *To find the length of the day at any given place.*—If the place be on the same side of the equator, find its latitude (by Prob. I) and elevate the north pole to that latitude; then bring the beginning of Cancer to the brazen meridian, and set the hour-index to XII at noon. But if the given place be on the S. side of

elevate the south pole to its latitude, and the beginning of Capricorn to the brazen meridian and the hour-index to XII. This done, turn the globe westward, until the beginning of Capricorn (as the latitude is N. or S.) be to the horizon; and the index will then show the time of sun-setting, for it will be over all the afternoon hours, between noon and sun-set; which length of time being doubled, will give the whole length of the day answering to sun-setting. For, in all latitudes the sun rises as long before mid day as he sets after it.

PROB. XXVI. *To find in what latitude the longitude, of any given length, less than 24 hours, is latitude be N.* bring the beginning of Capricorn to the brazen meridian, and elevate the south pole to about  $66\frac{1}{2}$  degrees; but if the latitude be S. bring the beginning of Capricorn to the brazen meridian, and elevate the south pole to about  $66\frac{1}{2}$  degrees; because the longest day in N. latitude, when the sun is in the first point of Cancer, is S. latitude, when he is in the first point of Capricorn. Then set the hour-index to noon, and turn the globe westward, until the index points at half the number of hours which is done, keep the globe from turning on its axis, and slide the meridian down in the globe, until the aforesaid point of the ecliptic (Cancer or Capricorn) comes to the horizon; the elevation of the pole will be equal to the latitude required.

PROB. XXVII. *The latitude of any place, not above  $66\frac{1}{2}$  degrees, being given; to find in what latitude the place is.*—Find the length of the day at the given place, (by Prob. XXV.) and divide it by the number of hours whereby it is twelve, double that number, and the result will give the climate in which the place is.

PROB. XXVIII. *The latitude, and the day of the year being given; to find the hour of the day, when the sun shines.*—Set the wooden horizon to the meridian, and the brazen meridian due N. and S. with a mariner's compass; then, having rectified the globe, stick a small sewing needle into the surface of the ecliptic, perpendicular to that of the surface of the globe; this done, turn the globe on its axis, until the needle comes to the brazen meridian, and set the hour-index to noon; then turn the globe on its axis, until the needle points exactly towards the sun; it will do when it casts no shadow on the globe, and the index will show the hour.

XXIV. DIRECTIONS for using the CELESTIAL GLOBE.

When we shall now proceed to the use of the celestial globe, premising, that as the equator, ecliptic, polar circles, horizon, and brazen meridian are exactly alike on both globes, all the problems concerning the sun are solved in the same way. The method also of rectifying the globe is the same. N. B. The sun's place for any day of the year stands directly over that day on the horizon of the celestial globe, as on the terrestrial.

LATITUDE and LONGITUDE of the stars, and all other celestial phenomena, are reckoned from that of places on the earth; for

all terrestrial latitudes are reckoned from the equator; and longitudes from the meridian of some remarkable place; but all astronomers reckon the latitudes of the heavenly bodies from the ecliptic; and their longitudes from the equinoctial colure, in that semicircle of it which cuts the ecliptic at the beginning of Aries; and thence eastward, quite round; so that stars between the equinoctial and the northern half of the ecliptic, have north declination and south latitude; those between the equinoctial and the southern half of the ecliptic have south declination and north latitude; and all between the tropics and poles, have declinations and latitudes of the same denomination.

There are six great circles on the celestial globe, which cut the ecliptic perpendicularly, and meet in two opposite points in the polar circles; which points are each ninety degrees from the ecliptic, and are called its poles. These polar points divide those circles into 12 semicircles; which cut the ecliptic at the beginning of the twelve signs. They resemble so many meridians on the terrestrial globe; and as all places which lie under any particular meridian-semicircle on that globe have the same longitude; so all those points of the heaven, through which any of the above semicircles are drawn, have the same longitude.—And as the greatest latitudes on the earth are at the north and south poles of the earth, so the greatest latitudes in the heaven are at the north and south poles of the ecliptic.

For the division of the stars into constellations, &c. see ASTRONOMY.

PROB. I. *To find the right ascension and declination of the sun, or any fixed star.*—Bring the sun's place in the ecliptic to the brazen meridian; then that degree in the equinoctial which is cut by the meridian, is the sun's right ascension; and that degree of the meridian which is over the sun's place is his declination. Bring any fixed star to the meridian, and its right ascension will be cut by the meridian in the equinoctial; and the degree of the meridian that stands over it is its declination.

So that right ascension and declination, on the celestial globe, are found in the same manner as longitude and latitude on the terrestrial.

PROB. II. *To find the latitude and longitude of any star.*—If the given star be on the north side of the ecliptic, place the 90th degree of the quadrant of altitude on the north pole of the ecliptic, where the 12 semicircles meet, which divide the ecliptic into the 12 signs; but if the star be on the S. side of the ecliptic, place the 90th degree of the quadrant on the south pole of the ecliptic; keeping the 90th degree of the quadrant on the proper pole, turn the quadrant about, until its graduated edge cuts the star; then the number of degrees in the quadrant, between the ecliptic and the star, is its latitude; and the degree of the ecliptic cut by the quadrant, is the star's longitude, reckoned according to the sign in which the quadrant then is.

PROB. III. *To represent the face of the starry firmament, as seen from any given place of the earth, at any hour of the night.*—Rectify the celestial globe for the given latitude, the zenith, and sun's place in every respect, as taught by the XVth

on the globe is higher or lower than it  
ved to be in the heaven, turn the globe  
or forwards, keeping the edge of the  
upon the star, until its centre comes to  
ved altitude in the quadrant; and then  
will show the true time of the night.

PROB. IV. *The latitude of the place, and day of the month, being given; to find the time when any known star will rise, or be upon the meridian, or set.*—Having rectified the globe, turn it about until the given star comes to the eastern side of the horizon, and the index will show the time of the star's rising; then turn the globe westward, and when the star comes to the brazen meridian, the index will show the time of the star's coming to meridian of your place; lastly, turn on, until the star comes to the western side of the horizon, and the index will show the time of the star's setting. *N. B.* In northern latitudes, those stars which are less distant from the north pole than the quantity of its elevation above the north point of the horizon never set; and those which are less distant from the south pole than the number of degrees by which it is depressed below the horizon never rise: and *vice versa* in southern latitudes.

PROB. V. *To find at what time of the year a given star will be upon the meridian at a given hour of the night.*—Bring the given star to the upper semicircle of the brazen meridian, and set the index to the given hour; then turn the globe, until the index points to XII at noon, and the upper semicircle of the meridian will then cut the sun's place, answering to the day of the year sought; which day may be easily found against the like place of the sun among the signs on the wooden horizon.

PROB. VI. *The latitude, day of the month, and azimuth of any known star being given; to find the hour of the night.*—Having rectified the globe for the latitude, zenith, and sun's place, lay the quadrant of altitude to the given degree of azimuth in the horizon; then turn the globe on its axis, until the star comes to the graduated edge of the quadrant; and when it does, the index will point out the hour of the night.

PROB. VII. *The latitude of the place, the day of the month, and altitude of any known star, being given; to find the hour of the night.*—Rectify the globe as in the former problem, guess at the hour of the night, and turn the globe until the index points at the supposed hour; then lay the graduated edge of the quadrant of altitude over the known star; and if the degree of the star's height in the quadrant upon the globe answers exactly to the degree of the star's observed altitude in the heaven, you have guessed exactly: but if the star

on the globe is higher or lower than it  
ved to be in the heaven, turn the globe  
or forwards, keeping the edge of the  
upon the star, until its centre comes to  
ved altitude in the quadrant; and then  
will show the true time of the night.

PROB. VIII. *An easy method for finding both their altitude and azimuth of any two known stars at any hour of the night by any two known stars, knowing either their altitude or azimuth, and thereby the true meridian.*—Tie one end to a common musket bullet; and having the globe as above, hold the other thread in your hand, and carry it slowly betwixt your eye and the starry heaven, until it cuts any two known stars at or guessing at the hour of the night, turn until the index points to that time circle; which done, lay the graduated the quadrant over any one of these stars on the globe which the thread cut in. If the said edge of the quadrant cuts the other star also, you have guessed the time exactly; if it does not, turn the globe slowly backwards, until the quadrant (kept upon the star) cuts them both through their centres; the index will point out the exact time of the degree of the horizon cut by the thread will be the true azimuth of both these stars; and the stars themselves will show their true altitudes in the quadrant: At present, if a common azimuth compass be set upon a floor or level pavement, that the shadow of the needle may have the same bearing upon the pavement as the shadow of the needle upon the wooden horizon, a thread extended over the north end of the compass will be directly in the true meridian; and if a line be drawn upon the pavement, along the course of the shadow, an upright wire be placed in the middle of the line, the shadow of the wire will show that line, when the sun is on the meridian upon the pavement.

PROB. IX. *To find the place of the planet in the ecliptic, for the given month; and according to its longitude, as shown by the ephemeris, mark with chalk upon the globe.* Then, having rectified the globe, turn it round its axis, until the planet comes to the eastern side of the horizon, to the brazen meridian, or western side of the horizon, the index will show at what time the planet rises, comes to meridian, and sets, in the same manner as for a fixed star.

For an explanation of the harvest of the globe, and the equation of time, see *ASTRONOMY, Index.*

SECT. XV. DESCRIPTION of the IMPROVEMENTS applied to GLOBES.

GLOBES mounted in the common way with their hour circles fixed on the globe, though instructive instruments for ex-

es of geography and the spherical doctrine, yet have several defects; want any elevation of the north and south to their axes, or the brass meridian quite moveable round in the horizon; do not show how all the phenomena they arise from the motion of the earth; are not adapted to the present age; cannot serve accurately the purposes of astronomy and history, which they might be if the poles whereon they turn were not move in a circle round those of the earth according to its present obliquity.

Mr John Senex, F. R. S. invented a method for remedying these defects, by fixing the axis of the diurnal motion to two shoulders of brass, at the distance of  $23\frac{1}{2}$  degrees of the ecliptic. These shoulders are fastened at the other end to an iron ring, which passes through the poles of the ecliptic, and made to move round with a very stiff spring, that when it is adjusted to any point of the ecliptic which the equator is made to intersect, the motion of the globe on its axis is thereby altered. When it is to be adjusted for the past or future, one of the brazen circles is brought under the meridian, and held fast with one hand, whilst the globe is turned round the other, so that the point of the ecliptic which the equator is to intersect, may pass under the degree of the brazen meridian; then the globe is turned to that point, and turning the globe, it will describe the equator according to the declination at the time required; and transferred to  $23\frac{1}{2}$  and  $66\frac{1}{2}$  degrees on the ecliptic, the tropics and polar circles will be described for the same time. By this contrivance the celestial globe may be so adjusted, as to represent not only the rising and setting of the stars and in all latitudes, but likewise all the phenomena that depend upon the motion of the diurnal axis round the annual axis. Several globes, especially the two great globes of 28 inches in diameter, have been contrived upon this principle; so that by means of a screw, the pole of the equator is made to revolve about the pole of the ecliptic. See *Phil. Trans.* N<sup>o</sup> 447. p. 201, 203. or *Martyn's Abr.* Vol. VIII. p. 217. and N<sup>o</sup> 493. art. 18. in *Phil. Trans.* Vol. XLVI. p. 290.

To represent the above phenomena in the most easy manner, the late Mr B. Martin invented a method, by which Mr Senex's contrivance a moveable equator and solstitial colure, a moveable ecliptic, and a moveable ecliptic; all so contrived as to represent those imaginary circles of the heavens for any age of the world. Mr Harris, late essay-master of the mint, to remedy the former of the defects mentioned, by placing two horary circles round the meridian, one at each pole; these circles are fixed tight between two brass rollers placed parallel to the axis, so that when the globe is turned round, they revolve round with it, the meridian being fixed to cut the horary divisions. The globe in this state serves universally and readily to solve all the problems in N. and S. latitudes, and

also in places near the equator; whereas in the common construction, the axis and horary circle prevent the brass meridian from being moveable quite round in the horizon. This globe is also adapted for showing how the vicissitudes of day and night, and the alteration of their lengths, are really occasioned by the motion of the earth: for this purpose, he divided the brass meridian at one of the poles into months and days, according to the sun's declination, reckoning from the pole. Therefore, by bringing the day of the month to the horizon, and rectifying the globe according to the time of the day, the horizon will represent the circle separating light and darkness; and the upper half of the globe, the illuminated hemisphere, the sun being in the zenith. *Phil. Trans.* N<sup>o</sup> 456. p. 321. or *Martyn's Abr.* Vol. VIII. p. 352.

The late Mr George Adam, mathematical instrument-maker, made some additional improvements in the construction of the globes. His globes, like others, are suspended at their poles in a strong brass circle NZÆS (See *Plate CLXIII.* fig. 3, representing the celestial,) and turn therein upon two iron pins, which form the axis. They have each a thin brass semicircle NHI moveable about these poles, with a small, thin, sliding circle II thereon; which semicircle is divided into two quadrants of 90 degrees each, from the equator to both the poles. On the terrestrial globe this semicircle is a moveable meridian, and its small sliding circle, which is divided into a few points of the compass, is the visible horizon of any particular place to which it is set. On the celestial globe this semicircle is a moveable circle of declination, and its small annexed circle an artificial sun or planet. Each globe has a brass wire TWY placed at the limits of the crepusculum or twilight; which, together with the globe, is mounted in a wooden frame, supported by a neat pillar and claw feet, with a magnetic needle in a compass-box, marked M in the figure. On the strong brass circle of the terrestrial globe, and about  $23\frac{1}{2}$  degrees on each side of the north pole, the days of each month are laid down according to the sun's declination; and this brass circle is so contrived, that the globe may be placed with the north and south poles in the plane of the horizon, and with the south pole elevated above it. The equator on the surface of either globe serves the purpose of the horary circle, by means of a semicircular wire placed in the plane of the equator, ÆEF, carrying two indices, F; one on the east, the other on the west side of the strong brass circle; one of which is occasionally to be used to point out the time upon the equator. In these globes, therefore, the indices being set to the particular time on the equator, the globes are turned round, and the indices point out the time by remaining fixed; whereas in the globes as generally mounted, the indices move over the horary circles while the globe is moving, and thus point out the change of time. For farther particulars of these globes, and the method of using them, *Mr Adam's Treatise on their Construction and Use,* &c. 1772, may be consulted.

The additions and alterations above mentioned, made by Mr Adam, may save trouble to a practitioner.

tioner in the performance of a few complex problems, and render the globes more elegant and costly; but to a young beginner, the more simple the construction of the globes, the better will they be adapted to initiate him into the *rational* and practice of the problems in general; and as such, the globes, as improved by the late Mr B. Martin and Mr Wright, described below, appear to have considerably the advantage in simplicity, and to obviate several material defects that attend the construction of the other globes. The chief of the defects in the old globes is, that the horary circle being screwed on the meridian at the north pole, prevents the elevation of the south pole; which is necessary for the performance of problems for all latitudes. In Mr Adam's, the semicircular wire ZEF preventing the equator being placed exactly in the horizon, or the poles in the zenith, the great distance of the strong brass circle NZÆS from the surface of the globe, on account of the brass semicircles, renders the solution of problems, which require the use of the strong circle, not very easy nor accurate.

An easy and expeditious method of elevating the south pole of the terrestrial globe, and by which means the new discoveries, tracks, &c. made of late years by Captain Cook and other eminent navigators in the south seas, may be clearly seen and traced by the eye over all the southern ocean, was made use of by Mr B. Martin in the construction of the following improvement.

There is a groove turned out on the back part of the brass meridian A, *fig. 1. Plate CLXIII*; and by unscrewing the nut of the hour circle D at the north pole, the circle is made to slide away to any other part of the meridian, as at G. The meridian is fixed or moveable at pleasure by a screw passing into the groove, through the piece or side of the notch in which it moves, on the bottom or nadir point: by properly loosening this screw, the meridian is free to move, and the globe with it, into any required position; but at the same time, it is confined within the notch of the brass piece, and thereby the globe is prevented from falling out of the frame in any position thereof whatsoever. The hour-circle being removed, both the north and south poles of the globe may be placed in the horizon, and thereby form a right sphere, which the usual mounting of the globes does not admit of.

By this construction also, the south pole may be elevated for all latitudes: for this purpose there is an hour-circle about the south pole between the meridian and the globe, which does not obstruct the sight of any land, none having been thereabouts discovered. Consequently the globe is thus equally useful for the solution of all common geographical problems in the southern as in the northern hemisphere, and more extensively so than heretofore.

In this method of mounting the globe, it may readily be converted into a TELLURIAN; for as the globe cannot fall out of the frame, the horizon of it may be placed in a perpendicular position: then the sun's place in the ecliptic being brought to the meridian, and its declination, the pole of the globe must be elevated to its declination; which may be done by means

of the degrees cut on the outer edge of the meridian for that purpose. If a lighted candle be placed at a considerable distance, and the height of the centre of the globe, as well as the meridian, the globe will exhibit the phenomena of our earth for that day; and if the horizon of the globe be conformed to the horizon, and divides the whole into light and dark hemispheres; therefore, in revolving the globe about its axis from West to East, it clearly appears that all places emerging from the dark hemisphere into the luminous hemisphere, will then be rising; when they arrive at the meridian it will be their noon; and when they come to the dark hemisphere at the eastern horizon, they will see the sun as setting.

When any place is under the meridian, the hour index to XII, and revolve the globe, it will the natural motion and position of the sun be seen when at all hours of the day the sun rises or sets to it; the length of the day and nocturnal arches, or of day and night, and what places the sun does not rise and set to; and whence the vicissitudes of day and night throughout the year in all latitudes, &c. should give this experiment the best effect, it should be enclosed within a dark lacquer, and its light issue through a hole or lens in the same purpose.

On the outer part of the sliding hour-circle, the north pole, are usually engraved the hours of the compass; so that by bringing the hour-circle centrally over any place on the globe, the hour may be seen by inspection only upon what part of the compass any other place bears from it, all over the globe.

This method of the sliding hour-circle is applicable to the celestial globe. Mr Martin of London has yet farther simplified the construction of the hour-circles, and it is the least operose than Mr Martin's above. It consists of the following particulars: The hour-circles are engraved on the globes two hour-circles at each of the poles; which are divided into a double set of 12 hours, as usual in terrestrial globes, except that the hours are engraved round both to the right and left: See *Plate CLXIII*. The hour hand or index, is in such a manner under the brass meridian, that it may be moveable at pleasure to any required position, and yet remain there during the revolution of the globe on its axis, and is entirely independent of the poles of the globe. In this manner by the motion of the globe about its axis, carrying the hour-circle, the hour-circle serves to point out the time, the same may be done in the reverse way by Mr Martin's or other method.

There is an advantage by having the hour-circle figured both ways, as one hour-circle serves for XII for the other, and the same may be used for rising and setting, and *vice versa*, and may be seen at the same time on the hour-circle. The problems generally to be performed, on the globe, the circle is the circle of reckoning, and the hour-circle is only the complement. *Fig. 5.* is a representation of the globe, with Mr Wright's hour-circle at C.

*An Analemma, Showing the time of Sun rising & Sun setting, the length  
 of Nights, & the point of the Compass on which the Sun rises & sets, for every Degree  
 for every Degree of the Sun's North and South declination.*

William Jones, mathematical instrument maker, who mounts globes according to the improvements above mentioned of Messrs Wright and Smeaton, applies a compass of a portable form to the east part of the wooden horizon of portable globes (see F, fig. 1.), by a dove-tail joint to the lid of the compass-box; which method is more convenient and ready in the case of problems, than when fixed under a frame at their feet; and as it occasions no removal away from the globes, the compass is useful in other situations.

To perform the problems which relate to the altitudes and azimuths of celestial objects, Mr. Smeaton has made the following instrument applicable to the celestial globe. It consists of a thin flexible slip of brass, which accompanies the globes, called the *quadrant*. Mr. Smeaton substitutes an arch of a circle of the same radius, breadth and substance, as the meridian, divided into degrees, &c. and the divisions of that circle, and which, from its strength, is not liable to be bent out of its plane of a vertical circle, as is usual with the quadrant put to globes. That end of the arch which is the horizon, being filed off square to fit and lay on it throughout its whole breadth; the other end of the arch is firmly attached, by an arm, to a vertical socket, in such a position that when the lower end of the arch is on the horizon, the lower end of this socket is at the upper edge of the brass meridian, directly under the zenith of the globe. This socket is supported and ground with a steel spindle of the same diameter, so that it will turn freely on it without friction; and the steel spindle has an apparatus at its lower end, by which it can be kept in a vertical position to the brass meridian, its centre directly over the zenith point of the globe. The spindle being fixed firmly in the base, and the socket which is attached to the arch put on to it, and so adjusted that the lower end of the arch just rests on and fits the horizon; it is evident that the altitude of any object above the horizon will be the degree which it intersects on this arch, and its azimuth by that end of the arch which is on the horizon.

Mr. Smeaton also directs to place the index usually fixed on one end of the axis of the globe, in such a manner that its upper edge may move in the plane of the horizon rather than above it, as it usually does. He directs to fix the end of this index to a circular arch, of the same radius with the inner edge of the hour circle, which it is to fit very exactly; and a line drawn on its upper surface to determine the hour, instead of the tapering point which is usually used. By these means half minutes are distinguished, if the hour circle be 4 inches in diameter. Mr. Smeaton also describes a method for preventing the meridian from shifting, when the operator is engaged in adjusting the globe, while the operator is engaged in adjusting the globe. But as the method which this is intended to answer appears to be better performed, by the turned groove

on the meridian in Mr. Martin's contrivance described above, we shall omit the particular description; and for farther explanations and figures of Mr. Smeaton's improvements, refer the reader to the *Phil. Trans.* Vol. LXXIX, Part 1.

Mr. FERGUSON made another improvement on the celestial globe. See ASTRONOMY, *Index*.

Most of the above problems may also be performed by accurate maps; but this requires a great deal of calculation, which is often very troublesome. The ANALEMMA, or Orthographic Projection, delineated on Plate CLXIV. will solve many of the most curious; and with the assistance of the maps will be almost equivalent to a terrestrial globe. The parallel lines drawn on this figure represent the degrees of the sun's declination from the equator, whether N. or S. amounting to 23½ nearly. On these lines are marked the months and days which correspond to such and such declinations. The size of the figure does not admit of having every day of the year inserted; but by making allowance for the intermediate days, in proportion to the rest, the declination may be guessed at with tolerable exactness. The elliptical lines are designed to show the hours of sun-rising or sun-setting, before or after six o'clock. As 60 minutes make an hour of time, a fourth part of the space between each of the hour lines will represent 15 minutes; which the eye can readily guess at, and which is as great exactness as can be expected from any mechanical invention, or as is necessary to answer any common purpose. The circles drawn round the centre at the distance of 11½ each, show the point of the compass on which the sun rises and sets, and on what point the twilight begins and ends. To make use of this analemma, it is only necessary to consider, that when the latitude of the place and the sun's declination are both north or both south, the sun rises before six o'clock, between the east and the elevated pole; that is, towards the north, if the latitude and declination are north; or towards the south, if the latitude and declination are south. Let us now suppose it is required to find the time of the sun's rising and setting, the length of the days and nights, the time when the twilight begins and ends, and what point of the horizon the sun rises and sets on, for the Lizard point in England, Franckfort in Germany, or Abbeville in France, on the 30th of April. The latitude of these places by the maps will be found nearly 50° north. Place the moveable index so that its point may touch 50° on the quadrant of north latitude in the figure; then observe where its edge cuts the parallel line on which April 30th is wrote. From this reckon the hour-lines towards the centre, and you will find that the parallel line is cut by the index nearly at the distance of one hour and 15 minutes. So the sun rises at one hour 15 minutes before six, or 45 minutes after four in the morning, and sets 15 minutes after seven in the evening. The length of the day is 14 hours 30 minutes. Observe how far the intersections of the edge of the index with the parallel of April 30th is distant from any of the concentric circles; which you will find to be a little beyond that marked two points of the compass; and this shows, that on the 30th of April the sun rises two points and

G E O G R A P H Y. S E

ro the east towards the north,  
no ward of ENE. and sets a  
d of WNW. To find the  
; and e of twilight, take from the  
ed arch C. circle  $17\frac{1}{2}$  degrees with a  
compasses, move one foot of the compas-  
Add to this distance along the parallel for  
April, t l the other just touches the  
index, which must still point at 50.  
ere the other foot rests on the paral-  
l 30th, then denotes the number of  
re fix at which the twilight begins.

This is somewhat more than three hou-  
half; which shows, that the twilight t-  
soon after two in the morning, and lik-  
it begins to appear near five points fro-  
towards the north. The uses of this  
may be varied in a great number of  
the example just now given will be fu-  
the ingenious reader.—The small circ-  
same plate, marked *Island, Promontor*  
added, to render the maps more inte-  
shewing how the different subjects are  
delineated on them.

GEOLOGICAL, *adj.* belonging to GEOLOGY.  
(1.) \* GEOLOGY, *n. f.* [ $\gamma\eta$  and  $\lambda\alpha\gamma\theta$ .] The  
doctrine of the earth; the knowledge of the state  
and nature of the earth.

(2.) GEOLOGY, [from  $\gamma\eta$ , earth, and  $\lambda\alpha\gamma\theta$ , dis-  
course,] properly signifies a discourse upon the  
earth; but is generally used for a discourse on the  
origin or theory of the earth. See TERRAQUE-  
OUS GLOBE. M. Chaptal, in his *Elem. of Chem.*  
vol. 2. introduces his III<sup>d</sup> Part, “concerning Me-  
tallie Substances,” with “General Views respec-  
ting the decompositions and changes to which the  
stony part of our Globe has been subjected,” un-  
der the title of “GEOLOGICAL OBSERVATIONS.”  
From these we shall here give a short extract:  
“The slightest observation (says he) shews us,  
that living beings are kept up and perpetuated  
only by successive decompositions and combina-  
tions. A slight view of the mineral kingdom ex-  
hibits the same changes; and our globe, in all its  
productions, presents continual modifications, and  
a circle of *activity*, which might appear incom-  
patible with the apparent *inertia* of lithologic pro-  
ducts. In order to arrange our ideas with greater  
regularity, we will consider this globe in two dif-  
ferent states. We will first examine the primitive  
rock which forms the central part. This appears  
to contain no germ of life, includes no remains or  
part of any living being, and from every circum-  
stance appears to have been of primitive forma-  
tion, anterior to the creation of animated or ve-  
getating bodies. We shall pursue the various  
changes, which are daily produced by the des-  
tructive action of such agents as alter or modify  
this substance. We shall then proceed to examine  
what stones have been successively placed upon  
this, and what are the decompositions to which  
these secondary rocks have been subjected. The  
observations of naturalists all unite to prove, that  
the central part of the globe consists of the stone  
known by the name of GRANITE. The profound  
excavations, which the art of man or currents of  
water, have made in the surface of our planet,  
have all uncovered this rock, and have been in-  
capable of penetrating lower. We may therefore  
consider this substance as the nucleus of the globe;  
upon this substance it is that all matters of  
ior formation rest. Granite exhibits many  
• in its form, composition, and disposition:  
• a general consists of an assemblage of cer-

tain siliceous stones; such as quartz, f-  
spar, mica, &c. and the more or less ex-  
magnitude of these elements of granite,  
it to be divided into coarse-grained g-  
fine grained granite. It appears to me  
rocks owe their arrangement to water;  
may be permitted to recur to that  
which, according to sacred and profane  
the water and earth were confounded  
confused mixture of all principles form-  
we shall see that the laws of gravity in  
matter must have carried it down, and  
produced the arrangement which obs-  
present exhibits to us. The water, a  
heavy, must have purified itself, and ar-  
surface by a filtration through the other  
while the earthy principles must have pr-  
and formed a mud, in which all the e-  
stones were confounded. In this very  
der of things, the general law of affinity  
continually tends to bring together all  
parts, must have exerted itself upon the  
of this almost fluid pate; and the result  
been a number of bodies of a more def-  
in crystals more or less regular: and  
muddy substance, in which the princij-  
stones were confounded, that compose t  
a rock must have been produced, cont-  
elementary stones all in their distinct  
characters. In this manner we obser-  
very different kinds develope themselves:  
which hold them in solution, and crys-  
and gypsum formed in clays which co-  
component parts. It may easily be  
that the laws of gravitation must have  
the arrangement and disposition of the  
The most gross heavy bodies must have  
the lightest and most attenuated subst-  
have arranged themselves on the surfac-  
constitutes the primitive schisti, the  
rocks of mica, &c. which commonly re-  
granite. The disposition of the fine-gr-  
nite in strata or beds, appears to depen-  
position, and the fineness or tenuity of  
Being placed in immediate contact with  
fluid must naturally have influenced the  
ment which it presents to us; and the  
this rock, being subjected to the effect  
and the action of currents, must have for  
The rocks of granite being once establi-

our globe, we may, from the analysis of its constituent principles, and by attending to the various agents capable of altering the degradations to which it has been subjected, step by step. Water is the principal agent which we shall examine. This fluid, in the ocean, is carried by the winds to the most elevated mountains, where it is precipitated in rain, and forms torrents, which by their various degrees of rapidity into the reservoir. This uninterrupted motion must gradually attenuate and wear away the rocks, and carry their pulverulent particles more or less considerable. The air, and the varying temperatures of the atmosphere, facilitate the attenuation and decomposition of these rocks. Heat dries their surface, renders it more accessible and more penetrable to the air which succeeds; cold divides them, by the expansion of the water which has entered into their texture; and the carbonic acid, which is formed in the air, and causes it to effloresce; the action of the iron and calcines it; in some cases the concurrence of causes favours the decomposition; and consequently the action of the water, which carries away the products of decomposition, and makes previous a succeeding process of the same nature. The first effect of the rain is therefore to be the mountains. But the stones which they must resist in proportion to their height, and we observe peaks, which have resisted the destructive action of time, and still remain above the primitive level of the mountains which have appeared. The primitive rocks, alike in the injury of ages, as to the animals which cover less elevated mountains with their remains, may be considered as the origin of the streams. The water, which falls on the mountains, flows down in torrents by their sides. In its course, it wears away the rocks which it incessantly acts. It hollows out, of a depth proportioned to the rapidity of its course, the quantity of its waters, and the nature of the rock over which it flows: at the same time that it carries along with it fragments of stones as it loosens in its course. The rocks, led along by the water, strike together, and break off their projecting angles; a process which quickly has afforded those rounded pebbles which form the pebbles of rivers. These are diminished in size in proportion to their distance from the mountain which affords them; and to this cause that Mr Dorthes has referred the proportionate magnitude of the pebbles, in our ancient worn stones, when compared with those of modern date: For the sea itself formerly much more inland, in the case of the Rhone, the stones which it received from the rivers, and threw back again upon the banks, had not run through so long a space of time as those which they at present pass by us the remains of the Alps, carried along by the Rhone, have successively covered the banks, and comprised between the mountains of Vivarais; and are carried into our rivers, and deposited them in small pebbles on the banks. The pulverulent remains of mountains, (or

the powder which results from the rounding of these flints,) are carried along with greater facility than the flints themselves: They float long in the water whose transparency they impair; and when these waters are less agitated, they are deposited in a fine and light paste, forming beds more or less thick, and of the same nature as that of the rocks to which they owe their origin. These strata gradually became drier, by the agglutination of their principles; they become consistent, acquire hardness, and form siliceous clay, silex, petrosilex, and all the numerous class of pebbles, which are found dispersed in strata, or in banks, in the ancient beds of rivers. Mr Pallas has observed the transition of clay to the state of silex, in the brook of Sunghir near Wolodimir. Mr J. W. Baumer has likewise observed it in Upper Hesse. The mud is much more frequently deposited in the interstices between the rounded flints themselves, which it fills, and there forms a true cement that becomes hard, and constitutes the compound stones known by the names of PUDDING-STONES, and GRIT-STONES: for these two kinds do not appear to differ, but in the coarseness of the grain which forms them, and the cement which connects them. We sometimes observe the granite spontaneously decomposed. The texture of the stones which form it has been destroyed; the component parts are disunited, and gradually carried away by the waters. I have observed near Mende, towards Castelnouvel, the most beautiful kaolin on the surface of a granite, in a state of decomposition; and this same rock is decomposed in several other parts of our province. It appeared that the felspar was particularly subject to be altered first. Most siliceous stones, formed by the decomposition of fluviatile waters, and hardened by the lapse of time are easily subjected to a second decomposition. Iron is the principal agent in these secondary alterations; and its calcination, determined by air or water, produces a disunion of principles. Nature may be observed in this process by an attentive examination of such alterations as gun flints, variolites, porphyries, jaspers, and the like are subjected to. The decomposition of flints, calcedonies, agates, and generally all stones of this kind, which possess a certain degree of transparency, appears to me to be referable to the volatilization of the water, which forms one of their principles, and is the cause of their transparency. These stones may be considered as commencements of CRYSTALLIZATION; and when the water is dissipated, they effloresce after the manner of certain neutral salts. Hence it arises, that the decomposition is announced by opacity, a white colour, loss of consistence and hardness; and terminates by forming a very attenuated powder, sometimes of extreme whiteness. It is this decomposition particularly, which forms clays. There are flints, whose alterations form effervescent marles. These do not appear to be of the nature of primitive rocks: They have the same origin as the calcareous stones, from which they differ only in consequence of a very considerable proportion of clay. The stones which we so abundantly find around us, among calcareous decompositions, may be considered as of this kind. Water, filtering through mountains of primitive

rock, frequently carries along with it very minutely divided particles of quartz, and proceeds to form, by deposition, stalactites, agates, rock crystal, &c. These quartzose stalactites, differently coloured, are of a formation considerably analogous to that of calcareous alabasters; and we perceive no other difference between them, than that of their constituent parts." M. Chaptal next proceeds to consider the decompositions and changes which appear to be produced by the class of living or organized beings on our globe; such as "the remains of shell animals, of marine and terrestrial vegetables;" &c. for which, as room permits us not to quote the whole of his Geological Observations, we must refer the reader to his work.

\* **GEOMANCER.** *n. f.* [*γην* and *μαντις*.] A fortuneteller; a caster of figures; a cheat who pretends to foretell futurity by other means than the astrologer.—Fortunetellers, jugglers, *geomancers*, and the incantatory impostors, though commonly men of inferior rank, daily delude the vulgar. *Brown's Vulgar Errors.*

(1.) \* **GEOMANCY.** *n. f.* [*γην* and *μαντις*; *geomance*, French.] The act of casting figures; the act of foretelling by figures what shall happen.—According to some there are four kinds of divination; hydromancy, pyromancy, aeromancy, and *geomancy*. *Ayliffe.*

(2.) **GEOMANCY,** } is performed by means of a  
**GEOMANTIA,** } number little points, or dots, made on paper at random: and by forming from the various lines and figures which those points present, a pretended judgment of futurity, upon any question proposed. The word is derived from the Greek *γην*, earth, and *μαντις*, divination; it being the ancient custom to cast little pebbles on the earth, and thence to form their conjectures, instead of the points afterwards made use of. Polydore Virgil defines *geomancy* a kind of divination performed by means of clefts or chinks made in the ground; and supposes the Persian Magi to have been the inventors of it.

\* **GEOMANTICK.** *adj.* [from *geomancy*.] Pertaining to the act of casting figures.—

Two *geomantick* figures were display'd }  
 Above his head, a warrior and a maid, }  
 One when direct; and one when retrograde. }  
*Dryden.*

\* **GEOMETER.** *n. f.* [*γεωμετρος*; *geometre*, Fr.] One skilled in geometry; a geometrician.—He became one of the chief *geometers* of his age. *Watts.*

\* **GEOMETRAL.** *adj.* [*geometral*, Fr. from *geometre*.] Pertaining to geometry. *Dict.*

\* **GEOMETRICAL.** **GEOMETRICK.** *adj.* [*γεωμετρικος*; *geometrique*, French; from *geometry*.]

1. Pertaining to geometry.—A *geometrical* scheme is let in by the eyes, but the demonstration is discerned by reason. *Mere against Atheism.*—This mathematical discipline, by the help of *geometrical* principles, doth teach to contrive several powers. *Wilkins.* 2. Prescribed or laid down by geometry.—Must men take measure of God just by the same *geometrical* proportions that he did, that gather'd the height and bigness of Hercules by his foot? *Stillingfleet.*—

Does not this wise philosopher assert,  
 That the vast orb, which casts so fair his beams,

Is such, or not much bigger than  
 That the dimensions of his glorious

Two *geometrick* feet do scarce surpass  
 3. Disposed according to geometry,  
 Jasper seemeth of affinity with the *lapis*  
 described by Boetius; but it is certain  
 of *lapis cruciformis*. *Grew's Medusæ.*

(2.) **GEOMETRICAL CONSTRUCTION**  
**CONSTRUCTION OF EQUATIONS.** See **ALGEBRA**  
**CONSTRUCTION,** § 1, *def.* 7.

(3.) **GEOMETRICAL CURVES.** See **ALGEBRA**  
*Chap.* II. § 5, 7.

(4.) **GEOMETRICAL LINE.** See **ALGEBRA**

(5.) **GEOMETRICAL METHOD.**

established the higher parts of their  
 on the same principles as the elements  
 science, by demonstrations of the same  
 they did not suppose any thing done,  
 vious problem, they had shewn that  
 actually done by performing it. &  
 they suppose any thing done *that cannot*  
*be done*; such as a line or series to be a  
 need to infinity, or a magnitude to be  
 till it become infinitely less than what  
 elements into which they resolved  
 were finite, and such as might be con-  
 sidered. Unbounded liberties have of-  
 ten been introduced; by which geometry,  
 which should be perfectly clear, is filled with  
*oxymorons*. *Int.* p. 39.

(6.) **GEOMETRICAL FACE,** a measure

(7.) **GEOMETRICAL PROGRESSION**  
 sion in which the terms have all the  
 same ratio; as, 1, 2, 4, 8, 16, &c. the  
 common ratio is 2.

(8.) **GEOMETRICAL PROPORTION**  
 tude or equality of ratio; called **ALGEBRA**  
**PROPORTION.**

(9.) **GEOMETRICAL SERIES.** See **ALGEBRA**  
*Chap.* VII. § II.

(10.) **GEOMETRICAL SOLUTION** i  
 blem is resolved according to the  
 geometry, and by lines truly geom-  
 etrical, is used in contradistinction  
 metrical, instrumental, or mechanical.

\* **GEOMETRICALLY.** *adv.* [*geometricaliter*.]  
 According to the laws of geom-  
 etry, or *geometrically* to contrive the  
 motion as shall be of greater swiftness

volutions of the heavens. *Wilkins's*.  
 All the bones, muscles, and vessels  
 are contrived most *geometrically*, ac-  
 cording to the strictest rules of mechanicks. *Ray on*

\* **GEOMETRICIAN.** *n. f.* [*γεωμετρικος*.]
